GUIDE TO THE SC15 PAEZ FILE

/Although the SC15 Paez file unit actually consists of a number of other highland Chibcha-speaking people, in addition to the Paez proper, as for example the Andaqui (Andaki), Coconuco, Guanaca, Moguex (Guambiano), Pijao (Pinao), Purace, Timana and Yalcon (Cambi), the present file is primarily concerned only with the Paez. These people occupy in most part the highland areas of the region of Tierradentro, department of Cauca in southwestern Colombia. The Paez whose economy today is based primarily on agriculture, were originally one of the old chiefdoms of Colombia, and received some small degree of Inca influence. The file was chosen for processing because of the availability of good literature on these people, in contrast to most Colombian groups aside from the Cagaba and Goajiro.

The file consists of eight sources all written by anthropologists. Of these sources two are in English, one, a translation from the German (1: Nachtigall) and the remaining five (3, 4, 5, 6 & 8), all by Bernal Villa, are translations from the Spanish. 1: Nachtigall is the primary source for this file and presents an excellent over-all coverage of Paez ethnography written by a trained ethnologist. 7: Hernandez de Alba further supplements Nachtigall's work by presenting a cultural summary of the Paez. This source possibly should be read first as a general orientation to the file unit. 2: Pittier de Fábrega also summarizes previously known information on the Paez (primarily from the writings of Castillo y Orozco of about the year 1735) and adds new data from the author's own field work. This source also contains interesting linguistic data which can be of use to those interested in Paez values and classification systems. 3: Bernal Villa is

concerned with the mythology and tales from the parcialidad of Calderas. 4: Bernal Villa deals with various fiestas held by the Paez of Calderas throughout the calendar year, and is concerned primarily with the fiesta of San Juan. 5: Bernal Villa presents a comprehensive study of the function and scope of shamanism and sorcery in Paez society. 6: Bernal Villa is an excellent summary of Paez economy which is based principally on agriculture and further supplemented by livestock raising, hunting, fishing and gathering. The remaining source in this file 8: Bernal Villa deals with the problem of social organization from the standpoint of kinship terminology.

As a whole the file seems to be fairly well-rounded and quite adequate for comparative research. In historical depth the file extends back from 1954 to the early period of Spanish-Indian contact.

Material on the "pest" or ritual contamination has been marked for category 783; descriptive information on the sugar cane crushing apparatus for category 407; the cabildo or native council (including the Gobernador) for 623; the capitan/síndico, for 624; festival houses for 346; shamanistic signs for 787/755 depending on context; and the minga, a community work group, for 476./

Processed in 1966-1968

/9 cont./

114 Our stay in Colombia lasted a year, from August 8, 1952,
[101] to August 12, 1953. During this time I worked first under the direction of Herr P. Pedro José Ramirez Sendoya as Investigador at the Instituto Etnológica Nacionál, beginning September 20, 1952, as Jefe de Arqueología at the Instituto Colombiano de
[126] Antropología. After several weeks of inventorying the antiquities in the region of San Agustín we traveled to Tierradentro where we collected the field material of the present publication during the period from December 24, 1952, to April 24, 1953.

122 The scientific work in Colombia was financed by the Ministerio de Educación and the Instituto Colombiano de Antropología. On this occasion I should also like to express my sincerest thanks to the then Minister of Education, Herr Dr. Lucio Pabón Nuñez, and to the Director of the Instituto Colombiano de Antropología, Herr Dr. Antonio Andrade Crispino, for the help rendered. Here I should also like to thank the Vice-President of the Academia de Ciencias Naturales, Herr Prof. Dr. P. Enrique Perez Arbelaez, who, during the early period of my stay in Colombia, smoothed many paths for me. I am no less grateful to the colleagues of the Institute for the scientific help given to me, as well as to the workers in Tierradentro for their diligence in the difficult and, at the beginning of the rainy period, quite unpleasant work of digging.

126 For the research and travel equipment, a number of firms
122 generously put material at our disposal. For the photographs published in this book I had the use of a Leica III f with Elmar /10/ 1:3.5 and accessories, as well as a Rolleiflex with Tessar 1:3.5. For special photographic purposes Rodenstock-Heligon 1:2.8 wide-angle lens, a Steinheil-Culminar 1:2.8 telephoto lens, and Proximeters I and II from H. Schneider & Co. were used with the Leica, and with the Rolleiflex the Rolleikin equipment with the Rolleinars 1 and 2. The interior shots of the grave holes and the native houses were taken with Osram SO and Philipps Pf 45 flash bulbs, as well as with Seuthe flash capsultes. Adox KB 17 and R 18, as well as Perutz Perpantic film, served as negative material for the photographs.

Colombia SC1
Tierradentro

C /13 cont. /
133 Negro de Narvaez, the principal rivers of Tierradentro. They
C drain into the Magdalena River, like all the rivers on the eastern
487 slope of the Central Cordillera. The principal traffic routes of
133 Tierradentro also lead to the Magdalena Valley, the most im-
C portant one leading down to the Rio Paez by way of /14/ La Plata
[632] to Neiva or Garzón. Thus, La Plata forms the center of trade and communication for this area, which economically, however, is not yet very accessible.

Even the earliest chroniclers described Tierradentro as a land of "eternal up and down." As a matter of fact, despite its excellent climate for colonization, the large number of small rivers cutting deep into the mountains represents a great obstacle
P to accessibility for communication, without which more extensive
[161] agricultural production is not profitable. The impassability is
●[101] one of the reasons that the Paez Indians here, with a total number of about 25,000 persons, have maintained themselves racially pure and, in a few mountain valleys, in a relatively original state culturally.

C The climatic differences of this region lying less than
132 three degrees of latitude north of the equator are considerable, de-
133 pending on the elevation. Neiva, lying 472 meters high on the
a Magdalena River and the capital of the department of Huila, is
[633] one of the warmest cities of Colombia with an average temperature of 30°. Nevado del Huila, lying only 75 kilometers to the west in a straight line, is covered with eternal snow. In between there is an average temperature of 21° at 1,200 meters elevation
C and one of 11° at 3,000 meters. The predominant elevation of the
[361] settlements in the southern part of Tierradentro lies between 1,400 and 1,700 meters, which corresponds to a mean temperature of
C 18-20°. This is the best climate for the Colombian coffee. At
[245] the same time it is an excellent climate and elevation for the
[249] planting of sugar cane and maize and for cattle-raising, economic
[233] activities that only the colonists profit by in a commercial sense.
P The Paez villages lying in this climate are therefore extensively
C overrun by colonists, and broad stretches of land have been taken
[648] by them for agricultural use. Here the mountain slopes which
P
[361]
C
[311]

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of
Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez
fought for their liberation on the republican side under Gregorio
Calambás. Their leader was captured and shot. After the
victorious termination of the struggles for independence, Gregorio
Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
● 101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[151] as the eastern neighbors of the Quimbaya, they perished in
countless battles with the Spaniards. As late as the eighteenth
century, remnants of them lived in the valley of the Rio Negro
de Narvaez, as neighbors of the Paez. They, called Bemb by the
Paez, as well as the Guanaca, spoke languages that differed
from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweš by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano in-
habit the west side of the Central Cordillera and today live in
the valley of the Piendamó around Silvia. The life and customs
of his tribe have been recently represented by the Guambiano
Francisco Tumiña Pillumbe in a number of very instructive /103/
drawings, each of which was provided with a brief text by
Gregorio Hernandez de Alba.

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive P [563] fashion with wooden pans, the workers standing up to their knees [186] in water. The Paez do not generally intermarry with the Negroes, but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 361 563 b) The Paez who north of the Rio Ullucus have settled both banks of the Rio Paez as far north as Nevado del Huila. They have in part intermarried with the white and mestizo colonist P [103] population. The /106/ places inhabited by them are: Araujo, Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

P 162 103 c) The pure Paez villages of Calderas, Chinas, Huila, Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez of Calderas have preserved their cultural individuality most P purely. We worked primarily among them, and the present ma- 114 121 terial, insofar as nothing is said to the contrary, refers to the culture of the Paez of Calderas. The Calderun, as the inhabitants P 181 of Calderas are known in the country, are by far the most unap- 648 proachable of all the Paez. They have best kept to this day the 101 three laws of Juan Tama, the mythical hero of the Paez, which were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

/106 cont./

648 it was impossible for the Spaniards to conquer Tierradentro and [101 181] subjugate the Paez.

Even today the Paez love their independence above all. And even though they cannot accomplish anything by force against the "whites," by which they mean the colonists and the Colombians in general, they nevertheless hate them with impotent fury. "Muiska pešu" (*), "white robber," is what they call the

* Concerning the transcription and phonetics of Paez words, cf. pp. 154-156.

colonists who took their land from them. The latter, however, more industrious than the Paez, need land for their numerous children. They cannot see why the best and virgin soil should remain unused in the hands of the Paez.

361 The rivers arising in the heights as a result of the water flowing down in the mountainous country form enclosed valley basins, each of which contains a village politically. These are, however, not villages in our sense, since the houses do not lie together, but separately, scattered on the slopes of the entire 123 valley basin as individual farms. This decentralized position of 361 a village rendered the ethnological work considerably more difficult, since one cannot keep an eye on "his" village and survey all the inhabitants together. Hence it is very difficult to become acquainted with all the people of the village, since in each case one must go great distances from one house to another and at the same time usually very laboriously climb a slope. How often it happened that the inhabitants were not at home at the moment or did not want to be seen or spoken to. For, at first, the Calderun did not by any means care to see us, and even after months of life and visits among them, the old people looked back with nostalgia on the times when /107/ all intruding whites were killed. 123 Today, moreover, not only whites, but even foreigners come to [177] Calderas. "If we speak to them and treat them well," they said, "then more and more whites will come here." How often it happened that we visited one of the old men, who, I was told,

/164 cont./

439 cloth for trousers, and all European clothing. Furthermore, every type of ornament must be bought, such as necklaces, earrings, and finger rings, then cotton, since it is finer and shinier than sheep wool, and aniline dyes for dyeing women's belts and coca bags, since they are more brilliant and clearer than the native vegetable dyes. The trip to market and the necessary trade, however, are not undertaken because of an inclination for business, pleasure in bargaining or in underbidding or outbidding, but out of the necessity to procure an [438] article that they cannot make themselves. If it is at all [797] possible, one tries to buy the required things in the village, for example, from the missionaries, and the purchase with money or the trip to market is, so to speak, the ultima ratio.
437 They do not bargain. The man -- /165/ and it is almost al-
439 ways he who shops -- asks the price, and if it seems too high --
[462] as in most cases -- he says "too expensive." If the tradesman lowers the price, he usually buys; if not, he goes on to the next stand.

The traders are never Paez, but always white and mestizo colonists. They know, of course, about the disinclination of the Paez to bargain, and they charge too high a price to begin with, so as to ask a still inflated normal price after the obligatory "too expensive." Thus the Paez are naturally cheated. They let themselves be too easily dazzled by an attractive display or packaging, for example, by the polish or the silver paper; also a more expensive green or red comb is preferred over a black one. Fortunately, one might say, they never have much money and can therefore never spend too much.

126 The way in which I was obliged to acquire the women's
439 colored belts for our collection is characteristic. Since every woman possesses only two at the most, one to fasten her skirt and the other to carry her baby, any attempt to buy them was [101] always useless. I had therefore bought at the market in Inzá a few women's belts which are made by the Guambiano, the tribe neighboring the Paez on the west, and are sold in Inzá.
[184] They are made of cotton, the white color of which in the freshly

/254 cont./

804 The period of a day is subdivided into the day (ẽn) and the
192 night (kos). Early morning is called kosẽ; afternoon at the time when work is at an end, which is reckoned by the position of the sun, is called ff'nze. Other subdivisions of the day are made according to the interval of an éšnetc, meaning the time it takes to chew a dose of coca. In translation this designation is used for "hour." The largest period of time is the month, ãte, which is designated by the same word as for "moon." For the period of a year the Spanish word año is used. In former times the word
[221] enzte was used. It is the designation for the large annual com-
[226] munal fishing at the weir during the dry season in February. The
[132] two rainy seasons, called nospá'nye, and the two dry seasons of the year, called sek, are not regarded as time intervals, but as seasons. The latter is at the same time the word for "sun."

823 No large geographical orientations or regional, individual
[491] divisions of any kind could be discovered. Moreover, all of Tierradentro is enclosed by civilized areas -- there is even an auto road leading to Belalcázar -- so that many Paez men have seen the surrounding countryside and even cities with their own eyes.
● 601 Only the western bordering mountains of the Central Cordillera,
[186] in the direction of Popayán, are conjectured to be the habitation
123 area of the dreadful man-eaters, the Pijao. Geographical means
484 of orientation are unknown. Traveling is done only during the day, in groups, and in company with a person who knows the way.
821 Of the stars it is only known that there stars that move and fixed ones, without their being distinguished in greater detail or according to constellations.

202 It is amazing that, in spite of their settlement pattern of
[361] individual farms, the Paez do not have any optical or acoustical
[203] means of communication over larger distances. /255/ In case of urgent news or questions, children are sent.

802 There are numbers only from one to six and ten. For the designations seven to nine the corresponding Spanish numbers are used. The Paez word for "ten" (kóse pémba) literally means "no more hands" and indicates that the fingers were used for counting. The toes are not used for counting; anything beyond ten is

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

FORMER OCCUPANTS. "PLANOS DE INDIOS." HUACAS

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed [692 descendants still live in the villages of Las Pavas and Vijes, 181 near Cali; the "Paveños" have become inveterate legal fighters, 162] keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 Of the Jamundies I was told that they were indefatigable 114 warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town [103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have [135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

tion which would correspond pretty well with the explanation given by subsequent authors, except for its last, untranslated member, which seems to imply a lack of geographical knowledge on the part of Father Rodriguez. According to modern maps, indeed, the term "Alto", or "Cordillera", de Guanacas, seems to apply only to the group or node of mountains north of the Coconucos and Puracé volcanoes, and south of the towering Huila. This includes the "Páramo de Moras," which we crossed on our return from Tierra Adentro, but not the *Páramo de las Papas*, which is situated south of the Puracé, at the headwaters of the Cauca, Caquetá, and Magdalena rivers. 131 114 133

If we admit, then, that in Father Rodriguez's description the name Páramo de las Papas is merely a lapsus for Páramo de Moras, the area given by him corresponds pretty well with that which is recognized as such by Uricoechea in his introduction to Castillo's work, excepting that the latter extends this area northward to include the upper Yaguará basin. According to Castillo, this last was probably inhabited by another *parcialidad*, which he calls Bemb, "indios infieles de nacion pijaos." At Huila, when pointing northward to the valleys on the eastern slope of the volcano and asking who lived there, the Indians answered, "Los Pijaos", and among the Spanish people it is generally understood that the Paez and the Pijaos are one and the same. This is also the opinion of Reclus,[1] who says: "Among the various tribes that wandered through the thick forests of this [eastern] slope of the [central] Cordillera, the most barbarous were the *Pijaos* or *Paez*, who selected innocent victims to offer to their divinities. The enemy killed in a fight could be only indifferent to the gods; but a woman, a child, an inoffensive stranger, the pure ones, were welcome to the bloodthirsty genii." And these monstrous sacrifices must be repeated at short intervals to insure the permanent good-will of the gods. 131 114 101 [782 727]

The area given on the accompanying map (plate I)[1] corresponds with the above-mentioned description by Rodriguez, 101 103

[1] Reclus, *Géographie universelle*, XVIII, p. 305.

[1] [See p 304 – Analyst]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

101 only it might be necessary to modify it slightly if we were able
103 to localize all of the thirty-four villages or hamlets reputed to be of Paez stock and included in the following systematic list:

1. *Paez Basin*

As-at	Inzá	Suin
Chinas	Lâme	Tálaga
Chitoco	Mosoco	Toés
Cuetandó	Nátaga	Vitonció
El Pital	San Andrés de la Plata	Yaqtirá
El Naranjal	San José	

2. *Palo Basin*

Jambaló	San Francisco	Toribío
Pitaió	Tacueyó	

3. *Orejas, Corre, and Pondama Mountains*

Cajibio	Caldonió	Paniquitá

4. *Vagnará Basin*

El Retiro		Iquirá

5. *Locality Uncertain*

Abirama	Osyó	Ricaurte
Caldera	Pueblo Nuevo	Tobóima
La Troja	Pusó	

101 The principal neighbors of the Paez Indians, according to the above description of their territory, were to the north — the Quimbayas on the western slope of the central cordillera, and the Pijaos on the eastern slope. To their east were the Manipos, in the Magdalena valley; the Guanacos were on both watersheds of the central cordillera southward; and westward on the plains of the Cauca valley, the Kitšua and the Jamundies. The Kitšua were probably the most advanced in culture of all these different stocks, and the ones whose influence is more easily recognized
CMT in the customs and idiom of the Paez. Their language is also
191] the only one which has come down to us in its integrity.

101 There is no positive proof of the identity of the Paez and
174 Pijaos, and it is fair to state that there are many data pointing to the fact that originally they were merely neighbors, and allied against the Spaniards, as, for instance, in 1641, when they de-

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

stroyed the city of Caloto, then on the Magdalena river, according to Alcedo. But it is not unlikely that, later on, during their decline, the Pijaos, Paós, and perhaps several other tribes became mixed, and those whom we now call *Paez* are the survivors in blood, customs, and traditions, of all these frequently named *parcialidades* or *naciones*. 101 174

Physical Characteristics

There is no special reference by former writers respecting the physical characteristics of these Indians, probably because of the apparent uniformity in type of all the tribes of tropical South America. According to my own very fleeting observations the Paez are small, broad-shouldered, with small bony hands, and feet broadened toward the extremities. Their skin is very dark, a character common to all Indians living at great altitudes. In the case of almost every adult, both male and female, coming under my observation, I observed a fine black pubescence covering all visible parts of the body. They appear to be generally strong and healthy, and their physical endurance is not below the average. On our trip across the cordillera each adult man carried at least thirty kilograms, and many of them more than fifty, and none complained of being too heavily laden, although the trail up to nearly 4,000 meters and down again was exceedingly rough and steep, requiring at times not only much exertion but equal presence of mind. 142 147

It is well to mention, after Uricoechea, that the Paeces are naturally inclined to warfare, and invariably join one side or the other in the unceasing Colombian revolutions. In early times they raided the Spanish establishments, the destruction of Caloto on two occasions (the first time in 1641) being still held by them in vivid remembrance as glorious feats of their ancestors. I was even assured that not long ago, during the last war, they were with difficulty prevented from making an incursion on the neighboring Cauca cattle ranches. 181 721

I was quite surprised to find among the Paez Indians a character that I had noticed previously in Central America, but of which no record could be found in current literature. I refer to 147

/284 cont./

132 gives rise to cold local winds that blow through the valley of the Páez, affecting chiefly the areas of Vitoncó, Suin, Chinas, San José, Mosoco, and also the parcialidad /a territorial division/ of Calderas itself. The variation in temperature is noticeable in these zones sometimes having hot days and very cold nights. Nebulosity is almost constant, especially in the northern zones.

241 Economy.--The topographic and climatic characteristics permit the cultivation of various plants, such as maize, beans, bananas, sugar cane, yuca, arracacha, and gourds in the temperate zones, and in the cold ones potatoes, maize, ullucos, [433] beans, gourds, and cabbage. The produce barely leaves a [439] surplus for trade with the parcialidades and urban centers of [438] Belalcázar, Inzá, and Valencia. The potato crops of Mosoco, Vitoncó, and San José serve for an active trade with the Paez of the western slope of the cordillera, across the Páramo de Moras.

433 Coffee and the production of panela are important lines 245 in the economy of the colonists and also of numerous groups 249 of acculturated natives. The coffee of Tierradentro is con- 177 sidered one of the best in the country, owing to the quality and mildness of the bean.

231 /285/ The raising of livestock flourishes among the civilized 437 groups. For the natives it serves for maintaining a barter trade with their neighbors, the white and mestizo colonists.

311 On the whole, native production is relatively scant, 433 giving rise to times of "hambruna" /ravenous hunger/ when [731] the summers or winters are rather harsh. The workable land lies in the small plains and valleys of rivers and streams, on the alluvial terraces, and on the plateaus. Comparing the size of Tierradentro with that of its arable land, the latter appears scant, a problem that is aggravated by the increase in population and the habitual burning.

101 Population.--Tierradentro is the country of the Paez, 361 who at the time of the Conquest were settled to the north of

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166-173] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

/364 cont./

571 in the cantinas, in lawsuits over land, or for religious fiestas.
434 These arguments are confirmed, on the other hand, by the
454 statistical table on income in that only five native families in the three parcialidades made up the deficits in their budgets of last year with sums saved in 1952.

Economy and acculturation

121 Before closing the present work we wish to describe in
177 broad outline the process of acculturation which is now going on in some Páez parcialidades.

● [101] The material on Páez culture which we have published and that which we are now elaborating on were collected in the parcialidades located on the right bank of the Paez River, leaving aside those located on the left bank of this river, owing above all to factors of public order which have been disturbing their peace for several years.

[178] The native communities of San Andrés, Santa Rosa, Togoima, Calderas, Avirama, Suin, Chinas, Lame, Vitoncó, Huila, Toez, and Tálaga are more traditionalistic, live in accordance with the institutions of the culture, and for this reason we regard them as more "primitive." On the other hand, the community of Mosoco, suspended on the slopes of the Central Cordillera itself and extending into the very heart of the Paramo de Moras, is fully in the process of transformation.

[648] /365/ Our research was begun in the parcialidad of Calderas,
[101] isolated, by reasons of a geographical nature, from the principal centers of the "white" population and whose inhabitants have defended their independence at all costs and have been hostile to living with the "whites" (39). From here comes the greater part

39. Bernal Villa, S. "Mitología y cuentos de la parcialidad de Calderas, Tierradentro /Mythology and tales from the parcialidad of Calderas, Tierradentro/," pp. 289 ff.

[101] of our materials. But we also carried out systematic investigations in San Andrés, Santa Rosa, Togoima, Lame, Vitoncó, Tálaga, and, lastly, in Mosoco.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Pasto SC17

The area of this study is delimited on the west by the valley of the Patía River and by the Cuembi, Nambi, and Cuaiquer Rivers, and on the east by the divide between the rivers running to the Pacific Ocean and those flowing eastward into the Caquetá and Putumayo Rivers. P 133 121

All this region is cool to temperate throughout the year, the extremes being at Túquerres, which lies at 3,104 m. (9,433 feet) elevation and has a mean temperature of 11° C., and Ancuyá at 1,358 m. (4,380 feet) with a mean temperature of 21° C. The greater part of the population lives between 2,890 m. (about 9,470 feet) with 12° C., as at Ipiales, and 2,020 m. (about 6,630 feet) with 18° C., as at Buesaco. P 132 P 133

Farther north, the Cordillera Central forms a great mountain mass at the sources of the Cauca and Magdalena Rivers, the latter delimiting the Cordillera Oriental, which extends toward the northeast, entering Venezuela and stopping at the Atlantic Coast. In the Department of Cauca, the native peoples occupied the altiplanos and the mountain slopes of the central portion of the Andes and of the Cordillera Central and Cordillera Oriental. Some of the mountains are snow-capped, like Coconucos (4,800 m.; 15,746 feet) and such volcanoes as Puracé (4,908 m.; 16,102 feet) and Sotará (4,580 m.; 15,026 feet). There are high páramos, swept by icy winds, where only the frailejón (*Espeletia hartwegiana*) and certain grasses grow. Below these heights, the topography is hilly and grandiose, with a succession of hills, terraces, altiplanos, ravines, cañons, and valleys.

Some tribes, like the *Coconuco* and *Moguez*, live in the cold mountain spurs toward the Cauca River; others, like the *Páez* and *Guanaca*, in the high páramos with a climate like that at Moras (3,670 m.; 12,040 feet), Guanacas (3,518 to 3,750 m.; 11,541 to 12,303 feet), Las Delicias, and other places to the east. The *Popayanense* occupy the temperate Valley of Pubén. The *Pijao* lived in the last mountains of the Cordillera Central toward the Magdalena River, which, like the valley of this river, is low and warm, and extended to the Cauca Valley in the neighborhood of Buga. P 101 361 PO [101] [361]

The country inhabited by the *Popayanense* at the Conquest has an altitude of 1,760 m. (5,775 ft.) and a mean temperature of 18° C.; the *Páez* in Tierradentro, 1,650 to 2,620 m. (5,774 to 8,595 ft.) and 13 to 17° C.; the *Moguez*, 2,521 m. (8,270 ft.) and 14° C. at Silvia; the *Andaquí* in the region of San Agustín, 1,695 m. (5,561 ft.) and 18° C.; the *Yalcón* and *Timaná*, 1,100 m. (3,608 ft.) and 24° C.; and the *Pijao*, 873 m. (2,864 ft.) and 25° C. at Carnicerías, and 1,700 m. (5,577 ft.) and 18° C. at Pijao (Caldas). P 133 132 PO [133] [132]

Such differences in climate with the consequent differences in flora and fauna contributed to the variations in economy and culture. The high peaks of the cordilleras and the deep rivers were frontiers between the tribes, clearly separating them from one another—the *Moguez* P 101 131

?:Hernández de Alba E-5 (no date) 1948 SC15 Paez SC15

101 from the *Páez*, the *Páez* from the *Pijao*, the *Andaqui* from the *Tama*
131 of Bajo Huila.

This extremely varied habitat offers a great range of food resources
241 and of possibilities for agricultural crops. In the high, cold moun-
133 tains and altiplanos, between 2,500 and 3,000 m. (about 8,200 to 9,800
132 ft.) elevation, where the mean temperature is 11 to 15° C., the principal crops were potatoes (*Solanum andigenum*), ullucos (*Ullucus tuberosus*), and cubios (*Tropaeolum tuberosum*). In the medium zone, between 1,600 and 2,500 m. (about 5,200 to 8,200 feet), with a temperature of 15 to 20° C., the main crop was maize (*Zea mays*), but arracacha (*Arracacia esculenta*), quinoa (*Chenopodium quinoa*), and sweet potato (*Ipomoea batatas*), were also cultivated. In the low, warm zone between 500 to 1,600 m. (about 1,600 to 5,200 feet), with a temperature of 20 to 28° C., the main crops were maize, sweet manioc or yuca (*Manihot utilissima*) and beans (*Phaseolus vulgaris*).

136 The cold lands also produced in addition to these principal crops,
[241] maize, squash (*Cucurbita maxima*), wild fruits, birds including ducks (Anatidae), doves (Columbidae), guans (*Penelope*), mammals such as the spectacled bear (*Tremarctos ornatus majori*), and other small, wild beasts like the armadillo (*Dasypus novemcinctus*), guaratinajo (*Dinomys branickii*), guatin (*Dasyprocta fuliginosa candelensis*), and
[231] small fish from the rivers and lakes. The guinea pig (curí or cuy,
[262] *Cavia aperea*), which is prolific in all the climates, was the only domesticated animal and is an important source of food of the modern Indians.

241 The inhabitants of the medium, humid zone were more favored by nature in that crops grew faster and in greater variety. In addition to the plants named, they grew achira (*Canna edulis*), auyama (*Cucurbita verrucosa*), beans (frijoles), and peanuts (*Arachis hypogaea*).
262 Among the great variety of wild foods were fruits, granadilla (*Passi-*
137 *flora ligularis*), guayaba (*Psidium*), guama (*Inga* spp.), avocados
136 (*Persea Americana*), papaya (*Carica papaya*), guanabana (*Annona muricata*), and chirimoya (*Annona cherimolia*), and such animals as deer (*Mazama rufina*, *M. gualea*, and *Odocoileus virginianus consul*), rabbits (*Sylvilagus fulvescens*), guinea pigs, various rodents, and large birds, such as chachalacas (*Ortalis*) and guans (*Penelope*).

Additional foods of the low, warm regions were sweet potatoes, beans (frijoles), and yams (*Dioscorea alata*); such fruits as pineapples (*Ananas sativus*), papaya, custard apple (*Annona squamosa*), cactus fruit (*Opuntia* spp.), and plantains (*Musa paradisaica*); and large fish from the rivers.[1]

---

[127] [1] The scientific names of the plants were taken from Cortés, 1519. The mammals were tentatively identified by Dr. Remington Kellogg, of the Division of Mammals, U. S. National Museum, and the birds by Dr. Alexander Wetmore, Secretary of the Smithsonian Institution.

Pasto SC17

TRIBAL DIVISIONS

Captain Sebastián de Belalcázar was the first conquistador who went north from Quito and entered the Andean region of what is today Colombia. He passed through the territory of the Pasto and Popayán Rivers to reach the region of Neiva and beyond in 1535–36.

At the time of their discovery, the native peoples north of Ecuador were very numerous, but the chroniclers, for example Cieza de León, who crossed this region in 1545 and is its outstanding historian, gave their locations and designations in a very confused manner. The historians classified the aboriginal peoples either according to small villages or groups of houses, slight differences of dialects, or slight cultural variations, so that the true classifications are very difficult to make.

Modern ethnological studies and a critical interpretation of the chroniclers somewhat clarify the cultural panorama of these regions, however, and it is now possible to list the following tribal divisions which existed just before the Conquest [5] (map 7):

Pasto.—The *Pasto* (*Koaiker*, *Cuaiquer*, *Quayquer*, *Coaiquer*,[6] etc.) (Jijón y Caamaño, 1936–38), who had a uniform language and culture throughout their villages, were distributed from the town of Tuza between the Mira and San Juan Rivers northward throughout the mountains to the valley of the Patía River and toward the northeast to the southern boundary of the present Department of Cauca. Eastward, they extended to the country of the *Quillacinga*, which began at the Guáitara River (Cieza, 1880, ch. 33). In the west, they occupied the western portion of Nariño, but accurate information is lacking on some tribes, which like the *Abades*, *Masteles* (Juán López de Velasco *in* Guerra, 1942) and *Patía* of the lower Patía River, lived toward the Pacific Coast region. The Angasmayo River in *Pasto* territory was the limit of the conquest of the *Inca* Guaynacapa (Cieza, 1880, ch. 37). Ortiz locates this river southeast of Nariño but other authors identify it with the Mayo River farther to the north.

There was a large number of native groups or villages within this area. Among these Cieza mentions the *Ascual*, *Mallama*, *Túcurres*, (*Tulcan*), *Zapuys*, *Iles*, *Guaimatal*, *Funes*, *Chapal*, *Males*, *Piales*, *Pupiales*, *Turca*, some of which are south of the Colombia-Ecuador border, *Cumba*, and others, and adds that, "All these peoples and chiefs had and have the name of *Pastos*" (Cieza, 1932, ch. 33). Guerra gives other names of small groups (parcialidades).

Quillacinga.—East and southeast of the *Pasto* lived the *Quillacinga*. Padre Velasco (1841–44, vol. 3) identified them with the *Pasto*, but cultural and linguistic differences between these tribes leave no doubt that Cieza de León (1880, ch. 33), was correct in considering them a

[5] Castellví, 1934; Guerra, 1942; Jijón y Caamaño, 1940–41; Ortiz, 1937 d, 1938 c; and Ogura, 1938, 1939.

[6] The *Coaiquer* are sometimes treated as a subgroup of the *Pasto*. (See this volume, pp. 857–858, 867–868.)

Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15
Pasto SC17

distinct people. The present city of Pasto was founded in *Quillacinga* territory in the valley of Atris, which was occupied by several small groups: the *Isancales*, *Paguanes*, *Zacuampues*, *Chorros* (Velasco, 1841–44, 2:153), *Mocondino*, *Bejendino*, *Buyzaco*, *Guajanzangua*, *Mocoxonduque*, *Guacuanquer*, and *Macaramata* (Cieza, 1932, ch. 33). *Quillacinga* territory extended from the frontier of the *Pasto* on the west, i. e., the Guáitara River, eastward to the mountain ridges from which flow the Caquetá and Putumayo Rivers. Its northern and northeastern limits are the high páramo of the Letrero and the sources of the Cauca River. Recent investigations show that it extends south to the district of Puerres (Guerra, 1942). (See also Ortiz, this volume, p. 911.)

Popayanense.—North of the *Quillacinga* in the province of the *Popayanense*, which is well delimited by the Cauca River valley and by the first spurs of the Cordillera Oriental and Cordillera Central, were numerous peoples who had the same general culture, although some of the first historians differentiate them. These tribes, which may collectively be called *Popayanense*, perhaps included the *Puracé*. The many small groups so lacked political unity, however, that Cieza said "That there were no men among them who were feared," i. e., they lacked chiefs.

Coconuco, Moguex, and Páez.—In the hills and small valleys of the eastern slopes of the Cordillera Central were groups of distinctive and strongly organized people. The *Coconuco*, the *Moguex* (*Guambía*), and the *Páez* lived on the eastern slope of the Cordillera, and the *Guamza* (*Guamsa*), *Malausa*, *Polindara*, *Palacs*, *Tembio*, *Colaza*, *Zotara*, and *Guachicone* on the western slope of the Cordillera (Cieza, 1932, ch. 32). Linguistically and culturally,[7] these tribes were very homogeneous. There were three important subgroups: (1) the *Coconuco*, *Cotara* (*Zotara*), and *Colaza*; (2) the *Moguex* (*Guambía*), *Totoró*, and *Polindara*; (3) the *Páez*, with groups on both slopes of the Cordillera Central. (See also Lehmann, this volume, p. 969.)

Andaquí and neighboring tribes.—The *Andaquí* lived in the mountains from the source of the Magdalena River to near Timaná and south to the high ridges which form the watershed between the upper Magdalena River and the Fragua and upper Caquetá Rivers (Velasco in Ternaux Compans, 1840, pp. 167–68; Pérez, 1862). This zone contains the important archeological remains known as San Agustín (Arroyo, 1907). The territory of the *Yalcón* (*Cambí*) was between the headwaters of the Río de la Plata and the Magdalena River (Simón, 1882–92, vol. 4, Noticia cuarta, ch. iii). The *Timaná* were found by the conquistadors to the southeast of this region, between the Guarapas and Magdalena Rivers centering around Timaná (Velasco, in Ternaux Compans, 1840, 3:26). The *Páez* lived to the north of the

[7] Jijón y Caamaño, 1936–38, 2:186; Otero, 1939.

7:Hernández de Alba E-5,4 (no date) 1946 SC15 Paez SC15

Yalcón and *Timaná* in an area delimited by the high crests of the Cordillera Central on the west, the snowcapped peak of Huila on the north, the valley of the Páez River on the east, and the region of the Río de la Plata and the Moscopán River on the South (Cieza, 1932, ch. 32), although some groups lived in the valley of the Cauca River bordering the Cordillera on the west (Otero, 1939).

Pijao.—The *Pijao* (*Pinao*) were the strongest and most warlike neighbors of the *Páez*. They inhabited the eastern slopes of the Cordillera Central from La Plata to Ibagué, which included the region of the Río de la Plata and the left side of the Páez River, but extended to near Buga on the western slope of the Cordillera Central. The Páez River formed their frontier with the *Páez* and was their southwestern limit. They extended northward to the territory of the *Quimbaya*, and one of their divisions lived in the Cauca Valley, near Buga. (Simón, 1882–92, vol. 3, ch. 53, p. 330; vol. 4, ch. 24, p. 156; Ordoñez de Ceballos, 1938, chap. 28.) The *Pijao* were bordered on the north by the *Quimbaya* and *Panche*, on the east by the peoples occupying the hot valley of the Magdalena River, on the south by the tribes of the upper Putumayo and Caquetá Rivers, and on the west by the peoples already mentioned and by the *Gorrón* and *Lile*, near the Pacific Ocean. Near them in the Huila Plains were the *Tama*.

7:Hernández de Alba E-5,¼ (no date) 1946 SC15 Paez SC15
Moguex

Today the special industry is the extraction of oil from the "mil pesos" palm. Hunting and war are the principal occupations of the men. They involve very important rites conducted by the captain or cacique, assisted by a deputy or second in command of a group. These rites are performed as follows (Albis, 1934):

In preparing for an attack on the *Witoto*, the deputy captain takes his men to hunt animals, while the women prepare chicha and "caguana." Upon their return, the hunters adorn themselves, dance, and drink chicha, and then go to their houses. The following day they catch "conga" ants, whose bite causes fever, and place them in a palm-leaf mat so that their heads stick out. The captain's wife picks up the mat and lets the ants bite her husband on his legs to make him strong, on his breast to make him brave, on his face to prevent him from sleeping, and on the chin to make him silent. The captains then make the ants bite the back and legs of the women, so that young *Witoto* prisoners will be diligent helpers. Afterward the captains each eat three ants mixed with water. If they have pains, the hunt will be successful. After this, the captain, carrying a turtle shell, speaks to the women, admonishing and scolding them, and then retires to a separate house, where he holds a conference with his men, forecasting the probable outcome of the fight and exhorting the men to avenge those who may be killed by the *Witoto*. That night they hold ritual dances and mimic animals. Two balsa-wood images are placed at the door of the main building and two Indians must pierce them with their spears while running. These two Indians are whipped after their feat by all those present. At dawn they plant a pole in the middle of the yard or square, pour water around it, and dance there until they have made mud, and then spend the day gathering food for the departing warriors. In order to be strong and to capture many young *Witoto*, each warrior has to place an arm in a bag full of "yuco" ants until it is thoroughly bitten. Upon departing, the captain gives his wife a knotted hemp cord (a kind of quipu). She unties a knot every night and thus knows when to expect him back and on what day the fight will take place. The day of the battle she remains in the hut where the hunters stayed the first day; otherwise they will be unable to capture any *Witoto* children. With other women she waits there 3 days for the men to return and then, after leaving there an "araraita," a palm branch, the women return to their homes to prepare more chicha. If the expedition is successful, the men return with great demonstrations of joy, but if it fails, they hit everything and bemoan their luck. The captain's principal wife upbraids her husband. After a community meal, all go home and resume their occupations.

Menstruating women throughout this area remain in a special house weaving hemp. They may have no visitors. At the end of the period, they bathe and return to their dwellings.

At childbirth, a woman must remain at home 3 months, while her husband stays in his hammock, refraining from labor and dieting lest his child die. After 3 months the parents anoint themselves and child with "jagua" fruit and resume normal life.

THE CULTURE OF THE MOGUEX AND PÁEZ

Although the *Moguex* and *Páez* have distinct territories and different dialects, their ethnology may be described together because of the great similarity of their economy with its agricultural basis, their social organization, and their general culture.

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive fashion with wooden pans, the workers standing up to their knees T [563] in water. The Paez do not generally intermarry with the Negroes, [186] but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 b) The Paez who north of the Rio Ullucus have settled 361 both banks of the Rio Paez as far north as Nevado del Huila. 563 They have in part intermarried with the white and mestizo colonist P population. The /106/ places inhabited by them are: Araujo, [103] Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

T c) The pure Paez villages of Calderas, Chinas, Huila, 162 Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez 103 of Calderas have preserved their cultural individuality most P purely. We worked primarily among them, and the present ma- 114 terial, insofar as nothing is said to the contrary, refers to the 121 culture of the Paez of Calderas. The Calderun, as the inhabitants P of Calderas are known in the country, are by far the most unap- 181 proachable of all the Paez. They have best kept to this day the 648 three laws of Juan Tama, the mythical hero of the Paez, which 101 were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

ETHNOGRAPHIC NOTES

Former Occupants. "Planos de Indios." Huacas

101 In addition to the still existing tribes, traces of the former
174 occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed
[692 descendants still live in the villages of Las Pavas and Vijes,
181 near Cali; the "Paveños" have become inveterate legal fighters,
162] keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 Of the Jamundies I was told that they were indefatigable
114 warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town
[103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have
[135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes.
172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

tion which would correspond pretty well with the explanation given by subsequent authors, except for its last, untranslated member, which seems to imply a lack of geographical knowledge on the part of Father Rodriguez. According to modern maps, indeed, the term "Alto", or "Cordillera", de Guanacas, seems to apply only to the group or node of mountains north of the Coconucos and Puracé volcanoes, and south of the towering Huila. This includes the "Páramo de Moras," which we crossed on our return from Tierra Adentro, but not the *Páramo de las Papas*, which is situated south of the Puracé, at the headwaters of the Cauca, Caquetá, and Magdalena rivers. 131 114 133

If we admit, then, that in Father Rodriguez's description the name Páramo de las Papas is merely a lapsus for Páramo de Moras, the area given by him corresponds pretty well with that which is recognized as such by Uricoechea in his introduction to Castillo's work, excepting that the latter extends this area northward to include the upper Yaguará basin. According to Castillo, this last was probably inhabited by another *parcialidad*, which he calls Bemb, "indios infieles de nacion pijaos." At Huila, when pointing northward to the valleys on the eastern slope of the volcano and asking who lived there, the Indians answered, "Los Pijaos", and among the Spanish people it is generally understood that the Paez and the Pijaos are one and the same. This is also the opinion of Reclus,[1] who says: "Among the various tribes that wandered through the thick forests of this [eastern] slope of the [central] Cordillera, the most barbarous were the *Pijaos* or *Paez*, who selected innocent victims to offer to their divinities. The enemy killed in a fight could be only indifferent to the gods; but a woman, a child, an inoffensive stranger, the pure ones, were welcome to the bloodthirsty genii." And these monstrous sacrifices must be repeated at short intervals to insure the permanent good-will of the gods. 131 114 101 [782 727]

The area given on the accompanying map (plate I)[1] corresponds with the above-mentioned description by Rodriguez, 101 103

[1] Reclus, *Géographie universelle*, XVIII, p. 305.

[1] [See p 304 – Analyst]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

101 only it might be necessary to modify it slightly if we were able
103 to localize all of the thirty-four villages or hamlets reputed to be of Paez stock and included in the following systematic list:

1. *Paez Basin*

As-at	Inzá	Suín
Chinas	Lame	Tálaga
Chitoco	Moseco	Toés
Cuetandó	Nátaga	Vitoncó
El Pital	San Andrés de la Plata	Yaquirá
El Naranjal	San José	

2. *Palo Basin*

Jambaló	San Francisco	Toribío
Pitaió	Tacueyó	

3. *Orejas, Corre, and Pienlama Mountains*

Cajibio	Caldonió	Paniquitá

4. *Vaguará Basin*

El Retiro		Iquirá

5. *Locality Uncertain*

Abirama	Osyó	Ricaurte
Caldera	Pueblo Nuevo	Tobóima
La Troja	Pusó	

101 The principal neighbors of the Paez Indians, according to the above description of their territory, were to the north — the Quimbayas on the western slope of the central cordillera, and the Pijaos on the eastern slope. To their east were the Manipos, in the Magdalena valley; the Guanacos were on both watersheds of the central cordillera southward; and westward on the plains of the Cauca valley, the Kitšua and the Jamundies. The Kitšua were probably the most advanced in culture of all these different stocks, and the ones whose influence is more easily recognized
[177 in the customs and idiom of the Paez. Their language is also
191] the only one which has come down to us in its integrity.

101 There is no positive proof of the identity of the Paez and
174 Pijaos, and it is fair to state that there are many data pointing to the fact that originally they were merely neighbors, and allied against the Spaniards, as, for instance, in 1641, when they de-

[Parcialidad of Calderas]

* /303 cont./

539 392 at one side of the path and hid in a river. By the smoke they found the fire, and all the people were able to supply themselves from it. This one was not extinguished again. It is believed that the old woman was a Pijao.

Informant: Vicenta Tumbo, 40 years old, does not know Spanish.

Interpreter: Marco Antonio Penkue.

Version II

When religion had recently been introduced, there was an old woman who drew fire from her armpit and gave it to anyone who asked for it. The missionaries came and said that this fire was witchcraft and thus had to be blessed. The old woman fled so that the fire would not be taken from her and the blessing would not be given. As she went running off, the old woman set herself on fire, and the flames covered her completely. When she reached the river, which was in flood, she threw herself into it. The old woman is said to have been a monster (Pijao); she had a very large face, hair like a mane and rather gray.

Informant: Juan Petins.

Interpreter: Marco Antonio Penkue.

/304/ Version III

The old people related that once there was a little girl who had nothing. María Santísima appeared to her and asked her what she was doing, to which she replied that she was there. "You will have to blow on the fire," she said, "because even I am cold." Ordering her to fetch some kindling, María Santísima drew fire from her armpit. She warned her to preserve it, for without it they could not live. From it fire was obtained for everyone. This is why they gave the place the

• [103] name of Calderas

/177/

I

Point of Departure

631 To the north of the municipio of Inzá and to the west of
[361] the confluence of the Ullucos and Páez rivers, two hours on horseback from the points just mentioned, the corregimiento /district governed by a corregidor/ of San Andrés is found on the left bank of the Pisimbalá torrent, an affluent of the
[175] Ullucos. Its name has been registered in the parochial books
[103] since 1736, when the priest José Fernández Belalcázar, as the
[797] representative of the Bishop of Popayán, initiated in San Andrés de Pisimbalá pastoral visits to the Paez pueblos.

361 San Andrés de Pisimbalá is a pueblo with the same characteristics that we have noted in other Paez centers; that is to say, it consists of a church, a school, the rectory, the house of the cabildo, and some others used solely for the celebration of religious fiestas. It is located on a small plateau, a ledge hanging on the declivity.

563 At the present time it is inhabited by whites and mestizos
177 whose ways of life, norms of behavior, and labor practices
361 have been imposed on the natives. Resistance to contact has
[648] been overcome, but active resentment against the white still
[566] crops out among the old people. Almost completely acculturated, many of them have sunk to the state of tenant farmers. The phenomenon of the colonization of Indians and land is the same everywhere. The Indian loses his land and sinks into servitude.

In 1926 the Municipal Council of Inzá created a settlement area with clearly delineated boundaries in a common agreement /178/ between the municipal authorities and the cabildo. The colonists established themselves in that area. The valley of the Pisimbalá torrent is narrow, but extremely fertile. It belongs in its entirety to a few families of colonists,

/218/

XXIV

The Race for the Rooster at Tumbichukue

•103 The name of Tumbichukue is familiar to the colonists throughout Tierradentro. It is synonymous with fabulous treasures. In this place, it is said, the Paez buried all the gold and silver that they collected in the ill-fated settlement of Sebastián Quintero destroyed by them.

[131] Tumbichukue is a pass /vereda/ formed by the eastern slopes of the paramo of San Lucas and located between the Kukiyú and the Yusayú gorge (Guacharaca). It belongs to the parcialidad of Lame, and the road that goes from San Andrés [491] to Lame passes precisely there. This road is well traveled, its people more accessible to the whites.

796 On June 24 the men race their horses along the road.
541 It is a custom of Indians and whites "to race on the day of San Juan." The whites say that those who do not race their horses on the day of San Juan get scabies. The small, husky horses pant under the demands of their drunken riders. A wild race and shouts in an unsteady voice: Viva San Juan!

The people of the pass go to a small square along the road, near which lives the capitán of Lame. Indians from
184 San Andrés come to watch the race for the rooster. On the
796 other hand, in spite of the nearness, no Calderun /person from
291 Calderas/ is seen there. The women who are seen are clean,
177 with neatly braided hair; they wear black skirts, navy-blue
301 rebozos, pink blouses, numerous multi-colored necklaces,
541 bright earrings, and cloth hats. The monotonous dark or black necklaces characteristic of Paez apparel are nearly absent among these people. The classic pindo hat worn by the [191] Calderas people is absent. Spanish is spoken more frequently.

796 All the riders are concentrating on the cage and the
541 roosters.

361 /295 cont./
311 strong political groupings had their principal seats at Tálaga,
643 Suin, and Avirama (3). "The place of residence of a cacique
175
[622]
[103]

3. Hernández de Alba, Gr. "The Highland Tribes of Southern Colombia," pp. 915-960.

constituted a sort of settlement or gathering place, most of which remain today as Indian pueblos and retain their names, such as Suin, Tálaga, Avirama, Togoima," Chitoquez, Cuetando, Yaquivá, Pisimbalá, and Itaibe, all of them located at the
361 temperate thermal level. It is precisely along the course of
311 the Páez River and along the middle and lower courses of its
161 tributaries that the Páez population is now concentrated.

13 2. Physiography. Merely a single glance at the wild geography of Tierradentro will give an idea of the pattern of life of the Páez people. The physiography of the entire course of the Páez River, from Irlanda to Itaibe, with nearly all of its tributaries, is compressed into profiled accidents. It might be said that it forms a "thermic chimney," Professor Guhl's expression. It belongs to the temperate thermal level. This is the land of the great slopes covered with natural pastures and of the short, narrow vegas with fertile soils. There are those who speak of the fertility of all the soil of Tierradentro, classifying it, consequently, as a privileged zone. The concept proves to be deceptive, because it does not take into account the physiographic factor. We find the usable vegetal layer /296/ only in the extremely narrow vegas of the rivers, ravines, and streams, and in places
13 where the topography becomes a little smoother. The left bank
241 of the Páez River, from Toez to La Plata, is usable for agricul-
[233] ture and stock-raising only with difficulty, given the brutality of the slopes. Every tributary that enters on this side is a deep ravine isolated by ridges running from northeast to southwest. On the other hand, the left bank has important vegas. It is there that plantains, manioc, sugar cane, coca, arracacha, maize, and lately coffee and guadua bamboo are grown. The soils are essentially acid, and the Gramineae grow in abundance

7:Hernández de Alba E-5,✓ (no date) 1948 SC15 Paez SC15
Moguex

civilized tradesman, the Indian turns to drinking guarapo or chicha and becomes drunk. Often a heated discussion, always spoken in Spanish and not in *Páez*, leads to insults and perhaps to blows and injuries. A man's wife usually maneuvers him from the village and, if he falls asleep on the road, she sits by him warding off dangers.

SOCIAL AND POLITICAL ORGANIZATION

Political structure.—The *Moguex*, *Páez*, *Guanaca*, *Timand*, and *Yalcón*, despite their great similarity in language and culture, formed separate groups at the time of the Conquest. Each was divided into several communities (parcialidades), of which those of the *Páez* were the most numerous. The *Guanaca* were split between two principal caciques, one of whom, Anabeima, joined the Spaniards against the *Páez* of Avirama. The other cacique was Esmisa, Anabeima's brother-in-law. Each *Páez* community had its own chief, but the communities were grouped into three great divisions. One consisted of the *Páez*, *Tálaga*, *Simurga*, and *Taravira*, on the shores of the Páez River. The chiefs of three of these groups were brothers; that of the fourth was their sister, whose name was Taravira. Another group was headed by Suin, and his son, Esmisa. In the third group, Avirama was joined by other neighboring chiefs of less importance.

Each community (cacicado) consisted of several polygynous families under a male chief (pl. 185, *top, left*). Each family had its own house, located some distance from its neighbor's. All the members of a community gathered for general work, and all or several of the communities united for war, either against the *Pijao*, their feared neighbors, or against the Spaniards.

The place of a cacique's residence was a sort of focal point and meeting place, and today most of such places are Indian villages with the same names, such as Suin, Tálaga, Avirama, Togoima (formerly Toboima), etc. The present *Páez* Indian reservation of Tierradentro is divided politically into two municipios—Páez or Belalcázar and Inzá—with 22 communities, each governed by its own councils (cabildos, of Colonial origin) and by the municipal authorities. The cabildo is elected annually. The Indians, however, are jealous defenders of their traditions, and insist on a captain and síndico, each with life tenure, to act as their own leaders and as true representatives of the cacique. Their duties are moral and fiscal and carry a certain divine authority, as they are inaugurated in the local church. The cabildo, on the other hand, has only administrative and police powers; it divides the land, orders work to be done, and executes the municipal orders. The members of a cabildo hold office for 1 year and receive no remuneration. They are elected on the first of December by all the male adults, or "macaneros," that is, the Indians who participate in the communal work according to a

104

/For lists of titles associated with the various political offices of the community, see category 116, pp. 99-103./

104

kut -- a bass drum
lōčinyi -- girls' dolls
mbāts -- agave
mbéca -- chicha, an alcoholic beverage
mbéka kígwe -- the happy land of death; heaven
mīś -- cat
ndōsoknas -- the midwife
nikálo -- the bridal couple
panderēta -- the tambourine
sāt -- war leaders with shamanistic abilities
tátyinas -- god, creator
tíkwe -- a term used to designate priests and missionaries
tũs -- the rainbow spirit
úńsa -- mice
vacaloca -- a representation of a cow used in religious festivals
wáhi -- tobacco

● 104

áhimos -- ghost
alko -- dog; also a term used in approbation for a person who doesn't like to work
číngalo -- the triangle, a Paez musical instrument
čúnga -- a top; one of a child's toys
dúrat -- menstrual hut
eč -- the most evil of all spirits, dwellers in the earth
eč kígwe -- the land of the dead corresponding to hell
enzte -- a large annual fishing expedition of the entire village, usually in the dry season of February
fi'nz oñ -- the second meal of the day, at 3-4 p.m.
gělyómp -- mountain spirit
hénde -- hole-ball; a hollowed out fruit capsule used in a children's game
iglésia -- church
ítok -- shamanistic "signs"
káka -- small cylindrical drums
kánoe -- a trough for storing chicha
ki'sen -- non-working days, now used in reference to Sunday
koi -- the transverse flute
kosé oñ -- the first meal of the day, around 4-5 a.m.
kotç -- maize
kotyâvyat -- maize store house

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

● 104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

● 104 /321 cont./

Conquista	Period of the Spanish conquest.
Conquistador	Spanish conqueror at time of the discovery of America.
Finca	Plantation farm or estate for the growing of coffee, sugar cane, bananas, etc.
Gobernador	Spanish head of the administration of a province. Among the Paez, the head of the village council.
Guaquero	Pirate excavators of prehistoric, Indian burial sites.
/322/	
Hacienda	Large country estate in Tierradentro.
Kazike	(Cacique) West Indian designation for the chief of a village or native tribe, used by Spaniards as a general designation for native chiefs within their area of authority. The translation "Fürst"/prince/ used in the literature in German is misleading.
Lagoon	Lake, pond.
Machete	Bush knife, long chopping knife.
Milpa System	Central American designation for periodic tillage on previously burned-off clearings; called roza in Colombia, wáts among the Paez.
Minga	System of free joint work by the village.
Municipio	In Tierradentro a number of villages, somewhat like our administrative district.
Nyiç	Evil shaman, evil sorcerer.
Panela	Boiled-down sugar-cane juice. Transported and traded in the form of bars of about half a kilogram each. Customary form of sugar consumption among the Colombian rural population.
Páramo	High steppe. General designation for the crests of the Cordilleras.
Parcialidád	In Tierradentro: village with the lands belonging to it.
Poncho	Sleeveless cloak of the Andean Indians in the form of a rectangular or square blanket with a hole for the head. Called ruana in Colombia.

[114]

104 /322 cont./

Roza	Colombian burned-off field. Cf. "Milpa."
Ruana	Colombian designation for poncho.
Shaman	Popularly: medicine man. The Paez distinguish between evil shamans (nyiç) and good ones (teyu). The former kidnap souls, bring sickness or death. The latter, as adversaries of the nyiç, are doctors in the spiritual realm.
Tafí	Soul, which can leave a person in his sleep.
Tama	Ceremonial staff of the shaman.
Teyu	Paez designation for the good shaman.
Trapiche	Sugar mill.
Tumba	Large, underground grave-chamber.
ũns	Soul that leaves the person at death.

/The bibliography, pp. 323-327, is omitted in the translation; see the foreign text./

/217 cont./ In the
194 transcription of Paez words we departed from the Spanish spelling
104 and used the following alphabet:

'	"glottal stop," as in the German ab'ändern
~	nasal vowel
a	short a, as in the German Ball
ā	long a, as in the German schmal
ai	not a diphthong, a+i as in the Paez áime (star), without "glottal stop"
b	always voiced, as in the German Baum
bw	b with the English w
by	palatalized b
č	Spanish or English ch, German tsch
čy	palatalized č
ç	dental ch sound, as in the German ich
d	always voiced, as in the German dumm, English "and"
dy	palatalized d
/218/	
e	closed e, as in the German Schnee, but short
ē	closed e, as in the German Schnee
e̱	open e, as in the German wenn, hätte
ē̱	open, long e, as in the German Schäfer
ĕ (ə)	centralized e, as in German gern
ei	not a diphthong, e+i as in the Paez néi (father), without "glottal stop"
f	dentilabial, as in the German fein
g	always voiced, as in the German gut, English "pig"
gw	g with the English w
gy	palatalized g
h	strong h, between h and the ch in German ach
hw	h with the English w
hy	palatalized h
i	short i, as in the German wie, but short
ī	long i, as in the German nie
k	not aspirated, as in the German
kw	k with the English w
ky	palatalized k
l	as in the German laufen; used in place of r in loanwords from the Spanish
ly	palatalized l
m	as in the German mein

/218 cont./

194

123 Calderas, and the water divide of the Kukiyú river and the
133 Pisimbalá torrent, the former a deep gorge, the latter an
[131] elongated basin. Toward the north, the outline of another ridge bounds the horizon and divides the parcialidades of Suin and Chinas. Prominent along it, the Vichaguau peak, the hill Dondotá with the double crests, between which, when the sky is clear, one can see Huila with its eternal snows, where the golden rays of the sun break into a silvery radiance. Toward the east one sees the hills of Chindavá and Potrerito, the heights of Togoima, and the canyon of the Páez. Toward the south stand the mountain ranges of Pangok and El Aguacate, which separates the valleys of the Pisimbalá and the Ullucos; the tablelands of Pedregal, Turminá, and Inzá; the sharp peak of Trueno /Thunder/, the "Kapich" of the natives, a summit
823 of silence, lightning, thunder, and storms. In the place where
173 the sun sets, there rises, stately and challenging, the sharp
648 peak of Hipinjí (1), on which, according to some Indians, lie
[133]
[104]

1. H = the English h.
   J = the French j.
   Sh = the French sh.

the images of saints, the bells, the clothing, the gold, and the silver which the Paez army carried away from San Sebastián de la Plata after murdering all of its white inhabitants, setting fire to the town, and filling up the famous silver mines which had given the town its name and brought large numbers of ad-
173 venturers and not a few misfortunes to the Indians. This legend
823 has fired the imagination of the whites and has led not a few to search for them. It is said that several whites went to the Hipinjí in search of the legendary treasure. At the /181/ /illustration appears here/ top of the peak a white flag was waving. One day there appeared on it the following mysterious order: "At 12 o'clock you may clear out this opening." Their enthusiasm was renewed, their fatigue forgotten, and they went to work eagerly. One worker was rewarded by blind

104

aguardiente--an alcoholic beverage
arco--the rainbow spirit
kachí--special divination sites
kuetand tuka--a small calabash used to hold the lime employed in coca chewing
mambe--lime to be chewed with coca
pango pil--bench
ptans--literally "dirt"; the evil sent by a sorcerer
té eu--curer, shaman
ut ká--"dirt-send"; curing ceremonies at a family or individual level
ut peu--"dirt-wash"; the purification ceremony performed by the shaman for the participants in a funeral
wé ká--"pest-send"; the ritual by means of which an epidemic is ritually conjured away from a community by the shaman
yat put--"house-blown"; the purification of the house of the deceased after a funeral

Symptomatology. The good curers, the authentic té eu, in whom the society believes and trusts, those who constitute a monolith of security in the face of the mysteries of illness and death, are those whose vocations were determined by a vision, more precisely by a hallucination. In this case, the fate of the men is inescapable, permits no deviation. This leitmotiv, vigorous in times past, is now on the wane.

A curer from the Parcialidad /a territorial division/ of Santa Rosa describes his vision as follows: "At the age of six, while I was tending a field in the montaña, I saw my mother dressed in black, with a white hat and pouches. She chided me for the poor quality of my work, saying that animals were ruining the field. She walked on and I followed her. At the stream she vanished. I went to my home and found out that the woman was not my mother, since at the moment of the

6. From the Spanish: guineo.

7. Underlined vowels indicate nasalization:

[104] sh = French ch (chaise); ch = Spanish ch (chicha); j = French (jardín); h = Spanish j (rojo).

8. From the Spanish: coles.

9. From the Spanish: cebolla.

10. From the Spanish: cebada.

11. From the Spanish: habas.

12. From the Spanish: cilantro.

cabildo--a community council
captain--a community chief
egg--a unit of weight which is more or less equivalent to a chicken's egg
macanero--the name given to one who is required to give one day's work each year for the collective planting for the benefit of the saint and as many days as may be required by the cabildo for repair of roads, bridges, etc., or for general work in the village
mingas--meetings for collective work
mohanes--shamans

/167 cont./

601 Seemingly there is no terminology for designating the older and younger brothers of the generation of EGO, although in practice this distinction stands out. EGO is obliged to greet older brothers and the older members of the community in general, and there also exists the obligation of being greeted by the younger brothers and, in general, by all the younger members of the community.

Among the adults of both sexes, married and with children, the use of teknonymous forms is general.

114 /168/ The only two studies of kinship systems made in Colombia are from the pen of Professor Gerardo Reichel-Dolmatoff working among the Iroka and the Kogi. That of the Iroka was [104] done with the collaboration of Alexander L. Clark. With the intention of facilitating subsequent comparative studies on the subject, we have adopted his system for presenting the materials, especially the abbreviations of the kinship terms in the Spanish language /the English equivalents for the abbreviations of the Spanish terms are given on p. 10 /.

127 Before finishing with this brief introduction, we wish to
128 place on record our sincere thanks to Señor Víctor Bedoya for his voluntary transcription of unpublished documents from the Archivo Nacional relating to the Páez, and to Professor Marcos Fulop for his valuable observations and opportune suggestions which brought much light to obscure sections of our work.

Analysis of Kinship Terms

601

Consanguineous Relatives

A--EGO's Generation:

a) Masculine EGO: Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (iaktẽ).

b) Sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (Pesh).

601
[104]

/168 cont./

Sh = the French ch (chaise); ch = the Spanish ch (chicha); j = the French j (jardin); h = the Spanish j (rojo).

c) Feminine EGO: sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (iaktẽ).

d) Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (jish).

B--First Ascendant Generation:

a) For father and mother, separate words are used (tãta and mãma). /Figs. 1 and 2 appear here./

/169/

b) The brothers and sisters of the father and the sons and daughters of the brothers and sisters of the father of the father (grandfather) are grouped in a single category and classified as uncles and aunts (ñuk and pẽsuts, respectively).

c) The brothers and sisters of the mother and the sons and daughters of the brothers and sisters of the mother of the mother (grandmother) are grouped in a single category and classified as uncles and aunts (kãhka and pẽñuk, respectively).

C--Second Ascendant Generation:

a) One term is used for both grandfathers (ishi) and one term for both grandmothers (penshi).

b) The brothers and sisters of the grandparents, for both the paternal and maternal lines, are grouped in a single category and classified as grandfathers and grandmothers (ishi, penshi).

D--Third Ascendant Generation:

a) The great-grandfathers are designated with one term (ishi wãla) and the great-grandmothers with another one (penshi wãla).

E--First Descendent Generation:

a) The sons, the daughters, and the sons and daughters of brothers and sisters, real or classificatory, for both the paternal and maternal lines, are grouped into a single category and designated as sons and daughters (kuẽ or jik and wãnak or nis, respectively).

/171 cont./

601 2--a) Father-in-law and mother-in-law are designated with separate terms (táta, máma).

b) The husbands of the daughters and the wives of the sons are designated with different terms (ndõ, nikuẽ mivũ, respectively).

Kinship Terms

[104] Abbreviations: p = father
m = mother

539 when the thief again came, took down some potatoes, kindled a fire, and roasted them in it, he took out both of his eyes "out of foolishness" before he ate and laid them on one of the three hearth-stones. Then the owner of the potatoes, whom the thief, of course, could not see, stepped up, saw the eyes, and kicked them into the fire, so that they burned with a bang. The thief heard the bang, to be sure, but thought to himself, how fine the potatoes are popping and sizzling!

When the thief had eaten all the potatoes, he looked for his eyes, but could not find them. He then left the house very sadly, without eyes, and set out for his own house. On the way he met a rat who was out walking there, and they started a conversation. The thief complained that he had lost his eyes and that, without eyes, it was very difficult to find them again. He begged the rat to lend him one of hers only until he had found his own eyes again. The rat lent him one, but since both of his eyes were burned, he could not, of course, find them. The man then turned himself into wind.

The rat searched for the thief of her eye for a long time, but could not find him. Her son, like his mother, also had only one eye. The son in turn had a son, and he, too, had only one eye. Since that time the descendants of this rat family have only one eye. And that is why one can still find rats today who, to be sure, have the nose, mouth, feet, skin, and ears of a rat, but only one eye or none at all; they go back to that rat who once lent one of her eyes.

/313/

●105 V. Summary and Culture-historical Classification of Paez Culture

[161] If we briefly summarize the sketch of Paez life and the ele-
[621] ments of their culture, we find before us a democratic agricultural people of 25,000 persons, among whom no one is master and no
[177] one servant. Surrounded for centuries by Spanish culture, they have
[197] preserved their language in extensive sections of their area of settlement.

/313 cont./

105 settlement. At the same time, however, we must certainly confirm a cultural impoverishment, considerable in some respects, among these people who outwardly seem quite prosaic and matter-of-fact.

105 Anthropologically they belong to the American Centraloid
143 /zentraliden/ race (v. Eichstedt /see the bibliography in the
144 foreign text, pp. 323-327, for this and the following references/) with a striking predominance of blood group 0. Although the latter fact is only one component of the somatic picture, it is extremely interesting to find a predominance of this blood group among a large number of American natives. Among the Paez there are 88.78%, among the neighboring Guambiano 84.25% (Lehmann, Duque y Fornaguera, p. 200), among the natives of Caldas 92.25% (Duque, 1944, p. 626), among the Sibundoy 84.42%, among the Santiagos 94.23% (Paez-Perez y Freudenthal, p. 413), and among the Pijao the blood group 0 is almost 100% (Reichel, 1944, p. 517). These investigations of Colombian tribes agree with a more comprehensive picture. According to the analysis of G. Arcila Velez (p. 11), 80.6% of the people among the Eskimo are of blood group 0, 91.3% among the pure North American Indians, 72.7% among the Navajo, 97.7% among the Yucatecans, 79% among the Mataco, and 100% among the Guarani of the Rio Grande do Sul.

105 The form of settlement of the Paez in the deeply fissured
[361] mountainous region of Tierradentro is the loose arrangement of individual family-farms on the mountain slopes, as far from neighbors as possible. The village settlement-area is geographically invariable and embraces the natural area of the dwellings and the land used within a valley basin. The house, as the family focus and social center for one family in each case, is built on the family's own land. It is used -- depending on the type of construction -- for a harvest period or for ten to 15 years. The land belongs to the family that first cleared it. Besides this there is community land for the free use of all members of the village. The interior of the normally /314/ hip-roofed rectangular houses is divided into two rooms, one of which serves as the kitchen and living room, the other as a storage room.

/314 cont./

●105 The clothing of the men and women covers the upper and lower body. The men's upper garment, called "ruana" in Colombia, "poncho" in Peru, is a sleeveless shirt open at the sides. It is ancient American, known both from the relief of the so-called "sun god" of Tiahuanaco and from a grave of the pre-Spanish [291] period in Arica (northern Chile) (Montell, pp. 173-183). Soon [171] after the Conquista, since the second half of the sixteenth century, this Andean article of clothing, which consists simply of a square piece of cloth with an elongated slit for the head, was distributed throughout the area of the Andean mountain cultures. Its name, "atc," among the Paez, however, has no parallel linguistically. [177] The men's trousers are clearly Spanish. The women's costume is most simple: as an upper garment to a skirt a rectangular piece of cloth is simply put crosswise over their upper bodies.

[241] From an economic point of view, field cultivation is primary. It is carried out by the men in the form of the burned-clearing system with a ten-year clearing cycle. The only field tool is the [433] digging stick. The minimal area of cultivated land for one family is about one hectare. The principal crops are maize and sugar [177] cane. The latter was not introduced until after the Conquista. The Paez word means "sweet." The Paez designation for maize, "kotc," has no parallel with the corresponding words of the Chibcha, Carib, or Aruac /Arawak/ language groups, but with Kechua /Quechua/, where maize is called "kuts" (Birket-Smith, pp. 22-30). The stimulants are coca and chicha made of sugar-cane juice. Both Paez words, es and mbéka, respectively, have no parallels in other language groups.

105 241 There are no outstanding festivals indicative of a planter's culture or rites associated with the products of field cultivation, nor does anything indicating an agricultural rhythm of life appear in the myths and religious customs of the Paez. The mythology and ceremonial customs are remnants of a hunter's attitude of mind. It appears as though the Paez did not adopt their primitive agriculture until the time of the Conquista or shortly before, and adopted only the mechanical application of the methods of simple digging-stick farming, without the ceremonial customs associated

/314 cont./

105 with sowing and harvesting otherwise characteristic of peoples
241 who plant. It is not improbable that they practiced this field
[442] cultivation as they describe it for the Pijao. In the story /315/ of the Paez with the ax (No. 16) it is said that the Pijao were not familiar with tools in former times and, accordingly, could not fell trees to lay out a proper burned-off field. In order to obtain fields for their sowing, they were obliged to split the bark of trees with stones. After these were dried, they sowed their maize between the dead trunks.

105 In connection with hunting, economically insignificant today,
[224] the hunter is surrounded by a number of prohibitions such as we find everywhere among hunting peoples throughout the world.
[226] Fishing is carried on with poisonous plants at weirs. It took place as a joint fishing expedition of the entire village in the February dry season when the water was at its lowest level of the year. This large annual fishing expedition was called enzte. The time
[233] period of one year was also designated with the same word. Raising
[556] large livestock is almost purely a sport or a matter of appearance
[231] and wealth. Horses are not used; cattle are slaughtered only for the three large annual Christian festivals (Semana Santa, San Juán, Immaculada).

Among weapons, only the shotgun for hunting is of significance
[773] today. The pellet blowgun and the stone-sling are used as toys. In
[441] the mythology the latter plays an important part as a decisive weapon in war.

In the handcraft techniques of plaiting and weaving, the use of agave fiber and sheep wool predominates, generally in the form of spun and twisted threads. The carrying bags of agave fiber and the wool coca bags are made by the loop technique; the hammocks, bird nets, berry sieves, and stone-slings by the knot technique. Only straw hats are plaited. The bands of the fiber bags are woven out of agave fibers; the women's belts and the articles of clothing of men and women, out of sheep wool. The weaving method is simple rod-weaving with the linen texture. The women's belts have an ornamental warp formed during the weaving process. The weaving frame is vertical, of the so-called

/315 cont./

105 "Araucanian" type (O'Neale, p. 115). In place of the shed rod we have a simple loop; in place of the heddle rod, a bundle of loops.

105 The warp threads are stretched in the form of the "false spiral warp,"
286 a mixture of the method of the continuous, circular warp with the
171 method of the terminating flat warp. This genuinely American way of stretching the warp is found among the Northwest Coast Indians as well as among the tribes of the Gran Chaco (Olson, pp. 114-121). Culture-historically H. Nevermann regards the various forms of American weaving /316/ as having originated on the basis of a native or pre-Polynesian plait-weaving. Among the Paez we find this technical stage in the plait-weaving of the carrying bands of the coca bags.

105 For dyeing, vegetable dyes are used, which dye only sheep wool, but not cotton.

Pottery is very simple. There are only hemispherical pots and bowls made with the spiral coil technique, both without any ornamentation.

The present political organization of the Paez is based on the village community. It is led by a village council (cabildo), whose members are chosen for a year from among the men of the village. The designations for the members of the cabildo and their functions are in part Spanish. In former times the leaders of the Paez were
[621] often men with shamanistic abilities. The village is not organized
[565] by either classes or occupations. No one need serve another for
[463] pay; the word and the thing are unknown to the Paez. The father
[464] of the family with his sons or brothers works his fields, and if
[476] friends or neighbors lend their help, it is compensated for by assistance in their fields.

[594] The family organization is basically the patrilineal,
[178] monogomous nuclear family, consisting of the parents and the
[851] unmarried children. Here there has probably been the least
[533] change in Paez culture. The children are given the family of the father. For her marriage the woman receives no dowry of any kind from her parents, and she keeps her maiden name. Since there are no social or financial reasons for concluding a marriage, a woman has only the merit of her personality and abilities. These are tested during a "trial year" before the actual conclusion of the marriage.

/316 cont./

105 601 The kinship nomenclature shows remnants of a "classificatory" system, into which the individual is fitted as part of a living structure and does not stand out in profile, detached within the family. Persons are differentiated in address according to certain circumstances of age and life, and, among others, siblings are differentiated in address, according to whether they are younger or older than the speaker.

105 53 In art and mythology a considerable impoverishment has taken place. There is neither song nor any peculiar dance. The music of transverse flutes and drums, performed with great enthu- [177] siasm, is to be stressed. The cylindrical drum with skin stretched on two sides, which is used at the present time by the Paez, is in all parts of America a loan from the Negroes. In earlier times hanging, hollowed-out tree-trunks were used for the dance and for conveying information, such as /317/ are used today as troughs for making chicha. The rattles formerly present are no longer used today. The transverse flutes with six blowholes used by the Paez are post-Columbian; at any rate they are not found in this form either archeologically or recently among uninfluenced Indians. The only transverse flute form known from pre-Spanish and modern times are flutes that are stopped at both ends and provided with two blowholes (Izikowitz, pp. 298 ff.).

105 773 776 In the fund of tales no comprehensive picture of the world emerges. The chief figure in the myths is Thunder, who appears as the first shaman and as a war leader. He is not, however, an exalted, numinous figure, but rather to some extent has charac- teristics attributed to forest spirits in other parts of South America. [784] There is also a special forest spirit (gĕlyŏmp) among the Paez. He [224] has the figure of an old man with large, exposed sexual parts, and his stings inflicted as punishment for ritual uncleanness in connec- tion with hunting cause the human being sickness and pain. He does not, however, appear mythologically. Fragments of larger myth-complexes are the story of the woman from whose body useful plants arise, the story about the ghostly human head that comes rolling along, stories about transformed animals and human beings, and stories about werejaguars.

/317 cont./

105 In the Paez religion there is no cult priesthood with offerings
771 and prayer, just as there is also no cult or worship of numinous
756 beings. The Paez religion is a shamanism, the two forms of which are the evil sorcerer and the good shaman as doctor and helper against evil sorcery. As a religious phenomenon Paez shamanism is not as distinctive as the Siberian or the North American shamanism. Assistant spirits and the soul journey as shamanistic means are only rudimentary with the shamanistic "signs," the "thunder child," and the journeys of the shaman to the house of Thunder on the bottom of the lagoon; there is almost no ceremonial apparatus. Nevertheless, the activity of the good shaman in particular, as doctor and helper in sickness caused by magical practices, as well as his function as sociological crystallization point of the community, is entirely a shamanistic phenomenon.

105 Linguistically Paez belongs among the agglutinative languages,
[197] in which the form element is made up by affixes that characterize
[194] whole classes of words. In phonetics the series of palatals including all the consonants is striking, as well as the frequent occurrence of nasal vowels.

105 /318/ The linguistic classification of Paez is difficult. Since
114 the research of H. Beuchat and P. Rivet it has been regarded as
197 one of the Chibcha languages. This was not always the case. E. Castillo i Orosco emphasized in 1735 that in its grammatical structure Paez is very different from Chibcha (p. 63). It was C. Cuervo Marquez who first regarded Paez as a Chibcha language (p. 199). H. Pittier de Fábrega emphasized in 1907 that the relationship of Paez refers only to the rules of grammatical construction; the vocabulary is completely different (p. 341). Then in 1910 Beuchat and Rivet investigated all the North Andean languages in a work of large scope and then confirmed the distribution of the Chibcha languages from Nicaragua to Eucador. According to this, the majority of the Colombian tribes spoke Chibcha (pp. 193-198). Up to now this classification has neither been examined in greater detail nor disproved by linguistics. This may be left to the philologists. Here there will only be a few remarks about the problem of the Chibcha languages in general and that of Paez as an

/318 cont./

105 assumed Chibcha language in particular. The difficulty of language
114 comparison in the northern Andean area lies in the wholely in-
197 adequate material for comparison. The majority of the tribes investigated have died out long ago, and there is seldom sufficiently complete material available from the few living ones. Even the true Chibcha (Mwiska) on the plateau of Bogotá has not been spoken for two and a half centuries and is known only from the literature. Beuchat and Rivet choose the lexicographic and grammatical method for their language comparison. The total vocabulary of the languages investigated contains about 200 words. These serve as comparative material for 49 languages, namely, for true Chibcha (Mwiska) and 23 other languages and dialects in northern Colombia and Panama, as well as for 25 languages and dialects of southern Colombian languages! Methodologically the procedure was to find a lexicographic agreement between language A and language B, another agreement between language B and language C, a further agreement between language C and language D, etc. In the proof, language A is related to languages B,
105 C, D, etc. Applied to Paez: In the vocabulary given by Beuchat,
114 and Rivet there is no Paez word in direct agreement with Chibcha!
192 Nor was there even a choice of words according to their qualita-
197 tive significance. Thus it is especially noteworthy that there is a complete lack of corresponding designations for food, animals, useful plants, metals (gold), parts of the body, kinship designations, etc. /319/ On the basis of the vocabulary, therefore, it is not possible to designate Paez as a Chibcha language. To what extent this applies to the other southern Colombian tribes, for whom there usually exists only a very limited vocabulary, cannot be discussed here. In any case, there is a large number of Kechua /Quechua/ words in all these languages -- as a result of the close proximity to Kechua-speaking peoples. (For Paez, cf. the
105 compilations in Castillo i Grosco and Pittier de Fábrega.) Gram-
197 matical agreements between Chibcha and Paez do exist. At the
[114] same time, however, Beuchat and Rivet expressly point out that,
[193] of the languages compared, Paez shows the greatest grammatical differences with Chibcha (pp. 190/191). In summary it may be

P /319 cont./
105 concluded that the classification of Paez as a Chibcha language
197 cannot be regarded as definite. The grammatical agreements may just as well be remnants of an older, or superimpositions of a younger, population layer. In addition there is the fact that in the sometimes centuries-long struggles since the Conquista considerable shifting and intermingling of populations have taken place. It is possible that the tribes existing or surviving today are only scattered remains or groupings that have been made up from other tribes only after the Conquista.

C P 105 P [197] P E [361] P C [241] [412] P C [323] P [325] P C [411] P C [771]

Culturally the Paez have nothing at all in common with Chibcha culture. The Chibcha language group established by H. Beuchat and Paul Rivet is a linguistic concept, which, in an uninterrupted extension from Nicaragua to Ecuador, embraces completely different cultures! For example, the Chibcha settlements on the plateau of Bogotá are compact villages, whereas the Paez live on individual farms. The agriculture of the Chibcha, with the use of a wooden spade, is relatively advanced in comparison with the digging stick and burned-clearing cultivation of the Paez. Technically the manufacture of Chibcha ceramics is far above that of the Paez, and it is certain that the Paez did not do any gold work. Among the Paez the sling was the principal weapon; among the Chibcha, club and spear with the spear thrower. In the Chibcha religion we have a creator-god or a tribal mother with a pantheon of other gods, with offerings of gold and emeralds; we find hero-temples, holy places, and sacred kings, while among the Paez, only shamans.

C 105 P C 197

Thus we have a gaping division between the Chibcha language group and the Chibcha culture. Scientific terms, however, should be unequivocal and not designate different concepts with the same words. This is done correctly in Europe, for example, with /320/ the Indo-Germanic family of languages, the Dinaric race, or the band-ceramics culture.

The cultural concept of the Chibcha is the older one. In order not to identify and confuse the culture group with the language group which is completely different from it, the language group should have a different name, especially since it is not certain whether

C 105 R 197

/320 cont./

what is common in the vocabulary and structure of the language goes back to Chibcha or to a linguistically different substratum. Analogously this is true of the archeological cultures of the northern Andean area, which are also similar in many aspects, but do not go back to the Chibcha culture.

P 105 172 174

There remains the question of the ethnic relationship of the archeological Tierradentro-culture. In view of their meager material and artistic cultural possessions, the Paez were technically not capable of the manifestations of an advanced culture that exist in Tierradentro. With their strictly democratic social structure, they also lack the organization by estate needed to maintain such a culture. Even in the mythological traditions of the Paez, there is no hint of any relationship with the archeological culture. The only similarity seems to be the Paez method of burial in a niche grave; typologically, however, this is not identical with the shaft grave. In addition there is the difference of the cremation burial in the archeological culture in contrast to the skeleton burial of the entire corpse among the Paez. Moreover, the Paez are a local, relatively narrowly circumscribed tribe; the archeological culture, on the other hand, has the most extensive geographical relationships in the art (*), in the style of

* G. Hernandez de Alba (IV) /see the bibliography in the foreign text, p. 324/ found a necklace of small sodalite figures in a grave chamber. This material is otherwise not found in Colombia. It comes from a Bolivian mine, and works of art made of it are found in Tiahuanaco as well as in Peruvian and Argentinian sites.

their stone statues, and in the method of burial in shaft graves.

Artistic relationships, however, make probable more extensive linguistic relationships than is the case for the Paez and their neighbors. From this standpoint a relatively well-developed trade may also be assumed. The disposition and present activity of the Paez, however, does not give us any support in this respect either.

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

/316/

105 178 [244] Potatoes are the principal crop in the parcialidad of Mosoco and the primary source of the natives' monetary income. It has made possible the establishment of intensive trade with the municipio of Silvia and has plainly had repercussions in the modification of rules of behavior and the restructuring of institutions. The transformation embraces nearly all aspects of Páez culture.

In the first place, work has intensified. The people of Mosoco have permanent work throughout the year. The women participate directly in the preparation of the soil, the planting, and the harvesting.

The children of both sexes go to school regularly, learn basic skills, and utilize them in everyday life. Mosoco is the only part of Tierradentro where there is a private school supervised by a native.

[191] Bilingualism is general. The "chontales," that is to say, persons who do not speak Spanish, are very few. There are not more than ten.

[276] The consumption of coca has disappeared among all the youthful elements.

[262] [264] The alimentary diet and schedule have been altered considerably. They have breakfast very early in the morning, lunch at noon, and dinner at nightfall. Milk, panela, lard, meat, and bread are consumed regularly.

The utensils are completely modern, consisting of aluminum and iron pieces.

There are wooden beds for sleeping, and blankets as well.

The houses are better built and furnished. There are houses of adobe and tile. Two tile-works inclusively already exist in the parcialidad.

The people are hospitable and generous toward foreign visitors.

[291] The clothing of the men is almost completely transformed. They dress like any Colombian peasant. The palm hat worn in other parcialidades has disappeared from this region. The women are clean, orderly, and talkative. They retain the slit skirt and sash, but have adopted chemises and the blue rebozo of the

/316 cont./

105 178 Guambianos. They adorn themselves with showy necklaces and pins. Not a few of them wear fine gold earrings.

[232] Livestock-raising has intensified and is in full swing. Norman cattle are replacing and being crossed with the native cattle. The same thing has happened with the wool-bearing livestock. The /317/ saddle and pack horses are indispensable for every family. The natives also possess fine breeds of hogs and domestic fowl.

[565] Social stratification is in full progress. Rich and poor families can already be named.

Mosoco women seldom marry natives from other, less acculturated parcialidades. People speak of mingas, and even of burials, of the rich and poor, a larger number of people going to those of the former.

They live on good terms with the whites and treat them as equals. There are many good native dealers.

These natives are thoroughly familiar with the methods of curing, the use of remedies, and sorcery. But the té eu and even more the nara jihi (sorcerer) are on the wane. Many consult the doctor of the "whites" in Silvia and use the drugs of the "whites." They are less superstitious.

They are believers by conviction. A few are Protestants with great reasoning powers.

The cabildo retains its power and is duly respected.

The properties are duly parceled out. Many of them are planted with pastos de selección /literally, choice pasture grasses/. Fences with barbed wire are frequently encountered.

Agricultural implements

412 [241] [177] Among the implements used in agriculture, only the digging stick for planting maize (uhach) is of native manufacture. The others are of European origin.

The universal implement among the Paez is the machete. With it the clearings are made, the ground is cleaned, and the fields, the montañas are felled, sugar mills are made, and bridges are laid over rivers and streams. They prefer it large and with a leather sheath that they fasten to the belt. They are

Translated from the German for the Human Relations Area Files by Frieda Schütze.

Only pp. 1-20, 97-327 and end illustrative pages I-II, XI-XXI, and LXXVII-CXXIII have been processed for this file. Omitted from the Files are sections on the archaeology of the Tierradentro region.

[This source presents a valuable contribution to the study of the ethnography of the Paez Indians, one of the largest Indian tribes of Colombia, enclosed largely within the Tierradentro region. This region is located in the southern part of the country and forms part of the eastern portion of the department of Cauca. In his study of the ethnography of the Paez, the author has concentrated his attention primarily on the community or parcialidad of Calderas. Outside of a few introductory remarks regarding the geographical position of Tierradentro and the prehistoric cultures of the region (the major portion of the archaeological material not having been translated), the author begins his meticulous study of Paez ethnography with

1: Nachtigall, Horst.

some general notes on culture history, demography and anthropometry and then proceeds to more specific information on various aspects of Paez material culture, with emphasis on dwellings, clothing and ornament, economy, crafts and techniques, and trade and transportation. The remainder of the source is concerned with the Paez life cycle, a brief analysis of political and family organization, law, language, religion, music and folklore.

The author, a member of the Institut für Völkerkunde of the University of Mainz, was assisted in the field by his wife who helped in preparing the manuscript for publication. The author gathered much of his data with the assistance of two native Spanish-speaking interpreters, Marcos Antonio Penkue and Victoriano Piñakué, the latter of whom was treated in an antagonistic fashion by the majority of the Paez in the community.

An excellent summary of Paez culture will be found on pages 238-248.

The German-Paez vocabulary which has not been translated for this source will be found only in the foreign text, category 116, pp. 228-251. Complete captions for the maps, figures, and illustrations appearing at the end of the text (following p. 250) will be found in category 116, pp. 295-303.]

/The data collected in this source are essentially a summary of previously known information on the Paez Indians (primarily from the writings of Castillo y Orozco of about the year 1735), supplemented by information gathered by the author during his brief stay of a few days in 1906 at the Paez villages of Tacueyo at the headwaters of the Palo river and at Huila, at the junction of the San Vicente and Paez rivers on the Indian reservation known as Tierra Adentro. The notes presented in the first half of this source give a brief ethnographic sketch of the Paez Indians, with particular reference to archaeology, location and

2: Pittier de Fabrega, Henry.

identification, physical characteristics, diseases, clothing and personal ornaments, house types, bridge construction, diet, cultivated plants, religion and superstition. The remainder of the source deals with various Paez linguistic elements such as phonetics, grammar, and vocabulary. The analysis of these latter data may be of value to those interested in Paez values and classification systems. /

[This work is primarily a study of one of several religious fiestas celebrated by the Paez of Calderas during the calendar year. Prior to the actual discussion of the fiesta itself the author presents a brief survey of other aspects of Paez ethnography, such as roads and routes of travel in the region, land ownership, child training, the selection and building of a house, house types, the settlement plan of Calderas, marriage customs, mythology related to fire, and the "conservatism" of the inhabitants of Calderas in contrast to the "liberalism" of the majority of Indians living outside this community but within the Tierradentro region. In reference to the fiesta of San Juan, much information is presented on preliminary preparation, such as selection and duties of ceremonial officials--the fiesteros, albaceros, and mayordomos, preparation of food and drink, candle and firework manufacture, "cleaning" of the church, and types of music and musical instruments used in the fiesta. The remainder of the source describes in detail the fiesta itself, accompanying religious ceremonies and related phenomena (e.g., the breakdown of costs involved in the ceremonies).]

[This paper presents a comprehensive study of the function and scope of shamanism and sorcery in Paez society. The author compares and contrasts the shaman and sorcerer in regard to training and acquisition of "power," their individual statuses in the society, psychological characteristics, and the socio-dynamic value of sorcery and shamanism. Chapter 1 deals primarily with the shaman and his function in the society with particular emphasis on his role in curing ceremonies and in the various purification rites. Chapter 2 is concerned almost entirely with the sorcerer and the methods he uses in his office. Additional data are also to be found on Paez concepts of sickness and the various types of plants used in their cure.]

[This source provides an excellent comprehensive summary of Paez economy, based primarily for its major substantive part on agriculture, and further supplemented by livestock-raising, and to a lesser degree hunting, gathering and fishing. Each of the above aspects are thoroughly discussed in detail in the text with comparisons being made between several Paez parcialidads (San Andrés, Lame, Mosoco and Calderas) as to over-all economic productivity. In addition to these data on Paez economy the author also presents additional ethnographic information on the mingas (communal work groups), and communal tasks as a whole, property, division of labor by sex, tenant farming in San Andrés, diet and food preparation, trading, family income and expenses, and the effects of acculturation on Paez society. The work contains many illustrative tables showing economic production, family income and expenses, etc./

[This source provides a general summary of Paez ethnography in highly compact form. The first part of the source, pp. 915-927, is primarily concerned with Paez culture history and relationships with the Spanish colonial powers, but data on geography, tribal divisions, agriculture, and language may also be found in this section. In addition to the Paez proper, the author also discusses various aspects of the ethnography of the closely related sub-tribes of the Paez, namely the Andaqui, Moguez, Pijao, Timana, and Yalcon. Additional information is to be found in this source on the Pasto (SC17) including the Popayanense and the Quillacinga, which has been subheaded. The second part of this source, pp. 937-956, deals in more detail with Paez and Moguez ethnography, primarily agriculture, domesticated animals, food preparation, house types, bridge construction, transportation, dress and ornaments, various aspects of manufacture, trade, social and political organization, the life cycle, warfare, aesthetic and recreational activities, religion, and beliefs about sickness.

The author was assisted in the field by his wife who was particularly helpful in preparing the section on marriage, and in the preparation of the source as a whole, by the Bureau of American Ethnology, the

/A major portion of this source is concerned with Paez social organization from the standpoint of kinship terminology (which the author identifies as being "...classificatory and bilateral"), and various aspects of kinship relations--grandparent, cousin, avuncular and nepotic, and in-law. These data, gathered with the help of a native interpreter, Victoriano Piñakué (the same individual used by Nachtigall in the gathering of his ethnographic data, see 1: Nachtigall, this file), were further checked as to reliability by showing them to informants from the parcialidads of San Andrés and Mosoco who verified their authenticity, with only minor changes. The work concludes with a study of Paez family organization and marriage customs, particularly the amaño or trial marriage./

75 7. The curer toasts Thunder with the chicha, sprinkling
783 it in the air.

8. The curer washes the patient with a calabash of remedies. He fills up completely the hole that contains the "dirt," sprinkles the remaining aguardiente, and ends the cleansing with some final advice. It is 3:00 or 4:00 in the morning.

All treatment of illness is carried out with this cleansing procedure. That is to say, when the impurity (ptans) has been removed from the body, the health of the patient is restored. The curer combats the ptans. In a sense, the cleansing is a hard fight in which the curer is engaged.

756 The tama. The tama is a chonta staff about 40 centi-
755 meters long and indispensable for every cure.

While in other cultures the medicine man uses the maraca as an indispensable accessory in the art of curing, viewing it as having a mythical origin and thus a sacred character and magical properties, and while, according to Roth, certain piai of the Guianas use wooden dolls in their conjurations (6), among the Paez this little staff called tama

755 is used. In Santa Rosa, a curer-sorceress uses in her treat-
756 ments a wooden dolly dressed like the people, received, ac-
532 cording to the informant, from Thunder himself, and called
552 "Soft wind of Thunder."

[773] According to all the evidence, this name is derived from that mythical personage, more precisely that culture hero,

/245 cont./

*765 756 783 [113]

8. See: "Mitología y Cuentos de la Parcialidad de Calderas, Tierradentro /Mythology and Tales from the Parcialidad of Calderas, Tierradentro/," Revista Colombiana de Antropologia, 1953.

[114] This type of cleansing has not been confirmed by any informant, curer or layman, young or old, male or female, from the Parcialidades of Santa Rosa, San Andrés, Calderas, Togoima, Avirama, or Mosoco.

342 796 *756 [241] Conjuration of the new rancho. To protect their fields from the voracity of wild animals, they build a small rancho. Before occupying it, they perform the following conjuration. The curer blows remedies in the center of the rancho where the hearth will be. He digs a hole and buries shu and shulape. He makes a fire and casts fiundayuskei and bitopiskue into it. He gathers up all the ashes and throws them outside the rancho. He revives the fire again and roasts a green ear of maize, which is given to a dog to eat. If the dog does not die, it is a sign that there is no pest there and the owners can occupy it. In the opposite case they must abandon it. In Santa Rosa the Té eu eats the ear of maize.

This same ceremony is performed upon beginning a house. They give the dog roasted maize since it is not the season for green ears. Then they drink chicha and aguardiente.

241 *756 E huse uña (clearing-eat). The harvesting of the crops from new clearings must be initiated by the curer. The owner of the field provides coca, tobacco, and aguardiente and invites the curer. The entire family goes to the field.

The té eu prepares a calabash of remedies based on Chayuts, shugues, tayuskei, echiutse, ul fiñ, tatse. He sprinkles the clearing with this. He distributes as many bundles of remedies as there are persons present, for them to chew, to swallow the juice, and to rub their bodies with the remainder.

/247 cont./

776 Manuel José Tipo was in Calderas (9). The people tossed

539

[113]

9. Frazer, Sir James George. La Rama Dorada /The Golden Bough/, Fdo. de Cultura Económica, Mexico, 1951, pp. 33-34.

poison into the lagoon and he had to leave the place in the company of his wife. He went through the air to Santa Rosa, where, upon arriving, he let his wife fall. It killed her. In this parcialidad he was in love with a cacica /female cacique/. He always came to her well-dressed, with a rich bag of chachalacas. The father of the cacica, curious as to how he had killed so many chachalacas, followed him to the montaña and noted that when he undressed he had snakeskin on his back. He was a snake and for this reason caught birds with ease. He told this to his daughter. She, accompanied by a servant girl, set out on the following day for her field of very fertile soil. She had handsome fields of potatoes, cabbages, and onions. Thunder came to visit her. The place began to become a lagoon, and the servant girl warned her mistress of the danger that they were in. She paid no heed. Lucía Kalguesh, the cacica, remained there, living with Thunder. The lagoon was very rough, and Thunder deceived his wives a great deal. Then the puswesh (the stars) came down, cleared the forest around the lagoon, and dug out a drainage ditch for the purpose of /248/ drying it up. Just as they were about to achieve their end, Thunder came out and begged them not to dry up his dwelling. The angry puswesh sewed his mouth and cut off his tongue, for they were too big.

Thunder continued to behave badly, and the curers chased him to another lagoon, without his wife and children.

776 Kallumb. He lives in the springs and in the caves. He is a good spirit. The people say that the Virgin left a roving

/260 cont./

754 If a person kills himself in a fall, it is believed that the
[783] sorcerer sent him ptans.
[761] h) To cast a spell on the plantings, they use tobacco, matches, and other remedies with which they are burned and destroyed.

As will be noted, in their enchantments the sorcerers do not use any parts or objects belonging to the victim, such as hair, nails, clothing, etc. Most of the remedies that they use are herbs or objects that have properties noxious to man or can cause him harm.

The sorcerer believes that putting them in contact with the soul or simply with the body produces the desired effects.

754 /261/ Paez sorcery is a clear case of imitative or
789 homeopathic magic, according to Frazer's classic definition. It is "desire dominating the world with instruments born of desire " (10).

[118] 10. Ponce, Aníbal. Estudios de Psicología /Psychological Studies/, El Ateneo, Buenos Aires, 1947, p. 363.

754 The Paez fear illness and death and live in the fear that
182 the whites may take from them their land, their ranchos, their plantings, that is to say, their very sources of survival.

While the sorcerers attack the customs of a capitalist economy and transculturation openly, the curers protect the community against sickness and against the attacks of individuals or groups, by means of their divinations and their vigorous and constant conjurations. In this sense sorcerer and curer are identical. They protect the community.

683 Punishment of the sorcerers. The sorcerer is feared by
754 the entire population; identified throughout by it, he suffers general enmity; torrents of hatred arise against him, ending most of the time in violent punishment: confinement in the stocks, whippings, dunkings, and even exile.

Valcón and *Timaná* in an area delimited by the high crests of the Cordillera Central on the west, the snowcapped peak of Huila on the north, the valley of the Páez River on the east, and the region of the Río de la Plata and the Moscopán River on the South (Cieza, 1932, ch. 32), although some groups lived in the valley of the Cauca River bordering the Cordillera on the west (Otero, 1939). |9|

Pijao.—The *Pijao* (*Pinao*) were the strongest and most warlike neighbors of the *Páez*. They inhabited the eastern slopes of the Cordillera Central from La Plata to Ibagué, which included the region of the Río de la Plata and the left side of the Páez River, but extended to near Buga on the western slope of the Cordillera Central. The Páez River formed their frontier with the *Páez* and was their southwestern limit. They extended northward to the territory of the *Quimbaya*, and one of their divisions lived in the Cauca Valley, near Buga. (Simón, 1882–92, vol. 3, ch. 53, p. 330; vol. 4, ch. 24, p. 156; Ordoñez de Ceballos, 1938, chap. 28.) The *Pijao* were bordered on the north by the *Quimbaya* and *Panche*, on the east by the peoples occupying the hot valley of the Magdalena River, on the south by the tribes of the upper Putumayo and Caquetá Rivers, and on the west by the peoples already mentioned and by the *Gorrón* and *Lile*, near the Pacific Ocean. Near them in the Huila Plains were the *Tama*.

C. (1920), on archeology and ethnology; Garganta Fabrega (1942), on coca; Douay (1900), on language; Jiménez (1936), on geography; Ortíz (1935), on the native communities of Jamondino and Males; Otero (1938), on the *Guanaca* and (1939) on languages in the Departamento del Cauca; Pérez (1862), on the geography of Cauca; Pittier de Fabrega (1907), on the *Páez;* Reclus (1893); Thrasher, (1860–61); and Triana (1907).

LANGUAGES

P 197 175 Ever since the chroniclers wrote of the Conquest, the problem of the native languages in this part of Colombia has been extremely complicated. One writer affirmed, "It is certain that there are more languages differing from another than there are leagues in the whole province" (Jijón y Caamaño, 1936–38, 2: 179–82). According to the "Relación de los Sucesos de Pedrarias Dávila," by Governor Andagoya, the Spaniards ascending the Cauca Valley found within 2 leagues east of Cali:

> There are other peoples with a different language from that of the *Lili*. In the ten leagues of the road toward Popayán there is another people of another language . . . toward the other cordillera of the mountains in the eastern part . . . the language of Popayán extends some ten leagues toward the south. And from the top of the mountains toward the valley of Timaná is another different language and ten leagues beyond [from Popayán] from one cordillera to the other there are other different languages all the way to Quito. [Cuervo, 1894, 2:113.]

P 197 But modern linguistic studies in this region have classified the languages spoken at the time of the Conquest as follows:

- *Chibchan* family
  - *Chibcha-Aruaco* group
    - *Aruaco* subgroup
      - *Andaquí* (Castellví, 1934)
  - *Talamanca-Barbacoa* group
    - *Páez* subgroup
      - *Páez, Paniquitá, Quilla*
      - *Totoró, Polindara, Moguez* (*Guambia*), *Coconuco*, and *Guanaco*
      - *Pijao, Panche, Quimbaya, Pantágora**
- *Cochean* (*Kamsá*) family
  - *Quillacinga* subgroup (Castellví)
- *Tucanoan* family
  - *Pasto* subgroup†

Po [197]

*Castellví, 1934; *Jijón y Caamaño*, 1939; and Otero, 1938.

†Rivet cited by Guerra. Jijón y Caamaño classifies the *Pasto* or *Cheiguer* language in the *Talamanca-Barbacoa* group of the *Chibchan* family.

/9 cont./

114 [101] Our stay in Colombia lasted a year, from August 8, 1952, to August 12, 1953. During this time I worked first under the direction of Herr P. Pedro José Ramirez Sendoya as Investigador at the Instituto Etnológica Nacionál, beginning September 20, 1952, as Jefe de Arqueología at the Instituto Colombiano de Antropología. After several weeks of inventorying the antiquities [126] in the region of San Agustín we traveled to Tierradentro where we collected the field material of the present publication during the period from December 24, 1952, to April 24, 1953.

122 The scientific work in Colombia was financed by the Ministerio de Educación and the Instituto Colombiano de Antropología. On this occasion I should also like to express my sincerest thanks to the then Minister of Education, Herr Dr. Lucio Pabón Nuñez, and to the Director of the Instituto Colombiano de Antropología, Herr Dr. Antonio Andrade Crispino, for the help rendered. Here I should also like to thank the Vice-President of the Academia de Ciencias Naturales, Herr Prof. Dr. P. Enrique Perez Arbelaez, who, during the early period of my stay in Colombia, smoothed many paths for me. I am no less grateful to the colleagues of the Institute for the scientific help given to me, as well as to the workers in Tierradentro for their diligence in the difficult and, at the beginning of the rainy period, quite unpleasant work of digging.

126 122 For the research and travel equipment, a number of firms generously put material at our disposal. For the photographs published in this book I had the use of a Leica III f with Elmar /10/ 1:3.5 and accessories, as well as a Rolleiflex with Tessar 1:3.5. For special photographic purposes Rodenstock-Heligon 1:2.8 wide-angle lens, a Steinheil-Culminar 1:2.8 telephoto lens, and Proximeters I and II from H. Schneider & Co. were used with the Leica, and with the Rolleiflex the Rolleikin equipment with the Rolleinars 1 and 2. The interior shots of the grave holes and the native houses were taken with Osram SO and Philipps Pf 45 flash bulbs, as well as with Seuthe flash capsultes. Adox KB 17 and R 18, as well as Perutz Perpantic film, served as negative material for the photographs.

/10 cont./

128 [114] For assistance in drawing up the manuscript, I should like first of all to thank my wife, who accompanied me on all my trips in Colombia, recorded the field research there stenographically, and has attended to transcribing the manuscript. I thank Herr Prof. Dr. E. L. Rapp, Mainz, for his friendly advice with regard to the transcription of the Paez language, and Herr Prof. Dr. Wilhelm Geilmann, Mainz, for the roentgenographic examination of the prehistoric teeth and bones available from the grave chambers of Tierradentro. Here, too, I should like to thank the artist of the Institut für Vor- und Frühgeschichte of the University of Mainz, Fräulein Margot Kunzmann, for the technical drawings and maps, and the Herrn. cand. phil. Wolfgang Lindig for proofreading.

122 [128] The Deutsche Forschungsgemeinschaft, which had already financed my journey both ways and granted a considerable allowance for working up the scientific results, also assumed part of the printing costs for this publication. For this I should like to express my respectful gratitude to the President of the Deutsche Forschungsgemeinschaft. For public and private financial and moral support I must thank Herr Ministerial Director Prof. Dr. Hans Becker and Ministerial Counselor Dr. Otto Wegner of the Ministry of Public Worship and Education /Kultusministerium/ of the Rhineland-Palatinate, the Chief Burgomaster of the city of Mainz, Herr Franz Stein, the Curator of the University of Mainz, Herr Fritz Eichholz, and the Chairman of the Supervisory Council of the Dykerhoff Portland-Zementwerke AG., Herr Consul Alexander v. Engelberg.

Mainz, October 1, 1954. H. N.

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of
Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez fought for their liberation on the republican side under Gregorio Calambás. Their leader was captured and shot. After the victorious termination of the struggles for independence, Gregorio Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[151] as the eastern neighbors of the Quimbaya, they perished in countless battles with the Spaniards. As late as the eighteenth century, remnants of them lived in the valley of the Rio Negro de Narvaez, as neighbors of the Paez. They, called Bemb by the Paez, as well as the Guanaca, spoke languages that differed from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweš by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano inhabit the west side of the Central Cordillera and today live in the valley of the Piendamó around Silvia. The life and customs of his tribe have been recently represented by the Guambiano Francisco Tumiña Pillumbe in a number of very instructive /103/ drawings, each of which was provided with a brief text by Gregorio Hernandez de Alba.

/103 cont./

127 We know little about the other Indian cultures of southern Colombia existing at the time of the Conquista. The conquistadors had tasks other than drawing up scientific ethnographic descriptions of their cruel enemies. Nevertheless, working with subtle methods, modern ethnological and linguistic research in the old sources has produced outstanding results.

114 Our knowledge is very inadequate with regard to the Paez, 127 who, with approximately 25,000 persons, constitute the largest [161] non-Spanish-speaking population group within Colombia, next to the Goajiro, the inhabitants of the Guajira Peninsula in the northern part of the country. The oldest dates come from [797] Eugenio Castillo i Orosco, who, from 1735-1755, was active as a missionary in Tálaga -- often at the risk of his life, as he reports -- and wrote down a vocabulary, a grammar, and some cultural data about the Paez. This manuscript was printed in 1877. Further ethnological data are given by the Colombian general, Carlos Cuervo Marquez, who, on his extensive journeys, also traveled through the Tierradentro region from north to south and produced the first reports about its archeological cultures. The next one, in terms of time, to report on the Paez was the American ethnologist, Henri Pittier de Fábrega, who in 1906, coming out of the central part of the Cauca Valley from the northwest by way of Corinto and Toribió, spent a few days in Tacueyó and Huila. Georg Bürg, who first investigated the archeological objects of Tierradentro more thoroughly, likewise lived for a time among the Paez and gives a few ethnographic notes in his report. In his comprehensive survey of the highland tribes of southern Colombia, Gregorio Hernandez de Alba also reports about the Paez, with whom he became acquainted in connection with his own research. Graciliano Arcila Velez undertook a blood-group examination on 303 Paez. The first thorough special study of Paez culture from the standpoint of the religious and social life was made at the time of our stay in Tierradentro by the Director of the Archeological Park of San Andrés, Segundo Bernal Villa.

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive T fashion with wooden pans, the workers standing up to their knees [563] in water. The Paez do not generally intermarry with the Negroes, [186] but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 b) The Paez who north of the Rio Ullucus have settled 361 both banks of the Rio Paez as far north as Nevado del Huila. 563 They have in part intermarried with the white and mestizo colonist P population. The /106/ places inhabited by them are: Araujo, [103] Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

T c) The pure Paez villages of Calderas, Chinas, Huila, 162 Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez 103 of Calderas have preserved their cultural individuality most P purely. We worked primarily among them, and the present ma- ● 114 terial, insofar as nothing is said to the contrary, refers to the 121 culture of the Paez of Calderas. The Calderun, as the inhabitants P of Calderas are known in the country, are by far the most unap- 181 proachable of all the Paez. They have best kept to this day the 648 three laws of Juan Tama, the mythical hero of the Paez, which 101 were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

/111 cont./

3. Anthropological Remarks

114 Since I did not take any anthropological measurements
141 among the Paez personally, I cannot give any numerical data. These investigations were undertaken during my stay by the Colombian anthropologist, Nestor Usacategui, but have not yet been published.

14 From the somatic point of view, as far as the men are concerned, they are generally medium-sized, slim, with narrow shoulders, seldom thickset. As practiced climbers and mountaineers, they are never obese. They do not give the impression of being undernourished, but their padding of fat is very thin. Their arm and body musculature is also poorly developed (cf. Ill. 173 /see p. 277/). They are unable to lift large loads.
[482] A maximum of 25 kilograms is transported by means of the fiber bags hanging down on their backs and carried with a chest-band. Their calves are muscular, but not fat. Fallen arches prevail
[481] generally. Their gait is slightly bowlegged; the great toes point inward during walking. The same somatic peculiarities are also found among the women. In youth they are well-proportioned, in old age never fat.

141 In general brachycephaly predominates, but it is not extreme. The faces are oval, the cheekbones only slightly prominent. The nose is primarily straight, sometimes slightly concave, and of medium width. Among women one sometimes finds slightly distended alae. The forehead /112/ is high, straight,
142 and steep. The eyebrows are not very pronounced. The eyes are sometimes slightly slanting and show -- especially among women -- a slight Mongolian fold. The mouth is large, the lips somewhat puffy. The eye color is dark brown and shining, the skin color medium-brown. In Avirama there was proudly introduced to us a family whose members, along with normal skin-color and dark eyes, have reddish-blond hair. One of the grandfathers was said to have been lighter colored and to have had even lighter hair. The normal color of the hair is dark; the hair is straight, but not stiff, and sometimes wavy. Even in old

/126 cont./

433 only on the basis of knowledge about their rites, ceremonial acts, mythology, cultic preparations, or festivals of thanksgiving.
433 This is difficult in view of the great cultural poverty of the Paez,
241 but it is noteworthy that nothing connected with agriculture or
[233] with cattle-raising reveals any kind of cultic relationship.
Neither during sowing nor harvesting was I able to observe or
[224] learn of any kind of typical agricultural rites, whereas in connection with hunting, now economically unimportant, a number of precepts and prohibitions surround the hunter before and after his hunting.

a) Agriculture

243 The chief crop in the Calderun region, as among the Paez
191 generally, is maize, which was at the same time the most important cultivated plant and the basic food of the American peo-
● 114 ples from Patagonia to Canada in pre-Colombian times. To this day the discussion about its culture-historical origin has not come to an end. Formerly Central America was regarded as the original land of its cultivation. On ethno- /127/ botanical grounds and plant-geographical investigations, K. Birket-Smith (p. 32) assumes that the original land of maize cultivation is not Central America, but northern South America, since, according to the more recent botanical discoveries, the original form of maize is believed to have been found in the form of the pod corn (Zea mays tunicata) of the Andean countries. Not to be left unmentioned are the voices which most recently have argued for an Asiatic origin of maize, as well as of cotton (Zerries, 1952, pp. 104/5).

If we compare these hypotheses about the origin of maize with the first authenticated reports about its occurrence in America, we find as the oldest date the year 1493, when Columbus had already brought maize to Europe from his first journey across the ocean. As early as 1525 maize was extensively cultivated in the fields of Andalusia (Schweinfurt, pp. 514 f).

P /127 cont./
241
[243]

Maize cultivation, like every other kind of tillage among the Paez, is done by the system of burning off clearings, a form of cultivation which is widespread among all tropical agriculturalists and is commonly known in America under the designation "milpa system." The term is Central American (probably Aztec) and means "maize field" or "bare surface in the forest," but the latter always in the sense of a burned-over piece of land planted with maize. The Colombian word corresponding to the designation "milpa" is "roza," to which in Peru the designation "chacra" generally corresponds, although there the word is also used for terraced fields that are cultivated regularly every year.

The basis of the milpa system of clearing by burning is an extensive type of agriculture, in which, before sowing, new land is cleared of its growth by burning and after the harvest is (again) abandoned for several years or forever. This type of agriculture is feasible in sparsely settled regions in which there is sufficient land to permit the intervals between the separate burnings of the clearings to be long enough. If the intervals are too brief and the land burned over too often, all kinds of taller growth are eradicated. The grass covering which then forms and grows all through the year makes the land worthless for agricultural use, whereupon a larger population can no longer feed itself from its land. This is demonstrated in large areas of Central America where the dense population living in large urban cultural centers has exhausted the soil with the milpa system to such an extent that today many of these old culture areas are treeless, uninhabited grassland.

P 114
241

O. F. Cook (p. 323) regards /128/ the simultaneous cultivation of one-fifth to one-tenth of the available land as a sound form of the milpa system. This corresponds to a clearing cycle of five to ten years. There is sufficient land for this in Calderas. A cleared field is cultivated there once, at most twice in succession, and then it is left to rest at least ten, but usually 15 to 20 years (Ill. 146 /see p. 264/). The areas used by the Indio villages, then, present a picture completely different from

C 311

/147 cont./

283 alpaca wool and the wool of their wild relatives, the vicuña and guanaco.

283 824 The agave (mbāts) grows in all parts of Tierradentro, and the fibers of its fleshy, watery leaves are used for plaiting, weaving, and the making of nets and ropes. The fiber must be obtained immediately after the leaf, 1.50 meters long, is struck off the plant, since the moisture is lost very rapidly and it is then very difficult to remove the dry flesh from the fibers. For this purpose every house has a tree trunk leaning diagonally against the wall in the shadow of the roof, and a string with a small stick hangs down from the upper part of it. This is stuck crosswise into the leaf hanging tip-downward, and then the pulpy parts of the agave leaf are scraped downward rapidly with a very sharp-edged, halved bamboo tube split lengthwise, until only the long, continuous, clean fibers /148/ remain (Ills. 177 and 178 /see p.279 /). These are tied loosely around a beam to dry, until sooner or later they are spun and twisted for use.

283 [462] Men and women employ different techniques to obtain thread from the agave fibers. The men twist the thread with the hand on the upper thigh, whereas the women spin the agave fiber, like the sheep wool, into thread with the spindle. Two methods of spinning are distinguished among the South American natives, depending on the shape of the spindle and the way it is held. O. Frödin and E. v. Nordenskiöld call these the Bororo and the Bakaïri /Bacairi/ methods, according to their characteristic occurrence. The first method is the older culture-historically. In this case the spindle staff is symmetrical in cross-section and the whorl is generally near the lower end. In spinning, the spindle is held more or less horizontally and is placed with the lower end on a forked twig stuck into the ground or is held between the toes. The spun thread is first wound onto the shorter part below the whorl and only later wound up on the main part above. The principal area of distribution of this type

[114] [171] [171]

/155 cont./

294 285 From the other side there is a corresponding procedure with the then outer plaiting-strip, so that the strips are plaited alternately from both sides always only to the center. This produces a very uniform and firm band.

A thread of the agave fiber is used to sew the plaited bands together. In order to give the hat brim sufficient stiffness, leaf ribs are sewed on the underside over the seams.

e) Weaving

285 286 ●114 The demarcation of plaiting from weaving is not uniform. In the literature written in English the two are generally not differentiated. According to H. Nevermann (pp. 4-6), the following conditions must be given for the simplest technique of weaving, namely, rod weaving /Stabweberei/, such as is also practiced among the Paez: 1) the stretching of the threads or fibers on a frame, 2) long weft threads, 3) rectangular crossing of warp and weft, 4) mechanical formation of the first and second shed. The last point is the decisive one, for in plaiting each weft thread must be drawn separately over or under each separate warp thread, whereas in weaving this is done over a certain number of longitudinal threads simultaneously by means of a heddle rod or something similar. More complicated types of weaving, for example, little-board weaving, comb weaving, or braid-grid weaving /Brettchenweberei, Kamm- or Litzengatterweberei, types of weaving found in Indonesia and described by Nevermann, pp. 16-18 (see the bibliography in the foreign text, p. 325)/, do not occur among the Paez.

/156/ 1. Weaving Apparatus for Carrying Bands

286 The weaving apparatus for the carrying bands of the fiber bags (vitoñãpc) consists of a forked branch, the sides of which must not be too far apart and should, if possible, run parallel. Its size is 60 to 80 centimeters in height and between 20 and 60

/169 cont./

491 rivers (*), for example, the Rio Kokiyó, which flows through

[114] *I did not see anywhere the simplest form of a bridge mentioned by H. Pittier (p. 320) /see the bibliography in the foreign text, p. 326/ in the northern part of Tierradentro, a bridge which people cross hand over hand on a liana stretched across the river.

the Calderun region, there are strong bridges over which even
491 loaded horses may go without trouble. This type of bridge
499 consists of two tree trunks placed a good meter apart, upon which poles are tied crosswise as planking. Only about every fifth planking pole is lashed, while the ones in between are held fast by a longitudinal beam laid over each of the main supports. On either side of the bridge, poles are tied vertically and horizontally as a railing and at the same time serve to support the roofing. The latter is a characteristic of all such bridges (Ills. 194 and 195 /see pp. 285 and 286/). One finds it not only on the bridges in the colonists' region of Tierradentro, but /170/ also, for example, on the bridges of the upper Magdalena River, the region around San Agustín.

The third type of bridge is found in two artfully constructed arched bridges made of bamboo over the Rio Paez at Belalcázar and Avirama (Ills. 191 to 193 and 196 /see pp. 285 and 286/).
[284] They are both quite similar in construction and, like all the other bridges of the Paez, made without nails or other iron parts, but simply lashed with bast and lianas. For reinforcement, however, two wire cables have now been stretched underneath.
491 Although even the Spaniards at the time of the conquistadors
177 report on the "weak and flexible bamboo bridges" and on the
499 "liana bridges" of Tierradentro (Hernandez, 1944, p. 189), in
[175] the case of the two above-mentioned arched bridges, which are relatively difficult to construct, it seems not to be a matter of an original Paez technique. Indeed, these would be the only suspension bridges of this type in pre-Spanish South America.

3. Customs during the Course of Life and of a Day

182 The Paez generally give the impression of being contented
593 human beings, and it seems that marriage and family life are
[157] better than average. Of course, the observations on this are very
[114] scanty, for, on account of the remote location of the individual dwellings, the research worker always has only a brief glimpse of family conditions at any one time. This very solitude, however, and the consciousness of greater dependence on one another within the family, favors its cohesion, even as it reduces the conflict and irritation which arise through women's gossip when people live too closely on top of one another.

842 Basically every family wants a great many children -- at
[123] any rate so said all the men questioned. Two Calderun women, however, /184/ confided to my wife that there was a remedy -- which they and other women, too, naturally did not use! -- that
[825] would with certainty prevent conception: One must eat some of
[237] the spittle of a mula (the female, infertile cross between horse and donkey), and then one would no longer have children. They said that a woman does this only when she has already given birth to a great many children. In general every girl desires a great one

/189 cont./

b) Maturity

881 Today no rites or ceremonies for the youths take place any
[178] more. In former times they were led to the sacred lagoon of Juan
[778] Tama or to the heights of Cuetando, and there they had to build
a hut and lay out a small cornfield as proof of their capabilities
as a man and father of a household (Hernandez, 1944, p. 203).

[582] A girl comes of age with puberty, that is to say, she may
[836] marry. Before that and before marriage, intercourse is not per-
[535] mitted. On the occasion of the first menstruation in former times
a special dance was performed (itsa-kó), during which the young
girl was bathed naked in chicha in a pit outside the festival house
881 (Castillo i Orosco, p. 85). Today this no longer takes place;
285 rather, a girl, when she goes to the dúyat for the first time at
787 about 15 years of age, takes along agave fibers and during the
[178] approximately five days that she stays there plaits a very pretty,
[262] small fiber bag (yāhalečkwe) about the size of a fist. There
are no additional food prohibitions or similar things. After that
she goes to a distant river to bathe. On the way there she lets
the bag fall. A married man passing by lets it lie, for he knows
that it belongs to a young girl. A young man, however, who
happens to be coming that way sees the beautifully worked bag,
picks it up, and uses it as a small money-bag. Without knowing
who made the little bag, he will -- people are convinced -- marry
this girl.

/190/ c) Marriage

595 The present form of marriage of the Paez is monogamy.
● 114 H. Pittier de Fábrega (p. 314), however, concludes from their
traditions that the Paez were formerly polygamous and were con-
verted to monogamy only through education on the part of the
missionaries. I could find no clue in their mythology for actual
595 polygamy in former times. The social structure and way of life
591 of the Paez, however, prohibits living alone for unmarried girls.
[589] In case they have no relatives or do not find lodging in the house
of relatives, another man takes them into his family. The girl

/191 cont./

584 the city, even before reaching it, be devoured by a Pijao. There-
754 fore, this has never been attempted by any girl. An example of
539 the opposite is instructive in this connection. Our Colombian
114 colleague, Segundo Bernal Villa, who lived in the park of San
584 Andrés with us and at the same time carried on his ethnological and sociological research in Calderas, had often mentioned, jokingly and in order to make himself popular, that he intended to look for a bride in Calderas. He was often seen with a pretty Calderun girl by the people in the village, as he conversed and went walking with her. One day when he presented her with a bottle of brandy, not knowing or not heeding the courtship custom connected with this, his joking was taken seriously and very much
[423] amiss. The girl was sentenced by the cabildo to severe corporal
[692] punishment and, after this was carried out, was married the next day to a young man of the village.

584 For the official offer of marriage, the father of the young
431 man goes to the house of the girl's parents. He takes along a gourd calabash with about ten liters of chicha and five bottles of brandy. First he converses only casually with the entire family of the girl for half an hour, many jokes are made, and they talk about this and that. Then he asks the girl's father whether his daughter would not like to marry his son. The parents reply that they have only one daughter and that unfortunately they cannot give her away, since they themselves need her so much. Thereupon they converse further, talk about this and that, and then the father of the young man asks a second time whether the daughter of the house would not like to marry his son. But this time, too, the father of the girl replies that he has but one daughter and can unfortunately not give her away. Then they talk some more, until the guest asks a third time: "Can you not give me your daughter for my son?" The father of the girl then replies: "Very well, I shall give my daughter to your son, but I expect him always to treat her well and not to speak ill of her!" Then the guest hands over the bottles of brandy which he brought along, the first to the father of the bride, the second to the mother of the bride, then the third to the bride, and then a bottle each to her brothers and sisters. He gives all the chicha that he brought to the bride's

IV. Spiritual Culture

1. Language

121 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 ●114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of
the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic
classification of Paez within the language groups of Colombia and
classified it in the southwestern group of the six Chibcha language
groups. (These Chibcha-speaking tribes correspond neither
archeologically nor ethnologically to the true Chibcha (Mwiska)
of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic
recording lay, aside from the brief time at our disposal, in the
lack of grammatical training of the interpreter, who otherwise
spoke Spanish very well, but who, during dictation or in transla-
tions, often said the same sentence entirely differently when re-
peating it; possibly because he could translate it better this way.
When his attention was called to this, the stereotyped answer
was: "One can say it that way, too" or "that is the way we speak."
Another thing was that the interpreter was able to summon up the
unusual mental concentration for linguistic recording for only
two or at most three hours daily, distributed over the forenoon
and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collec-
tion of ethnological data, the following word list was also made
with my Calderun interpreter, Victoriano Piñakuẽ.

In the Paez alphabet the complete palatal range, which
includes all consonants, is noteworthy. Almost as numerous are
the consonant combinations with the English "w." In the

/223 cont./

193 576

address him as "father of ..." If the person concerned has no children, one addresses him, like contemporaries, by his first name, "since a man who has no children is no man."

Older women are respectfully addressed "ikf."

193 601

you (father or mother to son):	kwe
you (father or mother to daughter):	ĭča
you (wife to husband):	ĭngya
you (husband to wife):	ĭkwe
you (brother to brother or sister to sister):	yakté
you (brother to sister):	pe's
you (sister to brother):	ndyĭš
you (fem.):	ĭkf, respectful address for older women
he, she, it:	kya
we (masc. and fem.):	kweš
they (masc. and fem.):	kyáñweš

193 [576]

you /plural/: not known; in the corresponding translation the word cúkai (all) was sometimes used. In the grammar of Castillo i Orosco, the Paez word "icuexs" (ikweš) is given for "vosotros." The interpreter translated this for me as "Ustedes." It is not used to conjugate verbs. [114]

The possessive pronouns correspond -- except in the third person singular -- to the personal pronouns. They are placed first.

/224 cont./

193 no one: tẽčanyópa; tẽčanyópa máhiméta, "no one is working";

several, various: ko; ãtya ko hímba hipt, "I several horses have";

many: tak; tak násа, "many people";

little: wẽ; very little: táwala wẽha.

193 Verbs: The infinitive forms of the verbs end in -ya. The
● 114 only data thus far published about the conjugation system are to be found in Castillo i Orosco, who conjugates the verb "to write"
[177] in all paradigms according to Latin grammar. The word forma-
[797] tion of the model verb and the conjugation are artificial and set up for teaching at the mission schools. People do not speak that way in Calderas.

193 The conjugations of a few verbs given in the following do not
124 represent all the conjugation possibilities, since -- as was men-
177 tioned -- the interpreter lacked a knowledge of Spanish grammar. Hence the schema of the paradigms is largely theoretical. Everyday speech is different, and especially in storytelling the interpreter used forms which he reproduced in Spanish with participial constructions. Nevertheless the forms reproduced here are /225/ "correct" in the sense that one "can" speak this way and be understood while using the forms.

193 Besides the four tenses reproduced here (present, future, and
[124] two forms of the perfect), there are probably also forms corresponding to the conjunctive, which, however, the interpreter neither understood nor was able to reproduce in Spanish. The forms of the future are not always used. Very often the present is used with the addition of "tomorrow" or "later," for example, ãtya gwágwan kúskay, "I speak tomorrow," instead of ãtya gwágwahípt, "I shall speak." The forms of the two past tenses are apparently used arbitrarily. To my questions on this point I always merely received the answer: "one can say it this way and also that way." Here, too, the addition of ónna, "yesterday" (in context: ónnaha), or esé, "some time ago," is customary.

[126] The abstract, consecutive listing of the forms of a conjugation is hardly possible for the Paez. I always had to make

P /291 cont./
533 properly with their instruments and simply uniformly beat sixteenths.
[177] Thus it seems that the melody is more original and hence more
[534] firmly anchored in the tradition of the Paez, and that with the borrowing of the drum, the corresponding modern rhythm was also
C 533 adopted. This has been corroborated for me by an observation per-
534 taining to the music of the Negroes of Tumaco in the Colombian
[172] port city on the Pacific coast. There, among the descendants of onetime slaves, West African musical instruments with corresponding Negro designations are still in use today, among others the xylophone-like marimba and two drums, the conical konuno with skin stretched over one side and the cylindrical bass drum covered with skin on both sides, the bombo. The latter shows the same type of stretching as the Paez bass drum and is also played with two drumsticks, one of which, provided with a raw-rubber knob, is struck on the skin and the other, a simple stick, on the frame of the body of the drum.

P 533 The musicians are always men. They play the music as
[462] amateurs who learn one or another instrument because they have taken a fancy to it. The drum is the more popular instrument, whereas flutists are less numerous and primarily limited to certain families.

P 535 The dances danced today, which, by the way, not everyone
[171] masters, correspond to the Colombian bambuco, though they do not show the dexterity and lightness of movement required for that, such as is found among the Colombian rural population in other parts of the country.

P 535 By way of a note, there should be cited the dances which H.
114 Pittier de Fabrega (based on E. Castillo i Orosco) mentions for the Paez and which in some of the designations, point to an independent culture: onza-kó, /292/ "mouse dance," nwi-kó "buzzard dance," itsa-kó, puberty dance of the girls, eč-koi-kó, dance of the spirit-flute, tel-koi-kó, dance of the long flute or war dance, la-kó, dance to dedicate a house, etc.

1: Nachtigall--215 E-5 (1952-1953) 1955 SC15 Paez SC15

/292 cont./

5. Folklore

*539 The present fund of tales of the Paez is neither rich nor varied. Here, too, a certain impoverishment has undoubtedly taken place, as may be seen from fragments of larger complexes of myths. Among these there are the "Story of the Woman from Whose Body Useful Plants Come Forth," stories about transformed animals and human beings, as well as stories about werejaguars. [171] The story of the ghostly human head that comes rolling by is also extraordinarily widespread in North and South American legends [176] and has a manifold lunar-mythological meaning. In contrast to this, the complete absence of typical stories about the forest spirit (gĕlyŏmp) is noteworthy, although the latter plays an important role in the religious conceptions of the Paez. Animal and transformation tales are only very dull and colorless.

● 114 609 *539 [887] Unfortunately, the reluctance of the Paez to communicate is particularly frustrating in the recording of the myths. It is primarily the old people who can tell stories. But they are the very ones who are particularly standoffish toward the stranger. The chroniclers and early reporters tell us nothing about the folklore of the Paez, and even the most recent travelers of the 'thirties report only the story of Juan Tama or deny that the Paez have any mythology at all.

12 609 *539 [554] The stories collected by S. Bernal Villa and by myself could surely be augmented with better acquaintance among the old people. The unpopularity of our interpreter, especially among the old people, was sometimes so great an obstacle that Victoriano had to ask suitable informants for some of the stories told about his father or uncle.

*539 The themes of the stories chiefly consist of tales about Thunder (Nos. 1-12), mostly under his names of Juan Tama, Llivan, Chautĕ, or Juan Chiracol. In the myths he is the first shaman and teacher of the present-day shamans (see under "Religion" /see pp. 176 ff. /) and considerably more powerful than human beings. He is not an exalted, numinous figure, however. On the contrary, people in olden days /293/ sometimes treated him quite badly, threw poisonous herbs in his lagoon,

/293 cont./

*539 and even shut him up in a box. A second group of stories (Nos. 13-14) deals with tales about spirits, a third (Nos. 15-16) tales about Pijao, the feared man-eaters and dreadful enemies of the Paez. These are related to a certain extent to tales about werejaguars (Nos. 17-18). The remaining stories, which cannot be further classified, are given in the last group (Nos. 19-22). [114] In order to achieve a certain completeness, stories No. 1 and 2 about Juan Tama are given here as told by G. Bürg (p. 34) and G. Hernandez de Alba (1946, p. 953), respectively, and stories No. 4, 9, 10 as told by S. Bernal Villa (?) /see the bibliography in the foreign text, p. 323/.

1. Juan Tama, the Water-born

The following remembrance of Juan Tama lives on among the Indians of Vitomcó: A long time ago there ruled in Vitomcó a female cacique who was childless and therefore always sad when she thought about who would follow her in power. One day when she was washing clothes at the confluence of the Rio Paez and a brook that comes from the Páramo de Moras (from the lagoon known today as Juan Tama), she saw in the water a floating piece of wood on which lay a small child. She fished it out, and, since it was a boy, she took him in, reared him, and, when he reached majority, made him cacique. This cacique -- known as Juan Tama today -- was very wise and strong and led his people against the Spaniards when the latter settled on the Magdalena [648] River. The last time he was seen on the Paez was in the great battle of San Vicente, where he and his troops succeeded in defeating the Spaniards. Since he had come floating on the water, he was not regarded as an ordinary human being, but rather it was assumed that he was sent to the cacique by her ancestors, or else that he descended directly from the gods who mated with the lagoon of Juan Tama, so that the latter is his mother. When Juan Tama saw that his people were victorious at San Vicente and no longer needed his protection, he disappeared again. He merely gave his subcaciques orders and then went back to his mother, the Lagoon de Juan Tama, where he lives to this day and from where he directs the destinies of his Indians in Tierradentro.

/317 cont./

105 In the Paez religion there is no cult priesthood with offerings
771 and prayer, just as there is also no cult or worship of numinous
756 beings. The Paez religion is a shamanism, the two forms of which are the evil sorcerer and the good shaman as doctor and helper against evil sorcery. As a religious phenomenon Paez shamanism is not as distinctive as the Siberian or the North American shamanism. Assistant spirits and the soul journey as shamanistic means are only rudimentary with the shamanistic "signs," the "thunder child," and the journeys of the shaman to the house of Thunder on the bottom of the lagoon; there is almost no ceremonial apparatus. Nevertheless, the activity of the good shaman in particular, as doctor and helper in sickness caused by magical practices, as well as his function as sociological crystallization point of the community, is entirely a shamanistic phenomenon.

105 Linguistically Paez belongs among the agglutinative languages,
[197] in which the form element is made up by affixes that characterize
[194] whole classes of words. In phonetics the series of palatals including all the consonants is striking, as well as the frequent occurrence of nasal vowels.

105 /318/ The linguistic classification of Paez is difficult. Since
114 the research of H. Beuchat and P. Rivet it has been regarded as
197 one of the Chibcha languages. This was not always the case. E. Castillo i Orosco emphasized in 1735 that in its grammatical structure Paez is very different from Chibcha (p. 63). It was C. Cuervo Marquez who first regarded Paez as a Chibcha language (p. 199). H. Pittier de Fábrega emphasized in 1907 that the relationship of Paez refers only to the rules of grammatical construction; the vocabulary is completely different (p. 341). Then in 1910 Beuchat and Rivet investigated all the North Andean languages in a work of large scope and then confirmed the distribution of the Chibcha languages from Nicaragua to Eucador. According to this, the majority of the Colombian tribes spoke Chibcha (pp. 193-198). Up to now this classification has neither been examined in greater detail nor disproved by linguistics. This may be left to the philologists. Here there will only be a few remarks about the problem of the Chibcha languages in general and that of Paez as an

/318 cont./

105 assumed Chibcha language in particular. The difficulty of language
114 comparison in the northern Andean area lies in the wholely in-
197 adequate material for comparison. The majority of the tribes investigated have died out long ago, and there is seldom sufficiently complete material available from the few living ones. Even the true Chibcha (Mwiska) on the plateau of Bogotá has not been spoken for two and a half centuries and is known only from the literature. Beuchat and Rivet choose the lexicographic and grammatical method for their language comparison. The total vocabulary of the languages investigated contains about 200 words. These serve as comparative material for 49 languages, namely, for true Chibcha (Mwiska) and 23 other languages and dialects in northern Colombia and Panama, as well as for 25 languages and dialects of southern Colombian languages! Methodologically the procedure was to find a lexicographic agreement between language A and language B, another agreement between language B and language C, a further agreement between language C and language D, etc. In the proof, language A is related to languages B,
105 C, D, etc. Applied to Paez: In the vocabulary given by Beuchat.
114 and Rivet there is no Paez word in direct agreement with Chibcha!
192 Nor was there even a choice of words according to their qualita-
197 tive significance. Thus it is especially noteworthy that there is a complete lack of corresponding designations for food, animals, useful plants, metals (gold), parts of the body, kinship designations, etc. /319/ On the basis of the vocabulary, therefore, it is not possible to designate Paez as a Chibcha language. To what extent this applies to the other southern Colombian tribes, for whom there usually exists only a very limited vocabulary, cannot be discussed here. In any case, there is a large number of Kechua /Quechua/ words in all these languages -- as a result of the close proximity to Kechua-speaking peoples. (For Paez, cf. the
105 compilations in Castillo i Orosco and Pittier de Fábrega.) Gram-
197 matical agreements between Chibcha and Paez do exist. At the
[114] same time, however, Beuchat and Rivet expressly point out that,
[193] of the languages compared, Paez shows the greatest grammatical differences with Chibcha (pp. 190/191). In summary it may be

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

104 /321 cont./

Conquista	Period of the Spanish conquest.
Conquistador	Spanish conqueror at time of the discovery of America.
Finca	Plantation farm or estate for the growing of coffee, sugar cane, bananas, etc.
Gobernador	Spanish head of the administration of a province. Among the Paez, the head of the village council.
Guaquero	Pirate excavators of prehistoric, Indian burial sites.
/322/	
Hacienda	Large country estate in Tierradentro.
Kazike	(Cacique) West Indian designation for the chief of a village or native tribe, used by Spaniards as a general designation for native chiefs within their area of authority. The translation "Fürst"/prince/ used in the literature in German is misleading.
Lagoon	Lake, pond.
Machete	Bush knife, long chopping knife.
Milpa System	Central American designation for periodic tillage on previously burned-off clearings; called roza in Colombia, wáts among the Paez.
Minga	System of free joint work by the village.
Municipio	In Tierradentro a number of villages, somewhat like our administrative district.
Nyiç	Evil shaman, evil sorcerer.
Panela	Boiled-down sugar-cane juice. Transported and traded in the form of bars of about half a kilogram each. Customary form of sugar consumption among the Colombian rural population.
Páramo	High steppe. General designation for the crests of the Cordilleras.
Parcialidád	In Tierradentro: village with the lands belonging to it.
Poncho	Sleeveless cloak of the Andean Indians in the form of a rectangular or square blanket with a hole for the head. Called ruana in Colombia.

ETHNOGRAPHIC AND LINGUISTIC NOTES ON THE PAEZ INDIANS OF TIERRA ADENTRO, CAUCA, COLOMBIA

By H. PITTIER DE FÁBREGA

INTRODUCTION

Very little is known of the ethnology of the aboriginal inhabitants of the western and central cordilleras of Colombia and the intervening broad valley of Cauca. The early historians and chroniclers have left only long lists of more or less confused tribal names, along with the recital of the protracted war of extermination conducted with conscienceless and selfish cruelty by the conquistadores. With few exceptions modern writers have found little or no opportunity to deal with what is left of these interesting people. 121

With special reference to the Paez Indians, who are the subject of these notes, our notions have hitherto been derived almost exclusively from the materials collected by Castillo y Orozco about 1735, and published in 1877 with brief analytical notes by the late Colombian scholar, Señor Don Ezequiel Uricoechea.[1] 127

Early in 1906 the writer visited the section of the central cordillera inhabited by the Paez, staying a few days at two of their principal villages, namely, at Tacueyó, at the headwaters of the Palo river on the western side of the mountains, and at Huila, at the junction of the Paez and San Vicente rivers, on the Indian reservation known as Tierra Adentro. The personnel of the expedition, in addition to the author, with a few friends and two servants, consisted of native Indians, so that good opportunities were afforded for becoming familiar with the Paez language and to gain an insight into native manners and customs. 114 [361]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

Former Occupants. "Planos de Indios." Huacas

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed [692 descendants still live in the villages of Las Pavas and Vijes, 181 near Cali; the "Paveños" have become inveterate legal fighters, 162] keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time.

101 Of the Jamundies I was told that they were indefatigable 114 warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town [103] of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have [135] been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

173 he said, "the caciques or chieftains, had their messages trans-
202 mitted from valley to valley by means of runners who were
205 stationed at short intervals along the main roads. Each runner kept himself in readiness to start on the arrival of a message, thus insuring rapid transmission." As the "planos" and also the old trails are found on almost every ridge, it is difficult enough to judge of the value of this explanation; but, if I am not mistaken, such a system of communication existed without doubt at a short distance southward among the Incas of Ecuador and Peru, and perhaps extended into the Cauca valley.

172 On our return from Huila, while traveling between Toribió and Tacueyó, I noticed on the left an isolated hill with a part of its ridge separated from the rest by a deep cross-cut, evidently artificial. The top of the separated part looked in the distance as if also isolated by a ditch. My friend, Mr Emile Bizot, a mining engineer of wide experience in these parts, informs me that this is a common feature of the hilly district formerly inhabited by the natives, and that the enclosed surface always contains numerous graves (plate III, 2).

172 The high peaks of the most rugged districts of Tierra
532 Adentro are often crowned by isolated *huacas*, which are especially sought by treasure-hunters. At Tacueyó we had the opportunity of admiring a set of gold objects found in such graves and of which we made the photograph reproduced in plate II, 2. The frogs are of a type quite distinct from those with which I became familiar in Costa Rica. The representative of a human being recalls certain Chibchan idols, or, according to Mr W. E. Safford, Kitšua amulets. As to the thirteen remaining pieces of gold, quite thin and almost uniform in shape, they are perfectly new to me.

Former and Present Distribution

131 According to Father Rodriguez[1] the Paez, or Paós, Indians
114 lived on the summit and slopes of the *Cordillera de Guanacas*,
133 "sierra muy fria que llaman el Páramo de las Papas," a defini-

[1] P. Manuel Rodriguez, *El Marañon y Amazonas. Historia de los descubrimientos, entradas y reducciones de Naciones*, Madrid, 1684.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

tion which would correspond pretty well with the explanation given by subsequent authors, except for its last, untranslated member, which seems to imply a lack of geographical knowledge on the part of Father Rodriguez. According to modern maps, indeed, the term "Alto", or "Cordillera", de Guanacas, seems to apply only to the group or node of mountains north of the Coconucos and Puracé volcanoes, and south of the towering Huila. This includes the "Páramo de Moras," which we crossed on our return from Tierra Adentro, but not the *Páramo de las Papas*, which is situated south of the Puracé, at the headwaters of the Cauca, Caquetá, and Magdalena rivers. 131 114 133

If we admit, then, that in Father Rodriguez's description the name Páramo de las Papas is merely a lapsus for Páramo de Moras, the area given by him corresponds pretty well with that which is recognized as such by Uricoechea in his introduction to Castillo's work, excepting that the latter extends this area northward to include the upper Yaguará basin. According to Castillo, this last was probably inhabited by another *parcialidad*, which he calls Bemb, "indios infieles de nacion pijaos." At Huila, when pointing northward to the valleys on the eastern slope of the volcano and asking who lived there, the Indians answered, "Los Pijaos", and among the Spanish people it is generally understood that the Paez and the Pijaos are one and the same. This is also the opinion of Reclus,[1] who says: "Among the various tribes that wandered through the thick forests of this [eastern] slope of the [central] Cordillera, the most barbarous were the *Pijaos* or *Paez*, who selected innocent victims to offer to their divinities. The enemy killed in a fight could be only indifferent to the gods; but a woman, a child, an inoffensive stranger, the pure ones, were welcome to the bloodthirsty genii." And these monstrous sacrifices must be repeated at short intervals to insure the permanent good-will of the gods. 131 114 101 [782 727]

The area given on the accompanying map (plate I)[1] corresponds with the above-mentioned description by Rodriguez, 101 103

SC15 Paez SC15

marriage bonds were not definitely made until experiment indicated the fecundity of the woman, and that the union was dissolved at the will of the husband if the wife proved to be barren. The same authority informs us that the wife had to give her husband the necessary clothing, while the husband provided food for the family. 581 [586] [585]

A custom mentioned by Castillo was that during menses the women spent the time sitting in small huts expressly built for that purpose, for fear of contaminating the common dwelling and of bringing disease and death to its occupants. 841

Rodriguez relates another custom in connection with childbirth and death: ". . . y siempre que pare la mujer, ó que muere alguno de su familia, desamparan la casa, dexando en ella al difunto con cantidad de bastimento y de la chicha, brebage, que beben: y á las casas donde parió la mujer, las dejan con las inmundicias de el parto, y acabadas de nacer las criatures, las laban, y se vañan sus madres, poniendose en viaje á buscar nuevo paraje para su habitacion, que siempre procuran sea en parte muy fragosa, por no ser visitados." 844

These details are confirmed by Castillo and were probably still observed in his time. As to what is done at present, and regarding the family organization in general, it is very difficult to obtain reliable information. The Indians are very jealous of their women, do not tolerate in them any intercourse with strangers, and become instantly distrustful when questioned about family matters. 152 593 609

With reference to death, Castillo differs from Rodriguez in that he states that a dying person was taken from the house, so that he did not actually die in it, and that the dwelling was destroyed by fire. He does not mention the custom of leaving food near the corpse, but states that the body was buried and a fence built around the grave. 768 763 764

Diseases

No diseases came under my observation during my stay at Huila and Tacueyó, and the Indians rather impressed me as being a healthy people. But if their vocabulary affords suffi- 164 [114]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

164 cient testimony, they have their share of physical ailments. Besides itch (*lal*), tumors of several kinds (*lal-sek*, tonsilitis; *kui*, tumor in the groin), they have original names for smallpox (*ùu-gui*), which I was told often rages among them, for diarrhœa (*u-tsitl*), dysentery (*mengui*), and intermittent or malarial fevers (*ya-ya-gui* in the ancient dialect, *kui-kui-ui* in that spoken at the present day).

752 Of the practices and superstitions made use of in the cure of
114 these diseases I could gain no information, but it is very probable that the Paez still have their own medicine-men.

Clothing. Personal Adornment

291 At present the wool obtained from the numerous sheep kept
286 by the Paez Indians plays the most important part in the cloth-
[231] ing of both sexes. I cannot find any direct information on the fabrics used before the introduction of sheep by the Spaniards,
[174 but it is most likely that the Paez obtained cotton from the In-
45?] dians of the Cauca and Magdalena plains, the cultivation and the manufacture of which into thread must have formed one
[172 of the principal industries in the latter. I have already referred
174] to the great number of clay spindle-whorls found in the graves and on old dwelling sites throughout the Cauca valley. Judging by these we may feel sure that the former inhabitants were great spinners. On the other hand, the present Paez Indians still weave most of their own clothing, and there is no reason why they should not have done so formerly.

291 The dress of the men consists of a pair of short trousers (*kiu*),
[177] that are evidently a concession to modern civilization. These are made of raw cotton cloth, or of imported fabrics, and reach from the waist to about the knees. Over the shoulders is worn a broad rectangular piece of white woolen homespun cloth, split in the middle in the form of a poncho so as to allow the head to pass through, and hanging free front and back. This is called *tund-atl*, i. e., 'the cloth that binds, or covers.' It is generally worn next to the skin, but sometimes a light cotton shirt, called *atl-petl*, is first put on. Over the *tund-atl* they carry on their left
[276 side, hanging by straps that pass over the right shoulder, the coca

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

314 fortunately the tree is being rapidly destroyed, either in the gathering of the wax or through clearing for cultivation.

Religion, Customs, Superstitions

114 According to Rodriguez the Paez did not know of any religion. But this is diametrically opposed to Castillo's repeated mention of pagan rites still practised among his flock. Moreover, it is not reasonable to suppose that these Indians would have lived in close contact with the Kitšua, who were veritable sun-worshippers, without being influenced by their beliefs.

771 *Itaki*, the sun, was worshipped at special shrines built on the 786 cut-off summits (*itaki finô*) of high mountains. At certain dates, 821 fixed by their priests (*diχi*) in accordance with their omens, they [787] congregated at these places and for many consecutive days gave themselves up to chicha drinking and all the lubric manifestations provoked by drunkenness. On these occasions no blood relation was respected; nor was there any limit to adultery. Later, after the missionaries had undertaken their civilizing work, the Indians secretly continued these hideous practices; indeed, it is even asserted that they have not yet given them up completely, although they may not commit the excesses that were formerly attributed to them, as such would be contrary to their present ideal standards.

535 Dances played an important part in all the diversions of the Paez. They were of several kinds, varying with the occasion. Castillo mentions the *guciô-kô*, money-begging dance (baile de pedir dinero), or *šita-ko* (sea-shell dance, baile de caracol), in [534] which two sea-shells (bocinas), the one giving a low tone (bajon destemplado) and the other the treble, were played alternately for whole nights, remembering, "(a los cristianos) la noche de la prision de Nuestro Señor Jesucristo, i á los indios, la chicha, baile i maldades que ejecutan." Other dances of which we generally have no description were *onza-kô*, the mouse dance; *neni-kô*, the buzzard dance; *itsa-ko*, the puberty dance of females, to which allusion has already been made (page 314); *eti-kobi-ko*, the dance of the phantom reed; *tel-kobi-ko*, the dance of the long reed, or war-dance; *la-ko* the new-house dance; *himb-ko*,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they 609
have been subjected to much abuse by their neighbors of the 186
"superior race." Moreover, the Paeces are naturally hostile to
strangers, descending, as we have seen, from a warlike people. 181
The old Paeces always went about armed, carrying a lance or 648
javelin in the hand and ready to protect their bodies from the [411
darts of an enemy by means of a shield of basket-work (*opimb*), 714]
or of tapir hide (*χimba-kât*). The warlike tendencies of the 181
tribe were stimulated by means of periodical contests in which [544]
the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have 181
abundant opportunity to satisfy their fighting propensity by 648
taking sides in the frequent quarrels of the political parties that 154
thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other 684
races is said not to exist; barbarous chastisement would be the 186
fate of the offending female. It is to be expected, however, 177
that the closer contact brought about by the gradual penetra- 563
tion of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that 266
the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the 114
personal pronouns and the conjugation of the verbs 'to be' 193
and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194

I. — PHONETICS

Vowels

	a	*a*	*ä*		
e	*ẻ*		*o*	*ȯ*	*ȯ*
i	*ỉ*		*ü*	*u*	*ü*
ä	*ẽ*	*ɪ*	*ȯ*	*ũ*	

Consonants

		ḣ	*h*		
k	*g*	*χ*	*χ̇*		*ñ*
tʃ	*dʒ*	*ʒ*			
ts	*dz*				
t	*d*	*s*	*z*	*l*	*n*
p	*b*	*f*	*v*		*m*

194 114 In his introduction to Castillo's vocabularies, Uricoechea asserts, on the faith of the latter, that the Paez vowels are numerous, distinct from those of the Spanish language, and difficult of pronunciation. The Castilian language has only the five fundamental Latin vowels, while the Paez has three more, *ä*, *ȯ*, and *ü*, not including the nasalized vowels, which are not specifically distinct.

This can scarcely be called rich, but if by richness Uricoechea means euphony, then he is certainly correct. Indeed, the diphthongs *ai*, *eu*, *io*, *ua*, *ue*, *ui*, *uo*, recur with extreme frequency, and there are none of the half-mute vowels so often met with in the dialects of the Chibchan group. Again, it cannot be said that the Paez, in its present phonetics, offers any serious difficulty to the student so far as pronunciation is concerned. I have given careful attention to this special question, and think that the above table of vowels and consonants is fairly adequate to an exact transcription of the language.

194

When we come to the comparison of consonants we find that the Paez has all the consonants used in classical Castilian except the *z* (*θ*, English *th*), and that it has *χ̇*, *tʃ*, *dʒ*, *ʒ*, *ts*, and *dz* in addition. Here we may be justified in speaking of abundance, inasmuch as these fundamental consonants are accompanied by quite a formidable array of compound ones, either

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

initial like *ll, ft, kb, kl, kn, kp, ks, kt, mb, pk, pl, ps, pt, st, tsk,* 194
or terminal like *fχ̇, kχ̇, pχ̇, mb, nt, nt.*

A further comparison of Castillo's material with my own 194
shows three chief points of divergence in the transcription of 114
words. One of them, namely, the prefixing of an initial *g* to words beginning with *na* or *ne*, is general among Spanish authors, there being as much difficulty for a Spaniard to pronounce correctly that broad diphthong as to express any foreign word beginning in *st, sp*, etc., without an initial *e*. Just as a Spaniard will say 'estreet,' 'esprout,' 'estyle,' he is sure to pronounce 'gwatchman,' if not 'gwatchiman,' 'gwarbler,' and so on. This misspelling, then, may be regarded as an idiosyncrasy of our author.

A second difference, often repeated and which must be considered as an error in the reproduction of the original text, is that the words ending in my vocabulary in *ts, fχ̇, kχ̇*, etc., end respectively in *ti, fi, ki*, etc., in Castillo's vocabulary, the terminal *s* and *χ̇* having almost uniformly been mistaken for an *i*. Examples: [192]

efi	for *efχ̇*,	eye-tooth.
equi	" *ekχ̇*,	fuel.
cafi	" *kafχ̇*,	gargante de.
cati	" *kats*,	hide, skin, peel.
conchi	" *kuntl*,	black.
miti	" *mitl* or *mits*,	pot.
tambi	" *tampχ̇*,	flank.

Unwritten languages are subject to rapid alteration. This is sufficient to explain the frequent change of *o* to *u*, and the suppression of the initials *a, e*, and *i*, in certain words. Following are a few examples of both cases: [192]

doj	has become	*duχ̇*,	weight.
tilo	" "	*flu*,	tree.
guaco	" "	*uaku*,	tick.
onza	" "	*kunza*,	mouse.
ioc	" "	*iuk*,	wood, fuel.
alech	is now	*lutl*,	child.
alauech	" "	*lauetl*,	lizard.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*cpench*	is now	*pení,*	old (applied to female only).
114	*isus*	" "	*sus,*	urine.
[192]	*atamp*	" "	*taap,*	fog, cloud.

In Castillo's vocabularies *.rs* stands for *ʒ*, *z* for *ts* and *tz*, *ch* for *tš*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mes-a*, it is not; *ishe* for *its-i*, to join, to marry, etc.

II. — Word-formation

192 114 *Remarks.* — A few preliminary remarks as to the vocabulary given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's 114 vocabulary and their orthography adapted to our own.

192 197 174 Among those words not included in Castillo's, some have simply escaped him, as, for instance, a number of plant names. But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 114 [171] *Compound Nouns.* — The Paez language, like most of the languages belonging to the Chibchan group, has suffixes indicative of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

easy to determine the words that form such families, and it remains for the future student to systematize and complete them. 193 114
We are able, however, to give a few examples:

Kuĉ is indicative of smallness, fragility, and is found also in several terms referring to childhood or parental relations. 192 193
Examples:

kuĉ	child.
a-kuĉ	monkey.
ala-kuĉ	child.
ant-kuĉ	nephew.
ant-tsun-kuĉ	grandson.
atl-kuĉ	nephew.
dog-kuĉ	nephew.
etl-kuĉ	orphan (phantom's son).
ku-kuĉ	uncle, father's brother.
fe-ku-kuĉ	aunt, father's sister.
kuku-kuĉ (onomatope)	a small dove.
ucso-kuĉ	girl.
ucs-kuĉ	thread.
witta-kuĉ	bird.

In the following words, however, the signification of the suffix is not apparent:

ak-kuĉ	burial.
cig-ka-kuĉ	ant.
ia-kuĉ	ceremonial feather-dress.
ko-kuĉ	body.
imeta-kuĉ	dorsal spine.
ne-kuĉ	challenge, contest.
sa-kuĉ	heart of a tree.

Guĉ, meaning disease, is found as a suffix in a few known cases:

atta-guĉ	hectic fever (lit. hot-ache).	[164]
kuti-guĉ	smallpox.	
iaia-guĉ	intermittent fever.	
su-guĉ	a medicinal plant.	

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

verb 'to be,' following what may be a noun or another adjective, and may be regarded as a predicate adjective or denominative verb: 193

ampa-kuł, lean, sad.
dił-kuł, pretty (Cast.).
dłił-kuł, pretty (Pitt.).
dsuns-kuł, frail, slender.
its-kuł, lean.
łła-kuł, small.
nu-kuł, small, low, of a river. [192]
o-kuł, plane, even.
pats-kuł, ugly.
pets-kuł, thin, like paper.
uáts-kuł, lazy.

It should not be inferred from the scarcity of this class of words in the examples given that the Paez language is lacking in them. On the contrary, a few examples show that, like many other primitive idioms, the Paez distinguishes gradations and categories in the qualities he attributes to an object or to different objects or persons. Thus, Castillo gives four different words for 'thick,' all of which, and one more, are still in use to-day. Now it is found that every one of them has a distinct signification or is applied in distinct cases:

fitse, thick, viscous, semi-liquid (of soup, mud, etc.). [192]
ɣot, thick (of a tree).
ñił, thick, stout (of a person).
iot, thick, bulky.
tat-a, thick or dense (of a forest, a jungle).

In the same way we have four expressions for 'large' three for 'soft,' etc., but without data to exemplify their use.

Reduplication is frequent in adjectives and seems to correspond to a superlative gradation.

The adjectives for 'young' and 'old' differ according to the sex of the person to whom they apply. The first is translated by *taki* when it applies to males, as in *pits-taki*, 'young man,' and by *kue-nas* when applied to females. 'Old' is *iuš*, or *teé* when referring to males, and *pcuš* (or *e-pcuš*) when used for females. [562] [561]

Formation of Verbs. — Owing to the brevity of my stay among the Paez Indians, I felt from the first a certain reluctance to enter into the intricate study of the verbs, fearing that, should 193 114

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 114 I begin it, I might be induced to accept *a priori* as true apparent rules which would then draw me into further mistakes. My former experience shows that a reliable comprehension of the infinite variations of the verbs, as bearing on flexion, derivation, etc., is not really acquired until one is fully cognizant of the spirit of the language to which they belong and is able to handle this almost as easily as his own.

In consequence of this, the few notes that follow are based mainly on the verbal terms included in Castillo's vocabulary.

193 192 (*a*) *Primitive Verbs.* — We find first that there are terms, expressive of condition, action, or motion, that can be considered as essentially verbal, and could be called, for simplicity's sake, "primitive verbs." Here are a few of them:

dî, to sleep	*ôts*, to burn.
gûgu, to run	*peû*, to beg, to ask.
ios, to fly	*pos*, to stretch.
kis, to fast	*pot*, to breathe.
ktond, to carry	*si*, to attend, to serve.
e, to eat	*so*, to take, to receive.
ô, to die	*tunî*, to soften, to knead.
ôp, to shut, to close	*tet*, to beat, to knock.
os, to give	*tetî*, to lick.
ôs, to plant	*vis*, to touch.
ots, to work wood (labrar madera).	

It is not unlikely that most of these verbs were originally nouns or adjectives, and that a few of them are still in use as such, although they do not so appear in the vocabulary. The following are given with a nominal, or a qualificative, and a verbal signification, and may be considered as true

(*b*) *Denominative Verbs* — susceptible of all flexions corresponding to person, mode, or time:

ampô-kut, sad, to be sad.
attatî, warm; *attatâ*, to be warm (*ô-atî*, to warm one's self).
ios-ô, standing, to be standing.
ipe-inka, thoughtful, to be thoughtful.
yuend, laying, to be laying.
paio-ki, careless, to be careless.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 The middle *k* of the plural forms is inserted apparently for the sake of euphony.

D.—*The Verb*

[121 114] As explained above, I did not endeavor to collect material for the study of verbs, by reason of the limited time at my disposal. Castillo's data are also very defective, but the paradigms presented by him as examples of conjugations are sufficient to afford an insight into the mechanism of conjugation. We reproduce the principal tenses with the object of showing that the verbal modifications referring to person, mode, and time, consist of a combination of the verbal root with the copulative or substantive verb and a suffix or ending that expresses the person. Our spelling differs somewhat from that used by [114] Friederich Müller,[1] who had no practical experience with the language:

(1) To be:

	Singular	Plural
	Præsens	
1st p.	*anki-t*, I am;	*ku-k-uel ta-u*, we are;
2d p.	*inui-ng*	*ik-uel ik-u*
3d p.	*kinâ-a*	*kinâ-(g-)uel i-a.*
	Perfectum	
1st p.	*anki-kit*, I was;	*ku-k-uel ta-u iâ*, we were;
2d p.	*inui-ng-iâ*	*ik-uel nek-u iâ*
3d p.	*kinâ-k-iâ*	*kina-g-uel ta iâ.*
	Futurum	
1st p.	*anki-net*, I shall be;	*ku-k-uel net-ka-u*, we shall be;
2d p.	*inui-neng*	*ik-uel nek-u*
3d p.	*kinâ-nen*	*kina-k-uel pat-in.*

(2) To write, or to paint, *fis*:

	Præsens	
1st p.	*anki fis-ats-t*, I write;	*kuł-k-u-fis-ats-ta-u*, we write;

3d p.	*kina fis-ats-k*	*kina-g-uel fis-ats-tâ.*

[1] *Grundriss der Sprachwissenschaft*, Bd. II, 358, Wien, 1882.

[Parcialidad of Calderas]

/289 cont./

142 The Calderuno /native of Calderas/ is rather tall, with a light copper skin, straight black hair, a straight nose somewhat flattened and broad at the base, slightly prominent cheekbones, dark brown eyes reminiscent of the Mongolian eye, a broad forehead, long and robust extremities, a slightly pentagonal face; many have mustaches, and, on the whole, the
157 features are rather /290/ handsome. On the other hand, he is talkative, communicative, deeply traditionalistic, proud
[361] of himself, and has a deep love of the land. Isolated as they
[177] are from the other parcialidades by natural accidents and far removed from the urban centers of Inzá and Belalcázar, they are shy, sullen, and withdrawn with the white, stubbornly opposed to contact with him, and, as a result their institutions, have suffered less from the impact of cultural mestization.
797 Not even the very church that has worked so persistently for the
177 catechization of these tribes, especially in this century through the Lazarist missionaries active since 1905, has been able to penetrate fully into the soul of these people.

● 114 I have carried out my research in this parcialidad since
773 the month of August of last year, with several interruptions.
[124] The myths and tales which I now present were gathered with patient labor after much waiting, for the natives, when questioned about these themes, nearly always reply with the word himeto ("I don't know"). There is no need to stress the importance of mythology as an institution in the so-called "primitive" cultures. Nor is it my intention to theorize on the subject. It is enough to say, in the words of Herskovits, that "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones /mythology is the constitutional charter of beliefs and gives meaning to the ritualistic behavior that is derived from its consecrations/" (1). The chroniclers tell

1. Herskovits, p. 409 /see the bibliography in the foreign text, p. 309/.

/290/

114 us nothing about the religion and mythology of the Paez. Nor
773 do systematic modern studies exist. Nor do those who have had the opportunity to be in contact with them and to describe their customs and ways of life tell us about their religion and mythology. Furthermore, there are those who state that the Paez have no mythology. José Pérez de Barradas collected the myth of Juan Tama. Gregorio Hernández de Alba refers to it, and the Lazarist missionary Fr. David González also collected it and has it in his unpublished work, Los Paeces /The Paez/, in quite elaborate and synthetical form, as does G. Burg. It is obvious that a large part of the myths and tales which I am presenting, not to say all of them, have suffered modifications in the avatar of time, as the institutions also changed. Since mythology is the rationalization of conflicts created by the culture itself, it is subject to the directives /291/ of that society and culture. Its roots are inevitably of a sociological and cultural nature.

773 Many of the myths collected have a marked similarity to
776 that of Juan Tama. The predominant central motifs refer to
538 sex and aggression. The personages in the myths are Thunder, Llîban, Juan Chiracol, Chaute, and Santo Tomás. Llîban is regarded as Thunder's son, but everyone maintains that he is Thunder himself; he was a cacique, and the natives state that many of their caciques took refuge in the turbulent waters of the river. The last two personages merge and in reality form a single being. It is to be noted that in some accounts the tricky personage presented is not Tomás, who is a saint, but Pedro Dimales, his brother.

186 There is no need to emphasize the role played by the Pijao
793 in these accounts. The recollection of this people inured to
628 war is still fresh in the memory of the Calderunos, the characteristics of the struggle sustained against them still manifest, the fear that the name Pijao awakened still alive. To the Calderun mentality they seem like monsters, like animals of uncommon size and power, who drew fire from their armpits.

/178 cont./

several leagues around were supplied for a long time with the salt extracted from the three salt deposits that still exist in Segovia. Across from these and on the other side of the Ullucos, in Vivorá, another salt deposit was also exploited.

At the confluence of the small stream called El Escaño and the Pisimbalá, on the right bank of the latter and at the foot of the ridge of Aguacate, the Archeological Park of /179/ Tierradentro, a branch of the Instituto Colombiano de Antropología, is located on an alluvial terrace covering an area of two hectares. Founded some 15 years ago, it is in charge of the care and conservation of the archeological monuments, which have been known to the scientific world since 1936, but to which reference was made as early as around the penultimate decade of the last century, when Dr. Carlos Cuervo Márquez carried out his explorations through the "lands of the Paez and much of the Nevado del Huila." Subterranean necropolises with columns, colonnades and niches, black and red geometric painting on a white background, statuary very similar to the Augustinian, ceramics and metalwork are the principal exponents of this culture hardly known in descriptive form.

The Archeological Park of Tierradentro has served as the center of operations for the scientific expeditions which the national government has sponsored, fostered, and supported during the last 15 years.

II

Over the Zigzags of the Road

In order to travel on winding roads one needs horses resistant to fatigue; a dashing spirit must yield to a solemn step, firm tread, and steady pace.

[114] This type of cleansing has not been confirmed by any informant, curer or layman, young or old, male or female, from the Parcialidades of Santa Rosa, San Andrés, Calderas, Togoima, Avirama, or Mosoco.

342 796 *756 [241] Conjuration of the new rancho. To protect their fields from the voracity of wild animals, they build a small rancho. Before occupying it, they perform the following conjuration. The curer blows remedies in the center of the rancho where the hearth will be. He digs a hole and buries shu and shulape. He makes a fire and casts ñundayuskei and bitopiskue into it. He gathers up all the ashes and throws them outside the rancho. He revives the fire again and roasts a green ear of maize, which is given to a dog to eat. If the dog does not die, it is a sign that there is no pest there and the owners can occupy it. In the opposite case they must abandon it. In Santa Rosa the Té eu eats the ear of maize.

This same ceremony is performed upon beginning a house. They give the dog roasted maize since it is not the season for green ears. Then they drink chicha and aguardiente.

241 *756 E huse uña (clearing-eat). The harvesting of the crops from new clearings must be initiated by the curer. The owner of the field provides coca, tobacco, and aguardiente and invites the curer. The entire family goes to the field.

The té eu prepares a calabash of remedies based on Chayuts, shugues, tayuskei, echiutse, ul ñiñ, tatse. He sprinkles the clearing with this. He distributes as many bundles of remedies as there are persons present, for them to chew, to swallow the juice, and to rub their bodies with the remainder.

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguex*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.

[2] Cieza de León, 1932; Aguado, 1916; Simón, 1882-92; Oviedo y Valdés, 1851-55; Velasco, 1841-44.

7:Hernández de Alba E-5 (no date) 1946 SC15 Paez SC15

175 ture, with only slight differences in dialects and customs. Some
197 authorities affirmed that these Indians had no kind of religion; others
114 gave details which reveal a highly developed religion and an organized
[174] cult. In spite of these contradictory statements and in spite of the fact that today only the *Moguex* (*Guambia*) and *Páez* Indians retain indigenous cultures, it is possible to sketch the cultural picture of these Indians at the moment of their first contact with the Spanish soldiers by reexamining the chroniclers of the Conquest according to ethnological criteria, by utilizing modern linguistics, and by studying the ethnology of the present-day peoples.[3] It is also possible to trace the
174 acculturation during the Colonial Period, when new European usages
177 were introduced, and to depict the social and cultural conditions of the present day. The modern penetration of highways into the Indian territory and the official policy of changing the indigenous communities are likely to bring an end to these few remaining examples of primitive Andean societies, which have survived in spite of a poor economy, bad sanitary conditions, and missionary efforts to eradicate their traditions.

12/ A fertile field for future research lies in continuing anthropological studies in the central mass of the Colombian Andes. The region is as important for physical geography as for ethnology, as its mountain chains run in various directions to form valleys and diversified environments.

[172] It also contains the archeological remains, known as San Agustín and Tierradentro, which long antedate the Conquest and which have an undetermined origin and relationship to cultures in other parts of America. The present article, however, does not deal with these, but is limited to ethnology.

GEOGRAPHY

13/ The tribes considered in this article occupied the eastern halves of the present Departments of Nariño and Cauca, almost all of the Department of Huila, the southern part of Tolima, and the eastern zone of the Department of the Valle del Cauca, which embraces the western spurs of the Cordillera Central as far as Calarcá in Caldas. The region lies between 1° and 4° 40′ N. lat. and 1° and 3° 40′ west of the meridian
133 of Bogotá. The country consists of high mountains of the Andean system, which bifurcate at the Ecuadorean border to form the Cordillera Occidental, which runs to Panamá, and the Cordillera Central, which approaches the Atlantic coast of Colombia. Each branch has high plains (altiplanos), small valleys with rivers which are tributaries of the Patía River to the west, and high mountain peaks, some of which are volcanoes, like Pasto, Galeras, and Cumbal. The area of

TRIBAL DIVISIONS

Captain Sebastián de Belalcázar was the first conquistador who went north from Quito and entered the Andean region of what is today Colombia. He passed through the territory of the Pasto and Popayán Rivers to reach the region of Neiva and beyond in 1535–36.

At the time of their discovery, the native peoples north of Ecuador were very numerous, but the chroniclers, for example Cieza de León, who crossed this region in 1545 and is its outstanding historian, gave their locations and designations in a very confused manner. The historians classified the aboriginal peoples either according to small villages or groups of houses, slight differences of dialects, or slight cultural variations, so that the true classifications are very difficult to make.

Modern ethnological studies and a critical interpretation of the chroniclers somewhat clarify the cultural panorama of these regions, however, and it is now possible to list the following tribal divisions which existed just before the Conquest [4] (map 7):

Pasto.—The *Pasto* (*Koaiker*, *Cuaiquer*, *Quayquer*, *Coaiquer*,[5] etc.) (Jijón y Caamaño, 1936–38), who had a uniform language and culture throughout their villages, were distributed from the town of Tuza between the Mira and San Juan Rivers northward throughout the mountains to the valley of the Patía River and toward the northeast to the southern boundary of the present Department of Cauca. Eastward, they extended to the country of the *Quillacinga*, which began at the Guáitara River (Cieza, 1880, ch. 33). In the west, they occupied the western portion of Nariño, but accurate information is lacking on some tribes, which like the *Abades*, *Masteles* (Juán López de Velasco in Guerra, 1942) and *Patía* of the lower Patía River, lived toward the Pacific Coast region. The Angasmayo River in *Pasto* territory was the limit of the conquest of the *Inca* Guaynacapa (Cieza, 1880, ch. 37). Ortíz locates this river southeast of Nariño but other authors identify it with the Mayo River farther to the north.

There was a large number of native groups or villages within this area. Among these Cieza mentions the *Ascual*, *Mallama*, *Túcurres*, (*Tulcan*), *Zapuys*, *Iles*, *Guaimatal*, *Funes*, *Chapal*, *Males*, *Piales*, *Pupiales*, *Turca*, some of which are south of the Colombia-Ecuador border, *Cumba*, and others, and adds that, "All these peoples and chiefs had and have the name of *Pastos*" (Cieza, 1932, ch. 33). Guerra gives other names of small groups (parcialidades).

Quillacinga.—East and southeast of the *Pasto* lived the *Quillacinga*. Padre Velasco (1841–44, vol. 3) identified them with the *Pasto*, but cultural and linguistic differences between these tribes leave no doubt that Cieza de León (1880, ch. 33), was correct in considering them a

Moguex

881 heights of Cuetando, where they built a hut and planted a miniature field as proof of their masculine aptitude.

797 **Education.**—Today the Indians are educated principally by their 871 parents in the customs and tasks pertaining to each sex. Some boys [868] and a few girls are sent to the few missionary schools, where they are given religious instruction and are taught Spanish, arithmetic, geography, the history of Colombia, and modern embroidery or light [562] basketwork. The *Páez* are reluctant to send their daughters to the schools because they feel that women should keep the traditions of [77] their people. The missionary schools strive to change the native language and the cultural traditions which have given the Indian community social cohesion.

585 **Marriage.**[11]—Formerly polygyny was prevalent, but now Catholi- 77 583 cism has imposed monogamy. The Indians continue, however, to practice trial marriage (amaño). A marriage is arranged as follows:

584 The bride is selected by the young man's parents or by himself. His parents and two witnesses or godparents then visit her house to request her for the groom. They also serve as advisors to the young woman, in case she disapproves the marriage. The visitors carry half-filled bottles of rum (aguardiente) and some special garments for the girl. The young man's father offers the girl's father a half-bottle, acceptance of which means, as usual among the *Páez*, that the second party is well disposed toward the proposal and the negotiations may proceed. If the girl's mother agrees, the boy's mother presents her a half-bottle of liquor. The godfather or witness gives another half-bottle to the girl's father and the 583 godmother gives one to the mother. The visitors now leave, taking the girl, who then begins a year of trial marriage, during which the young man seeks proof that the girl is able to bear children, is active, cooks well, can weave, and can cultivate the land. After the trial period, the man may return the girl to her 585 parents or they marry in the Catholic Church, holding a feast which, like all 527 such celebrations, is called a "cuido." The couple and their parents and godparents are accompanied by an orchestra (chirimía) to the house where the feast is to be held. Here the bride puts on a modern dress, a ribbon on her hair, necklaces, and earrings, while the groom is with his godfather. As the guests arrive, chicha is distributed frequently, music is played, and then there is a feast of thick soup, generally with chicken, cooked yuca, arracacha, and roast or baked meat. In the afternoon, after more music and chicha drinking, the "refresco," really a banquet or social communion, is served. Six bottles of wine made from cane molasses, cinnamon, and cloves, and cake are given to the bride, groom, godmother, [782] and godfather, who give some to everyone present. A prayer, led by the head of [775] the house, then asks the souls of the dead to bless the marriage and give permission to dance. First, the godfather dances with the bride, then the godmother with the groom, after which everyone dances. The feast lasts 5 days, depending on the wealth of the family. Chicha is served and accepted with the phrase, "May God pay you, compadrito, for accompanying us. Accompany us more."

764 **Death.**—At a death, the family formerly buried the deceased inside the house with his possessions, and abandoned it. Some communities, however, preferred to cremate the body or dry it over the fire. The

[114] [127]

[11] I thank my wife and companion, Helena Ospina de Hernández, for her research in 1936 on matrimonial matters.

Moguex

765 756 787 775 784 the fire and turns on the lights, and everyone returns to examine a layer of fine ashes placed beforehand at the door. If the ashes shows the footprints of an angel, they believe that the soul is saved, but if the footprints are those of a bird, they believe that the soul is condemned to hell. In some cases they ascertain the fate of the soul by the kind of bird prints.

WARFARE

726 The *Páez* and *Moguex* were particularly warlike. Their attacks were staged in the morning, accompanied by yells and the sound of trumpets, horns, sea shells, and drums. They were generally armed with great spears or pikes, spear throwers, and slings. When fighting, [411] they would first hurl javelins with their spear throwers, then use their slings, the missiles for which they carried in a pouch, and finally pick up their spears or pikes for man-to-man struggle. They also formed closed squadrons, men with clubs alternating with spearmen. The former would step forward to wield their clubs, and then draw back to their positions for protection. Their best defense was on high ridges, from which they rolled large stones on their enemies. They perfected these natural defenses by cutting or camouflaging paths on which they prepared ambushes. They built trenches or pitfalls, which caused the attacking Spaniards much trouble.

628 The principal enemies of these peoples were the *Pijao* and the Span- [648] ish soldiers. The *Páez* remember the *Pijao* well, and call the stone [632] statues in their territory "portraits of Pijaos," and the painted tombs, [764] "houses of Pijaos." They are afraid to see the statues or visit the tombs.

To insult an enemy killed in war, they cut off his penis and placed it 727 on the road.

266 Some historians ascribe cannibalism to the *Páez* and the *Moguex*, which seems to have no basis in fact. They kept trophy heads and stuffed the skins of their enemies, but did not eat their foe. There are, however, numerous historical references which state that in the wars [175] against the Spaniards, the *Páez* left the bodies of dead enemies for the [648] *Pijao* to eat, and that they cremated their own dead or dried them [764] over a slow fire, which Friar Pedro Simón (1882–92, ch. 23) mistook for a means for preserving the flesh so that it could be eaten later.

[114] As war trophies, they kept enemy heads, which they preserved with resins, and the skins of their entire bodies, which they filled with ashes 72 (Aguado, 1931, vol. 3, book 16, ch. 3). They even preserved the [314] heads of the Spaniards' horses. They carried these trophies to wars, meetings, and feasts.

7:Hemández de Alba E-5,4 (no date) 1946 SC15 Paez SC15
Moguex

Castillo mentions that they wor-

shiped the sun, in whose honor they met and danced in places called "Itaqui-finó," i. e., the place where the sun revealed its mysteries; and that they venerated a kind of culture hero called Guequiau. It was he who instructed shamans (mohanes).

This hero has a counterpart in the religious legend of Juan Tama, the Son of the Star. One day when the Morning Star shone very brightly, some Indians found a child in a gorge—ever since called the Gorge of the Star. This was Juan Tama. They picked him up and entrusted him to a woman to nurse, but he nursed so much that her milk dried up. He was given to another woman, whom he also made very weak. They then said that he could not be nursed by a woman, and gave him food. After he grew up, he married the female chief of Huila, Doña María Mendiguagua, and became chief of all the Indians. He instructed people and explained to them how to keep the land for themselves and not mix with White people. He pronounced them invincible and summoned a chief from Pitayó, called Calambás, whom he appointed his manager. Calambás rebelled,[13] but was defeated by Juan Tama, who pardoned him on account of his bravery, and conferred on him and his heirs the right to rule the *Páez* in Bitoncó. As death approached, Juan Tama went to the lake on the páramo of Moras and sank into the waters. He had come out of this place and returned to it, leaving no heirs.[14]

In the neighborhood of Bitoncó there is a rock with what appears to be human footprints. When the Indians pass it, they uncover their heads and say, "The Holy One came this way." Another remnant of the cult of Juan Tama is the custom that each member of the council spends one week at the shores of the lake before the end of his term to render an account to Juan Tama of his actions in office. Likewise, newly elected officers, as soon as they receive their staffs or insignia of authority, spend a week at the lake. They toss silver coins into it, wash their staffs, and pray for strength to rule well. This ceremony, performed with the greatest secrecy, is called the "curing of the staffs." Recently, however, the Indians have stopped "curing" their staffs in the lake, for they say that Juan Tama is angry, and whenever they approach the lake, it rains and storms badly.

In the Guanacas section there was another sacred lagoon, called Tumbachí, which was recently drained because a snake that lived there attracted girls and kept them for a whole year, and then returned them when they were about to become mothers.

These tribes believed that the soul comes back to life.

Witchcraft was strongly developed among these Indians, who still believe in most of its practices, in spite of the catechization forced upon them by the missionaries.

[13] During the War of Independence, as well as in subsequent revolutions, the Indians of the family named Calambás distinguished themselves as warriors.

[14] We are indebted to Father David González for this legend, told to him by an old Indian in Lame.

600 Bases for the Study of the Social Organization of the Páez

By
Segundo Bernal Villa.

/Page 166 is blank./

124 /167/ The material for the study of the kinship system of
128 the Páez was collected in the month of May, 1953, thanks to the
[114] enthusiastic collaboration of Victoriano Piñakuĕ, 18 years of age,
[115] bilingual, and a native of the parcialidad /a village and the lands
belonging to it/ of Calderas. With this material we made an
analysis of the kinship system, which we present below without
any major modifications. It was later discussed with several na-
tive men of the parcialidad of San Andrés, who found it to be
correct. At the end of May, 1954, we had the opportunity to
discuss it again in Mosoco with two male informants of the lo-
[197] cality. They found practically no phonological differences, in
spite of the fact that the Páez spoken in that parcialidad showed
some different nuances in relation to that spoken in the other
124 parcialidades. They made only one fundamental observation,
128 which we accepted, since we consider it to be convincing. It
601 refers to the terms used to designate the sons and daughters of the
brothers and sisters of EGO. According to Piñakuĕ, they are
designated with the Spanish terms: sobrino and sobrina /nephew
and niece/. Jorge Mulcuĕ (Mosqueño /a person from Mosoco/
58 years old) affirmed that they are designated with the words kuĕ
or wásak (son and daughter) preceded by the possessive my (anji).
601 Men and women use the same terms for both the paternal
and the maternal line, with certain exceptions, subordinating the
real degree of kinship to the generation. The Páez system of
kinship terminology is, therefore, classificatory and bilateral.

/167 cont./

601 Seemingly there is no terminology for designating the older and younger brothers of the generation of EGO, although in practice this distinction stands out. EGO is obliged to greet older brothers and the older members of the community in general, and there also exists the obligation of being greeted by the younger brothers and, in general, by all the younger members of the community.

Among the adults of both sexes, married and with children, the use of teknonymous forms is general.

114 /168/ The only two studies of kinship systems made in Colombia are from the pen of Professor Gerardo Reichel-Dolmatoff working among the Iroka and the Kogi. That of the Iroka was [104] done with the collaboration of Alexander L. Clark. With the intention of facilitating subsequent comparative studies on the subject, we have adopted his system for presenting the materials, especially the abbreviations of the kinship terms in the Spanish language /the English equivalents for the abbreviations of the Spanish terms are given on p. 10 /.

127 Before finishing with this brief introduction, we wish to
128 place on record our sincere thanks to Señor Víctor Bedoya for his voluntary transcription of unpublished documents from the Archivo Nacional relating to the Páez, and to Professor Marcos Fulop for his valuable observations and opportune suggestions which brought much light to obscure sections of our work.

Analysis of Kinship Terms

601

Consanguineous Relatives

A--EGO's Generation:

a) Masculine EGO: Brothers and sons of uncles and aunts, paternal and maternal, are grouped in a single category and classified as brothers (iakté).

b) Sisters and daughters of uncles and aunts, paternal and maternal, are grouped in a single category and classified as sisters (Pesh).

/183 cont./

557 say, the surname, is transmitted through the paternal line. The
582 wife retains it throughout her life, but does not transmit it to her children. A son of hers will bear only the father's surname.
604 According to an /184/ informant from Calderas a man respects his paternal uncles and aunts in the same manner as the maternal uncles, but not the maternal aunt, because "she is not a real relative;...she is a woman and not a man ... the men (older) have to be respected the same as the old women" and, generalizing, adds: "of the uncles and aunts one respects the men more than the women and the paternal uncles more than
601 the maternal ones." Although the terms for designating the
604 uncles and aunts of EGO differentiate sex and specify the line to which they belong, EGO considers the relationship of the paternal uncles and aunts to be closer than that of the maternal ones, and although the uncles call the sons of their brothers "sons," there does not exist among the present-day Páez a clear concept of parallel uncles and cross uncles and, consequently, of parallel and cross cousins. Masculine EGO calls paternal and maternal male cousins Iakté, paternal and maternal female cousins pesh, making them equal with his own sisters and brothers, and feminine EGO calls paternal and maternal female cousins Iakté, paternal and maternal male cousins Jish, making
601 them equal also with her own brothers and sisters. But logically
604 such a distinction must have existed, to judge from the conduct
582 observed in the selection of mates and in the respect that EGO pays to his uncles and aunts, this being more pronounced for the paternal than for the maternal ones and greater still for the men.
● 114 Eugenio del Castillo y Orozco corroborates our argument. In
60 his Vocabulario he states that the mother-in-law is called by the
582 same term as the one designating the father's sister (pezoz), and the father-in-law by the same term as the one for designating the mother's brother (cacca). This means that in the eighteenth century in-law kinship specified the origin of the spouses, clearly showing marriage between cross cousins.

60 All these traits make us think that possibly there were
614 patrilineal exogamous clans, now manifested by some types of
174 stereotyped conduct,

/107 cont./

123 knew tales he could tell, and to whom we gave tobacco and salt and a few other small gifts, a knife, a hoe, or an aluminum cup. At the moment he had a headache, he said. I gave him a few tablets, and we agreed that I would come back the next morning and he would tell me a few tales. When we arrived the next day, after hours of tramping, his wife told us that her husband had gone into the mountains very early that morning in order to cut wood.

115 Our first visit in Calderas took place in the company of the interpreter, Marcos Antonio Penkue, a Paez about 40 years old from San Andrés, who regarded himself as very civilized and who had reached a certain position of wealth. He served as a [191] soldier on the Brazilian border and speaks Spanish well. On his [245] finca /see the glossary, p. 249/ he has about 2,000 coffee trees, [439] whose yield he sells in Inzá on the market. He also carries on [464] other business there by functioning as an interpreter and middleman for the non-Spanish-speaking and generally unbusinesslike Paez. During our work in Calderas he combined business with his services. [233] The Paez are ardent cattle-raisers, albeit not in our economic sense, but purely for sport and the pleasure of numbers. A cow-calf is much more valuable to them than a full-grown bull, for [437] it will produce another calf and increase the herd. Thus, Marcos Antonio exchanged calves for bulls in Calderas and, indeed, bought [434] some cattle himself. These business transactions bring him about 200 to 250 pesos profit per head, since among themselves the Paez ask only low prices, about 50 pesos for a bull. His selling 115 price on the market in Inzá amounts to about 300 pesos. He re- 124 garded the work with us as highly troublesome, but he knew what he was worth to us. His fee rose from three pesos a day at the beginning to ten pesos. Translations that seemed to him too complicated or explanations that were too long for him he would give "in essence" in a few words, after which my counterquestions obviously annoyed him. One day when I had planned some important work, but he some important business, he hid our horses and calmly let us look for them all day long, while he, under the pretext of searching for the horses, carried on his business until he "found" them in the evening.

/108/

● 115 We then looked for another interpreter, the Calderun Victoriano Piñakué, about 17 years old and very open-minded with regard to "white" civilization. His father even once visited Popayán, the capital of the department of Cauca. Through this he had a somewhat broader outlook and became involved in a quarrel with a bad shaman, in which the latter took one of his eyes by magic. Since then old Piñakué has been blind in one eye. A younger brother of Victoriano is going to school in Inzá and is the helper of the sacristan there. Victoriano is very much interested in one day becoming acquainted with Popayán or even Bogotá. He speaks Spanish quite well and has already earned money on occasion in the service of the white colonists and in La Plata as a construction worker, in order to buy clothing of the whites for himself. By "white" the Paez mean the Spanish culture of the Colombians, namely, clothing, education, and corresponding customs, not, however, skin color or other characteristics of the white race.

[191] [464] [829]

Victoriano set great store by dressing, not like a Paez, but like a white. He was an enthusiastic fellow-worker, not, however, out of greed for money, but out of sincere interest, and at every opportunity he would ask how things were among us in Germany. With a great craving for knowledge, he would again and again have our photos of Europe explained to him, and he even made an effort to learn German.

115 156 554

In his native village of Calderas the work with Victoriano was very difficult, since he was very unpopular because he dresses like a white. Several times, when his fellow villagers were drunk, they even wanted to murder him. Once when we visited a house together, he was heckled by some tipsy men: he was called a sluggard who does nothing the whole day but talk with the "doctores" and go for walks. Besides, they said, he thinks that he is better than the rest of the Paez because he wears "white" clothing. When Victoriano replied that in his work among the whites it would be impossible for him to wear the Calderun costume, but that in his dress he was obliged to adjust to his environment, they retorted that he went to the whites merely in order to be able to eat more meat.

/108 cont./

115 156 554 [598] Victoriano likes to parade his outward standing of higher culture openly. He possesses soap, a toothbrush, a small brush for grooming his eyebrows, and perfume. He uses all these toilet articles very frequently. He is not afraid of the jealousy of his Calderun fellow-villagers; he always carries his machete /see the glossary, p. 249/ with him in order to defend himself. He wants to marry a "white" woman outside of Calderas (cf. also "The Course of a Day" /see p. 133 /).

124 286 386 /109/ In the work an attempt was made as a matter of principle to observe all the activities of the Paez ourselves; when this was not feasible, two different informants were questioned if possible. Two examples will show, however, that errors can creep in, even with the most careful work: I had the dyeing process for the black-dyed fabrics explained to me by the interpreter Marcos, according to whom they are first boiled with certain leaves, and then all of this is placed in black humus earth for two days. When the same question was put to Victoriano, he stated that the black coloring occurs if the fabric is placed in black humus earth for two days. At my suggestion that the fabric first had to be boiled with leaves, he delightedly agreed with me. When called to account as to why he had not told me that, he replied: "Well, you did not ask me about that; you only wanted to know how the material becomes black!"

124 423 One cannot speak sufficiently often and again and again in different ways about the same subject, for to the Paez the necessity or the meaning of explanations for things self-evident to them is usually incomprehensible. Thus in the case described there was as little ill-intent or even mere carelessness as in the following case: In roaming over boundary lines, I inquired as to which fields were private property and which were community property. We came to the general conclusion that the lowlands were community property and the mountain slopes the private property of the man or family who had first cleared the land. I asked Victoriano several times as to whether there were any pieces of land that at present had no owner. He stated emphatically that all the land had been disposed of and there was no longer any ownerless land.

/204 cont./

556 special sociological role within their community, for they are elected neither more frequently nor more rarely to the village offices. They have simply "always" been considered wealthy, though it should be noted that in the language of the Paez there [192] is no word at all for "rich" or "poor." The word used for "poor," "póre," comes from the Spanish (povre), and the word used for "rich," "čačanas," at the same time means "strong" in the physi-
556 cal sense. Despite this apparent unimportance of wealth, how-
626 ever, it is jealously seen to that no other industrious man of a poor family will become rich and possibly put his wealth -- by means of Colombian dress or something similar -- on display. The evil shamans would put a spell on him or poison him, /205/ and the neighbors would devastate his fields by driving their cattle there. He would be cut by everyone, and people in a state of intoxica-
● 115 tion would start a fight with him in order to kill him. At any
556 rate, this is what happened and is happening to our interpreter,
626 Victoriano. He does not come from a wealthy family, but he wants to acquire money and livestock through diligence and [291] ability. From the money he earned among the whites he has [177] already bought himself the clothing of the whites, which he now proudly displays, and at festivals he sells wax candles and sweets. His fellow-villagers hate him on that account. The priest has had to protect him several times already from the machetes of drunken men who had started a fight with him; and in our presence, too, when we visited various houses with him, he was occasionally very rudely heckled by drunken men. Not least because, in the opinion
115 of the Calderun, he is not working. Again and again I tried to ex-
123 plain to the people that they, too, could "go walking" with me and
556 earn money if they were able to speak Spanish. Since this was
626 not the case, there was nothing else for me to do but always work with Victoriano. Nothing helped; Victoriano became more and more unpopular, and I, too, was regarded as a do-nothing. A
123 drunken man who, instead of the one cigarette he was given, vainly demanded an entire pack as a present abused me, too, as an "alko," a dog, who is always going from house to house and does not work.

/210 cont./

423 considerably larger parcels of land than others, for example, the
427 Guagáz family, who, according to my information, own almost half of all private land. Permission for the use of land is granted only for crops with a short ripening period, namely, wheat, maize, beans, and cabbage, but not sugar cane, coca, or bananas, which need several years to mature, in other words, can be used for years. As rent the owner receives a small portion of the harvest, which is left on the stalk and which he must harvest himself.

423 As a matter of principle, land cannot be bought, we were
[428] told repeatedly, for every man must leave his land to his sons. Even if a man has no sons, he may not sell his land, but must hand it over to his brothers. This was the information always
423 given in answer to my direct questions on the subject. /211/ In
437 practice, however, it is quite possible to sell land, and this is not infrequently done, but no one realizes that a land sale actually takes place when a man clears a piece of land for himself, plants it, and exchanges the entire harvest, including the land, for a
[115] head of cattle, a horse, etc. This is what Victoriano did, for example, in order to acquire a horse. He cleared and planted a piece of his father's land, about 2,500 square meters, to sugar cane, and when this was mature, he exchanged the harvest, including the land, for a mare. Nobody wanted to admit that this violated the principle of not selling land.

423 The land belongs to the father of the family, who, as a rule,
241 tills it with his grown sons. If the sons have their own houses,
59 they generally go on working with their father, since no one likes to work alone. At the harvest, the respective wives fetch the food
423 required for their families from the common field. If father and
427 son do not live in amity, the son must plant and harvest his own
59 3 field, for which he is then obliged to accept the help of friends.
241 It is considerably more expensive to entertain them than family
[476] help, for in the latter case there need not be any chicha for entertainment. Even in this instance, however, the son must ask his father and owner of the family land for permission to cultivate the land. This is not denied, however, After the harvest, this piece of land, since it will lie fallow now for about ten years, goes back

/265 cont./

756 right ring finger up the arm to the heart, the person concerned
826 will bury a relative on the next day. Signs in the palm of the
787 right hand mean that the sick person will get well; signs in the
[763] palm of the left hand, that the mountain spirit is not accepting the gifts and the patient must die. By means of signs on the back of the left hand the mountain spirit makes it known that the offerings are insufficient. If the signs go from the palm of the right hand to the neck, this means "pest" from the Pijao. Signs in the right thumb and in the hand announce the appearance of a lost or strayed animal; signs in the corner of the left eye, that the lost animal has been stolen and has already been eaten by the thief; signs in the left arm announce the arrival of the ec spirit; signs in the right upper arm announce to the shaman that good people are asking him to be the sponsor at a christening. Signs on the head of the shaman announce that the nyic will send the pest, and if the signs go from the head into the left hand, the
756 person is already bewitched. In these and similar ways of
787 interpreting their signs, the shamans discover the nature of all illnesses and the means required to cure them. Thus their signs are their only treasure of experience, and if they do not feel them, or no longer feel them, they have lost the essential characteristic of being shamsns.

787 Besides the shamanistic signs described, for the teyu as well
828 as for ordinary human beings of every age and sex dreams are an essential means of experience for looking into the future, as well as for confirmation of a foreign -- usually evil -- influence on one's own person. Just as the effects of evil magic on the individual are brought about through auto-suggestion, so, too, what is seen in a dream. The latter perhaps even more intensively because of a person's own, direct dream experience; only in this way can one understand the positively fatalistic attitude of the persons
● 115 concerned. Our interpreter Victoriano, for example, is one of the
787 most industrious and capable Calderun. He is determined not to
828 remain socially on the Indio level of his village. He therefore
554 takes /266/ work from time to time among the white colonists,
[770] in order to earn money for Colombian clothing. He is therefore
[464]

/266 cont./

●115 greatly hated in the village. In an intoxicated state the men have
787 often threatened to murder him. One day he came to us and said
828 that we would have to hurry with our work, for he would soon die.
554 He was by no means agitated when he said this, but smiled with an expression of absolute conviction. In answer to our question as to why, he stated that during the night he had dreamed of seeing himself in the grave. This is a sure sign that he must die. He would not let us ease his mind, for he knew, so he said, that he was unpopular in the village and he had been threatened with death anyway because he had seen more than the others, wore better clothes, and ate meat, instead of working in the village. For this reason the nyic would most certainly bring him to his death. It took several days and all our art of persuasion to get him away from this idea. Again and again we had to point out that, after all, he was a Christian, and as a precaution we had to give him many of our medications, before he would believe that perhaps he need not die
[787] after all. In any case his medallion of the Virgin Mary, which he always carries with him, does not unconditionally help against
787 evil magic. In the following there are a few further examples of dreams that are significant in some way or other: if one dreams that he is bitten by a snake, it is a sign of bewitchment; if, however, in the dream another person kills this snake at the moment of biting, a teyu will put an end to the bewitchment. To dream of jaguars and cats indicates that there are graves of the Pijao under
[783] the house. Someone will die of the "pest" of the Pijao if a person dreams that a jaguar is devouring his chickens. Dreaming about a funeral pile means that there is gold there. If one dreams about a
[763] cow, his wife will die. If one kills a bull or a horse in a dream, a good person (a shaman) will die. If one is stung by wasps in a dream, it means future punishment. Carrying beams or a chicha trough in a dream means that one will soon assist at a funeral. To choke in a dream means war, captivity, or being put into prison. Moreover, it is always a bad sign to dream of arracacha; in case of a journey, one would, for example, be devoured by a jaguar in the páramo. Also, if one dreams that he is able to walk under a rock, it likewise means that a jaguar will devour him. If someone

*539 /296 cont./
bent down to his mother and shouted into her ear with the voice of thunder, "Ooooh," whereupon she came back to life. And he did the same thing to his sister. Llivan then left the house in order to see how many Pijao were dead; he went as far as Togoima, holding a pair of scissors in one hand and a bag in the other, and cut off the earrings and necklaces of all the dead Pijao and gathered them up in his bag. Near Togoima he found a young Pijao who had not yet been killed sitting in a hole; he had a human leg that he was going to eat because he was hungry. "Ah," said Llivan, "you are not yet dead?" -- whereupon he hurled his lightning and killed this Pijao also.

[192] Then Llivan carried all the ornaments that he had taken off the Pijao /297/ into one of the underground prehistoric burial caves (koátkac) of the kind that the Paez do not use to bury their dead. This cave was located near a river, and after Llivan had put down the ornaments, the river rose and covered the burial site with the treasures.

Then Llivan returned to the house of his mother and said: "Now I have killed all the Pijao and none of them will ever come back. But now I can no longer live with you. Since I have killed so many Pijao, it is possible that I might kill you, too. I must therefore leave you. I bought myself a very beautiful house in the mountains and shall live alone from now on, but never die." His mother and sister both wept, but not he. Mother and sister offered to accompany him, but he declined. Then Llivan set out. His sister followed, in order to see where Llivan went, but Llivan was accompanied by the wind and therefore he went so fast that no one could follow him. The sister could only see that Llivan rose far behind into the air. Then it began to rain, and the clouds were very low, and Llivan fell down into the Hipendyk Lagoon. Thenceforth Llivan lived in the lagoon and became Thunder.

[115] Victoriano told me this detailed story after learning it from his father and his uncle. Old Celia Uriaga of Calderas told it to me in a similar way but much less completely.

[For information on the informants and interpreters used by the author in collecting specific examples of mythological tales from the Parcialidad of Calderas, see category 116, pp. 10-32.]

[Parcialidad of Calderas]

/291 cont./

773 They are in fact legendary personages who go beyond the
[186] boundaries of legend to enter the territory of myth, not only
[628] by their symbolism, but in their dramatic force, their sociological framework, and their cultural function.

The mythology gravitates around the behavior of the natives, their attitudes toward the whites, the organization of the cabildo, illnesses, and death. Of Juan Chiracol, a 23-year-old informant says: "He warns when the mob is coming, he no longer warns, so." And of Thunder, it is said that he almost killed a padre because he went to the montaña to get wood to board up the school. "Thunder was defending the
538 wood," they say. The tales were always told around the fire,
773 with men, women, and children present, who sometimes laughed, at other times kept silent, but always corroborated, corrected, elaborated, or confirmed. The storytellers sometimes put on a serious face, accompanied their tale with mimicry, and once in a while they would burst into mocking laughter, as if to signify that what they were saying was worthless and they did not believe it. I was soon able to ascertain
• 115 their sociological and cultural value. The myths and tales
773 were collected with the help of an interpreter, a mestizo from San Andrés, about 35 /292/ years old, tall, muscular, quiet in manner, intelligent, calculating, with great charm and a knowledge of Paez and the Spanish language; he was familiar with the customs of the Calderunos, esteemed by them, and
773 skilled in his questioning. We present below the myths and
128 tales collected, leaving the other aspects of the culture for presentation in a complete monograph.

1. Thunder

*539 The old people related that at one time the area was full of Pijao. Thunder lived in Sukafi. In view of the growing number of Pijao, he decided to kill them. He stood on a tall stone that is to be found there, threw his lariat /boleadora/

/361/

75 Their importance is emphasized if we make a comparison
511 with the parcialidad of San Andrés, where there is a Centro de
743 Salud duly staffed by a registered nurse, and furthermore, not far away, there is the Centro de Higiene of Inzá, staffed by a doctor and a group of nurses whose services are free and who also distribute free drugs. In spite of this, the natives do not always go to these centers, preferring their own doctors and most commonly the té eu of Calderas.

651 Concerning taxes, we have already said that the immovables
511 of the native communities are exempt from this type of encumbrance; hence, the column reserved for this type of expense remains empty. The few figures that are found in it are payments on immovables within the settlement area and, in one case or another, the payment of taxes for the exercise of trade in various plazas of the municipio of Inzá.

511 The amounts devoted to the education of children are the
871 smallest, if we except those of the "white" informants, some of
[563] whom have their children in high schools, in rural normal schools,
[115] and even at the university. In the parcialidades of San Andrés and Lame, they are practically null. The children of San Andrés go to school, as a rule, unprovided with school supplies, carrying in their bags provisions for lunch, consisting of manioc and cooked plantains, mote, and roasted maize, since the dwellings are located at a distance of several kilometers from the school, with very bad and rugged paths. School cafeterias and the donating of school supplies are more than indispensable in these regions. These children go to school irregularly and do not remain there for more than two years; they are taught in Spanish, and on the
[562] whole the benefit is minimal. Girls attend in smaller numbers
[212] than boys; the adults believe that women do not need to learn to read and write. This situation is different in Mosoco. The children of both sexes attend school and try to attend regularly, and many walk several kilometers a day; the fathers of families are interested in having their children learn to read, write, and count, and for this reason they try to outfit them with some equipment for their tasks of apprenticeship.

600 Bases for the Study of the Social Organization of the Páez

By
Segundo Bernal Villa.

/Page 166 is blank./

124 /167/ The material for the study of the kinship system of
128 the Páez was collected in the month of May, 1953, thanks to the
[114] enthusiastic collaboration of Victoriano Piñakué, 18 years of age,
[115] bilingual, and a native of the parcialidad /a village and the lands belonging to it/ of Calderas. With this material we made an analysis of the kinship system, which we present below without any major modifications. It was later discussed with several native men of the parcialidad of San Andrés, who found it to be correct. At the end of May, 1954, we had the opportunity to discuss it again in Mosoco with two male informants of the lo-
[197] cality. They found practically no phonological differences, in spite of the fact that the Páez spoken in that parcialidad showed some different nuances in relation to that spoken in the other
124 parcialidades. They made only one fundamental observation,
128 which we accepted, since we consider it to be convincing. It
601 refers to the terms used to designate the sons and daughters of the brothers and sisters of EGO. According to Piñakué, they are designated with the Spanish terms: sobrino and sobrina /nephew and niece/. Jorge Mulcué (Mosqueño /a person from Mosoco/ 58 years old) affirmed that they are designated with the words kué or wásak (son and daughter) preceded by the possessive my (anji).

601 Men and women use the same terms for both the paternal and the maternal line, with certain exceptions, subordinating the real degree of kinship to the generation. The Páez system of kinship terminology is, therefore, classificatory and bilateral.

áhimos -- ghost
alko -- dog; also a term used in approbation for a person who doesn't like to work
číngalo -- the triangle, a Paez musical instrument
čúnga -- a top; one of a child's toys
dúrat -- menstrual hut
eč -- the most evil of all spirits, dwellers in the earth
eč kígwe -- the land of the dead corresponding to hell
enzte -- a large annual fishing expedition of the entire village, usually in the dry season of February
fi'nz oṅ -- the second meal of the day, at 3-4 p.m.
gělyómp -- mountain spirit
hénde -- hole-ball; a hollowed out fruit capsule used in a children's game
iglésia -- church
ítok -- shamanistic "signs"
káka -- small cylindrical drums
kánoe -- a trough for storing chicha
ki'sen -- non-working days, now used in reference to Sunday
koi -- the transverse flute
kosé oṅ -- the first meal of the day, around 4-5 a.m.
kotç -- maize
kotyâvyat -- maize store house

kut -- a bass drum
lõčinyi -- girls' dolls
mbãts -- agave
mbéca -- chicha, an alcoholic beverage
mbéka kígwe -- the happy land of death; heaven
mĩś -- cat
ndõsoknas -- the midwife
nikálo -- the bridal couple
panderẽta -- the tambourine
sãt -- war leaders with shamanistic abilities
tátyinas -- god, creator
tíkwe -- a term used to designate priests and missionaries
tũs -- the rainbow spirit
úńsa -- mice
vacaloca -- a representation of a cow used in religious festivals
wáhi -- tobacco

Foreword by the Editor

121 This second volume of our series of studies contains a portion of the research which my collaborator, Dr. Horst Nachtigall, was able to carry out in 1952/53 in Colombia. The volume testifies to the fact that our scientific work at the Institut für Völkerkunde of the University of Mainz is not limited to desk research. Rather, we endeavor, in keeping with the scope of the problems in our field, to gather new observations in various parts of the world through fieldwork and in this way to help fill the large gaps in our knowledge of peoples living close to nature. Such research must necessarily also extend to the prehistoric evidence of human culture in the areas visited. Thanks to his extensive preoccupation with the special field of pre- and ancient history, Dr. Nachtigall was in a position to obtain the present material from the Colombian archeological province of Tierradentro.

Being occupied myself at the present time with ethnographic work in another corner of the world, I am particularly happy about the publication of this first volume of results from the fieldwork of our Mainz Institut für Völkerkunde. I thank [122] our publisher, Dr. H. Wyss, and the Deutsche Forschungsgemein- [128] schaft for their kind understanding and their active help, which have made this publication possible.

Gilgit, Pakistan, May 23, 1955. Adolf Friedrich

/9/

Words of Thanks by the Author

The description of the archeology and ethnology of Tierradentro presented in the following represents the first part of the scientific results of the Colombian journey undertaken with my wife, which was instigated by the Director of the Institut für Völkerkunde of the University of Mainz, Herr Prof. Dr. Adolf Friedrich, and carried out through his negotiations with German and Colombian authorities. The course of the journey and the preliminary summary of scientific results have already been published elsewhere.

/9 cont./

114 Our stay in Colombia lasted a year, from August 8, 1952,
[10] to August 12, 1953. During this time I worked first under the direction of Herr P. Pedro José Ramirez Sendoya as Investigador at the Instituto Etnológica Nacionál, beginning September 20, 1952, as Jefe de Arqueología at the Instituto Colombiano de
[126] Antropología. After several weeks of inventorying the antiquities in the region of San Agustín we traveled to Tierradentro where we collected the field material of the present publication during the period from December 24, 1952, to April 24, 1953.

122 The scientific work in Colombia was financed by the Ministerio de Educación and the Instituto Colombiano de Antropología. On this occasion I should also like to express my sincerest thanks to the then Minister of Education, Herr Dr. Lucio Pabón Nuñez, and to the Director of the Instituto Colombiano de Antropología, Herr Dr. Antonio Andrade Crispino, for the help rendered. Here I should also like to thank the Vice-President of the Academia de Ciencias Naturales, Herr Prof. Dr. P. Enrique Perez Arbelaez, who, during the early period of my stay in Colombia, smoothed many paths for me. I am no less grateful to the colleagues of the Institute for the scientific help given to me, as well as to the workers in Tierradentro for their diligence in the difficult and, at the beginning of the rainy period, quite unpleasant work of digging.

126 For the research and travel equipment, a number of firms
122 generously put material at our disposal. For the photographs published in this book I had the use of a Leica III f with Elmar /10/ 1:3.5 and accessories, as well as a Rolleiflex with Tessar 1:3.5. For special photographic purposes Rodenstock-Heligon 1:2.8 wide-angle lens, a Steinheil-Culminar 1:2.8 telephoto lens, and Proximeters I and II from H. Schneider & Co. were used with the Leica, and with the Rolleiflex the Rolleikin equipment with the Rolleinars 1 and 2. The interior shots of the grave holes and the native houses were taken with Osram SO and Philipps Pf 45 flash bulbs, as well as with Seuthe flash capsultes. Adox KB 17 and R 18, as well as Perutz Perpantic film, served as negative material for the photographs.

/10 cont./

128 [114] For assistance in drawing up the manuscript, I should like first of all to thank my wife, who accompanied me on all my trips in Colombia, recorded the field research there stenographically, and has attended to transcribing the manuscript. I thank Herr Prof. Dr. E. L. Rapp, Mainz, for his friendly advice with regard to the transcription of the Paez language, and Herr Prof. Dr. Wilhelm Geilmann, Mainz, for the roentgenographic examination of the prehistoric teeth and bones available from the grave chambers of Tierradentro. Here, too, I should like to thank the artist of the Institut für Vor- und Frühgeschichte of the University of Mainz, Fräulein Margot Kunzmann, for the technical drawings and maps, and the Herrn. cand. phil. Wolfgang Lindig for proofreading.

122 [128] The Deutsche Forschungsgemeinschaft, which had already financed my journey both ways and granted a considerable allowance for working up the scientific results, also assumed part of the printing costs for this publication. For this I should like to express my respectful gratitude to the President of the Deutsche Forschungsgemeinschaft. For public and private financial and moral support I must thank Herr Ministerial Director Prof. Dr. Hans Becker and Ministerial Counselor Dr. Otto Wegner of the Ministry of Public Worship and Education /Kultusministerium/ of the Rhineland-Palatinate, the Chief Burgomaster of the city of Mainz, Herr Franz Stein, the Curator of the University of Mainz, Herr Fritz Eichholz, and the Chairman of the Supervisory Council of the Dykerhoff Portland-Zementwerke AG., Herr Consul Alexander v. Engelberg.

Mainz, October 1, 1954. H. N.

/13/ I. Introduction

1. The Geographical Position of Tierradentro

131 The Colombian region of Tierradentro, the "land that
101 lies within," has, by reason of its archeological finds and the
133 largest Indian tribe of Colombia living enclosed there, the Paez, come to represent the typical Colombian regional and cultural province. It lies in the southern part of Colombia, almost directly north of the large knot of mountains, the Colombian massif, in which the largest rivers of Colombia, the Magdalena, the Cauca, and the Caquetá, originate. Here the mountain chain of the Cordilleras divides into three branches -- separated by Cauca and Magdalena -- to intersect the entire country from south to north as the Western Cordillera, the Central Cordillera, and the Eastern Cordillera.

[634] Politically Tierradentro forms the eastern part of the de-
[633] partment of Cauca, whose chief city is Popayán and whose economic and political weight lies in the Cauca Valley. Geographically, however, it belongs to the drainage area of the Magdalena River. The ridge of the Central Cordillera, from Nevado del Huila over the paramos /see the glossary, p. 249/ of Moras, Las Delicias, and Guanacas, forms the western boundary of the area, whose surface shape is triangular, and the course of the Rio Negro de Narvaez, from Nevado del Huila to where it empties into the Rio Paez at Itaibe, forms the eastern boundary. The southern boundary is formed by the ridge of the mountains between the Río de la Plata and the drainage area of the Rio Paez.

133 Nevado del Huila at 7,550 meters is the highest elevation of the Colombian Central Cordillera and the highest mountain of Colombia, next to Cristóbal Colón of the Sierra Nevada de Santa Marta, which is only a few meters higher. Its peak, covered with eternal snow, feeds, among others, the Rio Paez and the Rio

C /13 cont./
133 Negro de Narvaez, the principal rivers of Tierradentro. They
C drain into the Magdalena River, like all the rivers on the eastern
487 slope of the Central Cordillera. The principal traffic routes of
133 Tierradentro also lead to the Magdalena Valley, the most im-
C portant one leading down to the Rio Paez by way of /14/ La Plata
[632] to Neiva or Garzón. Thus, La Plata forms the center of trade and communication for this area, which economically, however, is not yet very accessible.

Even the earliest chroniclers described Tierradentro as a land of "eternal up and down." As a matter of fact, despite its excellent climate for colonization, the large number of small rivers cutting deep into the mountains represents a great obstacle
P to accessibility for communication, without which more extensive
[161] agricultural production is not profitable. The impassability is
[101] one of the reasons that the Paez Indians here, with a total number of about 25,000 persons, have maintained themselves racially pure and, in a few mountain valleys, in a relatively original state culturally.

C The climatic differences of this region lying less than
132 three degrees of latitude north of the equator are considerable, de-
133 pending on the elevation. Neiva, lying 472 meters high on the
C Magdalena River and the capital of the department of Huila, is
[633] one of the warmest cities of Colombia with an average temperature of 30°. Nevado del Huila, lying only 75 kilometers to the west in a straight line, is covered with eternal snow. In between
C there is an average temperature of 21° at 1,200 meters elevation
[361] and one of 11° at 3,000 meters. The predominant elevation of the settlements in the southern part of Tierradentro lies between 1,400 and 1,700 meters, which corresponds to a mean temperature of
C 18-20°. This is the best climate for the Colombian coffee. At
[245] the same time it is an excellent climate and elevation for the
[249] planting of sugar cane and maize and for cattle-raising, economic
[233] activities that only the colonists profit by in a commercial sense.
P The Paez villages lying in this climate are therefore extensively
C overrun by colonists, and broad stretches of land have been taken
[648] by them for agricultural use. Here the mountain slopes which
P
[361]
C
[311]

Here the mountain slopes which
/14 cont./
C 311 134 only 70 years ago were still covered with dense tree growth are now cleared to gain pasture areas for stock-raising, thus causing P 361 132 extensive erosion of the normally already very thin humus covering and a certain sterility of the soil. The situation is different in the villages still exclusively inhabited by Indios in northern Tierradentro. They lie in part considerably higher (Mosoco, P [244] Vitoncó, Suin, and Lame about 2,500 meters). Here the nights are already perceptibly cold. Coffee no longer thrives, in its P [233] stead maize and potatoes. It is also the best climate for cattle-P [311] raising. The mountain slopes, due to relatively sparse settlement on the part of the Paez, have not all been put to economic [134] use as yet; the /15/ tree growth guarantees natural water conservation throughout the year.

C 132 The two rainy periods of the year are from May to June and October to December. During these times, especially in the rainy period of the first half of the year, it rains in considerable amounts every day, whereas the dry periods are regularly free of precipitation.

C 317 175 Tierradentro's wealth underground has not yet been explored with modern means. In pre-Spanish times, and even [135] after the Conquista /the Spanish conquest; see the glossary, C 175 p. 249 /, numerous salt beds were exploited. The Spaniards 317 brought Negro slaves into Tierradentro as mine workers, whose 563 descendants make up a considerable part of the population of 464 Belalcázar. Today some of them work as gold-washers on the 316 banks of the Rio Paez. In Indian times gold was still obtained C 316 at Tálaga, San Vicente, and Jambaló. In the southern part of C [103] Tierradentro the silver mines were a significant economic factor near the city of La Plata -- so-named because of its important finds.

C 487 From colonial times up to five years ago only the routes passable for human beings and horses (caminos de herradura /bridle paths/) were available for traffic routes. The two chief connections were from Inzá over Paramo de las Guanacas to Silvia and Popayán and into the Cauca Valley, as well as from Inzá via La Plata into the Magdalena Valley.

/15 cont./

600 C 491 C 489 [494] [509] [497] C [494] C [509] La Plata into the Magdalena Valley. Since the construction of an auto road from La Plata to Belalcázar, there is a good road connection both to the Cauca Valley and to the Magdalena Valley. From La Plata a bus goes to Garzón in four hours and to Neiva in seven hours. At the present time both cities have twice-weekly air service to Bogotá and Neiva, besides a daily train connection with the capital of the country. It takes about ten hours by bus to go from La Plata over the Central Cordillera to Popayán. From Popayán there is daily air service to all parts of the country.

P C 172 489 361 Most of the archeological sites and the most important ones lie near the small village of San Andrés, on the hilltops and ranges of the valley of the same name. The place lies about six kilometers straight north of Inzá, separated from it by the Rio Ullucus and El Aguacate range. In order to get from La Plata to San Andrés, one first takes the road toward Belalcázar up the Rio Paez to Juntas, the point of confluence of the Rio P C [492] Ullucus with the Rio Paez. From Juntas one must ride horseback west into the mountains for about three hours in order to reach P C 361 162 San Andrés. This place is a village with the same characteristics as all Paez villages, that is to say, it consists of only /16/ a church, a school, the house of the town council, and a few other houses used by merchants and by the inhabitants for religious festivals. C [241] The latter, Paez Indians and colonists, live on individual farms on the slopes of the mountains along the valleys of the small streams, in a very unfavorable distribution, to be sure, as far as the Paez are concerned: the white and mixed-colored colonists live in the fertile valleys, mainly along the river courses, where they grow coffee, maize, and sugar cane, whereas the Indios must be content with the relatively unfruitful slopes.

2. The Investigation of the Prehistoric Cultures of Tierradentro

484 The numerous mountain ranges and deeply cut watercourses which traverse the entire Tierradentro region make travel other [492] than on the roads very arduous. The visitor is dependent upon horse or mula /female mule/ as a means of travel: the former is the more pleasant because of its ambling pace; the mula is the safer method of travel because of its instinctive sureness at night and in difficult terrain.

122 In general every valley basin constitutes a village. In 114 order to get from one to another either wide detours must be 172 made in the valley or the ranges must be crossed on very narrow [361] and steep zigzag paths. This -- along with the rebuffing attitude [487] of the Paez -- is one reason that the archeological and ethnologi- [609] cal investigation of Tierradentro was not started until very late. 114 The first reporter on the prehistoric finds was the Colombian gen- 172 eral and geographer, Carlos Cuervo Marquez, who on his expeditions through large parts of Colombia, after his visit in San Augustín in the year 1882, also stayed in the Tierradentro region and gives us the first report about "strange cemeteries and large underground chambers" with pillars, rows of pillars, and niches. He reports further about human figures of stone that are very similar to those of San Augustín (Vol. I, pp. 241-243). In the edition of 1920, C. Cuervo Marquez (Vol. I, pp. 273-277) at the same time cites the report of a commission consisting of Victor Trujillo and Bernardino Montealegre, who for the first time describe the statues of Aguabonita. A member of the commission, Victor Trujillo, gives a separate report about them in 1935 in the periodical Educacion. His announcement that he was the discoverer of the /17/ statues of Aguabonita is contradicted by Cenon M. Valencia in an article in the periodical Huila Historica. According to this, their discoverer was a native named Ignacio Cotacio, who found these statues in September, 1918.

/17 cont./

114
172 The next travelers who visited the region of the archeological grave-chambers and statues around San Andrés and Inzá, for two days each, were the Belgian Marquis de Wavrin and the German-American H. Walde-Waldegg. In 1931 the Marquis de Wavrin, after he had first reported on the presence of a number of new statues in Nariño and San Agustín, inspected some of the grave chambers on a journey through Tierradentro and reported on them in various articles from 1932 on. A summary report of his long and numerous journeys and adventures in Colombia appeared in 1953.

The systematic investigation of the grave chambers of Tierradentro began in 1936 when the German geologist, Georg Bürg, then a professor at the University of Popayán, made new discoveries of a large number of grave chambers and had a few of them cleaned out. After a report to the department of Cauca he was granted the means to provide protective roofs for the
[113] most important grave chambers. His brief publication appeared in the Ibero-Amerikanischen Archiv, 1937/38.

In July of the same year the Colombian archeologist, Gregorio Hernandez de Alba, was commissioned by the Colombian Ministry of Education to draw up a report on the archeological
[113] finds of Tierradentro. His descriptions and sketches of ornamentation, published by him in 1938 in the periodical Revista de las Indias, are the first scientific publications on the types of the grave chambers of Tierradentro.

In the same year in which Georg Bürg and Gregorio Hernandez de Alba worked in Tierradentro, the Spanish archeologist, José Perez de Barradas, was also commissioned by the Colombian Minister of Education to study the Tierradentro culture now moving into the light of Colombian publicity. He had shortly before been invited by the Colombian Ministry of Education to do archaeological research, and in October, 1936, he spent two weeks in San Andrés and Inzá in order to make a first complete inventory of the statues and grave chambers known up to this time. His publication, which forms the basis of all further research, appeared in 1937 as the first volume of the publications

Colombia SC1
Tierradentro

/17 cont./
114 172 of the archeological section in the Colombian Ministry of Education.

114 172 815 Although archeological work in Tierradentro up to this time was limited /18/ to the inventory and preservation of what was at hand, that is to say, of the chambered graves opened up and plundered by the guaqueros /see the glossary, p. 249/, this changed with the subsequent founding in 1941 of a Colombian national ethnological institute in which a number of young Colombians, under the leadership of Paul Rivet and with the cooperation of Gregorio Hernandez de Alba and Wolfram Schottelius, were trained as archeologists, ethnologists, and anthropologists. One of the first scientific and methodologically unobjectionable field-trips was conducted in the winter dry season of 1942/43 [113] in Tierradentro by E. Silva Celis. The results were published in the first volume of the newly founded Revista del Instituto Etnológico Nacionál. The excavations include the sites "Parte alta de las Huacas" (today: "El Duende") and "La Montaña."

172 654 Subsequently the government bought up the land of the most important sites and combined them for the archeological park of Tierradentro. Below the site "Segovia," which belongs to the village of San Andrés, a house was equipped with the necessary working and living rooms for the scientists working there and a small museum was set up for the archeological objects. The sites of El Tablón, Segovia, El Duende, and the Alto 172 de San Andrés belong to the archeological park. Other sites, 656 some of them important for science, are still in private ownership. 423 According to Law No. 103 passed in 1931, all antiquities in the ground within the Colombian national boundaries belong to the state. They may be dug up only by archeologists authorized by the government. The landowners, however, often refuse to give permission for explorations and excavation, for, according to another, older law, half the value of the antiquities found on their property belongs to them. In order, on the one hand, to avoid having their land declared valuable for archeological research and bought up by the state and, on the other hand, to circumvent the difficult and tedious formalities to obtain the

C /18 cont./
172 discovery value of the objects brought to light, the landowners
656 often have them dug up by guaqueros and sold for their own
423 benefit. Digging for spoils on the part of the guaqueros is, of course, forbidden by the law mentioned. Since, however, the archeological sites are almost never in the vicinity of cities or police stations, this uncontrollable digging is practiced even today in large parts of the country, to the detriment of the science of archeology.

C The excavation sites belonging to the park lie within sight
172 of the administration building. The other sites are often to be
484 reached only by very narrow and steep paths. For example, in
487 order to reach El /19/ Canadá, one travels on horseback for an
C hour. It takes just as long to climb on foot the Filo de El
[492] Aguacate, to which the detour on horseback takes more than twice as long. At least the same amount of time, one to three hours, is also generally required for the trip from one village to another.

C The sharply fissured, steeply rising mountains around the
133 archeological park represent the typical panorama of the
172 Tierradentro region (Ills. 5-9 /see pp. 261-263/). The archeological sites with the grave chambers are always on heights, the simpler ones on the peaks of the highest ridges, the largest and
C most splendid ones on leveled-off hilltops below these. One has
133 the best view of the valley of San Andrés from its western end,
361 the Yokaichí ridge, beyond which the valley of Kokiyó, with the village of Calderas, begins. From here one has a broad view as far as the Dondotá ridge, which borders the towns of Suin and Chinas. To the north the Chíndava Mountains border the village of Togóima. Looking eastward in the direction of our ascent, the houses of Supón lie directly below us, then comes the village of San Andrés, then about two kilometers downstream the administrative building for the park, and about two kilometers below
C the park the point Cruzero, from which the road from San Andrés
133 to Juntas branches off in the direction of Inzá. Still farther east,
[823] forming the imposing background of this mountainous landscape,
[776] lie the towns of Pedregál and Turminá, and behind them the
[173]

C /19 cont./
133 dome of "Picacho des Trueno," the mountain of thunder and
? lightning, in which the Paez of San Andrés believe that the
[823] thunder lives and in which -- in the opinion of some Indios --
[776] the Paez, after the destruction of the city of La Plata (1577),
[173] hid the captured gold and silver, the bells and figures of saints
C of the old Spanish silver city devastated by them.

126 My own archeological research in the Tierradentro region
172 includes an inventory of the archeological objects, as well as
114 prehistoric excavations within the sites of the Alto de San Andrés, the Filo de El Aguacate, El Canadá, and Segovia. For the inventory, exact outline and sectional drawings of the various grave types were first of all undertaken. The photographs of the grave chambers /not reproduced for the translation/ show all the types of decoration that occur. Furthermore, the statues present in the Tierradentro region, as well as the types of ceramics, are completely illustrated /not reproduced for the translation/. The excavations include intact grave-chambers not yet opened by pirate diggers, with the first completely preserved burial urns of the Tierradentro culture of the chambered graves.

C /20/ In the description and numbering of the grave cham-
172 bers the numbering used after the establishment of the park was changed. On the Alto de San Andrés today this is the reverse of what it was formerly, since the entrance of the now fenced-in area lies in the direction of the San Andrés River. The present grave chamber No. 1 corresponds to the No. 12 of G. Hernandez de Alba and J. Perez de Barradas. In Segovia, too, the numbering of the grave chambers has changed. The only chambers published thus far, Nos. H. 1 and H 2 of G. Hernandez de Alba, or Nos. 1 and 2 of J. Perez de Barradas, now lie farthest from the entrance and correspond to Nos. 35 and 38. The designations of a few of the sites were also changed. The archeological site "Necropolis de San Andrés" is now officially called "Alto de San Andrés," the "Loma Alta de San Andrés" is now "Filo de El Aguacate," and the "Parte alta del potrero de las Huacas" is now "El Duende." /The remainder of p. 20 and pp. 21-96 are omitted in the translation./

Part II

Ethnography

/Page 98 is blank./

/99/ I. Introduction

1. Historical Sketch of the History of the Paez since the Conquista

P 175

When the Spanish general, Sebastian de Belalcazar, as lieutenant general of Francisco Pizarro, conquered the northern part of the Inca kingdom and founded the city of Quito in the year 1534, he made careful inquiries about the countries lying farther north. Then he met a foreign Indian who gave his name as Muquetá and that of his cacique /see "Kazike" in the glossary, p. 249/ as Gogotá. When he was further questioned as to whether his country contained the metal that the Spaniards called gold, he eagerly affirmed this and added that in his country there is a lagoon /see the glossary, p. 249/, upon which his cacique travels with a raft several times a year, powdered from head to foot with gold dust, so that he looks like a gilded man, In this fashion he offers gold objects to the sun, whereupon he washes off his body and offers this gold, too, as a sacrifice. This story was the reason that Sebastian de Belalcazar in 1535 sent Diego de Tapia on an exploration to the north, in the direction of the land of El Dorado, the gilded man. He reached the present Rio Carchi. This became the starting point of the conquest of southern Colombia by the Spaniards.

P 70 175 648

The resistance against the intruders shown by the natives of southern Colombia differed. The tribes of the Pasto and Quillacinga and the Cauca Valley tribes around Popayán offered only slight resistance. They had already been subjugated earlier by the soldiers of the Inca, whose kingdom with its northernmost expansion reached as far as Rio Ancasmayo. The Paez, Guambiano, Andaqui, and Pijao, on the other hand, living in barely accessible

P 175 648

/99 cont./

175 648 parts of the Central Cordillera, offered the Spaniards violent and quite successful resistance. In the same year that Belalcazar sent out the first expedition, a troop of Spaniards under Pedro de Añasco set out for the north. In 1536 Belalcazar likewise followed him. In the course of that year he founded the cities of Popayán and Cali in the Cauca Valley, important /100/ starting points for further explorations. The latter proceeded in the direction of the Central Cordillera, the paramos of Moras and Guanacos, and Tierradentro. Amid constant battles with the Paez, who at that time occupied a considerably larger area than today, Belalcazar was repulsed and was obliged to return to Popayán and Lima, leaving behind 26 Spaniards, among them several officers. In 1537 he undertook a second assault from Popayán, in order to reach the land of El Dorado through Tierradentro. With 100 horsemen, 200 infantrymen, and more than a thousand Indios as porters, he came to the Magdalena River without being hindered by the Paez. After four months of hard fighting with the natives of the Magdalena Valley, he finally, on the plateau of Bogotá, met the conquistador Gonzalo Jimenez de Quesada, who had shortly before come from the north. A threatened clash of weapons between the two conquerors was prevented by the arrival of a third conquistador, that is, when Nikolaus Federmann, the German mercenary leader who was in the service of the Welsers /a German banking house/, reached Bogotá from the east, through the lowlands of Venezuela.

We again hear about the martial activity of the Paez when in 1538/39 Pedro de Añasco, with immeasurably cruel treatment of the natives, pushed into the Magdalena Valley, in order to keep open, at the command of Belalcazar, the connecting route from Quito to Santa Fé de Bogatá, the capital of the newly founded viceroyalty of New Granada. In a desperate battle 5,000 warriors of the united Timaná, Yalcon, Paez, and Apirama succeeded in overpowering the Spaniards and capturing their leader, Pedro de Añasco. The Indios provided a dreadful fate for him, who had had the son of the female cacique of the Timaná, Gaitana, burned. Gaitana, upon whose urging the

/100 cont./

175 alliance of the tribes against the Spaniards had come about, had
648 him dragged from village to village and one of his limbs hacked off each day.

In order to avenge the death of his comrade-in-arms, Juan de Ampudia with his mercenaries then set out in 1539/40 from Popayán for Tierradentro. But he and his mercenaries were overcome by the same fate. He himself lost his life, and his men were driven back by the Paez amid great losses. Not discouraged by this fate of his predecessors, Francisco Garcia set out on a new expedition into Tierradentro, but he, too, failed completely. The cacique Gaitana achieved, by means of fiery speeches, a renewed alliance of the Timaná, Paez, Yalcon, Apirama, Guanaca, and Pijao, and with 10,000 men she fell upon the city of Timaná and /101/ destroyed it. Its defender, Diego Ruiz des Campo, fell in an attempt, with his riders, to break through the dense swarm of Indian troops armed with the new weapon of lances 40 spans long.

Soon afterward Juan Cabrera was called from Neiva to Timaná for its reconstruction. The Yalcon offered peace and their co-operation in the reconstruction of the city destroyed by them. Juan Cabrera accepted this, and then, when the Yalcon and their caciques were assembled, he fell upon them from ambush and killed their caciques and the greater part of the men. There has not been a tribe of Yalcon since then.

The Paez remained intact and kept their peace until in 1543 Belalcazar returned from a brief stay in Spain and now, with 1,000 horsemen and fully equipped, undertook from Popayán an expedition of retaliation against the Paez. The Paez, fighting for their freedom in their mountains, stood up against the most experienced general of Spain. After severe, bloody losses Belalcazar was obliged to withdraw in defeat. From then on he made no further attempts to subjugate the Paez (*).

* There is a detailed description of this era, briefly sketched here, in H. Trimborn (1954), pp. 67-84 /see the bibliography in the foreign text, p. 327/.

/101 cont./

175 648 Nineteen years later, in 1562, Domingo Lozano made a new attempt to exploit the rich silver mines of Timaná and La Plata. He was obliged to withdraw, however, only to return the next year with reinforced troops. He founded the city of San Vicente de Paez, but only two months later, in an attack by the Paez on the city founded by him, he lost his life. An auxiliary body of troops advancing in forced marches from Popayán was also completely destroyed. After this new expulsion of the conquerors, the Paez allied themselves with the Pijao, who had destroyed Neiva in 1569. Together they attacked and plundered the silver mines of the city of La Plata in 1577, killed all the inhabitants, and set fire to the houses.

As a result of these unfavorable reports, the Spanish king energetically ordered the "pacification of the province," which from 1605-1608 was carried out so successfully that finally the troops could not find any Indios to fight or houses to plunder. In 1605, after the lost battle of Itaibe, the Paez retreated to the region of their inaccessible mountains still occupied by them today. Their western neighbors, the Guanaca, allied themselves with the Spaniards, and the latter put through their territory the [797] connecting road from /102/ Popayán to Bogotá. In 1613 the Jesuits set up the first mission station and a rest station for travelers [164] in the town of Guanacas. In 1790 most of the Guanaca fell [731] victim to an introduced smallpox epidemic. The survivors withdrew to the present Inzá, where they were absorbed among the colonists. Nothing has remained of their language.

175 648 797 The Paez continued to defend their country against the Spaniards and against missionization and, by their sudden attacks, made the road to Bogotá never quite safe. And then in the subsequent period the Spaniards had little interest in missionizing and civilizing the Paez. After the Guanacas station, only one 648 mission was founded in Tálaga. Because of the location of the 177 individual communities, enclosed by high mountain ranges, a 175 few villages were able to remain uninfluenced by Spanish civiliza- [36] tion for quite a long time. Later the authorities supported the establishment of native self-government, the cabildo /see the

/102 cont./

175 glossary, p. 248/, and, by means of reservation laws, protected
177 the Paez from the gradually advancing colonists. In this way the
648 Paez were able to preserve their language and customs to a con-
[178] siderable extent, in contrast to the other mountain tribes of
Colombia, who have long since been absorbed in the Spanish-
175 Colombian culture. In the struggles for independence from the
648 Spanish crown under Simon Bolivar from 1812 to 1824, the Paez
fought for their liberation on the republican side under Gregorio
Calambás. Their leader was captured and shot. After the
victorious termination of the struggles for independence, Gregorio
Calambás became one of the martyrs of Colombian independence (*).

* According to V. A. Bedoya, P. J. Ramirez Sendoya, and G. Hernandez de Alba (VII).

175 The Pijao perished like the Guanaca. After having oc-
101 cupied, before the Conquista, almost the entire area of the
648 present-day department of Tolima east of the Central Cordillera,
[151] as the eastern neighbors of the Quimbaya, they perished in
countless battles with the Spaniards. As late as the eighteenth
century, remnants of them lived in the valley of the Rio Negro
de Narvaez, as neighbors of the Paez. They, called Bemb by the
Paez, as well as the Guanaca, spoke languages that differed
from the Paez. They could not understand one another.

178 Besides the Paez, the culture of the Guambiano, a
101 neighboring tribe called Mogweš by the Paez, has been preserved
114 to a certain extent up to the present day. The Guambiano in-
habit the west side of the Central Cordillera and today live in
the valley of the Piendamó around Silvia. The life and customs
of his tribe have been recently represented by the Guambiano
Francisco Tumiña Pillumbe in a number of very instructive /103/
drawings, each of which was provided with a brief text by
Gregorio Hernandez de Alba.

/103 cont./

127 We know little about the other Indian cultures of southern Colombia existing at the time of the Conquista. The conquistadors had tasks other than drawing up scientific ethnographic descriptions of their cruel enemies. Nevertheless, working with subtle methods, modern ethnological and linguistic research in the old sources has produced outstanding results.

114 Our knowledge is very inadequate with regard to the Paez,
127 who, with approximately 25,000 persons, constitute the largest
[161] non-Spanish-speaking population group within Colombia, next to the Goajiro, the inhabitants of the Guajira Peninsula in the northern part of the country. The oldest dates come from
[797] Eugenio Castillo i Orosco, who, from 1735-1755, was active as a missionary in Tálaga -- often at the risk of his life, as he reports -- and wrote down a vocabulary, a grammar, and some cultural data about the Paez. This manuscript was printed in 1877. Further ethnological data are given by the Colombian general, Carlos Cuervo Marquez, who, on his extensive journeys, also traveled through the Tierradentro region from north to south and produced the first reports about its archeological cultures. The next one, in terms of time, to report on the Paez was the American ethnologist, Henri Pittier de Fábrega, who in 1906, coming out of the central part of the Cauca Valley from the northwest by way of Corinto and Toribió, spent a few days in Tacueyó and Huila. Georg Bürg, who first investigated the archeological objects of Tierradentro more thoroughly, likewise lived for a time among the Paez and gives a few ethnographic notes in his report. In his comprehensive survey of the highland tribes of southern Colombia, Gregorio Hernandez de Alba also reports about the Paez, with whom he became acquainted in connection with his own research. Graciliano Arcila Velez undertook a blood-group examination on 303 Paez. The first thorough special study of Paez culture from the standpoint of the religious and social life was made at the time of our stay in Tierradentro by the Director of the Archeological Park of San Andrés, Segundo Bernal Villa.

Since, therefore, a total description of the culture of the Paez does not yet exist, a tribal monograph on the Paez is herewith presented in the following, in which, besides the data from my own investigations, the results of the earlier investigators have been incorporated. Much will have escaped me -- as a result of the short time at my disposal and the inaccessibility of the population -- much that was part of the domestic economy /104/ of Paez culture has already been destroyed as a result of advancing civilization and is therefore lost forever. In the following description of the cultural heritage of the Paez a division has been made, for working purposes, with regard to material and spiritual culture and with regard to the description of social forms. In practice a sharp line of demarcation cannot normally be drawn within a culture between these aspects of it, since these three areas do not lead a separate existence, but are closely bound up with the acting human being as the creator and bearer of culture. This is true to a greater extent for primitive peoples, where all areas of human activity are much more closely linked together, than in modern high culture where the individual sectors of activity are specialized to a high degree and accordingly may be treated and investigated separately. Thus if, for practical reasons, in the following tribal description the form of settlement is described under material culture and shamanism under spiritual culture, nevertheless both factors are also of great importance from the sociological point of view. Conversely, family organization, for example, as part of the description of society, is also very closely bound up with the economy and techniques in the primarily material realm, and also with religion.

2. Demography

Altogether the Tierradentro area embraces about 5,000 square kilometers, of which about 3,000 square kilometers fall in the region north of the Rio Ullucus. Its 18 villages are divided into two municipios (administrative districts) /see the glossary, p.249 /, the southern one of which includes three villages with Inzá as the seat of the administration, while the northern one

Colombia SC1
Tierradentro

C /104 cont./
632 includes 15 villages with Belalcázar as the administrative seat.
[103] Belalcázar, which takes its name from the conquistador Sebastian de Belalcazar, but not altogether correctly, since the latter was unable to conquer the Tierradentro area, is at the same time the
P 162 seat of the Apostolic Prefect for Tierradentro. According to the
C 162 632 census of 1938, the population of Tierradentro, consisting of mixed-colored colonists and racially pure Indios, contains 17,578 inhabitants, distributed over Belalcázar with 13,861 and Inzá with 3,717 inhabitants. The more recent count of 1951, with a total of 25,495 inhabitants, showed a considerably larger figure, of which 15,388 fall to the municipio of Balalcazar and 10,103 to
C [114] the municipio of Inzá. A comparison of the two counts of 1938 and 1951 shows /105/ a notable error in the count in the municipio of Inzá for the year 1938 (figures cited in Bernal Villa [I], p. 285).

P 641 [162] [851] [191] Of this number about 80 per cent are natives who today are largely civilized, that is, they are baptized and speak some Spanish. Politically they, too, are basically full citizens of the country; they may vote and be drafted into military service, but
P 641 423 do not pay any taxes. In one respect, however, fortunately for them, they are regarded as "minors" before the law; in their totality they own all the landed property of Tierradentro, but
P 641 423 691 648 the individual man is not in a position to sell his land. This is supposed to keep the Paez from losing their settlement area to the whites. In practice this law is not always strictly observed, for otherwise neither the colonists nor the large landowners, who are slowly but surely pushing their pasture and agricultural lands into the territory of the natives, could be in Tierradentro. The latter cannot in fact defend themselves against this, for, due to lack of money, no one among them is in a position to complain in court. If a complaint is nevertheless made, the Indios always lose, as, for example, in Itaibe, in the southeastern part of Tierradentro, where the Spaniards began to colonize as early as 1636 and where for many years lawsuits were carried on by the Indios in vain. Moreover, no judge is able to undertake anything against a rich landowner or against the missions likewise owning land.

/105 cont./

C 162 The inhabitants of Tierradentro may be divided into three groups, according to the degree of civilization: a) the colonists living south of the Rio Ullucus, who speak Spanish and have nothing in common with the Paez. In habits and customs they correspond to the general, more or less strongly mestizo, Colombian rural population. Furthermore, the population of Balalcázar, consisting predominantly of Negroes, has nothing in common with the Paez. They were brought there by the Spaniards in colonial times as slaves, in order to exploit the salt mines that were used by the Paez even in ancient times. Today salt C [316] extraction is no longer profitable. The Negroes live partly on gold-washing in the Rio Paez, which is undertaken in primitive fashion with wooden pans, the workers standing up to their knees P [563] in water. The Paez do not generally intermarry with the Negroes, [186] but, on the contrary, despise them, since they know that they at one time came there as slaves.

P 162 b) The Paez who north of the Rio Ullucus have settled 361 both banks of the Rio Paez as far north as Nevado del Huila. 563 They have in part intermarried with the white and mestizo colonist P population. The /106/ places inhabited by them are: Araujo, [103] Avirama, Belalcázar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

P c) The pure Paez villages of Calderas, Chinas, Huila, 162 Lame, Santa Rosa, Suin and Vitoncó. Among these the Paez 103 of Calderas have preserved their cultural individuality most P purely. We worked primarily among them, and the present ma- 114 terial, insofar as nothing is said to the contrary, refers to the 121 culture of the Paez of Calderas. The Calderun, as the inhabitants P of Calderas are known in the country, are by far the most unap- 181 proachable of all the Paez. They have best kept to this day the 648 three laws of Juan Tama, the mythical hero of the Paez, which 101 were originally strictly observed by all. These three laws say: 1. Tierradentro is solely and exclusively the land of the Paez, 2. the Paez may never intermarry with other races, 3. the Paez are invincible as long as they keep these laws. The third law in particular has well-founded justification, since for centuries

/106 cont./

648 it was impossible for the Spaniards to conquer Tierradentro and
[101 181] subjugate the Paez.

Even today the Paez love their independence above all. And even though they cannot accomplish anything by force against the "whites," by which they mean the colonists and the Colombians in general, they nevertheless hate them with impotent fury. "Muiska pešu" (*), "white robber," is what they call the

* Concerning the transcription and phonetics of Paez words, cf. pp. 154-156.

colonists who took their land from them. The latter, however, more industrious than the Paez, need land for their numerous children. They cannot see why the best and virgin soil should remain unused in the hands of the Paez.

361 The rivers arising in the heights as a result of the water flowing down in the mountainous country form enclosed valley basins, each of which contains a village politically. These are, however, not villages in our sense, since the houses do not lie together, but separately, scattered on the slopes of the entire
123 valley basin as individual farms. This decentralized position of
361 a village rendered the ethnological work considerably more difficult, since one cannot keep an eye on "his" village and survey all the inhabitants together. Hence it is very difficult to become acquainted with all the people of the village, since in each case one must go great distances from one house to another and at the same time usually very laboriously climb a slope. How often it happened that the inhabitants were not at home at the moment or did not want to be seen or spoken to. For, at first, the Calderun did not by any means care to see us, and even after months of life and visits among them, the old people looked back with nostalgia on the times when /107/ all intruding whites were killed.
123 Today, moreover, not only whites, but even foreigners come to
[177] Calderas. "If we speak to them and treat them well," they said, "then more and more whites will come here." How often it happened that we visited one of the old men, who, I was told,

/107 cont./

123 knew tales he could tell, and to whom we gave tobacco and salt and a few other small gifts, a knife, a hoe, or an aluminum cup. At the moment he had a headache, he said. I gave him a few tablets, and we agreed that I would come back the next morning and he would tell me a few tales. When we arrived the next day, after hours of tramping, his wife told us that her husband had gone into the mountains very early that morning in order to cut wood.

115 Our first visit in Calderas took place in the company of the interpreter, Marcos Antonio Penkue, a Paez about 40 years old from San Andrés, who regarded himself as very civilized and who had reached a certain position of wealth. He served as a [191] soldier on the Brazilian border and speaks Spanish well. On his [245] finca /see the glossary, p. 249/ he has about 2,000 coffee trees, [439] whose yield he sells in Inzá on the market. He also carries on [464] other business there by functioning as an interpreter and middleman for the non-Spanish-speaking and generally unbusinesslike Paez. During our work in Calderas he combined business with his services. [233] The Paez are ardent cattle-raisers, albeit not in our economic sense, but purely for sport and the pleasure of numbers. A cow-calf is much more valuable to them than a full-grown bull, for [437] it will produce another calf and increase the herd. Thus, Marcos Antonio exchanged calves for bulls in Calderas and, indeed, bought [434] some cattle himself. These business transactions bring him about 200 to 250 pesos profit per head, since among themselves the Paez ask only low prices, about 50 pesos for a bull. His selling 115 price on the market in Inzá amounts to about 300 pesos. He re- 124 garded the work with us as highly troublesome, but he knew what he was worth to us. His fee rose from three pesos a day at the beginning to ten pesos. Translations that seemed to him too complicated or explanations that were too long for him he would give "in essence" in a few words, after which my counterquestions obviously annoyed him. One day when I had planned some important work, but he some important business, he hid our horses and calmly let us look for them all day long, while he, under the pretext of searching for the horses, carried on his business until he "found" them in the evening.

/108/

115 We then looked for another interpreter, the Calderun Victoriano Piñakué, about 17 years old and very open-minded with regard to "white" civilization. His father even once visited Popayán, the capital of the department of Cauca. Through this he had a somewhat broader outlook and became involved in a quarrel with a bad shaman, in which the latter took one of his eyes by magic. Since then old Piñakué has been blind in one eye. A younger brother of Victoriano is going to school in Inzá and is the helper of the sacristan there. Victoriano is very much interested in one day becoming acquainted with [191] Popayán or even Bogotá. He speaks Spanish quite well and has [464] already earned money on occasion in the service of the white colonists and in La Plata as a construction worker, in order to [829] buy clothing of the whites for himself. By "white" the Paez mean the Spanish culture of the Colombians, namely, clothing, education, and corresponding customs, not, however, skin color or other characteristics of the white race.

Victoriano set great store by dressing, not like a Paez, but like a white. He was an enthusiastic fellow-worker, not, however, out of greed for money, but out of sincere interest, and at every opportunity he would ask how things were among us in Germany. With a great craving for knowledge, he would again and again have our photos of Europe explained to him, and he even made an effort to learn German.

115 In his native village of Calderas the work with Victoriano 156 was very difficult, since he was very unpopular because he 554 dresses like a white. Several times, when his fellow villagers were drunk, they even wanted to murder him. Once when we visited a house together, he was heckled by some tipsy men: he was called a sluggard who does nothing the whole day but talk with the "doctores" and go for walks. Besides, they said, he thinks that he is better than the rest of the Paez because he wears "white" clothing. When Victoriano replied that in his work among the whites it would be impossible for him to wear the Calderun costume, but that in his dress he was obliged to adjust to his environment, they retorted that he went to the whites merely in order to be able to eat more meat.

/108 cont./

115 Victoriano likes to parade his outward standing of higher
156 culture openly. He possesses soap, a toothbrush, a small brush
554 for grooming his eyebrows, and perfume. He uses all these
[578] toilet articles very frequently. He is not afraid of the jealousy of his Calderun fellow-villagers; he always carries his machete /see the glossary, p. 249/ with him in order to defend himself. He wants to marry a "white" woman outside of Calderas (cf. also "The Course of a Day" /see p. 133 /).

124 /109/ In the work an attempt was made as a matter of
286 principle to observe all the activities of the Paez ourselves;
386 when this was not feasible, two different informants were questioned if possible. Two examples will show, however, that errors can creep in, even with the most careful work: I had the dyeing process for the black-dyed fabrics explained to me by the interpreter Marcos, according to whom they are first boiled with certain leaves, and then all of this is placed in black humus earth for two days. When the same question was put to Victoriano, he stated that the black coloring occurs if the fabric is placed in black humus earth for two days. At my suggestion that the fabric first had to be boiled with leaves, he delightedly agreed with me. When called to account as to why he had not told me that, he replied: "Well, you did not ask me about that; you only wanted to know how the material becomes black!"

124 One cannot speak sufficiently often and again and again
423 in different ways about the same subject, for to the Paez the necessity or the meaning of explanations for things self-evident to them is usually incomprehensible. Thus in the case described there was as little ill-intent or even mere carelessness as in the following case: In roaming over boundary lines, I inquired as to which fields were private property and which were community property. We came to the general conclusion that the lowlands were community property and the mountain slopes the private property of the man or family who had first cleared the land. I asked Victoriano several times as to whether there were any pieces of land that at present had no owner. He stated emphatically that all the land had been disposed of and there was no longer any ownerless land.

/109 cont./

124 423 One day, at the sight of a freshly cleared field on the highest mountain slopes, I asked a Paez working there to whom this land belonged and whether the person concerned had always owned it. He answered that he himself was the owner and that previously the parcel had been ownerless. He said that he had cleared it for himself and only recently built his house here in order to live here. In answer to my question as to whether there was any more ownerless land, he explained to me that the highest and inaccessible mountain peaks which are still covered with big trees and have never been cleared do not belong to anyone and that any Paez could clear a piece on them, which would then become his property. Later I called Victoriano to task, saying that actually there still was ownerless land. "Yes," he then answered me, "of course there is still ownerless land, but it is so poor that it has no value."

157 Far from their village, on the way to market, and generally in /110/ places away from home, the Paez, if they [123] are alone or in the minority, are timid and reserved. If they are together in large numbers, however, or, even better, in [522] their own house, they are usually quite bold and impudent and loudly made their jokes at our expense. Indeed, jocularity is a 157 prominent characteristic of the Paez. No talk, no conversation, 521 be it ever so unimportant, is begun without joking -- often of 522 an erotic nature. The importance of conducting such a light, [834] idle conversation is shown by the fact that serious-minded girls are scarcely ever married.

123 They made fun of my wife in particular, for they found 522 it altogether ugly that she wore long pants. Numerous jokes 157 were made about this, which we, of course, did not understand, and for this reason we, in turn, had to take the initiative by making a joke which was then acknowledged gratefully and usually 609 with quick-wittedness. On the whole, respect toward strangers 522 inside their dwelling is unknown to them. In larger groups they 159 make their asides even in a strange environment, accompanied by much laughter. Since one does not understand them, one [197] easily gets the impression that they are silly. In their own houses they also mimic the visiting mission priest by repeating

/110 cont./

609 parts of the Mass, as they have understood it, in an exaggeratedly
522 dramatic fashion. The priest has a difficult office in any case.
797 They do not understand his sermons and teachings in the church,
157 conducted in the Spanish language. If he speaks their own language, his inevitable mistakes are commented upon amid loud laughter.

123 On our first visit to Calderas, a man about 30 years old met us at the boundary of the village and asked us in a gruff tone whether we did not know that this land was only for the Paez. No white man had any business here. We should turn back, for no one wanted our visit. Marcos Antonio intervened and explained that we had only come to bring gifts to the Calderun and that we had no intention of settling down in Calderas. We would surely leave again the next day. The man let this pass and warned us upon departure not to dare try to steal any land.
[623] Even later we never obtained permission from the cabildo, the village council, to remain in the village more than a week at a time. Our reputation among the younger people of the village improved from week to week, on the one hand because we offered a cigarette to each man and each woman with whom we had an opportunity to talk, but even more because -- as we were told later -- we were friendly to everyone and always /111/ laughed.
[648] As a matter of fact, it would never occur to any of the white or mixed-colored colonists to favor a Calderun even with a glance. On the contrary, in the houses lying along the road, the dogs are trained to attack the Indios. True, these dogs are all undernourished and generally very cowardly. The Paez man need only raise his machete or a club in order to ward off the dog. We were the first whites who did something completely out of the ordinary in that we were always friendly, without any mental reservations, and always greeted them first, in their language. And this not only in Calderas, but also in Inzá and on the roads to the market. This friendliness was taken in good part on all sides. Then later, after we were able to show and to give them the first photographs of themselves, they were definitely pleased to be photographed and now and then offered us an egg or a bowl of chicha /see the glossary, p. 248/ when we photographed them.

/111 cont./

3. Anthropological Remarks

114 Since I did not take any anthropological measurements
141 among the Paez personally, I cannot give any numerical data. These investigations were undertaken during my stay by the Colombian anthropologist, Nestor Usacategui, but have not yet been published.

14 From the somatic point of view, as far as the men are concerned, they are generally medium-sized, slim, with narrow shoulders, seldom thickset. As practiced climbers and mountaineers, they are never obese. They do not give the impression of being undernourished, but their padding of fat is very thin. Their arm and body musculature is also poorly developed (cf. Ill. 173 /see p. 277/). They are unable to lift large loads.
[482] A maximum of 25 kilograms is transported by means of the fiber bags hanging down on their backs and carried with a chest-band. Their calves are muscular, but not fat. Fallen arches prevail
[481] generally. Their gait is slightly bowlegged; the great toes point inward during walking. The same somatic peculiarities are also found among the women. In youth they are well-proportioned, in old age never fat.

141 In general brachycephaly predominates, but it is not extreme. The faces are oval, the cheekbones only slightly prominent. The nose is primarily straight, sometimes slightly concave, and of medium width. Among women one sometimes finds slightly distended alae. The forehead /112/ is high, straight,
142 and steep. The eyebrows are not very pronounced. The eyes are sometimes slightly slanting and show -- especially among women -- a slight Mongolian fold. The mouth is large, the lips somewhat puffy. The eye color is dark brown and shining, the skin color medium-brown. In Avirama there was proudly introduced to us a family whose members, along with normal skin-color and dark eyes, have reddish-blond hair. One of the grandfathers was said to have been lighter colored and to have had even lighter hair. The normal color of the hair is dark; the hair is straight, but not stiff, and sometimes wavy. Even in old

/112 cont./

142 age the hair seldom becomes white. We met only one woman with slightly graying hair and an old man with a gray, sparse [302] beard, but dark hair. The beard among men is scant. The beard hair is regularly plucked (see Ills. 148 to 155 /see pp. 265-268/).

143 According to the blood-group analysis of the Paez, among the 303 individuals examined there were 88.78 per cent of blood group 0, 6.93 per cent of blood group A, and 4.29 per cent of blood group B. The blood group A+B is not represented (G. Arcila Velez, pp. 11-14).

829 The racial concept of Indian is foreign to the Paez themselves. To them "Indio" designates a cultural status. My colleague, Segundo Bernal Villa, an Indian from the region of Pasto, was designated as "blanco" because of his European clothing. And when our interpreter Victoriano bought himself "white clothing" (hat, pants, shirt, shoes) with the money he earned, he was called a "white" in his village and accordingly treated with hostility.

161 The population figures for the Paez do not seem either to increase or decrease, as far as the uncivilized Paez are con-
165 cerned, for example, in Calderas. Infant mortality comes to more
164 than 50 per cent. The most common cause of sickness is whooping cough. The health of children who survive their second year, as well as of adults, is -- considering the circumstances -- quite good. True, one scarcely sees old people over 60 (and [132] those who look that old are probably younger). The most fre- [362] quent illness of adults is tuberculosis, which claims numerous victims, since the nights are very cold and the cold and wind can [262] penetrate through the light walls of the houses unhindered. More- [273] over, no fat of any kind is commonly eaten. Another illness from which many Paez suffer, which, however, is not taken seriously, is stomach trouble caused by the drinking of brandy even during [854] infancy and the unsuitable diet in childhood. Infants are given [262] beans, cabbage, and yuca, but no milk, except mother's milk.

/113/

175 Physicians are not consulted in any case. All illnesses that do not show external influences are traced back to evil sorcery or to the "pest" (see under "Religion"/see p. 191 ff./). They must therefore be treated by the native shamans /see the glossary, p. 250 /. Open wounds and injuries are treated by the midwife. Now and then, however, people visit the mission station in order to have a tooth pulled, on which occasion the nurses without reservation praise their great steadfastness in enduring pain.

273 276 648 The impairment to health caused by the consumption of coca and chicha seems to me to be exaggerated by the authorities; it would be even less with sensible and nourishing food. The prohibition against coca consumption and the government's battle against coca and chicha give the impression of being more a struggle against a brandy tax deficit, for alcohol under the state monopoly may be sold to any Indio in any quantity. The fact 461 829 that the Paez generally does not work hard and continuously probably has nothing to do with any degeneration caused by the stimulants mentioned, but rather it is quite simply his psychological attitude which does not let him see why a human being should strive for things which seem unnecessary to him, things beyond his animal necessities of life, eating and reproduction. I often asked whether, in their opinion, there might come a time when the Paez, too, would wear only Colombian clothing or even use electric lighting. They had never thought about it and in no instance had an answer.

II. Material Culture

1. The Dwelling

a) The Settlement

361 Politically and sociologically the Paez villages of Tierradentro embrace the inhabitants of a valley basin more or less closed off by the surrounding mountains. In their structure, however, they are not villages in our sense, by which we understand a locally concentrated aggregation of a number of houses,

/113 cont./

361 but rather we are /114/ concerned, almost without exception, with individual farms scattered on the slopes of the mountains, where the families live in the midst of their cultivated fields [157] (cf. Ills. 156 and 157 /see p. 269 and 270/). The Paez is by no means an unsociable person and likes to take part in the festivals, but he does not like to live closely confined in a village and to have his neighbors always around him; rather, he prefers to live quite far away from the next house, surrounded by his animals, in order to be able to go about his daily work in the fields undisturbed with his family.

423 609 Every Paez has a strong tie to "his soil," and the fear that he could be robbed of his soil and land dictates his unfriendly and forbidding attitude toward the stranger. Besides, for centuries their experiences with the whites have been too unfortunate for the Paez to be able to understand that a stranger might come for entirely unselfish reasons, merely in order to become acquainted with them and their country.

423 [342] [428] The Paez builds his house, as the family's focus and social center, only upon his own land, which he inherited from his fathers and which, through all subsequent generations, belongs to the family that first cultivated it. There is land in sufficient quantity in every family; in case of need anyone can also find ownerless, uncleared land on the highest sites of the mountain ranges.

Whereas the slopes of the mountains are private property after the initial clearing, the valley floor with the community house and the festival plaza is community land. The houses are 487 [481] connected with one another, as well as with the village plaza, by means of footpaths which are always very narrow because the Paez, even in larger numbers, never walk side by side, but always one behind the other. Originally even the connecting trails between the individual villages, the trails that had to be taken to the weekly markets in Belalcázar or Inzá, were no wider. In more recent times, however, visits on the part of secular and religious authorities made it necessary to widen the trails for riders.

31 Since there are no compact settlements among the Paez, there is also no geographical variations of the village. The church

/114 cont./

361 with graveyard, the community house, festival houses, and, more recently, mission station and school are the central pole, whereas the family houses are always built in other places, but on one's own land (Ills. 146-147 /see p. 264/). Sometimes
342 one erects a house merely for one harvest, that is, for half a
361 year, in the middle of his field that is to be harvested. During the work and harvest it may then happen that a Paez family will not see its neighbors for several weeks.

361 The size of the villages varies; Calderas is one of the
[162] largest Paez /115/ communities and contains about 200 houses with approximately 1,000 inhabitants. Other villages, San Andrés, Santa Rosa, Lame, and others, are substantially smaller.
484 In each case it takes considerable time to cross a village, be-
361 cause this means, of course, crossing the entire valley basin in question. In the case of Calderas this is more than three hours
[487] for a European on horseback. The Paez, it is true, travel over the steep short-cuts much more quickly on foot.

b) The House

342 For laying out a house one looks for a building spot as
312 close as possible to a small brook, large numbers of which flow down from the slopes of the mountains and unite at the foot of the valley floor to form the Kokiyó River (literally "maize water"). When it is impossible to lay out a house directly on a brook, the water is led from above through a small ditch past the house. This, as well as any other running water, may always be drunk.
[514] It is known that the residents living above this house now and then urinate in the water, but "that does not matter at all," I was assured.

591 In principle, only one family, consisting of father, mother,
[594] and children, lives in a dwelling. The married sons must build their own houses. It is customary, however, for newlyweds to go
[342] on living in the house of the father for a time, until they have
[476] saved enough chicha and food to feed the friends who will help
000 them build their house. In one case, however, in the house of

In one case, however, in the house of
/115 cont./
596 Ezequiel Calliumbo, there were three married sons, besides three unmarried ones, all of whom cultivate the fields together. Ezequiel, who is about 60 years old, had ten children, of whom six sons are still living. The oldest son has three children, two of whom have died, the second eldest has four children, two of whom have died, and both the children of the third eldest are dead.

342 The normal houses (yat) are rectangular houses with a hip roof and, depending on their size, are divided into "large houses" (hatwála) and "small houses" (yatléčkwe) (Ills. 158 and 159 /see pp. 270 and 271 /). In accordance with its use the dwelling house specifically is called ōpyat (ōp = to live). The dimensions of the small houses vary between five to ten meters in length and
[345] three to five meters in width. The largest houses are up to 15 meters long and seven meters wide. These are primarily the
342 festival houses. As dwellings they differ from the small ones,
407 which represent by far the greatest proportion of all houses, not
249 only by their /116/ size, but above all by the fact that they have
352 the sugar mill (lapíče) /"Trapiche" (Sp.) in the glossary, p. 250 /, which is a feature of every house, in their interior. As a rule it stands in front of the house or a little to one side of it, normally covered with quantities of expressed sugar-cane stalks hung over it
343 to dry. Besides the sugar mill, a small menstruation hut (dúyat)
342 is required for any house to be complete; it may be absent only if the family erects a small field-hut (ēyatwá) in the middle of the field for a harvest period. In this case the women of the family living there go into the dúyat of another house. In no case may they remain in the dwelling during this period. The field hut and
[341] the small menstruation-hut are rectangular gable-roof houses in construction and, with the exception of the gable roof, of the same construction as the normal hip-roofed houses.

342 Every house has an annex (škídnyeyát) or at least a com-
273 partment for storing the chicha trough (kánoe). This trough is the
251 most important accessory of a Paez house, next to the sugar mill (Ill. 165 /see p. 273 /).

/116 cont./

343 In addition to these dwellings only a few houses have
[574] separate buildings, such as, for example, one or, if need be,
[513] two storehouses or a small house (yatléčkwe) in which friends
and neighbors sleep when they help the owner for days for the
251 joint work of expressing sugar cane or for the harvest. In the
343 storehouse (kotyāvyat: literally "maize storehouse") only maize
[262] and beans are stored, not wheat or garden produce. Fruit, yuca,
potatoes, and arracacha are not kept on hand or stored at all,
but always merely fetched as needed and eaten immediately.
Wheat is tied in bundles below the ears on stalks about 20 centimeters long and hung up under the roof above the fire. Maize and beans may be kept up to two years in the storehouse. For this purpose horizontal cross-sticks are fastened in it, over which the ears are hung, and racks consisting of maize stalks
[825] laid close together are constructed for the beans. These racks,
too, are hung up, if possible, or at least are fastened quite high above the floor so that the mice (úńsa) cannot get to them.
[231] In addition, a cat (miš) is shut up in the storehouse, if one is available. Stalls for the livestock are unknown.

34 In the middle of the village of Calderas, on community land, stand the church (iglésia), the community house (kabíldeyát), and the six festival houses of the six largest families (Ill. 147 /see p. 264 /). In their construction, they are likewise hip-roofed houses, but their walls are built in the manner of the colonists' houses, /117/ out of vertical posts, on the inside and outside of which bamboo poles or straight branches are tied horizontally. To strengthen the posts the interstices are filled with earth, clay, and, in the lower part, also with stones. The filling is spread smoothly and the wall whitewashed inside and
[373] out. Whereas light enters the other houses through the door and
the not very tightly sealed walls made of maize stalks placed side by side, light can enter the above-mentioned houses consisting of solid walls only through the relatively small door and the opening of the roof ridge, which makes the interior rather dark.

/117 cont./

342 761 783 [756] [773] [628] 961 783 123 Anyone may build himself a house of whatever size he wishes on his own land in the mountains, as well as on the above-mentioned community land in the valley, but he must first ask the shaman acting for him whether any bones of the Pijao are in the ground on the piece of land in mind. As comes out in the myths, the Pijao in ancient times were the frightful and militarily cleverer enemies of the Paez. Their bones (eč ndyít Pijao) contain "pest." This pest is a very complex and significant concept among the Paez (cf. under "Religion" /see p. 191/), and the pest of the Pijao bones is capable of killing the people living above them. How very much our interpreter Victoriano, one of the most enlightened Paez, was affected by this fear came out when he worked with us in the archeological park in San Andrés. For lack of space he had to sleep in the tool room, where, however, he felt very comfortable and, with a camp bed and mattress, had built himself probably the best bed of his life. One day we opened a large prehistoric grave-chamber, which contained more than 80 bone-urns with the remains of cremations. Since we could not accommodate such a large number of urns in our living room, which at the same time served as our museum, we had to put a number of them in the tool room. I left the skeletal remains in several of them in order to save them for a later examination. Weeping, Victoriano begged me please not to put in his tool room any urns containing bones, because the bones might have come from the Pijao, who would surely kill him. Even the washed and cleaned urns, he assured us, contained very much "pest," so that at the next opportunity he wanted to go to Calderas and have himself "purified" by his home shaman. He failed to do this, and when after a few days he had a toothache, he traced this back to the action of the pest from the burial urns previously filled with bones.

342 761 783 756 787 /118/ The shaman's testing of the ground proposed as the building site is not done by digging or sampling the ground; rather, the one who wishes to build goes to the house of the shaman in the evening with coca, tobacco, and brandy, tells him of his wish, and then both sit down on the ground next to each other

/118 cont./

342 and begin to chew coca and tobacco and to drink brandy to-
761 gether. After a while the shaman ascertains through signs in
789 his arms or legs whether bones of the Pijao are in the ground.
756 If this is not the case, the building may be started; otherwise
787 the man must look for another building site. After the building is finished, a further ceremony is performed (see under "Religion"
342 /see p. 205/), and then the same shaman fastens special herbs
756 to the roof to prevent the eč or gélyómp spirit, hostile to man,
789 from entering the house from there.

Houses are built only by men, by fathers of families.
342 One man alone, however, is not in a position to do this. At
476 least in the erection of the house posts he is helped by his brothers,
[462] as well as by other men and friends who have nothing else to do anyway on these days and receive chicha and something to
342 eat for their assistance. The building material costs nothing,
273 to be sure, but the builder must furnish a substantial amount of
476 chicha, for which planning must be begun in plenty of time, two or three years beforehand, by the planting of sufficient sugar cane. This is the task of the married son who is still living in
[594] his father's house this long. To make the chicha he also still
[249] needs the sugar mill of his father, upon whose consent and help, therefore, much depends. According to the amount of chicha
[461] that is available, the building of the house thus lasts two to six months, depending on whether only five or 15 men participate.

342 The most important thing in the construction of the house
335 is the erection of the wooden frame (Ills. 161 to 164 /see p.272 /),
[476] which always requires several men who bring in the trees, which are superficially smoothed with the machete, but not freed of bark. The master of the house is able to make the walls by
[462] himself in an emergency. The covering of the roof, too, like the entire house construction, is men's work, but the woman of the house may hand up the sugar-cane leaves for the roofing. First the vertical corner and side posts of the outer walls (yátšínda) are erected, then the outer beams lying horizontally on the side posts to support the roof (yátpopãnt) are laid on, and, as the third step in the work, the horizontal crossbeams (bīkas) are fastened at

/118 cont./

342 ceiling height. It should be noted that all the beams are merely
335 lashed with lianas, /119/ but not mortised. The roof does not rest directly on the corner and side posts; rather, the crossbeams (bīkas) and the rafters (yátkát) are tied to the rectangular, horizontal frame of the roof, and only the latter rests on the vertical posts.

The fourth step in the work is the building in of the ridge beam (dahwāk), together with the rafters, the former being supported primarily by the center post (pwát), usually the only house post that extends vertically through to the ridge. It is not exactly in the middle of the longitudinal axis of the house, but somewhat to the side of it, in the place where the two rooms of the house are partitioned off. Here it serves at the same time as a wall post. The horizontal purlins (kwīnt), which are lashed to the rafters (yátkát) one above the other about 20 centimeters apart, are the only part of the house frame that is not of wood, but instead they consist of a type of reed (karís). The roof (yátominyē) is covered with sugar-cane leaves (nyúš̌a éts) by proceeding from the bottom up and hanging the leaves over the purlins in such a way that the tips lie on top and the lower parts show on the outside. Finally one or two ridge purlins are laid over the still open ridge, and an even layer of sugar-cane leaves is spread crosswise over this. The elevation thus formed provides an exit for the smoke at the two gable ends of the house. The ridge covering is protected from blowing away by two poles placed over it (Ill. 162 /see p. 272/).

342 A newly built house (yátūse) lasts about 15 years. In be-
356 tween, however, the roof must be repaired several times.

On entering a Paez house one is assailed by a sweetish odor
574 of fermentation arising from the chicha, somewhat like that at
576 grape-gathering time in the houses of the German winegrowers'
[273] villages. Before entering, one opens the door (vitc) of the house and calls out in a questioning tone, "payoét" (I should like to enter); from the interior there comes back, "mkāč̌" (sit down). When no one is at home, the door is usually tied shut with a small piece of bast. Sometimes even this is omitted, for no one

/119 cont./

574 would ever enter a house whose occupants were not present. We
576 never succeeded in persuading Victoriano to enter an empty house, although he knew that we were always greatly interested in learning about the interior of houses and their furnishings.

342 The door of the house is only in rare cases a wide board which at the top and bottom on one side runs out into two pegs which turn in a socket, one in the threshold and one in the doorframe. The entrance is generally constructed in the same fashion as the wall (īnd), which /120/ consists of vertical maize stalks placed next to one another as closely as possible and lashed by means of bast or a liana to one another and to two horizontal maize stalks. The latter always reach from side post to side post. At the place for the door, the rigid wall is interrupted, and the vertically placed maize stalks, only loosely bound with bast, may be shoved a little to one side, whereby they drag along the ground (Ill. 158 /see p. 270/).

[231] Dogs, cats, and chickens are kept in the houses, but not pigs, which live out of doors all the time, exactly like the cows, horses, and sheep.

c) Household Implements

Generally the house has only one division into two rooms, the smaller of which is the kitchen, living room, and bedroom, the larger serving as storage and supply room. The wall between these two rooms is likewise only made out of maize stalks set next to one another vertically. In the "large" houses the larger
[249] part contains the sugar mill, by means of which undiluted sugar-
[404] cane juice may be produced, even in rainy weather. In case
596 adult married sons live in their father's house, a separate com-
342 partment divided off in the same manner is built for these families and furnished as a kitchen, either next to the living room of the parents or -- as in most cases -- on the other side of the
354 house. The hearth area is the family center, and every married
596 woman, in case she is living as a daughter-in-law in the house of the father-in-law, has her own hearth area. The latter has

the simplest possible form.

000 /120 cont./

354 the simplest possible form. Three rocks provide the lateral sup-
415 port or stand for the pots, of which there are two at most, a
metal one, usually of aluminum, and an earthen one. Very
poor families have only one earthen pot, which is relatively
[417] cheap to buy. The earthen pot cannot be hung up; it is set
between the three fire-stones in such a way that it cannot tip
over, whereas the aluminum pot is hung by its handle on a soot-
covered, angled stick that hangs down from the ridge (Ill. 166
352 /see p. 273/). Above the fire area there hangs a frame made
[251] of maize canes and about one square meter in size, on which
[353] household utensils and, above all, the rock salt for salting food
are stored, airy and dry. Tables, chairs, or stools of any kind
[237] are unknown. One generally sits on the hairy side of an un-
tanned and hence board-stiff cowhide, on which one also /121/
[513] sleeps, or one sits on a beam, a block of wood, or a stone. Paez
[177] who have seen house furnishings in Inzá or in the dwellings of white
colonists have sometimes built for themselves as a bed a sort
of bench 30-50 centimeters high, consisting of sticks or reeds
[513] laid side by side. For sleeping the customary cowhide is spread
on it. These sleeping benches are not used for sitting.

342 The nights in Calderas are generally quite cool, and
362 the light construction of the walls with cracks between the in-
132 dividual maize stalks does not in any way prevent the cold wind
from coming in. In a few houses, near the sleeping area, I saw
the walls sealed by means of expressed sugar-cane piled up
462 horizontally. For sleeping, the members of the family lie down
[354] in a circle around the fire area, where the fire must be kept going
[513] all through the night. This, like all housework, is the task of
the woman, who must gather sufficient fuel beforehand and get up
every two hours during the night to stir up the fire. Furthermore,
[264] she must get up an hour earlier in the morning in order to have
the first meal, which is eaten around five o'clock, sometimes
[461] even at four o'clock, prepared on time. In spite of this, the
men think that they are the ones who do the hardest work and that
basically they are the only ones in the village who really work.

/121 cont./

372 In case the fire should go out, which happens very rarely, the men, if they have no matches, know how to make fire by striking the blade of the iron machete with a stone and catching the sparks in the dry tinder of expressed sugar-cane. To fan this or a dying fire the hat is used as a fire fan, instead of a special fan. A few times I also saw a reed tube (yotá) about 50 centimeters long, which is blown into with the mouth and which thus acts like a bellows.

352 Infants do not as a rule sleep on the floor, but in ham-
[854] mocks (máka), which, however, as the name indicates, were
[513] not originally Paez. Nevertheless all the men know how to
[286] make them out of agave fibers, which is done with the same knotting technique as in the manufacture of nets for bird hunting.
415 Moreover, a few bags (yáha) made of agave fibers, which con-
[286] tain beans, maize, or other supplies, hang on the wall posts.
[353] Arracacha lies on the floor. For drinking chicha, which is allowed
[273] to ferment in large, hollowed-out tree troughs, calabashes (tóka) are used, but they are plain and undecorated. Cracked calabashes are sewed with a waxed agave thread (Fig. 25 /see
[249] p.253/). The calabash gourd is grown in the house garden /122/
412 of every family; its meat is inedible. Furthermore, an oval or
352 rectangular grindstone on which maize is ground with a smaller hand-stone is found in every household. It usually lies on the floor in a corner of the house, but sometimes it is set about one meter high on two forked posts.

412 Meals are taken with wooden spoons (todšá'tc) off of
415 wooden plates (bič), which are carved by the Paez themselves
264 (Fig. 27 /see p. 253/). Aluminum or enamel bowls were rarely
[322] encountered in Calderas. Plates and mugs of aluminum were
[177] therefore always coveted gift articles, along with kitchen knives, needles, safety pins, matches, and salt.

356 Cleanliness within the house is surprisingly great, consider-
515 ing that the Paez wash their bodies but seldom and their hands only when they are "very dirty." This is the case when a person has been working in a burned field and has cleared away the
000 sooty, burned tree trunks and the burned underbrush. The house

The house

/122 cont./

356 is swept by the women every day with a broom (ctábando) con-
824 sisting of shrubs of the psáñga plant. This plant at the same
[825] time drives away fleas. The rubbish is swept out of the house in such a way that even the entrance is clean.

351 All around the house and surrounding it at some distance
417 either a fence is erected or a ditch dug about one meter deep,
[231] within which the poultry and usually the pigs and sheep are kept.
In Calderas, where, because of the low temperature, bamboo
[137] no longer grows, the fence is made of wood obtained from the
[313] natural growth when a piece of land is burned off. Stakes are driven vertically into the ground at intervals of about two meters and the interspaces filled with small tree trunks, branches, and twigs up to a good meter in length, lying horizontally. Climbing over this fence is done with notched tree trunks or bamboo stalks placed obliquely against the fence as a ladder. Similar notched tree trunks also serve as ladders in the houses (Ills. 168 and 154 /see pp.274 and 268 /).

514 There are no privies. On account of the isolation of the houses, however, it is never difficult for the Paez to find a place off in the brush or in the forest. We never found the paths
264 and the vicinity of the houses soiled with filth. The Paez showed
[412] the same tact in eating and at other gatherings. We never experienced smacking of lips or belching, even though their eating habits are somewhat crude, for, lacking spoons, they are in the habit of simply shoving their food from the plate into the mouth with the fingers.

/123/ 2. Clothing and Ornaments

291 The Paez today wear clothing covering their upper and lower bodies. In ancient times, according to the reports of chroniclers, some of them were said to have worn small cotton cloaks, although the majority of them "went about naked, even in the cold mountains" (cited by Hernandez, 1944, p. 191,
[302] from P. M. Rodriguez, 1684). They were also said to have painted their bodies with color and to have made imprints on them with

stamps,

/123 cont./

291 stamps. Soon after the Conquista they adopted the upper garment
177 and the straw hat still worn today.

The clothing of the men consists of the upper garment, linen trousers, the cloak (called "poncho" in Peru, "ruana" in Colombia /see the glossary, p. 250 /) and the waterproof, plaited
291 straw hat. The upper garment and the ruana are woven by the
294 women out of sheep wool, whereas the linen trousers are made
286 by the men themselves out of purchased fabrics. This is note-
177 worthy culture-historically, for cutting clothing from woven
[462] fabrics was unknown to the South American Indians in pre-Colombian times, since fabrics were not woven "by the meter" to be sewed later into clothing as desired; rather, the shape of the subsequent article of clothing was already taken into con-
296 sideration at the start of the weaving. It follows from the method of manufacture that torn fabrics are never repaired by the women with a ready-made patch, but are always darned in imitation of
[462] the texture of the cloth. It is different for men's trousers, the materials of which are bought by the men and sewed by them themselves, never by the women. Once these -- as well as the purchased shirts -- are torn, they are never darned, but always repaired by the men by means of a patch sewed underneath.
296 Thus, we have here the fixed rule that woven clothing is never-
177 patched, but is darned, whereas the sewed clothing is never darned,
462 but is always patched. The former is women's work, the latter men's work.

291 The garment covering the upper body of the men (tondato; for lack of an appropriate European designation it is called upper garment in the following) is not a sleeveless shirt, since the sides are not sewed together, but are open. It is quite simply a rectangular woven piece of wool about 60 centimeters wide and 160 centimeters long, whose warp threads run lengthwise. A slit about 30 centimeters long is left open in the center for the neck. It is pulled on over the head, and the lower ends are either stuffed into the trousers or left hanging over them. In the latter case they must be secured with a strap tied over them (Ills. 154 /see p. 268/, 165, 166 /see p. 273/, 171 /see p. 276 /, 202 /see p. 289 /, 203 /see p. 290/).

/124/

291 The men's trousers (calsón) have no pockets. On the aver-
294 age they reach to the calves. Generally they are very carefully sewed, either with purchased thread or with homemade, very fine yarn made of agave threads. In making them, as well as in the case of necessary repair work, all the edges are very carefully bound.

The men's ruana (atç) is generally square, with a side edge of 100 to 160 centimeters. It is sewed together out of two equally wide, rectangular panels, with a slit about 20 centimeters long left open in the center as a neck opening. Because of its square shape the ruana may be worn just as well with the neck-opening crosswise.

285 Whereas shoes or sandals are not used by the Paez, men,
462 women, and children wear the same type of straw hats (śwá).
293 These are plaited, however, only by the men and boys. The
415 dress of both sexes is completed by two or three of the colored
291 woolen coca bags, in which, on journeys, the necessary personal articles are also carried.

291 The garments of the women's clothing consist of wool and
294 are woven by the women themselves. In general the quality and fineness of the women's fabrics are significantly greater than that
286 of the men's woven fabrics. The boys' and young men's fabrics are generally the coarsest, woven with a rather thick spun thread. Decorative strips of a different color within the fabric are found chiefly in the women's clothing, but not infrequently also in that of the men, especially in the ruanas. The absolutely necessary basic clothing of the women consists of skirt and upper garment. Both are worn in such a way that the warp threads run crosswise. The skirt (atytól) is a very wide, tubular garment, whose diameter may amount to 150 centimeters and more, with a length (in the weaving state this corresponds to the width!) of about 80 centimeters. It is worn in such a way that the front part is tight, while the back side falls in numerous folds. It is fastened at the height of the hips with a woman's colored belt, and its upper edge is folded down somewhat over the belt.

/124 cont./

291 The upper garment (ipotsatc) is a simple, rectangular piece of cloth about 160 centimeters long and 80 centimeters wide, which, when being put on, is held crosswise so that the warp and ornamental threads run crosswise. When it is on, it covers only the bosom, back, and one side, whereas the other one remains more or less free (Ills. 166 /see p. 273/ and 178 /see p.279 /). In use it is put on from one side of the body over the bosom to the other side, and then led across the back to the original side again. The back /125/ part is now pulled up and fastened over both shoulders to the bosom part with a thorn (tõpo) or a safety pin. The part that hangs down is tucked into the skirt. In general the women try to buy colored, usually red blouses in the market for festival days, and these then replace the old, simple cloth. The skirts, however, are not exchanged for other clothing, because the purchased fabrics are not nearly as durable and also do not have the necessary width.

Outside the house the women usually wear a shawl over the ipotsatc; they either weave one (senyatc) for themselves or [854] purchase it (panyelõn). In any case it is necessary for carrying babies, for they are wrapped in it and secured with the colored belt (táw) (Ills. 152 /see p. 267 /, 166 /see p. 273 /, 178 /see p. 279/, 183 /see p. 282 /).

292 There is no special, original ceremonial dress or any special clothing for dignitaries. The latter carry, as their only [293] distinguishing mark, the chonta staff introduced to them by the [177] Spaniards. For festivals and ceremonies people try to wear either items of European clothing or a new outfit of the customary gar- [764] ments. For a Christian burial it is the duty of the members of [177] the family to bury the deceased in the clothing of white Colombians.

291 Small children usually run around naked or have a scrap of cloth hung over them in the style of the ruana. Larger boys wear either a large ruana reaching to the upper thighs, which is held together by a belt, or they already wear trousers. Smaller girls are usually dressed in a piece of cloth reaching from the upper body down over the knees, which is drawn over one shoulder. Older girls wear the clothing of the women. No distinction is

/125 cont./

291 made between the clothing of the married and the unmarried.

302 The men's hair is cut "semilong" with scissors, so that they have a cut midway between bobbed hair and a modern, shaped cut. Women wear their hair long and combed toward the back, to some extent in the form of a part. Older girls and [412] married women plait their hair in braids. Only the modern, purchased combs are used for combing. The men do not groom their beards, which are sparse to begin with, but from youth onward pull out the beard hair with the fingers.

301 No ornaments of any kind are worn by the men nowadays.
439 Two hundred years ago they wore nose rings (zomp) "like the oxen" (Castillo i Orosco, p. 89). The women today wear /126/ purchased pendant-ornaments only to a very slight extent, the white glass-bead chains (wǎča = bead) being relatively the most common (Ill. 148 /see p. 265/). The traders are Sibundoy or similar fellow-tribesmen from the southern part of the country, where chains of this kind are worn by the pound by men and women as pendant ornaments. Earrings consist either of a few purchased beads strung on a thread or of a purchased silver pendant. Anyone may wear purchased brass finger-rings; it is not a sign of being married. In earlier times it is possible that there were arm rings, as is shown by Castillo's term kasẽnand-gnue-tsa for "arm ring."

3. Economy

433 The first impression that one has of the Paez from an economic standpoint is that of a democratic farming people firmly rooted in their soil, and during an initial consideration of their food and way of life it appears as though they have never been anything but agriculturalists. In the case of primitive peoples, however, we must distinguish between the principal means of production and the original means of production. The former is usually not hard to recognize, whereas the question of the original means of production of a people can be answered

/126 cont./

433 only on the basis of knowledge about their rites, ceremonial acts, mythology, cultic preparations, or festivals of thanksgiving.
433 This is difficult in view of the great cultural poverty of the Paez,
241 but it is noteworthy that nothing connected with agriculture or
[233] with cattle-raising reveals any kind of cultic relationship.
Neither during sowing nor harvesting was I able to observe or
[224] learn of any kind of typical agricultural rites, whereas in connection with hunting, now economically unimportant, a number of precepts and prohibitions surround the hunter before and after his hunting.

a) Agriculture

243 The chief crop in the Calderun region, as among the Paez
191 generally, is maize, which was at the same time the most im-
114 portant cultivated plant and the basic food of the American peoples from Patagonia to Canada in pre-Colombian times. To this day the discussion about its culture-historical origin has not come to an end. Formerly Central America was regarded as the original land of its cultivation. On ethno- /127/ botanical grounds and plant-geographical investigations, K. Birket-Smith (p. 32) assumes that the original land of maize cultivation is not Central America, but northern South America, since, according to the more recent botanical discoveries, the original form of maize is believed to have been found in the form of the pod corn (Zea mays tunicata) of the Andean countries. Not to be left unmentioned are the voices which most recently have argued for an Asiatic origin of maize, as well as of cotton (Zerries, 1952, pp. 104/5).

If we compare these hypotheses about the origin of maize with the first authenticated reports about its occurrence in America, we find as the oldest date the year 1493, when Columbus had already brought maize to Europe from his first journey across the ocean. As early as 1525 maize was extensively cultivated in the fields of Andalusia (Schweinfurt, pp. 514 f).

241
[243]

Maize cultivation, like every other kind of tillage among the Paez, is done by the system of burning off clearings, a form of cultivation which is widespread among all tropical agriculturalists and is commonly known in America under the designation "milpa system." The term is Central American (probably Aztec) and means "maize field" or "bare surface in the forest," but the latter always in the sense of a burned-over piece of land planted with maize. The Colombian word corresponding to the designation "milpa" is "roza," to which in Peru the designation "chacra" generally corresponds, although there the word is also used for terraced fields that are cultivated regularly every year.

The basis of the milpa system of clearing by burning is an extensive type of agriculture, in which, before sowing, new land is cleared of its growth by burning and after the harvest is (again) abandoned for several years or forever. This type of agriculture is feasible in sparsely settled regions in which there is sufficient land to permit the intervals between the separate burnings of the clearings to be long enough. If the intervals are too brief and the land burned over too often, all kinds of taller growth are eradicated. The grass covering which then forms and grows all through the year makes the land worthless for agricultural use, whereupon a larger population can no longer feed itself from its land. This is demonstrated in large areas of Central America where the dense population living in large urban cultural centers has exhausted the soil with the milpa system to such an extent that today many of these old culture areas are treeless, uninhabited grassland.

P 114 241

O. F. Cook (p. 323) regards /128/ the simultaneous cultivation of one-fifth to one-tenth of the available land as a sound form of the milpa system. This corresponds to a clearing cycle of five to ten years. There is sufficient land for this in Calderas. A cleared field is cultivated there once, at most twice in succession, and then it is left to rest at least ten, but usually 15 to 20 years (Ill. 146 /see p. 264/). The areas used by the Indio villages, then, present a picture completely different from

C 311

C /128 cont./
311 those of the colonists in Tierradentro. In the territory of the
[137] latter there is almost no forest anywhere; all the slopes have been
[233] deforested and artificially, but not through excessive agricultural
C cultivation, made into pasture areas for the livestock of the
311 colonists or large landowners. This has upset the natural water
312 economy of the region. The water flowing off unchecked dur-
134 ing the rainy season washes away the humus earth and forms
C deep gullies on the slopes. The soil thus eroded is infertile.
[361] The mountain slopes dry out completely during the dry seasons,
P so that dwellings can only rarely be built in the higher locations
311 because of the lack of water. In the areas used solely by the
134 natives, in which a natural alternation of cultivated and fallow
312 land is observed, there are countless channels and small brooks
361 that make it possible to put a house near running water at almost
P every spot on the landscape.

241 Every task of the Paez that is connected with the fields,
461 be it clearing, sowing, or harvesting, is done extraordinarily
476 willingly by all participants, "because it is for food." There is
P simply no such thing as anyone unwilling to work in the fields.
134 The soil is not very fertile, since the major part of the moun-
241 tains in the region of Calderas consists of slate which often stands
[135] out bare and on the slopes is covered with a layer of humus or
P loam only 20 to 50 centimeters deep on the average. In the
241 valley the humus layer is often more than a meter deep. The
P abundant land available, however, does not make the utmost
[312] utilization imperative. And although the numerous mountain
brooks are diverted in such a way that every house has its running
water, nevertheless there is no acute inducement for irrigation or
terraced cultivation, nor does the use of them seem to be known.

Maize occupies the major part of the cultivated area, closely followed by sugar cane, the raw product for the manufacture of chicha. Both constitute the basic production of agriculture, and there is no Paez family that does not cultivate sugar cane and maize on its land. The size of the cultivated areas cleared by burning varies. The smallest fields that we saw

/128 cont./

241 were only ten by ten meters /129/ square, whereas the largest continuous field occupied an area of about 500 by 250 meters. I was assured, however, that such a large area of land was not required for one family and that the owner would use this large [433] cleared field only little by little for planting. A family can live, so I was told, from a field that measures about 100 by 100 meters, [244] which corresponds to the area of one hectare. In addition, every house has a vegetable garden of about 1,000 square meters in area for the planting of vegetable bananas /cooking bananas/, cabbage, beans, cucumbers, and onions.

241 476 464 [462] The clearing of the fields, like the sowing, is done only by men, whereas the harvest may be gathered by women or men. Several men always participate in the clearing and sowing; one man never works alone. At the very least his brothers or sons help him. Otherwise he must ask friends who must be served food and chicha during the work, and whom he likewise helps in 241 a similar instance. On the field intended for planting, first the thinner trees at a height of about one to one and a half meters are cut down with the machete and left lying on the ground as they fall. With this the first part of the work is done, and one has two to four weeks' rest until the felled young trees and branches are dry, but not dried up. Then the men go out into the field again and light the wood, but only the thinner branches of less than an arm's thickness are consumed. This burning takes a few days, and it is not infrequent that a woman helps her husband on [515] the last day in order to burn up the remaining wood. The Paez, by the way, give this handling of the sooty trunks as the only time that they get dirty and must wash their hands afterwards (Ills. 169 to 171 /see pp.275 -276/).

241 417 The fence which each field must have for protection against the freely roaming domestic animals is built out of the unburned branches and tree trunks. For this purpose rather thick poles are rammed vertically into the ground, and the remaining branches and tree trunks piled up horizonatally to a height of a good meter. In order to climb over this fence one puts a notched tree trunk against it on both sides as a ladder (aff) (Ill. 168 /see p.274/).

000 /129 cont./
35/ p.274 /). The same fencing with the same ladder construction
417 generally also surrounds the house gardens of the Paez farms. In case the houseowner has larger domestic animals, such as cows, horses, and sheep, a gate (puélta) consisting either of a regular lath door or a barrier of horizontal beams is built into
[824] the fence surrounding his house. In the villages of the civilized Paez, in the /130/ environs of which tree growth is inadequate for the construction of a wooden fence, bamboo is used for the vertical poles, and bundles of dry maize stalks for the horizontal parts.

241 The entire agriculture of the Paez is digging-stick culti-
412 vation (Ill. 172 /see p. 276/). Hoe culture was originally unknown. The house gardens, only recently laid out after the model of the colonists and in which European plants such as cabbage, cucumbers, and onions are cultivated, are turned over with the spade (pála). The digging stick (āty) consists merely of a pointed tree-trunk or pole, though recently broad iron tips with
243 a socket are being put on the digging sticks more and more. Maize may be sowed throughout the year, but it is generally sowed in April when the rainy season begins. Several men always participate, making holes in the ground about one meter apart in every direction with the digging stick, and putting six to eight maize kernels into each hole. The holes are covered again with only very little earth with the foot, "so that the sprout can come out more easily." The ripening period of ten to 12 months is relatively long. After half a year the field is cleared of weeds once. The harvest period is spread out over approximately half a year, provided that sufficiently large amounts of maize were planted; and for this half
[262] year the people practically live "from the stalk." First the young maize (tsót; maize in general, kóty) is eaten half-ripe and only later are the ripe ears harvested and eaten. Every day the men or women go into the field with their bags made of agave fibers and break off only as much as is needed each time for the meal.

249 Whereas maize may be cultivated at all elevations in
[243] Calderas, sugar cane (nyúša) thrives only in the lower, protected localities of the Kokiyó Valley. Its ripening period of two to

/130 cont./

249 three years is very long. Shoots from old sugar-cane plants are used as slips, which are set out by the men in the same way as the maize kernels. A hole is made in the ground with the digging stick at one-meter intervals in every direction from the neighboring plant; the slip is stuck into it and pressed firmly with [462] the hands. The cane is harvested by men or women. Both know [482] how to handle the machete. The men carry the sugar cane home over their shoulders (Ill. 173 /see p.277 /), women stuff the sugar cane into the fiber bags and hang them over their backs, holding the carrying band with their foreheads.

244 Besides maize and sugar cane, the bean (ōs) is of great im- [262] portance for the Paez diet. There are the large, speckled so-called "sow beans" /broad beans/ (Spanish frijol) and the smaller, white beans. /131/ The former are for the most part eaten, whereas the white beans are usually sold. They are sowed either in the vicinity of the house at the foot of trees and shrubs, with three beans always stuck into the ground at a time, or together with maize. In this case, during the maize sowing, three to four beans are put in the same hole with the six to eight maize kernels. In growing simultaneously the beans climb up the maize stalks.

243 Wheat (skótc) is not of importance in the diet of the Paez, [262] for no bread is baked. Nevertheless it is very often planted because it grows fast and thus represents a suitable item for the Paez to sell. 243 If anyone has to buy something, be it fabric for a pair of trousers, 434 a machete, a metal pot, etc., he sows wheat, usually in March/ April, and after half a year he can already pocket profit from the sale. It is characteristic of the Paez, however, that they make use of this only when they need something urgently, but not in 243 advance so as to have money on hand in any case. The preparation for wheat sowing is done in the customary manner of clearing by burning. The sower hangs around himself a fiber bag containing the seed grain and, in exactly the same fashion as our sower, starts to broadcast the wheat with his hand in a wide arc. Subsequently the ground is superficially turned over with the shovel, so that the birds cannot pick up the grains. In harvesting it a bundle of stalks is grasped a good hand's breadth under the ears and cut off with the

/131 cont./

243 other hand by means of the semicircularly curved sickle. In case
[251] the wheat is not sold immediately, the bundles of ears are tied together and stored under the house roof, above the fire area. Whereas the kernels are shelled off the maize ears by hand by the
[237] women as needed, the wheat is threshed. For this purpose a cowhide is put on the floor, a bundle of wheat ears is held securely on the hide with one hand, and with the other hand the ears are beaten with a club until the grains are removed.

244 The other produce used in the diet is planted in the house garden, which likewise is used every year as long as the house is occupied. The yield is generally good because the Paez have learned from the colonists the importance of regular fertilization. Each harvested plot is carefully dug up again with the spade and strewed with the refuse from the house and the collected manure of the cows and horses. Human excrement is not used; it is "too ugly," Everyday, in addition, the kitchen refuse (maize and bean husks, banana peels, arracacha and yuca scraps), as well as the excrement /132/ of the guinea pigs (fits) kept in the kitchen, is scattered in the garden and tossed on the vegetable plots.

The most important garden plant is white cabbage (kólis). The women buy the small plants from a woman in the village who raises them from seed. The planting time is March, when the rainy season begins. Potatoes (ká 'ka) are seldom planted. They are very small, have a yellow flesh, and are of poor quality. Sowing time is whenever one wishes. The men make a small hole with the digging stick and put one or two small potatoes in it and carefully cover up the hole again. After a month one can already hill them with the hands, and after four months, harvest them. To do this, the entire family digs them out with their
[821] hands. Arracacha (ā's) may likewise be planted throughout the year, but yields the best harvest if it is planted with the full moon. In harvesting it a digging stick is used. Yuca (ānya) is seldom eaten, for the climate is too cold to grow it in Calderas. In the lower villages the ripening period is two years.

245 A very important crop that plays a great role in the diet
[262] of the Paez is the banana, which was not native to America originally (Schweinfurt, pp. 504 f.). Two large groups are

/132 cont./

245 differentiated: that of the fruit or sugar bananas, and that of the vegetable or mealy bananas. Both kinds are known to the Paez, to be sure, but only the vegetable bananas (tolǒ), whose starchy fruits must be cooked first before being eaten, like potatoes, because they are difficult to digest, are important for them, as for all tropical peoples. The fruit bananas (gnayoĩts), the only bananas eaten in Europe, are seldom eaten by the Paez and generally are not cultivated. They are planted by means of slips, which in Calderas bear from the third year on and yield harvests
244 for many years. Other crops grown in the house garden and eaten from time to time are cucumbers (kambĩč or pĩna, according to the species), squash (pete), and the wild granadilla (šlāl).

b) Food Preparation

264 The Paez eat only two meals a day, the first one (kosẽ oñ) about four or five o'clock in the morning before work, and the second (fi'nz oñ) at three or four o'clock in the afternoon, after returning from work in the fields. In between, that is, while working on the often quite distant fields, coca /133/ is taken and sugar-cane juice drunk every two to three hours. The morning and evening meals do not differ in content and vary
252 little from day to day. They are cooked without meat, without
262 fat, without salt, as well as without any other seasoning. Cook-
[263] ing with fat is customary only on festive days in the festival house.
[237] On this occasion a blood sausage is made from the blood of cattle, sheep, or pigs, for which the intestines are cleaned and then cooked with blood, salt, onions, and caraway, as well as with another herb (pléo). Meat is not put into the intestines, and likewise no fat.

262 There is no desire for greater variety in food and drink. I was scarcely able to discover any individual differences in taste among the Calderun, for everyone eats everything, and they all regard beans or cabbage or both together as the best food and bean leaves as the worst.

000 /133 cont./
264 food and bean leaves as the worst. They eat together. The
[415] family sits around the fire and the woman serves. They do not,
[412] however, eat out of the large cooking pot, which is usually of clay, though sometimes of aluminum, but rather the soup is dipped out with a wooden ladle into shallow bowls, from one of which the men, that is to say, the father and sons, eat, and the mother, daughters, and small children eat out of another one.
[263] Above the fire area a few small pieces of rock salt hang in a
[353] small pouch or lie on a rack and are used to salt the food after it is cooked. To do this each one takes the piece of salt and holds it or puts it in his plate until the soup is sufficiently salted.

252 In the following, a few dishes: 1) maize flour, ground
262 on the oval or rectangular grindstone with a hand-stone, is cooked with beans and cabbage; 2) vegetable bananas with beans and arracacha; 3) green ears of maize with beans (wood ashes are added to every maize dish, in order to make the maize tender more quickly); 4) green ears of maize with white cabbage; 5) white cabbage, arracacha, and potatoes; 6) beans and vegetable bananas; 7) only beans and maize flour; 8) arracacha and beans. Eggs are either boiled hard in the shell in a pot, or the egg is beaten with a spoon in a dish, water and onions are added, and
[415] the whole is cooked. All foods are cooked in a large pot as soup; only ears of maize roasted in a bowl /Schale, "bowl, shell, husk"/ (wáts; Spanish arepa) are an exception. Meat is only boiled, never roasted; they eat the meat of cattle, sheep, and pigs, as well as poultry and guinea pigs, but not horse meat. If horses die, the carcasses are devoured by dogs.

/134/ c) Means of Enjoyment

273 The two most important pleasures for the Paez, as for the
276 cultures of the entire Andean area, are coca and chicha. Tobacco plays a subordinate role.

P /134 cont./

276 Coca (ēs) is a shrub whose alkaloid leaves, containing
137 cocaine, tanning substances, and various volatile oils, were used as stimulants even before the time of the Conquista, chiefly among the natives of the Cordilleras region. Almost 200 species of it are known, most of which, namely 137, occur in America (Walger, p. 9). It flourishes almost without exception between the tropics, from Honduras to Bolivia, in a temperature that generally remains between 15 and 20 degrees. In too low a temperature the leaves are small and worthless; in too hot a climate they lose strength and content. The most favorable elevation is between 700 and 1,700 meters.

P The word coca comes from the Kechŭa /Quechua/ lan-
279 guage (coca or cuca), which, however, does not state anything
192 definite about the origin and use of the plant, for the Kechŭa-
171 speaking tribes of Ecuador are the very ones who do not use the plant (Cooper, p. 549). In the northern part of South America the designation hayo, hahiu is customary, in northeastern Peru ebee, hibia, hibio, and in the Amazon region generally, names
P like ypadu, ypatu, ipado, or batu (Bühler, p. 3344).

The first information about coca reached Europe as early
175 as 1499 through the report of the Spanish priest, Thomas Ortíz, to
276 his spiritual superiors, according to which the natives of the northern coast of South America used a plant called hayo as a means of enjoyment. The first detailed description of the cultivation and use of the plant is found in a work, printed in 1553, by Pedro de Ciéza de León, who for the first time calls attention to the fact that coca bestows strength and vigor and drives away hunger (Bühler, p. 3353).

P At the time of the Conquista, coca was known in Colombia
276 among the Cauca Valley tribes between Popayán and Cali, near
171 Ibagué in the Magdalena Valley, on the savanna of Bogotá, and
P among the tribes of the Sierra Nevada de Santa Marta. Today the
C
276 use of coca is officially forbidden in Colombia on account of its
C harmful effects. According to Decree No. 95 of 1938, the sale
656 of coca, except in apothecary shops and drugstores, was forbidden

P C /134 cont./

276 by the "Ministerio de Trabajo, Higiene y Prevesion Social."
C This prohibition was extended by Decree No. 578 of 1941 by the
656 same ministry, according to which an exact list of the existing coca plants of the country was demanded and their destruction ordered, /135/ with a simultaneous prohibition against new plantings (Duque, 1945, pp. 445 f.). Of course this prohibition against coca planting cannot be strictly supervised and enforced in all the remote parts of the country.

P The argument for the use of coca has remained the same
276 from the time of the Conquista to this day: it is supposed to
461 drive away hunger and to give strength. "Without coca one cannot work," I was told over and over again when I asked the Paez the reason for chewing coca. And, as a matter of fact, one sees the Paez chewing it on the long trips to market and during every physical task; but only at work, when one needs strength, and not during festivals and celebrations or on festive days. (The shamans are an exception, see below.)

P The bitter tasting coca is chewed by both sexes, and the
276 boys begin at 12-14 years of age, when they also begin helping
P their father with the work in the fields. The girls generally begin
[887] somewhat later, and in old age both sexes chew quite heavily and more frequently than is normal in younger years. The men take coca three times a day as a normal dose, and each dose lasts about two to three hours. Nothing is eaten all day after taking the first meal early in the morning before work; the second one
P is not eaten until after they return home from the fields in the
[272] late afternoon. During the pauses for coca, unfermented sugarcane juice (nyúsayumfl) is drunk, everyone carrying a calabash with one to two liters of it with him.

P The coca shrub, about 80 to 200 centimeters high, is
276 striking even at a distance because of its fresh, light green,
249 lancet-shaped leaves, which have two slightly curved longitudinal
[137] lines on the underside. Among the Paez of Calderas almost every family has its coca shrubs, the leaves of which, after plant-
P ing, are harvested from the first year for about 20 years. Anyone
[437] who does not own coca shrubs himself trades for the leaves in

1: Nachtigall --57 E-5 (1952-1953) 1955 SC15 Paez SC15
Colombia SC1

P /135 cont./
276 exchange for brandy, wheat, or maize (for exchange and barter
249 rates, see "Trade" /see pp. 92-94 /). Within the family each
437 one harvests for himself as many leaves as he happens to need;
otherwise the father of the family usually barters for the entire
family. Harvest time is throughout the year (Ill. 174 /see
P p. 277 /).

276 Before use the leaves are roasted in a clay bowl and then
317 carried around in the colored wool pouch (kwatandyáha), together
[415] with a small calabash containing lime. The lime (kwatánd) is
obtained from limestone (kwatandkwát) which crops out at vari-
ous places throughout the region and which men and women look
for as it is needed, or the husband sends his wife to fetch a few
stones. These pieces of limestone are put in a vigorously fanned
fire for two hours, /136/ then in a clay bowl, and cold water is
P poured over them. After that the cracked stone is pounded to
276 powder. To enjoy it, one takes a handful of leaves out of his
pouch and puts them in the mouth and chews them for a while,
until the lime can be added. Care must be taken that neither the
tongue nor lips come in contact with the lime. Beginners press
the coca mash flat against their tongues with their gums and
sprinkle a pinch of lime from the pear-shaped, absolutely un-
adorned calabash (kwatandóka) upon it; practiced coca-chewers
take a pinch of lime on the back of the hand between thumb and
index finger and toss it into the open mouth with a flourish. The
green saliva copiously produced is partly spat out, but most of
P it is swallowed. In the case of old people it often runs out of the
C mouth and drips on the clothing (Ill. 179 /see p. 280 /).

276 According to my experiences among the Paez and the
P coca-chewing Colombian workers, the harmful effect of coca
C seems to be exaggerated in most of the studies on the subject.
276 Of interest, however, are the data of C. Gutiérrez Noriega (1952),
146 who investigates the psychological and physiological effect of
273 taking coca, especially among the Peruvian Indios. There, in
the region of the greatest coca consumption, two to four kilo-
grams per person and year, the daily amount of food for a worker
is only about 2,000 calories per day. With a simultaneous drinking
of brandy and an inadequate diet, physical and mental consequences

P
C /136 cont./
276 are naturally more in evidence than in the case of the use of
146 coca with good nutrition and as the only indulgence. Along
273 with improved nutrition and corresponding enlightenment, a
prohibition on brandy instead of its propagation would be more
C desirable for the health of the people than a prohibition on coca.
[651] The departments, however, draw their chief income from the
P brandy tax, whereas coca was always tax-free.

276 Tobacco (wáhi) is neither planted by the Paez nor con-
[249] sumed in large amounts, since there is generally no money
available for the purchase of tobacco or cigarettes. Both sexes,
P however, smoke gift cigarettes, and, to be sure, from child-
hood, that is, from two to three years of age. The shamans
[756] in their séances and ceremonies are in the habit of chewing
[755] cigarette tobacco along with coca, but it is always purchased.
These séances last many hours or throughout the night, during
which shamans and patients together chew this mixture uninter-
P ruptedly.

273 Chicha (pronounced tschitscha) is one of the alcoholic
[171] beverages which, made out of various raw materials, are wide-
spread among the natives /137/ throughout South America, with
manioc chicha predominating in the forest region (Venezuela,
Brazil) and maize chicha in the Andean region (Cooper, pp.
539 f. and Map 11). Two methods of production are distin-
guished, according to whether it is a matter of raw materials
with a high sugar content (honey, sugar cane, palm sap, pine-
apple) or more starchy crops (manioc, maize). The former ferment
without the addition of saliva and need not be chewed in the
preparation; the latter need human saliva before or after cook-
P ing in order to ferment.

[137] Among the Paez chicha (mbéca) is made only from the
juice of sugar cane, a raw material that is not American, but
came from southern Asia and did not come to America until the
post-Columbian period (Maurizio, 1933, p. 75). Formerly
chicha was made out of maize, as it still is today among the
neighbors of the Paez living in higher regions (for example, the
Guambiano). The name for sugar-cane juice, nyũšayumĩ

/137 cont./

273 (= sweet water), as for the unfermented chicha, does not in any case have anything in common with the name for fermented chicha. Moreover, there is no separate name for sugar cane; nyúza also means "sweet" and "honey."

249 In the region of the Paez, sugar cane may be planted and harvested throughout the year. The juice of the cane is pressed [407] out in the sugar mill (lapíce). The latter stands in front of or inside every house; it belongs to every family in the same way [273] that each has its sugar-cane field and its chicha. The latter has [431] no commercial value whatever, but is merely given away, and 249 anyone who asks for it gets it. The sugar mill (Fig. 28 /see 407 p254 /) of the Paez of Calderas and southern Tierradentro consists of two tree trunks smoothed off on either side, which form the lateral posts (mágrena) of the mill. They are rammed into the ground and are provided, each one twice, with two recesses that receive the horizontal guidebeams (sépo) for the three crushing cylinders. These guidebeams are merely pinned. No metal parts or nails of any kind are used here or in the entire construction. Below the two lower guidebeams a strong plank is fastened to the lateral posts, upon which the three cylinders (ũnk) rest. Of these only the center one is turned by means of a crossbar, with human power or by a horse, whereas the two lateral ones are moved by means of pegs, which are most accurately fitted, but are not in addition pinned. A horizontal pole is lashed above each of the two lower cylinder-guidebeams, in order to guide the sugar cane shoved in for pressing. Below the cylinders lies a rectangular board (tablón) with /138/ two longitudinal grooves, [492] in which the extracted sugar-cane juice runs out at the side. If a horse is used to move the crushing cylinders, it is hitched up with two ropes leading out from a rope tied around the belly of the horse, so that the horse does not pull with its chest, as is customary among us.

H. Pittier de Fábrega illustrates (Pl. VI/2) another type of sugar mill from northern Tierradentro, which shows only two horizontal cylinders, one above the other. Both are clamped with pegs between two vertical posts and are turned on either side by hand. The extracted juice is caught in a pouch hanging underneath.

/138 cont./

249 In chicha production for festive days it is customary for
407 the mill to be turned only by human power, by men or women.
461 One could generally observe that the slightly intoxicated men
273 exerted themselves only a short time in each case and were then relieved by the more sober acting women, who -- with their children on their backs -- showed remarkable endurance at this physically quite hard work.

407 Almost every father of a family and houseowner makes his
335 sugar mill himself, or a neighbor helps. There are no profes-
[412] sional carpenters. With an ax (swéla) and a foxtail saw (serúčo) the cylinders are sawed from a tree trunk and crudely smoothed. The cylinders thus prepared are provided with a small hole in the center, from the base and upper side, and are clamped horizontally, by means of pegs, between two posts rammed into
[413] the ground and held together with a rope. Then with a gauge (regla), which consists of a board with thorns, the distances between the pegs are precisely incised on the revolving drum.

273 The sugar cane is put through the crushing cylinders
[249] several times by the workers, one squatting on either side, until
[516] the juice, which is caught in a wooden tub or in calabash vessels,
[415] is pressed out (Ill. 175 /see p. 278/). It is first vigorously heated and then put in a large horizontally positioned tree-trough (kánoa) up to five meters long, in which there must always be a little chicha to begin with (Ill. 165 /see p. 273/). It is stirred up with the old chicha in the trough, the kánoa is covered with banana leaves, and already the next morning the chicha is ready to be drunk. As time goes on the chicha becomes ever stronger in alcoholic content. By noon of the same day it is already strong enough to distill brandy from it. If one does not do this, /139/ some water must be added the next day to dilute it. If this is not done, the chicha is neither drunk nor is new sugar-cane juice added, whereupon it becomes sour and bitter after four or five days and strongly sears the throat. There are also "gourmets" among the Paez, however, who let the chicha go on fermenting, untouched, for up to three weeks and only then drink it so sharp and sour.

/139 cont./

273 No new chicha can be made without some old chicha in the kánoa. The sugar-cane juice, even if it were left standing for many days, would still be merely sweet and not produce proper fermentation. After five or seven days, however, there is a certain kind of fermentation (probably as a result of the acid content of the wood of the empty kánoa), but of very bad taste.

[476] In case a person is planning a major piece of work for which he must ask people to come and then, of course, also entertain them properly for their labor, the sugar cane is milled the day before, and on the following day the chicha is ready and may be served. It is said that chicha drunk in any quantity does not produce discomfort of any kind or headache.

Besides the production of chicha, which is carried on by all families, each family also has in its house distilling apparatus [462] with which brandy is distilled from the day-old chicha. This distillation is commonly the work of the women while the men are in the field. It may also be undertaken, however, by men or youths. The distilling apparatus (walyíndeya) consists of three vessels, a large clay pot holding ten to 15 liters, which is two-thirds full of strong chicha, anise, a pound of dill, cloves, cinnamon, and other herbs. A second clay pot without a bottom is set on this and hermetically sealed to the upper edge of the lower chicha pot with a paste of water and wood ashes. Into the upper edge of this second pot are drilled three holes, by means of which a flat wooden plate is tied inside the pot, just below the mouth, and has cut into it on one side a groove leading to the outside through a hole in the wall of the pot and emptying into a tube. A shallow copper bowl sits, sealed airtight, on this second pot. In the distillation process the evaporated alcohol, passing through the second pot, strikes the bottom of the copper bowl. The latter is constantly filled with cold water. The alcohol vapor condensing on the underside of the copper bowl drips onto the wooden plate, flows out through the runoff tube, and is caught in bottles (Ill. 176 /see p. 278 /).

/140/

d) Animal Husbandry

231 Although the Paez keep large livestock, cattle and
233 horses, along with small livestock, they are not livestock-
[232] raisers in the true sense. They neither have anything to do
492 with the breeding of their animals nor do they utilize their labor
[237] power to any great extent. The utilization of animal products,
too -- especially those of the large livestock -- bears no rela-
231 tion to the existing possibilities. Horses (hímba; stallion =
492 himbapítste, mare = himbaóite) are used least of all, though they
[556] do find use now and then in milling sugar cane. Actually, people have them only to have them and to be considered rich. They are used neither as draft horses in front of wagons nor as beasts of burden, and only now and then as riding animals, with-
231 out a saddle, by young people. Adult men do not ride, even
484 though the mountainous country, difficult to traverse on foot,
492 fairly challenges one to ride, and the Paez, on their visits to the markets, see almost all the colonists on horseback. But "we are accustomed from the time of our forefathers to walk in the mountains," they reply, "and we are much faster on foot than you are on horseback." They are not wrong about this, and one would not like to trust one of the Paez horses, degenerated through inbreeding, to carry its rider on market days 30 kilometers over
232 hill and dale from Calderas to Inzá and back again. Since the
[556] Paez does not demand service of his horses, it is understandable that only the number of head counts for him and his reputation. How the horses look generally matters not at all; in no case is there any breeding selection, nor does a man know anything about the mating and birth of his animals, but generally finds out about a new litter only after it has arrived. Gestation times are unknown. From various parties I was assured that horses, cows, sheep, and pigs were pregnant "about a year." Castration of stallions, bulls, and rams is not known; it happens now and then in the case of boars, with the owner -- no specialist -- cutting out the testicles of the young pigs with a knife.

/140 cont./

231/ 439 Since the only purpose of keeping horses among the Paez is to have as large a number as possible, it is understandable that they place importance above all on the possession of mares. The birth of a filly is therefore a great joy and everyone would be happy to trade a grown stallion for a filly, "because it again gives foals." Unfortunately this exchange takes place only all too rarely, because the colonists are not interested in the degenerate horses of the Calderun. It is different with cows (kulá; steer = toló, heifer = novflya). Here the /141/ Calderun breed (black mottled "Holstein" and brown cattle) is healthier and usually also stronger than the cattle of the colonists. Moreover, on account of the somewhat cooler climate, their bodies are almost completely free of ticks and vermin, in contrast to the cows belonging to the inhabitants of lower altitudes, normally 231 crawling with larvae and maggots. Unlike horse meat, beef is [262] eaten, but milk is never drunk, "since the Calderun never have [272] the cows milked." The breeding goal here, too, is the greatest possible number. Thus it would never happen that a cow or calf would be slaughtered. I could not learn of any preference for a particular color, for example, black-white or brown-white, or uniformly all black or white or brown. All are liked equally well [431] by the Paez, since only the number is important. There is no special attachment between a person and his livestock, for no one gives away livestock, either as a birthday, christening, or [552] wedding present. Special names or designations for livestock or pet names are not used.

233 About half the total number of Calderun cattle and horses 422 graze on the pastures of community land. This means about 40 231 horses and 60 cattle. The figure shows that only a small number of Calderun families own a cow or a horse. The proportion [554] becomes even less favorable when one learns that there are three rich families who own about ten to 20 head of cattle and horses each. The other half of the large stock, as well as sheep, pigs, and small stock, remain near the houses and seek their fodder there. [241] They may also forage in the uncultivated fields of neighbors; they are prevented by the fences from breaking into the cultivated fields.

/141 cont./

231 Every member of the family knows every head of its herd
233 of livestock, and the men every head of the large livestock of
422 the entire village. Nevertheless, marks of ownership are used, which, for the horses, consist of branding irons with the first initial of the owner, such as are used by the colonists and may be bought there. The cattle have as marks of ownership small cuts in their ears in the form of a triangle, square, or semicircle, or a corresponding piercing of the ears. Pigs and sheep have the same marks of ownership in their ears.

231 Sheep (pǐsa) are kept chiefly for their wool, though they
236 are also eaten. The total stock of the village, however, is so
[262] small that only every third family on the average owns one or
[422] two sheep. The other families must obtain the wool they need
[437] from the sheep owners in exchange for other things (see under "Trade and Transportation" /see p. 92 /). /142/ Pigs (čúče)
231 are greatly coveted because of their meat, but there are not
[422] enough of them so that every family can own one, only about every second family. Like all the other domestic animals, they roam about freely in the vicinity of the farmyard and must forage for their food. They are prevented from getting into the fenced fields by having a frame made of three sticks hung around their necks.

[343] Stalls for the animals or regular and special feeding or
[232] care are unknown. The owner puts rock salt in the pasture areas for the cattle and horses every Sunday. Occasionally scraps of arracacha or maize are thrown in front of the house for the pigs, which must then forage for them. Chickens (ǎtaly; rooster =
235 atalyepítste, chick = atalyelúčkwe are now and then fed with maize or peck at the arracacha lying about in the dwelling. To feed baby chicks the woman chews some maize and spits out the
[685] mash for them. Every family has a few chickens, but their number does not grow large because foxes and neighbors are always
[422] stealing those wandering free. Hence the average figure remains
231 at only two to three chickens and a rooster per family. In many
262 houses guinea pigs (fits) run about, living on refuse from the kitchen and, when roasted, prized as a delicacy.

/142 cont./

231 There are dogs (álko) in almost every house. They are supposed to protect the chickens from the fox and the house from strange persons. We never met any really vicious dogs, however. They are all very undernourished and cowardly and, in addition, are of a small, short-haired breed. There are no larger dogs, say, of the size of our shepherd dogs. [262] They must hunt for their food, which consists chiefly of the meat of dead horses, since the people do not eat horse meat. Only very rarely are the remains of human meals tossed to them. Cats (mīs) are rare. Only a few families have one. They serve human beings by keeping the house and storerooms free of mice. [235] Ducks (páto) are likewise very rare; we came across only two each in two houses. They are [262] greatly prized as roasts.

Bees (čí·nc) are kept by only a few families. They are smaller than our German honeybees and of a yellowish brown color. There are no special beehives; rather, an old, hollow, but still standing tree-trunk is used. In one case they nested in a house post next to the doorway. Their honey (čí·nc mil) is dark brown, [237] like syrup. Beeswax (čí·nc) is used to strengthen the agave-fiber string with which broken chicha bowls are repaired and fireworks are made.

/143/ e) Hunting and Fishing

224 Neither plays any great role in the economy of the Paez. [433] Moreover, there is no special class of hunters or fishermen. Hunting is practiced only by the men and, for lack of big game, generally extends to smaller mammals, rabbits, monkeys, and to birds. Only in the mountains is it possible to find and to hunt the čái and gwágwa. The former is a kind of deer, so I was told, and the gwágwa a small animal similar to a badger.

The greatest frequency of the hunting trips of a man is about one day a week. Mostly, however, the men go hunting [231] less often. This is done alone with dogs in the vicinity of the [776] houses, whereas a hunting trip in the mountains is generally made by several men, since a man alone is afraid of gělyómp, the mountain spirit.

/143 cont./

224 mountain spirit. We met only a single young man of about 18 who goes hunting alone in the mountains once a week. He told us that, in order to become a good hunter, one must first try to [789] kill a bear (ĕswiy). One must then rub its fat into the right [237] lower-arm, which would give him the same powers as the bear. [262] One is not permitted to eat this fat, however, because it would [828] make him insane. After rubbing in the fat, the young hunter [263] continued, one may not eat salt at any meal for a week. There are no further rules and ceremonies of any kind to be observed. [237] We learned, however, that one can also use bear fat as a healing remedy, and, to be sure, for bone fractures or sprains one [752 757] must rub the affected part with bear fat, whereupon the injured limb will heal immediately and will become considerably 224 stronger than ever before. For stalking he wears on his head a 292 cap made of the skin of a reddish-blond hairy monkey (mŏno), [825] which in the first place protects him from the thorns of the bushes, but which is also supposed to facilitate creeping up on [439] game. He sold it to us for two pesos without hesitation, since, [126] as he said, he was perfectly capable of shooting another monkey 224 for himself. He was not afraid of the gĕlyómp spirit, but the 776 other men were, for gĕlyómp screams and makes a noise when human beings enter his area in the mountains, so that they become quite confused and go astray. The mountain spirit cannot do anything to several men together, however, since he could make as much noise as he pleased, but they would not let them- 224 selves be diverted. Of course, the men, even if there are ever so 776 many of them, must not offend the mountain spirit or provoke 515 him unnecessarily, but rather must avoid everything that gĕlyómp 783 does not like. /144/ For instance, he hates everything impure [296] and filthy. Hence the men always only go hunting well washed; [824] they even wash the entire body, and the ruana, too. In addition, they rub themselves with the cleansing herbs šu and šayuts, which they obtain from the shaman, in order to be really altogether [761] clean in a physical and ritual sense. But if someone has taken part in a burial or has merely seen a funeral procession close by, he has picked up a good deal of "pest" from the dead and must have himself specially purified by the shaman before hunting.

/144 cont./

have himself specially purified by the shaman before hunting. In case the wife of a hunter happens to be menstruating at the very time of the hunt, however, purification is of no avail; the hunter is too "dirty" and must stay at home, so as not to provoke the wrath of the gĕlyómp and thus bring misfortune on the entire hunting party.

The latter generally consists of six men with 12 dogs, without there being any regular battues, however. The hunters are equipped with shotguns, whose smooth barrels, with a caliber of about 15 millimeters, consist of strong sheet-iron. Fine sand is used as shot; powder is purchased and ignited with a spark from the flintlock.

There are no closed seasons for animals; nor is gĕlyómp angry, say, because too much game might be hunted, for "this does not happen, since there is not that much." After hunting, however, the hunter fastens the tail feathers of the birds killed to the inner side of the roof of his house and the cleanly gnawed skulls of the four-footed animals killed to its center post or center gable-post, both so as to be successful again the next time in hunting the same game. I found tail feathers of birds under the roof covering of almost every house, and frequently also three, five, or ten monkey or rabbit skulls fastened directly to the house post or strung one above the other on a string. Only once did I find, on the gable post of a small field-hut, at a man's height, below a monkey skull, a very crudely incised human figure with an oval face and six hairs standing straight up on the head (Ill. 200 /see p. 288 /). The eyes are represented by circles, the nose by a long rectangle, and the mouth by a triangle. The body is rectangular. Two semicircular lines are incised on the sides of the body. The arms start at these semicircles as two bent lines and stick out somewhat; the legs are represented in a similar way; a triangle between them is probably supposed to indicate the genitals. A Christian cross is carved on the side of the post. I was told that the human figure represents the "devil," /145/ but had nothing to do with hunting. This explanation is, of course, unsatisfactory, but I was unable to find any similar

/145 cont./

532 776 carving anywhere else or obtain an explanation anywhere (*).

* Possibly this is supposed to represent "Thunder," who, as the most important mythical figure and also as the shamans' assistant spirit, is described as a small man with the shaman staff and a triangle as a musical instrument, who displays his sexual parts.

223 Bird-hunting for the pigeon-sized tom birds is carried on by almost all Paez families with the net (ōka), as well as with the shotgun. The net is about five meters high and 20 meters wide. For this purpose a correspondingly wide breach is cut in the growth of trees or bushes on a hill or the ridge of a mountain chain, and the net fastened in the opening produced. The flushed birds, who think that there is a convenient passage at this place, fly into the net, get caught in it, and are then killed by the [237] capturers, who twist their heads. Another type of bird-catching consists of fastening a noose made of horsehair (nyákiwez; nyák = to set up, wez = string) to the twig of a tree or shrub in such a [857] way that the noose rests in a bird's nest. When the bird returns to its nest, the noose becomes entangled in its foot, and the boy -- for it is mostly boys who engage in this task of noose-setting -- 224 is able to seize the bird. Rabbits are caught in the same way with nooses, but made of agave fibers, by laying the nooses where they pass.

226 Fishing is done with hook and line at the river or with [283] poison in weirs. The fishing line (wendyánsyuts) consists of twined agave string to which are tied a metal hook and a stone as a sinker. A small worm is fastened to the hook as bait. [462] Angling is done only by men, and at twilight or at night.

226 824 171 Fishing with poisonous plants is a cultural characteristic of almost all South American Indians. For this purpose a total of more than 100 species of poisonous plants are used by them, which means that this part of the world leads all the continents in this respect (Heizer, p. 277). Among the Paez, fishing with

Among the Paez, fishing with

/145 cont./

226 poisonous plants is done once a year, in the dry season, as com-
824 munity fishing with weirs. For this purpose -- it was explained to me -- a dam of stones and earth is first made by the men. The herbs, which only grow high in the mountains and contain a poisonous substance, and which have been pulverized with stones, are tossed into the pool thus partitioned off. These herbs are called yūkse or kēse. The fish are said to die from them immediately. /146/ They are caught only by the men. But since the poisonous herbs are so far away and are to be found only with difficulty, the men are said to catch the fish sometimes unpoisoned at the weirs with their bare hands.

f) Weapons

411 The weapons of the Paez are limited to hunting weapons
[726] and children's toys, since wars are no longer fought. The only important hunting weapon today is the shotgun. As children's
[524] playthings there are the stone-sling (fsot), blowgun (pīt), and in in recent times the elastic sling (kāučēro).

[824] In former times, in the battles with the Spaniards, the
[714] Paez were said to have used lances 25 handspans long made from
[237] the wood of the chonta palm, as well as plaited shields or shields
[124] of tapir skin (Pittier, p. 327). I could find no confirmation for the present-day or even earlier use of lance and shield; my informants
[175] were familiar with neither the word nor the object. From the chroniclers, however, it is reported that the Paez, as well as other mountain peoples of this region, had learned from their battles with Spanish horsemen to defend themselves with long lances. There is, however, absolutely no foundation for a pre-Spanish use
714 of this type of lance. It is not unlikely that the Paez originally had plaited shields (opimb). The word for skin shield (himba-kat) is interesting; its present literal meaning is "horse skin." Whether himba meant "tapir" in pre-Spanish times cannot be ascertained.

/146 cont./

726 In order to defend their mountain country the Paez also used
[726] large rocks which they hurled down on the attackers from the
[177] heights. They, too, however, soon succeeded in obtaining iron
[411] and iron weapons. In their battles at the time of the Conquista they were already using swords and machetes.

411 The stone-sling plaited of agave fibers, whose manufacture
726 is described below (see under "Plaiting" /see pp. 85-86 /), is
773 of great importance mythologically in the battles with the "Pijao."
628 For geographical reasons it is the typical weapon of the American
411 mountain peoples from Tierra del Fuego to Canada, whereas the
177 blowgun, for similar reasons, is the typical weapon chiefly of the Amazonas and Orinoco forest area. The simultaneous occurrence of blowgun and sling is found all the way from Mexico to Ecuador and in Bolivia (Friederici, 1911, pp. 71-73, Pl. 13).

411 /147/ The blowgun of the Paez consists of a single barrel and is very simple in its construction. It is made only by men, but
[462] for bird-hunting is used almost solely by boys. To make it, one
[357] uses the thin, straight trunk of the fíza tree, the pith of which is
[223] burned out with a long iron tube about eight millimeters in diameter and heated red-hot. The length of the tube is two to three meters. No special mouthpiece is attached. As a sight a little piece of beeswax is pasted above the mouth of the blowgun.
[224] The ball-shaped fruits of the smbák tree, which have exactly the right caliber when green, are used as shot. The range amounts
[211] to about 20 meters. The accuracy of the shot is not great. Nevertheless, there are boys who have carved more than 20 notches above the blowhole of the tube as a record of the birds killed.

4. Crafts and Techniques

a) Treatment of Fibers

283 The fiber material used by the Paez for plaiting, weaving, nets, or ropes is primarily agave, cotton, or sheep wool. Agave and cotton are ancient American fiber plants whose homeland is probably Central America, while working with sheep wool has its tradition in the Peruvian Highlands, in working with llama or

/147 cont./

283 alpaca wool and the wool of their wild relatives, the vicuña and guanaco.

283 824 The agave (mbāts) grows in all parts of Tierradentro, and the fibers of its fleshy, watery leaves are used for plaiting, weaving, and the making of nets and ropes. The fiber must be obtained immediately after the leaf, 1.50 meters long, is struck off the plant, since the moisture is lost very rapidly and it is then very difficult to remove the dry flesh from the fibers. For this purpose every house has a tree trunk leaning diagonally against the wall in the shadow of the roof, and a string with a small stick hangs down from the upper part of it. This is stuck crosswise into the leaf hanging tip-downward, and then the pulpy parts of the agave leaf are scraped downward rapidly with a very sharp-edged, halved bamboo tube split lengthwise, until only the long, continuous, clean fibers /148/ remain (Ills. 177 and 178 /see p.279 /). These are tied loosely around a beam to dry, until sooner or later they are spun and twisted for use.

283 [462] Men and women employ different techniques to obtain thread from the agave fibers. The men twist the thread with the hand on the upper thigh, whereas the women spin the agave fiber, like the sheep wool, into thread with the spindle. Two methods of spinning are distinguished among the South American natives, depending on the shape of the [114] spindle and the way it is held. O. Frödin and E. v. [171] Nordenskiöld call these the Bororo and the Bakaïri /Bacairi/ methods, according to their characteristic occurrence. The first method is the older culture-historically. In this case the spindle staff is symmetrical in cross-section and the whorl is generally near the lower end. In spinning, the spindle is held more or less horizontally and is placed with the lower end on a forked twig stuck into the ground or is held between the toes. The spun thread is first wound onto the shorter part below the whorl and only later wound up on the main [171] part above. The principal area of distribution of this type

/148 cont./

283 of spindle lies east of the Andes, in Mojos and in eastern Ecuador.
171 The Bakaïri spindle, also designated as the "Andean drop spindle," is characterized by a conical thickening at its lower end. The whorl is slipped onto the spindle staff from above and cannot slide off, since by the Bakaïri method spinning is done only in a vertical position. The upper end of the spindle is often provided with a notch or a hook. In principle the thread is formed at the upper, longer end of the spindle shaft, in other words, exactly the opposite of the Bororo spindle. The area of distribution of the Bakaïri type is a very large one; it occurs throughout the Andean area, as well as in the Venezuelan and Brazilian forest region.

283 The spindles of the Paez (wágat; as wool spindle: káswagat) and their spinning methods cannot be said to belong strictly to either the Bororo or the Bakaïri type, since they contain elements of both. The unadorned spindle shaft is uniformly about three millimeters thick, the whorl (nyít) may either be absent or is slipped on very artlessly in the form of a crudely carved, discus-
[224] shaped bone or wood disk. Not infrequently a piece of an ear of maize, a potato, or a bean pod will serve as a whorl substitute. The spindle is held in different ways. It may hang down free perpendicularly, with the tip in perpendicular position resting on a support (upper thigh), or it is held horizontally in the air or even with the lower part upward /149/ (Ills. 179 to 180 /see p. 280 /). The position of the spindle does not depend on whether agave fiber or wool is spun, but rather it seems to be
[171] arbitrary. Whereas these characteristics point to Bakaïri spinning, at least insofar as the spindle is held downward without support, the way the thread is made and its being wound temporarily on the lower, shorter part of the spindle are characteristic of Bororo spinning, although its typical fork-shaped support, with the spindle held horizontally, is absent here. Among the Paez, the spindle is worked with the right hand. The left plucks the fibers and forms the thread. The women can sit, stand, or walk during this. Insofar as it is a matter of working with sheep wool, the women are in the habit of spinning it chiefly on the way to the

/149 cont./

283 market or on other errands; when spinning agave fibers, they sit in front of the beam around which the fibers have been tied to dry.

[236] Sheep wool (kas) is roughly cleaned and for spinning is wound, unwashed, around a rod (Ill. 179 /see p.280 /). The latter is 60-150 centimeters long and is gripped under the arm by its lower part. On its upper part it has a notch in which is fastened a string to wind around the wool and hold it on the rod. To prevent it from drying out too much, which would make spinning difficult, it is protected by being wrapped in leaves or by a cloth.

After several meters of thread have been spun and wound on the lower part of the spindle, it is removed from there and wound on the upper part. In this wound form, that is, still on the spindle staff, the thread, after the removal of the whorl, may be used as [236] a shuttle in weaving garments. For weaving the colored belts of the women, however, and for making the wool coca bags, not the simple, but the twisted wool thread is used. The agave threads are even twisted on principle for every type of use. For this purpose two single threads are twisted into a double thread 283 in a rotating direction counter to the spinning direction. This 462 process is carried out differently by men and women. The former twist either with the hand on the upper thigh or use a special instrument, the klafíca, with which the strongest ropes are also made, whereas the women use the spindle even for twisting. The direction of rotation of the twisted thread is different for men and women. Depending on the material, the former use the Z-twist in their handwork, the women the S-twist in their work with the spindle. In the twisting or ropemaking with the klafíca done by the men, the S-rotation prevails. (For indicating the /150/ direction of rotation according to these two letters, the direction of the front, diagonal part of the vertically held thread, which runs parallel to the middle part of an S or Z, is the determining factor [Fig. 34 /see p. 256/].)

/150 cont./

283 To twist the thread, the women remove the spun thread from the spindle, after they have slipped off the freely movable spinning whorl at the bottom, then grasp it in the center, and, in a loop, again put it on the spindle. Then the thread, taken doubled in this way, is twisted with the right hand, while it is disentangled and guided with three fingers of the left hand (Ill. 180 /see p. 280 /). Here, too, a smaller piece is always first twisted onto the lower, smaller part of the spindle and only later wound on the longer, upper part.

b) Ropemaking

[462] The making of ropes is men's work. True, there is also a type of rope of agave fiber that is made by women (tāpe), but these ropes are plaited in the form of a threefold braid out of three strands and are therefore plaited work. Two-strand ropes of agave fiber (mémwez) of optional length are made with the same technique as the thin, twisted agave strings. For this the klaffca (from the Spanish clavicula?) is used, a lancet-shaped, flat piece of wood about 15 centimeters long, which has notching at one end and a round perforation below it (Fig. 26 /see p. 253 /). Through the latter a stick of equal length is inserted horizontally, one end of which shows a thickening which prevents the piece of wood from sliding off. Around the notching, the middle part of a hand-twisted thread is fastened, and then the piece of wood is made to rotate. The longer part, because of its noncentric perforation, acts as a flywheel mass. In turning, the thread fastened to it is twisted. For this work, of course, a helper is required to hold the other end of the thread or rope. Three-strand ropes (láso) may also be made by the klaffca. For this purpose the three tips of the three twined agave-strands are tied to the notching of the klaffca, and the instrument is then turned in the same manner. A helper takes care of the uniform twist and uniform strength of the rope. A lasso of horsehair (séltas), as a three-strand rope, is also made with the klaffca following to the method described. The individual strands are previously turned by hand, then twisted,

/150 cont./

283 and, as the third step in the work, the extraordinarily strong rope
281 about one centimeter in diameter is produced. /151/The Lassos
283 (kádya) cut spirally from cowhide as leather strips are also twisted with the klaffca. The prerequisite is that the skin be worked in a fresh or wet state. If, after twisting, it is stretched out for a while to dry, it will keep its spiral twist. It will lose it, however, if it is pulled too hard or becomes too wet.

c) Net Techniques

286 In describing the net techniques of the Paez, I should like to distinguish between the loop technique /Schlingtechnik/ and the knot technique /Knotentechnik/. Among the articles made by the loop technique are the carrying bags of agave fiber (called "fiber bags" in the following) and the wool coca pouches; among those made by the knot technique are bird nets, hammocks, berry sieves, and slings. Agave fiber or sheep wool, both in the form of twisted threads, serves as the material.

The loop technique is used, for example, in knitting and crocheting in our European culture-circle, and, to be sure, with the technique of intertwining /Verschlingen/. The simplicity of this method of work stands in contrast to the disagreeable attendant phenomenon that the entire fabric can be destroyed by pulling one thread. The loop technique of the Paez in producing cloth is fundamentally different. It consists of the technique of simple insertion /Einhängen/. Purely as a matter of form it should be noted that neither needle nor crochet hook nor any other object is used to carry it out; rather, everything is done with the hands.

In order to connect the loops one must draw the thread in its entire length through each individual loop. Since with this technique the supply of thread in the form of a thick ball would not pass through the loops, or only with great difficulty, another way of arranging the thread supply had to be thought up. The Paez succeeded in doing this in a very clever way; they were even able to devise a serviceable substitute for a needle from the same material (Ill. 183 /see p.282 /). The thread to be worked in, wool

/151 cont./

286 or agave fiber, is folded over upon itself several times, slightly twisted, and then tied together in the center with a simple thread. The latter is knotted several times in such a way that it runs out into a point which at the same time serves as a plaiting needle. This folded thread supply, which is up to four meters long and six to eight millimeters thick, may easily be passed through each loop of the fiber bag. When a length of the thread is used up, /152/ a loop of the thread supply may promptly be pulled through the "eye" of the "needle," and this continues until the supply is used up.

The method of making the fiber bag and the wool coca [461] pouch is fundamentally the same. The work period lasts two to six weeks. In the case of the fiber bag (yáha), the largest of which may measure more than a meter in height and width, a small bottom is plaited first, from which the bag is worked, bell-shaped, in several sections up to the rim. At the start of this process, between the thumb and ring finger for the one part and between the index and middle finger for the other part, there is stretched a short piece of thread, around which the continuation of the thread is wound loosely and spirally in loops. This produces the first row of meshes (Fig. 30 /see p. 255/). The following length of thread is now again drawn back through these, so that it loosely catches the previously formed loops. Proceeding in this fashion, when the rectangular bottom has been made to a size of about two by five centimeters, one starts at a corner of it with the first section. Here, too, as in the entire plaiting, the thread continues in the same technique. In order to enlarge the bag, as many additional rows are interlaced in each loop of the bottom as are desired to widen the bag.

At the end of the work a broad row of holes is worked into the bag three loops below its upper rim, and this serves for fastening the carrying band. This band terminates in loops at both ends, conditioned by the method of weaving (see below). For fastening, the first loop of the band is drawn through a rim eyelet from the inside and put first around the top toward the back. Then the second loop is drawn down through the first loop and only then back again through the eyelet of the bag toward the top-back as before. The last loop of the band is knotted with

/152 cont./

286 the beginning or end warp thread of the carrying band in an eyelet of the bag.

The making of the woolen coca pouch (kwatandyáha), literally "lime pouch," the size of which varies between 12 and 35 centimeters, is done in the same technique as the manufacture of the fiber bags. The process, after the bottom is made, is done 286 in three sections, the middle one of which stands out externally 531 because of its colored, chessboard-like pattern, which is bordered above and below by a row of triangles. Since this colored section is likewise plaited from the bottom to the upper rim, thread of a different color is required for each change of color. These threads of a different color are twisted into ropes in the same way as in the case of the fiber bags and held together with a wool thread which serves as a plaiting needle. The number of /153/ colored squares in the unit area is constant, and their arrangement, conditioned by the plaiting, is necessarily diagonal (Ills. 154 /see p. 268 / and 203 /see p. 290 /).

286 The fastening of the carrying band, made by plait-weaving (see below /see p. 85 /), to the coca bag is done in the same way as that of the carrying band of the fiber bag.

The fabrics made by the knot technique are generally wide-meshed and include primarily the various kinds of nets. The knots are formed by tightly pulling suitable loops or interlacings so that the more or less loose meshes cannot shift. To obtain uniform meshes, the bird nets (ōka) and hammocks of the Paez are worked with a mesh stick whose height of about five centimeters corresponds to the size of the mesh (Fig. 31 /see p. 255 /). The material is the twisted agave thread. To make the net -- and the hammock -- the loops of the rows of meshes are made by means of the "symmetrical knot" (Fig. 34c /see p. 256 /). For this the ascending thread travels from back to front over the open part of the mesh and, passing over the latter horizontally, runs downward again in the loop produced. The mesh stick is always pressed from below firmly against the row of knots above, whereby the new knots bind it in tightly on its underside. This produces perfectly uniform meshes. The dimensions of the bird net -- spread out -- may reach a size of five by 20 meters.

/153 cont./

286 The hammock (máka), as the Spanish name already indi-
[177] cates, is a borrowed article and not generally distributed in the Andean cultures. Among the Paez it is used only for children. Its dimensions, with 100 meshes, are about 100 by 100 centimeters. It is hung up with agave or horsehair ropes, which are looped through the upper and lower rows of meshes and then tied to house posts.

[415] The berry sieves (tása) are present in almost every household. They are about 30-60 centimeters in diameter and are stretched inside a round wooden frame. The meshes are formed by means of the "fishnet knot" (Fig. 34d /see p. 256 /). This draws together very closely and is then scarcely recognizable in its structure.

The sling (ísut) is made with various techniques. For its
283 manufacture the dried fibers of the agave leaf are used just as they are obtained when the leaf is stripped. A knot is made at the tip of the bundle of fibers, and it is then divided into two parts. Both are turned by hand in the same direction and then twined by rotation in the opposite direction. This produces /154/ -- conditioned by the naturally thickening material -- a two-strand rope of steadily increasing strength. Since it is twisted only by hand, it threatens to lose its tightness with greater thickness. Hence, after about 50 centimeters, the hank is divided into three parts and plaited for about the same length in the manner of a three-strand braid.

286 To make the net for holding the sling stone (Fig. 29 /see
284 p.255 /), the three plaiting strands are divided into seven strands which, in each case, are separated from the plaited part by a simple finger knot. From each of these knots two double strands continue, which, put diagonally, are tied together by a double finger knot.

The length of the net part is about 20 centimeters. At its end it changes back to a three-strand braid by way of a simple finger knot. It should be noted in this connection that the middle strand at the beginning of the braid is caught in the threads of an adjacent knot. This prevents the plaiting from loosening up as it goes into the net and losing its tightness. The same

/154 cont./

284 reinforcement is found at the other end of the net in the transition
286 to the braid part. The further procedure up to the completion of the sling corresponds to the beginning. At one end a sliding loop is tied by means of a knot, which, when the sling is used, is drawn over the middle finger.

d) Plaiting

283 The technique of plaiting is practiced among the Paez only
285 in plaiting bands for making straw hats (šwá) and for making three-strand ropes. The latter are plaited by the women in various lengths and strengths from agave fibers in the normal form of the three-strand braid. There are no plaited baskets, sieves, fans, bands, etc. of any kind among the Paez.

294 The shape of the Paez hats seems to imitate those of the
285 whites. It is the same for men, women, and children. They are made only by the men. The dry leaves of the šyēts reed, which are first torn into strips about one centimeter wide, serve as material. To be worked up they are then divided once more by being torn lengthwise into five to ten narrow strips from one to two millimeters wide. The quality and value of the hat depends on the fineness of these strips, for the finer the plaiting strips are the more waterproof and durable the hat is. It /155/ is made from a single plaited band (čemótč) sewed together in spirals -- starting from the center of the hat.

The plaiting of the band is done without any aids, in the form of diagonal plaiting with 11 strips (Fig. 33 /see p.256 /). At the start of the work they are bent in the middle and thus used double in such a way that the upper side of the reed leaf is on the outside. The second strip is inserted into this initial bend at right angles and likewise bent. This is done alternately until all 11 strips have been worked into a band approximately six to ten millimeters wide. The further plaiting work is continued with the double strips. For this the first double strip is always bent from the outside downward toward the center, in order to be drawn over the second, under the third and fourth, and over the fifth and sixth.

/155 cont./

294 From the other side there is a corresponding procedure with the
285 then outer plaiting-strip, so that the strips are plaited alternately from both sides always only to the center. This produces a very uniform and firm band.

A thread of the agave fiber is used to sew the plaited bands together. In order to give the hat brim sufficient stiffness, leaf ribs are sewed on the underside over the seams.

e) Weaving

285 The demarcation of plaiting from weaving is not uniform.
286 In the literature written in English the two are generally not dif-
114 ferentiated. According to H. Nevermann (pp. 4-6), the following conditions must be given for the simplest technique of weaving, namely, rod weaving /Stabweberei/, such as is also practiced among the Paez: 1) the stretching of the threads or fibers on a frame, 2) long weft threads, 3) rectangular crossing of warp and weft, 4) mechanical formation of the first and second shed. The last point is the decisive one, for in plaiting each weft thread must be drawn separately over or under each separate warp thread, whereas in weaving this is done over a certain number of longitudinal threads simultaneously by means of a heddle rod or something similar. More complicated types of weaving, for example, little-board weaving, comb weaving, or braid-grid weaving /Brettchenweberei, Kamm- or Litzengatterweberei, types of weaving found in Indonesia and described by Nevermann, pp. 16-18 (see the bibliography in the foreign text, p. 325)/, do not occur among the Paez.

/156/ 1. Weaving Apparatus for Carrying Bands

286 The weaving apparatus for the carrying bands of the fiber bags (vitoñsāpc) consists of a forked branch, the sides of which must not be too far apart and should, if possible, run parallel. Its size is 60 to 80 centimeters in height and between 20 and 60

/156 cont./

286 centimeters in width. Two rods corresponding to the breast beam and warp beam (pšátegwe) for the vertically stretched warp threads (yáhawes) are tied horizontally to the forked frame with bark bast (Fig. 35 /see p. 257/).

For weaving by the method used by the Paez, a special warping device, which otherwise, in weaving with a spiral warp, is required in some form for the preparatory stretching of the warp threads, becomes superfluous. The Paez weaving is done neither according to the method of the continuous circular warp nor according to the method of the terminating flat warp, but constitutes a mixture of both in the form of the so-called "false spiral warp." The warp threads run circularly around the breast and warp beams and form two planes, one below and one above the beams. They are not, however, stretched spirally, but like a parallel warp. They are fastened by means of a small horizontal stick around which the first warp thread is wound with a loop. This then runs all the way around the frame to the horizontal stick again, passing over the latter from back to front, and going back again around the frame in the opposite direction. Alternating in this fashion, all the warp threads are stretched to the desired width. After the last warp thread has passed around the horizontal stick, it is knotted and immediately used as the first weft thread.

The weaving is done according to the method of the simple rod weaving. The texture is always the texture of linen. Instead of a regular shed rod and heddle rod, loops of bast or agave fiber constitute the aids for the mechanical shed formation. The shed loop (batsnés) grasps warp threads 1, 3, 5, 7, etc. together; the heddle loops (nyúgwe) grasp the warp threads of the even numbers singly in one long loop each, and they in turn are tied together at the top. The mechanical shed formation is done by alternately raising the shed loops and the heddle loops (Ill. 182 /see p. 281 /).

[824] The shuttle (bánka) consists merely of a wound ball of thread; the sword (kyíta) is carved from the hard wood of the chonta palm pointed at both ends, and semicircular in cross-section.

As a result of the way they are stretched, the warp threads in /157/ their entirety may be drawn around the horizontally lashed tension rods during the weaving, so that the piece being woven

/157 cont./

286 always lies conveniently in front of the woman for the weft. The beginning and end of the woven part start at a distance of about three centimeters from the horizontal stick. At the end the last weft thread is knotted at the edge of the warp. When the stick is pulled out, the band comes off the frame. Since the warp threads terminate in loops, the texture of the band cannot become slack.

2. Weaving Apparatus for Cloth

286 The weaving of cloth of larger dimensions for clothing is
294 also done in the technique of the linen texture and according to the same method as the weaving of the carrying bands for the
[581] fiber bags. Every woman can do both, for she herself must be able to make all the material needed by her family for clothing; otherwise a girl has no prospect of getting married.

The weaving apparatus stands upright and consists of two strong posts which are rammed into the ground about two meters apart in front of the house, but still in the shelter of the roof. Into each of these posts, a little above the ground, a notch is cut, into which the breast beam is placed horizontally and lashed. Its position with respect to height is unchangeable. The warp beam, likewise horizontal, may be lashed to the vertical post with ropes higher or lower, depending on the length of the cloth to be woven, whereby a uniform tension of the warp threads is achieved.

The non-twisted woolen warp threads are stretched in the same way as in the case of the carrying bands for the fiber bags. The width is determined by the piece of material to be woven.
[461] The work period for a woman's skirt takes a total of about six months. In order to attain a certain decorative effect in the finished piece, between the uncolored sheep-wool warp-threads are stretched likewise uncolored or differently colored cotton threads which, in the subsequent dyeing process with plant dyes, do not take on this coloring.

/157 cont./

286
294 The shed rod consists of a round, straight wooden rod. The heddle loops are held by a horizontally stretched string immovable in height, which is tied left and right to the two vertical posts of the weaving apparatus. The sword is semicircular in cross-section, pointed at both ends, and carved out of the dark, hard wood of the chonta palm. Its width is /158/ three to four centimeters, its length about 60 centimeters. The shuttle consists of a rod on which the thread is wound crosswise. Sometimes the spindle with the spun thread is used for this.

Making the shed for the insertion of the shuttle is laborious for -- depending on the width of the piece to be woven -- not all the corresponding warp threads can be pulled forward simultaneously with the heddle loops. The woman doing the weaving is able to grasp only about half a dozen heddle loops at a time with one hand and pull them forward, in order to push along the sword slowly and form the shed. Even before the shed has reached the width of a sword length, the shuttle must already be pushed along, so that the weft can only be carried through in stages, as it were, with the shed formed by the heddle loops (Ill. 181 /see p. 281/). The shed formation with the wooden shed rod is essentially simpler, since the latter may easily be drawn forward to form the countershed and the heddle loops yield.

The beginning and end of the woven material are determined by the width of the only thin cross-rod, since at the end the shed rod is drawn out and the cross-rod takes on its function. In the loops left at the beginning and end, weft threads are drawn through by hand in the same form of the plain linen texture, until the loops are filled out. The last weft thread in each case is taken threefold so that a firm selvage is produced.

3. Weaving Apparatus for Women's Belts

Originally every woman was able to weave the women's belts
[463] (táw), the most difficult type of weaving among the Paez. Today it is almost a specialist's work, for in Calderas there are only five women left who are able to weave the women's belts themselves.

/158 cont./

286 One of them, Talesia Pame, has even developed a small in-
294 dustry from this ability. She now weaves women's belts almost
438 exclusively and barters them for food and other things. She is
463 in her early thirties and has three children. Her oldest daughter, about 12 years old, is also learning from her mother how to weave belts.

286 The weaving apparatus (tawkyáviton) is fundamentally the
294 same type as the one for the bands of the fiber bags. The fork-shaped mounting of the frame is somewhat wider and correspondingly longer. The weaving material is wool. The preparation for making the patterns in different colors consists of stretching the warp threads of corresponding color, which, as in the case of the fiber-bag bands, are laid around a small cross-stick. /159/ The weft thread is always plain white and, in the form of a ball, is used as the shuttle. The general arrangement of the warp threads is such that on both outer sides a number of white warp threads are stretched, then follow four of red, yellow, blue, or some other color, which, in the completed woven band, appear in each case as a colored stripe running through it. The ornamented center section consists of four white warp threads followed by two red ones. The latter serve to produce the pattern and are the only warp threads of the belt that are not woven in the linen-texture technique. They are therefore not included in the shed loop that takes every second warp thread. There are two heddle loops, one of which grasps the warp threads corresponding to the shed loop, while the other grasps the red warp threads of the ornamental chain of the center stripe (Ills. 187 to 190 /see p. 284/).

In weaving the linen texture, shed loops and heddle loops are used in the normal technique. The red warp threads of the second heddle loop are lifted up -- altogether or in part, depending on the design to be formed -- while beneath them the weaving continues in the normal linen texture. Thus, if all the red threads are lifted together, a red cross-stripe is produced as the simplest design, the height of which depends on the length of time the second heddle loop remains lifted. In making designs

/159 cont./

286 for which only certain red threads are used, the weaver counts
294 the required number and holds these up for the time being with a special shed rod consisting of a small piece of reed. The red warp threads not required fall down under and appear on the back side of the band, in part as a negative pattern and in part covered by the white warp threads.

[531] No patterns exist for the weaving designs. In general it is a matter of traditional forms -- human beings, rhombuses, triangles -- although imaginative women include Latin letters in their store of ornaments.

On account of the space required for the arrangement for the mechanical shed formation, the band terminates in loops about ten centimeters long, which are removed from the cross-rod and plaited circularly with four strips each.

f) Plait-weaving

286 Whereas the carrying bands of the fiber bags (yáha) are woven in the technique of rod weaving in linen texture, the wool carrying /160/ bands of the coca pouches (kwatandyáha) are made in the plait-weaving technique. This means textile techniques which are not weaving because of the lack of mechanical shed formation in the manufacturing, but which also do not represent plaiting because of the vertical and horizontal course of their threads. The bands are about 1.50 centimeters wide and 76 centimeters long. At a superficial glance they give the impression of being plaited freehand because of their thickness. Their thickness results, however, from the turning and simultaneous crossing of the warp threads in the plaiting (cf. Ill. 152 /see p. 267/).

To make the band a frame similar to the one for weaving the carrying band for the fiber bag is required. The warp threads are stretched in the same way; the beginning and end are fastened to a similar cross-stick. Warp and weft are perpendicular to each other, but there is no mechanical shed formation.

/160 cont./

286
531

For the plaiting process, which proceeds from the top down, there are stretched beside one another -- in their sequence -- four red warp threads, four white, four blue, four white, and again four red threads. At the start, two to three centimeters are woven in the customary linen texture. Then begins the plaiting of the band with the rhombus design. To do this, the weft, made up of one red thread, is drawn through two like-colored warp threads twisted one over the other. The twisting of the warp threads first goes in an inward direction; thus the right warp threads are twisted to the left, the left ones to the right, but always in a complete turn of 360°. Their sequence after the twisting is exactly as before. To form the rhombus design, the twisted warp threads are at the same time crossed under one another.

To lead back the weft threads, the still crossed warp threads are beaten from below upward with a pointed shed rod, usually the weaving sword, and the weft thread is led back through the opening thus made. This releases the twist of the warp threads. Now the position of the warp and weft threads once again corresponds to the normal linen texture.

To complete the rhombus, that is, to form the lower part, the warp threads are now reversed, twisted from the inside to the outside, and then one proceeds appropriately in the same manner as described.

The weft threads are pulled quite taut so that they disappear within the texture, and only the warp threads are to be seen. Their distance from one another -- conditioned by the twisted warp threads -- is relatively great.

/161/The decisive characteristic of this plait-weaving and its distinction from the weaving of the patterned belts of the women (táw) consists in the fact that the same patterns appear on the front and back side of the plaited band, though always shifted by half of their dimensions.

As variants of the simple rhombus pattern described, there may be two rhombuses next to each other or five small rhombuses in a diagonal arrangement. In this case the back side does not

/161 cont./
286 show the same design, but rather one that results from the cross-
531 ing of the twisted warp threads.

g) Dyeing

386 The Paez feel that black is the most beautiful color.
824 Hence almost all the home-woven garments of the men and
[822] women are dyed black, and only rarely does one see articles of clothing in the yellowish-white natural color of sheep wool.
[462] Dyeing is women's work and is done with certain plants, which, however, dye only the animal material used in weaving, but
[294] not that from plants. This peculiarity of the dyes is utilized by the Paez to make patterns in their clothing by weaving into the sheep-wool fabrics a few cotton warp threads, which, in the subsequent dyeing, retain their original color.

Every woman is in a position to dye her home-woven fabrics black. To do this the pieces of fabric are boiled in a pot for about two hours, along with the leaves of the šal tree or the zóte tree (according to Hernandez, 1946, p. 944, with the leaves of a Phyllanthus) and then buried for two days and two nights with these leaves in a pit in black, rich humus earth (ašáktič). Then they are taken out again, washed thoroughly, and allowed to dry. The black dye is now lightfast and waterproof. The cotton ornamental stripes in the women's clothing, which are not affected by this dyeing process, are either natural
[283] in color, red, or green. They are bought by the women in the desired color, since cotton is not spun by the Paez.

386 The threads of different colors used to make the coca bags
824 and the women's belts were originally all dyed by the Paez
177 women with vegetable dyes. Today this is done only in part,
[439] for anyone who has the money buys aniline dyes at the market in Inzá or Belalcázar; they are more popular because of their stronger coloring and greater luminosity. Similarly, the cotton purchased in thread already dyed is more popular for making women's belts, since it is brighter or more brilliant.

/162/

386 The following colors are produced with vegetable dyes: red
824 (mbe; also the color designation for pink, ocher, brown) with the roots of a plant called béwoetse. (According to Hernandez, this is the Rubiaceae Relbunium hypocarpium.) The wool threads are boiled with these roots for about an hour and they are then put in the sun. For blue coloring (séin; light blue = séin-séin) the threads are boiled with the leaves of the indigo tree for an hour; for green coloring (oálye séin; oálye = species of bird with green feathers, thus literally "oálye blue"), with the leaves of the tamp tree; and for yellow coloring (škítc), with the leaves of the mūzec tree. The results of the dyeing are not always uniform. There are always deviations in the color. With a little experience, however, one can differentiate them from the purchased chemical dyes.

h) Pottery

323 The art of pottery is very little developed among the Paez and is essentially limited to larger or smaller, crudely fashioned, spherical-shaped pots (mītc) with a lip slightly curved outward. In use they are not hung up, but placed between the three hearthstones for cooking. Smaller, shallower bowls serve for roasting
[531] the coca leaves. There are no vessels with handles. There is no ornamentation of any kind, neither painting, nor incising, nor
[415 531 824] finger imprints. For drinking chicha or for fetching water only gourd calabashes (tōka) are used, which are exactly as unadorned and purely functional as the ceramic vessels.

323 The making of pots is a specialist's work. In Calderas there
463 are three potters, two of whom are women. Only one of them, however, Santos Kiskue, works to keep a supply, whereas the other two make pots only on order. Santos Kiskue is about 40 years old and has a wife and four living children; four others
[437] are dead. He has a horse, but no cow and no sheep. The latter he can do without, since he barters his pots chiefly for wool.

The technique of pottery among the Paez is a spiral coil technique. Since the shapes are very simple, a special

Since the shapes are very simple, a special
/162 cont./
463 apprenticeship with a master is not absolutely necessary; Santos
323 Kiskue, at any rate, began making pots by himself after an
[467] accident that left him with a stiff left wrist. He uses the unmixed clay that stands near his house. Out of this, constantly moistening it, he shapes on a /163/ board lying on the ground an even, round "clay sausage," which he then presses flat with the palm of his hand. He builds up his pots out of this in spirals. They are put with their lower part on a shallow clay bowl, so that he can turn them easily in closing up the junctures (Ills. 184 to 186 /see pp. 282-283/). He lets the freshly made pots dry for about a week under a roof, then he takes them to a place where there is sufficient dry wood. Here he places the pots very close together, stacks wood and twigs over them, and lets them burn for about two hours. They are then ready for use.

i) Candlemaking

388 At the three annual church festivals a large number of
[796] candles (mbéla; Spanish: vela) are used to decorate the church.
[462] They are in part purchased, but largely homemade. Everyone is
[824] familiar with the process of manufacture, but for the festivals it is men's work. The wax is obtained from the wood laurel (Myrica pubescens Willd), whose small fruits, measuring about five to eight millimeters in diameter, are harvested in great masses in April and May. For this purpose the twigs are struck off and stripped of the fruits over the round berry net that is put in the opening of a large fiber bag. After they are dried, they are poured into a bag, boiled, and squeezed. The wax, caught in a vessel and dried, was formerly an important commercial product in the trade with the whites. In making the candles, wax is poured over the wicks until the proper thickness is obtained.

k) Fireworks

389 No celebration and no church festival is possible without
[796] setting off the greatest possible number of fireworks. The fire-
[541] crackers required for this are made by the men themselves.
[462]

/163 cont./

389 The powder, however, must be bought. As for its production,
822 the general opinion is that it is made from human beings. The
829 whites, they believe, fatten human beings, then hang them,
[439] and, while they are still alive, tap their fat, from which they then make powder. That is why the Paez do not like to send their children far away and do not let them go to the whites, because they believe that the latter would catch them in order to make powder from them.

824 /164/ To make the fireworks a piece of sheep gut is used,
389 filled with powder and wound tightly with an agave string.
[237] The latter is waxed with beeswax for extra strength. One of
[283] these powder cases is used for the smaller firecrackers (koétes), while two, one over the other, are used for the larger firecrackers (kwatón), and under these is placed the fuse, which consists of a small bamboo tube, one to five centimeters long, filled with powder (Fig. 32 /see p. 256 /). These two or three parts are wrapped in a maize leaf and fastened to a bamboo splice 20-60 centimeters long. When it is lighted, the firecracker rises to a height of 50 meters with a considerable whistle and then explodes.

5. Trade and Transportation

438 One cannot speak of trade in the commercial sense among the Paez, for they trade almost solely among themselves and
[441] abhor everything that has to do with business. Moreover, since there is no merchant class among them, there is no carrying trade. Merchants are regarded as do-nothings who, though they
[437] are needed, are nevertheless despised. Fundamentally the self-contained household economy predominates, and whatever one family does not have it barters for within the same village if
439 possible. Only when this is not possible, thus when industrial products are involved, does one go to the weekly market held regularly at Inzá or Belalcázar, in order to buy the necessary articles. These include, above all, salt, as well as spades, machetes, aluminum pots, knives, scissors, spoons, needles,

/164 cont./

439 cloth for trousers, and all European clothing. Furthermore, every type of ornament must be bought, such as necklaces, earrings, and finger rings, then cotton, since it is finer and shinier than sheep wool, and aniline dyes for dyeing women's belts and coca bags, since they are more brilliant and clearer than the native vegetable dyes. The trip to market and the necessary trade, however, are not undertaken because of an inclination for business, pleasure in bargaining or in underbidding or outbidding, but out of the necessity to procure an [438] article that they cannot make themselves. If it is at all [797] possible, one tries to buy the required things in the village, for example, from the missionaries, and the purchase with money or the trip to market is, so to speak, the ultima ratio.

437 They do not bargain. The man -- /165/ and it is almost al-
439 ways he who shops -- asks the price, and if it seems too high --
[462] as in most cases -- he says "too expensive." If the tradesman lowers the price, he usually buys; if not, he goes on to the next stand.

The traders are never Paez, but always white and mestizo colonists. They know, of course, about the disinclination of the Paez to bargain, and they charge too high a price to begin with, so as to ask a still inflated normal price after the obligatory "too expensive." Thus the Paez are naturally cheated. They let themselves be too easily dazzled by an attractive display or packaging, for example, by the polish or the silver paper; also a more expensive green or red comb is preferred over a black one. Fortunately, one might say, they never have much money and can therefore never spend too much.

126 The way in which I was obliged to acquire the women's
439 colored belts for our collection is characteristic. Since every woman possesses only two at the most, one to fasten her skirt and the other to carry her baby, any attempt to buy them was [101] always useless. I had therefore bought at the market in Inzá a few women's belts which are made by the Guambiano, the tribe neighboring the Paez on the west, and are sold in Inzá. [184] They are made of cotton, the white color of which in the freshly

/165 cont./

126 worked state is considerably more brilliant than the somewhat
439 yellowish sheep wool. Moreover, their aniline dyes gleam much
184 more brightly than the vegetable dyestuffs of the Paez dyes.
126 Unfortunately, they are shorter than the Paez belts. Neverthe-
439 less, the trade was most happily made. The coca pouches of
437 our collection, too, we acquired entirely by way of barter, for example, for a pair of scissors at the Bogotá price of 50 centavos. At the market in Inzá such a pair costs about a peso. The Paez know this. Nevertheless, the same persons who had previously refused a sale for five pesos exchanged a pouch for a pair of scissors. It was the same with eggs. They would not sell them for 20 centavos, but traded them for a wax candle which was available everywhere for five centavos.

43 In the case of their own products, there is no trade from village to village. Nor is there any exchange of certain specialties outside the village, since the initiative for special achievements or the unusual always comes from the colonists or foreign traders. In general the Paez do not buy and sell among themselves, but only barter, since money is used very unwillingly among them. Their idea that an article sold, /166/ for example, an egg, may bring misfortune to the part retained, in this case the chicken, may play a role in this. Moreover, even today paper money is scarcely ever accepted, first because they usually do not have a special pocketbook, but put the bills in their coca pouch, where they may be easily torn, and, secondly, because many are in the habit of burying their money or hiding it somewhere. In this way the bills soon become moldy, whereas hard money lasts a long time. The latter is therefore extremely rare in the entire Tierradentro area.

435 In the barter of foodstuffs there are certain rates that every-
437 body knows. Since, furthermore, they always make an effort to furnish only satisfactory goods, there are no exaggerated claims or any reason for bargaining or haggling. It is simply: either-or, especially since market phenomena have no effects, and the barter rates are in no way increased in times of shortage or want. Thus, at the time of my visit, sheep and therefore wool were very

/166 cont./

435 437 scarce. Nevertheless, the barter rate of the wool of a sheep for a bag of maize was not shaken.

The sheep themselves were generally not bartered, but only [804] the wool, which amounts to about a pound. The equivalent is a tomín (Span. pile) of sugar cane piled up in a mound about a meter wide at the base and a meter high. In exceptional cases of bartering sheep, I was told that the equivalent is ten tomín of sugar cane or 12 pounds of coca leaves or two arrobas of maize (one Spanish arroba corresponds to approximately 12.5 kilograms). In this case, as in many barter transactions, the customary barter equivalents sometimes deviate considerably from the market prices customary among the Paez. (The official market prices in the trade with the colonists on the weekly market are about five times as high.) Thus, for example, one tomín of sugar cane is worth 20 centavos, but one pound of wool from a sheep, one peso. Arracacha is also bartered in the form of a tomín quantity, which comes to about ten to 12 pieces. The value in money is ten centavos. One pound of coca leaves is exchanged for one pound of salt (value 20 centavos) or one pound of rice or ten eggs. The latter cost 25 centavos apiece at the weekly market in Inzá. The Paez use stones as pound weights, which are gauged accord- [405] ing to a pound of salt bought from a trader in Inzá. Two calabashes fastened to a scale beam serve as scales.

[804] Potatoes are bartered in cuartillas and measured out in large wooden bowls which are made by the Paez themselves and contain about ten pounds. The equivalent consists of half a bottle of brandy. This would come to 80 centavos at a trader's, as the barter /167/ amounts of a tomín of sugar cane or a fiber bag full of maize indicate. Vegetable and fruit bananas are bartered by the whole bushels (tlóits), which, however, in Tierradentro contain only about 30 to 50 bananas. Two bushels are worth a bag of maize. Beans, like maize, are bartered in fiber bags, and [432] a bag full of cabbage has the same value. Chicha is not sold, but [431] only given away. [273]

/167 cont./

435 Livestock can be exchanged for other livestock or for food-
437 stuffs. For example, a stallion has the value of 20 pounds of coca leaves or a man's ruana; a mare, however, is much dearer and is exchanged for the maize harvest of a field about 100 square meters in area, to be harvested by the buyer himself. Similarly, one can exchange the harvest of a maize field for a steer or a heifer. (The latter has a monetary value of 30 to 40 pesos.) The exchange or sale of a cow, on the other hand, is not possible under any circumstances. Pigs have the relatively low value of only three to five pesos; they are exchanged for five pounds of coca, ten bags of maize, or ten tomín of sugar cane. One may also exchange a small sow or a full-grown hog for a steer. The latter has the value of about 15 pesos, a mare about 20 to 30 pesos. Stallions are gladly exchanged for a foal. They are valued at 15 pesos. Whereas the exchange of a stallion for a cow is impossible because of the latter's higher value, stallions are often exchanged for bulls, especially by hosts who need beef to feed their guests.

It is significant that a head of cattle or a horse cannot be exchanged for quickly consumed foodstuffs, such as maize, arracacha, beans, potatoes, bananas, etc., since the latter do not last long enough and the buyer of the foodstuffs feels that he will not get sufficient use out of his exchange. On the other hand, coca leaves still on the tree, maize on the stalk, or a sugar cane field are quite possible as media of exchange. Victoriano, for example, exchanged for a foal a sugar cane field about 50 by 50 meters in area, which the new owner may harvest as needed. Such an exchange, however, is possible only for
[185] persons who are as industrious as Victoriano. In general the Paez is much too disinclined to work for a future supply, especially if he is not even to have the use of it later on; besides, he is much too fond of drinking his own chicha to give away a two-year old sugar cane field.

439 The goods are transported to the market by men and women,
482 albeit more by the former than by women. This seems quite
484 surprising, for the civilized Indios, as well as many colonists, are in the habit of riding to market unencumbered by any load,

/167 cont./

484 while the /168/ woman on foot lugs the goods behind. From
439 Calderas more men than women visit the market. For both it
482 is a very welcome occasion to become intoxicated. The
[273] owners of the taverns try to prevent the stealing of the much
[275] coveted beer and whiskey glasses, popularly practiced by the Paez, by chaining the glasses to the tavern tables.

On market days it is customary to leave very early and to transport the loads in the fiber bags in the customary way: the men take the carrying belt diagonally across their chests and the women hold it with their foreheads. In both cases the bag hangs on their backs. Then generally travel in groups of twos or threes, but not infrequently one also meets solitary
[432] individuals. Provisions are taken along, for, as a matter of
[273] principle, nothing is bought on the way except chicha or brandy.
[485] If it is necessary to stay overnight, nothing is paid for this. They sleep either at the entrance of a house of acquaintances or spend the night in the open field.

439 For traveling and for the visit to the market they try to wear
484 at least one article of European clothing, a felt hat, a shirt, or
[291] a blouse. The quality plays only a minor role, since the worst
[177] shirt is still more desirable than the finest ruana. A person who cannot buy anything in the way of clothing at least ties a black
[262] band around his hat, such as the felt hats have. Provisions are carried along in the fiber bag, roasted maize, cabbage, potatoes,
[415] arracacha. A person who can carries with him two or three of
484 the woolen coca pouches, in one of which there is coca and lime,
461 in another one money, and in the third the plaiting material
[285] for the straw hat. Almost all the men do this plaiting work, which actually is not work at all, but more like a "blind occupation," when they have nothing else to do, either when visiting, on the way to market, or also during the shaman ceremonies.
[283] The women, no matter where one meets them, are equally in-
[285] dustrious and always busy with spinning or plaiting the fiber bags or the wool coca-pouches. Like the men, they carry their work material with them in a second wool pouch.

/168 cont./

484 Special orientation devices for traveling are unknown and are unnecessary, since no one leaves the wider area of his home district. Anyone taking a route for the first time joins someone who knows the way. One does not travel by night, and for this [482] reason the stars do not serve for orientation. The average load to be sold on market days is about 20 to 25 pounds for men; if a married couple goes together, the man usually carries the load, and the woman, the provisions. The daily distances covered are considerable. From Calderas by way of San /169/ Andrés to the market at Inzá is almost 20 kilometers. It takes about [492] six hours on foot. On horseback it is not much less, since one cannot ride fast on the steep paths of the countryside. Many Paez manage this route back and forth in one day, albeit only "without becoming intoxicated on the way," which is not altogether simple.

487 The traffic routes consist of narrow footpaths which can be traveled by walking or riding only in single file. As for roads 491 for wagons or autos, there is only one at present: the gravel auto road from La Plata to Belalcázar, traveling up the Rio Paez. Since the end of 1952, however, a connecting road to Inzá is being built with modern American road-building equipment, which will then open up to traffic the southern, less mountainous area of Tierradentro, settled exclusively by colonists, and its products, coffee and panela /see the glossary, p.249 /. These roads are cut directly out of the sometimes very steep slopes and cross rivers and brooks with modern iron bridges.

491 The Paez, too, are accustomed to crossing the waterways 484 on bridges. It is not customary to wade across, unless it is a matter of very shallow brooks. Even then large stones are usually set in them, by means of which one can reach the opposite 491 shore with dry feet. The bridges of Paez may be divided into three groups, according to their construction. The simplest type is that of two thick poles or tree trunks placed side by side, without a railing, which span the ditches around the farmyards [825] and gardens that substitute for fences. Such ditches are supposed to prevent horses, cattle, and pigs from entering. Over the

/169 cont./
491 rivers (*), for example, the Rio Kokiyó, which flows through

[114] * I did not see anywhere the simplest form of a bridge mentioned by H. Pittier (p. 320) /see the bibliography in the foreign text, p. 326/ in the northern part of Tierradentro, a bridge which people cross hand over hand on a liana stretched across the river.

the Calderun region, there are strong bridges over which even
491 loaded horses may go without trouble. This type of bridge
499 consists of two tree trunks placed a good meter apart, upon which poles are tied crosswise as planking. Only about every fifth planking pole is lashed, while the ones in between are held fast by a longitudinal beam laid over each of the main supports. On either side of the bridge, poles are tied vertically and horizontally as a railing and at the same time serve to support the roofing. The latter is a characteristic of all such bridges (Ills. 194 and 195 /see pp. 285 and 286/). One finds it not only on the bridges in the colonists' region of Tierradentro, but /170/ also, for example, on the bridges of the upper Magdalena River, the region around San Agustín.

The third type of bridge is found in two artfully constructed arched bridges made of bamboo over the Rio Paez at Belalcázar and Avirama (Ills. 191 to 193 and 196 /see pp. 285 and 286/).
[284] They are both quite similar in construction and, like all the other bridges of the Paez, made without nails or other iron parts, but simply lashed with bast and lianas. For reinforcement, however, two wire cables have now been stretched underneath.
491 Although even the Spaniards at the time of the conquistadors
177 report on the "weak and flexible bamboo bridges" and on the
499 "liana bridges" of Tierradentro (Hernandez, 1944, p. 189), in
[175] the case of the two above-mentioned arched bridges, which are relatively difficult to construct, it seems not to be a matter of an original Paez technique. Indeed, these would be the only suspension bridges of this type in pre-Spanish South America.

/170 cont./

491 Rather, these constructions seem to be a borrowing from the
177 Negro slaves who were brought into the region around Belalcázar
499 in very early times in order to work the gold and salt mines there. Both bridges would then be an African culture element in the Tierradentro region. They are suitable only for people. Larger animals are pulled through the river with ropes and must swim part of the way.

499 The two groups of posts on each bank -- a very modern method of bridge anchorage -- upon which the arch of the bridge hangs, are supported by a number of stakes driven into the ground farther up the bank. Bamboo poles serve as joining and holding material. The footway held from above is made with split bamboo, pounded flat. Additional bamboo tubes, secured by
[476] lianas, form the railing. For the construction of such an arched bridge the inhabitants from the adjacent villages along both shores come together. They bury the ends of two long and strong bamboo tubes in the ground, so that their tips lean
[623] slightly toward the river. Then the gobernadores /see the glossary, p. 249/, as the heads of the town councils at the time, start climbing up the poles, which, as a result of the weight, lean toward the center of the river, until the poles touch and the two gobernadores can shake hands from either side. With one hand they then quickly tie the joined tips of the bamboo poles together by means of lianas, which is the first step in the bridge construction. It is completed by the rest of the people (from Hernandez, 1944, p. 190).

/171/

III. Society

1. Political Organization

619 The tribe of the Paez consists of the inhabitants of a number of villages of the Tierradentro region who regard themselves as belonging together because of language, clothing, habits, and
621 traditions. Their present-day political organization is based on the village community. It corresponds roughly to the original

/171 cont./

621 tribal organization. Even at the time of the Conquista the Paez
[622] did not form a common, cohesive community and were similarly independent from village to village and without a chief,
[623] just as today. Only in times of war did a few villages join together
[648] in a sort of loose federation, in order to be able to offer stronger resistance to the Spanish intruders. Afterwards, however, the
177 "alliance for convenience" dissolved. The political influence
361 of the Spaniards during the colonial period had the effect of
131 fixing the boundaries of the villages that had existed up to that time, each of which occupies the area of a valley basin, in order to create clear relationships with respect to the white landowners. The former arrangement of the villages was essentially the same, as one may see from the large number of old native names.

621 The control of the community at that time -- in keeping with
622 the character of the Paez -- was probably in a democratic village management, in a fashion similar to that of today. In times of war leadership was in the hands of men who were called caciques /see "Kazike" in the glossary, p. 249/ by the Spaniards -- as was the case generally in their colonies. The Paez have also taken over this name as a rank designation for the heroes of their traditions. Actually, their own word "sāt" for the political leaders in their mythology corresponds more to a war leader with shamanistic abilities than to a regular hereditary chieftainship of a society organized by classes, such as we find among the tribes of the Cauca Valley or the sacred principalities of the Chibcha at the time of the Conquista.

621 The present-day composition of the village council (cabildo)
623 as the administrative head of each village varies in strength according to the size of the village. It seems to be the most nearly complete in Calderas. Its composition and its tasks show
[565] that it is the head of a democratic community. The village is
[626] not organized by classes or by occupations. The consciousness of the equality of all is so strong /172/ that outsiders who distinguish themselves from others through personal achievement or personal acquisition are brought down to the common level by
623 force or killed. The leader of the cabildo has the grand Spanish

/172 cont./

623 title of gobernador. In Paez this corresponds to the designation tótens. At his side, in Calderas, stands the gobernador suplente as his representative; other functionaries are the alcalde /see the glossary, p. 248 / (in Paez ka'nas), of whom there are two in Calderas, the alcalde mayor and the alcalde menor, furthermore two fiscales, three comisarios, and one comisario escolar, as well as an alguacil. The composition of the cabildo in Santa Rosa is the following: a gobernador, an alcalde, a fiscal, a comisario escolar, and an alguacil. In Lame there are a gobernador, a gobernador suplente, two fiscales, one comisario, and one alguacil. The cabildo in Togoima consists of the gobernador, the gobernador suplente, two alcaldes, two fiscales, three comisarios, one comisario escolar, and one alguacil. Aside from the double and triple occupancies, the composition of the cabildo is the same in the four villages. It should be noted that there are Paez words only for the gobernador and the alcalde; Spanish designations are used for the rest of the functionaries.

623 554 The authority of the gobernador as the leader of the village rests more on his personal prestige than on official means of power. He must therefore be very cautious with his regulations and instructions. He has the collectively conceived decisions of the village council carried out with respect to road or bridge building or the repair of the church, the school, or the com-
[626] munity house. While his regulations remain within the scope of what the great majority of the village also regards as good, the collectivity exerts strong pressure on those who stand apart. In flagrant instances of apartness, however, he has quite drastic measures at his disposal, which, though they are today no longer as strictly wielded as formerly, can nevertheless be very effective in the hands of an energetic gobernador. It is taken for granted, however, that the gobernador acts neither unjustly nor arbitrarily, sets a good example in all undertakings, and is active first and
123 last in the communal work. How little the gobernador is in a
623 position to issue arbitrary orders within his village may be illus-
554 trated by the following example: One Saturday the gobernador

/172 cont./
123 of Calderas came from the weekly market in Inzá and visited
623 me in San Andrés. When in the course of the conversation I
554 mentioned that I would be coming to Calderas on the following
Monday, he suggested that I arrive there early. He said that
he already knew that I was interested in everything concerning
[476] his village and on Monday /173/ I could be present at a com-
munity project for all the men of the village in clearing a field.
Since my interpreter was not free until Monday, I could not set
out on Sunday in order to be present in time for the field work
on Monday. I begged him to postpone the communal project
for a day or two. That would be impossible, he replied, since
this work had been decided upon for Monday by the cabildo and
123 he was not in a position to change the date independently. I
623 offered him as a gift a very handsome travel-machete with a
554 sheath, in case he might be in a position to postpone the work.
411 Generally the Paez own only the heavy, broad work-machete for
felling trees, which they can drag along with them on the way to
[435] market only with difficulty. As a weapon for traveling, therefore,
the lighter, chrome-plated machetes are greatly coveted, but
on account of their high price of 12 pesos no Calderun has here-
123 tofore been able to afford one. I had put this gift aside for the
623 gobernador some time before, but had never found the proper
554 reason for presenting it. This time the occasion seemed very
favorable and really worthwhile. The gobernador, although he was
extremely anxious to be the first Calderun to possess the imple-
ment, explained that my request could not be fulfilled, since
all the men had already been notified for Monday. I pointed out
that he surely had enough messengers to inform his people that
the work would not take place until a few days later. He could
not make the decision to do this; he kept explaining that in
addition the men would be angry. I proposed to him that I would
treat them, at my expense, to ten pesos' worth of chicha to
placate them, an amount that they had hardly ever had before.
He could not make a decision; he finally said that he would try
and would speak to his people on Sunday, and he hoped, in view
of so much chicha, that he would succeed, but he could not

/173 cont./
123 promise it. When I arrived in Calderas on Monday I found that
623 the men of the village had not wanted to meet a second time and
554 that they had indeed begun the work.

623 The alcaldes and the alguacil are the messengers of the
[203] cabildo; they notify the people when communal projects are
[696] necessary. Moreover, the alguacil administers corporal punish-
[203] ment. The three comisarios are likewise messengers and help
[794] the gobernador carry out and supervise public projects. It is the duty of the fiscales -- together with the gobernador -- to decorate the church. They provide candles and help the priest. According to C. Cuervo Marquez (Vol. II, p. 183), the fiscales formerly also had the duty of defending the interests of the /174/
871 village against the encroachments of the colonists. The comisario
623 escolar, finally, is responsible for the school attendance of the
[797] children. The mission sisters, as the teachers, turn to him and
[875] he is supposed to get the children to school, by force, if necessary.

It should not remain unmentioned that Calderas -- and ap-
621 parently this village only -- is divided into four parts, each of
623 which occupies roughly a cardinal point and has about 50 houses.
[361] An alcalde, alguacil, fiscal, and comisario are each an equal representative of a quarter in the cabildo. At present the alcalde is the representative of the western region of Yocashí, the alguacil the representative of the northern region of Puélche, the fiscal that of the eastern region of Aépel, and the comisario that of the southern Bishók. I was told that the connection between an office and the representation of a village quarter is arbitrary, depending on where the occupant of the post happens to live. The official position within the cabildo is first assigned, and today it is the more important. Four of them take over the representation of a village quarter each. Thus, the comisario, if he lives there, may be the representative from Yocashí, and the alcalde the representative of Aépel. The present gobernador, for example, was fiscal ten years ago. Since he lives in the village section of Puélche, he was at the same time the representative of this quarter.

/174 cont./

624 [177] In addition to the cabildo, there was introduced in Spanish colonial times, as the trusted agent of the missions, the post of capitan, who was not subordinate to the secular authorities and often was not democratically elected, but appointed by the church for life. Appointed to this office, if possible, are the members of an old, influential family, in which a son or nephew then succeeds the capitan in office, so that in practice this position was often hereditary within a family. The capitan in Calderas, who died February 18, 1953 and who had held this office for about 20 years, was named Manuel José Guagáz. His predecessor was his father, Bruno Guagáz. And though the gobernador told me that the family of the Guagáz were feeble-minded and no longer fit for any work, he admitted that it was probable that the successor of the old capitan would nevertheless be another Guagáz.

623 624 The deceased capitan was ill and weak during the last years of his life, and thus it came about that the gobernador played the leading role in the cabildo. The weekly council meetings were also held in his house. According to conditions in other villages, however, the capitan in practice not only presides in the cabildo, but his voice also has somewhat more weight. At least, he is able to prevent a bridge from being built, for example, through his veto. /175/ True, he cannot accomplish it or even order it by himself, against the will of the cabildo.

623 651 Another functionary, who is likewise appointed by the missions for life, is the síndico, who fixes the ecclesiastical tax assessments and administers the funds.

623 293 [666] The election of the cabildo takes place every year on the first of December. On the following January first, the elected cabildo must appear before the administrative authorities of the municipio /see the glossary, p. 249/, where each member is given his staff of office and is sworn in for his duties. The staffs of office (kampo) belong to the village and are handed on from year to year. They are round in diameter, about 80 to 100 centimeters long and three to five centimeters thick, and carved out of the black, hard wood of the chonta palm. The tips of the sticks are fitted with a brass or iron cap for their protection. The handle is somewhat thinner than the rest of the stick and enlarged at the end to form a knob which is covered with silver leaf. Below the

/175 cont./
623 handle an additional crescent-shaped piece of silver leaf is applied.
293 In former years, on the first day of the new year, a cere-
623 mony for the old as well as for the newly elected cabildo took
796 place on the not easily accessible lagoon of Juan Tama, the
778 Páramo de Moras, and lasted for several days. It started with
823 chicha drinking under the leadership of a shaman, after which the culture hero, Juan Tama, and the spirits of the ancestors (?) were asked by the shaman for advice and assistance in the coming year. A dance and a bath in the lagoon concluded the ceremony (Bürg, pp. 340 f.). According to my information, this gathering at the lagoon has not been carried out for several years. The reason given is that for several years in succession it has rained around
[787] New Year's time. After that the shamans announced that with this
[776] sign Juan Tama renounced any further performances of the ceremony on his lagoon.

623 The election of the cabildo is done by the men of the entire
666 village. The candidates must be citizens of the given village,
[641] that is to say, they must own land there. A stranger could never hold office in a Paez village. The candidates may not propose themselves, but must be nominated by the assembly or by the old cabildo. Anyone who is elected for an office by the village assembly for the first time may not refuse, but must accept it. Only re-election, which is possible up to five or ten years in succession, is voluntary. The wealth or possessions of the candidates do not play
[556] any role. The present gobernador, Marcelo Muse, is /176/ about 30 years old. Two children, a son about six years old and a four-year-old daughter, are living; four of his children died. In the way of material possessions he owns five horses and two pigs, but no cows and no sheep. Ten years ago he was fiscal for a year. In the general opinion of the Paez the gobernador should not be too young or too old. The best age is between 30 and 50 years. The remaining posts, which to a large extent consist of messenger services, are generally held by younger, unmarried people, although
[896] they may also be filled by married men up to 50 years of age. In general the gobernador chooses people who are loyal to him and who must also carry out the punishments for him, for a gobernador

/176 cont./

623 himself does not punish. For this purpose four representatives of
666 the lower offices have an official whip which consists of a rod ten
696 centimeters long, with a plaited strap about 80 centimeters long.

The election itself proceeds with the introduction of the candi-
623 dates by the capitan with the question: "This one as gobernador,
624 do you want him?" And they reply: "We wish it" or "we do not
666 wish it." It was interesting to observe how, after the death of the capitan, one of his relatives, Cerbelión Guagáz, tried to be named capitan. The priest, however, insisted on an election by the village. And although he tried very hard to have Cerbelión elected, the village kept refusing him because he was too autocratic and such people are not liked. Another whom everyone would like to have as capitan is himself unwilling. "As capitan I am only the beadle of the padre," he replied to my question as to why he did not accept the choice. And he had no desire for that. He had been comisario once and gobernador once, and now he wanted peace for the rest of his life.

2) Family Organization

594 The family of the Paez is basically the patrilineal nuclear family /Kleinfamilie/ consisting of the parents and unmarried
[513] children. The latter, while they are small, sleep with the parents in the kitchen; as soon as they are larger, in a compartment in
591 another part of the house. After marriage they erect their own house.
596 It is not uncommon, however, for the married sons to live with their wives for another year or two in the house of the father, until they have enough money for a house, which will be small at first. The daughters upon marriage leave /177/ the paternal home and then live with their husbands, that is to say, at first with the parents-in-law.

354 Normally, therefore, every house has only one cooking
596 place, in which the woman of the house cooks. If a son marries,
252 a new kitchen is partitioned off and a second place built for the
[462] fire at which the young wife cooks. As a matter of principle, each married couple -- and it alone -- has its own fire area, for the wife is always responsible for the food. Men do not cook.

/177 cont./

the wife is always responsible for the food. Men do not cook. Old, solitary persons or unmarried girls or men live with relatives or friends, but never alone, since a single person is unable either to protect himself or to provide for himself adequately.

The father's authority is great. Wife and children owe him absolute obedience. Nevertheless, the man does not have the right to alienate personal articles of members of the family or possessions that they made themselves. Thus, for example, he is not in a position to sell a coca bag or a fiber bag belonging to his wife or his children's toys.

The children are given the family name of the father, but the women keep their maiden names even after marriage. There is no external indication in dress or hair style or otherwise for unmarried girls and married women. The wife is obligated to work for her husband and children in her family. Beyond that she may procure personal belongings for herself by weaving cloth beyond the needs of her family, for example, and trading it for ornaments.

If the young people are still living in the house with their parents, the daughter-in-law is not absolutely subordinate to her mother-in-law, although this appears to be so, to judge from the speech at the wedding ceremony. A relationship of dependence is out of the question because of the separate kitchens. Usually, however, mother-in-law and daughter-in-law are on good terms, and then it is not uncommon for only one woman to cook for both families, for there is no in-law avoidance. Then the two women share the work of cleaning the house.

Conjugal fidelity is demanded of both marriage partners; in the case of the man, however, it is sometimes not taken so seriously. If a man surprises his wife, however, or she her husband, in marital infidelity, the deceived party may beat (but not kill) both and report them to the cabildo, which again has the guilty party very soundly thrashed.

Illegitimate children are not rare among the Paez. In case an unmarried girl has a child, she is beaten by her parents and

848 /178/ the cabildo until she names the father of her child. If he
623 is an unmarried young man, he must marry the girl. A married man, however, is beaten by the cabildo. He does not need to make support payments. It is different if a married man has no
842 children. In this case the wife is regarded in principle as the one
848 at fault. He may then have a child by an unmarried girl without
837 being punished. He simply explains to the cabildo that he has a
[623] great deal of property and that he therefore needs children whom he cannot have by his wife. To the mother of his natural child he gives a cow, clothing, and a pretty belt, and she then surrenders her child to the lawful wife of the father of her child. He may
[554] do this several times until he has enough children. This is not permitted, however, for a poor man without possessions, it was explained to me, for "why does he need children?"

844 At the time of menstruation and also at the birth of a child
841 the woman stays in a special small hut (dúyat). She receives her
[343] food either from her mother, sister, or a neighbor woman from a house in which several women live. This woman at the same time cooks for the members of the family of the menstruating woman. The members of the family of the woman who is temporarily cooking receive their meals from another female member of her family. The woman who takes care of the food also fetches the wood for the fire necessary for warmth in the dúyat. Female inhabitants of farms or of field huts used for only a few months, which have no
[758] dúyat, go to a neighboring or related family for this period. In
[602] case the housewife becomes ill, she moves into the house of one of her sisters or female relatives, where she is nursed. The male relatives of the sick woman must then likewise go to the house of this relative to eat.

614 Besides the patrilineal nuclear families, no recognized patrilineal kin-groups /Sippen/ are known among the Paez, but all who bear the same family name feel related and may not marry, even though they are not knowingly -- this knowledge goes back only two generations -- related. Our interpreter, Victoriano Piñakuẽ, for example, may not only not marry any girls with the patronymic Piñakuẽ, but also no girls whose mothers are named Piñakuẽ. Conditions are particularly difficult among the

/178 cont./

614 bearers of the name Guagáz, the old family whose members furnish the capitan and who numerically make up about a quarter of the village. The young men of this name do not always find their wives in Calderas. They /179/ must therefore often look for them in other villages, although in general this is preferably not done. Thus we have among the Paez exogamous kin-groups, that is, groups of persons of male descent, who, to be sure, live dispersed, but have a common festival house, and who cannot marry each other because of their same name. They lack the consciousness of being descended from the same ancestor, however. Similarly, there is neither a common kin-group chief, nor [162] special costumes, or any other common insignia. The bearers of [346] six family names, who together make up more than 60 per cent of the population, have festival houses on the village plaza, in each of which the bearers of the same name meet for the big annual festivals, Immaculada (December 8), Semana Santa (Easter), and San Juan (June 24), and eat and drink together. The other families, who have no festival house of their own, take part in the festival houses of friends' families.

[551] The six large families of Calderas are: Guagáz, Piñakuē, Petíns, Oléz, Oriága, Pechéne.

614 Within the kin groups, relatives play no role, but the god-
602 parents (padrino, madrina) do, and strict etiquette is observed with
608 respect to them. Boy or girl, man or woman who meet their god-
576 parents anywhere must kneel down to receive their blessing.

601 The kinship nomenclature is in part more differentiated than ours. The common form of address for father and child and mother and child and the differentiated address for older and younger siblings are striking. The designations for father and mother are differentiated according to whether one speaks of one's own or of foreign fathers and mothers. One's own father is táta, the foreign one néi; one's own mother is máma, the foreign one nihí. It does not matter whether a man or a woman is speaking in the following examples:

601 /179 cont./

my father	atc táta	my mother	atc máma
your father	inc táta	your mother	inc máma
his father	kyec néi	his mother	kyec nihí
our fathers	kweš táta	our mothers	kweš máma
their fathers	kyáñweš néi	their mothers	kyáñweš nihí

It is interesting that in address the foreign father or the foreign mother of the partner in conversation is called táta or máma, like one's own parents.

The relatives in the parents' generation, who correspond to our "uncles" and "aunts," are differentiated in address, /180/ depending on whether they are relatives in the maternal or paternal line. In the case of the female relatives in the maternal line the prefix "pe" is placed in front of the corresponding designations for the male relatives. It is also striking that for stepfather and stepmother no word combinations with "father" or "mother" are used, but rather the same words as for the father's brother and mother's sister, or the spouses of the father's sister or the mother's brother.

father's brother	nyok	father's sister	pétsots
mother's brother	ká'ka	mother's sister	pényok
stepfather	nyok	stepmother	pényok
father's sister's husband	nyok	mother's brother's wife	pényok
father-in-law	táta	mother-in-law	máma

In the children's generation the absence of designations for [177] nieces and nephews is noteworthy. For lack of specific Paez words and concepts, Spanish ones are used. It is possible that in pre-Spanish times the entire children's generation, either that of an extended family /Grossfamilie/ or at any rate that of the maternal or paternal line, was designated by the same name by members of the parents' generation in the manner of the "classificatory kinship

/180 cont./

60/ system." In contrast to our kinship system, which is based on the nearness of degree of blood relationship, according to the classificatory system not only one's own children are designated as "sons" or "daughters," but also those of the siblings. Correspondingly, the children -- in extreme cases -- likewise call the siblings of the parents, that is, their uncle and aunt, "father" or "mother."

The latter is not the case among the Paez, since they make a sharp distinction between the descendants of the paternal and maternal line. Within this, however, a tendency toward the classificatory system makes itself noticeable, first because of the aforementioned same name for stepfather or stepmother and father's sister's husband or mother's brother's wife, and, secondly, because of the distinction made on the basis of whether siblings are older or younger than the speaker.

The kinship designations for the children's generation are:

son, small	luč	daughter, small	luč
son, grown	ndyík	daughter, grown	nīs
brother's son (man speaking)	sobríno	brother's daughter (woman speaking)	sobrína

/181/

sister's son (man speaking)	sobríno	sister's daughter (woman speaking)	sobrína
sister's daughter (man speaking)	sobrína	sister's son (woman speaking)	sobríno
brother's daughter (man speaking)	sobrína	brother's son (woman speaking)	sobríno
stepson	sobríno	stepdaughter	sobrína
son-in-law	nokwębió	daughter-in-law	ndõ
brother's daughter's husband	sobríno	sister's daughter's husband	sobríno
brother's son's wife	sobrína	sister's son's wife	sobrína

/181 cont./

601 Within one's own generation one distinguishes between older and younger brothers or sisters. In keeping with what was said about the classificatory kinship system, we have here, too, identical designations for male and female cousins and step-siblings -- differentiated according to the male or female line of the family.

brother (of husband)	yakté	sister (of wife)	yakté
brother (of wife)	nyiś	sister (of husband)	peś
older brother	yakté nte (= older)	older sister	peś nóite
younger brother (if other people speak of him)	yakté noć (noć = younger)	younger sister (if other people speak of her)	peś noć
if own brother or own sister speaks of the younger brothers	yakté npéi	if siblings speak of the younger sister	peś npéi
father's brother's son (*)	yakté	mother's brother's son (*)	yakté
father's brother's daughter (*)	peś	mother's brothers daughter (*)	peś
father's sister's son (*)	yakté	mother's sister's son (*)	yakté
father's sister's daughter (*)	peś	mother's sister's daughter (*)	peś

* These designations for male and female cousins apply only when they are addressing each other.

/181 cont./

60/ In addressing persons outside the family the following designations are used:

/182/

father's brother's son or mother's brother's son	pokatenyík
mother's brother's daughter or father's brother's daughter	pokatépěnyí (pokats = side)

stepbrother	yakté	stepsister	peí

The designations for brothers-in-law and sisters-in-law are the following:

If the brother speaks:

wife of the brother	só'ov	husband of the sister	tsóom

If the sister speaks:

wife of the brother	tyínas	husband of the sister	só'ov

More distant in-law relationships which in our kinship nomenclature are no longer distinguished as such are still taken into account by the Paez in the following instances:

father's brother's daughter's husband	tsóom	father's sister's son's wife	só'ov
mother's brother's daughter's husband	tsóom	mother's sister's son's wife	só'ov

In the generation of the grandparents or grandchildren, the following terms are used:

father's father	ĩsi	father's mother	péndyi
mother's father	ĩsi	mother's mother	péndyi
son's son	nzón	son's daughter	nzón
daughter's son	nzón	daughter's daughter	nzón

[192] The designations for persons at various age levels or circumstances of life are highly differentiated among the Paez; the

/182 cont./

601 mutual forms of address for certain groups of persons or of several
192 persons with certain kinship connections, which show that here the individual does not stand detached within the family, but is fitted in as part of a living structure, are noteworthy.

child or boy	luč
small child (boy or girl)	lučkwe
baby (boy or girl)	lučléčkwe
youth	pítstaty
man	pítste
married man (except when his own wife speaks of him)	iyõ
old man	íš
widower	ečpits
girl	gnáskwe

/183/

maiden	gnãs
woman	õi
somewhat older woman	óite
old woman	penš
widow	éčoi
pregnant woman	tóya
sterile woman	ema
married woman (except when her own husband is speaking of her)	imĩ
wife (of other men)	nyó
husband (of other women)	nemĩ
wife (addressed by husband)	íkwe
husband (addressed by wife)	íngya
married couple	ovényi
orphan, half-orphan	váučo
relative (general)	nuevéš

/183 cont./

601 Forms of address:

father and mother together (whether by their own children or other persons)	ovẽnyi or pẽtãm
father and son together (by other persons)	pẽndyĩk
father and daughter together (by other persons)	pẽndyĩs
mother and son together (by other persons)	pẽndyĩk
mother and daughter together (by other persons)	pẽndyĩs

3. Customs during the Course of Life and of a Day

182 593 [159] [114] The Paez generally give the impression of being contented human beings, and it seems that marriage and family life are better than average. Of course, the observations on this are very scanty, for, on account of the remote location of the individual dwellings, the research worker always has only a brief glimpse of family conditions at any one time. This very solitude, however, and the consciousness of greater dependence on one another within the family, favors its cohesion, even as it reduces the conflict and irritation which arise through women's gossip when people live too closely on top of one another.

842 [123] Basically every family wants a great many children -- at any rate so said all the men questioned. Two Calderun women, however, /184/ confided to my wife that there was a remedy -- which they and other women, too, naturally did not use! -- that [825] [237] would with certainty prevent conception: One must eat some of the spittle of a mula (the female, infertile cross between horse and donkey), and then one would no longer have children. They said that a woman does this only when she has already given birth to a great many children. In general every girl desires a great

In general
842 /184 cont./every girl desires a great
[581] many children, for this is the chief requirement for being married. Moreover, the percentage of barren women -- in childless marriages,
[162] they say, the fault is always the woman's -- is not small. According to inquiries, it comes to about 10 per cent. Men generally want boys; the women, girls, in order to have help in the house-
845 hold. Twin births are rare, but they are not regarded as anything special; rather, people are happy about them as they are about other children. Deformities at birth are said not to occur; however, I saw several persons with cleft palates. They seem to be ashamed of this, for in conversations with us they always held
847 their hands over their mouths. Infanticide does not occur. To
123 inquiries about this, there was always the completely horrified counterquestion as to whether that was the case in my country.
165 Overpopulation is not to be feared, even with a larger number
[163] of children -- the average is three to four living children per family -- since infant mortality comes to more than 50 per cent.
[164] Whooping cough is the most frequent cause of death among small children.

a) Birth and Childhood

843 The parents' concern for the child begins even before birth. The husband of a pregnant woman expecting her first child must sleep with her very frequently, for otherwise the child would be very weak. In the case of subsequent children this is no longer
[783] required so often after the beginning of pregnancy. The pregnant woman may not leave the house or eat pork for two months before the birth, since this causes "pest" and she would have stomach
[822] pains; this would be very detrimental to the child. For the same reason she may not eat beans and onions, and no fish because it comes from the cold element, water, and because a pregnant woman must not become cold.

843 According to one informant, the pregnant woman retires
343 to the menstruation hut (dúyat) two to three weeks before the
124 birth. During this time her mother or another female relative cooks for the family. According to another informant, the
000 /185/ woman does not retire to the dúyat until the birth. In any

/185 cont./ In any
844 case, the birth, which is always regarded as very dangerous, takes
[343] place there. As a matter of principle, a midwife (ndõsoknãs) is
fetched. The latter, as the name implies, is not a shaman. She
[759] has nothing to do with shamanistic functions, but is qualified only
for births or external injuries, such as broken bones or flesh wounds.

The midwife may not be an old woman. She is fetched before the birth by the husband of the pregnant woman and always comes. Several times I asked whether in an emergency a man or the mother could help, but it was always said that the midwife
[465] always comes, no matter how busy she is. For her assistance she receives only her meals, unless complications arise. In this case she receives wool or natural produce as remuneration for her help.

In principle, only the midwife and the woman in labor are in the dũyat. The latter is in a squatting position. With her hands she holds onto a belt that is slung around the roof beam of the dũyat. If there is no belt, the husband may also be present, and he then embraces his wife from behind and holds her in such a way that she is likewise in a squatting position. The midwife
845 receives the child. If its position is not normal, for example, in
844 case of a breech position of the child, she turns the child so that the head lies downward. If the child is still not born, the mother must die -- as was explained to us -- for then nothing further can be done. This only rarely happens, however.

844 The midwife brings along her medicinal herbs, with which she rubs the body of the woman in labor. The newborn child is first washed with cold water and then wrapped in a piece of ruana
[412] and given to the mother. The severing of the umbilical cord is not done with the knife or the scissors, but rather, after the umbili-
[824] cal cord (kolwãt) is tied beforehand with a homespun wool thread, with the sharp-edged cane of a type of reed. The father may see his child immediately after birth; the mother, however, stays with the child approximately two weeks longer in the dũyat. The afterbirth (duyãha), together with the umbilical cord, is buried near the menstruation house. The father digs the hole for this
[856] purpose, and the mother throws both into it. The hole must not be too shallow, for otherwise the dogs would dig them out, but not too deep either, for then the child would not get its teeth until very late and only with great difficulty.

/185 cont./

844 until very late and only with great difficulty. The proper depth is supposed to be about 30 centimeters.

846 Four to six days after birth and after the first bath, the
851 father or one of the godparents brings the child to the sacristan of
608 the village or /186/ to the women missionaries, in order to have
[797] it christened with water and given the name of the Christian saint
of the christening day. Every child has only one given name and
[551] the Paez surname of its father. The baptism by the priest with oil
takes place later on a suitable occasion, in the presence of the god-
[783] parents, and is followed by an eating and drinking bout. The
[756] mother also takes part in this, after she has left the dúyat and has
washed herself, her child, and her clothes and has been purified by
the shaman.

861 The rearing of the children is in the hands of the parents, who teach them the necessary accomplishments of life quite as a matter of course and almost in play. Disobedient children are also beaten, however, and, to be sure, usually if the son has no real desire to help his father with the field work. In punishing, the fathers are generally stricter than the mothers and on occasion beat them with leather straps all over their bodies. The boxing
[461] of ears is also to be seen. If a young man proves to be lazy in later life, the father is blamed because he did not properly ad-
848 monish his son to work. Illegitimate sons, who lack the strict hand of a father, are said to turn out badly in many cases, though as such they are very popular. Since they do not know their father, they are not obliged to work in his field. They are all the more
[426] in demand as helpers in the fields of other families. When they
[431] are older, they may borrow land and establish a family. Usually they even receive the land as a present. Thus, they need not
848 starve by any means. Illegitimate daughters are in a more unfavor-
562 able position, for their help is not needed for the most part, and their mother does not have a household of her own. Nevertheless
[583] their marriage prospects are not unfavorable, since a girl does not
[581] have a dowry, but is married only on the basis of her personal qualities.

/186 cont./

[77 Today all children are obliged to attend school in the
797 mission schools, where they are taught the catechism and the
871 Spanish language and must bathe once a day under supervision.
515 The mother nurses her child exclusively during the first six
853 to eight months; only then is the giving of more solid food begun, which, however, does not differ in any way from that of adults, that is to say, the child is given yuca, beans, chicha, brandy, etc., like the adults. The mother suckles the child until the next one arrives, namely, three to four years, and sometimes beyond that, along with the one born next. Every woman who has a child generally also has milk, we were told. Only if the mother should be far away, /187/ for example, on an errand at the market or out fetching wood, may another woman help the child with her milk. In the rare cases in which a woman does not have enough milk to feed her child, she may give it to some
853 other woman, who, however, does not receive anything for it. It
855 may also happen that a family with ten children has become so
[593] large that the food is no longer adequate. In this case the woman may leave one or several children in the care of her mother. If she no longer has a mother, however, she must keep them herself. In case the mother of small children dies and leaves a baby of less than two or three months who still cannot eat any food other than milk, the father looks for a woman who likewise has a nursing baby and who brings up the strange child with her milk for two or three years, until it can talk. Then the father takes it back, and the wet nurse is given a cow as "milk money."

854 Ordinarily the children are carried by the mother. The
482 colored woven belt (táw) and the large shawl (panyelón or séntyatc), in which the child is wrapped and carried by the mother on her back, are needed for this.

857 The games of the children are generally instructive for their
868 later life. The boys go bird hunting with the blowgun (pāt), the plaited stone-sling (ísot), or the elastic sling (kaučéro), or they practice catching each other with the lasso, during which the child
[231] to be caught represents a cow or a horse. The ability of the children, and of the adults, too, by the way, in the use of the lasso is not

/187 cont./

857 great. Handling it for catching cows or horses is regarded as sport,
868 as, indeed, is animal-raising in general. The animals are not easy
231 to catch, but must really be outwitted. To catch a cow, for example, the lasso-wielder, in the midst of a group of several men or youths, first runs behind a few other cows that are near the cow to be captured. The latter feels quite secure, since the shouting apparently does not apply to her. The men now drive the cows in such a way that they come close to the one being captured; then the lasso-thrower doubles back and throws the rope at a distance of only about three meters. In spite of the short distance, only about every third throw is successful.

524 Two boys' playthings, used with enthusiasm as a pastime of school children, are the top (čúnga) and the hole-ball (hénde). The latter (Fig. 36 /see p. 258 /) is a hollowed-out fruit capsule about five centimeters in diameter, with a hole one centimeter in size on the underside. /188/ Exactly opposite this larger hole, a small one is bored. A twisted agave string about 20 centimeters long is drawn through the large and the small hole from below and knotted above the small hole so that it cannot slide out again. The other end of the string is knotted in the center of a small rod about 15 centimeters long, which is slightly smaller in diameter than the hole on the underside of the fruit capsule. In play the string of the capsule hangs down from the rod, half of which is grasped with one hand. With a gentle swing one now tosses upward the capsule attached to the string and tries to catch it with the rod. Beginners seldom or never hit the hole, whereas more practiced persons succeed many times in a row.

[322] The top consists of a small double-conical chunk of wood four to six centimeters high, which boys carve out for themselves and which ends in a small knob on the upper side. A small thorn is stuck into the tip on the underside. The top is set in motion with a string that ends in two loops. One of these is drawn over the middle finger of the hand, the other over the knob on the upper side of the top. From there it is led to the underside around the thorn and then wrapped spirally upward around the lower, conical part of the top. To set it in motion, the top is thrown on the plank floor of the school. The loop fastened to the middle finger

/188 cont./

524 causes the unwinding of the string and its revolving motion. The rule of the competition is to knock over the turning top with another turning one.

A simpler kind of top, which, like the hole game, is also called hénde, consists of a round seed capsule into which a vertical rod is inserted and protrudes about five centimeters. To set it in motion, a twisted string and a small board are required. One end of the string is wound spirally around the stem of the top and the other is knotted to the board and then pulled off.

526 Besides these games, wrestling is greatly enjoyed by the
[178] boys. Youths and young men no longer wrestle. On the occasion of the festivals, however, when they have drunk a little, the young men hit each other on their bodies, with arm outstretched, with the hand or fist. Several of them form an irregular circle, but without taking sides, and each tries to hit the other from behind.

524 The girls play with dolls (lučinyi) about 20 centimeters high, which they make themselves out of wood and remnants of cloth. It is remarkable that these dolls do not represent children, but adults fully dressed. /189/ A doll man, for example, consists of a forked stick, the longer part of which represents the body, and the forks, the legs. A cross-stick tied on indicates the shoulders. The clothing consists of a man's shirt, which is tied and "fitted" at the height of the hips with an agave string. A rectangular piece of cloth with a horizontal hole in the center is drawn over it as a ruana. A face is not indicated on either the male or the female doll. The doll woman consists of only a straight rod, around the lower part of which a piece of cloth is wrapped as a skirt and tied with a red thread as a belt. On her back the woman carries a child, represented by a small piece of wood wrapped in a piece of cloth. The cloth is fastened around the child with a red thread in the way children are wrapped. The doll woman carries her child wrapped in the large shawl, which is held fast by a red thread which serves as the belt.

/189 cont./

b) Maturity

881 Today no rites or ceremonies for the youths take place any
[178] more. In former times they were led to the sacred lagoon of Juan
[778] Tama or to the heights of Cuetando, and there they had to build
a hut and lay out a small cornfield as proof of their capabilities
as a man and father of a household (Hernandez, 1944, p. 203).

[582] A girl comes of age with puberty, that is to say, she may
[836] marry. Before that and before marriage, intercourse is not per-
[535] mitted. On the occasion of the first menstruation in former times
a special dance was performed (itsa-kó), during which the young
girl was bathed naked in chicha in a pit outside the festival house
881 (Castillo i Orosco, p. 85). Today this no longer takes place;
285 rather, a girl, when she goes to the dúyat for the first time at
787 about 15 years of age, takes along agave fibers and during the
[178] approximately five days that she stays there plaits a very pretty,
[262] small fiber bag (yāhalečkwe) about the size of a fist. There
are no additional food prohibitions or similar things. After that
she goes to a distant river to bathe. On the way there she lets
the bag fall. A married man passing by lets it lie, for he knows
that it belongs to a young girl. A young man, however, who
happens to be coming that way sees the beautifully worked bag,
picks it up, and uses it as a small money-bag. Without knowing
who made the little bag, he will -- people are convinced -- marry
this girl.

/190/ c) Marriage

595 The present form of marriage of the Paez is monogamy.
114 H. Pittier de Fábrega (p. 314), however, concludes from their
traditions that the Paez were formerly polygamous and were con-
verted to monogamy only through education on the part of the
missionaries. I could find no clue in their mythology for actual
595 polygamy in former times. The social structure and way of life
591 of the Paez, however, prohibits living alone for unmarried girls.
[589] In case they have no relatives or do not find lodging in the house
of relatives, another man takes them into his family. The girl

/190 cont./ The girl

595 then helps with household tasks and the father of the house may
591 have children by her, without his marrying the girl -- today at
178 any rate -- as his second wife in a regular marriage ceremony.

584 If a young man wants to marry, he speaks -- in the normal case -- to his father, and the latter with the father of his chosen one. Courtship through a third person outside the family is not customary, and the relatives on the two sides do not enter into communication with one another and exchange presents until after the official wedding ceremony. As a rule, the two young people have reached an agreement earlier, before the fathers speak to each other. The consent of the girl, however, is not required, for the agreement of the young man with the two fathers is fully adequate, and in this case the girl is given in marriage
584 even against her will. But this is said to be the case very rarely
754 or never, for it is dangerous for a girl to refuse a young man's
539 proposal of marriage. In this case he would spit and utter the following curse: "Toblel (untranslatable), I wanted to marry you, but you did not want it; now you must die!" I told the men of Calderas that I doubted whether this curse could have any effect, but then I was told the story of the girl who did not want to marry
[832] a Paez. This girl was very beautiful. (By the way, only unmarried girls are called beautiful; a married woman is never described as beautiful.) She was slightly fat -- being thin is regarded as ugly -- was always washed clean and well combed, and wore beautiful necklaces and earrings, handsomely woven clothing, and an exquisite belt that she herself wove. Many young men of Calderas wanted to marry her, but she did not want to marry a Calderun, only a white. She therefore left her village to go to Popayán (the only larger, well-known city). She walked very fast. On the way, however, in the páramo (bordering mountains) there was a Pijao. He /191/ seized her and took her into his house alive. There he kindled a fire, killed her, and devoured her. By way of explanation the storyteller added: A girl who does not want to marry a Calderun but a white, because the Calderun men are not handsome enough, would, on the way to

/191 cont./

534 the city, even before reaching it, be devoured by a Pijao. Therefore, this has never been attempted by any girl. An example of the opposite is instructive in this connection. Our Colombian colleague, Segundo Bernal Villa, who lived in the park of San Andrés with us and at the same time carried on his ethnological and sociological research in Calderas, had often mentioned, jokingly and in order to make himself popular, that he intended to look for a bride in Calderas. He was often seen with a pretty Calderun girl by the people in the village, as he conversed and went walking with her. One day when he presented her with a bottle of brandy, not knowing or not heeding the courtship custom connected with this, his joking was taken seriously and very much amiss. The girl was sentenced by the cabildo to severe corporal punishment and, after this was carried out, was married the next day to a young man of the village.

For the official offer of marriage, the father of the young man goes to the house of the girl's parents. He takes along a gourd calabash with about ten liters of chicha and five bottles of brandy. First he converses only casually with the entire family of the girl for half an hour, many jokes are made, and they talk about this and that. Then he asks the girl's father whether his daughter would not like to marry his son. The parents reply that they have only one daughter and that unfortunately they cannot give her away, since they themselves need her so much. Thereupon they converse further, talk about this and that, and then the father of the young man asks a second time whether the daughter of the house would not like to marry his son. But this time, too, the father of the girl replies that he has but one daughter and can unfortunately not give her away. Then they talk some more, until the guest asks a third time: "Can you not give me your daughter for my son?" The father of the girl then replies: "Very well, I shall give my daughter to your son, but I expect him always to treat her well and not to speak ill of her!" Then the guest hands over the bottles of brandy which he brought along, the first to the father of the bride, the second to the mother of the bride, then the third to the bride, and then a bottle each to her brothers and sisters. He gives all the chicha that he brought to the bride's

/191 cont./

584 father, and the latter distributes it /192/ to everyone and gives
431 the bringer and all those present some of his own chicha to drink. This continues all night until everyone is drunk. In the morning the daughter-in-law, along with her father-in-law, goes back to the house of the latter, and from then on she lives with her husband until the wedding.

606 In case the father of the girl should not be satisfied with the
585 young man as a son-in-law, he would still not take any practical action against this union of his daughter, since he does not have to pay a dowry anyway. Besides, once children arrive, the
[591] parents are always satisfied. If, conversely, the father of the young man is not satisfied with the latter's choice of a bride, he may refuse him his house. In this case the young people customarily immediately build their own house, a small one at first.

58 The wedding generally does not take place very soon after courtship among the Paez, but only after a year or more. First of all there begins a trial period, which, however, has an altogether conjugal character. During this time of "trial marriage" the housekeeping abilities of the girl are to be tested, for the latter brings into marriage no dowry of any kind from her parents or any other possessions except her clothing. Since there are no social grounds for a choice of bride in the nonstratified Paez community, and no stimulus to marry on the grounds of a large dowry or on account of the possibility of a low bride price, there are no
581 child betrothals. As bride and wife a girl has only the merit of
462 her personality and her personal capabilities. The latter have the greater weight. It is required of a woman that she be able to cook and to weave the cloth for the whole family, that she not gossip, keep the house in order, and, above all, that she be able to keep the fire going at night and prepare the meal on time in
[264] the morning. The Paez are in the habit of having their first meal
[252] very early, at five or four o'clock in the morning, and an hour before that the woman must already begin preparing the food.
[362] Moreover, as we have seen, the walls of the house are only made
[513] of maize stalks placed side by side, and give scarcely any protection against the coolness of the night. They therefore sleep lying

/192 cont./

581 around the hearth fire, and this must be stirred and provided with
462 wood every two hours. This is the task of the wife, who, there-
513 fore, sleeps next to the fire. Throughout practically her whole life, she is never able to sleep all through the night.

583 If during the trial year the bride does not meet the demands of the man, if she either cannot cook or is lazy or /193/ does not like to get up in the morning, he sends her back to her father. Since no wedding celebration has taken place, sending back the girl leads to no resentment of any kind. It does, however, if children have resulted from the trial marriage and the young man
[684 nevertheless changes his mind. In this case, to be sure, nothing
[623] can be changed with regard to his decision -- after all, he has not yet been officially married -- but, since such an action is condemned, he is beaten by the cabildo. He may then begin a
583 new trial marriage with another girl. The children of the previ-
848 ous trial marriage (they are designated by the Paez with the
[557] Spanish term hijo natural) are given the name of the mother. There are not a few such "natural children." The mothers, however, are not scorned or judged harshly on that account and do not by any means have poorer prospects for a subsequent marriage. The children are not adopted in case of a subsequent marriage by the
[761] mother and keep their mother's name. It is believed, however,
[851] that such "natural children" will soon die. They are not baptized, since the priest baptizes only legitimate children, or else demands such a large sum for the baptism of an illegitimate child that the unmarried mother cannot raise it.

585 The actual wedding celebration takes place after the period
[178] of the trial marriage. Today the prior marriage service by the Catholic priest in the church is usually combined with this wedding celebration. The money for this, as for the expenses of the wedding celebration, must be raised by the young man himself.
[435] This takes him many months. First of all, besides the cost of ten pesos for the marriage service, he must have collected the money for an ox, then prepare chicha in sufficient quantities, for which sugar cane is milled for about a month, and also provide for the rest of the food. In general his father or brothers do not

/193 cont./

585 help. Since the young men almost never own their own cattle,
[422] they must earn the purchase price for this by the sale of agricul-
[432] tural products. Wheat is usually chosen for this, since it may be
[243] harvested half a year after sowing.

For the wedding celebration about 50 men and women are
585 invited, not only relatives, but also friends, among them the
608 sponsors (padrino, madrina) required for the church marriage service. They sit with the bridal couple (nikálo). The parents
[291] and guests on both sides arrange themselves informally. The
[431] padrino and madrina must give or loan the bridegroom and bride
[426] new clothes for this wedding day, but they differ from the ordinary
[301] everyday clothing only in that they are newer and cleaner. No
585 special /194/ ornaments of any kind are put on by anyone. The wedding is celebrated in such a way that the church service takes place in the morning, after which the guests go to the wedding house accompanied by music and have a small midday meal, with which, however, only a little chicha is drunk. The festival ox is not yet slaughtered on this day, and not until the "actual" (as the Calderun say) wedding celebration, which takes place about a month later in the house of the bridegroom. The ox is slaughtered in the morning, and in the afternoon the guests arrive, sit down together informally, and eat and drink chicha and brandy copiously.
[533] Music is played for this, but no one dances to it. Before the eating
[535] begins, when all are still sober, the padrino makes a speech addressed to the bride and groom, in which he says approximately the following: You are now husband and wife, and you, as the husband, should not beat your wife, and you, as wife, should not use any bad words toward your husband. The husband should also not speak ill of his wife, and the wife should obey if the husband commands her to do something and should help him in all things! Then he takes the hand of the bride and gives it to the mother of the bridegroom, who speaks to the bride as follows: You have now been taken into our family and you are to work for your husband and cook his meals for him and make his clothes and arrange everything for him; in addition, you must help me in the house and carry out my instructions, as well as

/194 cont./

585 those of my husband, and you are not to say bad words either to your husband or to us!

The wedding celebration is as brilliant as possible, which means entertaining the guests lavishly as long as possible. In some families the celebration goes on for more than a week.
[535] There is no dancing in Calderas, but in other Paez villages
[177] Colombian folk dances, usually the open bambuco, are danced.

586 A dissolution of the marriage through divorce is said not to occur even among the non-Christian Paez. Also there is no separation of married people, since man and wife are dependent on each
[837] other for economic reasons. Yet it not infrequently happens --
[848] as reported above -- that married men have children outside their marriage with other unmarried girls.

587 In case of the death of one partner, the surviving spouse may remarry. But whereas for the first marriage he merely could not marry a partner of the same name, in the second marriage he also may not marry a partner bearing the name of the deceased. Thus, for example, Juán Piñakué, who in his first marriage was wed to Ascensiona Kiskué, may not marry a Kiskué a second time.

589 /195/ Widowers continue to live in their houses and, if the
591 children are not yet grown, usually marry a second time; other-
[587] wise they live in the house of one of their grown sons. Widows, if they are older, usually do not marry again. With their children they go back to where they came from, namely, the house of their parents. If the latter are no longer living, they have the right, for the time being, to live in the house of whichever brother happens to be living at the time in the house of the deceased father. If the house is no longer standing, the widow lives with one of her brothers or with other relatives. In any case, she cannot, as a woman, live alone in a house, but always only in one belonging to a man.

/195 cont./

d) Death

761 According to the belief of the Paez, death occurs chiefly
776 through the action of the evil shamans (nyic) or the evil spirits
165 ec, tus, and gělyómp (see "Religion" /see pp. 191ff./). Included
164 here also is the not infrequent cause of death through consumption.
[262] Causes of death of children are chiefly whooping cough, as well as stomach and intestinal disorders, the latter brought about by a
[762] diet very unsuitable for children. Suicide is completely unknown.

764 The death of a member of the community is passed on from
[763] man to man by members of the family and neighbors. There is
[203] no public mourning or lamentation; upon the death of small
[765] children, people act as though they were glad, since the children
[192] are now "little angels." (Among the colonists, as well as among the Paez, the Spanish word "angelito" is used.) In former times it was customary to abandon the house when death occurred and to leave the deceased and some food in it (Castillo i Orosco, p. IX).

764 The manner of burial is the same for men, women, and
184 children; there are no social differences. A few customs in other Paez communities, however, differ from those of the Calderun. Therefore the burial of the dead in Calderas will be described first.

[177] For burial the deceased is dressed if possible in purchased,
[291] that is, "white" clothing, even if he was the poorest of the poor and had never worn such clothing. For this reason the relatives incur considerable expense, which often cannot be paid for a long time. Burial takes place the day after death. Only the feet of the deceased are washed. This work, as well as dressing the deceased, may be done by relatives or even by outsiders; they must, /196/ however, always be men, even in the case of female deceased persons. The body is taken by two men on a bier made of two tree trunks to the graveyard next to the church, where two other men, usually relatives, have already dug the grave. The latter is trapezoid-shaped, a good shoulder's breadth at head height and narrower at the foot end. Its length is determined by the size of the deceased. The direction of the grave is completely arbitrary.

/196 cont./

764 It is dug out about 1.50 meters and at the bottom provided with
184 a lateral longitudinal niche about 40 centimeters high. This niche is generally hollowed out on the left side, but sometimes on the right. The body is laid in this, without the bier and without accessories, horizontally on its back, so that it no longer extends into the shaft of the grave. The shaft and the niche are, in addition, separated by vertical stakes and rods placed side by side so that the deceased cannot be touched by the earth filling the grave. On the latter, a stone about one meter high is placed at the head or foot end for identification.

[793] The priest is not present at a burial, nor is the shaman who
acts for the district of the deceased. The latter also does not
[756] enter a house in which there is a dead person. The participants in the funeral procession, men, women, and children, go to the graveyard together and then back again to the house of the deceased, where lavish entertainment with food, chicha, and brandy now follows. The latter was also drunk copiously on the way to and from the burial place. The mood during the entire time is
756 jolly and animated; people laugh and make jokes. Before the
764 participants enter the house upon their return from the burial,
783 they must go to the river where the shaman awaits them, in order
184 to "cleanse" them of the "pest" of the deceased for the first time (see "Religion"). Then they go together to the house of the deceased, which they may not enter, however, until the shaman has also cleansed this with the same remedies with which he freed the human beings of the "pest." These are water, to which special herbs and cow excrement are added, sprinkled everywhere, as well as brandy, which, mixed with herbs, the shaman squirts everywhere.

764 In Togoima we were able to take part in the burial of two
184 small children (angelitos). The graves of the cemetery in this town all have an east-west direction. The niche is always at the left, the body lies on its back with the head toward the west. The size of the grave required is measured with a bamboo stick that is
[273] as long as the deceased. Before the burial, there is drinking,
[535] music, and dancing in the house. /197/ Music is also played at
[533] the burial and on the way to the graveyard.

P /197 cont./

184 In this respect Calderas differs from all the other Indio or
764 colonist towns known to me, for there neither music nor dancing
533 is done on the occasion of a death. Both are done at the death of
535 an "angelito," not only among the Paez living in the vicinity of
S colonists, but, above all, among the white and mixed-colored
764 colonists. Thus, on January 1, 1953, soon after our arrival in the
533 archeological park of San Andrés, two small girls of the neighbor-
535 hood came to us and asked if I would photograph the "little angel."
C At first I was annoyed, for a short time before a group of children
123 had come, carrying a doll on a flower-bedecked tray from house to house, and they presented it to us, too, as the child Jesus who was collecting contributions for the mass that was to take place on January 6. The girls told me, however, that this little angel was the deceased, two-months-old child of the colonists in the neighboring house, whose mother had already washed and adorned it beautifully. The house was 20 meters away from our own, and even from our door one could already hear jolly music from the neighboring house, such as we had already heard at Christmas and at the New Year's Eve celebration. In the house a large num-
C ber of neighbors and relatives were gathered in the same room in
[534] which the child was laid out. People were laughing, drinking, singing, and dancing. The orchestra -- as always -- consisted of a guitar, a mandola, and rumba balls, and the usual musicians played in it. One of them was the father of the dead child, a second one, its uncle. Astonished at the bustle, I asked the mother whether she was not a little sad over the loss of her child. She admitted that she was, but at the same time said that her child was now a little angel and this was grounds for joy and dancing. I asked up to what age deceased children are called "little angels." I was told that if they are not yet two or three years old they "are" little angels and not merely called that. The small child, whom they always referred to only as the little angel, was laid out in the room on a table, flowers lay all around it, and at its
C head stood an image of the Virgin Mary with four candles in front
[273] of it. The people were not yet quite sober from New Year's Eve and already the inevitable liquor bottle was making the rounds again. On the next day the burial by the relatives took place.

S /197 cont./
764 The child had been laid in a coffin which was painted on the out-
C side with stars. The female relatives had made a so-called "canopy,"
123 /198/ a pole two meters high, on the tip of which was fastened a white hoop decorated with flowers, from which hung eleven colored paper streamers, one of which was carried by each of the participants. I, too, was asked to take one, and then we set out -- without the mother of the deceased child -- with music, for the graveyard where the small coffin was opened once more and then lowered
P into the earth without formality.

764 Among the Paez of Togoima, too, there is drinking, dancing,
184 and singing at the death of a child, and here, too, the mother does
[273] not take part in the burial at the graveyard. The body is carried
[533] by a woman -- usually the godmother -- in a small sedan chair of
[535] bamboo, accompanied by the music of drum, timpano, and flute,
[608] to the burial place where several men have already scooped out a grave with the lateral niche (Ills. 204 and 207 /see pp. 290 and 291/). The deceased child has a few flowers in its mouth. It is wrapped in a cloth and is laid in a recumbent position, along with a bouquet of flowers, in the niche, which is separated from the shaft by the rods of the sedan chair placed vertically side by side. The earth thrown into the pit is stamped down very firmly with posts.

P In Calderas, too, the mother of a "little angel" to be buried
[608] does not go along to the graveyard. The small corpse is carried by the godmother, not in a sedan chair, but simply wrapped in a cloth, on her arm.

The burial of the Christian Indios of San Andrés shows transi-
P tions in the shape of the grave from the Paez niche-grave to the
[674] simple, rectangular pit of the other Christians. We took part in the burial of the capitan who had been stabbed by his drunken son during a quarrel. The direction of the grave in the cemetery of San Andrés is always east-west; the head lies on the west side with the ground sloping upward. Instead of a lateral niche, a trapezoidal hollow about 50 centimeters deep is dug at the bottom of the shaft, which is covered horizontally by bamboo put so closely together that no earth can fall down, and the corpse is practically just as well

/198 cont./

764 protected from the earth above it as if it were lying in a lateral
184 niche (Ill. 206 /see p. 291/). It was expressly confirmed to me
[178] that this form of grave has been used for only about 20 years, and that previously regular niche-graves had been made. The transitional character of this covered pit from the shaft grave with the lateral niche becomes even more apparent from the fact that an additional niche was dug about 30 centimeters deep at the head end of the pit, into which the capitan was laid part way, "so that at least the head is lying in a niche."

/199/ The corpse, wrapped in Colombian clothing, was carried on a bier on the shoulders of two men. The bier consists of two poles held by cross-sticks lashed crosswise one above the other at intervals of 30 centimeters. The cross-sticks are lashed with lianas in pairs, each one above the one longitudinal pole and below the other one (Ill. 205 /see p. 291/). After the burial, the bier was chopped up and then left lying in the graveyard.
[201] Shortly before the lowering of the corpse, the members of the
[516] family take leave of it by kneeling down and moving one or both hands before them from above downward and saying: "You are now going to heaven, and we shall not see each other again; we hope it may go well with you!"

After the corpse was lowered and its head pushed into the small niche, the bamboo covering was very carefully and tightly laid over it. Then the pieces of sod as the bottom layer were packed next to each other as closely as they had been when lying on the surface of the ground. The members of the family and the friends, with their left hands, then tossed as many handfuls of earth into the grave as the person concerned has family relatives. Together they fill the grave with all the rest of the earth with their hands. This is an honor for the friends of the deceased; if a person has no friends, the members of his family must do this work themselves. After a few handfuls of earth, the filling of the pit is always stamped down long and thoroughly with tree trunks. This is a very long and exhaustive occupation, and the more beloved the deceased was, the longer the stamping. In the case of the burial of the capitan, this lasted almost two hours. As a

/199 cont./

764 result of the very hard stamping of the earth, the burial place
184 does not stand out from the surrounding terrain either because of a regular grave mound or because of any kind of slight elevation. A stone 30-60 centimeters in size serves as a marker, which is set either at the head or the foot end of the grave.

769 Whereas the deceased is given no accessories at all in the
[764] grave to take with him and no offerings are given this is done in
[796] the following year on December 8, the festival of the Immaculada. On this day, and each year recurrently, the relatives offer the spirits (áhimos) of their deceased, whom they think of as wind or shadows living in their former houses, their favorite foods: meat, yuca, potatoes, maize, chicha, brandy, coca, etc. These gifts are laid on a banana leaf on the floor of the church, and a candle is lighted and placed beside them. Small children do not get food, but flowers as gifts.

/200/

e) The Course of a Day

461 Men and women perform the tasks appropriate to them.
462 Those of the women are the least varied, since meals must be prepared daily and wood and water must be fetched regularly for cooking or for maintaining the nightly fire. Moreover, the work of the woman is more bound up with the house, whereas the men have shorter or longer pauses in their work and during these they visit neighbors, help them mill sugar cane, and drink chicha.
461 Steadiness is not the strong point of the Paez to begin with. It is but seldom that tasks are completed in an uninterrupted process; rather, we almost always found that on the following day the men were busy with something different from the previous day. To be sure, field work always requires long pauses between the clearing, the drying of the felled trees, burning, erecting the fences out of the remaining wood, and sowing. But even within each of these stages of work they generally take their time. True, there are said to be persons who can work for several weeks, up to a month, uninterruptedly in the clearing of a field, but I found again and again that after two to four days of work, a day of rest is inserted.

/200 cont./

461/ On one day, for example, a portion of the field is cleared of weeds, on the next the sugar-cane mill is repaired, on the day after that a neighbor is helped with housebuilding or milling sugar cane, then nothing is done for days because of drinking, and not until several days later is the weeding begun again. Once they have planned or begun a project for the day, however, they [123] will not let themselves be interrupted. Several times it happened that I would visit a family in the evening, in order to plan something which would be not at all unpleasant for them for the next day. But if they had already planned something else, I was obliged to come back on the day after that. In the fields, too, the men are not to be diverted, or only with difficulty. During the sowing, weeding, clearing, or other work on the field, they let themselves be drawn into conversation only during the coca pauses; at other times one could scarcely disturb them at these and similar tasks which are accomplished in a very even tempo -- provided that enough coca is available. It is different with the women. They let themselves be easily diverted from their daily, little varied household tasks. They are the ones who really do the most work within the family, for, as soon as they are married, they are never able to sleep through the night, /201/ but must stir the fire anew every two hours. Furthermore, they get up earlier in the morning, and they cannot go to bed until later at night. To rest a bit during the day is completely unknown. Nonetheless, they are satisfied with their lot and work happily, since all the women work in the same fashion and they have known nothing else for generations. There are, of course, tasks which are done willingly and others which are done less willingly. The goal of the necessary occupation seems to be decisive, for all the tasks necessary for nourishment are done willingly. Thus, the men, for example, like to work in the field, "since it is for food," like to plant sugar cane or build a sugar mill, "since it produces something to drink"; and the women, too, like to drag in firewood, [296] "since it is for meals." Washing clothes is one of the decidedly [499] unpleasant tasks of the women, as bridge-building is among the [462] men. In the examples sketched here, the tastes of all the Paez seem to be alike.

/201 cont./

461 Whereas the men for the most part plait straw hats when they
28 have nothing else to do, the women are busy with spinning and making the coca bags or the fiber bags. But even at this they do not work steadily in the sense, say, that they complete first one bag, for example, or make all the preparations from the outset for weaving an article of clothing; rather, they always work a little at a time on each task. Thus, for example, first a little spinning is done, then wood is fetched, then a coca bag is worked on, and then perhaps a brief hour is spent at the loom in order to weave a few centimeters more on the carrying band of the fiber bags, if the fiber material is at hand. No preparations are made for this plaiting and weaving for a long period in advance, but rather one provides herself with wool, spins it, weaves a bit farther, and then drops the work again for a week or more. Nevertheless, the women do not have periods of out-and-out idleness, like the men.
461 This doing-nothing is designated among the Paez with a word of
574 Spanish origin pasnyándo (paseando). To be sure, one must not
156 overdo the inactivity, that is, not "go for a walk" longer than
[192] about two weeks in succession, for otherwise one is called "alko" (dog), who runs from house to house, sniffs about everywhere, and gets his food from other people by begging. This is encouraged by the unwritten law of the Paez, to give food to a starving person,
[773] wherever it may be, until he is satisfied. This is taken very seriously, not only when adults are the petitioners, but also in the case of small children, in memory of an event in prehistoric times when Chauté /202/ turned a number of persons into stones because they had not given a begging child anything to eat out of their surplus (see the myths /see p. 224/). Hence if anyone enters a house "pasnyándo," he is given something to eat. Younger, unmarried people in particular take advantage of this and sometimes do not work at all, but go to a different house every day. They inquire as to where sugar cane is being milled, help there, are given chicha to drink and food to eat, and the next day go somewhere else. Thus there are some men who have neither house nor field, but nevertheless live quite well. To be sure, the

/202 cont./

461/ villagers know these "strollers," and even say that they are
574 sluggards who do not work; but if they then come at mealtime, they
156 get their food and are usually kept there gladly, because they know how to tell stories well and amusingly, go around everywhere, and always have news to impart. If a man is married and has a wife and children, he must, of course, cultivate his own field, in order to be able to feed his family. In Calderas, however, there is even a married "stroller" who has neither a house of his own nor his own field. He lives in the house of a good-natured man whom he helps in the field and in the house. But this is regarded as an exception.

829 Thanks for favors or benefits bestowed, which, according
571 to the view of the Paez, are taken for granted, were not custom-
[576] ary originally. Today, however, thanks are often expressed with
[178] a word of Spanish origin "slopage" (Dios se lo pague), without, however, any feeling of a debt of gratitude, such as toward a
[621] wealthy person or a person in a superior position. Within the Paez communities there is, to be sure, no sociologically established authority; similarly, there is no chief or employer of a number of people who would be dependent upon him and owe him obedience. Hence no one is forced to obey anyone whom he does not like or to do anything that he may not care to do. Accordingly, there is no respect for strangers to the place or even for the priest, for when the Calderun are in their village, "on their soil," everyone regards everyone else as equal. Not the least important in this connection is the general understanding of one another by the inhabitants, their strengths and weaknesses, which makes pretense, any spurious authority simply assumed by an official, impossible. This is one reason -- perhaps the principal reason -- why the Calderun purposely do not want to have anything to do with the "blancos" and their officials. An attempt to trace this back to an awareness of their own inferiority indicates a complete misunder-
[565] standing of the character of the Paez. Their lack of social classes, and therefore the impossibility of looking down on /203/ another person, explains their general respect for one another, which is bestowed on everyone equally. Everyone grants everyone else

Everyone grants everyone else

/203 cont./

571 whatever he expects and claims for himself, quite as a matter of
829 course. This results in an entirely natural self-esteem, injury to
155 which on the part of the "blancos" is felt as very painful by the Paez.

576 Within the Paez communities the obligation of a greeting (gwéčaya) by a younger person to an older one is strictly observed. Even a "family feud" does not absolve the younger people from the respectful greeting "pétenga" (translated by "good day") toward the older people of other families, who acknowledge it with " "pé'taw." Removing one's hat at the same time is not customary.

[608] A greeting by shaking hands takes place only among members of the family or with one's godfather or godmother with the salutation "ndyósta utsménga" (Godparent, how are you?), during which the hat is also removed. Contemporaries greet each other with

[521] "éwča" (how are you) and reply with "éwčataw" (I am well). Generally people chat awhile when they meet, introduce the conversation with a joke, a bit of news in the village, or perhaps merely a remark about the weather.

156 Though the Paez may be regarded basically as an individualist, this does not hold true universally. On account of the abundantly available land, it is possible for him to isolate himself and withdraw for weeks at a time to his separate farm, but

461 nonetheless the Paez does not like to drink his chicha alone. And
476 usually friends and neighbors help, not only with housebuilding or
156 clearing, but also with sowing and lesser tasks. The labor of the individual, in instances of mutual help, is merely loaned, however, since the same persons meet again for joint aid on the corresponding tasks of a neighbor. The owner in question must also make chicha and food liberally available for each task, which makes every joint task a small feast. The actual useful effects of the communal work are slight, and, as a visitor from the outside, one has the impression that the joint eating and drinking is the primary thing, interrupted at times by only brief periods of work. On sober consideration -- which no Paez, of course, undertakes -- the joint consumption in connection with a communal task is more expensive for the individual than if each person himself over a correspondingly

/203 cont./

461 longer period of time, consumed the products he himself raised.
476 Thus the practice of communal work and the joint consumption
156 of food and drink connected with it do not unconditionally emphasize the necessity for remote individual farms as against the compact village layout.

556 /204/ From what has been said about joint work and the
461 joint consumption associated with it, it follows that, with this
[476] method of production and consumption, practically no one can acquire great wealth, for the more a person has, the more he needs to entertain his helpers. Theoretically, however, it would be easy to become rich, if, for example, a young man would clear an additional piece of land each year for the planting of wheat or sugar cane and sell its yield for money or barter it for horses or cows. He would have to do this for several years, and then his herd of cows and mares would increase quite automatically, and with it his wealth. The actual work necessary for this
556 would be slight. Nevertheless, this is not possible in practice,
626 because, on the one hand, most of the Paez do not calculate and think so far ahead, and, on the other hand, the sufficiently intelligent and industrious ones would be subject to the dangerous envy of the other members of the community. The democratization of the Paez communities not only favors what is common, but also prevents the individualization of what is common to all -- among other things, even the common poverty.

For this reason no show is made of any possessions that one
556 might have. Significantly, only in connection with taking an inventory of livestock at the end of our work did we discover that even in Calderas there are comparatively rich people. This was not to be seen by an outsider, since these families do not stand out from the others either by dress or by way of life. Moreover, they did not tell me anything about their property -- a matter of more than ten head of cattle in the case of three families. I learned about it more or less accidentally from other
[651] people. In the case of these families, I could not see any reason for the concealment of their wealth, since they do not have any obligations or taxes or fees to pay. They likewise do not play a

/204 cont./

556 special sociological role within their community, for they are elected neither more frequently nor more rarely to the village offices. They have simply "always" been considered wealthy, though it should be noted that in the language of the Paez there [192] is no word at all for "rich" or "poor." The word used for "poor," "póre," comes from the Spanish (povre), and the word used for "rich," "čáčanas," at the same time means "strong" in the physi-
556 cal sense. Despite this apparent unimportance of wealth, how-
626 ever, it is jealously seen to that no other industrious man of a poor family will become rich and possibly put his wealth -- by means of Colombian dress or something similar -- on display. The evil shamans would put a spell on him or poison him, /205/ and the neighbors would devastate his fields by driving their cattle there. He would be cut by everyone, and people in a state of intoxica-
115 tion would start a fight with him in order to kill him. At any
556 rate, this is what happened and is happening to our interpreter,
626 Victoriano. He does not come from a wealthy family, but he wants to acquire money and livestock through diligence and [291] ability. From the money he earned among the whites he has [177] already bought himself the clothing of the whites, which he now proudly displays, and at festivals he sells wax candles and sweets. His fellow-villagers hate him on that account. The priest has had to protect him several times already from the machetes of drunken men who had started a fight with him; and in our presence, too, when we visited various houses with him, he was occasionally very rudely heckled by drunken men. Not least because, in the opinion
115 of the Calderun, he is not working. Again and again I tried to ex-
123 plain to the people that they, too, could "go walking" with me and
556 earn money if they were able to speak Spanish. Since this was
626 not the case, there was nothing else for me to do but always work with Victoriano. Nothing helped; Victoriano became more and more unpopular, and I, too, was regarded as a do-nothing. A
123 drunken man who, instead of the one cigarette he was given, vainly demanded an entire pack as a present abused me, too, as an "alko," a dog, who is always going from house to house and does not work.

/205 cont./

578 I acted as though I did not understand the words, but observed the
[123] same thing as on other occasions of disputes among Indios, namely, that two who are quarreling are not separated by a third stepping in. Rather, a dispute is regarded as an affair of the participants and as an interesting diversion in the monotonous daily existence, and the outcome is observed with obvious interest. Apart from the native word "alko," the Paez, interestingly enough, have no abusive word in their own language. The only term of abuse, but used very frequently, is the Spanish "carajo!"

f) Division of Labor between Men and Women

462 As we have seen from what was said above, the individual left to his own resources cannot exist in the Paez communities. The men's work is supplemented by the women's work, and vice versa. Both men and women are dependent upon each other to make a living /206/ and rely on each other for their most primitive vital needs. A man needs a woman who weaves clothes for him, and a woman cannot clear a field -- to cite but one example. The traditional tasks in relation to the sexes may be
[177] summarized once again here. Transitions toward newer ways of life are noticeable, as these have been taken over from the surrounding colonists.

g) Festivals and Celebrations

796 The public community festivals of the Paez which are celebrated and observed in the course of the year nowadays take place only on religious occasions, on the three church holidays Semana Santa (Easter week), San Juán (June 24), and Immaculada (December 8). For the Paez these are primarily occasions for joyful gatherings, for setting off fireworks, and for eating and drinking richly and abundantly. It is not certain whether in former times there were any indigenous festivals in connection with sowing and harvesting and the natural cycle of the year,
796 and to me this does not even seem probable. There is nothing
221 in the myths and surviving indigenous customs of the Paez that
241 points to an agricultural rhythm of life; rather, religion, mythology, and ceremonial practice are remnants of a hunting and shamanistic attitude of mind. The absence of a ceremonial life connected with sowing and harvesting becomes understandable in view of the fact that it is possible to do this at any time of the year; there is no correlation between a seasonal and growth rhythm and a corresponding natural festival cycle.

796 The gobernador at the time is in charge of organizing the community festivals. The actual running of the festival, which includes the entertainment of the entire village and the serving of the necessary food and drink, is the duty of the two "fiesteros" and their helpers, the "albaceros" and "mayordomos." It is an
[554] honor to be fiestero, but also an expensive matter, for this office costs each one two head of cattle, the food for the village on the festival day, and, in addition, the liberal distribution of chicha and brandy. And, to be sure, not only the chicha that is drunk by the village on the day of the festival, but also that which the helpers
[426] drink when they make the chicha before the festival. Even if a fiestero hires himself out to the whites months before the festival /208/ in order to earn money, he often remains in debt for years afterward as a result of the obligations arising from the festival. In spite of the costliness of this office, the fiesteros -- so I was

/208 cont./

796 assured -- always volunteer. Besides, no one can be forced. But this is not necessary, since there are always more applicants for this position than are needed. On account of the very high costs, however, no one can be fiestero more than three times in all. This number is not the absolute highest, but represents the normal maximum given the financial circumstances of the Paez. One may be albacero more often, however -- up to ten times, I was told -- since this person does not donate any cattle for feeding the village, but merely a pig for the meal on the eve of the festival, and bears the cost of the festival accessories other than the food supply (decorations for the church, candles, fireworks, and the "crazy cow"). The mayordomos only join in with contributions of money to pay the priest.

The fiestero and albacero themselves do not work, but merely serve the guests. For the preparation of the food they have [476] their helpers, men and women, who voluntarily help and at the end of the festival are specially entertained. Above all, carry- [273] ing the sugar cane from the fields for the large amounts of chicha to be prepared is hard work, for every fiestero wants to prepare the most chicha, since a festival is good only if one can be drunk for a long time.

On the principal festive day of the three annual festivals, which are essentially the same in arrangement, the women start to prepare the feast very early in the festival house. The men also arrive, chicha is drunk heartily, and the musicians start play- [541] ing early in the morning. No longer entirely sober, everybody assembles for the Mass, which is accompanied by the setting off of fireworks by those who have remained in front of the church door. [788] Then, led by the music, played incessantly, a procession follows, a parade around the church with the flower-decorated image of the Lord and those of the saints.

[431] In the afternoon, the fiesteros, along with the cabildo and [993] a large number of sightseers, set out for the church, in order to [994] give the priest a present of foodstuffs, meat, bananas, vegetables, and eggs in gratitude for the Mass that was held. After that the two fiesteros, along with their albaceros and the music, walk

/208 cont./

796 through the village and meet in front of the festival house for a
[194] ceremonial salutation. They exchange brandy, chicha, and candles, each giving the other exactly the same thing /209/ that
[537] he himself receives. After they have mutually complimented each
[431] other sufficiently, they turn to the bystanders, make a short speech to the effect that everyone should enjoy himself, and dis-
796 tribute everything to the people standing around. Soon afterward
532 all gather on the plaza in front of the church, where now the "vacaloca" is lighted. This "crazy cow" consists of a number of flexible twigs bent into semicircles and held together on the underside by cross-rods; they are fastened one behind the other, which gives the structure the shape of a half-cylinder. This is covered with a cowhide and forms the body of the crazy cow. On one end is fastened a cow's skull modeled out of bast and newspaper to look as real as possible, and on the other end, a stick wound with agave fiber as a tail. A strong young man takes the frame of the cow on his shoulders and it is then lit at the specially prepared places on horns and tail. While music is played, the young man goes across the square in a zigzag, during which the young people try to tease the cow, while it, in turn, tries to get the bold ones on its horns. The meaning of this game is not clear to the Paez. It looks as though it were a poorly understood imitation of a popular bullfight.

796 Everybody now returns to the festival houses, where the musicians have taken their places on a bench on the narrow end of the festival house. The women squat in one corner in a large
[273] group with their children. And then begins the feast, at which everyone, men, women, and children, may eat and drink as much as he is able, with the exception of the fiesteros, who have the sole right to pour the chicha and brandy and do not themselves become intoxicated, in order to be able to carry out their duty well. The festival guests do not go home for the duration of the festival, but eat, drink, and sleep in the festival houses, stretched out full length on the floor wherever they happen to be. The festival goes on with more or less intensity -- as far as eating and drinking are concerned -- throughout the entire week; at any rate, no one works, but at most goes from house to house "pasnyándo."

/209 cont./

4. Law

671 Although the legal life of the Paez cannot be compared to a well-developed jurisprudence, on account of its being interwoven with all manifestations of life, they nevertheless have fixed regulations adapted to their vital needs, /210/ the preservation of which is guaranteed by the entire community. To these legal regulations belong the political and family organization already described, as well as the customs in the course of life and of daily living. In the following the regulations governing property and inheritance and the views of the Paez concerning punishable acts and punishments are to be described.

423 In Calderas there is community land and private land. The former consists of the river lowlands with the territory of the church, school, community house, and festival houses, whereas the mountain slopes are the private property of those families who cleared them for the first time. Basically, everyone may have an interest in the community land, which consists essentially of pasture land. Here the families can pasture their animals, build themselves festival houses, and stake off a piece of land for [178] themselves anywhere they like and build dwellings. The latter was not customary formerly when a person built his own house only on his own land. Today there are already three families, those of Cerbeleón Guagáz, of Clemente Lis, and of Agustín Muse, who live on community land near the church and the school. They built their houses there and staked off a piece of land on which they cultivate vegetables and some sugar cane. There is no need to ask anyone for permission to do this. The situation is different in the 423 case of private property on the mountain slopes. True, no one 427 builds his house on a piece of land that does not belong to him; yet it may happen that one's own land is very far away, and then a person will ask the owner of a parcel of land nearby for permission ("licencia"; Spanish "authorized permission") to plant a field for a harvest. This is not often the case, for generally there is enough land in each family. A few families, however, have

/210 cont./

423 considerably larger parcels of land than others, for example, the
427 Guagáz family, who, according to my information, own almost half of all private land. Permission for the use of land is granted only for crops with a short ripening period, namely, wheat, maize, beans, and cabbage, but not sugar cane, coca, or bananas, which need several years to mature, in other words, can be used for years. As rent the owner receives a small portion of the harvest, which is left on the stalk and which he must harvest himself.

423 As a matter of principle, land cannot be bought, we were
[428] told repeatedly, for every man must leave his land to his sons. Even if a man has no sons, he may not sell his land, but must hand it over to his brothers. This was the information always
423 given in answer to my direct questions on the subject. /211/ In
437 practice, however, it is quite possible to sell land, and this is not infrequently done, but no one realizes that a land sale actually takes place when a man clears a piece of land for himself, plants it, and exchanges the entire harvest, including the land, for a
[115] head of cattle, a horse, etc. This is what Victoriano did, for example, in order to acquire a horse. He cleared and planted a piece of his father's land, about 2,500 square meters, to sugar cane, and when this was mature, he exchanged the harvest, including the land, for a mare. Nobody wanted to admit that this violated the principle of not selling land.

423 The land belongs to the father of the family, who, as a rule,
241 tills it with his grown sons. If the sons have their own houses,
59 they generally go on working with their father, since no one likes to work alone. At the harvest, the respective wives fetch the food
423 required for their families from the common field. If father and
427 son do not live in amity, the son must plant and harvest his own
59 3 field, for which he is then obliged to accept the help of friends.
241 It is considerably more expensive to entertain them than family
[476] help, for in the latter case there need not be any chicha for entertainment. Even in this instance, however, the son must ask his father and owner of the family land for permission to cultivate the land. This is not denied, however. After the harvest, this piece of land, since it will lie fallow now for about ten years, goes back

/211 cont./

423 to the father, and the next year the son must ask his father anew
427 for permission to use another piece of land.

593 Besides the land, the father of the family also owns the
24, dwelling, the menstruation house, all the animals -- including
422 chickens and guinea pigs -- all agricultural implements, and the
423 sugar mill. Property marks on the houses, fields, and implements are not required, for everyone knows to whom they belong.

428 Upon the death of the father of the family, the youngest son inherits his house and the greater part of the livestock. If, for example, there is only one cow, he gets it. Similarly, he gets all the land under cultivation at the time. The uncultivated land is divided equally among all the sons. The widow,
[768] like the daughter inherits nothing. The former then continues to live in her old house in the family of the youngest son. The fact that the latter receives so much more than the older ones in the distribution of the inheritance is explained by the fact that the older ones have worked for more years and therefore have had more time and opportunity to acquire property of their own.
[429] Favoring the youngest thus represents a certain equalization. If the father dies /212/ young and leaves only a small son, his mother administers his property for him until he is about 15 years
[768] old. He need not marry then, however. If there are several younger sons, they, of course, also go on living together in the house of the father.

Deviant inheritance plans of the deceased, for example, letting an older favorite son have more or leaving his house or implements, not to his youngest son, but to his brother, are not possible. Even if a father had ten daughters and only one son and none of the daughters would marry, he could not leave them anything. In such a case, the only son would have to provide for all his sisters, for women cannot live alone in a house and they would not be in a position to cultivate the land alone. If a man has no sons, but only daughters, his sons-in-law generally help him cultivate the fields. Yet he cannot bequeath them anything. His landed property and equipment go to that one of his brothers who takes care of the burial, that is to say, buys the grave clothes for the deceased and provides chicha and food for the mourning

P /212 cont./
428 guests. In case the deceased has neither sons nor brothers --
P which scarcely ever happens, it is said -- the villager who takes
[768] care of the burial inherits his entire property. The widow moves
in with one of her brothers or sisters or some other relative.
T Disputes and misdemeanors, such as theft or adultery, are
692 judged within the communities by the cabildo; murder or serious
625 C bodily injury, by the Colombian state judiciary. It was said that
[692] murder and manslaughter did not occur in former times, the old
T 682 people told us; they are a consequence of "white" influences
623 and the weakening of the cabildo. One can well understand this,
182 for in Calderas where the village council still enjoys a certain
[177] amount of power and considerable prestige, it would be unthinkable
P for a son to stab his father to death. This happened in San Andrés
[177] where the cabildo exists only in the form of three functionaries
who are basically powerless and without standing and where the
young people, through the influences of the living conditions of
the white colonists, no longer have any feeling for the old
discipline and customs. It was in San Andrés in March, 1953,
that the son of the capitan stabbed his father to death. The
P latter, after the death of his first wife, had married a second
[593] time, for which his children reproached him vehemently. In a
drunken state, this led to a brawl, in the course of which the
father struck off half of his son's right ear and the son killed his
father with several knife stabs in the abdomen. After the deed, he
fled; but since it was known that he could find shelter only with
relatives, the /213/ gobernador of the town of Lame seized him
P a few days later in the house of his sister, where he had hidden.
[624] He was brought to San Andrés in chains and delivered over to the
sindico, who was simultaneously occupying the position of
gobernador. The latter, an older man of the age of the deceased
capitan, tried for some time to reason with the murderer, who
gave the impression of being uncommunicative and almost sullen;
he pointed out to him the baseness of his deed, of patricide, and
then he was led to the church in which the dead capitan was lying
in state. The son resisted violently, but was forcibly led up to the
corpse and broke down weeping before it. Before he was transferred

/213 cont./

682 to Inzá by two members of the cabildo of San Andrés, friends and
623 relatives, as well as members of his own family, slipped him a
182 few coins so that he would be able to buy himself food in prison. His guards did not prevent anyone from doing this, and in general the feeling for the murderer was commiserating, but not unfavorable.

623 The punishments inflicted in Calderas by the cabildo are al-
692 ways floggings. In earlier times they were very rigorously carried
[681] out. There is no imprisonment. Today the cabildo judges only
[697] social misdeeds, debtors, and the theft of field crops, a chicken, or a sheep. Horse and cattle theft goes to the court in Inzá for punishment. The injured one himself may not punish the malefactor -- not even if caught red-handed - but must report everything
[693] to the cabildo. There the capitan and gobernador are the judges.
[624] The other members of the cabildo must likewise be present, but they have no vote. The sentence is very quickly passed. The malefactor is locked into one of the two rooms of the community
623 house, and the trial takes place on the next day at the latest. The
685 punishments are fixed. They consist of lashes with the whip, which
692 are increased for repetition. Thus, the thief receives ten lashes the first time, 20 the second time, and 30 lashes the third time; in case of further lapses he is shackled in the tree trunk. The theft of a sheep is punished with ten lashes and the replacement or giving up of the stolen object. If the accused protests, a house search is carried out with a member of the cabildo. If nothing is found, he must be set free again.

426 Loans up to ten pesos are given without security; beyond that the creditor is given a cow, a horse, a pig, wheat, or sugar cane as security. Loans are given only up to a year, so that the matter is not forgotten. Interest is not charged. If the debtor is unable to pay, a definite term is /214/ set for him; if he does not pay then, the lapse is reported to the cabildo, which punishes the offender with the whip. Denial is useless, for every loan transaction is concluded only before witnesses. If the debtor dies, the claims of the creditor are taken from his estate, for example, a machete, coca bag, or clothing. One may also ask relatives, for example brothers, to settle the debt. They are not obliged to repay it,

/214 cont./

426 however, so that in the case of a deceased poor debtor, the creditor has usually lost his money. Prescription does not occur.
685 A debt forgotten by the debtor may be collected by the creditor
695 years later, if there are witnesses. The situation is similar for
426 the theft of field crops: If there is no witness, no one can be found guilty. If, however, the witness is known as honorable and not deceitful, the accused is judged guilty, even without a con-
692 fession. There is no statement of confirmation corresponding to
695 the oath; similarly, no one condemned for wrongdoing has the
623 right to go to Inzá to the judge. For all misdeeds punished by the
208 [782] cabildo, the capitan and gobernador are the first and last authority; they do not act arbitrarily, however, but rely largely on custom
[686] and the opinion of the village. This is especially true if someone refuses several times in succession to take part in public works, but it also comes out -- unfavorably -- if a poor man tries to
623 become wealthy on his own. For example, disputes not infrequently
692 break out among the Paez on account of damage to cultivated
685 fields when the domestic animals of one person have broken into
578 the fields of a neighbor. Now the fences around each field must always be in good condition and put up in accordance with the term of use of the field. A fence for a maize field, which requires barely a year to mature, may be more lightly built than a fence around a sugar-cane field, which requires three years to mature. Then when strange animals break into fields with good fencing, the owner may kill them or at least wound them, for example, by
[231] cutting off a cow's tail. The owners of pigs fasten a triangular-shaped frame around the necks of their pigs to prevent them from breaking into fenced fields. If the fence is in poor condition, however, and has not been newly erected especially for the planted field, the owner of the animals breaking into the field is not to blame and the owner of the field may not kill them. Of course, the soundness of a fence is to a great extent a matter of opinion, and it happens not infrequently that the disputants go after each
696 other with machetes and wound each other considerably. The
685
417 /215/ guilty party is then, after an inspection of the fence, punished
681

/215 cont./

696 according to the decision of the cabildo. First of all, the animal
685 or the crop destroyed must be replaced, and then the offender is
417 put in the "tree trunk." This is a form of punishment that was
681 formerly used very frequently in other Paez communities, too.
[824] Actually it consists of two tree trunks, into each of which two notches are chopped on opposing sides. The condemned person is put in, with his feet up to the ankles in these rather narrow notches, and then the tree trunks are tightly bound together with
[623] lianas. All the members of the cabildo take part in this work. Then the bound tree trunks are fastened to the ceiling of the council house, so that the condemned man hangs head downward and the trunks cut into his flesh very considerably. There were no other types of punishment. The degree was determined by the number of hours of hanging, which extended from one to, allegedly, 24 hours.

556 Injustices on the part of envious fellow-citizens toward a
626 man striving for wealth manifest themselves by their driving their animals into the man's well-fenced fields. This is done until the person in question no longer feels any inclination to excel over others
[623] through diligence and property. Little is accomplished by com-
[692] plaining to the cabildo, since the gobernador cannot make a de-
[208] cision that runs counter to the opinion of the entire village, and a weak spot in the fence can always be demonstrated somewhere.

692 Other and not infrequent occasions on which the cabildo must
623 act as judge are complaints concerning adultery and support (see
68 above). There are no complaints about verbal insults, just as there is no punishment for this. They are countered by matching expressions. Similarly, unintentional bodily injury, for example, by a machete during joint work or a case of death during tree-cutting, is not punishable. Only if a person shoots his neighbor's eye out with an elastic sling during bird hunting would he be punished, "but not very severely."

/216/

IV. Spiritual Culture

1. Language

121 According to A. v. Humboldt, languages are differentiated by the elements of content and form, and, accordingly, languages are divided into three groups, which in the following period were erroneously interpreted as stages of the development of language. According to this, the oldest stage was represented by the isolating languages, which express form elements by means of independent words with the meaning still recognizable as far as content is concerned. Their words, as in Chinese, are monosyllabic, isolating. The second group is made up of the agglutinative languages, in which the element of form is added to the element of content, the stem, through clearly recognizable affixes. The Ural-Altaic and the Bantu languages in particular are put here. The inflected languages occupy the third stage. In them the form element is expressed by inner changes of the stem or by affixes closely intergrown with the stems, as, for example, in the Indo-Germanic and Hamito-Semitic languages.

Even though this classification of languages was subsequently abandoned as the schema of a sequence of development, it is nevertheless quite applicable as an initial, practical orientation. For the more precise classification of a language, the working out of the phonetics and syntax is required.

197 193 Paez is an agglutinative language. The grammatical forms are built up by a succession of syllables. The pronunciation is difficult for a European. It is similar to Kechua /Quechua/, from which a number of loanwords have been adopted.

175 797 192 193 114 The oldest linguistic reports about the Paez come from P. Eujenio del Castillo i Orosco, who collected his linguistic material around 1735, as a missionary in Tálaga. It was supplemented and published by E. Uricoechea in 1877. The collected data include a catechism, a vocabulary, and a grammar with information about personal pronouns and the conjugations of "to be" and "to write." The grammar and vocabulary contain some forms and word formations that are alien to the original Paez language.

/216 cont./

114 Further linguistic notes were collected by H. Pittier de
192 Fábrega. These supplemented Castillo's vocabulary and gram-
193 matical data. H. Lehmann published examples of sentences of the Paez from Pitayó collected by French missionaries.

197 /217/ In a comparative study based on the aforementioned
114 publications, H. Beuchat and P. Rivet investigated the linguistic classification of Paez within the language groups of Colombia and classified it in the southwestern group of the six Chibcha language groups. (These Chibcha-speaking tribes correspond neither archeologically nor ethnologically to the true Chibcha (Mwiska) of the savanna of Bogotá!)

124 The linguistic material presented in the following is ex-
126 tremely fragmentary. The data given, however, were for the
197 most part checked several times. The difficulties of linguistic recording lay, aside from the brief time at our disposal, in the lack of grammatical training of the interpreter, who otherwise spoke Spanish very well, but who, during dictation or in translations, often said the same sentence entirely differently when repeating it; possibly because he could translate it better this way. When his attention was called to this, the stereotyped answer was: "One can say it that way, too" or "that is the way we speak." Another thing was that the interpreter was able to summon up the unusual mental concentration for linguistic recording for only two or at most three hours daily, distributed over the forenoon and afternoon.

a) Phonetics

194 As a result of the location of the individual villages in iso-
[197] lated valleys, the pronunciation varies slightly from place to
[124] place. Since we started with the Paez of Calderas in our collection of ethnological data, the following word list was also made with my Calderun interpreter, Victoriano Piñakuẽ.

In the Paez alphabet the complete palatal range, which includes all consonants, is noteworthy. Almost as numerous are the consonant combinations with the English "w." In the

/217 cont./ In the
194 transcription of Paez words we departed from the Spanish spelling
104 and used the following alphabet:

'	"glottal stop," as in the German ab'ändern
~	nasal vowel
a	short a, as in the German Ball
ā	long a, as in the German schmal
ai	not a diphthong, a+i as in the Paez áime (star), without "glottal stop"
b	always voiced, as in the German Baum
bw	b with the English w
by	palatalized b
č	Spanish or English ch, German tsch
čy	palatalized č
ç	dental ch sound, as in the German ich
d	always voiced, as in the German dumm, English "and"
dy	palatalized d
/218/	
e	closed e, as in the German Schnee, but short
ē	closed e, as in the German Schnee
e̱	open e, as in the German wenn, hätte
ē̱	open, long e, as in the German Schäfer
ĕ (ə)	centralized e, as in German gern
ei	not a diphthong, e+i as in the Paez néi (father), without "glottal stop"
f	dentilabial, as in the German fein
g	always voiced, as in the German gut, English "pig"
gw	g with the English w
gy	palatalized g
h	strong h, between h and the ch in German ach
hw	h with the English w
hy	palatalized h
i	short i, as in the German wie, but short
ī	long i, as in the German nie
k	not aspirated, as in the German
kw	k with the English w
ky	palatalized k
l	as in the German laufen; used in place of r in loanwords from the Spanish
ly	palatalized l
m	as in the German mein

/218 cont./

194
104

mw	m with the English w
my	palatalized m
n	as in the German nur
nw	n and the English w
ny	like the Spanish ñ, French gn
ṅ	velar n, like ng in the German singen
ṅw	ṅ and the English w
ṅy	palatalized ṅ
o	short, closed o, not identified more precisely
o̱	open o, not identified more precisely
ō	long, closed o, as in the German Not
oi	not a diphthong, o+i as in the Paez ói (woman), without "glottal stop"
p	without aspiration, as in the German "Paul"
pw	p with the English w
py	palatalized p
r	only rarely in Spanish words where l is not spoken in place of it
s	always voiceless, as in the German lassen
sy	palatalized s
š	sch as in the German schon
šw	s with the English w
šy	palatalized š
t	without aspiration, as in the German Ton
ts	like the z in the German zwei
tw	t with the English w
ty	palatalized t
u	as in the German gut; often difficult to distinguish from o
v	dentilabial v, as in the German warm
vy	palatalized v
w	semivowel, like the English w
y	semivowel, as in the English "York"
z	voiced s, as in the German Rose
zy	palatalized z

/219/

194

The consonants and semivowels in Paez are the following:

	Plosive fort	Plosive lene	Fricative fort	Fricative lene	Affricate fort	Affricate lene	Liquid	Nasal	Semi-vowel
Aspirate	'			h					
Velars " (palatal)	k ky	g gy						ṅ	
Palatals	ty	dy	hy ç		č čy		ly	ṅg ny-ñ	y
Alveolars " (palatal)	t	d	s sy	z zy	ts		l	n	
Alveolars with hushing sound " (palatal)			š šy						
Labiodentals " (palatal)			f	v vy					
Bilabials " (palatal)	p py	p by						m my	w

The vowels are the following:

a, ā, ai, e, ē, e, ē, ě (=ə), ei, i, ī, (o), o, ō, oi, u.

The pronunciation of "o" and "o" was not observed accurately enough; similarly, the pronunciation of "o" and "u" varied among different persons and was difficult to distinguish. "Ai," "ei," and "oi" are not diphthongs, but are pronounced separately, but without any "glottal stop." The pronunciation of "ty" and "ky" is not always unequivocal, for example, tyita, "weaving sword." In front of some words beginning with "b" one can hear an "m," for example, in bāts (mbāts), "agave fiber." Also, in the case of Spanish loanwords beginning with "b," an "m" is popularly put in front of them. Thus, mbē! instead of véa! was always said by the Spanish-speaking Paez. The original Paez alphabet contains no "r"; in Spanish loanwords "l" is used instead, for example, trapiče = lapiče, horno = olno, nuestro Señor Jesucristo = neustlo Senyol Hesuklisto. Difficulties /220/ are caused by a number of words which to the stranger seem to sound exactly

/220 cont./

194 alike at first, but in reality differ -- aside from context -- in minimal nasal differences in pronunciation. Thus, for example, atc means "I," "today," "ruana," and "digging stick."

Stress is indicated by an accent (') or by a circumflex. Words without a mark for stress are stressed on the penultimate syllable. An accent (') between a vowel and the following consonant has sound value and indicates a "glottal stop" (glottal catch).

b) Grammar

193 The substantive: There is no article. Gender is not distinguished in words for things and plants. In the case of human beings and animals such a distinction occurs only in exceptional cases, for the terminology for human beings with respect to sex and age or circumstances is so rich in special words that special designations for the sex in general are not required (cf. the kinship nomenclature in the section "Family Organization"). The distinction is not only so exact with respect to human beings, but even maize, for example, is designated by entirely different words, depending on whether it is ripe or still green (kotc or tsot). If a more precise distinction is nevertheless required, the suffixes -pits (man) for the male sex and -ói (woman for the female sex are used, for example, éčpits, "widower," éčoi, "widow." In general, however, these are artificial distinctions which are used primarily for loanwords. In this case one proceeds from the general or typical. Thus, átaly is the "chicken," and it is the rooster that is singled out and distinguished from the chicken by the suffix -pits (átályepítste). "Horse" is regarded as general and is designated as hímba; the special distinctions are himbapítste, "stallion," and himbaóite, "mare." Moreover, the word lečkwe (child) is added as a suffix to designate small living creatures or small things, for example, luč, "child," lučléčkwe "small child"; hímba, "horse," himbaléčkwe, "foal"; átaly, "chicken," atályeléčkwe, "little chicken"; yat, "house," yatléčkwe, "small

/220 cont./
193 house"; witóñ, "tree," wítoñléčkwe, "small tree."

193 In the case of kinship nouns, there is a prefix pe- for desig-
601 nating female relatives, for example, pétsots, "father's sister," pényok, "mother's sister," "stepmother," "mother's brother's wife." Within the family a dual is designated with the prefix pe-, for example, pětām, "father /221/ and mother together," péndyík, "father and son together" or "mother and son together," péndyīs, "father and daughter together" or "mother and daughter together."

193 The suffix -nas often designates a state or an activity and is used chiefly to form new words: fisnās, "writer," ātycatynās, "tailor," yāsnās, "baptizer" (name-giver), pāsnās, "stranger, new arrival," ká'nas, "burgomaster," ndōsoknās, "midwife," gnās, "virgin." "To become intoxicated" is toñ, the "drunken man" tónas, "one who is becoming intoxicated" tónye. The forms tátyinas, "creator," and tótenas, "gobernador," are used only in sentences. As an individual word one says tákiyi or tótens, respectively. Possibly the ending -nas is one used only in a specific context, like the suffixes -pas and -sa, which are not infrequently encountered. In the case of adjectives, some in the positive and others in the comparative end in -nas: čačanas (strong), wac nyíčkwenas (more beautiful), wac éwnas (better).

There is no general plural. For a more precise designation either a number or an indefinite pronoun is added, for example, teč, "one," or in the plural, é'nzi, "both" (from é'nz, "two"), ko, "several," tak, "many." For the plural in connection with persons the suffix -weš is used in part, for example, pítstewes, "people," Mogweš, tribe of Guambiano, či'mewes, "whites" (či'me=white).

There is no declension. The sentence order is generally: subject, object, predicate. The nominative is to be distinguished only by its position at the beginning of the sentence. The accusative comes after the nominative and generally before the verb.

Atya na himbása vítepitsna óson, "I this horse this man give," ātya táwas tyaóinat ípak, "I the belt (taw) from this woman (oí)

193 /221 cont./
received," kwéša éšpas kyéhi óratepa óñwetáw, "we coca at any hour eat," čõosoñ pítstečata mahẽ, yátde oíčata mahẽ, "in the field men only work, in the house women only work," pálkite táwala kíma õsya, "in the park many sand fleas there are," but: ãtya evít kyákulása, "I lost this cow" (kula = cow), ãtya pákan teč pésnye, "I receive a present."

The genitive is expressed by its position before the subject. Pítste šwáa, "the hat of the man" (šwa = hat), ói táwa, "the belt of the woman" (taw = belt), pítste álko, "the dog of the man," tótenas nyó, "the wife of the gobẽrnador."

Negation is generally expressed by met, for example, hip met, "I do not have"; ñéndya, "to like," ñéndyi met, "not to like"; ãtya uwẽt, "I am hungry," ãtya ũwemẽt, "I am not hungry"; ãtya teč nyákča hipt, "I a brother have" (brother = yacté), ãtya teč nyákča /222/ hip met, "I have a brother not"; ãtya teč pésča nyópa, "I a sister not have" (sister = peš; "nyópa" was likewise translated for me as "not have").

Adjective: In the Paez the adjectives follow and do not change with respect to sex and number: yat ĩš, "the old house" pits ĩš, "the old man." The meaning of the adjective is in some cases differentiated more than in German, for example, "strong": pítste čačat, "the strong man," hímba čačat, "the strong horse," but: mbéka põs, "the strong chicha." For "stout," the following adjectives are used: pítste nyiš, "the stout man"; víton hõt "the stout tree." Likewise there are different words for young or old, depending on whether it is a matter of men or women.

Comparisons are expressed by wac, "more": hímba éw, "the good horse," hímba wac éwnas, "the better horse"; ói nyíčkwe, "the beautiful woman," ói wac nyíčkwenas, "the more beautiful woman"; ganš, "ugly," wac ganš, "uglier"; wéča, "little," wac wé, "less."

/222 cont./

802 Numerals: The cardinal numbers and the ordinal numbers are the same. The decimal counting system is built up on counting with the fingers. The numbers six to nine are compounds with "sáki" (six), whereby seven is formed as "six and two," eight as "six and three." There is no counting beyond ten. For "very many" one says "teč kwat" in Paez, literally "one stone." Today it has the meaning of "hundred."

1	teč	7	é'nzsáki
2	é'nz	8	téksaki
3	tek	9	pánssaki
4	pans	10	kosémba (literally kóse pémba "end of hands")
5	tats		
6	sáki or téčsaki		

193 Pronouns: The personal pronouns are absolutely necessary for conjugation. They are put at the beginning. In the first person singular a distinction is made without exception between masculine and feminine; in the second person singular, only in special cases. These cases are the address of spouses to each other, of siblings among themselves, and address to persons of respect. Otherwise there is no distinction according to sex either in the second person singular or in other forms of the singular and plural.

I (masc.): atc; in connection with the verb, ãtya; in the conjugations the suffix -pa, "too /auch, "too, also, likewise"/," is often added to the personal pronouns, ãtypa, "I, too."

I (fem): ŏk.

/223/

193 576 you (masc. and fem.): inc. Young people address older ones neither with "inc" nor with their names. In the case of men, they must first inquire about the name of the man's son (or if he has none, his daughter) and then

/223 cont./

193
576

address him as "father of ..." If the person concerned has no children, one addresses him, like contemporaries, by his first name, "since a man who has no children is no man."
Older women are respectfully addressed "ī́kf."

193
601

you (father or mother to son):	kwe
you (father or mother to daughter):	íča
you (wife to husband):	íngya
you (husband to wife):	íkwe
you (brother to brother or sister to sister):	yakté
you (brother to sister):	pe'š
you (sister to brother):	ndyīš
you (fem.):	ī́kf, respectful address for older women
he, she, it:	kya
we (masc. and fem.):	kweš
they (masc. and fem.):	kyáňweš

193
[576]

you /plural/: not known; in the corresponding translation the word cúkai (all) was sometimes used. In the grammar of Castillo i Orosco, the Paez word "icuexs" (ikweš) is given for "vosotros." The interpreter translated this for me as "Ustedes." It is not used to conjugate verbs.

[114]

The possessive pronouns correspond -- except in the third person singular -- to the personal pronouns. They are placed first.

/223 cont./

193 The masculine forms are:

my	horse	ãtc	himba
your	horse	inc	himba
his	horse	kyec	himba
our	horse	kweš	himba
their	horse	kyánweš	himba

The feminine forms are:

my	belt	õk	táwa
your	belt	inc	táwa
her	belt	kyec	táwa
our	belt	kweš	táwa
their	belt	kyánweš	táwa

The demonstrative pronouns are: "na" (this) and wíte (literally, "the other") in combination with /224/ "na," before or after, in the sense of "that." Na ãtc, "this ruana," wítena ãtc,, "that ruana"; na hímba, "this horse," wíte hímbana "that horse." Sometimes the third person singular of the personal pronoun (kya) is used as a demonstrative pronoun.

As an interrogative pronoun "ma" has the meaning of "which" and "how many." Ma hímba, "which horse," ma hímbanang inc uwáy, "which horse did you buy"; ma pits, "which man," ma pítsnang inc ói, "which man did you see"; ma ãtc "which ruana," ma ãtynak kya om, "which ruana did she weave"; ma ói, "which woman," ma óiweš twétsyo, "which women are walking there," mãnstyin, "how many," mans vyó hípong, "how much money have you."

Indefinite pronouns are:

all:	cúcai; cúcai pits, "all men,"
	cúcai ói, "all women";
each:	tečteč (cf. 1 = teč);
both:	é'nzi (cf. 2 = é'nz); é'nzi pits, "both men,"
	é'nzi ói, "both women";
enough:	ãhna; ãhna vyó, "enough money";
anyone:	mãpa

/224 cont./

193 no one: tĕčanyópa; tĕčanyópa máhiméta, "no one is working";

several, various: ko; ātya ko hímba hipt, "I several horses have";

many: tak; tak nása, "many people";

little: wé; very little: táwala wéhá.

193 114 Verbs: The infinitive forms of the verbs end in -ya. The only data thus far published about the conjugation system are to be found in Castillo i Orosco, who conjugates the verb "to write" [177] in all paradigms according to Latin grammar. The word formation of the model verb and the conjugation are artificial and set [797] up for teaching at the mission schools. People do not speak that way in Calderas.

193 124 177 The conjugations of a few verbs given in the following do not represent all the conjugation possibilities, since -- as was mentioned -- the interpreter lacked a knowledge of Spanish grammar. Hence the schema of the paradigms is largely theoretical. Everyday speech is different, and especially in storytelling the interpreter used forms which he reproduced in Spanish with participial constructions. Nevertheless the forms reproduced here are /225/ "correct" in the sense that one "can" speak this way and be understood while using the forms.

193 [124] Besides the four tenses reproduced here (present, future, and two forms of the perfect), there are probably also forms corresponding to the conjunctive, which, however, the interpreter neither understood nor was able to reproduce in Spanish. The forms of the future are not always used. Very often the present is used with the addition of "tomorrow" or "later," for example, ātya gwágwan kúskay, "I speak tomorrow," instead of ātya gwágwahípt, "I shall speak." The forms of the two past tenses are apparently used arbitrarily. To my questions on this point I always merely received the answer: "one can say it this way and also that way." Here, too, the addition of óñna, "yesterday" (in context: óñnaha), or esé, "some time ago," is customary.

[126] The abstract, consecutive listing of the forms of a conjugation is hardly possible for the Paez. I always had to make

/225 cont./

193 inquiries with reference to examples that were easily comprehensible.
126 If these lay outside of the context just discussed, I was often requested to provide the appropriate form myself, which I always succeeded in doing with the help of my examples, to the joyful surprise of the Paez. Their confirmation in each case, that "one can say it that way, too," permits me to set down the following
193 paradigms. Phonetic discrepancies are purposely retained, for
128 example, in the second person singular the endings -eg and -eng, in the third person plural the endings -yin or -yen. In the present, the first and third persons singular are generally the same. The personal pronouns for all forms are placed before the verb. In the model verbs the feminine form of the first person singular and the various forms of the second person singular were omitted in favor of the simple masculine forms.

193 ōpya, "to live"

Present:	ātya ōpon	Future:	ātya apohípt
	inç ōponeng		inç opohípeneng
	kya ōpon		kya opohípa
	kweš ōpontkaw		kweš opohíptaw
	kyáñweš ōpotyin		kyáñweš opohíptyin

Perfect:	ātya ōpokot	or:	ópnast	(óñnaha)
	inç ōpoing	or:	opnásing	(óñnaha)
	kya ōpok	or:	ópnasa	(óñnaha)
	kweš ōpotaw	or:	ópnastaw	(óñnaha)
	kyáñweš ōpotç	or:	ópnastyin	(óñnaha)

/226/

193 In like manner ôhoya, "to go," is therefore conjugated:

Present:	ātya ôhon	Future:	ātya ohohípt	
	inç ôhoneg		inç ohohípeneṅg	
	kya ôhon		kya ohohípa	
	kweš ôhontkaw		kweš ohohíptaw	
	kyáṅweš ôhoyen		kyáṅweš ohohíptyin	
Perfect:	ātya ôhokot	or:	ôhonast	(esé)
	inç ôhoing	or:	ohonásiṅg	(esé)
	kyá ôhok	or:	ohonása	(esé)
	kweš ôhotaw	or:	ohonástaw	(esé)
	kyáṅweš ôhotç	or:	ohonástyin	(esé)

In like manner úsya, "to give," is conjugated: present: átya úson, inç úsoneṅg, etc.

gwábya, "to speak"; here the "b" becomes "g" in the conjugation:

Present:	ātya gwágwan	
	inç gwágwaneṅg, etc.	
(on another occasion, however, I was given átya gwábal for "I speak").		
Perfect:	ātya gwágwakot	(ôṅnaha)
	inç gwáving	(ôṅnaha)
	kya gwáok	(ôṅnaha)
	kweš gwáotaw	(ôṅnaha)
	kyáṅweš gwáotç	(ôṅnaha)
Future:	ātya gwágwahípt	
	inç gwágwahípeneṅg	
	etc.	

/226 cont./

193 In the future and perfect, básya, "to answer," is conjugated slightly differently:

Present:	ãtya báson	Future:	ãtya basohípt
	inç básoneg		inç básmaṅg
	kya báson		kya básmak
	kweš básontkaw		kweš básẽntaw
	kyáṅweš básotyin		kyáṅweš básmatç

Perfect:	ãtya bást	(esé)
	inç básiṅg	(esé)
	kya básk	(esé)
	kweš bástaw	(esé)
	kyáṅweš bástç	(esé)

/227/

Similarly píyeya, "to learn":

Present:	ãtya píya'n	Future:	ãtya piyahípt
	inç piyáneṅg		inç píymaṅg
	kya piyán		kya píymak
	kweš piyántkaw		kweš píyẽmtaw
	kyáṅweš piyátyin		kyáṅweš píymatç

Perfect:	ãtya píyt	(ónnaha)
	inç píyiṅg	(ónnaha)
	kya píyik	(ónnaha)
	kweš píyẽtaw	(ónnaha)
	kyáṅweš píyitç	(ónnaha)

"To be" as an auxiliary verb is not known, but only õsya as a verb in the sense of "to be found."

Present:		Future:
I am in Calderas	ãtya Çaldelaste õst	ãtya õsohípt

Translation 1/1

The Human Jaguar

539 A man was a human jaguar. He went into the mountains to hunt. In walking he carried a knife in his hand. In order to rest, he sat down in the middle of the mountain that was there.

There came a Pijao, who was a member of the cabildo, with his golden staff of office. He set the gold staff on the ground. Then he lighted a fire. He stacked up wood to make a pile. Then he drew fire out of his armpits. Then he lighted it.

The human jaguar noticed that the one who was walking there was a Pijao, a member of the cabildo. He was a member of low rank, he noticed. Then (the Pijao) brought bananas, and he brought a snake. He roasted these bananas in the kindled fire. He also roasted the snake. Shortly thereafter the snake hissed. tsẽ.

The human jaguar pondered over how he might get hold of this staff. With a knife in his hand the human jaguar suddenly leaped up. He leaped on the Pijao in order to take the latter's staff in his hand. He pondered in this fashion as he pounced upon the Piajo. The Pijao, however, interrupted his meal of bananas. He seized his staff and ran away without eating.

/253/ He held the staff in his hand, thus he started to run. Then the human jaguar ran after the Pijao. He almost killed the Pijao. The latter did not let go of his staff while he ran. He fell down, he did not let go of his staff.

Three hours were full, that is as long as he ran. When three hours were up, they came to a rock. Then the jaguar transformed himself into a human being on the rock and sat down. The Pijao climbed down from the rock and went to a large plain. He went into his house.

After a moment the Pijaos go out and come running, in order to seize this jaguar. Thereupon the human jaguar transformed himself once again into a jaguar and returns and runs away. Three full hours (he ran back). When he came back, the roasted snake lay on the ground.

1/1 [this is a translation of the Paez text appearing on p. 168 -- An.]

/253 cont./

539 When he came back, he saw the snake in its place. Then he changed back into a human being. The fiber bag was there, too. The bananas were there, too. The snake filled with water (that is, underdone, still watery) was there.

It was afternoon when he went into his house. The bag he brought to his wife. He came to his wife with this bag. When he had knocked, he entered.

2. Orientation and General Knowledge

772 776 177 Nothing definite can be said about the ancient Paez conception of the world, since Christian influence has had a strongly modifying effect. In any case, there is in the Paez vocabulary the word "tátyinas," which is sometimes translated as "god," and sometimes -- and corresponding better with the meaning of the word -- as "creator." The word "Dios" is used to designate the Christian God. Tátyinas, I was told, lives in heaven, on the earth, and in the earth. He made all human beings. He does not receive sacrifices. He is not mentioned in shamanistic ceremonies.

772 775 The vocabulary shows that, besides the earth and the conception of a heaven or of the firmament, there were also two places of the dead that were familiar. The happy land of death, mbéka kígwe, is like heaven. Literally it means "land of chicha," and if one knows the Paez, one realizes that in any case it must be /254/ a happy land. The land of the dead corresponding to [776] "hell" is called eč kígwe. The eč are the most evil of all spirits. They live in the earth; hence this designation must refer to a subterranean land.

804 461 As for natural periods of time, only days and months are known, as well as work days and non-work days (ki'sen). The latter designation is now used for Sunday. Originally this was not a fixed day; rather, people worked and celebrated as they could arrange the time within a larger or smaller community. Even today, during the times of clearing, the people sometimes work for weeks in the field, without inserting a work-free day.

/254 cont./

804 The period of a day is subdivided into the day (ẽn) and the
192 night (kos). Early morning is called kosẽ; afternoon at the time when work is at an end, which is reckoned by the position of the sun, is called ff'nze. Other subdivisions of the day are made according to the interval of an ẽšnetc, meaning the time it takes to chew a dose of coca. In translation this designation is used for "hour." The largest period of time is the month, ãte, which is designated by the same word as for "moon." For the period of a year the Spanish word año is used. In former times the word
[221] enzte was used. It is the designation for the large annual com-
[226] munal fishing at the weir during the dry season in February. The
[132] two rainy seasons, called nospá'nye, and the two dry seasons of the year, called sek, are not regarded as time intervals, but as seasons. The latter is at the same time the word for "sun."

823 No large geographical orientations or regional, individual
[491] divisions of any kind could be discovered. Moreover, all of Tierradentro is enclosed by civilized areas -- there is even an auto road leading to Belalcázar -- so that many Paez men have seen the surrounding countryside and even cities with their own eyes.
601 Only the western bordering mountains of the Central Cordillera,
[186] in the direction of Popayán, are conjectured to be the habitation
123 area of the dreadful man-eaters, the Pijao. Geographical means
484 of orientation are unknown. Traveling is done only during the day, in groups, and in company with a person who knows the way.
821 Of the stars it is only known that there stars that move and fixed ones, without their being distinguished in greater detail or according to constellations.

202 It is amazing that, in spite of their settlement pattern of
[361] individual farms, the Paez do not have any optical or acoustical
[203] means of communication over larger distances. /255/ In case of urgent news or questions, children are sent.

802 There are numbers only from one to six and ten. For the designations seven to nine the corresponding Spanish numbers are used. The Paez word for "ten" (kóse pémba) literally means "no more hands" and indicates that the fingers were used for counting. The toes are not used for counting; anything beyond ten is

/255 cont./

902 designated as "much" (teč kwát), literally "one stone." Today it is the designation for "hundred."

75 The medical knowledge of the Paez is not great. Almost all illnesses are regarded as based on magical causes and are treated by the shamans (see below//see pp. 190 ff./). Broken bones are treated by the midwife, who rubs on cow fat and wraps [845] leaves around them. The broken bone is never put in splints. In a difficult birth the midwife is able to turn the child into the right position; if then the birth does not go well, her skill is at an end. No remedy is known for snake bite. In the case of headaches, a leaf is tied to the front of the head. For flatulence some wood ashes are rubbed on the abdomen. For injuries caused by a machete and bleeding profusely, a tourniquet is applied to the affected limb, above the place of the injury, and the wound is covered with a small piece of cloth. The shaman has the injured person bite hard with all his teeth on the iron machete.

3. Religion

771 The Paez today are nominally Christians. They are baptized 797 and usually married by the Catholic priest. The Christian missionizing began as early as the sixteenth century, at first, to be sure, with little success, which did not increase when from 1630-1654 Jesuit missionaries took over the mission work. Only in the last decades 797 has there been greater progress. Hand in hand with the conversion 177 to Christianity go the introduction and teaching of the Spanish lan- 871 guage and the adoption of Colombian customs and habits. Today in almost every village there is a mission station and a school, the teachers of which are mostly women missionaries. In general the parents do not send their children to school unwillingly, for they have realized that knowledge of Spanish and of reading and writing is accompanied by certain advantages in their relations with the [178] whites. In connection with the /256/ schooling, of course, there is [756] some alienation from the old habits and customs of the Paez, especially those of a religious and sociological nature. Nevertheless,

/256 cont./

797 in all Paez communities in which Spanish is not understood by the
177 majority of the population, the old functionaries of the original
178 Paez religion are needed to maintain the social life in particular.
871 In accordance with their activity, they are designated as "shamans"
756 by theologians. Because of the dissimilar nature of their religious activity, they do not by any means represent unbridgeable competition for the Christian missions; rather, both, the Christian faith and shamanistic activity, can exist side by side in the present stage of culture of the Paez.

771 If one considers existing theological convictions, one finds
793 that the office and dignity of the cult priest rest on the performance of sacred acts which must of necessity be fulfilled so that the
756 natural and normal development of human existence is not ob-
182 structed. His task is to confirm the existing world order through the consecration of sacerdotal acts. The shamans, however, -- on the contrary! -- want to outdo and break through the given order of nature and the environment. Their greatness and authority rest on the fact that they do supernatural things, that they heal the sick, struggle with spirits, yes, awaken the dead to new life. This, at any rate, is said of the greatest of their kind, whose talent lies in their spiritual, supernatural powers, in their mastering of extraordinary circumstances. Over against the cult priest's "thus it is," the shaman puts his "thus it should be" (A. Friedrich).

a) Characteristics of Paez Shamanism

756 The Paez shamans, in the sense given, are not functionaries
754 of a sacrificial cult, but persons who do supernatural things. There are two types of them, the teyu and the nyiç. Whereas the teyu (tepits as a man, téoi as a woman) is a good shaman, a good doctor and helper of human beings, the nyiç is an evil shaman, an evil sorcerer, a hexer. The shamanistic activity of both, however, as a religious phenomenon, is not nearly as distinctive as, for example, the shamanism that we are familiar with in Siberia or North America.

/256 cont./

771 It is not certain whether in former times the Paez had a cult
[793] priesthood besides shamans such as are practicing today. In any
756 case, to designate the priests and missionaries they use the word
[797] tikwe, /257/ which is not used for anything else. The present-
771 day characteristic thinking of the Paez, their entire mental atti-
754 tude, revolves around magic and countermagic, despite mission-
[797] izing and Christianity. No injury, no illness, no deformity, no
[177] poor livestock is traced back to natural causes, but rather every-
thing is the work of evil magic. Since the people themselves
are fully convinced of this belief and ensnared by this idea, the
actual achievement of the evil sorcerers corresponds to what is
desired; that is to say, a person who knows he is bewitched,
being mindful of the inevitability of his fate, actually becomes
554 ill and dies. The victims are almost always the most thrifty
and industrious members of the community, those who tower
above the others because of their success.

754 There are no persons who are privileged because of age,
177 sex, or social position -- with the exception of the good shamans,
who are incessantly the target of the evil ones. Anyone who, in
dress and way of living, adopts the customs of the whites, is in
the habit of associating with them, no longer chews coca, works
with modern tools, and wants to carry on his farming according
to the principles of the colonists is opposed by the nyic.

754 It is not only the outward superiority of the individual over
554 the masses that evokes the envy of the nyic, but also the general
popularity of an individual, and with it a certain personal influ-
ence within the village. Thus, for example, the father of our
Victoriano was the victim of an evil charm. He is regarded as very
intelligent, is a good worker, knows best how to build houses and
bridges, and has even undertaken a journey to the city of Popayán.
On account of his popularity and the good advice he always gives --
so it is reported -- a nyic tried to kill him out of envy. One
[755] night when he was asleep the nyic robbed him of his soul. His
brother noticed it, however, and spat coca on it. The next day
the eye of the bewitched one became white and was close to
running out, if a teyu had not helped. He is blind in that eye,
however, to this day.

/257 cont./

754 The special target of the evil sorcerers are the white
648 Colombians. People are afraid to undertake anything against them
797 openly, but the magic manipulations of the nyic against them are widely known. The ones primarily affected are the whites, who robbed the Paez of land, and among them the missionaries, too. The nyic then try to obtain mastery over the souls of the whites, to treat them with herbs, and thus make them so sluggish that they will not return to Tierradentro any more. It is also said that the nyic had placed their remedies /258/ in the church so that the mission priest from Belalcázar would never come there any more and would never enter it any more.

754 The victims of evil sorcery, however, are not only human
789 beings and animals, but also the cultivated fields, which can be
[464] bewitched by means of eggs, salt, or pubic hair. The families affected are then no longer able to feed themselves, and in many cases the fathers of the families must leave the village in order to hire themselves out to the whites. The removal of the unpopular one is thus achieved. His return is prevented in magical ways, the nyic placing special herbs, which the person cannot step over, on the connecting roads.

754 The aids for evil magic are not, say, objects belonging to the persons to be bewitched and used in a pars-pro-toto act, but are exclusively parts or agents from among the belongings of the sorcerer, which, for their effect, must be brought into close contact with the victim himself or his soul. If the nyic wishes his victim to have an accident, he places a smoothly polished stone from the river somewhere in his house. The person in question will then soon slip and fall and break his bones or suffer a sprain. Another possibility for bewitchment is for the nyic to spread his agent on the food of his victim. Thus, a shaman from Santa Rosa reports how the former young and capable Gobernador Leonidas was killed by the nyic Dolores Dinó. She visited him one day while he was working alone in his garden and threw several of her own pubic hairs in the food in his cooking pot and, in addition, a fragment from a prehistoric clay pot of the Pijao. Leonidas ate this meal.

/258 cont./

754 Afterward his throat began to dry out and he could breathe only with difficulty, until he finally died.

754 The evil shamans are not generally known publicly. Men
756 as well as women, however, may be teyu and nyic. In fact, the
[562] most famous and clever teyu whom we met was an old woman,
[753] Felisa Ipia in Santa Rosa, who at the same time, however, is re-
[623] garded as the most evil sorceress who ever existed. All the sick-
[683] ness and misfortune in Santa Rosa are ascribed to her acts. For this reason the cabildo once burned all her medicinal herbs and broke her shaman's staff. But people no longer dare to undertake anything serious against her, since they fear her, as they do all evil sorcerers. In former times the convicted nyic were always very severely punished, but since many members of the cabildo have died as a result of sorcery, no one any longer dares to accuse the well-known nyic today.

754 /259/ With regard to the problem of male and female shamans,
756 a teyu from Calderas explained that women as such had an excellent
562 sense of feeling and therefore the best talent as shamans. Since they are more crafty and cunning than men, however, the female shamans can transform themselves into an evil sorceress at any time. And that is precisely what makes them so dangerous and hence unfit for the calling of a good shaman.

754 The border between teyu and nyic, therefore, is flexible.
756 Both aspects of shamanism may be united in one person, or a teyu may become a nyic and vice versa. In the following, therefore, the teyu form of manifestation of shamanism will be described. In spirit the nyic are based on the same foundation. They never show their herbs and remedies and allow no one to take part in
[124] their ceremonies. The teyu, on the other hand, on closer acquaintance were quite willing to give information about their knowledge and to let us take part in their séances.

/259 cont. /

b) The Period of Development of the Shaman

756 The teyu with whom I was acquainted became shamans in two ways. Either they were taught by a teyu for a more or less long period of time, until they were given the "signs," or they were directly called to become a shaman by a vision. The latter, as a result of special selection through an experience caused by higher beings, is the more original type of shaman calling, whereas a regular apprenticeship with an experienced teyu is characteristic for the shamans who carry on the position of their fathers and sometimes also that of their grandfathers. These "hereditary shamans" are generally not as powerful magically as those initially chosen through a vision. The hereditary shamans are merely the continuers of an acquired shamanistic trade, whereas the initially chosen ones are the continuers of the tradition of a creator of human beings and animals, of a heroic war leader and liberator [776] of their people. This mythically important figure of Paez tradition is Thunder, who is also regarded as the foremost and the most powerful magically of all shamans. His human successors were scarcely inferior to him as shamans in olden times, whereas the present-day ones are generally quite far behind in their magical abilities.

754 The teoi Felisa Ipia from Santa Rosa is about 70 years old
756 (Ill. 199 /see p. 288 /). Her husband and six children are dead. Three children are living. She keeps no animals aside from a few chickens and turkey hens. About her calling she says that she received her call to become a shaman from Thunder. /260/ The latter lives in the lagoon of Taibe. He appeared to her in a black cloud and descended to earth to her in human form and gave her her shaman's staff and her medicinal herbs, saying that she had
754 been chosen as teoi by him. She then practiced her art for a long
756 time; but the people said that she was an evil shaman, a nyic,
683 and brought her before the cabildo to be punished. Since the people greatly fear the nyic, she was given many blows there, and, indeed, with her own shaman's staff. Afterwards it was broken and burned

/260 cont./

756 on the village plaza, along with her medicinal herbs. Then they
[754] sent her back to her house, without her staff and without her
[683] medicinal herbs. When someone again became sick, however, the people again came to her and asked her to help the sick one. Then her husband, who, however, was not a shaman, made her a new staff; she herself again looked for her medicinal herbs and was able to help the sick. Since then she has been recognized once again as a good shaman and helps all who come to her. Another shaman in Santa Rosa said that he had received his call when he was but six years old. One day when he was working in the field, his mother, dressed in black and with a hat on her head, came to him and scolded him on account of his poor work. When she left, he followed her, but she disappeared into the river. When he returned home, he realized that the woman whom he saw could not have been his mother, since the latter had been in the community field at that time, where she was cooking for the workers. Undoubtedly this woman was a spirit, he confessed, who wanted to tell him that he should become a shaman. This was also confirmed for him by two fiber bags which she carried and which corresponded exactly to those used by the shamans for their medicinal herbs. A shaman from Calderas said that there came to him one night a very beautiful blond child with the women's hair style, who, however, was Thunder, and called upon him to become a shaman.

756 If one does not have visions by himself, he can, in order to
787 become shaman, seek them purposely. For this he need only eat
[262] very little and must refrain entirely from ají (a very pungent condi-
[263] ment /see the glossary, p. 248/) and salt for one month. (The same thing also happens to a young man after he has involuntarily had a vision.) The one seeking a vision then goes all alone into the mountains, where he wanders over hill and dale for a long time, until he comes to a beautiful place where he meets an older man. The latter, like himself, is chewing coca. Through his appearance and his friendly manner he inspires confidence in the youth, and the latter tells /261/ him of his wish to become a shaman. He

/261 cont./

756 mentions that in his village there are so many sick people who
787 need his help and that he has gone into the mountains to look for medicinal herbs such as the shamans have. The one addressed replies that indeed there are in the mountains many good medicinal herbs for making people well. With that he hands him a fiber bag full of herbs and explains to him for which illness this and for which that will help. Explaining in such a manner, he acquaints the youth with all the herbs and tells him how they are used. Then he shows him how to make the shaman's staff and finally lets him feel the "signs," without a knowledge of which the medicinal herbs would be useless, since the latter can indeed be used only in connection with the corresponding "signs." (Cf. in this connection, under "Folklore," the similar myths about Llivan! /see
756 pp. 217ff./). Back home again, the youth begins first of all to learn under an experienced shaman, and then starts with curing a sickness in his own family. If he is successful, other people also come to demand his services.

One may also become a shaman without having had a vision. One becomes an apprentice of a good shaman and for several years learns there the practical manipulations. This includes the handling of the shaman's staff, the knowledge of medicinal herbs, and the interpretation of the "signs," in order to make the treatment of the sick successful. Here, too, the first treatment is done among members of the family under the supervision of the shaman
[554] teacher. His reputation and the further demand for his services in the community depend on the outcome of this treatment.

Several of the Calderun "hereditary shamans" attained their position by this latter method. For example, the tepits Martín Chukue. He is about 50 years old. His wife died six years ago. He had four children by her, three of whom are also dead. He has one child by a second wife. He lives in a small house, but has no field, no cows, sheep, or pigs. His uncle was tepits. He lived with him for many years, until he was about 30 years old. Then for the first time he received the "signs" in his arms, made his staff, and became independent. In his opinion, one cannot

In his opinion, one cannot
/261 cont./
756 learn how to become a shaman; rather, this is a hereditary gift.
[827] He himself has no son and no pupils.

The tepits Francisco Cuskue is about 40 years old, married, and has four daughters and one son. Two children died. He has neither /262/ cows nor pigs, horses or sheep, and is very poor. He learned from childhood on, for his father and grandfather were also shamans. He wants his son to become a shaman, too. The latter, about ten years old, has not yet begun the apprenticeship,
[123] however. In reply to my question as to whether I, too, as a stranger, might become a shaman, he asserted that this would be possible, but said that the training is very long and difficult. One has to learn from childhood on, until one is about 25 or 30 years old. I, in my case, am already too old to begin.

The tepits Cerbeleón Niunda (Ill. 153 /see p. 267/), who lives near the shaman Francisco, is the son of a shaman, was taught by his father, and had the "signs" when he was only ten years old. He is now, as an estimate, 55 years old (no Paez knows how old he is) and had ten children, six of whom died. In the way
756 of possessions he has neither horse nor cow nor sheep. Whereas
312 all Paez divert the mountain brooks so that a small ditch flows past their houses and they always use only flowing water, the shamans Francisco and Cerbeleón have a small joint reservoir below a spring, from which they drink and into which, before drinking, they place one of their medicinal herbs, šũ. When questioned, both stated that they did not do this for any special reason and could not find out about anything in the reservoir, neither sickness nor the future.

754 Just as the good shaman was chosen by a vision, this also ap-
787 plies for the evil sorcerer. It is regarded as an omen that he is to become a nyiç if, for example, in a dream he sees a bird that in its beak holds a donkey, into whose open mouth flies are
754 crawling, or simply if he dreams about pigs. The prospective nyiç may have his vision during the day or at night; it is said that people who are abroad a great deal during the night are the most susceptible to evil sorcery, since at this time they have the

/262 cont./

754 most opportunities to meet evil spirits. Generally they do not need a teacher, but may look for their herbs by themselves. There are also many people, however, who would like to learn sorcery from other nyic, just as there are also supposed to nyic who instruct others in their art.

756 Avoidance prescriptions and taboos for the shaman include
784 some sexual and dietary abstinence, without, however, being
[834] very extensive or strict. Intercourse with his wife is forbidden
[263] for him when he feels his "signs." Moreover, he may not eat any ají if possible, in order not to make Thunder too angry. Also, he may eat only very little salt, since Thunder likewise /263/ eats
[787] no salt. For the séances, which always take place at night, he fasts the whole day, since a full stomach makes it difficult to feel the
756 "signs." The other avoidance rules for the shaman are the same
784 as for all other human beings. For example, one may not kill a
825 snail, for if he should touch it, he would become lazy. In like manner, the black woodpecker (ánza) may not be killed, since otherwise, while working, one would split the machete in the same way as the tail of the woodpecker is shaped. Young men are forbidden to take a stolen hen away from a fox, for then another man would take his bride or wife away from him. Only
[262] old men may confidently eat such a hen, if they have first run around the house with a firebrand.

c) Shamanistic Aids

756 Among the shamanistic aids, the "signs" are the most im-
787 portant symptoms experienced, while the outward ceremonial gear is as meager as the whole Paez culture. The only ceremonial implement is the unadorned shaman's staff, the functional meaning of which, however, is far less important than the shamanistic "signs" (ítok). "They are like the pecking of a bird," the shaman Cerbeleón Niunda said of them, and Francisco Cuskue describes them as the irregular beating of his pulse. To be able to receive
[278] and to interpret them is the basis of being a shaman. Knowledge of the medicinal herbs, the handling of the shaman's staff, in

/263 cont./

756 fact, even the visionary sight of Thunder are worthless by them-
787 selves, if the shaman does not receive any signs. By means of them
278 the teyu discovers the cause of sickness and the means to be employed for healing it, which always consist of the dispensing of herbs. For this reason every shaman always has his fiber bag with all his medicinal herbs with him, in order to have them at hand
[753] and to be able to apply them at any time. Since, however, an illness does not have a physical cause, according to the opinion of the Paez, the herbs used for healing are not applied in accordance with the medical experiences of the shaman, but solely in accordance with his signs.

756 The herbs used by the shamans are the following (*):
278
137
[127]

* I am taking these, as well as some other data on the shamanism of the Paez, from the excellent summary by S. Bernal Villa (III) /see the bibliography in the foreign text, p. 323/.

ǰandúr, eš (Erythroxylon coca), biǰaǰ (Hevea?), ǰulko (Oxalis, sp.), ǰáyuts (Scutellaria racemosa Per.), ǰuwét, fisa, eǰyútse ǰime (Labiada?), /264/ gwepekas (Urera boccifera L.), kwése (Lonchocarpus?), limonsílyo (Cymbopogon citratus), nyika, nyundayuskey, šu (Spagnum sp.), šuwés (Peperomia sp.), šulápe, šupenyí (Peperomia sp.), tátse, táyuske (Peperomia sp.), ul níny (Hibiscus abelmoschus L.), umsim (Myricia acuminata DC. Vell, aff.), vitubítskwe, wáhi (Nicotiana tabacum L.), yakúma, yúskay (Scleria cattarinensis Boeck).

755 Most of these herbs are first chewed by the shaman and then
756 spat over the affected part. If a person is dying and his soul leaves
278 his body from the heart by way of the upper arms, the pulse of the
[774] lower arms, and the finger tips, the herb ǰáyuts, for example, is spat by the shaman from the finger tips in the direction of the armpits, in order to check the departure of the soul. Only rarely is a tea brewed from the leaves.

/264 cont./

756 Besides the remedies which the shaman must use for curing,
787 his signs also predict fate and the future for him or tell him whether the sicknesses will become better or worse. They also tell him about events which are imminent. Thus he learns through them, for example, that sick persons will be coming to him on the following day with this or that illness or this or that
756 request. For all these matters every shaman has his signs at
787 definite parts of his body, those on the left half of his body gen-
826 erally signifying something unfavorable, those on the right half, something good. Thus the rise of the signs from the outer side of the right foot to the ankle means that the medicinal herbs are taking effect. If the signs rise from the outer side of the left foot, this is proof that the nyic must win and the bewitched one
[763] must die. If the signs rise on the right foot to the shin, a mem-
[783] ber of the family will die and his soul go to heaven. If the signs
[828] go along the inner side of the left foot, "pest" will come, and the sick person will become mentally ill. If the signs are felt between the right shin and the heel and they go toward the left side, this is an omen of a battle between the teyu and the nyic. If the signs move from the left ankle up to the hollows of the knees, the planted field is bewitched. Signs in the left calf announce the visit of an evil shaman; signs in the right calf, the visit of a good old woman; signs on the outer side of the right or left calves announce the visit of a nyic or a good old man,
756 respectively. Signs that run down from the right knee cap announce
787 the death of a person through tũs or gĕlyómp ("rainbow" or "moun-
826 tain spirit" as spirit beings, see below /see pp. 191ff./). Signs on
763 the /265/ left kneecap mean that the teyu will win in battle with the nyic; signs from the upper thighs to the hollows of the knees of the right foot, that the patient will die of a malignant "pest." If the signs go down from the left upper thigh, a bad person is walking by outside. If the signs go from the right hip to the foot, the wife will menstruate. If the signs are felt in the tenth rib on the right side, the sick person will sobn die, since he has been stung by the mountain spirit. The signs on the left tenth rib announce the arrival of an evil person. If the signs go from the

/265 cont./

756 right ring finger up the arm to the heart, the person concerned
826 will bury a relative on the next day. Signs in the palm of the
787 right hand mean that the sick person will get well; signs in the
[763] palm of the left hand, that the mountain spirit is not accepting the gifts and the patient must die. By means of signs on the back of the left hand the mountain spirit makes it known that the offerings are insufficient. If the signs go from the palm of the right hand to the neck, this means "pest" from the Pijao. Signs in the right thumb and in the hand announce the appearance of a lost or strayed animal; signs in the corner of the left eye, that the lost animal has been stolen and has already been eaten by the thief; signs in the left arm announce the arrival of the ec spirit; signs in the right upper arm announce to the shaman that good people are asking him to be the sponsor at a christening. Signs on the head of the shaman announce that the nyic will send the pest, and if the signs go from the head into the left hand, the
756 person is already bewitched. In these and similar ways of
787 interpreting their signs, the shamans discover the nature of all illnesses and the means required to cure them. Thus their signs are their only treasure of experience, and if they do not feel them, or no longer feel them, they have lost the essential characteristic of being shamsns.

787 Besides the shamanistic signs described, for the teyu as well
828 as for ordinary human beings of every age and sex dreams are an essential means of experience for looking into the future, as well as for confirmation of a foreign -- usually evil -- influence on one's own person. Just as the effects of evil magic on the individual are brought about through auto-suggestion, so, too, what is seen in a dream. The latter perhaps even more intensively because of a person's own, direct dream experience; only in this way can one understand the positively fatalistic attitude of the persons
115 concerned. Our interpreter Victoriano, for example, is one of the
787 most industrious and capable Calderun. He is determined not to
828 remain socially on the Indio level of his village. He therefore
554 [77] takes /266/ work from time to time among the white colonists,
[464] in order to earn money for Colombian clothing. He is therefore

/266 cont./

115 greatly hated in the village. In an intoxicated state the men have
787 often threatened to murder him. One day he came to us and said
828 that we would have to hurry with our work, for he would soon die.
554 He was by no means agitated when he said this, but smiled with an expression of absolute conviction. In answer to our question as to why, he stated that during the night he had dreamed of seeing himself in the grave. This is a sure sign that he must die. He would not let us ease his mind, for he knew, so he said, that he was unpopular in the village and he had been threatened with death anyway because he had seen more than the others, wore better clothes, and ate meat, instead of working in the village. For this reason the nyic would most certainly bring him to his death. It took several days and all our art of persuasion to get him away from this idea. Again and again we had to point out that, after all, he was a Christian, and as a precaution we had to give him many of our medications, before he would believe that perhaps he need not die
[787] after all. In any case his medallion of the Virgin Mary, which he always carries with him, does not unconditionally help against
787 evil magic. In the following there are a few further examples of dreams that are significant in some way or other: if one dreams that he is bitten by a snake, it is a sign of bewitchment; if, however, in the dream another person kills this snake at the moment of biting, a teyu will put an end to the bewitchment. To dream of jaguars and cats indicates that there are graves of the Pijao under
[783] the house. Someone will die of the "pest" of the Pijao if a person dreams that a jaguar is devouring his chickens. Dreaming about a funeral pile means that there is gold there. If one dreams about a
[963] cow, his wife will die. If one kills a bull or a horse in a dream, a good person (a shaman) will die. If one is stung by wasps in a dream, it means future punishment. Carrying beams or a chicha trough in a dream means that one will soon assist at a funeral. To choke in a dream means war, captivity, or being put into prison. Moreover, it is always a bad sign to dream of arracacha; in case of a journey, one would, for example, be devoured by a jaguar in the páramo. Also, if one dreams that he is able to walk under a rock, it likewise means that a jaguar will devour him. If someone

If someone

/266 cont./

787 dreams of peté squash, he will be devoured by the Pijao, for this
[266] squash has black seeds, and the Pijao as man-eaters have /267/
black teeth. If one has been greatly amused in a dream at night
and has laughed a great deal, he will have a great deal of vexa-
tion during the day. If it rained heavily in a dream at night, a
chicken or something similar will be stolen the next day. If in
a dream someone has ridden very fast all night long on a brown
horse, the day will be beautiful, for the brown or red color is the
color of the sun (the same word is used for brown and red); dream-
ing of riding a black horse, on the other hand, will cause a black
cloud to come up the next day, and then it will rain. If, before
sowing, someone dreams of a big lagoon that appears all green
or has a great deal of green growth around it, this means that the
subsequent sowing will produce a good harvest. Anyone who sees
a black pig in his dream has in reality seen the heart of an evil
shaman, that is to say, he, as a good human being, has met the
wandering soul of an evil shaman; this is not a good sign, but
neither is it so bad that one would have to fall ill on account of it.
Dreaming about the slaughtering of a pig means that an evil
sorcerer will die. If one dreams that a thorn entered his foot on
[763] the road, a snake will bite him. If one's tooth drops out in a
dream, a close relative will die. If someone else kills a large
rooster, his father will die, for the rooster is the heart of the father.
But if a person himself slaughters a large rooster in a dream, he
will murder his own father. If one dreams that he has worked a
great deal in his field on one day, then wild animals will break
[754] into this field and destroy the entire crop. If a person dreams that
[763] he is falling into a deep hole and cannot get out again, this is a
sign that he will die, for an evil sorcerer has thus stolen the soul
of a human being, buried it in a deep hole, and stamped down
the earth again.

756 If dreams and shamanistic signs of a relatively advanced
spiritual attitude lead to the conclusion that there is a correspond-
ing external ceremonial outfit for the shaman, we shall be disap-
[181] pointed. The shaman's staff (tama), to which a liana (nika) is
added for certain ceremonies, is unadorned, poor, and inartistic,
like the entire culture of the Paez.

/267 cont./

756 like the entire culture of the Paez. For the rest, there are neither special articles of clothing or equipment nor any other kind of ceremonial gear, such as crystals, masks, or rattles.

[824] The shaman's staff consists of a smooth staff, 50 to 60 centimeters long, made out of the hard wood of the chonta palm. It is /268/ pointed at one end and semicircular in cross-section. Each shaman makes this staff for himself before treating his first [764] patient and never lets it out of his hand. When he dies, it is put into the grave with him. Before a séance begins, he sticks it into the ground, though not directly in front of him, but somewhat to the side. Only rarely does a shaman have it in his hand during the séance. As the single exception to the unadorned shaman's staff, I know of only the one belonging to old Felisa Ipia of Santa Rosa. On her staff she has tied a number of colored wool threads [774] which she spun herself and dyed with homemade dyes. She has collected in these threads the souls of all the villagers of Santa [755] Rosa. If someone in the village falls ill, she learns of it through [787] her signs or through Thunder personally and in this way is better able to help the sick person, since she can immediately blow her medicinal herbs, mixed with brandy, on the wool threads and thus can help the sick person better.

756 S. Bernal Villa points out that the designation for the shaman's 773 staff corresponds to the name of the most important culture hero of the Paez, Juan Tama, who, according to tradition, was lawgiver, famous and victorious commander of the army, first chief [976] and shaman. According to other traditions, he was the son of the stars, the son of Thunder, or Thunder himself. The present-day shamans regard the staff as a gift from Thunder, and as a sign of spiritual alliance with him. A shaman of San Andrés, reporting on the origin of the shaman staff, says that, according to the stories of the elders, the tama was introduced by Thunder himself. According to this, a man once had his hut and his potato field in the mountains. He harvested the field with his son. One day the son refused to follow his father to the field, but rather preferred to stay behind in the hut. The next day the son had disappeared

/268 cont./

756 without leaving a trace. In vain the father tried to find out where
773 he was staying. After eight days, however, the son again appeared in the hut. He said that he had been with his grandfather, who had given him brandy, medicines, and this staff that he held in his hand and that was called tama. The "brandy" was cold water from a lake, and the medicines in the fiber bag were mountain herbs. After he had said this, he fell into a trance and lay there as though dead. Fourteen days later, as he lay dying, he asked his father to hand him his tama, for Thunder had told him that he could defend himself with it and that, in case of illness, he should take the medicines that he had given him. He squeezed /269/ out the juice and drank it. Quickly he became well. When he gave it to other sick persons, they, too, became well immediately. With his staff and his medicines he became the best doctor far and wide. He died at an advanced age.

775 Another shaman said that the tama stems from a lifesaving
773 act of the Holy Virgin Mary. Once when the sea rose constantly
177 higher and had covered almost the entire earth, human beings were in great danger. The Virgin Mary took pity on them. She drew forth the tama and with it made the same motions that the shamans make with it today. The masses of water then receded. She left her staff behind for the person who became a shaman. This is supposed to be the origin of the tama.

Although in the latter story not only the figure of the Virgin Mary, but possibly also the motif of the Deluge did not originate in the thought of the Paez, nevertheless the origin of the tama as
756 a gift from a higher power is noteworthy. This power, which,
776 for the shamans, is of the greatest significance as a spirit being
787 and as the first shaman, is Thunder. According to reports, he also positively has the character of an assistant spirit, even though he is almost only feared by the present-day shamans. "The old shamans," the present ones constantly assert, "were still powerful enough magically to establish communication with Thunder directly and at any time; we today are no longer able
778 to do it." In former times the members of the cabildo, under the
756
623 guidance of a shaman, bathed together in the lagoon of Juan Tama

/269 cont./

778 and had their staff of office consecrated there. Today this no
756 longer takes place because of the lack of good shamans. The
623 shamans of today no longer have the intense visions that the
[787] earlier ones had, and that is why they are no longer so powerful magically. They are no longer able to speak with Thunder as simply as their predecessors did, and since they are weaker, it is believed that Thunder will kill them.

776 Thunder is generally described as small of stature and dressed like a Paez man with hat and black ruana. It is reported that he does not wear trousers, but exposes his sexual parts. He has with
[534] him, like a shaman, his tama, a fiber bag with medicines, and a
[532] musical instrument called "tíngalo" (triangle). It is not impossible that it is his picture, together with a Christian cross, that is incised in the gable post of a hut in the vicinity of the park of San Andrés, which represents a man with large, triangular-shaped sexual parts (Ill. 200 /see p. 288 /).

[756] /270/ Thunder is regarded by all the Paez as the greatest
[773] shaman and by the teyu as their master. In the folklore (see below /see pp. 215 ff./), he probably often has different names, such as Juan Tama, Llivan, Chauté, Juan Chiracol, but his characteristics stand out in them, no matter whether as sat (cacique) he is fighting the Pijao and defending his people, or that he will one day -- people are convinced -- again drive the hated whites
776 out of Tierradentro. He warns the Paez of an evil white person
821 who is coming to Tierradentro for a visit by a clap of thunder from
[783] a clear sky. When he thunders above a particular house, he is
[754] announcing that there is "pest" in it, and if he thunders first above the house of a nyic and then above one belonging to a teyu he is thereby announcing to a good shaman that he has just been bewitched.

776 A few stories also tell about the struggles of the shamans
787 against Thunder, for he once robbed the Paez of livestock and
756 people. But that was long ago, for today no one would dare undertake anything against Thunder. The Calderun shamans tell how the earlier teyu were in a position to speak with Thunder at any time and to get advice from him. Those of today are no

/270 cont./

753 longer able to do this. Old Filisa of Santa Rosa, however, who
776 was herself chosen and initiated into her office by Thunder, is
787 still able to enter into communication with Thunder today. To be sure, she cannot always do this, but she has often sought him out in his lagoon, dived into the water, gone to the house of Thunder on the bottom of the lagoon, and asked him for advice. One of the sons of Thunder, likewise a shaman, was even her constant companion who protected her everywhere. "In former times," she said, "Thunder himself cured people. Today it is different." Thunder knows when someone is sick; then when people come to her to ask for a remedy, Thunder personally announces to the shaman beforehand: such and such persons with such and such an illness will come today. He also tells her at the same time what remedies she should use. Then when the people come to tell about the illness, she can, since she is a good friend of Thunder, always help them with the best remedies.

776 Thunder, she said, has many children. They come into the world by way of a spring or a crevice out of which water trickles. They have the size of small human beings, but are very good and dressed in a beautiful táw (belt). For growing up and for their nourishment they need three women as attendants. They suck milk from them, whereupon the women must die. The Thunder-children /271/ themselves are barren and have no children. As children of Thunder, however, they have always been great caciques and shamans.

One day she showed me a small knot of a branch, wrapped in a piece of cloth. "This is a child of Thunder that I have from him," she said, "it looks like a branch, but in reality it is alive and can speak."

d) Sickness, Ideas About the Spirits and Souls

753 All sicknesses are explained by the Paez as having originated
754 by means of magical influences that have their cause primarily
783 in malevolent, deliberate acts. These magical, supernatural influences are either bewitchments by the nyic, magical injury

/271 cont./

753 caused by the spirits eč, tũs, or gělyómp, or general emanations
783 of impurity, of "pest" (uwẽ). Such reasons for catching pest, and
[754] thereby being afflicted with sickness, result largely from neglecting
[764] the prescribed shamanistic purifications. These must take place after a burial or when someone has merely seen a funeral proces-
753 sion or entered a house in which there is a corpse. The prohibitions
783 surrounding a woman giving birth or menstruating are just as strict.
841 If she does not retire to the menstruation hut at the proper time,
[849] if she cohabits during these days or neglects to take the subsequent bath after menstruation and birth, the consequences are equally
[264] grave. Pest befalls a man if he accepts food from a menstruating
753 woman. The same consequences befall the one who in housebuild-
783 ing or during the first harvest does not have the proper ceremonies
756 performed by the shaman.
342

Most people die as the result of the evil influence of the
754 nyiç, the evil sorcerers. The latter -- it is firmly believed --
783
761 are able to kill individual persons as well as to send pest to entire villages. Their power of evil is regarded as almost unlimited. Besides being bewitched by a nyiç, there are three other possibili-
753 ties for a person to become ill or to die. These causes are
761 gělyómp, tũs, and eč. All three are very complex conceptions
776 and may be translated roughly as "mountain spirit," "rainbow," and "firefly," respectively, although the Paez conception and the
[756] translation are not completely identical. The teyu knows the cause of the illness immediately from his signs, the rest of the people, however, usually only after the death of the sick person. And, to be sure, one recognizes the tũs as the cause of illness by the fact /272/ that the corpse lies there with a bent limb (arm or leg), whereas in the case of ec as the cause of death, blood flows from the mouth or nose. It is also possible that both together, tũs and eč, might bring death to the person, for example, if the person lies there bent and blood flows from the mouth or nose.

776 The gělyómp spirit lives chiefly in the mountains, but also in the valley, on the banks of brooks or rivers. He likes to lead wanderers astray in the mountains by making noise and screaming up there; at night one hears his screams -- like those of a human

/272 cont./

776 being -- in the valley, too, near the village. He is a raging foe
[784] of everything dirty. A hunter who has not washed himself and his
ruana before hunting or whose wife is in the menstruation hut at the
time will be punished by him. He has the figure of a human be-
ing, sometimes that of a man, but sometimes, too, that of a
woman or a child. Gĕlyómp, as well as tũs and ečˇ, can give a
776 person pest so that he will die. One can catch pest by himself
783 everywhere and on all occasions, no matter whether he is awake or
753 asleep. The pest of the three spirits mentioned is primarily caused
by stings that not only enter the body, but also the soul. In the
spot where they have entered the body they leave punctures that are
red in color in the case of gĕlyómp, blue in the case of tũs, and
black in the case of ečˇ. The sicknesses caused by gĕlyómp mani-
fest themselves by general pain caused by the penetration of one
of his hairs. This happens in the following manner: Someone is
walking along a path and suddenly feels a stinging pain in his arm
or some other part of his body, like the prick of a pin. Although
[755] he cannot discover a puncture, the pain remains. The person
therefore goes to the teyu, and he is able to remove the cause of
the pain by rubbing his herbs over the affected spot until he re-
[761] moves from it a black hair ten to 15 centimeters long. This hair
is from the gĕlyómp, and if the shaman had not removed it, the one
[759] afflicted by it would have had to die. To a certain extent one can
protect himself from the hairs of the mountain spirit if, when re-
turning home from a walk over the mountains or a night's march,
he passes a firebrand over the feet and body, in order to burn off any
hair of the gĕlyómp that might have penetrated.

776 Tũs, the "rainbow," lives on the banks of watercourses and
753 especially at springs. There are many tũs, and, to be sure, wher-
ever there is water. There are tũs as large as a snake, colored red
and yellow, and others only the size of a finger. People recognize
sicknesses /273/ of the tũs by the fact that the afflicted one is
covered all over with pimples and has to scratch himself constantly.
[821] If it rains when the sun is shining, tũs goes from the bank of the river,
where he lives, into the sky and from there back again to earth in
a semicircle. The rainbow is especially dangerous for children.

/273 cont./

776 If it rains when the sun is shining, they may not leave the house,
753 for otherwise they become afflicted with head maladies. These
821 are not headaches, but wounds such as would be inflicted by a
[756] machete. The teyu, however, have remedies to make the rain-
[789] bow disappear, so that children may go outside again.

776 Eč, the third of the aforementioned causes of sickness and
[753] death, is the most unpleasant and the most dangerous, since eč
[761] kills the most people. Eč lives in the earth; no man has seen
[787] him, apart from a few shamans. They need not enter into the
earth, however, to see him; rather, eč himself comes if a teyu
[825] calls him. He looks like a human being. Eč is also the name
for fireflies, which are regarded as the messengers that he sends
out to bring "pest" to human beings. People therefore kill fire-
776 flies if they are able to catch them. Eč is not angry, however,
782 if the people kill his messengers, if only he always gets enough
offerings. For this reason people give eč a dram-glass full of
brandy from every bottle, that is, they pour this amount on the
ground; likewise eč gets his share of every animal killed (chicken,
756 pig, cow, etc.). People ask their teyu which parts of the animal
776 eč demands and which ones they should offer him. If people
782 killed and ate an animal without offering eč any of it, he would
[761] in return kill a child of this family. If the father then comes to
the teyu and asks why his child died, he -- who, of course, knows
that the man slaughtered a pig without giving eč anything -- tells
him that this is the punishment of eč. That very rarely happens,
however; rather, the man gives the shaman the parts of the ani-
mal desired by eč, for instance, the liver, entrails, or meat, and
he gives them to eč, bringing them at night to the place desired
[787] by him. Moreover, as a precaution people give eč herbs and
brandy as the shaman advises, in accordance with the signs which
he has received from eč.

774 If the penetration of pest into the body of a person is the
776 cause of an illness that may result in death, this unfortunate out-
753 come is all the more probable if one of the three spirits or a nyiç
has stolen a human soul. I was given differing /274/ statements
about such a case: First of all, there are two words for soul, ũns

/274 cont./

774 776 753 (u = nasal) and taff, with which everyone is familiar, although they are not sure about the distinction between the two. The shamans Francisco and Cerbeleón said that the two were the same; but both of them also said that ũns or taff, if they had left the person in his dream and were abroad, could be caught by tũs, eč, or nyiç without the person's becoming aware of this immediately, but rather he still went on living. To my objection that in this case ũns and taff were probably different, they did not know how [775] to answer; Cerbeleón stated that if a person dies, his ũns goes to heaven and the person himself becomes taff. He and other teyu 756 774 754 were able to catch the ũns of a human being. Thus, for example, if someone had been robbed, he would come to Cerbeleón. The latter takes coca, tobacco, and brandy, and then he can bring forth the ũns of the thief, seize it, and kill it. The thief must [783] then die. In order to get the ũns in his power, he must first cleanse [924] his hands with the herbs šu and vitubitskwe, as well as with brandy. [276] The ũns has the form of a small animal, he explained; it can fly and glows and is about three centimeters long. It is very similar to a firefly in appearance, but different from eč.

554 754 756 [124] Having reached this point in his explanation, Cerbeleón grew silent, and our interpreter Victoriano said that we should now have to depart, but quickly. With that he left the house in positive flight, and we were obliged to follow. Outside he explained to us that Cerbeleón was a "mal brujo," a nyiç, which, to be sure, he had always suspected before, but just now Cerbeleón had given himself away inasmuch as he had said that he could catch and [682] kill the ũns of human beings. The people of Calderas also say that he possessed herbs that he could put in eggs, chicha, or other food, whereupon people would eat them and then die. One of the sons of Cerbeleón was a thief and had died in the following manner: The one who was robbed had prayed to the Virgen Santisima /Holy Virgin/, and God had punished the thief with death. The father himself, that is, the shaman Cerbeleón, is also a thief and kills people out of envy for their possessions.

The mission sisters confirmed this statement insofar as Cerbeleón had several times attempted to kill them by sprinkling

/274 cont./

554 herbs into their drinking-water canal. Now he had given it up,
754 however. To us he seemed to be merely an idle talker; he did
756 not give the impression of actually having received signs or of being serious about the matter, but rather it seemed as though he had merely learned a little by watching his father /275/ and was doing it mechanically without any inner concern. Francisco, too, had a father and grandfather as shaman predecessors. He was likewise rather ignorant, but apparently meant well. He did his best to help people.

756 Martin Chukue was completely absorbed by his calling and
753 duty, and he was well informed, serious, and dignified in his
761 shamanistic work. When the capitan of Calderas died, he was the shaman authorized to act for his residence, and he also conducted the purification ceremony after his burial. Martin explained the cause of death of the capitan as follows: The capitan had to die because the tũs had stolen the taff soul of the capitan. The capitan died with his left leg drawn up. He was very thin when he died, because he had not eaten anything for a long time, for
[755] his taff soul had been stolen five years ago. At that time the sick man began feeling pain, and during the entire time he, Martin, had fought with the tũs, offered him medicines, and tried to appease him.

775 When the ũns soul (ũns also means "heart"!) leaves the body,
[774] then the person is ultimately dead. And, to be sure, ũns leaves
[827] the body by way of the upper arms, lower arms, finger tips. Shortly before it leaves the person, one may still perceive it very faintly as a pulse beat, and when the pulse beat ceases altogether, the ũns has left the body and immediately goes to heaven. No one could tell me exactly in what form it goes to heaven. In heaven, however, it again has the normal human appearance.
[755] When children are ill, wool threads are put around their wrists
[774] and ankles and drawn tightly in order to prevent the escape of the ũns, or at least to make it more difficult.

/275 cont./

775 [828] [774] Old Celia Uriaga of Calderas, who told us two stories, but is not a shaman herself, reported the following: When a person sleeps and dreams, his taff leaves the body, goes everywhere, and experiences what the person is experiencing in his dream. When the person dies, ũns then leaves the person by way of the veins of the upper and lower arm, where one can feel the pulse, and finally by way of the finger tips. Taff also leaves the person, but in the form of a human being with white clothing. Whereas ũns goes to heaven, taff either stays near the body in the grave or goes about on earth, although not as taff, but as ǎhimos (ghost). It can be seen by the shamans at night, but also by human beings at midnight or around two o'clock at night, in the form of a human figure sitting by the wayside. It is not a real human being, however, but more like a wind. /276/ Ahimos is generally at the burial place, there where the corpse is buried and where the bones are.

According to the account of the old tẽoi Felisa, the ũns leaves the body upon the death of a human being and goes to heaven. It leaves the body by way of the lower arms, hands, and finger tips. 755 775 763 [824] Felisa herself tries to hold back the ũns of a dying person by blowing hard on his finger tips after she has previously taken a mouthful of the herbs čǎyuts and ỳuwéz as well as brandy. At the same time, with the same herbs in her hands, she strokes the patient's arms from the finger tips upward, in order to hold back ũns. Taff leaves the human body before death. In doing so, it whistles. Felisa can see it. It wanders along a path, well dressed, and the shaman is able to bring it back by tearing its clothes with a very sharp-edged reed (nyfka), and then it is obliged to return to the body (cf. Ill. 199 /see p. 288/).

775 [825] Apart from the shamans, she is convinced that no one is able to see taff, except for dogs, when they sometimes howl for no apparent reason. Whereas ũns goes to heaven, taff remains on earth and goes 769 on living in its house as ǎhimos in the form of a breath of air. (No accessories are put in the grave with the dead, but on the following December 8, the Feast of the Immaculada, and recurrently each year, the relatives offer to the ǎhimos of their dead their favorite

/276 cont./

769 foods: meat, maize, chicha, brandy, coca, yuca, etc. These gifts are laid on a banana leaf on the floor of the church and a
775 candle is lighted along with it.) The shimos, too, can only be seen by shamans.

774 She does not know when and from where a child gets its ũns and taff. She believes that as soon as the heart of the child beats in the mother's womb, the child has ũns; it gets taff only after birth. Animals have no taff; they have ũns only if they devour human beings.

e) Shamanistic Séances

756 Each of the shamanistic séances, be it a treatment of the sick
783 or a ceremony during housebuilding or at a burial, is basically a purification from "pest" and therefore a ceremony of magic practices. All these ceremonies and séances are thus in essence the same. They differ only in details, for example, in the different medicinal herbs or in the order of the various purifications. Let us first give a description of a purification ceremony /277/ by the shaman Martin Chucue after a burial (see Ill. 208 to 213 /see pp. 292-294/).

756 The shaman does not take part in the burial. Moreover, he
764 neither enters the house of a deceased in which the corpse is still
783 present, nor does he accompany a funeral procession to the burial place. The mourners, men, women, and children, go to the burial place together and then return to the house of mourning. Before they may enter it, however, they must go to the river where the shaman awaits them in order to purify them for the first time. Then they go together to the house of mourning, which, however, the purified people may not yet enter, since it is still unclean. The shaman, with his helpers, must first purify the house with the same remedies with which he purified the people, namely, with water to which herbs and cow excrement have been added. After that the people, too, may enter the house and eat and drink.

/277 cont./

The shaman learns the date of the second ceremony and principal purification through his signs from ečˇ. He announces this date to those who participated at the burial. Those to be purified -- primarily the nearest relatives -- gather at the river and at a place set apart for this, marked by a number of flat stones. These are absolutely necessary; without stones, no purification site. First the people sit in front of the stones, and the helpers of the shaman fetch calabashes filled with water that is mixed with the šũˇ herb and to which some cow excrement, standing ready in a pot at the same place, is added. The shaman has wound a liana around his staff. Even before the ceremony, he chewed coca and tobacco uninterruptedly and drank brandy copiously. First he goes to the left with the staff and liana and beats the air with both, as though he were struggling with invisible spirits. Then, always struggling, he goes in the other directions of the site, and, finally, once more to the left. There his helpers have dug a hole about 30 centimeters deep and 15 centimeters in diameter.

Now the linen of the deceased and the linen of the mourners which they used on the day of burial are brought forth. They are placed on the stones and then washed and rinsed long and vigorously by the widow and the daughter of the deceased.

The rest of the mourners, like the shaman, have been chewing coca the whole time and get brandy to drink from the teyu.

After the washing, the shaman next struggles as before, as though he wanted to drive invisible spirits away from the site of the purification ceremony. With wide sweeping blows he moves his tama /278/ and liana slowly through the air. In particular he turns to the left again, for to the left lives the evil ečˇ, and to be sure, in the ground (*).

* The direction left has nothing to do with any geographical direction or with the direction of the river. They sit with their backs to the river.

/278 cont./

756 Then everybody goes, the shaman last, to the hole on the left
765 side and spits coca into it; then everybody takes brandy and squirts
783 it into the air toward the left. After that those who are to be purified start to undress, and each one takes a seat on one of the stones. The helpers of the shaman bring vast quantities of water -- always mixed with herbs and cow excrement -- in their calabashes, and then the very vigorous washing of the body begins. The water is first poured over the head, then over the body, front and back, so generously that everyone must have at least 25 liters of water run over him. The people themselves rub their bodies very thoroughly. In conclusion the shaman places a few herbs on the head of each one. After that, too, the shaman must again fight his battle with staff and liana in the air and squirt brandy toward the left. Then each one stands up individually and the shaman passes his shaman staff and herbs laterally around him from left to right and from bottom to top. Again and again the shaman and the people drink brandy, which they spit out in the air to the left.

After the ablutions of the mourners, followed by the ablutions of the assistants and the shaman, all sit down again in their old places, opposite the stones. The shaman sits down beside them, the staff stuck in the ground before him, his mouth completely full of coca and tobacco. In addition, at short intervals, he takes a
[787] swallow of brandy. He sits this way for about 20 minutes, chewing
[763] and drinking, and then he says that the signs in his hand are very bad and that soon someone will die. One of the young men present, the nephew of the deceased and helper of the shaman during the purification, asks who is going to die or whether it might even be he himself. The shaman, who has been talking monotonously to himself and keeps staring at one spot, answers, without turning his head, that he does not know who will die. The shaman remains sitting a while longer, constantly chewing coca and drinking brandy, and then he gets up and the people sit down in a row behind the stones, first the men, then the women. The shaman takes herbs in his hands, spits the freshly chewed coca with tobacco on them, and passes this around the bodies of all present, always from the lower left, up the side to the head, and down again on the right side, then up the back

756 765 783 /279/ and the front, and at the end he "sucks out," holding one fist over the other, everything dirty, the last remnants of the pest, from the body at three places. First, on the right side of the neck in the hollow of the collarbone, then in the middle of the head, and then he passes both hands along the arms from the shoulders down to the finger tips and sucks on the palms of both hands. Then he cleanses himself in the same manner, by passing his hands, filled with herbs, along his entire body from below upward, whereupon he goes to the left, to the hole, sticks his staff into it, and apparently disgorges something from his stomach, aiding this procedure by pressing his hands into the pit of his stomach. Then he vigorously spits into the hole what he has disgorged. After that he once again takes herbs and brandy, as well as coca, into his mouth and likewise spits them into the hole. Now he takes fresh coca, herbs, and brandy, chews this, and spits it on the tip of his staff and passes this over the bodies of all the people, moving first showly, then faster from below upward, as though he were obliged to press out, from below upward, something inside the body. As he does so, he mutters words that are incomprehensible, and finally, after purifying each person, he hurls the pest, which is hanging on the point of his staff, away from him in a wide arc. He also cleanses the mountain of linen with his staff in the same way. afterwards he again takes coca and lime into his mouth, as well as herbs, among them always šũ in particular, and puts the same thing into the mouths of the people. After that he rubs off his hands with šũ, spits brandy on them, and performs the same purification ceremony on the people as before, again passing over their bodies from below upward and finally sucking out the pest from their necks, heads, and hands.

The participants, at the moment of purification, are very serious concerning the matter. In between, however, they laugh and talk, and the men go about their occupation of straw-hat braiding.

After these three purifications in a standing position, a further purification in a sitting position follows, during which the shaman thrusts his staff into the ground in front of each person. After each purification he goes to the hole and spits everything into it

/279 cont./

756 vigorously, then always rinses his mouth with brandy and spits it
765 out in a spray. After this final purification, standing in front of
783 the hole, he moves his staff several times in a circle through the air from below upward and stabs into the hole three times with the tip of his staff, as though he wanted to thrust something corporeal from above into the hole with the staff. Several times /280/ he paces off the entire place, beating with his staff, always starting from the right and squirting brandy to the left about ten times.

To conclude the ceremony, the hole is covered with a stone, and water containing šu herbs is poured over it. All the participants spit the herbs given to them by the shaman into a second hole about 50 centimeters away, rinse their mouths vigorously with brandy, and spit this also into the nearby hole. To conclude the ceremony lasting more than four hours, they are all given a swallow of brandy by the shaman and together spit this toward the left.

755 If the teyu is called to a sick person, before the actual treat-
756 ment he must determine the cause of the illness in a special séance. Like all sickness ceremonies, it begins about eight o'clock in the evening and usually ends several hours after midnight. For his séances he uses a specific place (kaci) where, in the presence of the patient, he receives his signs. In cases of serious illness, the treatment may also take place in the house, but then, if possible, ají and salt, things which Thunder does not like, should not be in the vicinity. In cases of particularly serious illness, the shaman may also go to a quiet place, free of human sounds and the barking of dogs, in order to receive his signs there alone.

Before the start of the séance, the patient must give the teyu half a fiber bag full of coca, a bottle of brandy, and a few cigars, since without these things it is impossible for the shaman to receive his signs. He thrusts his staff into the ground, a little to one side, and then he sits down opposite the patient. He now takes his medicinal herbs out of his fiber bag and first makes up two equal little packets of various mixed herbs, each of which he wraps in a maize leaf. With every herb that he takes from his fiber bag, he first makes a pass around his own body in order to stimulate his blood and to receive his signs better. It may already happen here

/280 cont./

755 756 that his signs tell him that his efforts will be in vain, because the patient must die. Only if the signs are favorable, do he and the patient start chewing the little packet of medicinal herbs. The shaman now takes his staff and spits some of the chewed medicinal herbs on it, to prevent the pest sent by nyic from possibly being transferred to him and killing him. Then he thrusts the tama into the ground with the point, in order to announce to Thunder that he does not wish to act badly and carelessly, but exactly in accord-
[824] [787] ance with his shamanistic rules. He sets the bottle of /281/ brandy, into which he puts a stalk of the čayuts herb, beside his shaman's staff. If the stalk remains vertical, it is a good sign; if it falls to one side and goes under, it is a very bad omen. On the mouth of the bottle he also places a small calabash vessel, likewise containing the čayuts herb, which is supposed to prevent the pest from taking the shaman by surprise and killing him. He now puts a handful of coca into his mouth and starts to chew. Motionless, he gazes at his staff, ready to receive his signs. From time to time he takes more coca and lime, tells the patient that his signs are favorable, that his illness, which comes from the pest, will soon get better. Then he gets up, goes to his tama, and vigorously spits out the chew. He empties a whole calabash of brandy and squirts it into the air. Again he returns to his seat, once again takes coca and lime and a little cigar tobacco into his mouth, and again remains squatting motionless. After about an hour he spits the chew in the direction of the staff, the patient does the same, and then both get up. The shaman now tells the
[783] patient that Thunder has shown him the possibility of a cure. He will now go and gather his special medicinal herbs, and for a good purification the patient will have to bring a pound of coca leaves, six cigars, a liter of brandy and chicha, and, in addition,
[777] [786] a few pounds of meat. The teyu urgently enjoins him not to take any of the medicine of the whites under any circumstances, for otherwise he must surely die. At this séance, as well as at others, the shamans all agreed that neither did they themselves leave the place of the séance nor did their souls leave their bodies to go wandering. The signs, to which alone they give heed, are the only characteristic of their experience.

/281 cont./

755 On the evening agreed upon for the purification from the pest,
756 the patient brings the shaman the required remedies, and the
783 latter divides everything into two parts, one to carry out the séance
[782] and the other as an offering for Thunder. He first takes the latter portion and goes to a particular place in order to offer it to Thunder. He spits part of the brandy into the air and drinks another part himself, as soon as Thunder has expressed his approval of the purification from the disease and his satisfaction over the gift.

[516] For the purification ceremony the teyu and the patient squat down on the ground next to each other, in the manner customary among the Paez. The teyu thrusts his staff into the ground and sets the brandy bottle beside it. Amid coca-chewing and brandy-drinking the hours flow by, broken only by an occasional spitting out of the chew on the part of the shaman. /282/ Through his signs he gradually learns the cause of the illness and also the necessary remedies, which he now hands over to the patient. He also places on his head a packet containing the same herbs, as protection against the evil eč spirit. The teyu now goes to one side and beats the air with his tama, in order to remove the pest that is present. Then he passes it up the entire body of the patient, beginning at the feet and ending at the head, in order to squeeze out, so to speak, the pest from the body of his patient from below upward. At various parts of the body, the hollow of the collarbone, the neck, and the head, he "sucks" out the pest. Into a hole dug a few meters in front of the place of the ceremony he now spits the contents of his mouth: coca and medicinal herbs, mixed with the pest sucked out of the patient. He then squirts a mouthful of brandy into the air, so that the pest will depart altogether, and drinks a further one himself, so that the pest will not enter his body. Now the patient is called. He must first spit into the same hole the mixture of coca and medicinal herbs which he has chewed the entire time, and then he, too, must take two swallows of brandy; he must squirt one into the air, and he swallows the other one. Further purifications of the patient follow, various herbs being passed over him and the pest being sucked out several times and spat into the hole. In conclusion there follows a bodily cleansing

/282 cont./

755 of the patient with water to which šũ and yakũma have been added
756 as medicinal herbs, so that he will now be completely freed of the
783 pest. Finally the teyu asks Thunder to prevent anyone from uncovering this hole in which the dangerous pest is buried. He further asks Thunder to help him in subsequent treatments of the sick later on. The patient is told that the signs are favorable, and he is again enjoined neither to use the medicines of the whites nor ever to pass this hole containing the pest.

757 Besides these two most important shamanistic ceremonies, the
756 treatment of the sick and the purification of the relatives after a
731 burial, the shaman's ability and his magical, supernatural powers are also called upon for preventive ceremonies and acts. This is particularly necessary if epidemics of disease -- smallpox, whooping cough -- occur in the village or in a family. In the first instance, the cabildo asks a shaman who is known to be able to speak with Thunder to conduct the proper protective ceremonies; in the latter instance, /283/ the oldest member of the afflicted family asks him. First a pig must be killed for this. A piece is cut from all the body organs on the left side, and everything is put into a new fiber
[782] bag. The shaman and the cabildo then set out in the afternoon for the lagoon in which Thunder is believed to live, in order to hand over to him the bag with the pieces of meat, with the request to avert the epidemic. During this time the women remaining behind have been preparing the rest of the meat for a meal, which, however, is eaten jointly only when, after twelve hours, the shaman and cabildo return from their ceremony.

756 For several cases of illness and death in one family the help of
783 a good shaman is likewise required. The pest is generally regarded
769 as the cause of these cases of death afflicting only one family, though according to a report by S. Bernal Villa, the deceased and angry members of the family are held responsible for this. In this case the eldest of the family provides brandy, coca, and tobacco, calls together the family members, and asks the shamán to come. The latter offers the angry ancestor spirits a fat pig that has first been tied in front of the house for a whole night, while the shaman during this time speaks to the spirits about whether they will accept the offering.

/283 cont./

756 It is killed by members of another family, since the ones concerned
783 may not perform any work or activity. The pig is scalded over a
769 hole into which the hair and refuse are thrown. The parts of the pig which the ancestor spirits, through the signs of the shaman, wish as a sacrifice are put into a fiber bag with a wooden stick. During this time the women bake small, flat maize cakes, and, to be sure, as many as there are dead in the family. These are
756 likewise put into the bag, and, in addition, a large quantity of
783 other food. Moreover, small wooden dolls, dressed like living
532 Paez, are carved in the same number as the dead. About 40
769 meters from the house a grave with a lateral niche is dug, exactly like the one made for deceased persons. In the evening the shaman goes there with the members of the family and performs the ceremonial purification on them. After that the sky becomes covered with thick, black clouds, in the direction of which the teyu spits his medicinal herbs. After two hours the clouds move off toward the left and bring into view the starry sky. Now the shaman lays the dolls (as representations of the spirits of the dead) into the lateral niche of the grave, sets a wax candle beside them, and blows his medicinal herbs over them. With a /284/ stone he closes off the lateral niche and then places the
756 bag with the food into the pit. After the latter has again been
783 filled with earth, he proceeds to a renewed purification of the
769 members of the family, which is undertaken a third time in the house and at the same time on the helpers in the pig-slaughtering and the baking. In conclusion one half of the pig is now eaten jointly, whereas the other half belongs to the shaman as remuneration.

756 A further important shamanistic ceremony is undertaken when
342 a new house is built. On this occasion the teyu, in dedication,
783 spits his herbs on the future fire area of the house and digs a small
[824] hole into which he places the herbs ṽũ and ṽulápe. On a small pile of wood he burns other herbs, the ashes of which he carries out of the house. Now he lights a new fire, in which he roasts a young maize ear and gives it to a dog to eat. If the latter does not die, this is regarded as a sign that no pest exists here any longer and the occupants may confidently live here. If this were not the case, they would be obliged to leave the house.

/284 cont./

241 The following ceremony before the first harvest of a newly
756 cleared field should ~~also~~ be understood in the same sense as
783 all the shamanistic séances of the Paez, namely, as a purification
[273] from pest or to ward it off. The owner, taking along coca, chicha,
[276] and brandy, goes to the field with the members of his family and
[824] the teyu. The latter first sprinkles the field with water to which
herbs have been added and then distributes small packets of
[782] medicinal herbs to all present. He now takes a sample from each
type of produce and makes a bundle out of this, in order to offer
it to Thunder. After this gift, the owner harvests a fiber bag full
of each type of produce and carries it home. He sets down all
the bags beside one another in front of the left side of the entrance,
and then the shaman spits his herbs over them, in order to cleanse
them of the pest, which, without this ceremony, would otherwise
[782] have been carried into the house. After the products have been
cooked, they are given to the shaman, who distributes one product
to each of those present and offers the rest as a gift to Thunder, who,
in turn, gives everything back to the shaman.

754 A good shaman does not know any herbs or other means to
756 harm people or to kill them. Such acts are the mark of the nyic.
According to what we heard, however, the boundary between good
and bad shamans is not very sharply drawn; each could also carry
out the activity of the other, even though Thunder -- people are
convinced -- does not lend his help to a nyic, so that the latter is
578 dependent solely on his bad and wicked agents. /285/ There is a
754 constant struggle between the teyu and the nyic, not openly to be
756 sure, but in secret. The teyu constantly feel pursued by the evil
machinations of the nyic, and one who relaxes his attention for
only a moment will be killed by them. In this struggle the one
who is the stronger magically has prospects of victory; but since
the nyic do not openly announce their successes over the good
shamans, one can learn only of the victories of the teyu over the
evil shamans. Thus a shaman from Santa Rosa relates that in his
youth he was very treacherous and underhanded and was already
familiar with many agents. One day a nyic, who had already

/285 cont./

578 killed his mother and his brothers, declared his hostility toward
754 him because he was well on the way to becoming a good shaman.
756 He became ill and his signs announced to him that he would soon
578 die. Now there was a famous shaman in Huila, and he sought
75 him out with much brandy and coca. Immediately this shaman
774 realized that it was a case of bewitchment by a nyic. The only possibility of getting off alive was to kill the soul of the evil sorcerer immediately. Together they dug a hole for this purpose and in it they waited many nights for the soul of the nyic. It came, but since it was very suspicious, it would not let itself be caught. More than a month passed in this way. Night after night the two were lying in wait, without sleeping, and then one night, near daybreak, the soul of the evil sorcerer came. The shaman was ready, however; he raised his staff and with a powerful blow it fell into the hole. Immediately earth was piled up over it and the hole completely covered. Hissing, the soul died.

756 Since the young shaman from Santa Rosa was well once more,
789 the old shaman sent him home. He advised him, however, to
824 carry herbs with him, since there were robbers on the way. Cautiously he proceeded to the dangerous spot, and already his signs announced to him that the robbers were in the vicinity. He immediately blew his herbs, and the robbers fell into a deep sleep. Farther along on the way home he met several people who were pursuing a criminal. They gave him brandy and coca and asked him to help them, from his home, to capture the criminal. He then strewed čayuts on his own feet, and the criminal could no longer walk, so the people were able to capture him.

75 Other shamans report that in case of a bewitchment by a
774 nyic, the bewitched person and the members of his family slaughter a pig and put a piece of each organ in a fiber bag. /286/ They bring these to the shaman, together with brandy, coca and cigars. The meat serves as bait for the soul of the sorcerer, for at the first cockcrow, when all present are chewing coca, it comes to get the bag. It falls into the hole dug under it, however. The shaman immediately throws herbs into it, those present their chewed packets of coca, and then the pit is covered up as quickly as

/286 cont./

75 774 possible. After his soul has thus been killed, the sorcerer, too, must die.

754 774 The same type of soul-capture as is reported here by the teyu is also the most common method of evil sorcery practiced by the nyiç. The nyiç digs a hole and stations himself above it, in order to await the wandering soul of his victim. It is visible, like a lighted candle. When it is over the hole, the nyiç gives it a powerful blow with his staff, so that it falls into the hole. If it is supposed to die very quickly, the nyiç throws strongly efficacious herbs over it and covers the hole with graveyard soil. If not, he has many possibilities of inflicting on the soul, and therefore on his victim, injury that takes effect more slowly. If he sprinkles the herb baw (Araceae) over it, the stomach of its owner becomes so distended that he dies. If the nyiç sprinkles lime over the soul, the person becomes blind. In the case of the poisonous herb boračero (Datura sp.), the owner of the soul becomes insane; the stinging smoke of the agave also produces insanity. Putting the leaves of the čuwét (Krameria ixina?) and the soul together brings death. The herbs kaspi (Toxicodendron striatum Kuntze), lečero (Euphorbia cotinifolia L.), and Pringamoza also cause death.

754 774 824

f) The Sociological Aspect of Shamanism

182 756 Although the shamanistic ceremonies and the conceptions underlying them are of a religious nature, nevertheless the activity of the shaman is a definite sociological fact. Without the activity of the teyu, neither the family nor the village community can exist. It is only the shaman who, through his personal abilities, is able to counteract the evil effects of the nyiç, the tũs, eč, and gělyómp spirits and turn them into something good. His activity, however, consists not only in the repulsion of what has already appeared, in the healing of what has happened, but his activity is also preventive, in fact, prophetic, for he predicts future sicknesses or deaths. Moreover, no house construction,

/286 cont./

182 no new harvest may be undertaken until the teyu has first cleansed
756 of the pest the building site or the crops, respectively.

/287/ He is, however, not only the protector of the individual or the individual family, but is also responsible for the beneficial
[173] co-existence of the members of the whole village. Thus, it is not surprising that it was the shamans -- besides Thunder under his various names -- who were the war leaders in the mythical tradi-
[726] tions. Thanks to their magical gifts and strength, they successfully led their people against the Pijao and the Spaniards. Several times the elders of the various villages told us that one day Thunder will again drive the white intruders out of the Tierradentro of the
[648] Paez and kill them. And it is only logical that, as late as 1952,
[789] on the occasion of an impending attack by an armed group of white revolutionaries, the shaman of Santa Rosa, as the successor of the mythical Thunder, should spit his magic herbs on the road leading to the village, in order to destroy them. Old Felisa Ipia is behaving in a similar manner when she keeps the souls of all the village inhabitants gathered together in the threads of her shaman's staff, in order to be able to protect them better against evil, magical influences.

756 On account of these certain supernatural abilities of theirs, the
554 effects of which no one in the community can evade, the teyu
[285] have a certain unofficial authority. In addition, they are all at least 30 to 40 years old and thus, by their very age, fulfill one of the natural prerequisites for recognition by the community. Not a few of them feel honored by this, set apart from the great mass of people, but many assured me that they were shamans only unwillingly, that though they were called by their ability to receive signs, they were nevertheless oppressed by the weight of the burden of their responsibility.

756 During times of epidemics of disease or inexplicable, "super-
124 natural" deaths, they are the focal point of the community, to
[182] which no one appeals in vain. And in conversations with them we generally had the distinct impression of facing unselfish, helpful human beings. They make no secret of their activity, and they tried, as best they could, to tell us about their experiences and knowledge which they use for the good of the community.

/287 cont./

4. Music

533 In no area of Paez culture is poverty evident to such an ex-
535 tent as in song and dance, the predominant expressions of the character and spirit of all peoples. No peculiar dance is per-
[173] formed among the /288/ Paez, and I heard no song sung. This undoubtedly represents an impoverishment, for it may be seen
533 from the folklore that in former times there was dancing. A similar conclusion must also be drawn about the playing of very
[173] agreeable music. Their knowledge of music, however, makes it
[181] highly probable that song also existed, especially among a people
[581 521 522 192] that is basically jolly and constantly disposed to jest. In fact, it is very difficult for a girl who is slow in jocular conversation to get a husband. And to my question about the Paez word for "sing house" listed in Uricoechea, the amiable Victoriano, to his own great surprise, was immediately able to give me a special word in his language, "mémyat."

534 It is not possible to say with certainty which of the musical
[171] instruments used by the Paez today is an original one. The absence of any kind of rattle, the outstanding instrument of the American natives, is surprising (*).

* Pittier de Fábrega (p. 325) /see the bibliography in the foreign text, p. 326/, however, mentions among the musical instruments of the Paez a rattle (tsoóts) in the form of a calabash with a handle, which was filled with small stones. Whether this may not perhaps be an instrument of the Negroes of Belalcázar is still undecided.

534 The cow horn (kǎčn) found in every house is not in the true
202 sense a musical instrument, but one for signaling. It is completely undecorated and, consisting of a horn sawed off at the tip, gives only one tone, which is produced in the same manner as the tone of a bugle or fanfare. This horn is used by the men when they come down from the mountains after a joint felling of the trees needed for housebuilding, in order to notify the village of their return.

/288 cont./

534 The genuine Paez music is performed by a group of musicians whose instruments consist of a larger or smaller number of transverse flutes, a bass drum /Pauke/, a drum /Trommel/, a tambourine, and a triangle (Ill. 202 /see p. 289/). The number of flutes varies between five and 15. Tambourine and triangle [439] (číngalo) may be lacking. The latter is always purchased, as in general is the tambourine (panderēta), covered with skin on one side and provided with tin jingles.

Judging by its name, the transverse flute (koi) is a Paez instrument. There has not yet been an investigation of the distribution or culture-historical age of this type of flute in America; in the Old World it is certainly younger than the long flute and the Pan flute (Sachs, p. 147). Among the /289/ Paez it is 65 534 centimeters long and about 2.5 centimeters in diameter. It is 463 made from a type of reed which is also known as koi and which [824] only grows in the mountains. Its manufacture is specialist's work. In Calderas Vicente Puche is at present the only producer. A flute can be made only from the pattern of another one, which, however, is not a model flute expressly for the construction of others; rather, it is any one that Vicente happens to have at his disposal. For example, he promptly sold to me his only instrument at the time. To make a new one, he said, he would borrow a flute from a neighbor.

534 The tube of the flute is cylindrical and without knots. The 322 seal on the side of the blowhole is made by means of a piece of expressed sugar cane, which is pushed a few centimeters into the flute. The six finger-holes are not placed at equal intervals from one another. The first is 25 centimeters from the blowhole, the second finger-hole is 4.2 centimeters from the first, the third 4.5 centimeters from the second, the fourth 4.2 centimeters from the third, the fifth 3.8 centimeters from the fourth, and the sixth 4 centimeters from the fifth.

The seven very sharp-edged holes of the flute have the same diameter. They are burned in with an iron tube (barflya) of the same dimension and heated red-hot. Their position and their intervals are taken from a flute held alongside and are marked

/289 cont./

534 by cuts with a machete (Ill. 203 /see p. 290/). In spite of the
322 relatively correspondent holes, each flute has a slightly different tone caused by the varying diameter of the tube.

533 According to the investigation kindly undertaken by my
534 brother Wilfried on the sample flute of Vicente Puche that I acquired, it is tuned between C and C-sharp. Its six finger-holes produce a nonsemitonic seven-tone scale. All the tone steps, however, are somewhat inexact, that is, not exactly a whole tone-step apart. This is particularly noticeable from the third to the fourth tone where we perceptibly have less than a major second, but considerably more than a half step. This is noteworthy because in our diatonic major scale there is also a definite half-step between these two tones.

The blowing is on the right or left side. The extended fingers, work-worn by the heavy field work, cover the finger holes with the first or second joint.

534 The value of the flute is not very high. On festive days
[578] people are in the habit of becoming intoxicated in the festival
[796] houses and in the subsequent brawls the flutes are used as striking
[273] instruments and thus broken.

/290/ Every music group has at least one small cylindrical drum (káka) or a bass drum (kut), both of which are covered with skin on two sides and are wider than high in their dimensions.
[177] Drum and bass drum in this form are probably borrowed and were
[194] taken over throughout South America from former Negro slaves. Their manufacture among the Paez is specialist's work. At
[463] present Vicente Puche makes the flutes as well as the drums. In former times, however, there was a special expert who made only
[461] drums and bass drums. The work time for their manufacture amounts to 10 to 14 days, since one day is allowed for each operation (cutting wood, drying it, for the various processes in treating
[824] the skins, etc.). The cylindrical body of the drum is made from
[237] the wood of the utsé tree. The two drum-skins (katc) are made of calfskin. They are stretched with cords made of agave fiber, which run in a zigzag from one stretcher to the other over the body of the drum. They are tightened by a continuous loop that encircles two strands of the stretching cords at a time and at the same time

/290 cont./

534 is wound around the entire body of the drum. A string with a small piece of wood as a rattle device is stretched across the lower skin. The method of construction of the drum and the bass drum [184] is the same in Calderas. A drum in Santa Rosa differs in that each of the stretchers, upper and lower, consists of a switch used double, with the edges of the drum skin clamped in between (Fig. 37 /see p. 258 /). The measurements of the small drum are 16 centimeters in height and 22 centimeters in diameter, those of the bass drum 40 centimeters in height and about 60 centimeters in diameter.

533 In playing the music, for which no text is (any longer) known, the drum and the bass drum beat the same rhythm, but in a different manner. The drum is beaten on the skin with two drumsticks, which are simply two ordinary, inarticulated pieces of wood. The bass drum is beaten with one hand with a regular drumstick consisting of a stick with a wrapping of cloth, while the other hand beats against the frame with a little stick. In three-quarter time, the principal kind of time, the bass drum is beaten with the drumstick in one hand, the first and third quarter regularly and the second quarter in eighths. The other hand beats afterwards with the other stick on the frame.

533 173 Whether this Paez rhythm is original or was taken over with the drum cannot be determined with certainty. According to the tradition of the Paez, as told in the story "The Paez with the Ax," the Pijao women in former times, when as yet /291/ there were no drums, beat out the rhythm on their breasts with their hands during the dances. We may assume that this was also in part the case 533 among the earlier Paez. According to E. Castillo i Orosco, the [175] Paez formerly used hanging chichacanoas /chicha troughs/ as drums [534] (kwimb). They consisted of hollowed-out tree trunks and during the kwimbkó dance were beaten by all the men together, while the women sang. The rhythm beaten on the drums at the present time, however, seems to be less firmly anchored than the melody. They [797] are so fond of the latter that they do not sing hymns at the Mass in [177] the mission church, but play the customary melodies on the same instruments, albeit disproportionately slower. The drum and the bass lose the beat in doing this; they do not know how to begin

P /291 cont./
533 properly with their instruments and simply uniformly beat sixteenths.
[177] Thus it seems that the melody is more original and hence more
534 firmly anchored in the tradition of the Paez, and that with the
C borrowing of the drum, the corresponding modern rhythm was also
533 adopted. This has been corroborated for me by an observation per-
534 taining to the music of the Negroes of Tumaco in the Colombian
[177] port city on the Pacific coast. There, among the descendants of onetime slaves, West African musical instruments with corresponding Negro designations are still in use today, among others the xylophone-like marimba and two drums, the conical konuno with skin stretched over one side and the cylindrical bass drum covered with skin on both sides, the bombo. The latter shows the same type of stretching as the Paez bass drum and is also played with two drumsticks, one of which, provided with a raw-rubber knob, is struck on the skin and the other, a simple stick, on the frame of the body of the drum.

P
533 The musicians are always men. They play the music as
[462] amateurs who learn one or another instrument because they have taken a fancy to it. The drum is the more popular instrument, whereas flutists are less numerous and primarily limited to certain families.

P
535 The dances danced today, which, by the way, not everyone
[171] masters, correspond to the Colombian bambuco, though they do not show the dexterity and lightness of movement required for that, such as is found among the Colombian rural population in other parts of the country.

P
535 By way of a note, there should be cited the dances which H.
114 Pittier de Fabrega (based on E. Castillo i Orosco) mentions for the Paez and which in some of the designations, point to an independent culture: onza-kó, /292/ "mouse dance," nwi-kó "buzzard dance," itsa-kó, puberty dance of the girls, eč-koi-kó, dance of the spirit-flute, tel-koi-kó, dance of the long flute or war dance, la-kó, dance to dedicate a house, etc.

/292 cont./

5. Folklore

*539 The present fund of tales of the Paez is neither rich nor varied. Here, too, a certain impoverishment has undoubtedly taken place, as may be seen from fragments of larger complexes of myths. Among these there are the "Story of the Woman from Whose Body Useful Plants Come Forth," stories about transformed animals and human beings, as well as stories about werejaguars. [171] The story of the ghostly human head that comes rolling by is also extraordinarily widespread in North and South American legends [176] and has a manifold lunar-mythological meaning. In contrast to this, the complete absence of typical stories about the forest spirit (gĕlyŏmp) is noteworthy, although the latter plays an important role in the religious conceptions of the Paez. Animal and transformation tales are only very dull and colorless.

114 609 *539 [887] Unfortunately, the reluctance of the Paez to communicate is particularly frustrating in the recording of the myths. It is primarily the old people who can tell stories. But they are the very ones who are particularly standoffish toward the stranger. The chroniclers and early reporters tell us nothing about the folklore of the Paez, and even the most recent travelers of the 'thirties report only the story of Juan Tama or deny that the Paez have any mythology at all.

12 609 *539 [554] The stories collected by S. Bernal Villa and by myself could surely be augmented with better acquaintance among the old people. The unpopularity of our interpreter, especially among the old people, was sometimes so great an obstacle that Victoriano had to ask suitable informants for some of the stories told about his father or uncle.

*539 The themes of the stories chiefly consist of tales about Thunder (Nos. 1-12), mostly under his names of Juan Tama, Llivan, Chauté, or Juan Chiracol. In the myths he is the first shaman and teacher of the present-day shamans (see under "Religion" /see pp. 176 ff. /) and considerably more powerful than human beings. He is not an exalted, numinous figure, however. On the contrary, people in olden days /293/ sometimes treated him quite badly, threw poisonous herbs in his lagoon,

/293 cont./

*539 and even shut him up in a box. A second group of stories (Nos. 13-14) deals with tales about spirits, a third (Nos. 15-16) tales about Pijao, the feared man-eaters and dreadful enemies of the Paez. These are related to a certain extent to tales about werejaguars (Nos. 17-18). The remaining stories, which cannot be further classified, are given in the last group (Nos. 19-22).

[114] In order to achieve a certain completeness, stories No. 1 and 2 about Juan Tama are given here as told by G. Bürg (p. 34) and G. Hernandez de Alba (1946, p. 953), respectively, and stories No. 4, 9, 10 as told by S. Bernal Villa (*) /see the bibliography in the foreign text, p. 323/.

1. Juan Tama, the Water-born

The following remembrance of Juan Tama lives on among the Indians of Vitomcó: A long time ago there ruled in Vitomcó a female cacique who was childless and therefore always sad when she thought about who would follow her in power. One day when she was washing clothes at the confluence of the Rio Paez and a brook that comes from the Páramo de Moras (from the lagoon known today as Juan Tama), she saw in the water a floating piece of wood on which lay a small child. She fished it out, and, since it was a boy, she took him in, reared him, and, when he reached majority, made him cacique. This cacique -- known as Juan Tama today -- was very wise and strong and led his people against the Spaniards when the latter settled on the Magdalena

[648] River. The last time he was seen on the Paez was in the great battle of San Vicente, where he and his troops succeeded in defeating the Spaniards. Since he had come floating on the water, he was not regarded as an ordinary human being, but rather it was assumed that he was sent to the cacique by her ancestors, or else that he descended directly from the gods who mated with the lagoon of Juan Tama, so that the latter is his mother. When Juan Tama saw that his people were victorious at San Vicente and no longer needed his protection, he disappeared again. He merely gave his subcaciques orders and then went back to his mother, the Lagoon de Juan Tama, where he lives to this day and from where he directs the destinies of his Indians in Tierradentro.

1: Nachtigall--217 E-5 (1952-1953) 1955 SC15 Paez SC15

*539

2. Juan Tama, Son of the Morning Star

One day when the morning star was shining particularly brightly -- so it is said among the Paez of Lame -- some people found a child in a ravine which since then has been called Ravine of Stars. This child was Juan Tama. They took him and brought him to a woman to rear. Juan Tama, however, sucked her milk so vigorously that it failed the woman. She therefore took him to another woman, but he did the same thing to her. The people therefore said that he could not be fed by a woman and gave him regular adult fare.

When he grew up, he married the cacique of Huila and became the chief of all the Indios. He instructed his people and ordered them to keep their land for themselves and not mix with the whites; then they would be invincible. When he felt death draw near, he went to the lagoon in the Páramo de Moras and sank under the water. He had come from there, he went back there. He had no heirs.

3. Llivan, the Shaman and Deliverer of the Paez

In former times the Pijao lived in Plata Vieja and came to Calderas each year to kill and to devour the people. They also destroyed the maize fields. The Calderun were very much afraid and did not know what to do. There were two men in Calderas, however, who were stronger than all the other men. They were Llivan and his brother. During a new attack by the Pijao, Llivan's brother was captured, whereas he himself was able to escape. The Pijao killed the brother and then skinned him, "like a cow," and cut the meat from the bones and devoured it. They then put the bones in the skin again and filled the skin with ashes in place of the flesh; then they sewed it together again, added a remedy (yútse) to it and dressed the brother in his clothes and ruana and put his hat on him and sent him back to his brother. (Here the narrator explained: The Paez of today do not know the remedy used by the Pijao to bring the brother back to life. Nor

*539 /294 cont./
is the word used today for any kind of remedy or medicine of their own shamans or of the white doctors. It refers to a remedy to restore the dead to life, which no longer exists today.) The remedy, however, is efficacious only until another person /295/ addresses the one who has been restored to life in this manner. Now when Llivan's brother approached his house, Llivan saw him first, called his mother's and sister's attention to him, and all three burst out of the house, and Llivan cried: "Why, here comes my brother; I thought that the Pijao had killed him." At these words the brother collapsed and lay there as a mere heap of dust with some skin and a few bones. Then Llivan, his mother, and his sister wept bitterly. Llivan said he could now no longer live in the house. He left it and went into the mountains, without eating salt or spice or meat, but he lived only on herbs. He traveled through the mountains for a long time in this fashion and suffered terrible hunger. He had to sleep at the foot of rocks. He walked along the bank of the Guacharaca brook and saw that the water was very dirty. He then decided to see who was making the water so dirty and, going upstream, found a tall, handsome man sitting and throwing stones into the brook. (In reply to my question as to whether that was what made the water so dirty, the narrator said: "I think that Llivan was a shaman; and since he had eaten nothing for such a long time, he was dreaming, and in reality the water was not dirty at all, but rather it merely looked dirty to him. And the other man, who in reality was Thunder, was also a shaman, and in this way it was possible that they met.")

When Llivan meets the man sitting by the brook, he comes nearer, without the other being aware of him. Only in the last minute does the other turn around and ask Llivan: "Why are you passing along here?" Llivan replied: "The Pijao killed our men and my brother and devastated the field." The man then asked: "Why do you not fight the Pijao, why are you so cowardly?" Llivan replied: "What shall I fight with, I have no weapon." Then the other said: "I have a sling which I shall lend you and with which you can fight." -- "But how am I supposed to fight with it?" asks Llivan. "I shall show you," answers the other man, who

* /295 cont./
539 in reality was Thunder, "watch carefully!" And Llivan observed intently how Thunder took the sling, threw it high into the air, and how, as it fell down, there was a flash of lightning with a loud crash of thunder and wind and rain, so that the descending lightning split trees and almost killed them themselves. Then Thunder gave Llivan the sling, and Llivan likewise hurled it and produced the same effect. "Good," said Thunder, "you can handle it, it, take the sling and fight the Pijao with it. Guard it well, /296/ and when you have fought with it, I shall call you, and then you will come into my house which is up there."

Llivan went with the sling into the house of his mother, but did not show the sling to anyone. He put it in a pot and put a cover on it.

A week later the Pijao came as far as the region of Togoima and set out in the direction of Calderas. There was a vast number of Pijao. The people gathered in Llivan's house and were very much afraid. The mother and sister were also afraid. But Llivan said nothing. He neither said that they should be calm, since he would fight, nor did he say that he had a sling. And when the Pijao had come as far as Llivan's house, he sent his mother to fetch him the sling from the pot. The mother went, but saw only a green snake in the pot, no sling. Then she became very frightened and ran back to her son and said: "There is no sling in the pot, but only a large green snake, which I cannot lift out." "Nonsense," said Llivan, "bring me the sling that is in the pot; there is no snake in there." (Here the narrator explained that Llivan's mother could not see the sling, since she was not a shaman like her son.)

But the mother was afraid and did not go. Meanwhile the Pijao forced their way into the house, and Llivan himself went to the pot to take out the sling, which, in fact, was in there. Before he lifted it in order to hurl thunder and lightning down on the Pijao, he said to his mother and sister: "Crawl under the pot so that the Pijao will not devour you," but since he tossed the sling at the same instant, they no longer had time to protect themselves in this way, and the descending thunder and lightning killed all the Pijao and his mother and sister as well. Then he

* /296 cont./
539 bent down to his mother and shouted into her ear with the voice of thunder, "Ooooh," whereupon she came back to life. And he did the same thing to his sister. Llivan then left the house in order to see how many Pijao were dead; he went as far as Togoima, holding a pair of scissors in one hand and a bag in the other, and cut off the earrings and necklaces of all the dead Pijao and gathered them up in his bag. Near Togoima he found a young Pijao who had not yet been killed sitting in a hole; he had a human leg that he was going to eat because he was hungry. "Ah," said Llivan, "you are not yet dead?" -- whereupon he hurled his lightning and killed this Pijao also.

[192] Then Llivan carried all the ornaments that he had taken off the Pijao /297/ into one of the underground prehistoric burial caves (koftkaç) of the kind that the Paez do not use to bury their dead. This cave was located near a river, and after Llivan had put down the ornaments, the river rose and covered the burial site with the treasures.

Then Llivan returned to the house of his mother and said: "Now I have killed all the Pijao and none of them will ever come back. But now I can no longer live with you. Since I have killed so many Pijao, it is possible that I might kill you, too. I must therefore leave you. I bought myself a very beautiful house in the mountains and shall live alone from now on, but never die." His mother and sister both wept, but not he. Mother and sister offered to accompany him, but he declined. Then Llivan set out. His sister followed, in order to see where Llivan went, but Llivan was accompanied by the wind and therefore he went so fast that no one could follow him. The sister could only see that Llivan rose far behind into the air. Then it began to rain, and the clouds were very low, and Llivan fell down into the Hipendyk Lagoon. Thenceforth Llivan lived in the lagoon and became Thunder.

[115] Victoriano told me this detailed story after learning it from his father and his uncle. Old Celia Uriaga of Calderas told it to me in a similar way but much less completely.

/297 cont./

*539

4. Juan Chiracol, the Son of the Jaguar

Juan Chiracol is descended from two mestiza girls who came down from the mountain Zenzepechi after they had to flee from the Pijao. They lived on potatoes and other field produce which they won from the mountain soil with great diligence and by means of their stone tools. One day they were surprised by the Pijao. They devoured one of the girls; the other remained behind alone.

After being embraced by a jaguar, she became pregnant and gave birth to Juan Chiracol. He was very intelligent. He knew of the sorrow that the Pijao had caused his mother. For that reason he fought against them until he had wiped out all of them. His mother made him accustomed to the presence of the jaguar, and the latter took care of his son Juan and brought him much meat from the mountains. When he was grown up, the jaguar disappeared.

/298/ Mother and son now settled among the Paez and began building a church. Juan Chiracol gave the Paez a great deal of advice. He warned them about selling land, for this was only for the Paez, he said, for whose safety he had fought against the Pijao. Then he told them that he was now going to the El Caspe lagoon and that he would never again return. When he grows angry, one hears him to this day, crying "uuuh."

The El Caspe lagoon lies far away on the border of Ata. It is supposed to be very malicious. It is believed that when a tree falls or a rock crashes down, it is Juan Chiracol who is thus announcing his displeasure. It is said that he is not interested in women; that is why there are no descendants from him.

5. Chauté Transforms Human Beings into Animals

Chauté caused much harm, and that is why human beings took him far away, to the place where the sun rises. This happened in the following way: In olden times there were only human beings. Chauté, however, made animals out of human beings by saying:

*539 /298 cont./
you are now such and such! The chiguaco was formerly a sacristan because he can pray well; the chicao was able to whistle well, and the chachalaca was formerly a great gossip. The rabbit was formerly a very deceitful person; today when the dog chases it, it -- maliciously -- does not let itself be caught, but dodges about all the time.

The carpenter was able to make large boxes, so large that one could put a human being inside. He promised Chauté that he would present him with a large box. When he had finished building it, he showed it to Chauté, and the latter lay down in it, in order to see whether it was large enough. The carpenter closed the lid, and to prevent Chauté from getting out and causing further harm, he carefully nailed it shut. Chauté begged the carpenter to let him out, but he did not open the box. He begged him at least to cut two holes into the lid so that he could see something. The carpenter took his chisel and made a nice hole, and as he was about to make the second, his tool slipped and knocked out one of his eyes. "I will be blind!" he cried, but as he said this he saw trees and only more trees and nothing else. He had turned into a woodpecker and from then on only chisels holes in trees with his beak and raises his young in them. Chauté, however, remained in the box. And when he moves around in it, the earth trembles.

/299/

6. Chauté Causes the Rio Paez to Form

A man named Chauté walked along a road for a very long way as far as the páramo. He was very thirsty, but he had no water. Then he came upon a swamp in the mountains. He looked for a tube similar to the kind from which flutes are made, stuck it into the swamp, and sucked up water with it, until he had enough. Before that the water had no outlet, but now it followed Chauté as he went on. The latter asked himself why it was coming after him, and he started to run. But the water followed him. Frightened, he climbed a tree. The water remained at his feet and formed a large lake, without running off on any side. So the man climbed down

/299 cont./
539 again, and the water followed him again. Then Chauté ran very fast. The water remained somewhat behind; in order to avoid being overtaken, Chauté now ran zigzag. Since that time the river at La Plata has had many bends. He ran on in this fashion for a whole day. When he grew very tired, he let himself fall into the large river (Magdalena River). Since that time the Rio Paez empties there.

7. Chauté Punishes San Tomás

A man named San Tomás turned himself into a bird similar to a carrion vulture. Then he always devoured the bodies and entrails of dead horses. Each time he asked his nephew, the black woodpecker, for permission. But the latter refused it, since his own teeth were not good enough to devour bodies. San Tomás, however, had such good teeth that he could devour everything. One day there came a man named Chauté. He was very envious of San Tomás because he ate so much meat, as well as entrails, eyes, and tongue. In order to punish San Tomás, he turned himself into a dead horse. San Tomás came and thought it was an ordinary horse and began to eat it. When he stuck his head into the belly of the dead horse, Chauté pulled his belly together and held San Tomás fast. The latter almost died and could only weakly flap his wings. Then Chauté opened his belly a little so that San Tomás could pull out his head. He was very battered, his eyes were swollen, and he had a bad headache. He had to tie a cloth around his head and went home.

Thereupon Chauté turned himself back into a human being and set out to visit San Tomás. "I have wonderful /300/ meat," he told San Tomás in greeting, but the latter merely shook his head and said: "Do not talk so much, I have a headache and cannot eat." Then Chauté went away again.

8. Chauté Turns Human Beings into Stones

On another day Chauté turned himself into a comb and lay down on the road. A woman came along, picked up the comb, and stuck it in her bag. After she had gone on for a while, she looked

* /300 cont./
539 in vain for the comb that she had found; it had disappeared. Then when she had gone on a short distance, she met a small child. It asked the woman for a bit of sugar cane from her fiber bag. But since it was only a child, she refused. "Then you shall be stone," said the child, who in reality was Chauté. Since then the woman has been a stone.

On another occasion Chauté did something similar. On a festive day when the people had a great deal of meat, Chauté came along, transformed as a small child, and asked the adults for some meat. "You will get nothing, there is barely enough for the adults," said the people, "in that case children get nothing." "Well, then you shall be stone," said the child, and the human beings turned into stones.

9. The Visit of the Young Stranger

One day a young man came to Calderas, to live on one of the mountain ranges of the place. A girl visited him very often. Her mother scolded her for that, but she told her that a snake drew wild pigeons from the twigs of the bushes and that she was going to gather them. Soon the girl had a child, a son, from whose body a type of worm came out. His young mother gave instructions that these were not to be touched or pulled out, because they were connected with the life of her child.

One day she went to the field and stayed somewhat longer. Her child, which she had left at home, woke up, and when its grandmother took it in her arms, she noticed the worms. Filled with disgust, she pulled them all out. The child died after that.

When the mother of the child came back, she lamented its death and threw herself weeping into the nearby lagoon. She did not drown, however, but merely disappeared into it. In the same manner the young man disappeared into it, /301/ in order to live with her in the lagoon. The mother of the girl in the lagoon succeeded in persuading a shaman to perform magic. He took the cloths used by a menstruating woman and, together with herbs, tossed them into the middle of the lagoon. The young man and the girl then left the lagoon in a black cloud and went to Santa Rosa.

1: Nachtigall--225 E-5 (1952-1953) 1955 SC15 Paez SC15

/301 cont./

The lagoon in Calderas dried up. A few embankments on the meadows today are the remains.

10. How Thunder Kidnapped the Women

Once upon a time a man had a potato field in Pueblito. When he went there one day to harvest it, he met an old, ugly man with a big hat plaited out of twigs. The man glanced around and noticed that the old one came from a fallen tree. The old one asked whether there had already been a harvest. The owner answered that he had harvested a few potatoes. The old one then asked the man to lease him a piece of land, so that they could harvest together. The owner did not agree to this, but said that instead he had other large fields that he could lease. The old one insisted, however, that he work together with the owner. They sat down to talk about it, but they could not reach an agreement.

Suddenly, a thick, black cloud came up, and it began to rain hard. The people ran into the field hut to protect themselves, but the rain came in nevertheless. The old one followed them, but remained outside and sat down on a tree trunk. The people noticed with amazement that the rain could not do him any harm. They invited him to come in, but he refused. The water now rose higher and higher, so that the people ran away. But the old one kidnapped the women. The shamans found out later that the old one had been Thunder.

According to another narrator, the story happened in the following way: An old woman was harvesting a potato field with four other members of her family. Suddenly a cloudburst set in. The youngest girl ran up the slope of the field, and when she looked around, the potato field with the people in it had turned into a lagoon. The little girl saw from above how an old man with a ruana and a large hat plaited out of twigs came and kidnapped the people.

1: Nachtigall--226 E-5 (1952-1953) 1955 SC15 Paez SC15

/302/

11. How the People Drove away Thunder

*539 Once upon a time Thunder lived in Calderas, and his wife as well. Besides his wife, however, he also had a mistress. She lived in Santa Rosa, where the Bugta lagoon is now. He had a daughter by his mistress and very fine property with fine, cultivated fields. In Calderas, however, Thunder had angered the people because he had kidnapped a woman and her daughter by placing a lasso on the road. The Calderun, therefore, put poison in a gourd and threw it into the lagoon. Thunder was obliged to leave it for that reason, and since that time the lagoon has dried up.

He then went with his wife to Santa Rosa. Since there was not yet a lagoon there, however, he caused it to rain hard over the site of the present lagoon, so that the water gathered in a small area and kept rising higher. When the water had filled the entire basin, Thunder was able to live in it with his wife and his mistress. But upon the people of Santa Rosa, too, Thunder inflicted all kinds of injury. Thus, one day, he devoured a cow belonging to the people of Santa Rosa. The people grew very angry at this and built a drainage ditch in order to dry up the lagoon. Thunder then begged forgiveness, however, and the people left him alone after that, until he again did harm. Then the shamans of Santa Rosa threw poisonous herbs into the water, just as the Calderun had done, so that Thunder was obliged to leave this lagoon, too. Since then he has been living in Barbacoa where there is likewise a lagoon. The wife of Thunder, however, is still in the lagoon of Santa Rosa. The old shaman Felisa has visited her, as well as Thunder himself when he sometimes comes back. Both of them look like Paez, are very well dressed, and wear exactly the same costume as the other Paez.

12. The Battle between Thunder and the Stars

When the shaman Felisa was still very young, she one day set bird traps along the enclosure around the lagoon and caught many birds in them. One day, as she was doing this, she met Thunder. He was very angry. He was, in fact, a bad man who muddied all the water of the lagoon by having thrown many trees into the water.

/302 cont./

539 Now, among the stars there is a special kind called pũsves, which could not endure Thunder. They plunged down from the sky into the lagoon in order to cleanse it. To annoy Thunder they had almost drained the lagoon. Thunder was very angry at this. /303/ In his rage he roared so dreadfully that he opened his mouth up to his ears and his whole tongue hung out. Then the pũsves became frightened and descended to the bottom of the lagoon where Thunder had his house and asked him why he roared so loudly. "Because of you, of course!" he replied. But then he asked the pũsves to forgive him because he needed the lagoon in order to live, and the stars then forgave him. But he had to promise not to roar so loudly any more. Then they gave him a remedy, whereupon his mouth grew together again into a small, normal aperture. [821] The stars then returned to the sky, where they still are. They differ from the other stars in that they move in the sky.

13. The Rolling Head

A man from Palma came to Calderas to visit a shaman. This visit lasted until two o'clock at night, at which time he left Calderas to return to Palma. On the road he came upon a stone on which lay a human head, probably that of a Pijao. First he saw only the teeth flash white in the darkness. Since the man from Palma had a staff with him, he knocked the head off the stone with the words, "why are you grinning here on the stone like an ear of maize?" The head fell down and rolled into a brook. The Palma man became frightened at this and ran on his way. But the head left the brook and hurried after the man, whistling constantly. The man ran faster and faster, and since the road was very steep, he was soon unable to run any longer. The man thereupon took tobacco in his hands and caught the head with his ruana and threw it in a wide arc back into the brook. He then hurried on until he came to a very tall tree which he climbed rapidly and hid in the topmost peak. Meanwhile the head left its brook bed by an underground passage and again followed the man, but since the latter was in the tree, the head could not see him and

/303 cont./

*539 went past the tree. The head walked on and on, and since it could not find the man anywhere, it turned back and found the scent of the man at the foot of the tree. It looked up and saw the man sitting in the highest tip of the tree. The head was unable to climb the tree, however, and in order to reach the man, it went back a little and leaped into the air. But it still could not quite reach the man and fell down to the ground again. Then it tried again and again, more than /304/ a hundred times, but it could never reach the man because he was sitting too high. Then the head became frightfully tired from its many vain attempts, and since it had to walk far to reach home, it had to leave the man whom it wanted to kill and return so as not to meet human beings by day. Then the Palma man climbed down from his tree and was able to reach home safely.

14. The White Dog

*539 781 794 The father of Victoriano went to Belalcázar one Saturday, where he became drunk. At two o'clock at night he set out on the way back. On the way he saw a white dog that was very thin. The father thought that it was a regular dog, but it was not a dog at all, but rather the taff soul of a human being. Suddenly this dog turned into a human being, very thin and lean in shape, whose heart hung out of the body so that it dangled in front of the chest. Then the father gave the lean dog a blow with his traveler's staff, but it did not hit the dog. The father became frightened at this and took to his heels. But the lean man kept running after him, so that the father, out of fear, became short of breath and almost died. Then the father pretended to be very stupid and simply sat down beside the road, laid his hands on his knees, and went to sleep. The lean man then left him. When the father awoke in the morning, he looked for the place where he had first met the lean dog, but he found only a bush with white blossoms. The father was convinced, however, that he had met a taff.

484 794 761 (No Paez customarily goes long distances at night, because the taff souls are abroad at night. And if a taff meets a human being, it immediately calls together a great many other taff ("about 50") and they bring about the death of the person, because the one concerned kills himself out of fright.)

/304 cont./

*539

15. Encounters with the Pijao

A young Paez man was working for a rich landowner on the latter's finca in the Cauca Valley somewhere near Popayán. The finca was near the mountain. One day he went into the mountains, since his master had a great deal of livestock. On the way he met a Pijao woman, who seized him and carried him to her house in order to devour him. There were many people in her house, and since she wanted to devour him by herself and not share him with the many other Pijao, /305/ she put him in a large pot. This was as large as a Paez house. She left him there for three days. During this time the Pijao drank, ate, and danced. After three days, when all the Pijao were tired and asleep, the woman went into the mountains to fetch wood and make a fire, in order to roast the Paez youth. The latter meanwhile looked out from the vessel in which he was imprisoned and saw two small girls on the hearth stones, the daughters of the woman. They were playing and nudging the drunken and sleeping Pijao, who, however, did not stir. The youth quickly climbed out of his vessel, took a piece of wood, and killed the two girls. He quickly seized a pot of gold and ran away.

When the woman returned to her house with sufficient wood, she found her two children dead. She immediately looked into the pot, and when she did not find the Paez youth in it, she became furious and quickly ran after him. The young man ran for three hours until he met a large herd of cattle belonging to his master, where he hid in the midst of the cattle. The woman tried to pursue him, but since she smelled so badly the cattle became wild, roared and kicked the woman, and she was unable to seize the youth. (The narrator explained that the Pijao are not familiar with cattle and dogs. If a dog and a Pijao meet, the dog kills
[827] the Pijao on the spot. The Pijao smell entirely different from other human beings, somewhat like animals.) Now, when the woman was unable to reach the Paez, she was furious and scratched her head with its many lice. But she could do nothing, and she therefore went back to her house and devoured her own two dead children.

* /305 cont./
539 The Paez youth could now go to the house of his master, and he showed him the pot of gold and reported his experience. He gave the gold to his master. The latter gave him a great deal of meat to eat and also gave him a fine bed to sleep in. When the youth lay down in it, he died.

[1781] [825] [1763] Comment of the narrator: A Paez who has an encounter with a Pijao or a jaguar may report this to people after half a year at the earliest, or, still better, not until a year later. If he does so earlier, he must die, as the following story, too, shows.

A Pijao met two Paez men in the mountains, one of whom was very ugly and dirty and the other very clean and handsome. The Pijao killed the clean one and devoured him on the spot. He first wanted to wash the ugly and dirty one and therefore went to a brook with him. The dirty Paez man, however, could swim, /306/ dived into the water, and swam away. The Pijao man, like all Pijao, was unable to swim and threw stones and earth into the water, but nothing helped. The Paez man was able to escape. Then the Pijao, very sad, remained behind on the shore. The dirty Paez went to his house and told his family about his experience, and then he, too, had to die.

16. The Paez with the Ax

A Pijao went into the mountains to catch birds. For this he used a stick smeared with a substance similar to glue, with which he touched the birds so that they remained stuck to it. He did this for many years. One day he came to the house of a Paez, whose owner, however, was not there. In the house lay only an ax (as the narrator added: made of iron, for the Pijao are not familiar with any kind of tools, neither knife nor axes. To prepare their fields for planting, they can only split the bark of trees with stones, whereupon they dry in the course of a year. After this time the Pijao plant their maize on the field with dead trees standing on it. Thus, since they have no machetes to fell trees, they cannot lay out proper burned-off fields, like the Paez, although they are acquainted with fire.)

* /306 cont./
539 The Pijao was very much astonished over the ax in the Paez house. He did not touch it, but wanted to own it. The next day he came back and met the owner and asked him to sell him the ax. But the Paez did not want to. (The Paez man and the Pijao man were able to talk to each other and to understand each other well, the narrator explained, for in former times they both had the same language.) The Pijao then offered a whole pot of gold for the ax. He would, of course, have to fetch it from the house of the Pijao. The Paez agreed, and so the two set out together for the village of the Pijao. Since the latter, like all Pijao, was unclothed, to be sure, but much taller than the Paez, he took him on his shoulder and carried him to his village. In one hand he had the ax, with which, along the way, he would cut down a tree with only one blow. Like all Pijao, he had uncanny strength.

[651] Having arrived in the village, there were no people present, since it was minga day /see "Minga" in the glossary, p. 249/, a day on which the whole village is obliged to take part in joint work (road or bridge building). The Pijao with the Paez man went into his house, in which only his mother was present, and he /307/ asked her not to divulge anything to anyone, for this Paez was not to be devoured, as was done otherwise. For if the other Pijao knew that there was a Paez in this house, they would want to devour him. Mother and son, therefore, dug a hole in a corner of the hut, put the Paez in it, and covered it with a large wooden bowl. In the evening many Pijao came to this house and talked and drank, until suddenly several Pijao discovered that there was such a pleasant Paez fragrance there. The mother of the house answered that what was so fragrant was not a Paez, but her own stench. They all laughed. Then they went on eating and became drunk on chicha and started to dance. A Pijao man made the music with his transverse flute, while the women beat time on their breasts. (The Pijao women all have long pendulous breasts.)

The Pijao danced for three days and three nights in a row, without sleeping. Then they all fell asleep. The whole house was full of the dancers. They snored like pigs; only the Pijao who had brought the Paez and his mother were not asleep. They

*
/307 cont./
539 took the Paez out of his hiding place and led him to a room that was completely filled with gold. Here the Paez was permitted to pick out what he wanted. He took a clay pot and filled it completely full of gold and stuck it into his fiber bag. Then the Pijao took him on his shoulder again and carried him back to his house in the forest on the mountain. Not until a year later did he dare tell the other Paez that he had gold, and he distributed it among the people of the village.

Comment of the narrator: The Pijao always had a great deal of gold that they took out of a lagoon filled with water. In order to do this they had to throw a boy or a young man on the shore of the lagoon into the water, and immediately all the water flowed to this point and devoured the youth. The lagoon then became completely dry for a short time, and the Pijao were able to take the gold from the bottom of the lagoon with pots. Whenever they wanted gold, they had to sacrifice a boy to the water in this way. And they did it often, for the Pijao were immeasurably rich in gold.

17. The Human Jaguar Who Wanted to Steal the Gold Staff of a Pijao

A man who was a human jaguar went hunting in the mountains of the páramo. While he was resting on the mountain, a Pijao came along who was a member of low rank of the cabildo. He had a very beautiful /308/ staff made of gold. He stuck it into the ground. Without seeing the human jaguar, he stacked wood in a pile, drew fire out of his armpit, and lighted the wood. Then he fetched bananas and a snake and began to roast them. Tsē, hissed the snake.

Meanwhile the human jaguar considered how he might steal the gold staff. He turned himself into a jaguar, and with a knife that he carried in his hand he leaped upon the Pijao in order to rob him of his staff. The Pijao, however, interrupted his meal, took his staff, and ran off. The staff was very heavy, but he did

* /308 cont./

539 not let go of it. The human jaguar ran after him. He almost killed the Pijao, but the latter did not let go of his staff. They ran in this fashion for three hours, until they came to a rock near which the Pijao lived. There the jaguar turned himself into a human being again and sat down. The Pijao, however, descended to his village, which lay on a great plain. He went into his house. Then the Pijao came running to catch the supposed jaguar. The latter again turned himself from a human being into a jaguar and ran away from the Pijao. For three full hours he ran, back to the place where the Pijao had been roasting the bananas and the snake. Both were still there, as well as the fiber bag. The snake was only half cooked. The human jaguar sat down and ate up everything. In the afternoon he went back to his house again and also took the bag along to show it to his wife. After he had knocked, he entered
* 539 his house. (In connection with this the narrator remarked: The
754 human jaguar was probably an evil shaman, because formerly they were able to turn themselves into jaguars in order to steal cattle and sheep. Then, when they returned to their houses, they turned themselves back into human beings. Today, however, no one is able to turn himself into a jaguar any more. To do this, one needs a special remedy (yutse), which looks like a caterpillar. It may be obtained in the Cauca Valley, but nobody knows where.)

*539

18. The Duel between the Human Jaguar and the Mountain Jaguar

On a mountain there was a jaguar who robbed the people of all their animals. It stole chickens, turkeys, foals, cattle. It always came down from the mountain and devoured these animals. The people were therefore very angry. One day six men set out to kill the jaguar. They had with them many dogs and many guns. They found the jaguar on the mountain, but it devoured all the dogs and filled the people with terror. They therefore returned in the afternoon, very /309/ sad and without dogs. They now had no more dogs to go hunting another day. So the next day they went to a man who was known to be very strong and asked him:

/309 cont./

539 "Why do you not go with us? Why are you so cowardly?" This man, however, was a human jaguar. He could turn himself into a jaguar, and he decided to kill the mountain jaguar. He did not tell the people, of course, that he could turn himself into a jaguar, but rather he simply said that he was willing to kill the jaguar.

The next morning he set out very early, armed with only his machete. The other men wanted to accompany the human jaguar, but he said: "Just stay here, you are of no use anyway." The human jaguar then departed without his dog, armed only with his knife. At about eight o'clock the jaguar man was in the mountains and came upon the mountain jaguar asleep. The man then turned himself into a jaguar, let his claws grow, and began to knock over bushes and trees, as though he had an ax in his hands. When he had sharpened his claws well in this way, he began to roar loudly. The mountain jaguar awoke and got up, furious. They both went to an open spot and began at first merely to play. But the mountain jaguar did not want to play and immediately started to fight in earnest. They then fought wildly for about three hours. Then the mountain jaguar was able to wound the human jaguar. Since the latter, however, had merely played at first, he had more strength at the end and was able to kill the [154] mountain jaguar. (Narrator's comment: The human jaguar is always stronger than the mountain jaguar, because the former eats salt.) The human jaguar then turned himself back into a human being, and with his machete, which he had brought along, he cut off the four feet of the mountain jaguar and put them in his bag. He set up the animal's body, however, as though the jaguar were still alive, the head turned downward in the direction of the village of the human beings.

The human jaguar now went back to the village as a human being and told his wife and the people that he had killed the jaguar of the mountains. "I have killed the mountain jaguar, go and see whether it is so."

The next day the people set out and went into the mountains to see whether the jaguar was really dead. They took along guns

* /309 cont./
539 and dogs. They had provided themselves with the latter from somewhere else. They came to where the battle had taken place. But, instead of a dead jaguar, they found a living one that was about to pounce on them. The people then became terribly frightened. They nevertheless gradually went closer, and since the jaguar continued to stand there with closed /310/ eyes, without moving, the people went still closer and discovered that it no longer had any feet at all. Then they saw that it was already dead and carried it to the valley, to their houses.

*539
372

19. How Human Beings Obtained Fire

An old woman possessed fire. One day a little girl came to her to ask for a firebrand. But the woman gave her only a few small chips which went out on the way, before the child reached home. She went back to ask the old woman for a fresh firebrand, but this, too, did not last until she reached home. Again the girl came back. This time, however, the old woman was not at home. Inside the house, however, a large heap of wood was burning. The girl took a large, burning branch and ran away. At this moment the old woman returned, saw the child, and ran after the girl in order to take the firebrand away from her. The latter, terrified, threw it into a pile of dry straw. The people, who until then had not known fire, fetched their fire from here. Since then the place has been called ipikwe = "fire mountain."

This story is told in different versions. According to one, the old woman always distributed fire to the people, and when one day she did not want to do it any more, she let her fire go out and disappeared with a glowing firebrand. The people noticed it, however, and pursued her. When the old woman realized that she was being overtaken, she hid the firebrand beside the road and disappeared in the river. Through the smoke, however, the people found the fire and shared it among themselves and possessed it from then on.

* /310 cont./

539 In another version, the old woman always drew fire out of her
372 armpit when the people asked her for it. When the missionaries came, they declared fire to be magic and demanded that it be blessed, or else she would have to surrender it. The old woman, however, neither wanted to have it blessed nor did she want to give it up, and she therefore fled. As she ran, she was caught by the flames, and when they enveloped her, she leaped into the river.

*539

20. The Girl Who Turned Herself into a Snake

One day a small child who was the daughter of Thunder came forth out of a spring. The people took her in, and a married couple offered to bring her up. One day when the priest came into the village to read the Mass, all the people went to church, as did the foster /311/ parents of the little foundling. The little child wanted to go along. Since she had no clothes, however, the parents did not take her with them. When they had gone, the child followed, dressed only in a poor piece of cloth, to take part in the Mass, too. The parents were already in the church when the child came to a brook and turned herself into a snake. The latter grew and grew and was soon as large as the rainbow. It slithered its way to the church, which was full of people, encircled the entire structure with its body, and stuck its head in the door. It devoured all the people, with the exception of its foster parents, whom it allowed to escape. Then it stretched itself up to heaven in order to devour the Virgin Mary besides. When its head was quite high, two eagles came flying up and bit it in two. It fell to the ground, dead. A man then came along with a mula, cut up the snake, and loaded the parts on his mula and took them far away. There it probably rotted.

But after that there were snakes in all regions. One above all stank abominably when the sun stood warm in the sky. It kidnapped the people in the surrounding fields and devoured them. They therefore asked an Englishman to kill the snake. He came and hung in a tree a large fiber bag, into which he put a human being

*539 /311 cont./
as bait. When the snake came to devour the human being, he cut off its head and tail with a saber. The head flew through the air in a wide arc and landed at a place called Ulnenga. The tail flew to another place, called Luto, where many snakes are still found to this day.

21. The Slain Woman from Whose Body Useful Plants Arise

An old woman of the type of people who are called õho, man-eaters, and who are either men or women, but always very old, and have very large faces, went into the village of Calderas to kidnap children whom she wanted to devour. There were many people there with their children. She told people that she loved children very much, and the people entrusted their children to her, to have her watch over them. She always devoured the children, however. One day the people gathered together and decided to kill the old woman. She lived in a remote house. The people carried much wood to it, piled it up along the walls until it reached the roof, and set fire to it. The house burned, and with it the old woman. Shortly before her death she spoke the following words: "From my heart will arise potatoes, /312/ gourds, and onions." With that she died. Half a year later, at the place where she died, there was a field with the crops mentioned, which had not been known before. The potatoes, as well as the other crops, were very large, and when the people cut them up, they found, in the middle of the potatoes and the gourds, a drop of blood.

22. The Stolen Eyes

A man lived in his house on the mountain and had stored in the loft of the house a great many potatoes to set out in the field. One day, when the owner was away, a thief came, took down a few potatoes, kindled the fire, and roasted them in it. Then he went away again. He did this many times, and the owner was getting very angry because he had fewer and fewer potatoes. Once

* /312 cont./

539 when the thief again came, took down some potatoes, kindled a fire, and roasted them in it, he took out both of his eyes "out of foolishness" before he ate and laid them on one of the three hearth-stones. Then the owner of the potatoes, whom the thief, of course, could not see, stepped up, saw the eyes, and kicked them into the fire, so that they burned with a bang. The thief heard the bang, to be sure, but thought to himself, how fine the potatoes are popping and sizzling!

When the thief had eaten all the potatoes, he looked for his eyes, but could not find them. He then left the house very sadly, without eyes, and set out for his own house. On the way he met a rat who was out walking there, and they started a conversation. The thief complained that he had lost his eyes and that, without eyes, it was very difficult to find them again. He begged the rat to lend him one of hers only until he had found his own eyes again. The rat lent him one, but since both of his eyes were burned, he could not, of course, find them. The man then turned himself into wind.

The rat searched for the thief of her eye for a long time, but could not find him. Her son, like his mother, also had only one eye. The son in turn had a son, and he, too, had only one eye. Since that time the descendants of this rat family have only one eye. And that is why one can still find rats today who, to be sure, have the nose, mouth, feet, skin, and ears of a rat, but only one eye or none at all; they go back to that rat who once lent one of her eyes.

/313/

105 V. Summary and Culture-historical Classification of Paez Culture

[161] If we briefly summarize the sketch of Paez life and the ele-
[621] ments of their culture, we find before us a democratic agricultural
people of 25,000 persons, among whom no one is master and no
[177] one servant. Surrounded for centuries by Spanish culture, they have
[197] preserved their language in extensive sections of their area of
settlement.

/313 cont./

105 settlement. At the same time, however, we must certainly confirm a cultural impoverishment, considerable in some respects, among these people who outwardly seem quite prosaic and matter-of-fact.

105 Anthropologically they belong to the American Centraloid
143 /zentraliden/ race (v. Eichstedt /see the bibliography in the
144 foreign text, pp. 323-327, for this and the following references/) with a striking predominance of blood group 0. Although the latter fact is only one component of the somatic picture, it is extremely interesting to find a predominance of this blood group among a large number of American natives. Among the Paez there are 88.78%, among the neighboring Guambiano 84.25% (Lehmann, Duque y Fornaguera, p. 200), among the natives of Caldas 92.25% (Duque, 1944, p. 626), among the Sibundoy 84.42%, among the Santiagos 94.23% (Paez-Perez y Freudenthal, p. 413), and among the Pijao the blood group 0 is almost 100% (Reichel, 1944, p. 517). These investigations of Colombian tribes agree with a more comprehensive picture. According to the analysis of G. Arcila Velez (p. 11), 80.6% of the people among the Eskimo are of blood group 0, 91.3% among the pure North American Indians, 72.7% among the Navajo, 97.7% among the Yucatecans, 79% among the Mataco, and 100% among the Guarani of the Rio Grande do Sul.

105 The form of settlement of the Paez in the deeply fissured
[361] mountainous region of Tierradentro is the loose arrangement of individual family-farms on the mountain slopes, as far from neighbors as possible. The village settlement-area is geographically invariable and embraces the natural area of the dwellings and the land used within a valley basin. The house, as the family focus and social center for one family in each case, is built on the family's own land. It is used -- depending on the type of construction -- for a harvest period or for ten to 15 years. The land belongs to the family that first cleared it. Besides this there is community land for the free use of all members of the village. The interior of the normally /314/ hip-roofed rectangular houses is divided into two rooms, one of which serves as the kitchen and living room, the other as a storage room.

/314 cont./

105 The clothing of the men and women covers the upper and lower body. The men's upper garment, called "ruana" in Colombia, "poncho" in Peru, is a sleeveless shirt open at the sides. It is ancient American, known both from the relief of the so-called "sun god" of Tiahuanaco and from a grave of the pre-Spanish [291] period in Arica (northern Chile) (Montell, pp. 173-183). Soon [171] after the Conquista, since the second half of the sixteenth century, this Andean article of clothing, which consists simply of a square piece of cloth with an elongated slit for the head, was distributed throughout the area of the Andean mountain cultures. Its name, "atc," among the Paez, however, has no parallel linguistically. [177] The men's trousers are clearly Spanish. The women's costume is most simple: as an upper garment to a skirt a rectangular piece of cloth is simply put crosswise over their upper bodies.

[241] From an economic point of view, field cultivation is primary. It is carried out by the men in the form of the burned-clearing system with a ten-year clearing cycle. The only field tool is the [433] digging stick. The minimal area of cultivated land for one family is about one hectare. The principal crops are maize and sugar [177] cane. The latter was not introduced until after the Conquista. The Paez word means "sweet." The Paez designation for maize, "kotc," has no parallel with the corresponding words of the Chibcha, Carib, or Aruac /Arawak/ language groups, but with Kechua /Quechua/, where maize is called "kuts" (Birket-Smith, pp. 22-30). The stimulants are coca and chicha made of sugar-cane juice. Both Paez words, es and mbéka, respectively, have no parallels in other language groups.

105 241 There are no outstanding festivals indicative of a planter's culture or rites associated with the products of field cultivation, nor does anything indicating an agricultural rhythm of life appear in the myths and religious customs of the Paez. The mythology and ceremonial customs are remnants of a hunter's attitude of mind. It appears as though the Paez did not adopt their primitive agriculture until the time of the Conquista or shortly before, and adopted only the mechanical application of the methods of simple digging-stick farming, without the ceremonial customs associated

/314 cont./

105 with sowing and harvesting otherwise characteristic of peoples
241 who plant. It is not improbable that they practiced this field
[412] cultivation as they describe it for the Pijao. In the story /315/ of the Paez with the ax (No. 16) it is said that the Pijao were not familiar with tools in former times and, accordingly, could not fell trees to lay out a proper burned-off field. In order to obtain fields for their sowing, they were obliged to split the bark of trees with stones. After these were dried, they sowed their maize between the dead trunks.

105 In connection with hunting, economically insignificant today,
[224] the hunter is surrounded by a number of prohibitions such as we find everywhere among hunting peoples throughout the world.
[226] Fishing is carried on with poisonous plants at weirs. It took place as a joint fishing expedition of the entire village in the February dry season when the water was at its lowest level of the year. This large annual fishing expedition was called enzte. The time
[233] period of one year was also designated with the same word. Raising
[556] large livestock is almost purely a sport or a matter of appearance
[231] and wealth. Horses are not used; cattle are slaughtered only for the three large annual Christian festivals (Semana Santa, San Juán, Immaculada).

Among weapons, only the shotgun for hunting is of significance
[773] today. The pellet blowgun and the stone-sling are used as toys. In
[411] the mythology the latter plays an important part as a decisive weapon in war.

In the handcraft techniques of plaiting and weaving, the use of agave fiber and sheep wool predominates, generally in the form of spun and twisted threads. The carrying bags of agave fiber and the wool coca bags are made by the loop technique; the hammocks, bird nets, berry sieves, and stone-slings by the knot technique. Only straw hats are plaited. The bands of the fiber bags are woven out of agave fibers; the women's belts and the articles of clothing of men and women, out of sheep wool. The weaving method is simple rod-weaving with the linen texture. The women's belts have an ornamental warp formed during the weaving process. The weaving frame is vertical, of the so-called

/315 cont./

105 "Araucanian" type (O'Neale, p. 115). In place of the shed rod we have a simple loop; in place of the heddle rod, a bundle of loops.

105 The warp threads are stretched in the form of the "false spiral warp,"
286 a mixture of the method of the continuous, circular warp with the
171 method of the terminating flat warp. This genuinely American way of stretching the warp is found among the Northwest Coast Indians as well as among the tribes of the Gran Chaco (Olson, pp. 114-121). Culture-historically H. Nevermann regards the various forms of American weaving /316/ as having originated on the basis of a native or pre-Polynesian plait-weaving. Among the Paez we find this technical stage in the plait-weaving of the carrying bands of the coca bags.

105 For dyeing, vegetable dyes are used, which dye only sheep wool, but not cotton.

Pottery is very simple. There are only hemispherical pots and bowls made with the spiral coil technique, both without any ornamentation.

The present political organization of the Paez is based on the village community. It is led by a village council (cabildo), whose members are chosen for a year from among the men of the village. The designations for the members of the cabildo and their functions are in part Spanish. In former times the leaders of the Paez were
[621] often men with shamanistic abilities. The village is not organized
[565] by either classes or occupations. No one need serve another for
[463] pay; the word and the thing are unknown to the Paez. The father
[464] of the family with his sons or brothers works his fields, and if
[476] friends or neighbors lend their help, it is compensated for by assistance in their fields.

[594] The family organization is basically the patrilineal,
[178] monogomous nuclear family, consisting of the parents and the unmarried children. Here there has probably been the least
[851] change in Paez culture. The children are given the family of the
[533] father. For her marriage the woman receives no dowry of any kind from her parents, and she keeps her maiden name. Since there are no social or financial reasons for concluding a marriage, a woman has only the merit of her personality and abilities. These are tested during a "trial year" before the actual conclusion of the marriage.

/316 cont./

105 601 The kinship nomenclature shows remnants of a "classificatory" system, into which the individual is fitted as part of a living structure and does not stand out in profile, detached within the family. Persons are differentiated in address according to certain circumstances of age and life, and, among others, siblings are differentiated in address, according to whether they are younger or older than the speaker.

105 53 In art and mythology a considerable impoverishment has taken place. There is neither song nor any peculiar dance. The music of transverse flutes and drums, performed with great enthu- [177] siasm, is to be stressed. The cylindrical drum with skin stretched on two sides, which is used at the present time by the Paez, is in all parts of America a loan from the Negroes. In earlier times hanging, hollowed-out tree-trunks were used for the dance and for conveying information, such as /317/ are used today as troughs for making chicha. The rattles formerly present are no longer used today. The transverse flutes with six blowholes used by the Paez are post-Columbian; at any rate they are not found in this form either archeologically or recently among uninfluenced Indians. The only transverse flute form known from pre-Spanish and modern times are flutes that are stopped at both ends and provided with two blowholes (Izikowitz, pp. 298 ff.).

105 773 776 In the fund of tales no comprehensive picture of the world emerges. The chief figure in the myths is Thunder, who appears as the first shaman and as a war leader. He is not, however, an exalted, numinous figure, but rather to some extent has charac- teristics attributed to forest spirits in other parts of South America. [784] There is also a special forest spirit (gĕlyómp) among the Paez. He [224] has the figure of an old man with large, exposed sexual parts, and his stings inflicted as punishment for ritual uncleanness in connec- tion with hunting cause the human being sickness and pain. He does not, however, appear mythologically. Fragments of larger myth-complexes are the story of the woman from whose body useful plants arise, the story about the ghostly human head that comes rolling along, stories about transformed animals and human beings, and stories about werejaguars.

/317 cont./

105 In the Paez religion there is no cult priesthood with offerings
771 and prayer, just as there is also no cult or worship of numinous
756 beings. The Paez religion is a shamanism, the two forms of which are the evil sorcerer and the good shaman as doctor and helper against evil sorcery. As a religious phenomenon Paez shamanism is not as distinctive as the Siberian or the North American shamanism. Assistant spirits and the soul journey as shamanistic means are only rudimentary with the shamanistic "signs," the "thunder child," and the journeys of the shaman to the house of Thunder on the bottom of the lagoon; there is almost no ceremonial apparatus. Nevertheless, the activity of the good shaman in particular, as doctor and helper in sickness caused by magical practices, as well as his function as sociological crystallization point of the community, is entirely a shamanistic phenomenon.

105 Linguistically Paez belongs among the agglutinative languages,
[197] in which the form element is made up by affixes that characterize
[194] whole classes of words. In phonetics the series of palatals including all the consonants is striking, as well as the frequent occurrence of nasal vowels.

105 /318/ The linguistic classification of Paez is difficult. Since
114 the research of H. Beuchat and P. Rivet it has been regarded as
197 one of the Chibcha languages. This was not always the case. E. Castillo i Orosco emphasized in 1735 that in its grammatical structure Paez is very different from Chibcha (p. 63). It was C. Cuervo Marquez who first regarded Paez as a Chibcha language (p. 199). H. Pittier de Fábrega emphasized in 1907 that the relationship of Paez refers only to the rules of grammatical construction; the vocabulary is completely different (p. 341). Then in 1910 Beuchat and Rivet investigated all the North Andean languages in a work of large scope and then confirmed the distribution of the Chibcha languages from Nicaragua to Eucador. According to this, the majority of the Colombian tribes spoke Chibcha (pp. 193-198). Up to now this classification has neither been examined in greater detail nor disproved by linguistics. This may be left to the philologists. Here there will only be a few remarks about the problem of the Chibcha languages in general and that of Paez as an

/318 cont./

105 assumed Chibcha language in particular. The difficulty of language
114 comparison in the northern Andean area lies in the wholely in-
197 adequate material for comparison. The majority of the tribes investigated have died out long ago, and there is seldom sufficiently complete material available from the few living ones. Even the true Chibcha (Mwiska) on the plateau of Bogotá has not been spoken for two and a half centuries and is known only from the literature. Beuchat and Rivet choose the lexicographic and grammatical method for their language comparison. The total vocabulary of the languages investigated contains about 200 words. These serve as comparative material for 49 languages, namely, for true Chibcha (Mwiska) and 23 other languages and dialects in northern Colombia and Panama, as well as for 25 languages and dialects of southern Colombian languages! Methodologically the procedure was to find a lexicographic agreement between language A and language B, another agreement between language B and language C, a further agreement between language C and language D, etc. In the proof, language A is related to languages B,
105 C, D, etc. Applied to Paez: In the vocabulary given by Beuchat
114 and Rivet there is no Paez word in direct agreement with Chibcha!
192 Nor was there even a choice of words according to their qualita-
197 tive significance. Thus it is especially noteworthy that there is a complete lack of corresponding designations for food, animals, useful plants, metals (gold), parts of the body, kinship designations, etc. /319/ On the basis of the vocabulary, therefore, it is not possible to designate Paez as a Chibcha language. To what extent this applies to the other southern Colombian tribes, for whom there usually exists only a very limited vocabulary, cannot be discussed here. In any case, there is a large number of Kechua /Quechua/ words in all these languages -- as a result of the close proximity to Kechua-speaking peoples. (For Paez, cf. the
105 compilations in Castillo i Orosco and Pittier de Fábrega.) Gram-
197 matical agreements between Chibcha and Paez do exist. At the
[114] same time, however, Beuchat and Rivet expressly point out that,
[193] of the languages compared, Paez shows the greatest grammatical differences with Chibcha (pp. 190/191). In summary it may be

P /319 cont./
105 concluded that the classification of Paez as a Chibcha language
197 cannot be regarded as definite. The grammatical agreements may just as well be remnants of an older, or superimpositions of a younger, population layer. In addition there is the fact that in the sometimes centuries-long struggles since the Conquista considerable shifting and intermingling of populations have taken place. It is possible that the tribes existing or surviving today are only scattered remains or groupings that have been made up from other tribes only after the Conquista.

C P 105 P [197] P E [361] P C [241] [412] P C [323] P [325] P C [411] P C [771]

Culturally the Paez have nothing at all in common with Chibcha culture. The Chibcha language group established by H. Beuchat and Paul Rivet is a linguistic concept, which, in an uninterrupted extension from Nicaragua to Ecuador, embraces completely different cultures! For example, the Chibcha settlements on the plateau of Bogotá are compact villages, whereas the Paez live on individual farms. The agriculture of the Chibcha, with the use of a wooden spade, is relatively advanced in comparison with the digging stick and burned-clearing cultivation of the Paez. Technically the manufacture of Chibcha ceramics is far above that of the Paez, and it is certain that the Paez did not do any gold work. Among the Paez the sling was the principal weapon; among the Chibcha, club and spear with the spear thrower. In the Chibcha religion we have a creator-god or a tribal mother with a pantheon of other gods, with offerings of gold and emeralds; we find hero-temples, holy places, and sacred kings, while among the Paez, only shamans.

C 105 P C 197

Thus we have a gaping division between the Chibcha language group and the Chibcha culture. Scientific terms, however, should be unequivocal and not designate different concepts with the same words. This is done correctly in Europe, for example, with /320/ the Indo-Germanic family of languages, the Dinaric race, or the band-ceramics culture.

The cultural concept of the Chibcha is the older one. In order not to identify and confuse the culture group with the language group which is completely different from it, the language group should have a different name, especially since it is not certain whether

C 105 Pc 197 /320 cont./

what is common in the vocabulary and structure of the language goes back to Chibcha or to a linguistically different substratum. Analogously this is true of the archeological cultures of the northern Andean area, which are also similar in many aspects, but do not go back to the Chibcha culture.

P 105 172 174 There remains the question of the ethnic relationship of the archeological Tierradentro-culture. In view of their meager material and artistic cultural possessions, the Paez were technically not capable of the manifestations of an advanced culture that exist in Tierradentro. With their strictly democratic social structure, they also lack the organization by estate needed to maintain such a culture. Even in the mythological traditions of the Paez, there is no hint of any relationship with the archeological culture. The only similarity seems to be the Paez method of burial in a niche grave; typologically, however, this is not identical with the shaft grave. In addition there is the difference of the cremation burial in the archeological culture in contrast to the skeleton burial of the entire corpse among the Paez. Moreover, the Paez are a local, relatively narrowly circumscribed tribe; the archeological culture, on the other hand, has the most extensive geographical relationships in the art (*), in the style of

> * G. Hernandez de Alba (IV) /see the bibliography in the foreign text, p. 324/ found a necklace of small sodalite figures in a grave chamber. This material is otherwise not found in Colombia. It comes from a Bolivian mine, and works of art made of it are found in Tiahuanaco as well as in Peruvian and Argentinian sites.

their stone statues, and in the method of burial in shaft graves.

Artistic relationships, however, make probable more extensive linguistic relationships than is the case for the Paez and their neighbors. From this standpoint a relatively well-developed trade may also be assumed. The disposition and present activity of the Paez, however, does not give us any support in this respect either.

/320 cont./

105 We are therefore obliged to regard the presence of the Paez in
172 their present settlement areas of Tierradentro as subsequent to the
174 archeological culture. Whether, as later immigrants within a larger population movement, they were the destroyers of the archeological culture, or whether they settled on the sites of the archeological culture only in the course of their wars with the
105 Spaniards cannot be clarified at the present time. /321/ The
172 latter assumption is corroborated by the fact that the reports of
174 the early Spaniards about the tribes that they encountered and
114 about their geographical position are not always clear. For exam-
131 ple, P. Manuel Rodriquez (1684) has the Paez living in the Páramo de las Papas, the páramo west of San Agustín, in which
101 rise the Magdalena, Cauca, and Caqueta. It is also remarkable
105 that the first Spanish reports do not mention the Guambiano, the
114 present-day western neighbors of the Paez. The assumption that
172 the Paez were affiliated with a newly immigrated, war-like
174 population is corroborated by the fact that the tribe of the Andaki /Andaqui/ living in the culture area of San Agustín at the time of the Conquista also had nothing to do with the archeological culture, but may possibly be regarded as the destroyers of it.

VI. List of Foreign and Technical Terms

104

Alcalde	Colombian designation for the burgomaster of a town or head of a district. Also the designation for local native authorities.
Ají	Very pungent mixture of ají pepper with onions and other spices.
Arroba	Spanish measure of weight of 12 1/2 kilograms.
Cabildo	Colombian community council. Among the Paez the designation for the democratically chosen village council.
Chaquira	Columbian designation for glass bead.
Chicha	(pronounced tschitscha) Native beer. Made of sugar cane among the Paez, of maize among most of the other Andean Indians, usually made of manioc among the South American Forest Indians.

104 /321 cont./

Conquista	Period of the Spanish conquest.
Conquistador	Spanish conqueror at time of the discovery of America.
Finca	Plantation farm or estate for the growing of coffee, sugar cane, bananas, etc.
Gobernador	Spanish head of the administration of a province. Among the Paez, the head of the village council.
Guaquero	Pirate excavators of prehistoric, Indian burial sites.

/322/

Hacienda	Large country estate in Tierradentro.
Kazike	(Cacique) West Indian designation for the chief of a village or native tribe, used by Spaniards as a general designation for native chiefs within their area of authority. The translation "Fürst"/prince/ used in the literature in German is misleading.
Lagoon	Lake, pond.
Machete	Bush knife, long chopping knife.
Milpa System	Central American designation for periodic tillage on previously burned-off clearings; called roza in Colombia, wáts among the Paez.
Minga	System of free joint work by the village.
Municipio	In Tierradentro a number of villages, somewhat like our administrative district.
Nyiç	Evil shaman, evil sorcerer.
Panela	Boiled-down sugar-cane juice. Transported and traded in the form of bars of about half a kilogram each. Customary form of sugar consumption among the Colombian rural population.
Páramo	High steppe. General designation for the crests of the Cordilleras.
Parcialidád	In Tierradentro: village with the lands belonging to it.
Poncho	Sleeveless cloak of the Andean Indians in the form of a rectangular or square blanket with a hole for the head. Called ruana in Colombia.

[114]

1: Nachtigall--250 E-5 (1952-1953) 1955 SC15 Paez SC15

/322 cont./

104

Roza	Colombian burned-off field. Cf. "Milpa."
Ruana	Colombian designation for poncho.
Shaman	Popularly: medicine man. The Paez distinguish between evil shamans (nyic) and good ones (teyu). The former kidnap souls, bring sickness or death. The latter, as adversaries of the nyic, are doctors in the spiritual realm.
Tafi	Soul, which can leave a person in his sleep.
Tama	Ceremonial staff of the shaman.
Teyu	Paez designation for the good shaman.
Trapiche	Sugar mill.
Tumba	Large, underground grave-chamber.
ũns	Soul that leaves the person at death.

Ills. 148 and 149. Young women.

Plate LXXIX

Ills. 150 and 151. Young men.

Plate LXXX

Ill. 152. Mother with child. The clothes are held together with thorns. The carrying band of the coca pouch hangs over the shoulder.

/CXX cont./

600 Ill. 153. The shaman Cerbeleón Niunda with his wife. Around his neck hangs the fiber bag with the medicinal herbs.

Plate LXXXI

Ill. 154. A man of Santa Rosa in front of his house. In the background a ladder cut out of a bamboo.

Ill. 155. Our interpreter, Victoriano Piñakué, in Colombian clothing.

Plate LXXXII

Ill. 156. The Paez customarily builds his house in the midst of his fields on his own property, sometimes only for the period of a harvest. The planted field is enclosed by a fence.

[241]

Plate LXXXIII

Ill. 157. A dwelling in the midst of a newly cleared field. The small annex at the left serves as a storage room for chicha.

Ill. 158. A rectangular field-hut built for the period of a harvest. The walls are made of maize stalks, the roof is covered with sugar-cane leaves.

/CXXI/

Plate LXXXIV

[356] Ill. 159. Hip-roofed house, the roof of which is repaired with sugar-cane leaves. In front of the house the sugar mill, over which the expressed canes are hung to dry. To the left, as an annex, the menstruation hut. Behind the house, vegetable bananas.

Ill. 160. Framework of a dwelling, made of bamboo.

1: Nachtigall--299 E-5 (1952-1953) 1955 SC15 Paez SC15

/CXXI cont./

Plate LXXXV

[200] Ill. 161. Framework of a house.

Ill. 162. Dwelling of the civilized Paez being built. The walls are filled with earth to the thickness of a post.

Ill. 163 and 164. Construction details of a Paez house.

Plate LXXXVI

Ill. 165. House annex with the chicha trough. In front of the man's stomach hangs the colorfully patterned coca pouch. Married women wear their hair plaited in a braid.

[585]
[302]

[352] Ill. 166. The interior of a Paez house. Tables, benches, and beds are lacking. At night they sleep on the floor around the hearth made of three field stones.

[513]
[354]

Plate LXXXVII

Ill. 167. House garden of the Paez with bananas, sugar cane, and yuca.

[417] Ill. 168. Maize field with fence. A notched tree-trunk serves as ladder.

Plate LXXXVIII

Ill. 169. Portion of a field readied for burning. The tree growth has been cut off at hip height.

Ill. 170. Land used by the village, with black surfaces of the fields burned off in preparation for sowing.

Plate LXXXIX

[241] Ill. 171. Paez burning felled trees. The ashes serve as fertilizer.
Ill. 172. Men setting out sugar-cane shoots with the digging stick.

/CXXI cont./

Plate XC

000

Ill. 173. Paez with a load of sugar cane. In front of his stomach hangs the coca pouch. The musculature of the men is generally slight.

[142]

Ill. 174. Harvesting coca leaves.

Plate XCI

Ill. 175. Sugar mill in operation. It is driven by human beings or by a horse. The sugar cane is put through the crushing cylinders several times until all the juice is expressed.

Ill. 176. Distillation apparatus with which brandy is distilled from chicha.

Plate XCII

[412] Ill. 177 and 178. Woman defleshing agave leaves with a sharp-edged halved bamboo tube.

/CXXII/

Plate XCIII

Ill. 179. Old woman spinning with the drop spindle. Coca juice runs out of her mouth and is sometimes wiped off with the back of her hand, sometimes it drips on her clothing.

Ill. 180. Woman twisting the spun wool thread.

Plate XCIV

Ill. 181. Weaver making wool cloth.

Ill. 182. Weaving process in making the carrying bands for the fiber bags.

Plate XCV

Ill. 183. Woman making fiber bags. The thread supply must be drawn through each separate loop of the bag.

/CXXII cont./

100 Ill. 184. Potter smoothing out the seams of the pot. In order to be able to turn it more easily, he has set it on a shallow clay bowl.

Plate XCVI

Ill. 185. Potter rolling out a "clay sausage." The pots are made with the spiral coil technique.

Ill. 186. Types of Paez ceramics. There are spherical pots and shallow bowls without a standing surface. The large pot is used for making chicha, the two smaller ones for cooking, the bowl for roasting coca leaves.

[273]
[276]

Plate XCVII

Ill. 187. Weaver making the women's colored belt. The many cross-sticks serve for stretching the warp threads.

Ill. 188. Weaving the ornamental warp. Visible above the sword is a shed rod which holds up the red warp threads not needed at the moment for the pattern.

Ill. 189 and 190. Patterns of the women's colored belts.

Plate XCVIII

Ill. 191. Bamboo suspension bridge over the Rio Paez at Avirama.

Ill. 192. Bamboo suspension bridge at Belalcázar.

Ill. 193. Shore anchoring of the suspension bridge of Balalcázar.

Ill. 194. Timber bridge across the Rio Kokiyó at Calderas, at the time of construction.

Plate IC

Ill. 195. Timber bridge across the Rio Kokiyó at Calderas, with the protective roof characteristic of this type of bridge.

/CXXII cont./

Ill. 196. Walkway of the bamboo suspension bridge at Belalcázar.

Plate C

[857] [868] Ill. 197. The older sisters take care of their younger siblings as a matter of course and practice the duties of a woman from childhood on.

Ill. 198. Among the tasks of the women are the making of clothing for the family and the housework, including the fetching of firewood. Whereas the men carry heavy loads on their shoulders, the women use the forehead band.

/CXXIII/

Plate CI

[774] Ill. 199. The shaman Felisa Ipia with her shaman's staff and the nyika reed. In the wool threads fastened to her staff she has gathered the souls of all the inhabitants of Santa Rosa. With the reed she tears apart the clothing of a soul about to leave a dying person. It must then return to its body and the person need not die.

[755]

Ill. 200. Gable post of a hunting hut with the skull trophy of a slain monkey. The skulls of the animal booty hung on the gable post, as well as the wing feathers of the birds killed, are supposed to guarantee further success in hunting. Below the skull trophy, the incised figure of a spirit besides the Christian cross.

Plate CII

Ill. 201. Woman grinding maize with the hand grindstone.

Ill. 202. Calderun music group. The instruments are the transverse flute, bass drum, drum, tambourine, and triangle.

/CXXIII cont./

Plate CIII

100

Ill. 203. The flute maker, Vicente Puche, is marking with the machete the position of the finger holes on a new flute being made. The holes are burned in with the iron rod, made red-hot, under his arm.

[322]

[493] Ill. 204. Burial of a child who died of whooping cough in Togoima. It was brought to the burial place in a small sedan chair. Music is played during the burial.

Plate CIV

Ill. 205. The capitan of San Andrés, stabbed by his son, lying on the bier.

Ill. 206. The grave of the capitan. In place of the formerly customary lateral-niche grave, here a special depression was dug at the bottom of the pit and this tightly covered with bamboo. For the head an additional niche was hollowed out at the narrow end of the pit.

Ill. 207. A niche grave that was dug for a child.

Plate CV

Ills. 208 and 209. Ritual purification after a burial. The relatives of the deceased first wash their clothes and are then washed themselves.

Plate CVI

Ills. 210 and 211. The shaman Martin Chucue draws the "pest" in the body upwards with his herbs and sucks it off at the fontanel.

Plate CVII

Ill. 212. The shaman spits the "pest" into a hole, pours brandy over it, and stabs at it with his staff.

Ill. 213. The shaman struggles against the spirits with staff and liana.

Vorwort des Herausgebers

IN DIESEM ZWEITEN BANDE unserer Studienreihe ist ein Teil der Forschungen niedergelegt, die mein Mitarbeiter Dr. Horst Nachtigall 1952/53 in Kolumbien durchführen konnte. Der Band gibt Zeugnis davon, daß unsere wissenschaftliche Arbeit am Institut für Völkerkunde der Universität Mainz sich nicht auf Untersuchungen am Schreibtisch beschränkt. Vielmehr sind wir, entsprechend dem Aufgabenbereich unseres Faches, bestrebt, durch Feldforschungsarbeit in verschiedenen Erdgebieten neue Beobachtungen zu sammeln und daran mitzuwirken, daß die großen Lücken in unserer Kenntnis naturgebunden lebender Völker ausgefüllt werden. Solche Forschungsarbeit muß sich naturnotwendig auch auf die prähistorischen Zeugnisse menschlicher Kultur in den besuchten Gebieten erstrecken. Dank seiner eingehenden Beschäftigung mit dem Fachgebiet der Vor- und Frühgeschichte war Dr. Nachtigall in der Lage, das vorliegende Material der kolumbischen archäologischen Provinz Tierradentro zu erarbeiten.

Selbst zur Zeit mit ethnographischer Arbeit in einem anderen Erdwinkel beschäftigt, freue ich mich ganz besonders über die Publikation dieses ersten Bandes von Feldforschungsergebnissen unseres Mainzer Institutes für Völkerkunde. Unserem Verleger, Dr. H. Wyß, und der Deutschen Forschungsgemeinschaft danke ich für ihr verständnisvolles Entgegenkommen und ihre tatkräftige Hilfe, die diese Veröffentlichung ermöglicht haben.

Gilgit / Pakistan, den 23. Mai 1955.

Adolf Friedrich

1: Nachtigall SC15 Paez

Dankeswort des Verfassers

DIE IM FOLGENDEN vorgelegte Beschreibung der Archäologie und Ethnologie des Tierradentro stellt den ersten Teil der wissenschaftlichen Ergebnisse der zusammen mit meiner Frau unternommenen Kolumbienreise dar, die von dem Direktor des Instituts für Völkerkunde der Universität Mainz, Herrn Professor Dr. Adolf Friedrich, angeregt und durch dessen Vermittlung bei deutschen und kolumbianischen Behörden durchgeführt wurde. Verlauf der Reise und erste Zusammenfassung der wissenschaftlichen Ergebnisse wurden bereits an anderem Ort veröffentlicht.

Unser Aufenthalt in Kolumbien erstreckte sich auf ein Jahr, vom 8. August 1952 bis zum 12. August 1953. Während dieser Zeit war ich zunächst unter der Direktion des Herrn P. Pedro José Ramirez Sendoya als Investigador im Instituto Etnológico Nacionál, vom 20. September 1952 ab als Jefe de Arqueología im Instituto Colombiano de Antropología tätig. Nach einer mehrwöchigen Bestandsaufnahme der Altertümer im Gebiet von San Agustín reisten wir nach dem Tierradentro, wo wir das Feldmaterial der vorliegenden Veröffentlichung in der Zeit vom 24. Dezember 1952 bis zum 24. April 1953 sammelten.

Die Finanzierung der wissenschaftlichen Arbeit in Kolumbien geschah durch das Ministerio de Educación und durch das Instituto Colombiano de Antropología. Dem damaligen Erziehungsminister, Herrn Dr. Lucio Pabón Nuñez und dem Direktor des Instituto Colombiano de Antropología, Herrn Dr. Antonio Andrade Crispino, möchte ich auch an dieser Stelle meinen ergebensten Dank für die gewährten Hilfen aussprechen. Danken möchte ich hier auch dem Vizepräsidenten der Academia de Ciencias Naturales, Herrn Professor Dr. P. Enrique Perez Arbelaez, der mir in der ersten Zeit meines Aufenthaltes in Kolumbien viele Wege ebnete. Nicht weniger dankbar bin ich den Kollegen des Institutes für die mir gewährten wissenschaftlichen Hilfen, wie den Arbeitern im Tierradentro für ihren Fleiß bei den schwierigen und zu Beginn der Regenzeit recht wenig angenehmen Grabungsarbeiten.

Zur Arbeits- und Reiseausrüstung hat eine Anzahl von Firmen in großzügiger Weise Sachspenden zur Verfügung gestellt. Für die in diesem Buch veröffentlichten Aufnahmen standen mir eine Leica III f mit Elmar

1 : 3,5 und Zubehör, sowie eine Rolleiflex mit Tessar 1 : 3,5 zur Verfügung. Für spezielle Aufnahmezwecke wurden zur Leica ein Weitwinkelobjektiv Rodenstock-Heligon 1 : 2,8, ein Teleobjektiv Steinheil-Culminar 1 : 2,8 und die Proximeter I und II von H. Schneider & Co. benutzt, zur Rolleiflex die Rolleikineinrichtung mit den Rolleinaren 1 und 2. Die Innenaufnahmen der Grabhöhlen und der Eingeborenenhäuser wurden mit Blitzlampen Osram SO und Philipps Pf 45, sowie mit Seuthe-Kapselblitzen vorgenommen. Als Negativmaterial für die Aufnahmen dienten Adox KB 17 und R 18, sowie Perutz Perpantic-Filme.

Für Hilfen bei der Abfassung des Manuskriptes möchte ich in erster Linie meiner Frau danken, die mich in Kolumbien auf allen Wegen begleitet, dort die Stenogramme der Feldforschung aufgenommen und die Abschrift des Manuskriptes besorgt hat. Herrn Professor Dr. E. L. Rapp, Mainz, danke ich für freundlichst erteilten Rat bei der Transkription der Paez-Sprache und Herrn Professor Dr. Wilhelm Geilmann, Mainz, für die röntgenographische Untersuchung der vorgelegten prähistorischen Zähne und Knochen aus den Grabkammern des Tierradentro. Für die Ausarbeitung der technischen Zeichnungen und Karten möchte ich auch hier der Zeichnerin des Institutes für Vor- und Frühgeschichte der Universität Mainz, Fräulein Margot Kunzmann und für die Korrektur Herrn cand. phil. Wolfgang Lindig danken.

Die Deutsche Forschungsgemeinschaft, die bereits meine Hin- und Rückreise finanziert und einen beträchtlichen Zuschuß für die Ausarbeitung der wissenschaftlichen Ergebnisse gewährt hat, übernahm auch einen Teil der Druckkosten zu dieser Veröffentlichung. Dem Herrn Präsidenten der Deutschen Forschungsgemeinschaft sei dafür mein ehrerbietiger Dank ausgesprochen. Für öffentliche und private finanzielle und ideelle Hilfen ist es mir ein Bedürfnis, den Herren Ministerialdirektor Professor Dr. Hans Becker und Ministerialrat Dr. Otto Wegner vom Kultusministerium des Landes Rheinland-Pfalz, dem Oberbürgermeister der Stadt Mainz, Herrn Franz Stein, dem Kurator der Universität Mainz, Herrn Fritz Eichholz und dem Vorsitzenden des Aufsichtsrates der Firma Dykkerhoff Portland-Zementwerke AG., Herrn Konsul Alexander v. Engelberg, zu danken.

Mainz, den 1. Oktober 1954. H. N.

TEIL I

ARCHÄOLOGIE

[P. 11]
[P. 12 is blank]

I. Einleitung

1. DIE GEOGRAPHISCHE LAGE DES TIERRADENTRO

DIE KOLUMBIANISCHE LANDSCHAFT Tierradentro, das «Land, das darinnen liegt», ist durch seine archäologischen Funde und den geschlossen dort lebenden größten Indianerstamm Kolumbiens, den Paez, zu dem Begriff einer kolumbianischen Landschafts- und Kulturprovinz geworden. Es liegt im Süden Kolumbiens, fast unmittelbar nördlich des großen Gebirgsknotens, des Macizo Colombiano, in dem die größten Flüsse Kolumbiens, der Magdalena, der Cauca und der Caquetá entspringen. Hier teilt sich die Gebirgskette der Kordilleren in drei Zweige, um — getrennt durch Cauca und Magdalena — das ganze Land von Süd nach Nord als Westkordillere, Zentralkordillere und Ostkordillere zu durchschneiden.

Politisch bildet das Tierradentro den östlichen Teil des Departamentos Cauca, dessen Hauptstadt Popayan ist und dessen wirtschaftliches und politisches Schwergewicht im Caucatal liegt. Geographisch aber gehört es zum Einzugsgebiet des Rio Magdalena. Der Kamm der Zentralkordillere vom Nevado del Huila über die Paramos von Moras, las Delicias und Guanacas bildet die Westgrenze des in seiner Flächenform dreieckigen Gebietes und der Lauf des Rio Negro de Narvaez, vom Nevado del Huila bis zu seiner Einmündung in den Rio Paez bei Itaibe, die östliche Begrenzung. Die südliche Grenze wird durch den Kamm der Gebirge zwischen dem Rio de la Plata und dem Entwässerungsgebiet des Rio Paez gebildet.

Der Nevado del Huila ist mit 7550 m die höchste Erhebung der kolumbianischen Zentralkordillere und nach dem nur wenige Meter höheren Cristobal Colón der Sierra Nevada de Santa Marta der höchste Berg Kolumbiens. Seine von ewigem Schnee bedeckte Kuppe speist u. a. den Rio Paez und den Rio Negro de Narvaez, die Hauptflüsse des Tierradentro. Sie entwässern, wie alle Flüsse auf dem Ostabhang der Zentralkordillere, in den Rio Magdalena. Zum Magdalenatal führen auch die Hauptverkehrswege des Tierradentro, deren wichtigster den Rio Paez abwärts über

La Plata nach Neiva bzw. Garzon führt. Damit bildet La Plata das Handels- und Verkehrszentrum für dieses wirtschaftlich allerdings noch nicht sehr erschlossene Gebiet.

Schon die ersten Chronisten beschrieben das Tierradentro als Land eines »ewigen Auf und Ab«. In der Tat bildet die große Anzahl von tief in das Gebirge eingeschnittenen kleinen Flüßchen, trotz des für eine Kolonisation ausgezeichneten Klimas, ein starkes Hindernis für die verkehrsmäßige Erschließung, ohne die eine landwirtschaftlich umfangreichere Produktion nicht rentabel ist. Die Unwegsamkeit ist einer der Gründe, weswegen sich hier die Paez-Indianer in einer Gesamtzahl von etwa 25 000 Menschen rassisch rein und in einigen Gebirgstälern noch in kulturell relativ ursprünglicher Art erhalten haben.

Die Klimaunterschiede dieses weniger als drei Breitengrade nördlich des Äquators gelegenen Gebietes sind je nach der Höhenlage beträchtlich. Das am Rio Magdalena 472 m hoch gelegene Neiva, Hauptstadt des Departamentos Huila, ist mit 30° Durchschnittstemperatur eine der wärmsten Städte Kolumbiens. Der in der Luftlinie nur 75 km westlich gelegene Nevado del Huila ist von ewigem Schnee bedeckt. Dazwischen findet sich bei 1200 m Höhenlage eine Durchschnittstemperatur von 21° und in 3000 m eine solche von 11°. Die vorwiegende Höhenlage der Siedlungen im südlichen Tierradentro liegt zwischen 1400 und 1700 m, was einem Temperaturmittel von 18-20° entspricht. Es ist das für den kolumbianischen Kaffee beste Klima. Gleichzeitig ist es eine ausgezeichnete Klima- und Höhenlage für den Anbau von Zuckerrohr und Mais und für die Rindviehzucht, wirtschaftliche Betätigungen, die im kommerziellen Sinne nur von den Kolonisten wahrgenommen werden. Die in diesem Klima liegenden Paez-Ortschaften sind deshalb weitgehend von den Kolonisten unterwandert und weite Strecken Landes von ihnen für die landwirtschaftliche Nutzung in Besitz genommen. Hier sind jetzt die noch vor 70 Jahren von dichtem Baumbewuchs bedeckten Berghänge zur Gewinnung von Weideflächen für die Viehzucht abgeholzt, wodurch eine weitgehende Auswaschung der normalerweise ohnehin recht dünnen Humusdecke erfolgt und eine gewisse Sterilität des Bodens eingetreten ist. Anders ist es in den noch ausschließlich von Indios bewohnten Ortschaften des nördlichen Tierradentro. Diese liegen teilweise beträchtlich höher (Mosoco, Vitoncó, Suin und Lame etwa 2500 m). Hier sind die Nächte bereits empfindlich kalt. Kaffee gedeiht nicht mehr, dafür Mais und Kartoffeln. Auch ist es das beste Klima für eine Rindviehzucht. Die Berghänge sind durch die relativ dünne Besiedelung seitens der Paez noch nicht in ihrer Gesamtheit zur wirtschaftlichen Nutzung herangezogen, der

Baumbestand gewährleistet das ganze Jahr hindurch einen natürlichen Wasserhaushalt.

Die beiden Regenzeiten des Jahres liegen von Mai bis Juni und Oktober bis Dezember. In diesen Zeiten, besonders in der Regenzeit der ersten Jahreshälfte, regnet es täglich in beträchtlicher Stärke, während die Trockenzeiten regelmäßig frei von Niederschlägen sind.

Die Bodenschätze des Tierradentro sind noch nicht mit modernen Mitteln erforscht. In vorspanischer Zeit und auch noch nach der Conquista wurden zahlreiche Salzlager ausgebeutet. Als Minenarbeiter brachten die Spanier Negersklaven ins Tierradentro, deren Nachkommen einen beträchtlichen Anteil an der Bevölkerung von Belalcazar ausmachen. Sie betätigen sich heute teilweise als Goldwäscher an den Ufern des Rio Paez. In indianischer Zeit wurde Gold auch noch bei Tálaga, San Vicente und Jambaló gewonnen. Im Süden des Tierradentro waren die Silberminen bei der — nach ihren bedeutenden Funden so genannten — Stadt La Plata ein bedeutender Wirtschaftsfaktor.

An Verkehrswegen standen seit der Kolonialzeit bis vor fünf Jahren nur die für Menschen und Pferde gangbaren Wege (Caminos de herradura) zur Verfügung. Die beiden Hauptverbindungen waren von Inzá über den Paramo de las Guanacas nach Silvia und Popayán und in das Caucatal, sowie von Inzá über La Plata in das Magdalenatal. Seit der Konstruktion einer Autostraße von La Plata nach Belalcazar besteht eine gute Straßenverbindung sowohl nach dem Caucatal, als auch nach dem Magdalenatal. Von La Plata aus fährt der Bus in vier Stunden nach Garzon und in sieben Stunden nach Neiva. Beide Städte haben zur Zeit zweimal wöchentlich Flugverbindung nach Bogotá und Neiva, außerdem eine tägliche Eisenbahnverbindung mit der Landeshauptstadt. Um von La Plata über die Zentralkordillere nach Popayán zu kommen, braucht man mit dem Bus etwa zehn Stunden. Von Popayán aus besteht täglicher Flugverkehr nach allen Teilen des Landes.

Die meisten und wichtigsten archäologischen Fundstätten liegen bei dem Dörfchen San Andrés, auf den Hügelkuppen und Höhenzügen des Tales gleichen Namens. Der Ort liegt, durch den Rio Ullucus und den Höhenzug El Aguacate getrennt, in der Luftlinie etwa 6 km nördlich von Inzá. Um von La Plata aus nach San Andrés zu gelangen, fährt man zunächst die Straße in Richtung Belalcazar den Rio Paez aufwärts bis Juntas, dem Punkt des Zusammenflusses des Rio Ullucus mit dem Rio Paez. Von Juntas aus hat man etwa drei Stunden nach Westen in die Berge hineinzureiten, um nach San Andrés zu gelangen. Diese Ortschaft ist ein Dorf gleicher Charakteristiken, wie alle Paez-Dörfer, d. h. es besteht nur

aus einer Kirche, einer Schule, dem Haus des Dorfrates und einigen wenigen weiteren Häusern, die von Kaufleuten und von den Bewohnern für die religiösen Feste benutzt werden. Letztere, Paez-Indianer und Kolonisten, wohnen an den Abhängen der Berge längs der Täler der kleinen Flüßchen in Einzelgehöften, allerdings in einer für die Paez recht ungünstigen Verteilung: hauptsächlich längs der Flußläufe, im fruchtbaren Tale, wohnen die weißen und gemischtfarbenen Kolonisten, die hier Kaffee, Mais und Zuckerrohr anbauen, während die Indios mit den relativ unfruchtbaren Hängen fürlieb nehmen müssen.

2. DIE ERFORSCHUNG DER VORGESCHICHTLICHEN KULTUREN DES TIERRADENTRO

Die zahlreichen Höhenzüge und tief eingeschnittenen Wasserläufe, die das ganze Tierradentro-Gebiet durchziehen, machen das Reisen außerhalb der Straßen recht mühselig. Der Besucher ist auf Pferd oder Mula als Reisemittel angewiesen, von denen das erstere wegen seines Paßganges das angenehmere, die Mula wegen ihrer Instinktsicherheit bei Nacht und in schwierigem Gelände das sichere Reisemittel ist.

Jeder Talkessel bildet allgemein eine Ortschaft. Um von einer zur anderen zu gelangen, müssen entweder im Tal weite Umwege gegangen oder die Höhenzüge auf recht schmalen und steilen Zickzackwegen überquert werden. Es ist dies — neben der abweisenden Haltung der Paez — ein Grund, weswegen die archäologische und ethnologische Erforschung des Tierradentro erst sehr spät eingesetzt hat. Der erste Berichterstatter über die vorgeschichtlichen Funde war der kolumbianische General und Geograph Carlos Cuervo Marquez, der auf seinen Streifzügen durch weite Teile Kolumbiens nach seinem Besuch in San Augustín im Jahre 1882 auch im Tierradentro-Gebiet weilte und uns die erste Mitteilung von «merkwürdigen Friedhöfen und großen, unterirdischen Räumen» mit Säulen, Säulenreihen und Nischen macht. Weiterhin berichtet er von steinernen, menschlichen Figuren, die sehr ähnlich denen von San Augustín seien (Bd. I, pp. 241-243). In der Ausgabe von 1920 zitiert C. Cuervo Marquez (Bd. I, pp. 273-277) gleichzeitig einen Bericht einer Kommission, bestehend aus Victor Trujillo und Bernardino Montealegre, die erstmals auch die Statuen von Aguabonita beschreiben. Einen gesonderten Bericht darüber gibt 1935 das Kommissionsmitglied Victor Trujillo in der Zeitschrift «Educacion». Seiner Meldung, daß er der Entdecker der

Statuen von Aguabonita sei, widerspricht Cenon M. Valencia in einem Artikel in der Zeitschrift «Huila Historico». Danach war ihr Entdecker ein Eingeborener namens Ignacio Cotacio, der diese Statuen im September 1918 fand.

Die nächsten Reisenden, die das Gebiet der archäologischen Grabkammern und Statuen um San Andrés und Inzá für je zwei Tage besuchten, waren der belgische Marquis de Wavrin und der Deutschamerikaner H. Walde-Waldegg. Der Marquis de Wavrin besichtigte 1931, nachdem er das Vorhandensein einer Anzahl neuer Statuen in Nariño und San Agustín erstmals mitteilte, auf der Durchreise durch das Tierradentro einige der Grabkammern und berichtete darüber in verschiedenen Aufsätzen ab 1932. Ein zusammenfassender Bericht seiner weiten und zahlreichen Reisen und Abenteuer in Kolumbien erschien 1953.

Die systematische Erforschung der Grabkammern des Tierradentro begann 1936, als der deutsche Geologe Georg Bürg, damals Professor an der Universität Popayán, eine große Anzahl von Grabkammern neu entdeckte und einige reinigen ließ. Nach einem Bericht an das Departamento Cauca bekam er die Mittel zur Verfügung gestellt, um die wichtigsten der Grabkammern mit Schutzdächern zu versehen. Seine kurze Veröffentlichung erschien im Ibero-Amerikanischen Archiv 1937/38.

Im Juli des gleichen Jahres wurde der kolumbianische Archäologe Gregorio Hernandez de Alba vom kolumbianischen Erziehungsministerium mit der Abfassung eines Berichtes über die archäologischen Funde des Tierradentro beauftragt. Seine von ihm 1938 in der Zeitschrift «Revista de las Indias» veröffentlichten Beschreibungen und Dekorationsskizzen bilden die ersten wissenschaftlichen Veröffentlichungen über die Typen der Grabkammern des Tierradentro.

Im gleichen Jahre, in dem Georg Bürg und Gregorio Hernandez de Alba im Tierradentro arbeiteten, wurde auch der spanische Archäologe José Perez de Barradas vom kolumbianischen Erziehungsminister mit dem Studium der nun in das Licht der kolumbianischen Öffentlichkeit gerückten Tierradentro-Kultur beauftragt. Er war kurz zuvor vom kolumbianischen Erziehungsministerium zu archäologischen Forschungen eingeladen worden und weilte im Oktober 1936 für zwei Wochen in San Andrés und Inzá zu einer ersten vollständigen Bestandsaufnahme der bis zu dieser Zeit bekannten Statuen und Grabkammern. Seine Publikation, die die Grundlage zu allen weiteren Forschungen bildet, erschien 1937 als 1. Band der Veröffentlichungen der archäologischen Sektion im kolumbianischen Erziehungsministerium.

Beschränkte sich die archäologische Arbeit im Tierradentro bis zu die-

ser Zeit auf die Bestandsaufnahme und Erhaltung des Vorhandenen, d. h. der von den Guaqueros geöffneten und ausgeraubten Kammergräber, so änderte sich dies mit der 1941 erfolgten Gründung eines kolumbianischen nationalen ethnologischen Institutes, in dem unter der Leitung von Paul Rivet und unter der Mitarbeit von Gregorio Hernandez de Alba und Wolfram Schottelius eine Anzahl junger Kolumbianer als Archäologen, Ethnologen und Anthropologen ausgebildet wurde. Eine der ersten wissenschaftlichen und methodisch einwandfreien Feldarbeiten führte E. Silva Celis in der Wintertrockenheit 1942/43 im Tierradentro durch. Die Ergebnisse wurden im 1. Band der neu gegründeten «Revista del Instituto Etnológico Nacionál» veröffentlicht. Die Grabungen umfassen die Fundorte «Parte alta de las Huacas» (heute: «El Duende») und «La Montaña».

In der Folgezeit kaufte die Regierung das Gelände der wichtigsten Fundstätten auf und vereinigte sie zu dem archäologischen Park von Tierradentro. Unterhalb der zu dem Dorf San Andrés gehörenden Fundstelle «Segovia» wurde ein Haus mit den nötigen Wirtschafts- und Unterkunftsräumen für die dort arbeitenden Wissenschaftler versehen und ein kleines Museum für die archäologischen Objekte eingerichtet. Zum archäologischen Park gehören die Fundorte El Tablón, Segovia, El Duende und der Alto de San Andrés. Andere, teilweise für die Wissenschaft bedeutende Fundorte, sind noch in Privatbesitz. Nach dem 1931 erlassenen Gesetz Nr. 103 gehören alle Bodenaltertümer innerhalb der kolumbianischen Staatsgrenzen dem Staate. Sie dürfen nur durch die von der Regierung autorisierten Archäologen ausgegraben werden. Die Grundbesitzer verweigern zu den Forschungen und Grabungen aber häufig die Erlaubnis, denn nach einem anderen, älteren Gesetz, gehört ihnen die Hälfte des Wertes der auf ihrem Grund und Boden gefundenen Altertümer. Um einesteils zu vermeiden, daß ihr Land als für die archäologische Forschung wertvoll erklärt und vom Staat aufgekauft wird und um andererseits die schwierigen und langwierigen Formalitäten zur Erlangung des Fundwertes der zu Tage geförderten Objekte zu umgehen, lassen die Grundbesitzer diese oft von Guaqueros ausgraben und auf eigene Rechnung verkaufen. Die Raubgrabungen seitens der Guaqueros sind nach dem erwähnten Gesetz natürlich verboten. Da die archäologischen Fundorte aber fast nie in der Nähe von Städten oder Polizeistationen liegen, wird diese unkontrollierbare Gräberei auch heute noch in weiten Teilen des Landes zum Schaden der archäologischen Wissenschaft ausgeübt.

Die zum Park gehörenden Grabungsstätten liegen in Sichtweite des Verwaltungshauses. Die übrigen Fundstätten sind oft nur auf recht schmalen und steilen Wegen zu erreichen. Um beispielsweise nach El Ca-

nadá zu gelangen, ist man zu Pferde eine Stunde unterwegs. Die gleiche Zeit braucht man, um zu Fuß den Filo de El Aguacate zu ersteigen, wohin der Umweg zu Pferde mehr als das Doppelte an Zeit ausmacht. Mindestens die gleiche Zeit, eine bis drei Stunden, braucht man im allgemeinen auch für den Weg von einem Dorf zum anderen.

Die um den archäologischen Park stark zerklüfteten, steil aufsteigenden Berge geben das typische Panorama des Tierradentro-Gebietes wieder (Abb. 5–9). Die archäologischen Fundorte mit den Grabkammern liegen immer erhöht, die einfacheren auf den Spitzen der höchsten Höhenzüge, die größten und prächtigsten auf abgeflachten Hügelkuppen unterhalb dieser. Den besten Überblick über das Tal von San Andrés hat man von seinem westlichen Abschluß, dem Höhenzug Yokaichí aus, jenseits dessen das Tal des Kokiyó mit der Ortschaft Calderas beginnt. Von hier aus hat man einen weiten Blick bis zum Höhenzug Dondotá, der die Orte Suin und Chinas abgrenzt. Nach Norden begrenzen die Berge von Chíndava die Ortschaft Togóima. Den Blick nach Osten in Richtung unseres Aufstieges gerichtet liegen unmittelbar unter uns die Häuser von Sûpón, dann folgt das Dorf San Andrés, dann etwa 1 km flußabwärts das Verwaltungshaus des Parkes und etwa 2 km unterhalb des Parkes der Punkt Cruzero, von dem aus der Weg von San Andrés nach Juntas in Richtung nach Inzá abzweigt. Noch weiter östlich, den imposanten Hintergrund dieser Gebirgslandschaft bildend, liegen die Orte Pedregál und Turminá und dahinter die Kuppe des «Picacho des Trueno», des Berges des Donners und des Blitzes, in dem die Paez von San Andrés sich den Donner wohnend vorstellen und in welchem — nach Meinung einiger Indios — die Paez nach derZerstörung der Stadt La Plata (1577) das erbeutete Gold und Silber, die Glocken und Heiligenfiguren der von ihnen verwüsteten, alten spanischen Silberstadt versteckt haben.

Die eigenen, im Tierradentro-Gebiet durchgeführten archäologischen Forschungen erfassen eine Bestandsaufnahme der archäologischen Objekte, sowie vorgeschichtliche Grabungen innerhalb der Fundstätten des Alto de San Andrés, des Filo de El Aguacate, El Canadá und Segovia. Für das Inventar sind erstmals genaue Grundriß- und Schnittzeichnungen der verschiedenen Grabtypen vorgenommen worden. Die fotografischen Aufnahmen der Grabkammern geben alle vorkommenden Typen der Dekoration wieder. Weiterhin sind die im Tierradentro-Gebiet vorhandenen Statuen, sowie die Typen der Keramik vollständig abgebildet. Die Ausgrabungen umfassen intakte, noch nicht von Raubgräbern geöffnete Grabkammern mit den für die Tierradentro-Kultur der Kammergräber ersten vollständig erhaltenen Bestattungsurnen.

1: Nachtigall SC15 Paez

Bei der Beschreibung und Numerierung der Grabkammern wurde die nach der Errichtung des Parkes zutreffende Zählung verwandt. Diese ist auf dem Alto de San Andrés heute umgekehrt als früher, da der Eingang des jetzt umzäunten Geländes in Richtung zum San Andrés-Fluß liegt. Die heutige Grabkammer Nr. 1 entspricht der Nr. 12 bei G. Hernandez de Alba und J. Perez de Barradas. Auch in Segovia hat sich die Zählung der Grabkammern geändert. Die einzigen bisher veröffentlichten Kammern, Nr. H 1 und H 2 bei G. Hernandez de Alba bzw. Nr. 1 und 2 bei J. Perez de Barradas, liegen jetzt am weitesten vom Eingang entfernt und entsprechen den Nr. 35 und 38. Auch wurden die Bezeichnungen einiger Fundorte geändert. Der archäologische Fundort «Necropolis de San Andrés» heißt jetzt offiziell «Alto de San Andrés», die «Loma Alta de San Andrés» jetzt «Filo de El Aguacate» und die «Parte alta del potrero de las Huacas» jetzt «El Duende».

II. Beschreibung der archäologischen Fundorte

1. DER PARK VON TIERRADENTRO

ETWA ZWEI KILOMETER unterhalb von San Andrés befindet sich der archäologische Park mit den Wirtschafts- und Verwaltungsräumen, sowie den Wohnräumen für die Forscher, nebst einem kleinen Museum, das die bei den Grabungen zutage geförderten archäologischen Objekte umfaßt, soweit sie nicht dem Museo Nacionál in Bogotá oder dem archäologischen Museum der Universität Popayán übergeben worden sind. Vor dem Haus ist eine Anzahl von steinernen Statuen, die in der Umgebung gefunden worden sind, in drei Reihen aufgestellt und in Sockel einzementiert.

Nr. 1 (Abb. 10) (Beschreibung der Statuen in ihrer Aufstellung von rechts nach links): Eine sehr grob gearbeitete Statue, eine menschliche Figur darstellend. Die Arme liegen gewinkelt vor der Brust. Hände und Finger sind nicht angedeutet. Die Ober- und Unterarme sind sehr dünn. Das Gesicht ist in der für die Tierradentro-Statuen üblichen Manier sehr flach gearbeitet. Die Augen sind durch ovale Einritzungen, der Mund ist durch eine schmale Vertiefung dargestellt. Die Nase tritt mäßig hervor und ist in ihrer Basis sehr schmal. Das Gesicht wird an Stirn und Wangen

TEIL II

ETHNOGRAPHIE

[P.97]
[P.98 is blank]

I. Einleitung

1. HISTORISCHER ABRISS DER GESCHICHTE DER PAEZ SEIT DER CONQUISTA

ALS DER SPANISCHE FELDHAUPTMANN Sebastian de Belalcazar, als Unterfeldherr des Francisco Pizarro, den Nordteil des Inkareiches erobert und im Jahre 1534 die Stadt Quito gegründet hatte, zog er sorgfältige Erkundigungen über die weiter nördlich liegenden Länder ein. Da traf er auf einen fremden Indianer, der als seinen Namen Muquetá und den seines Kaziken Bogotá angab. Als man ihn weiter fragte, ob es in seinem Lande das Metall gäbe, das die Spanier Gold nannten, bejahte er dies lebhaft und fügte hinzu, daß es in seinem Lande eine Lagune gäbe, auf die sein Kazike einige Male im Jahre mit einem Floß fahre, von Kopf bis Fuß mit Goldstaub bepudert, so daß er wie ein vergoldeter Mann aussähe. So bringe er der Sonne goldene Gegenstände dar, um sich danach den Körper abzuwaschen und auch dieses Gold als Opfer darzubringen. Diese Erzählung war für Sebastian de Belalcazar der Anlaß, im Jahre 1535 Diego de Tapia zu einer Erkundung nach Norden, in Richtung auf das Land des El Dorado, des vergoldeten Mannes, auszuschicken. Er kam bis zum heutigen Rio Carchi. Dieser wurde der Ausgangspunkt der Eroberung Südkolumbiens durch die Spanier.

Der den Eindringlingen von den Eingeborenen Südkolumbiens geleistete Widerstand war verschieden. Die Stämme der Pasto und Quillacinga und der Caucatalstämme um Popayán leisteten nur geringen Widerstand. Sie waren früher schon von den Soldaten des Inca unterworfen worden, dessen Reich mit seiner nördlichsten Ausdehnung bis zum Rio Ancasmayo reichte. Die in den schwer zugänglichen Teilen der Zentralkordillere lebenden Paez, Guambianos, Andaqui und Pijaos dagegen leisteten den Spaniern heftigen und recht erfolgreichen Widerstand. Noch im gleichen Jahre, als Belalcazar die erste Expedition ausschickte, brach ein Trupp Spanier unter Pedro de Añasco nach Norden auf. 1536 folgte ihm Belalcazar ebenfalls. Im Verlauf dieses Jahres gründete er im Caucatal die Städte Popayán und Cali, wichtige Ausgangs-

punkte zu weiteren Erforschungen. Diese gingen in Richtung auf die Zentralkordillere, die Paramos von Moras und Guanacos und auf das Tierradentro zu. Unter ständigen Kämpfen mit den Paez, die damals ein bedeutend größeres Gebiet als heute einnahmen, wurde Belalcazar zurückgeschlagen und mußte unter Zurücklassung von 26 Spaniern, darunter mehreren Offizieren, nach Popayán und Lima zurückkehren. 1537 unternahm er einen zweiten Vorstoß von Popayán aus, um durch das Tierradentro hindurch das Land des El Dorado zu erreichen. Mit 100 Reitern, 200 Mann Fußvolk und mehr als tausend Indios als Lastträger kam er an den Rio Magdalena, ohne von den Paez behindert zu werden. Nach vier Monaten schwerer Kämpfe mit den Eingeborenen des Magdalenatales traf er endlich auf der Hochfläche von Bogotá mit dem kurz zuvor vom Norden gekommenen Conquistador Gonzalo Jimenez de Quesada zusammen. Eine drohende Auseinandersetzung mit den Waffen zwischen den beiden Eroberern konnte durch das Eintreffen eines dritten Conquistadors verhindert werden, als nämlich der im Dienste der Welser stehende deutsche Landsknechtführer Nikolaus Federmann von Osten her, durch das Tiefland von Venezuela, Bogotá erreichte.

Von der kriegerischen Aktivität der Paez hören wir wieder, als 1538/39 Pedro de Añasco unter unendlich grausamer Behandlung der Eingeborenen in das Magdalenatal eindrang, um auf Befehl des Belalcazar den Verbindungsweg von Quito nach Santa Fé de Bogatá, der Hauptstadt des neu gegründeten Vizekönigreiches Neu Granada, freizuhalten. In einem verzweifelten Kampf gelang es 5000 Kriegern der vereinigten Timanás, Yalcones, Paez und Apirama die Spanier zu überwältigen und ihren Führer, Pedro de Añasco, gefangen zu nehmen. Die Indios bereiteten ihm, der den Sohn der Kazikin der Timanás, Gaitana, hatte verbrennen lassen, ein entsetzliches Schicksal. Gaitana, auf deren Drängen hin das Bündnis der Stämme gegen die Spanier zustande gekommen war, ließ ihn von Dorf zu Dorf schleifen und ihm jeden Tag ein Glied abhacken.

Um den Tod seines Waffengefährten zu rächen, brach daraufhin 1539/40 Juan de Ampudia von Popayán mit seinen Landsknechten nach dem Tierradentro auf. Aber auch ihn und seinen Söldnern ereilte das gleiche Schicksal. Er selbst verlor sein Leben, und seine Mannschaft wurde unter großen Verlusten von den Paez zurückgeschlagen. Von diesem Schicksal seiner Vorgänger nicht entmutigt, brach Francisco Garcia zu einer neuen Expedition in das Tierradentro auf, aber auch er scheiterte vollständig. Die Kazikin Gaitana erreichte durch flammende Reden eine erneute Vereinigung der Timanás, Paez, Yalcones, Apiramas, Guanacas und Pijaos, und mit 10 000 Mann fiel sie über die Stadt Timaná her und

zerstörte sie. Ihr Verteidiger, Diego Ruiz des Campo, fiel bei dem Versuch, mit seinen Reitern die dichten Scharen der mit der neuen Waffe von vierzig Handspannen langen Lanzen bewaffneten Indioscharen zu durchbrechen.

Bald danach wurde Juan Cabrera von Neiva nach Timaná zum Wiederaufbau berufen. Die Yalcones boten Frieden und ihre Mithilfe beim Wiederaufbau der von ihnen zerstörten Stadt an. Juan Cabrera nahm diese an, und als die Yalcones und ihre Kaziken versammelt waren, fiel er aus dem Hinterhalt über sie her und tötete ihre Kaziken und den größten Teil der Männer. Seitdem gibt es keinen Stamm der Yalcones mehr.

Die Paez blieben intakt und hatten ihre Ruhe, bis 1543 Belalcazar von einem kurzen Aufenthalt aus Spanien zurückkehrte und nun von Popayan aus mit 1000 Reitern und bestens ausgerüstet einen Rachezug gegen die Paez unternahm. Dem erprobtesten Feldhauptmann Spaniens standen die in ihren Bergen um ihre Freiheit kämpfenden Paez gegenüber. Nach hohen, blutigen Verlusten mußte Belalcazar sich geschlagen zurückziehen. Von da an unternahm er keinen Versuch mehr zur Unterwerfung der Paez.*

Neunzehn Jahre später, im Jahre 1562, versuchte Domingo Lozano von neuem, die reichen Silberminen von Timaná und La Plata auszubeuten. Er mußte sich jedoch wieder zurückziehen, um im nächsten Jahre mit verstärkten Truppen wiederzukommen. Er gründete die Stadt San Vicente de Paez, aber schon zwei Monaten danach verlor er bei einem Angriff der Paez auf die von ihm gegründete Stadt sein Leben. Eine Ersatzmannschaft, die in Eilmärschen aus Popayán heranrückte, wurde ebenfalls vollständig aufgerieben. Nach dieser neuerlichen Vertreibung der Eroberer verbündeten sich die Paez mit den Pijaos, die 1569 Neiva zerstört hatten. Gemeinsam überfielen und plünderten sie 1577 die Silberminen der Stadt La Plata, töteten alle Bewohner und zündeten die Häuser an.

Auf diese ungünstigen Nachrichten hin befahl der spanische König energisch die «Befriedung der Provinz», die von 1605-1608 derart erfolgreich durchgeführt wurde, daß schließlich die Truppen keine Indios zur Bekämpfung noch Häuser zur Plünderung finden konnten. Die Paez hatten sich 1605 nach der verlorenen Schlacht von Itaibe auf das heute noch von ihnen bewohnte Gebiet ihrer unzugänglichen Berge zurückgezogen. Ihre westlichen Nachbarn, die Guanacas, verbündeten sich mit den Spaniern, und diese legten durch deren Gebiet die Verbindungsstraße von

* Eine eingehende Beschreibung des hier kurz skizzierten Zeitabschnittes bei H. Trimborn (1954) pp. 67-84.

Popayán nach Bogotá. Jesuiten richteten 1613 in dem Ort Guanacas die erste Missionsstation und eine Raststation für den Reiseverkehr ein. Durch eine eingeschleppte Pockenepidemie gingen die Guanacas 1790 größtenteils zugrunde. Die Überlebenden zogen sich nach dem heutigen Inzá zurück, wo sie in den Kolonisten aufgingen. Von ihrer Sprache ist nichts erhalten.

Die Paez verteidigten weiterhin ihr Land gegen die Spanier und gegen die Missionierung und bewirkten durch ihre Überfälle, daß der Weg nach Bogotá nie ganz sicher war. Die Spanier hatten dann in der Folgezeit auch nur sehr wenig Interesse an einer Missionierung und Zivilisierung der Paez. Nach der Station von Guanacas wurde nur eine Mission in Tálaga gegründet. Durch die von hohen Gebirgszügen abgeschlossene Lage der einzelnen Ortschaften konnten sich einige Dörfer recht lange unbeeinflußt von der spanischen Zivilisation erhalten. Die Behörden unterstützten später die Errichtung einer Eingeborenenselbstverwaltung, den Cabildo, und schützten die Paez durch Reservationsgesetze vor den sich langsam vorschiebenden Kolonisten. Dadurch konnten die Paez ihre Sprache und Sitten weitgehend erhalten, gegenüber den anderen Gebirgsstämmen Kolumbiens, die längst in der spanisch-kolumbianischen Kultur aufgegangen sind. In den Unabhängigkeitskämpfen von der spanischen Krone 1812 bis 1824 unter Simon Bolivar kämpften die Paez unter Gregorio Calambás auf republikanischer Seite für ihre Befreiung. Ihr Führer wurde gefangen genommen und erschossen. Nach der siegreichen Beendigung der Unabhängigkeitskämpfe wurde Gregorio Calambás einer der Märtyrer der kolumbianischen Unabhängigkeit.*

Wie die Guanacas untergingen, so auch die Pijaos. Nachdem sie vor der Conquista als östliche Nachbarn der Quimbaya fast das ganze Gebiet des heutigen Departamentos Tolima östlich der Zentralkordillere eingenommen hatten, gingen sie in den zahllosen Kämpfen mit den Spaniern unter. Noch im 18. Jahrhundert lebten Reste von ihnen im Tale des Rio Negro de Narvaez als Nachbarn der Paez. Sowohl sie, die von den Paez Bemb genannt wurden, als auch die Guanacas, sprachen vom Paez verschiedene Sprachen. Sie konnten sich untereinander nicht verständigen.

Erhalten geblieben bis auf den heutigen Tag ist neben den Paez in gewissem Umfang auch die Kultur der Guambianos, eines Nachbarstammes, der von den Paez Mogwei genannt wird. Die Guambianos bewohnen die Westseite der Zentralkordillere und leben heute im Tale des Piendamó um Silvia. Leben und Gebräuche seines Stammes hat der Guambiano Francisco Tumiña Pillumbe kürzlich in einer Anzahl sehr instruktiver

* Nach V. A. Bedoya, P. J. Ramirez Sendoya und G. Hernandez de Alba (VII).

Zeichnungen dargestellt, die von Gregorio Hernandez de Alba jeweils mit einem kurzen Text versehen wurden.

Über die übrigen, zur Zeit der Conquista bestehenden Indianerkulturen Südkolumbiens wissen wir wenig. Die Conquistadoren hatten andere Aufgaben, als ethnographische wissenschaftliche Beschreibungen über ihre grausamen Feinde abzufassen. Dennoch hat die mit subtilen Methoden arbeitende moderne, völkerkundliche und sprachwissenschaftliche Erforschung der alten Quellen hervorragende Ergebnisse gezeitigt.

Die Kenntnisse über die Paez, die mit rund 25 000 Menschen neben den Goajiros, der Bevölkerung der Goajira-Halbinsel im Norden des Landes, die größte nicht spanisch sprechende Bevölkerungsgruppe innerhalb Kolumbiens bilden, sind recht ungenügend. Die ältesten Daten stammen von Eugenio Castillo i Orosco, der von 1735-1755 als Missionar — oftmals unter Lebensgefahr, wie er berichtet — in Tálaga tätig war und ein Vokabular, eine Grammatik nebst einigen kulturellen Daten über die Paez niederschrieb. Dieses Manuskript wurde 1877 gedruckt. Weitere ethnologische Daten teilt der kolumbianische General Carlos Cuervo Marquez mit, der auf seinen ausgedehnten Reisen auch das Tierradentrogebiet von Nord nach Süd durchreiste und die ersten Nachrichten über seine archäologischen Kulturen erbrachte. Der zeitlich nächste Berichterstatter über die Paez ist der amerikanische Ethnologe Henri Pittier de Fábrega, der 1906 aus dem mittleren Caucatal von Nordwesten her über Corinto und Toribió kommend, sich einige Tage in Tacueyó und Huila aufhielt. Georg Bürg, der erstmals eingehender die archäologischen Objekte des Tierradentro erforschte, lebte ebenfalls eine Zeitlang unter den Paez und gibt in seinem Bericht einige ethnographische Notizen. In der zusammenfassenden Übersicht über die Hochlandstämme Südkolumbiens berichtet Gregorio Hernandez de Alba auch über die Paez, die er im Rahmen eigener Forschungen kennen gelernt hatte. Eine Blutgruppenuntersuchung an 303 Paez nahm Graciliano Arcila Velez vor. Die erste eingehende spezielle Bearbeitung der Paez-Kultur unter dem Aspekt des religiösen und sozialen Lebens nahm zur Zeit unseres Aufenthaltes im Tierradentro der Direktor des Archäologischen Parkes von San Andrés, Segundo Bernal Villa vor.

Da somit eine Gesamtbeschreibung der Kultur der Paez noch nicht existiert, sei hiermit im folgenden eine Stammesmonographie der Paez vorgelegt, in der außer den eigenen erforschten Daten auch die Ergebnisse der früheren Forscher mit verarbeitet worden sind. Vieles wird mir — durch die Kürze der zur Verfügung stehenden Zeit und durch die Unzugänglichkeit der Bevölkerung — entgangen sein, vieles aus dem Kulturhaushalt

der Paez ist als Folge der fortschreitenden Zivilisation bereits zugrunde und damit für immer verloren gegangen. Bei der folgenden Beschreibung des Kulturbesitzes der Paez wurde aus arbeitsmäßigen Gründen eine Einteilung nach materieller und geistiger Kultur und nach der Beschreibung der Gesellungsform unternommen. Eine scharfe Grenze innerhalb einer Kultur ist zwischen diesen Aspekten in der Praxis normalerweise nicht zu ziehen, da diese drei Gebiete kein Eigendasein führen, sondern mit den handelnden Menschen als Schöpfer und Träger der Kultur eng verbunden sind. Dies gilt in verstärktem Maße für Naturvölker, wo alle Bereiche der menschlichen Betätigung viel stärker untereinander verbunden sind, als in der modernen Hochkultur, wo die einzelnen Sektoren der Betätigung in hohem Grade spezialisiert sind und dementsprechend auch getrennt betrachtet und untersucht werden können. Wenn deshalb in der folgenden Stammesbeschreibung aus praktischen Gründen die Form der Siedlung unter der materiellen Kultur und der Schamanismus unter der geistigen Kultur beschrieben ist, so sind doch beide Faktoren auch von großer Bedeutung für den soziologischen Gesichtspunkt. Umgekehrt ist beispielsweise die Familienorganisation als Teil der Gesellschaftsbeschreibung auch engstens verbunden mit Wirtschaft und Technik als dem vorwiegend materiellen Bereich, wie auch mit der Religion.

2. DEMOGRAPHIE

Insgesamt umfaßt das Tierradentrogebiet etwa 5000 km², von denen auf das Gebiet nördlich des Rio Ullucus etwa 3000 km² entfallen. Seine 18 Dörfer sind in zwei Municipios (Verwaltungskreise) unterteilt, deren südlicher, mit dem Verwaltungssitz Inzá, drei Dörfer und deren nördlicher, mit dem Verwaltungssitz Belalcazar, 15 Dörfer umfaßt. Belalcazar, das seinen Namen nach dem Conquistador Sebastian de Belalcazar nicht ganz zu Recht trägt, da dieser das Tierradentrogebiet nicht zu erobern vermochte, ist gleichzeitig Sitz des Apostolischen Präfekten für das Tierradentro. Nach der Volkszählung von 1938 umfaßt die aus gemischtfarbenen Kolonisten und reinrassigen Indios bestehende Bevölkerung des Tierradentro 17 578 Einwohner, verteilt auf Belalcazar mit 13 861 und Inzá mit 3717 Bewohnern. Die neuere Zählung von 1951 ergab mit insgesamt 25 495 Bewohnern eine beträchtlich größere Zahl, wovon 15 388 auf das Municipio Belalcazar und 10 103 auf das Municipio Inzá entfallen. Ein Vergleich der beiden Zählungen von 1938 und 1951 ergibt

eine beachtliche Unvollständigkeit der Zählung im Municipio Inzá für das Jahr 1938 (Zahlen zit. bei Bernal Villa [I], p. 285).

Von dieser Zahl sind etwa 80 Prozent Eingeborene, die heute größtenteils zivilisiert sind, d. h. sie sind getauft und sprechen etwas spanisch. Politisch sind auch sie grundsätzlich Vollbürger des Landes, sie können wählen und zum Militärdienst eingezogen werden, zahlen aber keine Steuern. In einer Hinsicht jedoch gelten sie, zu ihrem Glück, vor dem Gesetz als «Minderjährige»: sie sind in ihrer Gesamtheit Besitzer allen Grund und Bodens des Tierradentro, der einzelne Mann ist aber nicht in der Lage sein Land zu verkaufen. Damit soll vermieden werden, daß die Paez ihr Siedlungsgebiet an die Weißen verlieren. Praktisch wird dieses Gesetz nicht immer streng eingehalten, denn sonst könnte es im Tierradentro weder Kolonisten noch Großgrundbesitzer geben, die ihre Weide- und Anbauflächen langsam aber sicher in das Gebiet der Eingeborenen vorschieben. Diese können sich faktisch doch nicht dagegen wehren, denn aus Geldmangel ist niemand von ihnen zu einer Klage vor dem Gericht in der Lage. Falls es doch zu einer Klage kommt, verlieren immer die Indios, wie beispielsweise in Itaibe, im Südosten des Tierradentro, wo schon 1636 die Spanier zu kolonisieren begannen und wo viele Jahre hindurch vergebens von den Indios prozessiert wurde. Kein Richter vermag zudem etwas gegen einen reichen Großgrundbesitzer oder gegen die ebenfalls landbesitzenden Missionen zu unternehmen.

Nach dem Grad der Zivilisierung kann man die Bewohner des Tierradentro in drei Gruppen einteilen: a) Die südlich des Rio Ullucus wohnenden Kolonisten, die spanisch sprechen und nichts mit den Paez gemein haben. Sie entsprechen in Sitten und Gebräuchen der allgemeinen mehr oder weniger stark mestizierten kolumbianischen Landbevölkerung. Nichts mit den Paez gemein hat ferner die zum überwiegenden Teil aus Negern bestehende Bevölkerung von Belalcazar. Diese sind von den Spaniern in der Kolonialzeit als Sklaven dorthin gebracht worden, um die schon in alter Zeit von den Paez benutzten Salinen auszubeuten. Heute ist die Salzgewinnung nicht mehr rentabel. Die Neger leben zu einem Teil von der Goldwäscherei im Rio Paez, die in primitiver Art, von den Arbeitenden bis zu den Knien im Wasser stehend, mit Holzschüsseln vorgenommen wird. Die Paez vermischen sich allgemein nicht mit den Negern, sondern verachten sie, da sie wissen, daß diese einst als Sklaven dorthin gekommen sind.

b) Die Paez, die nördlich des Rio Ullucus beide Ufer des Rio Paez bis nördlich zum Nevado del Huila besiedelt haben. Sie haben sich teilweise mit der weißen und mestizierten Kolonistenbevölkerung gemischt. Die

von ihnen bewohnten Ortschaften sind: Araujo, Avirama, Belalcazar, Cuetando, Mosoco, Ricaurte, San Andrés, San José, Tálaga, Toez, Togóima.

c) Die reinen Paez-Dörfer Calderas, Chinas, Huila, Lame, Santa Rosa, Suin und Vitoncó. Von diesen haben die Paez von Calderas ihre kulturelle Eigenart am reinsten erhalten. Bei ihnen haben wir vorwiegend gearbeitet, und das vorgelegte Material bezieht sich, soweit nichts anderes erwähnt ist, auf die Kultur der Paez von Calderas. Die Calderuner, wie man die Bewohner von Calderas im Lande nennt, sind die am weitaus unzugänglichsten aller Paez. Sie haben die ursprünglich von allen streng beachteten drei Gesetze Juan Tamas, des mythischen Helden der Paez, bis heute am besten gehalten. Diese Gesetze besagen: 1. Tierradentro ist einzig und allein das Land der Paez, 2. die Paez dürfen sich nie mit anderen Rassen mischen, 3. die Paez sind unbesiegbar, solange sie diese Gesetze halten. Gerade das dritte Gesetz hat eine fundierte Berechtigung; war es doch den Spaniern jahrhundertelang nicht möglich, das Tierradentro zu erobern und die Paez zu unterwerfen.

Ihre Unabhängigkeit lieben die Paez auch heute noch über alles. Und wenn sie auch gegen die «Weißen», darunter verstehen sie die Kolonisten und allgemein die Kolumbianer, nichts mit Gewalt ausrichten können, so hassen sie sie doch in ohnmächtigem Grimm. «Muiska pešu»,* weißer Räuber, so nennen sie die Kolonisten, die ihnen das Land wegnahmen. Diese jedoch, fleißiger als die Paez, brauchen Land für ihre zahlreichen Kinder. Sie können es nicht einsehen, daß der beste und jungfräuliche Boden ungenützt in den Händen der Paez verbleiben soll.

Die in den Höhen durch die abfließenden Wasser im Gebirgsland entstechenden Flüsse bilden abgeschlossene Talkessel, die jeweils politisch ein Dorf umfassen. Es sind dies allerdings keine Dörfer in unserem Sinne, da die Häuser nicht zusammen, sondern einzeln, verstreut an den Berghängen des ganzen Talkessels als Einzelgehöfte liegen. Diese dezentralisierte Lage eines Dorfes erschwerte die ethnologische Arbeit beträchtlich, da man «sein» Dorf nicht im Blick hat und die Bewohner nicht insgesamt übersehen kann. Es ist somit sehr schwer, alle Leute des Dorfes kennen zu lernen, da man jeweils weite Strecken von Haus zu Haus gehen und dabei meist noch recht mühsam einen Hang erklettern muß. Wie oft kam es vor, daß die Bewohner gerade nicht zu Hause waren oder sich nicht sehen oder sprechen lassen wollten. Denn die Calderuner sahen uns zunächst keineswegs gerne, und noch nach Monaten des Lebens und der Besuche bei ihnen gedachten die Alten wehmütig der Zeiten, da man alle

* Über Transkription und Phonetik der Paez-Worte vgl. pp. 331-335.

eindringenden Weißen totgeschlagen hatte. Heute kommen zudem nicht nur Weiße nach Calderas, sondern sogar Ausländer. «Wenn wir mit ihnen sprechen und sie gut behandeln» so sagten sie, «dann kommen nur immer noch mehr Weiße her». Wie oft passierte es, daß wir einen der Alten besuchten, die, wie man mir sagte, Märchen zu erzählen wissen, und dem wir Tabak und Salz und einige sonstige kleine Geschenke, ein Messer, eine Hacke oder einen Aluminiumbecher gaben. Im Augenblick hätte er Kopfschmerzen, sagte er. Ich gab ihm einige Tabletten und wir vereinbarten, daß ich am nächsten Morgen wiederkommen und er mir dann einige Märchen erzählen würde. Als wir am nächsten Tage nach stundenlangem Marsch ankamen, erzählte uns seine Frau, daß ihr Mann heute schon ganz früh in die Berge gegangen wäre, um Holz zu schlagen.

Unser erster Besuch in Calderas geschah in Begleitung des Dolmetschers Marcos Antonio Penkue, eines etwa 40jährigen Paez aus San Andrés, der sich als sehr zivilisiert betrachtete und es bereits zu einem gewissen Wohlstand gebracht hatte. Er diente als Soldat an der brasilianischen Grenze und spricht gut spanisch. Auf seiner Finca hat er etwa 2000 Kaffeebäume, deren Ertrag er in Inzá auf dem Markt verkauft. Dort tätigt er auch noch weitere Geschäfte, indem er bei den nicht spanisch sprechenden und geschäftlich allgemein untüchtigen Paez als Dolmetscher und Zwischenhändler fungiert. Bei unserer Arbeit in Calderas verband er mit seinem Dienst auch gleichzeitig seine Geschäfte. Die Paez sind nämlich passionierte Viehzüchter, allerdings nicht in unserem ökonomischen Sinne, sondern aus reinem Sport und aus Freude an der Zahl. Ein Kuhkälbchen ist ihnen viel mehr wert als ein ausgewachsener Bulle, denn ersteres bringt ja wieder Kälbchen und vermehrt die Herde. Marcos Antonio tauschte also in Calderas Kälber gegen Bullen und kaufte wohl auch selbst einiges Rindvieh auf. Diese Handelsgeschäfte bringen ihm pro Stück etwa 200 bis 250 Pesos an Gewinn ein, da die Paez unter sich nur geringe Preise fordern, für einen Bullen etwa 50 Pesos. Sein Verkaufspreis auf dem Markt in Inzá beträgt etwa 300 Pesos. Die Arbeit mit uns betrachtete er als höchst lästig, wußte aber im übrigen, was er uns wert war. Seine Honorarforderungen stiegen von anfangs drei Pesos täglich bis auf zehn Pesos. Übersetzungen, die ihm zu kompliziert erschienen oder Erklärungen, die ihm zu lang waren, gab er «sinngemäß» mit wenigen Worten wieder, wobei meine Rückfragen ihn sichtlich belästigten. Als ich eines Tages eine wichtige Arbeit geplant hatte, er aber ein wichtiges Geschäft, versteckte er unsere Pferde und ließ sie uns den ganzen Tag über seelenruhig suchen, während er unter der Vorgabe des Pferdesuchens seinen Geschäften nachging, bis er sie dann am Abend «fand».

Wir suchten uns dann einen anderen Dolmetscher, den Calderuner Victoriano Piñakué, etwa 17 Jahre alt und der «weißen» Zivilisation sehr aufgeschlossen. Sein Vater besuchte einmal sogar Popayán, die Hauptstadt des Departamentos Cauca. Er hatte dadurch einen etwas weiteren Blick bekommen und bekam mit einem bösen Schamanen Streit, bei welchem dieser ihm auf magischem Wege ein Auge nahm. Der alte Piñakué ist seitdem auf einem Auge blind. Ein jüngerer Bruder Victorianos geht in Inzá zur Schule und ist Gehilfe des dortigen Sakristan. Victoriano hat großes Interesse daran, auch einmal Popayán oder gar Bogotá kennen zu lernen. Er spricht recht gut spanisch und hat sich bereits verschiedentlich im Dienste der weißen Kolonisten und in La Plata als Bauarbeiter Geld verdient, um sich Kleidung der Weißen zu kaufen. Unter «weiß» verstehen die Paez die spanische Kultur der Kolumbianer, also Kleidung, Erziehung und entsprechende Gebräuche, nicht aber die Hautfarbe oder sonstige Kennzeichen der weißen Rasse.

Victoriano legte großen Wert darauf, nicht wie ein Paez, sondern wie ein Weißer gekleidet zu gehen. Er war aber nicht nur aus Geldgier, sondern aus ehrlichem Interesse ein begeisterter Mitarbeiter, der bei jeder Gelegenheit rückfragte, wie es denn bei uns in Deutschland wäre. Mit großer Wißbegierde ließ er sich immer wieder unsere Fotos aus Europa erklären und bemühte sich sogar, deutsch zu lernen.

In seinem Heimatdorf Calderas war die Arbeit mit Victoriano sehr schwierig, da er sehr unbeliebt war, weil er wie ein Weißer gekleidet geht. Einige Male, als seine Dorfgenossen betrunken waren, wollten sie ihn sogar umbringen. Als wir einmal gemeinsam ein Haus besuchten, wurde er durch angetrunkene Männer angepöbelt, er wäre ein Faulpelz, der den ganzen Tag über nichts weiter täte, als mit den «Doctores» zu sprechen und spazieren zu gehen. Zudem glaube er wohl, daß er etwas Besseres sei als die übrigen Paez, weil er «weiße» Kleidung trüge. Auf die Entgegnung Victorianos, daß er bei seiner Arbeit unter den Weißen unmöglich Calderuner Tracht tragen könne, sondern sich in seiner Kleidung seiner Umgebung anpassen müsse, erwiderten sie, daß er nur zu den Weißen gegangen sei, um mehr Fleisch essen zu können.

Victoriano trägt seinen äußeren Stand höherer Kultur offen und gerne zur Schau. Er besitzt Seife, eine Zahnbürste, ein kleines Bürstchen zur Pflege der Augenbrauen und Parfum. Alle diese Toilettenartikel benutzt er sehr häufig. Angst hat er vor dem Neid der Calderuner Dorfgenossen nicht; zu seiner Verteidigung trägt er immer seinen Machete bei sich. Er wünscht, sich außerhalb von Calderas mit einer «weißen» Frau zu verheiraten (vgl. auch «Tageslauf»).

Bei der Arbeit wurde grundsätzlich versucht, alle Tätigkeiten der Paez selbst zu beobachten; wenn dies nicht angängig war, so wurden möglichst zwei verschiedene Gewährsleute befragt. Daß Irrtümer aber auch bei sorgfältiger Arbeit unterlaufen können, mögen zwei Beispiele zeigen: Ich ließ mir durch den Dolmetscher Marcos den Färbevorgang der schwarz gefärbten Stoffe erklären, wonach diese zuerst mit bestimmten Blättern gekocht und dann samt diesen zwei Tage in schwarze Humuserde gelegt werden. Bei der gleichen Frage an Victoriano erklärte dieser, daß die Schwarzfärbung eintrete, wenn man die Stoffe zwei Tage lang in schwarze Humuserde lege. Auf meinen Hinweis, daß man den Stoff doch vorher erst mit Blättern kochen müsse, stimmte er mir erfreut zu. Zur Rede gestellt, warum er mir denn das nicht auch gesagt hätte, antwortete er: «Ja, *danach* haben Sie doch nicht gefragt; Sie wollten doch nur wissen, wie der Stoff schwarz wird!».

Man kann gar nicht oft genug und immer wieder anders herum über dasselbe Thema sprechen, denn den Paez ist die Notwendigkeit oder der Sinn von Erklärungen für sie selbstverständlicher Dinge meist unverständlich. So lag auch in dem beschriebenen Falle genau so wenig eine böse Absicht oder auch nur Nachlässigkeit vor wie im folgenden: Beim Durchstreifen der Gemarkungen erkundigte ich mich, welche Felder Privateigentum und welche Gemeindeeigentum wären. Dabei kamen wir generell zu dem Ergebnis, daß die Niederungen Gemeindeeigentum und die Berghänge Privatbesitz des Mannes bzw. der Familie seien, die das Land erstmals gerodet hatte. Mehrmals fragte ich Victoriano, ob es noch Landstücke gäbe, die z. Zt. keinen Besitzer hätten. Ausdrücklich erklärte er, daß alles Land vergeben sei und es kein herrenloses Land mehr gäbe.

Eines Tages fragte ich beim Anblick eines frisch gerodeten Feldes auf den höchsten Berghängen einen dort arbeitenden Paez, wem denn dieses Land gehöre und ob der Betreffende es immer besessen hätte. Er wäre selbst der Besitzer, antwortete dieser, und das Stück war vorher herrenlos. Er hätte es sich gerodet und sich erst kürzlich hier sein Haus erbaut, um hier zu leben. Auf die Frage, ob es denn noch mehr herrenloses Land gäbe, erklärte er mir, daß die höchsten und unzugänglichen Bergspitzen, die noch mit dicken Bäumen bewachsen und noch nie gerodet worden sind, niemanden gehören und jeder Paez sich ein Stück davon roden könnte, welches daraufhin sein Eigentum würde. Ich stellte Victoriano danach zur Rede, daß es also doch noch herrenloses Land gäbe. «Ja», antwortete er mir da, «natürlich gibt es noch herrenloses Land, aber dieses ist so schlecht, daß es ja keinen Wert hat.»

Fern von ihrem Dorfe, auf dem Wege zum Markt und allgemein in der

Fremde sind die Paez, wenn sie einzeln oder in der Minderzahl sind, scheu und zurückhaltend. Sind sie aber in großer Anzahl beisammen oder gar in ihrem eigenen Hause, dann sind sie meist recht dreist und vorlaut und machten laut ihre Witze über uns. Scherzhaftigkeit ist überhaupt ein hervorstechendes Merkmal der Paez. Keine Unterhaltung, kein noch so belangloses Gespräch wird ohne Scherz — häufig erotischer Art — begonnen. Die Bedeutung, die die Führung einer solchen leicht-lässigen Unterhaltung hat, zeigt sich darin, daß ernst veranlagte Mädchen kaum geheiratet werden.

Besonders über meine Frau belustigte man sich, denn man fand es durchweg sehr häßlich, daß sie lange Hosen trug. Es wurden darüber zahlreiche Witze gemacht, die wir natürlich nicht verstanden und weswegen wir dann unsererseits die Initiative durch einen Witz ergreifen mußten, der dankbar und allgemein mit Schlagfertigkeit quittiert wurde. Überhaupt ist ihnen Respekt vor Fremden innerhalb ihrer Behausung fremd. In größeren Gruppen machen sie auch innerhalb fremder Umgebung ihre Glossen, wobei viel gelacht wird. Da man sie nicht versteht, erwecken sie leicht den Eindruck der Albernheit. In ihren eigenen Häusern äffen sie auch den besuchenden Missionspfarrer nach, indem sie Teile der Messe, sowie sie sie verstanden haben, übertrieben-dramatisch wiederholen. Dieser hat ohnehin ein schweres Amt. Seine Predigten und Belehrungen in der Kirche, in spanischer Sprache vorgetragen, verstehen sie nicht. Spricht er ihre eigene Sprache, so werden die unvermeidlichen Fehler laut lachend glossiert.

Bei unserem ersten Besuch in Calderas trat uns an der Grenze des Dorfbezirkes ein Mann von etwa 30 Jahren entgegen, der uns in barschem Ton fragte, ob wir nicht wüßten, daß dieses Land nur für die Paez sei. Kein Weißer hätte hier etwas zu suchen. Wir möchten umkehren, denn niemand wünsche unseren Besuch. Marcos Antonio vermittelte und erklärte, daß wir nur gekommen wären, um den Calderunern Geschenke zu bringen und daß wir nicht die Absicht hätten, uns in Calderas niederzulassen. Wir würden bestimmt am nächsten Tage wieder zurückkehren. Dies ließ der Mann gelten und ermahnte uns beim Abschied, es nur nicht zu wagen, etwa Land zu stehlen. Wir erhielten dann vom Cabildo, dem Dorfrat, auch späterhin nie die Genehmigung, länger als eine Woche hintereinander im Dorfe zu verbleiben. Unser Ansehen bei den jüngeren Leuten des Dorfes besserte sich von Woche zu Woche, einerseits dadurch, daß wir jedem Mann und jeder Frau, mit denen wir zu sprechen Gelegenheit hatten, eine Zigarette anboten, noch mehr aber dadurch, daß wir — wie uns später bestätigt wurde — zu jedermann freundlich waren und immer

lachten. In der Tat fällt es keinem der weißen und gemischtfarbenen Kolonisten ein, einen Calderuner auch nur eines Blickes zu würdigen. Im Gegenteil, in den am Wege liegenden Häusern sind die Hunde darauf abgerichtet, die Indios anzufallen. Allerdings sind diese Hunde durchweg unterernährt und allgemein sehr feige. Der Paez-Mann braucht nur seinen Machete oder einen Knüppel zu erheben, um den Hund abzuwehren. Wir waren die ersten Weißen, die etwas völlig Ungewöhnliches taten, indem wir, ohne jeden Hintergedanken, immer freundlich waren und sie in ihrer Sprache immer zuerst grüßten. Und dies nicht nur in Calderas, sondern auch in Inzá und auf den Wegen zum Markt. Diese Freundlichkeit wurde allerseits sehr gut vermerkt. Als wir ihnen dann später die ersten Fotografien von ihnen zeigen und schenken konnten, ließen sie sich ausgesprochen gerne fotografieren und boten uns hin und wieder ein Ei oder eine Schale Chicha an, wenn wir sie fotografierten.

3. ANTHROPOLOGISCHE BEMERKUNGEN

Da ich persönlich unter den Paez keine anthropologischen Messungen vorgenommen habe, kann ich keine zahlenmäßigen Angaben machen. Die entsprechenden Untersuchungen sind während meines Aufenthaltes von dem kolumbianischen Anthropologen Nestor Usacategui vorgenommen worden, aber noch nicht publiziert.

Was in somatischer Hinsicht die Männer anbelangt, so sind sie meist mittelgroß, schlank, mit schmalen Schultern, selten untersetzt. Als geübte Kletterer und Bergbewohner sind sie nie dick. Sie machen zwar keinen unterernährten Eindruck, dennoch ist ihr Fettpolster sehr dünn. Auch die Arm- und Körpermuskulatur ist nur schwach entwickelt (vgl. Abb. 173). Größere Lasten vermögen sie nicht zu heben. Mittels der auf dem Rücken herunterhängenden und mit dem Brustband getragenen Fasertaschen werden maximal 25 kg transportiert. Die Waden sind muskulös, aber nicht dick. Allgemein herrscht Senkfuß vor. Der Gang ist leicht o-beinig, die großen Zehen werden beim Laufen nach innen gestellt. Dieselben somatischen Besonderheiten finden sich auch bei den Frauen. In der Jugend sind sie gut proportioniert, im Alter nie dick.

Allgemein herrscht Kurzköpfigkeit vor, jedoch keine extreme. Die Gesichter sind oval, die Backenknochen treten nur wenig hervor. Die Nase ist vorwiegend gerade, teilweise leicht konkav und von mäßiger Breite. Bei Frauen finden sich manchmal etwas geblähte Nasenflügel. Die Stirn

ist hoch, gerade und steil. Die Brauenbögen sind wenig ausgeprägt. Die Augen sind mitunter leicht schräg gestellt und zeigen — besonders bei Frauen — eine leichte Mongolenfalte. Der Mund ist groß, die Lippen etwas wulstig. Die Augenfarbe ist dunkelbraun und glänzend, die Hautfarbe mittelbraun. Stolz wurde uns in Avirama eine Familie vorgestellt, deren Mitglieder bei normaler Hautfarbe und dunklen Augen, rötlichblondes Haar haben. Ein Großvater soll hellhäutiger gewesen sein und eine noch hellere Haarfarbe gehabt haben. Die normale Haarfarbe ist dunkel, das Haar ist schlicht, aber nicht straff, teilweise gewellt. Auch im Alter werden die Haare selten weiß. Nur eine Frau mit leicht angegrautem Haar trafen wir und einen alten Mann mit grauem, spärlichen Bartwuchs, aber dunklen Haaren. Der Bartwuchs bei den Männern ist gering. Die Barthaare werden regelmäßig herausgezupft (vgl. Abb. 148 bis 155).

Nach der blutgruppenmäßigen Zusammensetzung der Paez fanden sich bei 303 untersuchten Individuen 88,78 Prozent der Blutgruppe O, 6,93 Prozent der Blutgruppe A und 4,29 Prozent der Blutgruppe B. Die Blutgruppe A + B ist nicht vertreten (G. Arcila Velez, pp. 11-14).

Den Paez selbst ist der rassische Begriff der Indianer fremd. Für sie kennzeichnet «Indio» einen kulturellen Status. Der Kollege Segundo Bernal Villa, Indianer aus der Gegend von Pasto, wurde wegen seiner europäischen Kleidung als «Blanco» bezeichnet. Und als sich unser Dolmetscher Victoriano für sein verdientes Geld «weiße Kleidung» (Hut, Hose, Hemd, Schuhe) kaufte, wurde er in seinem Dorf als «Weißer» bezeichnet und entsprechend angefeindet.

Die Bevölkerungszahl der Paez scheint weder zu- noch abzunehmen, soweit es die nicht zivilisierten Paez, beispielsweise in Calderas betrifft. Die Kindersterblichkeit beträgt mehr als 50 Prozent. Die häufigste Krankheitsursache ist der Keuchhusten. Der Gesundheitszustand der das zweite Lebensjahr überlebenden Kinder, sowie der Erwachsenen ist — den Umständen entsprechend — recht gut. Allerdings sieht man kaum alte Leute über 60 Jahre (und die so alt Aussehenden sind wahrscheinlich jünger). Die häufigste Krankheit der Erwachsenen ist Tuberkulose, die zahlreiche Opfer fordert, da die Nächte sehr kalt sind und Kälte und Wind ungehindert durch die leichten Wände in die Häuser eindringen können. Zudem wird allgemein keinerlei Fett in irgendeiner Form zu sich genommen. Eine weitere, allerdings nicht ernst genommene Krankheit, an der viele Paez leiden, ist ein kranker Magen, hervorgerufen durch das Branntweintrinken schon im Säuglingsalter und die unsachgemäße Ernährung im Kindesalter. Säuglinge bekommen Bohnen, Kohl, Yuca, aber keine Milchnahrung außer der Muttermilch.

Ärzte werden in keinem Fall konsultiert. Sämtliche ohne äußere Einwirkungen zutage tretenden Krankheiten werden auf bösen Zauber oder auf die «Pest» (s. unter Religion) zurückgeführt. Sie müssen deswegen von den einheimischen Schamanen behandelt werden. Offene Wunden und Verletzungen behandelt die Hebamme. Hin und wieder besucht man allerdings die Missionsstation, um sich einen Zahn ziehen zu lassen, wobei von den Schwestern uneingeschränkt die große Standhaftigkeit im Ertragen der Schmerzen gelobt wird.

Die gesundheitlichen Schäden durch den Koka- und Chichagenuß scheinen mir seitens der Behörden übertrieben; sie wären noch geringer bei vernünftigerer und kräftigerer Ernährung. Das Verbot des Kokagenusses und der Kampf der Regierung gegen Koka und Chicha erwecken den Anschein, als ob es mehr ein Kampf um die ausfallende Branntweinsteuer ist, denn Alkohol des staatlichen Monopols darf an jeden Indio in jeder Menge verkauft werden. Daß der Paez allgemein nicht durchgehend und hart arbeitet, hat wohl nichts mit einer Degeneration durch die genannten Genußmittel zu tun, sondern es ist ganz einfach seine psychologische Einstellung, die ihn nicht einsehen läßt, daß der Mensch über seine animalischen Lebensbedürfnisse des Essens und sich Fortpflanzens hinaus nach Dingen streben soll, die ihm entbehrlich erscheinen. Oft fragte ich, ob es nach ihrer Auffassung einmal eine Zeit geben könnte, wo auch die Paez nur kolumbianische Kleidung trügen oder sogar elektrisches Licht benutzen könnten. Sie hatten nie darüber nachgedacht und wußten in keinem Falle eine Antwort.

II. Materielle Kultur

1. WOHNUNG

a) Siedlung

DIE PAEZ-DÖRFER des Tierradentro umfassen politisch und soziologisch die Bewohner eines durch die umliegenden Berge mehr oder weniger abgeschlossenen Talkessels. In ihrem Aufbau sind sie jedoch keine Dörfer in unserem Sinne, unten denen wir den örtlich eng begrenzten Zusammenschluß einer Anzahl von Häusern verstehen, sondern wir haben

es fast ausnahmslos mit an den Abhängen der Berge verstreuten Einzelgehöften zu tun, in denen die Familien inmitten ihrer bebauten Felder wohnen (vgl. Abb. 156 und 157). Der Paez ist keineswegs ein ungeselliger Mensch und nimmt auch gerne an den Festen teil, aber er liebt es nicht, eng zusammengeschlossen in einem Dorfe zu leben und dauernd seine Nachbarn um sich zu haben, sondern er wohnt lieber recht weit weg vom nächsten Haus, umgeben von seinem Vieh, um ungestört mit seiner Familie der täglichen Feldarbeit nachgehen zu können.

Jeder Paez hat eine starke Bindung an «seine Erde», und die Angst, daß ihm Erde und Land geraubt werden könnten, diktiert sein unfreundliches und abweisendes Verhalten gegenüber dem Fremden. Zu schlecht sind auch seit Jahrhunderten die mit den Weißen gemachten Erfahrungen, als daß die Paez verstehen könnten, daß ein Fremder nur käme, um sie selbst und ihr Land aus ganz uneigennützigen Gründen kennenzulernen.

Sein Haus, als Familienmittelpunkt und soziales Zentrum, erbaut der Paez nur auf seinem eigenen Grund und Boden, den er von seinen Vätern ererbt und der durch alle weiteren Generationen hindurch derjenigen Familie gehört, die ihn zuerst bebaut hat. Land ist in jeder Familie in genügendem Maße vorhanden, notfalls findet jedermann auch noch herrenloses, ungerodetes Land auf den höchsten Lagen der Höhenzüge.

Während die Abhänge der Berge nach der erstmaligen Rodung Privatbesitz sind, ist die Talsohle mit dem Gemeindehaus und dem Festplatz Gemeindeland. Die Häuser sind untereinander, sowie mit dem Dorfplatz, durch Fußwege verbunden, die immer sehr schmal sind, da die Paez auch in größerer Anzahl nie nebeneinander, sondern immer nur hintereinander gehen. Auch die Verbindungswege zwischen den einzelnen Ortschaften, die Wege, die zu den Wochenmärkten nach Belalcazar oder Inzá begangen werden mußten, waren ursprünglich nicht breiter. Besuche seitens der weltlichen und geistlichen Behörden machten jedoch in jüngerer Zeit eine Verbreiterung der Wege für reitende Personen erforderlich.

Da keine in sich eng geschlossenen Siedlungen unter den Paez bestehen, gibt es auch keine geographische Veränderung des Dorfes. Kirche mit Friedhof, Gemeindehaus, Festhäuser und neuerdings Missionsstation und Schule sind der zentrale Pol, während die Familienhäuser immer wieder an anderen Orten, aber auf eigenem Grund und Boden, erbaut werden (Abb. 146-147). Manchmal errichtet man ein Haus nur für eine Ernte, d. h. für ein halbes Jahr, inmitten seines abzuerntenden Feldes. Bei Arbeit und Ernte kann es dann vorkommen, daß eine Paezfamilie den Nachbarn mehrere Wochen lang nicht sieht.

Die Größe der Dörfer schwankt; Calderas ist eine der größten Paez-

Gemeinschaften und umfaßt etwa 200 Häuser mit rund 1000 Einwohnern. Andere Dörfer, San Andrés, Santa Rosa, Lame u. a. sind bedeutend kleiner. In jedem Fall braucht man eine beträchtliche Zeit, um ein Dorf zu durchqueren, da dies ja der Durchquerung des betreffenden ganzen Talkessels entspricht. Für Calderas sind das für einen Europäer zu Pferde mehr als drei Stunden. Die Paez legen die steilen Abkürzungswege zu Fuß allerdings bedeutend schneller zurück.

b) Das Haus

Für die Anlage eines Hauses sucht man sich den Bauplatz möglichst in der Nähe eines kleinen Baches aus, die in großer Zahl von den Hängen der Berge herabrinnen und sich am Fuße der Talsohle zu dem Kokiyó-Fluß (wörtlich «Maiswasser») vereinigen. Wo die Anlage eines Hauses direkt an einem Bach nicht möglich ist, leitet man von oberhalb her das Wasser durch einen kleinen Graben am Haus vorbei. Von diesem, wie jedem anderen fließenden Wasser, kann man immer trinken. Man weiß auch, daß die oberhalb dieses Hauses wohnenden Bewohner ab und zu in das Wasser urinieren, aber «das macht gar nichts aus», wie man mir versicherte.

In einem Wohnhaus wohnt grundsätzlich nur eine Familie, bestehend aus Vater, Mutter und Kindern. Die verheirateten Söhne müssen sich eigene Häuser bauen. Es ist allerdings üblich, daß die Jungverheirateten noch eine Zeitlang im Hause des Vaters weiterwohnen, bis sie sich genügend Chicha und Nahrungsmittel zur Bewirtung der beim Hausbau helfenden Freunde zusammengespart haben. In einem Falle jedoch wohnten im Hause des Ezequiel Calliumbo neben drei ledigen auch noch drei verheiratete Söhne, die alle gemeinsam die Felder bebauen. Ezequiel, der schätzungsweise 60 Jahre alt ist, hatte zehn Kinder, von denen noch sechs Söhne leben. Der älteste Sohn hat drei Kinder, von denen zwei gestorben sind, der zweitälteste hat vier Kinder, von denen zwei gestorben sind und dem drittältesten sind seine beiden Kinder gestorben.

Die normalen Häuser (yat) sind Rechteckhäuser mit Walmdach und werden je nach ihrer Größe in «große Häuser» (yatwála) und «kleine Häuser» (yatléčkwe) unterteilt (Abb. 158 und 159). Nach seinem Gebrauch wird das spezielle Wohnhaus als öpyat (öp = leben) bezeichnet. Die Maße der kleinen Häuser schwanken zwischen fünf bis zehn Meter Länge und drei bis fünf Meter Breite. Die größten Häuser sind bis zu fünfzehn Meter lang und sieben Meter breit. Sie bilden in erster Linie die Festhäuser. Als Wohnhaus unterscheiden sie sich von den kleinen, die den weitaus größten Anteil aller Häuser stellen, nicht nur durch die

Größe, sondern vor allem dadurch, daß sie die zu jedem Haus gehörende Zuckerrohrmühle (lapíče) in ihrem Innern haben. In der Regel steht diese nämlich vor dem Haus oder etwas seitwärts davon, normalerweise von Mengen ausgepreßter Zuckerrohrstengel bedeckt, die zum Trocknen darübergehängt sind. Außer der Zuckerrohrmühle gehört zur Vollständigkeit jedes Hauses ein kleines Menstruationshüttchen (dúyat), das nur fehlen kann, wenn sich die Familie für eine Ernteperiode eine kleine Feldhütte (ɣyatwá) mitten im Feld errichtet. In diesem Falle gehen die Frauen der dort wohnenden Familie in das dúyat eines anderen Hauses. Keinesfalls dürfen sie während dieser Zeit im Wohnhaus verbleiben. Feldhütte und Menstruationshüttchen sind ihrer Konstruktion nach rechteckige Giebeldachhäuser und, mit Ausnahme des Giebeldaches, von gleicher Konstruktion wie die normalen Walmdachhäuser.

Zu jedem Haus gehört ein Anbau (ikídnyçyát) oder wenigstens ein Verschlag für die Aufbewahrung des Chichatroges (kánoç). Dieser Trog ist nächst der Zuckerrohrmühle das wichtigste Zubehör eines Paez-Hauses (Abb. 165).

Zusätzlich zu diesen Wohnhäusern haben nur wenige Häuser Sonderbauten, wie beispielsweise ein oder allenfalls zwei Vorratshäuser oder ein kleines Haus (yatléčkwç), in dem die Freunde und Nachbarn schlafen, wenn sie zu der gemeinsamen Arbeit des Zuckerrohrpressens oder der Ernte dem Besitzer tagelang helfen. Im Vorratshaus (kotyāvyat: wörtlich «Maisaufbewahrhaus») werden nur Mais und Bohnen aufbewahrt, nicht aber Weizen oder Früchte. Obst, Yuca, Kartoffeln und Arracacha werden überhaupt nicht aufbewahrt oder bevorratet, sondern immer nur bei Bedarf geholt und gleich gegessen. Weizen wird unterhalb der Ähren an den etwa 20 cm langen Halmen zu Büscheln zusammengebunden und unter dem Dach oberhalb der Feuerstelle aufgehängt. Mais und Bohnen können im Vorratshaus bis zu zwei Jahre lagern. Dazu werden darin waagerechte Querstäbe angebracht, über die die Maiskolben gehängt werden und für die Bohnen Gestelle konstruiert, die aus dicht nebeneinandergelegten Maisstengeln bestehen. Auch diese Gestelle werden möglichst aufgehängt oder doch recht weit vom Boden erhöht angebracht, damit die Mäuse (úńsa) nicht herankönnen. Zusätzlich sperrt man, falls vorhanden, im Vorratshaus noch eine Katze (mil) ein. Ställe für das Vieh sind nicht bekannt.

Inmitten des Dorfes Calderas, auf Gemeindeland, stehen Kirche (iglésia), Gemeindehaus (kabíldeyát) und sechs Festhäuser der sechs größten Familien (Abb. 147). Es sind, ihrer Konstruktion nach, ebenfalls Walmdachhäuser, aber ihre Wände sind in der Art der Kolonistenhäuser ge-

baut, aus senkrechten Pfosten, an die innen und außen Bambusstangen oder gerade Äste waagerecht angebunden sind. Die Zwischenräume in Stärke der Pfosten werden mit Erde, Lehm und im unteren Teil auch mit Steinen ausgefüllt. Die Füllung wird glatt verstrichen und die Wand innen und außen weißgekalkt. Während der Lichteintritt in den übrigen Häusern durch die Tür und die nicht sehr dicht schließenden, aus nebeneinandergestellten Maisstengeln gebildeten Wände erfolgt, kann bei den genannten, aus festen Wänden bestehenden Häusern, das Licht nur durch die verhältnismäßig kleine Tür und die Öffnung des Dachfirstes eintreten, wodurch das Innere ziemlich dunkel ist.

Jedermann kann sich auf eigenem Grund und Boden in den Bergen, wie auch auf dem genannten Gemeindeland im Tal, ein Haus von beliebiger Größe bauen, allerdings muß er vorher den für ihn zuständigen Schamanen fragen, ob sich im Boden des in Aussicht genommenen Landstückes keine Knochen der Pijaos befinden. Die Pijaos sind, wie aus den Mythen hervorgeht, in alter Zeit die schrecklichen und kriegerisch tüchtigeren Feinde der Paez gewesen. Ihre Knochen (eĉ ndyit Pijao) enthalten «Pest». Diese Pest ist ein sehr komplexer und inhaltvoller Begriff bei den Paez (vgl. unter «Religion»), und die Pest der Pijao-Knochen vermag die über diesen wohnenden Menschen zu töten. Wie sehr auch unser Dolmetscher Victoriano, einer der aufgeschlossensten Paez, von dieser Furcht durchdrungen war, zeigte sich, als er im archäologischen Park in San Andrés mit uns arbeitete. Aus Platzmangel mußte er im Werkzeugraum schlafen, wo er sich aber recht wohl fühlte und sich mit einem Feldbett und Matratzen wohl die beste Lagerstatt seines Lebens gebaut hatte. Eines Tages öffneten wir eine große prähistorische Grabkammer, die über 80 Knochenurnen mit Resten von Totenverbrennungen enthielt. Da wir eine so große Anzahl von Urnen in unserem Wohnraum, der gleichzeitig auch als Museumsraum diente, nicht unterbringen konnten, mußten wir eine Anzahl davon im Werkzeugraum abstellen. In einigen von ihnen beließ ich die Knochenreste, um sie für eine spätere Untersuchung aufzuheben. Weinend bat mich Victoriano, nur ja keine Urnen mit den Knochen in seinem Werkzeugraum abzustellen, da die Knochen von den Pijaos stammen könnten, die ihn gewiß töten würden. Auch die gewaschenen und gereinigten Urnen enthielten, wie er uns versicherte, noch sehr viel «Pest», so daß er bei der nächsten Gelegenheit nach Calderas gehen und sich von seinem heimatlichen Schamanen «reinigen» lassen wollte. Er versäumte dies; und als er nach einigen Tagen Zahnschmerzen bekam, führte er diese auf die Wirkung der Pest der ehemals mit Knochen gefüllten Bestattungsurnen zurück.

Die Prüfung des als Bauplatz in Aussicht genommenen Bodens durch den Schamanen geschieht allerdings nicht durch Nachgraben oder durch Bodenproben, sondern der Bauwillige geht mit Koka, Tabak und Branntwein am Abend in das Haus des Schamanen, trägt diesem sein Anliegen vor, und dann nehmen beide nebeneinander auf dem Boden Platz und beginnen gemeinsam Koka und Tabak zu kauen und Branntwein zu trinken. Nach einer Weile erfährt der Schamane durch Zeichen in seinen Armen oder Beinen, ob sich Knochen der Pijaos im Boden befinden. Ist dies nicht der Fall, so kann mit dem Bau begonnen werden, im anderen Fall muß sich der Mann einen anderen Bauplatz aussuchen. Nach Fertigstellung des Baues wird eine weitere Zeremonie ausgeführt (s. unter «Religion») und dann befestigt der gleiche Schamane am Dach Spezialkräuter, um zu verhindern, daß der dem Menschen feindliche eč- oder gělyómp-Geist von dorther in das Haus eindringen könnte.

Häuser werden nur von Männern, von Familienvätern gebaut. Ein Mann alleine ist dazu jedoch nicht in der Lage. Zum mindesten bei der Errichtung der Hauspfosten helfen ihm außer seinen Brüdern auch noch andere Männer und Freunde, die an diesen Tagen ohnehin nichts zu tun hätten und für ihre Mithilfe Chicha und etwas zu essen bekommen. Das Baumaterial kostet zwar nichts, aber vom Bauherrn muß eine beträchtliche Menge Chicha gestellt werden, wozu die Planung schon zeitig, zwei bis drei Jahre vorher, durch Anpflanzung einer genügend großen Menge Zuckerrohr beginnen muß. Dies ist Aufgabe des verheirateten Sohnes, der solange noch im Hause seines Vaters wohnt. Zur Chichaherstellung braucht er auch noch die Zuckerrohrmühle seines Vaters, von dessen Einwilligung und Hilfe somit viel abhängt. Nach der Menge der zur Verfügung stehenden Chicha dauert der Hausbau dann auch zwei bis sechs Monate, je nachdem, ob nur fünf oder fünfzehn Männer mitarbeiten.

Das Wichtigste beim Bau des Hauses ist die Errichtung der Rahmenkonstruktion aus Holz (Abb. 161 bis 164), zu der immer mehrere Männer erforderlich sind, welche die mit dem Machete oberflächlich geglätteten, aber nicht entrindeten Bäume herantragen. Die Wände kann der Hausherr zur Not auch alleine erstellen. Auch das Decken des Daches ist, wie der gesamte Hausbau, Männerarbeit, bei welcher die Frau des Hauses aber die Zuckerrohrblätter zur Bedachung hochreichen kann. Zuerst werden die vertikalen Eck- und Seitenpfosten der Außenwände (yátšínda) errichtet, dann die äußeren, auf den Seitenpfosten aufliegenden horizontalen Balken, die das Dach tragen (yátpopānt) aufgelegt, und als dritter Arbeitsgang die waagerechten Querbalken (bīkas) in Höhe der Decke befestigt. Dabei ist zu bemerken, daß alle Balken nur durch Lianen verbun-

den, aber nicht verzapft sind. Das Dach liegt nicht unmittelbar auf den Eck- und Seitenpfosten auf, sondern die Querbalken (bīkas) und die Dachsparren (yátkát) sind an dem rechteckigen, waagerechten Rahmen des Daches angebunden, und nur dieser ruht auf den senkrechten Pfosten.

Als vierter Arbeitsgang wird der Firstbalken (dahwāk), zusammen mit den Dachsparren, eingebaut, wobei ersterer im wesentlichen von dem meist einzigen, senkrecht bis zum Dachfirst durchgehenden Pfosten des Hauses, dem Zentralpfosten (pwát) unterstützt wird. Dieser steht nicht genau in der Mitte der Längsachse des Hauses, sondern etwas seitlich davon, dort, wo die beiden Räume des Hauses abgeteilt werden. Hier dient er gleichzeitig als Wandpfosten. Die waagerechten Dachpfetten (kwīnt), die im Abstand von etwa 20 cm übereinander an den Dachsparren (yátkát) angebunden werden, sind als einziger Teil der Rahmenkonstruktion des Hauses nicht aus Holz, sondern bestehen aus einer Rohrart (karís). Das Dach (yátominyē) wird mit den Blättern des Zuckerrohres (nyúša éts) bedeckt, wobei man von unten nach oben vorgeht und die Blätter so über die Dachpfetten hängt, daß die Spitzen oben liegen und nach unten = außen zeigen. Zum Schluß werden über den noch offenen First ein oder zwei Firstpfetten gelegt und darüber eine gleichmäßige Lage von Zuckerrohrblättern quer ausgebreitet. Die dadurch gebildete Erhöhung ermöglicht den Rauchaustritt an den beiden Giebelseiten des Hauses. Die Firstbedeckung wird durch zwei darübergelegte Stangen vor dem Wegfliegen geschützt (Abb. 162).

Ein neugebautes Haus (yátūsę) hält etwa 15 Jahre. Zwischendurch muß jedoch mehrere Male das Dach ausgebessert werden.

Beim Eintritt in ein Paez-Haus schlägt einem ein von der Chicha hervorgerufener, süßlicher Gärungsgeruch entgegen, so etwa, wie zur Zeit der Weinlese in den Häusern der deutschen Winzerdörfer. Bevor man eintritt, öffnet man die Tür (vitç) des Hauses und ruft in fragendem Ton: «payoǵt» (ich möchte eintreten); aus dem Innern tönt es zurück «mkāč» (setz dich). Wenn niemand zu Hause ist, wird die Tür meist mit einem Stückchen Bast zugebunden. Manchmal unterläßt man auch dies, denn nie wird jemand ein Haus betreten, dessen Bewohner nicht anwesend sind. Es gelang uns niemals, Victoriano zum Eintritt in ein leeres Haus zu bewegen, obwohl er wußte, daß wir immer großes Interesse daran hatten, das Innere von Häusern und ihre Einrichtung kennen zu lernen.

Die Tür des Hauses ist nur in seltenen Fällen ein breites Brett, welches oben und unten an einer Seite in zwei Zapfen ausläuft, die sich je in einer Pfanne der Schwelle und des Türrahmens drehen. Allgemein ist der Eingang in gleicher Art konstruiert, wie die Wand (īnd), welche aus senk-

rechten, möglichst eng nebeneinander gestellten Maisstengeln besteht, die mittels Bast oder einer Liane untereinander und an zwei waagerechten Maisstengeln festgebunden sind. Letztere reichen jeweils von Seitenpfosten zu Seitenpfosten. An der Stelle der Tür ist die starre Wand unterbrochen, und die senkrecht gestellten, nur lose mit Bast verbundenen Maisstengel können ein wenig zur Seite geschoben werden, wobei sie auf dem Boden entlang schleifen (Abb. 158).

In den Häusern werden auch die Hunde, Katzen und Hühner gehalten; Schweine nicht, diese leben, genau wie Pferde, Kühe und Schafe, ständig im Freien.

c) Hausgerät

Allgemein hat das Haus nur eine Unterteilung in zwei Räume, deren kleinerer Küche, Wohn- und Schlafraum ist und deren größerer als Abstell- und Vorratsraum dient. Die Wand zwischen diesen beiden Räumen wird ebenfalls nur durch senkrecht nebeneinander gestellte Maisstengel gebildet. In den «großen Häusern» befindet sich in dem größeren Teil die Zuckerrohrmühle, mittels welcher auch bei Regenwetter ein unverdünnter Zuckerrohrsaft produziert werden kann. Falls erwachsene, verheiratete Söhne mit im Hause des Vaters wohnen, so wird für diese Familien ein besonderer, in gleicher Weise abgetrennter Verschlag gebaut und als Küche eingerichtet, entweder neben dem Wohnraum der Eltern oder — wie meistens — auf der anderen Seite des Hauses. Die Herdstelle ist nämlich das Zentrum der Familie, und jede verheiratete Frau hat in dem Falle, in dem sie als Schwiegertochter mit im Hause des Schwiegervaters wohnt, ihre eigene Herdstelle. Diese hat allereinfachste Form. Drei Felsblöcke bilden den seitlichen Halt oder Untersatz für die Töpfe, von denen höchstens zwei vorhanden sind, ein metallener, meist aus Aluminium und ein tönerner. Ganz arme Familien haben nur einen Tontopf, der in der Anschaffung relativ billig ist. Der Tontopf kann nicht aufgehängt werden, er wird so zwischen die drei Feuersteine gestellt, daß er nicht umfallen kann, während der Aluminiumtopf mit seinem Henkel an einem verrußten Winkelholz aufgehängt wird, das vom Dachfirst herunterhängt (Abb. 166). Oberhalb der Feuerstelle hängt ein aus Maisrohren gebildetes Gestell von etwa einem Quadratmeter Größe, auf welchem Haushaltsutensilien und vor allen Dingen das Steinsalz zum Salzen der Speisen luftig und trocken aufbewahrt werden. Tische, Stühle oder Schemel jedweder Art sind unbekannt. Allgemein sitzt man auf der Haarseite einer ungegerbten und deswegen brettharten Rinderhaut, auf der man auch

schläft, oder man sitzt auf einem Balken, einem Holzklotz oder einem Stein. Paez, die in Inzá oder in Wohnungen der weißen Kolonisten eine Wohnungseinrichtung sahen, haben sich als Bett mitunter eine Art Bank von 30-50 cm Höhe gebaut, die aus nebeneinander gelegten Knüppeln oder Schilfrohren besteht. Darauf wird zum Schlafen die übliche Kuhhaut gelegt. Zum Sitzen werden diese Schlafbänke nicht benutzt.

Die Nächte in Calderas sind allgemein recht kühl, und die leichte Bauweise der Wände mit den Spalten zwischen den einzelnen Maisstengeln hindert keineswegs den Eintritt des kalten Windes. In einigen Häusern sah ich in der Nähe des Schlafplatzes eine Abdichtung der Wände mittels waagerecht aufgeschichteter, ausgepreßter Zuckerrohre. Die Lagerung der Familienmitglieder zum Schlafen geschieht rund um die Feuerstelle, dessen Feuer die ganze Nacht hindurch unterhalten werden muß. Es ist dies, wie alle Hausarbeit, Aufgabe der Frau, die beizeiten genügend Brennmaterial heranschaffen und in der Nacht alle zwei Stunden aufstehen muß, um das Feuer zu schüren. Morgens muß sie sich zudem eine Stunde früher erheben, um die erste Mahlzeit, die um fünf Uhr, manchmal auch schon um vier Uhr eingenommen wird, beizeiten zu richten. Trotzdem glauben die Männer, daß sie es sind, die die schwerste Arbeit verrichten und im Grunde als die einzigen des Dorfes wirklich arbeiten.

Falls das Feuer einmal ausgehen sollte, was nur sehr selten vorkommt, verstehen die Männer, wenn sie keine Zündhölzer haben, Feuer zu machen, indem sie mit einem Stein auf das Blatt des eisernen Machete schlagen und die Funken in dem trockenen Zunder ausgequetschter Zukkerrohre auffangen. Zum Entfachen dieses oder eines heruntergebrannten Feuers wird anstelle eines besonderen Fächers der Hut als Feuerfächer benutzt. Einige Male sah ich auch ein Schilfrohr (yotá) von etwa 50 cm Länge, in das mit dem Mund hineingeblasen wird und das so wie ein Blasebalg wirkt.

Säuglinge pflegen nicht auf dem Boden zu schlafen, sondern in Hängematten (máka), die aber, wie schon der Name sagt, nicht original Paez sind. Alle Männer verstehen sie jedoch aus Agavefasern herzustellen, was in der gleichen Knotentechnik geschieht, wie die Anfertigung der Netze zur Vogeljagd. Außerdem hängen an den Pfosten der Wände einige aus Agavefasern gearbeitete Taschen (yáha), die Bohnen, Mais oder andere Vorräte enthalten. Arracacha liegt auf dem Boden. Zum Trinken der Chicha, die man in großen, ausgehöhlten Baumtrögen gären läßt, werden Kürbiskalebassen (tóka) benutzt, die aber schmucklos und unverziert sind. Gesprungene Kalebassen versteht man mit einem gewachsten Agavefaden zu nähen (Fig. 25). Der Kalebaßkürbis wird in dem Hausgarten

jeder Familie gezogen; sein Fleisch ist nicht eßbar. Zu jedem Haushalt gehört ferner ein ovaler oder rechteckiger Mahlstein, auf dem mit einem kleineren Handstein der Mais gemahlen wird. Er liegt meist in einer Hausecke auf dem Boden, teilweise ist er aber auch in etwa 1 m Höhe auf zwei gegabelte Pfosten gesetzt.

Gegessen wird mit Holzlöffeln (todlá'tç) aus Holztellern (biĉ), die von den Paez selbst geschnitzt werden (Fig. 27). Nur selten waren in Calderas Aluminium- oder Emailschüsseln anzutreffen. Teller und Becher aus Aluminium waren deswegen immer begehrte Geschenkartikel, neben Küchenmessern, Näh- und Sicherheitsnadeln, Streichhölzern und Salz.

Die Reinlichkeit im Hause ist erstaunlich groß, wenn man berücksichtigt, daß die Paez ihren Körper nur selten waschen und die Hände nur dann, wenn sie «sehr schmutzig» sind. Dies ist der Fall, wenn man in einem Brandfeld gearbeitet und die rußigen, verbrannten Baumstämme und das verbrannte Gesträuch beiseite geräumt hat. Von den Frauen wird das Haus täglich mit einem Besen (çtábando) ausgefegt, der aus den Sträuchern des pláṅga-Krautes besteht. Dieses Kraut vertreibt gleichzeitig die Flöhe. Der Kehricht wird so aus dem Hause herausgekehrt, daß auch der Eingang noch sauber ist.

Rund um das Haus, und dieses in einiger Entfernung umschließend, ist jeweils entweder ein Zaun errichtet oder wird ein etwa ein Meter tiefer Graben ausgehoben, innerhalb dessen das Geflügel und meist auch die Schweine und Schafe gehalten werden. Der Zaun wird in Calderas, wo wegen der niedrigen Temperatur kein Bambus mehr wächst, aus Holz erstellt, das von der natürlichen Bewachsung her bei der Brandrodung des Landstückes anfällt. In Abständen von etwa zwei Metern werden Pfähle senkrecht in den Boden geschlagen und die Zwischenräume durch waagerecht liegende Baumstämmchen, Äste und Zweige bis in eine Länge von gut einem Meter ausgefüllt. Das Übersteigen dieses Zaunes geschieht mittels eingekerbter Baum- oder Bambusstämme, die als Leiter schräg an den Zaun angelegt werden. Gleichartig gekerbte Baumstämme dienen auch in den Häusern als Leiter (Abb. 168 und 154).

Aborte gibt es nicht. Wegen der Abgelegenheit der Häuser fällt es den Paez aber nie schwer, ein verschwiegenes Plätzchen im Gebüsch oder im Wald zu finden. Die Wege und die Nachbarschaft der Häuser fanden wir durch Kot nie verunreinigt. Den gleichen Takt zeigten die Paez auch beim Essen oder bei sonstigem Zusammensein. Wir erlebten nie Schmatzen oder Rülpsen, wenngleich die Eßsitten auch etwas roh waren, da man sich aus Mangel an Löffeln sein Essen einfach mit den Fingern vom Teller her in den Mund hineinzuschieben pflegt.

2. KLEIDUNG UND SCHMUCK

Die Paez tragen heute den Ober- und Unterkörper bedeckende Kleidung. In alter Zeit sollen einige von ihnen, nach Berichten der Chronisten, kleine Baumwollumhänge getragen haben, wiewohl die Mehrzahl von ihnen «nackt ging, auch in den kalten Bergen» (zit. bei Hernandez, 1944, p. 191, nach P. M. Rodriguez, 1684). Auch sollen sie sich den Körper mit Farbe angemalt und mit Stempeln bedruckt haben. Bald nach der Conquista übernahmen sie das heute noch getragene Obergewand und den Strohhut.

Die Kleidung der Männer besteht aus dem Obergewand, der leinenen Hose, dem Umhang (in Peru «Poncho», in Kolumbien «Ruana» genannt) und dem wasserdicht geflochtenen Strohhut. Obergewand und Ruana werden von den Frauen aus Schafwolle gewebt, während die leinenen Hosen aus gekauften Stoffen von den Männern selbst geschneidert werden. Es ist dies kulturgeschichtlich bemerkenswert, denn ein Zuschneiden von gewebten Stoffen war den südamerikanischen Indianern in vorkolumbischer Zeit nicht bekannt, da man die Stoffe nicht «meterweise» webte, um später daraus beliebige Kleider zu nähen, sondern man bereits beim Beginn des Webens die Form des späteren Kleidungsstückes berücksichtigte. Aus der Herstellungsart ergibt sich, daß zerrissene Gewebe von den Frauen nie mit einem fertigen Flicken ausgebessert, sondern immer in Nachahmung der Leinwandbindung gestopft werden. Anders ist es bei den Männerhosen, deren Stoffe von den Männern gekauft und von diesen selbst, nie von Frauen, genäht werden. Sind diese — wie auch die gekauften Hemden — einmal zerrissen, werden sie nie gestopft, sondern immer von den Männern durch Darunternähen eines Flickens repariert. Wir haben hier also die feste Regel, daß gewebte Kleidung nie geflickt, sondern gestopft wird, während die genähte Kleidung nie gestopft, sondern immer geflickt wird. Ersteres ist Frauen-, letzteres Männerarbeit.

Das den Oberkörper der Männer bedeckende Gewand (tondatç; in Ermangelung einer zutreffenden europäischen Bezeichnung im folgenden Obergewand genannt) ist kein ärmelloses Hemd, da die Seiten nicht zusammengenäht, sondern offen sind. Es ist ganz einfach ein rechteckiges, gewebtes Stück Wollstoff von etwa 60 cm Breite und 160 cm Länge, dessen Kettfäden längs verlaufen. Ein etwa 30 cm langer Längsschlitz ist in der Mitte für den Hals freigelassen. Man zieht es über den Kopf und steckt die unteren Enden entweder in die Hose oder läßt sie auch darüber hängen. In letzterem Falle müssen sie durch einen darüber gebundenen Riemen festgehalten werden (Abb. 154, 165, 166, 171, 202, 203).

Die Hosen der Männer (calsón) haben keine Taschen. Sie reichen durchschnittlich bis zu den Waden. Allgemein sind sie sehr sorgfältig genäht, entweder mit gekauftem Zwirn oder mit selbst hergestelltem, sehr feinem Zwirn aus Agavefäden. Bei der Anfertigung, wie auch bei notwendigen Flickarbeiten, werden alle Ränder sehr sorgfältig umsäumt.

Die Männer-Ruana (atç) ist, bei 100 bis 160 cm Kantenlänge, allgemein quadratisch. Sie wird aus zwei gleich breiten, rechteckigen Längsbahnen zusammengenäht, wobei in der Mitte ein Längsschnitt von etwa 20 cm als Halsausschnitt freigelassen wird. Durch die quadratische Form kann die Ruana genau so gut mit querliegendem Halsausschnitt getragen werden.

Während Schuhe oder Sandalen von den Paez nicht benutzt werden, tragen Männer, Frauen und Kinder die gleiche Art von Strohhüten (ɨwá). Diese werden aber nur von den Männern und Jungen geflochten. Vervollständigt wird die Kleidung bei beiden Geschlechtern durch zwei bis drei der bunten, wollenen Koka-Taschen, in denen auf Reisen auch die notwendigen persönlichen Utensilien mitgeführt werden.

Die Teile der Frauenkleidung bestehen aus Wolle und werden von den Frauen selbst gewebt. Allgemein ist die Qualität und Feinheit der Frauenstoffe bedeutend besser als die der gewebten Männerstoffe. Die Knaben- und Burschengewebe sind durchweg am gröbsten, mit einem ziemlich dick gesponnenen Faden gewebt. Andersfarbige Zierstreifen innerhalb der Stoffe finden sich vorwiegend in der Frauen- aber nicht selten auch bei der Männerkleidung, besonders den Ruanas. Die unbedingt nötige Grundkleidung der Frauen besteht aus Rock und Obergewand. Beide werden so angelegt, daß die Kettfäden quer laufen. Der Rock (atytól) ist ein sehr weites, schlauchförmiges Kleidungsstück, dessen Durchmesser 150 cm und mehr betragen kann, bei einer Länge (im Zustand des Webens entspricht dies der Breite!) von etwa 80 cm. Er wird so angelegt, daß sein Vorderteil straff, seine hintere Seite aber in zahlreiche Falten zu liegen kommt. Mit einem der bunten Frauengürtel wird er in der Höhe der Hüfte festgehalten und sein oberer Rand etwas über den Gürtel umgeschlagen.

Das Obergewand (ipotsatç) ist ein einfaches, rechteckiges Stück Stoff von etwa 160 cm Länge und 80 cm Breite, das beim Anlegen quer genommen wird, so daß die Kett- und Zierfäden quer laufen. Im angelegten Zustand bedeckt es nur Brust, Rücken und eine Seite, während die andere mehr oder weniger frei bleibt (Abb. 166 und 178). Zur Benutzung wird es von der einen Körperseite über die Brust zur anderen gelegt und dann über den Rücken wieder zur Ausgangsseite zurückgeführt. Der Rücken-

teil wird nun hochgezogen und über beiden Schultern mit einem Dorn (tópo) oder einer Sicherheitsnadel am Brustteil befestigt. Den herunterhängenden Teil steckt man in den Rock. Allgemein bemühen sich die Frauen, sich für die Festtage auf den Märkten bunte, meist rotfarbige, Blusen zu kaufen, die dann das alte, einfache Tuch ersetzen. Die Röcke jedoch tauscht man nicht durch andere Kleidung ein, da die gekauften Stoffe längst nicht so strapazierfähig sind und auch nicht die nötige Weite haben.

Über dem ipotsatç tragen die Frauen außerhalb des Hauses meist ein Umschlagtuch, das entweder selbst gewebt (senyatç) oder gekauft ist (panyelõn). Es ist zum Tragen der Kleinkinder in jedem Falle erforderlich, da diese darin eingewickelt und mit dem bunten Gürtel (táw) festgehalten werden (Abb. 152, 166, 178, 183).

Besondere, ursprüngliche Zeremonialkleidung oder eine spezielle Kleidung für die Würdenträger gibt es nicht. Letztere tragen als einziges Unterscheidungszeichen ihren von den Spaniern eingeführten Chonta-Stab. Für Feste und Zeremonien bemüht man sich, entweder Teile europäischer Kleidung oder eine neuere Garnitur der üblichen Kleidungsstücke anzulegen. Für das christliche Begräbnis ist es die Pflicht der Angehörigen, den Verstorbenen in der Kleidung der weißen Kolumbianer zu beerdigen.

Kleine Kinder laufen meist nackt oder bekommen einen Stoffetzen in der Art der Ruana übergehängt. Größere Jungen tragen entweder eine große, bis zu den Oberschenkeln reichende Ruana, die durch einen Gürtel zusammengehalten wird, oder auch schon eine Hose. Kleinere Mädchen sind meist mit einem vom Oberkörper bis über die Knie reichenden Stück Stoff bekleidet, das über eine Schulter gezogen wird. Ältere Mädchen tragen die Kleidung der Frauen. Ein Unterschied in der Kleidung der Verheirateten und der Unverheirateten wird nicht gemacht.

Die Haare werden bei den Männern mit der Schere «halblang» geschnitten, so daß sie einen Schnitt haben, der zwischen einem Bubikopf und einer modernen Façonfrisur liegt. Frauen tragen die Haare lang nach hinten gekämmt, teilweise in Form eines Scheitels. Ältere Mädchen und verheiratete Frauen flechten die Haare zu Zöpfen. Zum Kämmen werden nur moderne, gekaufte Kämme benutzt. Die Männer pflegen ihren ohnehin spärlichen Bartwuchs nicht, sondern reißen die Barthaare von Jugend an mit den Fingern heraus.

Schmuck wird heute von den Männern in keiner Form getragen. Vor zweihundert Jahren trugen sie Nasenringe (zomp) «nach Art der Ochsen» (Castillo i Orosco, p. 89). Die Frauen tragen heute nur in sehr dürftigem

Maße gekauften Behangschmuck, von dem weiße Glasperlenketten (wáča = Perle) noch relativ am häufigsten sind (Abb. 148). Die Händler sind Sibundoy oder ähnliche Stammesangehörige aus dem Süden des Landes, wo derartige Ketten von Männern und Frauen als Behangschmuck pfundweise üblich sind. Ohrringe bestehen entweder aus einigen gekauften und auf einen Faden aufgereihten Perlen oder aus einem gekauften Silberanhänger. Gekaufte Messingfingerringe kann jeder tragen, es ist kein Zeichen von Verheiratetsein. In früherer Zeit hat es möglicherweise Armringe gegeben, wie sich aus Castillos Vokabel kaseñand-gnue-tsa für »Armring« ergibt.

3. WIRTSCHAFT

Der erste Eindruck, den man in wirtschaftlicher Hinsicht von den Paez empfängt, ist der eines demokratischen, fest in seinem Boden verwurzelten Bauernvolkes, und es hat bei erstmaliger Betrachtung ihrer Ernährung und Lebensweise den Anschein, als wären sie nie etwas anderes als Ackerbauern gewesen. Wir müssen jedoch bei Naturvölkern zwischen der Hauptproduktion und der Urproduktion unterscheiden. Erstere ist meist nicht schwer zu erkennen, während sich die Frage nach der Urproduktion eines Volkes nur nach Kenntnis von Riten, Zeremonialhandlungen, der Mythologie, kultischen Vorbereitungen oder Dankfesten beantworten läßt. Dies ist bei der starken Kulturverarmung der Paez schwierig, es ist aber bemerkenswert, daß alles Ackerbauliche, wie auch das Viehzüchterische bei ihnen keinerlei kultische Bezogenheit aufweist. Weder bei Saat noch Ernte konnte ich irgendwelche typischen ackerbaulichen Riten beobachten oder erfahren, während den Jäger bei der heute wirtschaftlich bedeutungslosen Jagd eine Anzahl von Ge- und Verboten vor und nach seinem Jagdgang umgeben.

a) Feldbau

Die Hauptanbaufrucht im Calderuner Gebiet, wie allgemein bei den Paez, ist der Mais, der gleichzeitig die wichtigste Kulturpflanze und Basis der Ernährung der amerikanischen Völker von Patagonien bis Kanada in vorkolumbischer Zeit war. Bis heute ist die Diskussion über seine kulturgeschichtliche Herkunft nicht abgeschlossen. Früher betrachtete man Mittelamerika als das Ursprungsland seiner Züchtung. Auf Grund ethno-

botanischer und pflanzengeographischer Untersuchungen nimmt K. Birket-Smith (p. 32) als Ursprungsland der Maiskultivierung nicht Mittelamerika, sondern das nördliche Südamerika an, da man nach den neueren botanischen Entdeckungen die Urform des Maises in der Form des Kapselmaises (Zea mays tunicata) der Andenländer gefunden zu haben glaubt. Nicht unerwähnt sollen die Stimmen bleiben, die in jüngster Zeit für eine asiatische Herkunft des Maises, wie auch der Baumwolle, plädieren (Zerries 1952, pp. 104/5).

Stellen wir diesen Hypothesen über den Ursprung des Maises die ersten verbürgten Nachrichten über sein Vorkommen in Amerika gegenüber, so finden wir als ältestes Datum das Jahr 1493, in welchem Kolumbus bereits von seiner ersten Fahrt über den Ozean den Mais nach Europa brachte. Schon im Jahre 1525 war der Mais in ausgedehnter Kultur auf den Feldern Andalusiens vorhanden (Schweinfurt, pp. 514 f).

Der Maisanbau, wie auch jeder andere Feldbau der Paez, geschieht im Brandrodungssystem, einer Form der Bodenkultivierung, die bei allen tropischen Feldbauern verbreitet und in Amerika allgemein unter der Bezeichnung «Milpa-System» bekannt ist. Das Wort ist zentralamerikanisch (wahrscheinlich aztekisch) und bedeutet «Maisfeld» oder «Kahlfläche im Wald». Letzteres aber immer in der Bedeutung eines abgebrannten und mit Mais bepflanzten Landstückes. Das der Bezeichnung Milpa entsprechende kolumbianische Wort ist «Roza», dem in Peru allgemein die Bezeichnung «Chacra» entspricht, obwohl das Wort dort auch für Terrassenfelder benutzt wird, die regelmäßig alle Jahre bebaut werden.

Die Basis des Milpa-Brandrodungssystems ist eine extensive Art des Feldbaues, bei welcher vor der Aussaat neues Land durch Verbrennung seiner Bewachsung gerodet und nach der Ernte (wieder) für mehrere Jahre oder für immer verlassen wird. Diese Art des Feldbaues ist vertretbar in dünn besiedelten Gebieten, in denen genügend Land vorhanden ist, um die Zeiträume zwischen den einzelnen Brandrodungen groß genug werden zu lassen. Sind die Abstände zu kurz und wird das Land zu oft abgebrannt, so werden alle Arten höherer Bewachsung ausgerottet. Die sich dann bildende, das ganze Jahr hindurch wachsende Grasdecke, macht das Land wertlos für ackerbauliche Nutzung, wodurch sich dann *eine zahlreichere Bevölkerung von seinem Boden nicht mehr ernähren* kann. Dies beweisen große Gebiete Zentralamerikas, in denen die in großen, städtischen Kulturzentren wohnende dichte Bevölkerung den Boden im Milpa-System so sehr ausnutzte, daß viele dieser alten Kulturgebiete heute baumloses, unbewohntes Grasland darstellen.

Als gesunde Form des Milpa-Systems sieht O. F. Cook (p. 323) die

gleichzeitige Bebauung von einem Fünftel bis einem Zehntel des zur Verfügung stehenden Landes an. Dies entspricht einem Rodungsturnus von fünf bis zehn Jahren. Dazu ist in Calderas genügend Land vorhanden. Ein gerodetes Feldstück wird dort einmal, höchstens zweimal hintereinander bebaut, und dann läßt man es mindestens zehn, meistens aber fünfzehn bis zwanzig Jahre in Ruhe (Abb. 146). Die Gemarkungen der Indio-Dörfer bieten dann auch ein völlig anderes Bild, als die der Kolonisten im Tierradentro. Im Gebiet der letzteren gibt es fast nirgendwo Bewaldung; alle Hänge sind abgeholzt und künstlich, aber nicht durch übermäßigen landwirtschaftlichen Anbau, zu Weideflächen für das Vieh der Kolonisten oder Großgrundbesitzer gemacht worden. Der natürliche Wasserhaushalt der Landschaft ist damit gestört. Die in der Regenzeit ungehemmt abfließenden Wasser waschen die Humuserde ab und bilden tiefe Einschnitte an den Abhängen. Der so erodierte Boden ist unfruchtbar. Die Berghänge trocknen in den Trockenzeiten vollständig aus, so daß wegen des fehlenden Wassers Wohnungen in höheren Lagen nur selten angelegt werden können. In den reinen Eingeborenengemarkungen, in denen ein natürlicher Wechsel von bebautem und brachliegendem Land eingehalten wird, gibt es zahllose Rinnsale und Bächlein, die eine Hausgründung an fast jeder Stelle der Landschaft in der Nähe von fließendem Wasser ermöglichen.

Jede Arbeit der Paez, die mit dem Feld zu tun hat, sei es Urbarmachung, Saat oder Ernte, wird von allen Beteiligten außerordentlich gerne vorgenommen, «da es für die Nahrung ist». Daß jemand nicht im Felde arbeiten will, gibt es einfach nicht. Der Boden ist nicht sehr fruchtbar, da der größte Teil des Gebirges der Gegend von Calderas aus Schiefergestein besteht, das oftmals kahl zutage tritt und an den Hängen mit einer Humus- oder Lehmdecke von durchschnittlich nur 20 bis 50 cm bedeckt ist. Im Tal erreicht die Humusschicht oftmals mehr als einen Meter Stärke. Der im Übermaß vorhandene Boden zwingt aber nicht zu letzter Ausnutzung. Und obwohl die zahlreichen Bergbäche so abgeleitet werden, daß jedes Haus sein fließendes Wasser hat, besteht doch für künstliche Bewässerung oder terrassierten Ackerbau keine akute Veranlassung, noch scheint man deren Anwendung zu kennen.

Den größten Teil der bebauten Fläche nimmt der Mais ein, dicht gefolgt vom Zuckerrohr, dem Ausgangsprodukt zur Herstellung der Chicha. Beides bildet die Grundproduktion des Feldbaues, und es gibt keine Paez-Familie, die auf ihrem Grund und Boden nicht Zuckerrohr und Mais kultiviert. Die Größe der bebauten und durch Brand gerodeten Flächen ist verschieden. An kleinsten Ausmaßen sahen wir Felder von nur 10x10 m

im Quadrat, während das größte zusammenhängende Feldstück eine Fläche von etwa 500x250 m einnahm. Es wurde mir aber bestätigt, daß eine so große Fläche Landes für eine Familie nicht erforderlich wäre und daß der Besitzer dieses große gerodete Feld nur nach und nach zur Aussaat verwenden würde. Leben kann eine Familie von einem Feldstück, das, wie man mir sagte, etwa 100x100 m mißt, was der Fläche eines Hektars entspricht. Hinzu kommt der zu jedem Haus gehörende Gemüsegarten von etwa 1000m² Fläche für den Anbau von Gemüsebananen, Kohl, Bohnen, Gurken und Zwiebeln.

Die Rodung des Feldes, wie auch die Aussaat, wird nur von Männern vorgenommen, während die Ernte von Frauen oder Männern eingebracht werden kann. An Rodung und Aussaat beteiligen sich immer mehrere Männer; nie arbeitet nur einer alleine, zum mindesten helfen ihm seine Brüder oder Söhne. Sonst muß er Freunde bitten, die bei der Arbeit mit Nahrung und Chicha bewirtet werden müssen und denen er im entsprechenden Falle ebenfalls hilft. Auf dem zur Saat in Aussicht genommenen Feld werden zunächst mit dem Machete die dünneren Bäume in etwa einem bis eineinhalb Meter Höhe umgehauen und diese, wie sie anfallen, auf dem Boden liegengelassen. Damit ist der erste Teil der Arbeit beendet und man hat 2 bis 4 Wochen Ruhe, bis die umgehauenen jungen Bäume und Äste trocken, aber nicht vertrocknet sind. Dann geht man wieder auf das Feld und zündet das Holz an, wobei aber nur die dünneren Äste von weniger als Armdicke verbrannt verden. Dieses Brennen dauert einige Tage, und es ist nicht selten, daß die Frau ihrem Mann am letzten Tage hilft, um das noch übrig gebliebene Holz zu verbrennen. Bei diesem Umgang mit den rußigen Stämmen geben übrigens die Paez als einziges Mal zu, daß man schmutzig würde und man sich danach die Hände waschen müsse (Abb. 169 bis 171).

Aus den nicht verbrannten Ästen und Baumstämmen wird der Zaun gebaut, den jedes Feld zum Schutze von den frei herumlaufenden Haustieren haben muß. Dazu werden dickere Pfähle senkrecht in den Boden gerammt und die übrigen Äste und Baumstämme waagerecht bis zu einer Höhe von gut einem Meter aufgeschichtet. Zum Übersteigen dieses Zaunes legt man auf beiden Seiten als Leiter (afá) einen eingekerbten Baumstamm an (Abb. 168). Die gleiche Einzäunung mit der gleichen Leiterkonstruktion umgibt allgemein auch die Hausgärten der Paezgehöfte. Falls der Hausbesitzer größere Haustiere, wie Kühe, Pferde oder Schafe besitzt, ist in dem sein Haus umgebenden Zaun ein Tor (puélta) eingebaut, das entweder aus einer regelrechten Lattentür oder aus einer Barriere waagerechter Balken besteht. In den Dörfern der zilivisierten Paez, in deren

Umgebung die Baumbewachsung nicht ausreichend für den Bau eines Holzzaunes ist, werden für die senkrechten Pfähle Bambus und für die waagerechten Teile trockene, gebündelte Maisstengel verwendet.

Der gesamte Feldbau der Paez ist Grabstockbau (Abb. 172). Hackbau ist ursprünglich unbekannt. Die erst neuerdings, nach dem Muster der Kolonisten, angelegten Hausgärten, in denen europäische Pflanzen, wie Kohl, Gurken und Zwiebeln angebaut werden, gräbt man mit dem Spaten (pála) um. Der Grabstock (āty) besteht nur aus einem angespitzten Baumstamm oder Pfahl, wenngleich neuerdings mehr und mehr auf die Grabstöcke breite eiserne Spitzen mit einer Tülle aufgesetzt werden. Mais kann während des ganzen Jahres gesät werden, allgemein sät man ihn aber im April, wenn die Regenzeit beginnt. Es beteiligen sich jeweils mehrere Männer, die mit dem Grabstock Löcher in etwa einem Meter Abstand nach jeder Richtung in die Erde stoßen und in jedes Loch sechs bis acht Maiskörner hineinlegen. Die Löcher werden mit dem Fuß mit nur ganz wenig Erde wieder bedeckt, «damit der Keimling leichter herauskommen kann». Die Reifezeit beträgt mit zehn bis zwölf Monaten eine relativ lange Zeit. Nach einem halben Jahr wird das Feld einmal von Unkraut gesäubert. Die Erntezeit verteilt sich auf etwa ein halbes Jahr, vorausgesetzt, daß genügend viel Mais angebaut wurde; und dieses halbe Jahr lebt man praktisch «vom Halm». Zunächst wird nämlich der junge Mais (tsót; Mais allgemein: kóty) halbgrün gegessen und erst später erntet und ißt man die reifen Maiskolben. Jeden Tag gehen die Männer oder Frauen mit ihren Taschen aus Agavefaser auf das Feld und brechen nur soviel, wie gerade jeweils zur Mahlzeit gebraucht wird.

Während der Mais in Calderas in allen Höhenlagen angebaut werden kann, gedeiht Zuckerrohr (nyúša) nur in den tieferen, geschützten Lagen des Kokiyó-Tales. Seine Reifezeit beträgt mit zwei bis drei Jahren eine sehr lange Zeit. Als Schößlinge werden Ableger alter Zuckerrohrpflanzen benutzt, die von den Männern in gleicher Art wie die Maiskörner gesetzt werden. Es wird mit dem Grabstock in einem Meter Abstand nach jeder Richtung von den Nachbarpflanzen ein Loch in die Erde gestoßen, der Schößling hineingesteckt und mit den Händen festgedrückt. Geerntet wird das Rohr von Männern oder Frauen. Beide wissen mit dem Machete umzugehen. Männer tragen das Zuckerrohr über der Schulter nach Hause (Abb. 173), Frauen stecken die Zuckerrohre in die Fasertaschen und hängen diese über den Rücken, wobei sie den Traggurt mit der Stirn halten.

Neben Mais und Zuckerrohr ist die Bohne (ōs) von großer Bedeutung für die Ernährung der Paez. Es gibt deren die großen, gesprenkelten sogenannten «Saubohnen» (span. frijol) und die kleineren, weißen Bohnen.

Gegessen werden vorwiegend die ersteren, während die weißen Bohnen meist verkauft werden. Sie werden entweder in der Nähe des Hauses am Fuße von Bäumen und Sträuchern gesät, indem immer jeweils drei Bohnen in die Erde gesteckt werden oder zusammen mit Mais. Dabei legt man bei der Maissaat zusammen mit den sechs bis acht Maiskörnern jeweils drei bis vier Bohnen in das gleiche Loch. Bei gleichzeitigem Aufwachsen ranken sich die Bohnen an den Maisstengeln hoch.

Der Weizen (skótç) ist in der Ernährung der Paez nicht von Bedeutung, da man kein Brot bäckt. Er wird nichtsdestoweniger recht häufig angebaut, da er schnell wächst und damit das geeignete Verkaufsobjekt für die Paez darstellt. Wenn nämlich jemand etwas kaufen muß, sei es Stoff für eine Hose, einen Machete, einen Metalltopf o. ä., so sät er Weizen, meistens im März / April und kann nach einem halben Jahr bereits den Verkaufsgewinn einstreichen. Bezeichnend für die Paez ist aber, daß sie davon nur Gebrauch machen, wenn sie etwas dringend benötigen, nicht aber schon im voraus, um etwa auf alle Fälle Geld zur Hand zu haben. Die Vorbereitung zur Weizenaussaat geschieht in der üblichen Art der Brandrodung. Der Sämann hängt sich eine Fasertasche mit dem Saatkorn um und beginnt in genau der gleichen Art wie unsere Säer mit der Hand im weiten Bogen den Weizen auszusähen. Mit der Schippe wird anschließend der Boden oberflächlich umgebrochen, damit die Vögel die Körner nicht aufpicken können. Zur Ernte wird je ein Büschel Halme eine gute Handbreit unter den Ähren zusammengefaßt und mittels der halbkreisförmig gebogenen Sichel mit der anderen Hand abgeschnitten. Die Ährenbündel werden, falls der Weizen nicht gleich verkauft wird, zusammengebunden und unter dem Hausdach, oberhalb der Feuerstelle, aufbewahrt. Während aus den Maiskolben die Körner von den Frauen mit der Hand bei Bedarf herausgeschält werden, wird der Weizen gedroschen. Man legt dazu eine Kuhhaut auf den Boden, hält mit der einen Hand ein Büschel Weizenähren auf der Haut fest und schlägt mit der anderen Hand mit einem Knüppel auf die Ähren, bis die Körner heraus sind.

Die übrigen Früchte für die Ernährung baut man im Hausgarten an, den man alle Jahre hindurch, solange das Haus bewohnt wird, ebenfalls benutzt. Der Ertrag ist allgemein gut, da die Paez von den Kolonisten die Bedeutung einer regelmäßigen Düngung erlernt haben. Jedes abgeerntete Stück wird von neuem sorgfältig mit dem Spaten umgegraben und mit dem Abfall des Hauses und dem gesammelten Dung der Kühe und Pferde bestreut. Menschenexkremente werden nicht benutzt, sie seien «zu häßlich». Täglich werden zudem die Küchenabfälle (Mais- und Bohnenhülsen, Bananenschalen, Arracacha- und Yucaabfälle), sowie die Exkremente

der sich in der Küche befindlichen Meerschweinchen (fits) in den Garten gestreut und auf die Gemüsefelder geworfen.

Die wichtigste Gartenpflanze ist der Weißkohl (kólis). Die kleinen Pflänzchen kaufen die Frauen bei einer Frau im Dorf, die sie aus den Samen zieht. Pflanzzeit ist der März, wenn die Regenzeit beginnt. Kartoffeln (ká'ka) werden selten angepflanzt. Sie sind sehr klein, gelbfleischig und von schlechter Qualität. Die Saatzeit ist beliebig. Mit dem Grabstock machen die Männer ein kleines Loch und legen eine oder zwei kleine Kartoffeln hinein und verschließen das Loch wieder gut. Nach einem Monat kann man sie bereits mit den Händen häufeln und nach vier Monaten ernten. Dies geschieht, indem die ganze Familie sie mit den Händen ausbuddelt. Arracacha (ā's) kann gleichfalls das ganze Jahr hindurch gesetzt werden, gibt aber die beste Ernte, wenn man sie bei Vollmond setzt. Bei der Ernte bedient man sich eines Grabstockes. Die Yuca (ānya) wird nur selten gegessen, da das Klima in Calderas zu ihrem Anbau zu kalt ist. In den tiefer gelegenen Ortschaften beträgt die Reifezeit zwei Jahre.

Eine sehr wichtige Frucht, die in der Ernährung der Paez eine große Rolle spielt, ist die Banane, die ursprünglich in Amerika nicht heimisch war (Schweinfurt, p. 504 f). Man unterscheidet zwei große Gruppen, die der Obst- oder Zuckerbananen und die der Gemüse- oder Mehlbananen. Beide Arten sind den Paez zwar bekannt, von Bedeutung sind bei ihnen, wie bei allen tropischen Völkern, aber nur die Gemüsebananen (toló), deren stärkehaltige Früchte wegen ihrer schweren Verdaulichkeit, nach Art der Kartoffeln, vor dem Genuß erst gekocht werden müssen. Die Obstbananen (gnayoíts), die einzigen in Europa gegessenen Bananen, werden von den Paez nur selten gegessen und allgemein nicht kultiviert. Ihre Anpflanzung geschieht durch Ableger, die in Calderas vom dritten Jahr ab tragen und für viele Jahre Ernten geben. Weitere im Hausgarten gezogene und von Zeit zu Zeit gegessene Früchte sind Gurken (je nach Art kambíč oder pína), Kürbis (pętę) und die wilde Granadilla (ślāl).

b) Nahrungsbereitung

Die Paez nehmen am Tage nur zwei Mahlzeiten zu sich, und zwar die erste (kosē oń) etwa um vier oder fünf Uhr morgens vor der Arbeit und die zweite (fi'nz oń) um drei oder vier Uhr nachmittags, nach Rückkehr von der Feldarbeit. Zwischendurch, d.h. während der Arbeitszeit auf den oft recht weit abgelegenen Feldern, wird alle zwei bis drei Stunden Koka

genommen und Zuckerrohrsaft getrunken. Das Morgen- und Abendessen unterscheidet sich inhaltlich nicht und ist von Tag zu Tag nur sehr wenig abwechslungsreich. Es wird ohne Fleisch, ohne Fett, ohne Salz, sowie ohne jedes andere Gewürz gekocht. Das Zubereiten der Speisen mit Fett ist nur an Feiertagen im Festhaus üblich. Bei dieser Gelegenheit wird aus dem Blut von Rindern, Schafen oder Schweinen eine Blutwurst hergestellt, wozu die Därme gesäubert und dann mit Blut, Salz, Zwiebeln und Kümmel, sowie mit einem anderen Kraut (pléo) gekocht werden. Fleisch wird in die Därme nicht hineingetan, desgleichen kein Fett.

Eine größere Abwechslung in Speisen und Getränken ist nicht erwünscht. Individuelle Geschmacksunterschiede habe ich bei den Calderunern kaum feststellen können, denn jeder ißt alles, und alle halten Bohnen oder Kohl oder beides zusammen für das beste Essen und Bohnenblätter für das schlechteste. Gegessen wird gemeinsam. Die Familie sitzt um das Feuer herum und die Frau schenkt aus. Dabei ißt man aber nicht aus dem großen Kochtopf, der meistens aus Ton, manchmal auch aus Aluminium besteht, sondern man schöpft mit einem hölzernen Schöpflöffel die Suppe in flache Schalen, von denen die Männer, d. h. Vater und Söhne, aus der einen und die Mutter, Töchter und kleinen Kinder aus der anderen essen. Über der Feuerstelle hängen in einem Beutelchen oder liegen auf einem Gestell einige Steinsalzstückchen, die nach dem Kochen zum Salzen der Speise Verwendung finden. Dazu nimmt sich jeder das Salzstück und hält oder legt es solange in seinen Teller, bis die Suppe genügend gesalzen ist.

Im folgenden einige Gerichte: 1) auf dem ovalen oder rechteckigen Mahlstein mittels eines Handsteines gemahlenes Maismehl wird mit Bohnen und Kohl zusammen gekocht, 2) Gemüsebananen mit Bohnen und Arracacha, 3) grüne Maiskolben mit Bohnen (wobei an jedes Maisgericht Holzasche getan wird, um den Mais schneller weich zu bekommen), 4) grüne Maiskolben mit Weißkohl, 5) Weißkohl, Arracacha und Kartoffeln, 6) Bohnen und Gemüsebananen, 7) nur Bohnen und Maismehl, 8) Arracacha und Bohnen. Eier werden entweder in der Schale in einem Topf hart gekocht oder man quirlt das Ei mit einem Löffel in einem Gefäß, tut Wasser und Zwiebeln dazu und kocht das Ganze. Alle Speisen werden in einem großen Topf als Suppe gekocht, eine Ausnahme machen nur in einer Schale geröstete Maiskolben (wáts; span. arepa). Fleisch wird nur gekocht, nie gebraten; es wird Rindfleisch, Schaf- und Schweinefleisch gegessen, außerdem Geflügel und Meerschweinchen; Pferdefleisch nicht. Wenn Pferde krepieren, werden die Kadaver von Hunden gefressen.

c) Genußmittel

Die beiden wichtigsten Genußmittel der Paez sind, wie bei den Kulturen des gesamten Andenraumes, die Koka und die Chicha. Der Tabakgenuß spielt eine untergeordnete Rolle.

Die Koka (ēł) ist ein Strauch, dessen alkaloidhaltige Blätter Kokain, Gerbstoffe und verschiedene ätherische Öle enthalten, die als Stimulans schon vor der Zeit der Conquista, vorwiegend unter den Eingeborenen des Kordillerenraumes, in Gebrauch waren. Von ihr sind fast 200 Arten bekannt, von denen die meisten, nämlich 137, auf Amerika entfallen (Walger, p. 9). Sie gedeiht fast ausnahmslos zwischen den Wendekreisen, von Honduras bis Bolivien, bei einer Temperatur, die sich allgemein zwischen 15 und 20 Grad hält. Bei zu tiefer Temperatur werden die Blätter klein und wertlos, in zu heißem Klima verlieren sie an Kraft und Gehalt. Die günstigste Höhenlage liegt zwischen 700 und 1700 m.

Das Wort Koka stammt aus der Kechüa-Sprache (coca oder cuca), womit aber nichts Sicheres über Herkunft und Gebrauch der Pflanze ausgesagt ist, denn gerade die kechüasprechenden Stämme Ecuadors gebrauchen die Pflanze nicht (Cooper, p. 549). Im Norden Südamerikas ist die Bezeichnung, hayo, hahiu üblich, in Nordostperu ebee, hibia, hibio und im Amazonasgebiet allgemein Namen wie ypadu, ypatu, ipado oder batu (Bühler, p. 3344).

Nach Europa gelangte die erste Kunde über die Koka schon im Jahre 1499 durch den Bericht des spanischen Priesters Thomas Ortíz an seine geistlichen Vorgesetzten, wonach die Eingeborenen der Nordküste Südamerikas ein Kraut mit Namen hayo als Genußmittel gebrauchten. Die erste ausführliche Beschreibung über Kultur und Verwendung der Pflanze findet sich in einem 1553 gedruckten Werk des Pedro de Ciéza de León, der erstmals darauf aufmerksam macht, daß die Koka Kraft und Stärke verleihe und den Hunger vertreibe (Bühler, p. 3353).

Zur Zeit der Conquista kannte man die Koka in Kolumbien bei den Caucatalstämmen zwischen Popayán und Cali, bei Ibagué im Magdalenatal, auf der Sabana von Bogotá und bei den Stämmen der Sierra Nevada de Santa Marta. Heute ist der Kokagebrauch wegen seiner schädigenden Wirkung in Kolumbien offiziell verboten. Durch Dekret Nr. 95 von 1938 wurde der Verkauf von Koka, außer in Apotheken und Drogerien, durch das «Ministerio de Trabajo, Higiene y Prevesion Social» untersagt. Erweitert wurde dieses Verbot durch Dekret Nr. 578 von 1941 des gleichen Ministeriums, wonach eine genaue Aufstellung der bestehenden Kokapflanzen des Landes gefordert und ihre Zerstörung angeordnet

wird, bei gleichzeitigem Verbot von Neuanpflanzungen (Duque, 1945, p. 445 f). Natürlich kann dieses Verbot des Kokaanbaues nicht in allen abgelegenen Teilen des Landes streng überwacht und eingehalten werden.

Die Begründung für den Gebrauch der Koka ist seit der Conquista bis heute gleichgeblieben: sie solle den Hunger vertreiben und Kräfte geben. «Ohne Koka kann man nicht arbeiten», so erklärte man mir immer und immer wieder, wenn ich die Paez nach dem Grunde des Kokakauens fragte. Und tatsächlich, auf den langen Wegen zum Markt und bei jeder körperlichen Arbeit sieht man die Paez kauen; allerdings auch nur zur Arbeit, dann, wenn man Kraft braucht, nicht bei Festen und Feiern oder an Feiertagen. (Eine Ausnahme machen die Schamanen, s. unten).

Gekaut wird die bitter schmeckende Koka von beiden Geschlechtern, und die Jungen beginnen mit 12-14 Jahren, wenn sie auch anfangen ihrem Vater auf dem Felde bei der Arbeit zu helfen. Die Mädchen beginnen allgemein etwas später, und beide Geschlechter kauen im hohen Alter ziemlich stark und häufiger, als normal in jüngeren Jahren. Als Normaldosis wird von den Männern dreimal pro Tag Koka genommen, wobei jede Dosis etwa zwei bis drei Stunden anhält. Gegessen wird den ganzen Tag über nichts, nachdem man die erste Mahlzeit am frühen Morgen vor der Arbeit eingenommen und die zweite erst nach Heimkehr vom Felde am späten Nachmittag zu sich nimmt. In den Kokapausen wird ungegorener Zukkerrohrsaft (nyúšayumíl) getrunken, von dem jedermann eine Kalebasse mit einem bis zwei Liter mit sich führt.

Der etwa 80 bis 200 cm hohe Kokastrauch fällt schon von ferne durch seine frischen, hellgrünen, lanzettförmigen Blätter auf, die auf der Unterseite zwei flachgebogene Längslinien aufweisen. Bei den Paez von Calderas hat fast jede Familie ihre Kokasträucher, deren Blätter nach der Pflanzung vom ersten Jahre ab etwa 20 Jahre lang geerntet werden. Wer nicht selbst Kokasträucher besitzt, tauscht sich die Blätter gegen Branntwein, Weizen oder Mais ein (Umrechnungs- und Tauschkurse s. unter «Handel»). Innerhalb der Familie erntet jeder für sich so viele Blätter, wie er gerade braucht, sonst tauscht meist der Familienvater für die ganze Familie ein. Erntezeit ist das ganze Jahr hindurch (Abb. 174).

Vor dem Gebrauch werden die Blätter in einer Tonschale geröstet und dann in dem bunten Wollbeutel (kwatandyáha) zusammen mit einer kleinen Kalebasse mit Kalk mit sich geführt. Der Kalk (kwatánd) wird aus einem Kalkstein (kwatandkwát) gewonnen, der im ganzen Gebiet an verschiedenen Stellen ansteht und den sich Männer und Frauen je nach Bedarf suchen, oder der Mann schickt seine Frau, einige Steine zu holen. Diese Kalksteine werden zwei Stunden lang in ein stark angefachtes

Feuer gelegt, dann in eine Tonschale getan und kaltes Wasser darüber gegossen. Danach wird der gesprungene Stein zu Pulver zerstampft. Zum Genuß nimmt man eine Handvoll Blätter aus seinem Beutel und steckt sie in den Mund und kaut sie eine Zeitlang, bis man den Kalk dazutun kann. Dabei muß darauf geachtet werden, daß weder Zunge noch Lippen mit dem Kalk in Berührung kommen. Anfänger machen es so, daß sie den Kokabrei auf der Zunge mit dem Gaumen breitdrücken und sich eine Prise Kalk aus der birnenförmig geformten, völlig schmucklosen Kalebasse (kwatandóka) daraufstreuen; geübte Kokakauer nehmen eine Prise Kalk auf die Handoberseite zwischen Daumen und Zeigefinger und schütten diese mit Schwung in den geöffneten Mund. Der sich reichlich entwickelnde grüne Speichel wird zu einem Teile ausgespien, das meiste jedoch wird verschluckt. Alten Leuten rinnt er häufig aus dem Mund und tropft auf die Kleider (Abb. 179).

Die schädigende Wirkung der Koka scheint, nach meinen Erfahrungen bei den Paez und bei den kokakauenden kolumbianischen Arbeitern, in den meisten diesbezüglichen Studien übertrieben dargestellt. Von Interesse sind aber die Daten von C. Gutiérrez Noriega (1952), der die psychologische und physiologische Wirkung des Kokagenusses besonders bei den peruanischen Indios untersucht. Dort, im Gebiet des mit zwei bis vier Kilogramm pro Person und Jahr höchsten Kokakonsums, beträgt die tägliche Nahrungsmenge eines Arbeiters nur etwa 2000 Kalorien pro Tag. Bei gleichzeitigem Branntweingenuß machen sich bei der mangelhaften Ernährung körperliche und geistige Folgen naturgemäß stärker bemerkbar, als im Falle des Kokagebrauches bei gutem Ernährungszustand und als einzigem Genußmittel. Neben der Verbesserung der Ernährung und entsprechender Aufklärung wäre ein Branntweinverbot statt seiner Propagierung volksgesundheitlich wünschenswerter als ein Kokaverbot. Allerdings ziehen die Departamentos aus der Branntweinsteuer ihre Haupteinnahmen, während die Koka immer steuerfrei war.

Der Tabak (wáhi) wird von den Paez weder angebaut, noch in größeren Mengen verbraucht, da zum Ankauf von Tabak oder Zigaretten allgemein kein Geld vorhanden ist. Geschenkte Zigaretten aber rauchen beide Geschlechter, und zwar von Kindheit, d. h. mit zwei bis drei Jahren, an. Die Schamanen pflegen bei ihren Séancen und Zeremonien, zusammen mit Koka, Zigarettentabak zu kauen, der aber immer gekauft ist. Diese Séancen dauern viele Stunden oder die ganze Nacht über an, bei welcher Schamane und Patient gemeinsam ununterbrochen diese Mischung kauen.

Die Chicha (spr. Tschitscha) gehört zu den alkoholischen Getränken, die, hergestellt aus verschiedenen Ausgangsstoffen, bei den Eingeborenen

ganz Südamerikas verbreitet sind, wobei in der Waldregion (Venezuela, Brasilien) die Maniok-Chicha und in der Andenregion die Mais-Chicha vorherrscht (Cooper, p. 539 f und map. 11). Nach der Herstellung werden zwei Methoden unterschieden, je nachdem, ob es sich um stark zukkerhaltige Ausgangsstoffe (Honig, Zuckerrohr, Palmsaft, Ananas) oder mehr stärkehaltige Früchte (Maniok, Mais) handelt. Erstere fermentieren ohne Speichelzusatz und brauchen für die Zubereitung nicht gekaut zu werden, letztere benötigen vor oder nach dem Kochen zur Fermentierung den menschlichen Speichel.

Bei den Paez wird die Chicha (mbę́ca) nur aus dem Saft des Zuckerrohres hergestellt, einem Ausgangsstoff, der nicht amerikanisch ist, sondern aus Südasien stammt und erst in postkolumbischer Zeit nach Amerika gekommen ist (Maurizio, 1933, p. 75). Früher wurde die Chicha aus Mais hergestellt, wie heute noch bei den in höheren Regionen lebenden Nachbarn der Paez (z. B. Guambianos). Der Name für den Zuckerrohrsaft nyúlayumíl (= süßes Wasser) als für die ungegorene Chicha hat jedenfalls nichts mit dem Namen für die gegorene Chicha gemein. Für das Zukkerrohr gibt es zudem keinen eigenen Namen, sondern nyúla bedeutet auch «süß» und «Honig».

Das Zuckerrohr im Gebiet der Paez kann das ganze Jahr hindurch angepflanzt und auch geerntet werden. Der Saft des Rohres wird in der Zuckerrohrmühle (lapíče) ausgepreßt. Diese steht vor oder in jedem Hause; sie gehört so zu jeder Familie, wie jede ihr Zuckerrohrfeld und ihre Chicha hat. Letztere hat keinerlei Handelswert, sondern wird nur verschenkt, und jeder bekommt, der darum bittet. Die Zuckerrohrmühle (Fig. 28) der Paez von Calderas und des südlichen Tierradentro besteht aus zwei an jeder Seite geglätteten Baumstämmen, die die seitlichen Pfosten (mágrena) der Mühle bilden. Sie werden in die Erde gerammt und mit je zweimal zwei Absätzen versehen, die die waagerechten Führungsbalken (sę́po) für die drei Quetschwalzen aufnehmen. Diese Führungsbalken werden nur verkeilt. Irgendwelche Metallteile oder Nägel werden hier wie bei der ganzen Konstruktion nicht verwendet. Unter den unteren beiden Führungsbalken ist ein starkes Brett an den seitlichen Pfosten befestigt, auf dem die drei Walzen (ünk) aufliegen. Von diesen wird nur die mittlere mittels einer Querstange durch Menschenkraft oder durch ein Pferd gedreht, während die beiden seitlichen durch Zapfen bewegt werden, welche genauestens eingepaßt, aber nicht weiter verkeilt sind. Oberhalb der unteren beiden Walzen-Führungsbalken ist je eine waagerechte Stange zur Führung der zum Pressen hineingeschobenen Zuckerrohre angebunden. Unterhalb der Walzen liegt ein rechteckiges Brett (tablón) mit

zwei Längsrillen, in denen der ausgepreßte Zuckerrohrsaft seitlich abläuft. Falls zur Bewegung der Quetschwalzen ein Pferd verwendet wird, so geschieht seine Anschirrung mittels zweier Seile, die von einem um den Bauch gewickelten Seil des Pferdes ausgehen, ohne daß das Pferd, wie bei uns üblich, mit der Brust ziehe.

Aus dem nördlichen Tierradentro bildet H. Pinzier de Fábrega (pl. VI/1) eine andere Art von Zuckerrohrmühle ab, die nur zwei übereinanderliegende horizontale Walzen aufweist. Beide sind mit Zapfen zwischen zwei vertikalen Pfosten eingespannt und werden je an einer Seite mit der Hand gedreht. Der ausgepreßte Saft wird in einem darunter gehängten Beutel aufgefangen.

Bei der Chichaherstellung zu den Feiertagen ist es üblich, daß die Mühle nur durch Menschenkraft gedreht wird, von Männern oder Frauen. Man konnte allgemein beobachten, daß sich die leicht angetrunkenen Männer jeweils nur kurze Zeit mühten und dann durch die nüchterner wirkenden Frauen abgelöst wurden, die — mit ihrem Kind auf dem Rükken — eine beachtliche Ausdauer bei dieser körperlich recht schweren Arbeit bewiesen.

Fast jeder Familienvater und Hausbesitzer fertigt sich seine Zuckerrohrmühle selbst an, sonst hilft ein Nachbar. Berufschreiner gibt es nicht. Die Walzen werden mit einer Axt (swéla) und einer Fuchsschwanzsäge (serúćo) aus einem Baumstamm gesägt und grob geglättet. Die so bearbeiteten Zylinder werden im Zentrum von Basis und Oberseite mit einem kleinen Loch versehen und waagerecht mittels Pflöcken zwischen zwei in die Erde gerammte Pfosten gespannt, die mit einem Strick zusammengehalten werden. Dann werden mit einer Lehre (regla), die aus einem Brett mit Dornen besteht, in die sich drehende Trommel die Abstände der Zapfen genau eingeritzt.

Die Zuckerrohre werden mehrere Male von den Arbeitenden, deren je einer an jeder Seite hockt, durch die Quetschwalzen geführt, bis der Saft ausgepreßt ist, der in einem Holztrotsch oder in Kalebaß-Gefäßen aufgefangen wird (Abb. 175). Er wird zunächst stark erwärmt und dann in einen großen, bis zu fünf Meter langen, waagerecht stehenden Baumtrog (kánoa) getan, in dem sich immer bereits ein wenig Chicha befinden muß (Abb. 165). Danach wird er mit der im Trog befindlichen alten Chicha umgerührt, die kánoa mit Bananenblättern bedeckt, und am nächsten Morgen ist die Chicha bereits fertig zum Trinken. Mit fortschreitender Zeit wird die Chicha immer stärker in ihrem Alkoholgehalt. Am Mittag des gleichen Tages ist sie bereits stark genug, um Branntwein daraus zu destillieren. Falls man dies nicht tut, muß man am nächsten Tage zur Ver-

dünnung etwas Wasser dazu geben. Geschieht dies nicht, wird die Chicha weder getrunken noch kommt neuer Zuckerrohrsaft dazu, dann wird sie nach vier bis fünf Tagen sauer und bitter und kratzt sehr in der Kehle. Doch gibt es auch «Feinschmecker» unter den Paez, die die Chicha bis zu drei Wochen unangerührt weitergären lassen und sie erst dann derart scharf und sauer trinken.

Ohne einen Rest alter Chicha in der kánoa kann man keine neue Chicha herstellen. Der Zuckerrohrsaft würde, selbst wenn man ihn viele Tage lang stehen ließe, auch dann nur süß sein, aber keine gute Gärung hervorbringen. Nach fünf oder sieben Tagen entsteht jedoch (wohl durch den Säuregehalt des Holzes der leeren kánoa) eine gewisse Art von Gärung, aber von sehr schlechtem Geschmack.

Falls jemand eine größere Arbeit vorhat, zu der er Leute herbitten und für die Arbeiten dann auch selbstverständlich entsprechend bewirten muß, wird ein Tag vorher das Zuckerrohr gemahlen und am anderen Tage ist die Chicha fertig und kann angeboten werden. Wie es heißt, mache Chicha, in jedweder Menge genossen, keinerlei Beschwerden oder Kopfschmerzen.

Neben der Chicha-Herstellung, die in allen Familien betrieben wird, hat auch jede Familie in ihrem Hause einen Destillationsapparat, mit welchem man aus der einen Tag alten Chicha Branntwein destilliert. Diese Destillation ist allgemein Arbeit der Frauen in der Zeit, während welcher die Männer auf dem Felde sind. Sie kann aber auch von Männern oder Jugendlichen vorgenommen werden. Der Destillationsapparat (walyíndɛya) besteht aus drei Gefäßen, einem großen, 10 bis 15 Liter fassenden Tontopf, der zu zwei Drittel mit starker Chicha, Anis, einem Pfund Dill, Nelken, Zimt und anderen Kräutern gefüllt ist. Auf diesen wird ein zweiter Tontopf ohne Boden aufgesetzt und mit einem Brei aus Wasser und Holzasche luftdicht mit dem oberen Rand des unteren Chichatopfes verbunden. In den oberen Rand dieses zweiten Topfes sind drei Löcher gebohrt, durch die im Innern des Topfes, dicht unter der Mündung, ein flacher Holzteller festgebunden ist, der auf der einen Seite eine Rinne eingeschnitten hat, die durch ein Loch in der Topfwand nach außen führt und in ein Rohr mündet. Auf diesem zweiten Topf sitzt, luftdicht abgedichtet, eine flache Kupferschale. Beim Destillationsvorgang trifft der verdampfte Alkohol, durch den zweiten Topf hindurchgehend, auf den Boden der Kupferschale. In diese wird ständig kaltes Wasser eingefüllt. Der an der Unterseite der Kupferschale kondensierte Alkoholdampf tropft auf den Holzteller, rinnt durch das Abflußrohr nach außen und wird in Flaschen aufgefangen (Abb. 176).

d) Tierhaltung

Obwohl die Paez neben Kleinvieh auch Großvieh, Rinder und Pferde halten, sind sie doch im eigentlichen Sinne keine Viehzüchter. Sie haben weder mit der Zucht ihrer Tiere etwas zu tun, noch nutzen sie in größerem Umfang deren Arbeitskraft. Auch die Verwertung tierischer Produkte — besonders der des Großviehs — steht in keinem Verhältnis zu den vorhandenen Möglichkeiten. Am wenigsten genutzt werden die Pferde (hímba; Hengst = himbapítstę, Stute = himbaóitę), obwohl sie hin und wieder zum Zuckerrohrmahlen Verwendung finden. Man hat sie eigentlich nur, um sie zu haben und um als reich zu gelten. Sie werden weder als Zugtiere vor einem Wagen, noch als Lasttiere benutzt und als Reittiere nur hin und wieder, ohne Sattelzeug, von der Jugend. Erwachsene Männer reiten nicht, obwohl das bergige, schwer begehbare Land zum Reiten geradezu herausfordert und die Paez bei ihren Besuchen auf den Märkten fast alle Kolonisten zu Pferde sehen. Aber «wir sind es von unseren Vorfahren her gewöhnt, in den Bergen zu laufen», antworten sie, «und wir sind zu Fuß viel schneller als ihr zu Pferde». Damit haben sie nicht unrecht, und man möchte es keinem der durch Inzucht degenerierten Paez-Pferde zutrauen, an Marktagen seinen Reiter 30 km weit mehrmals überBerg und Tal von Calderas nach Inzá und zurück zu tragen. Da der Paez eine Leistung von seinen Pferden nicht verlangt, ist es verständlich, daß für ihn und sein Ansehen nur die Stückzahl von Interesse ist. Wie die Pferde aussehen, ist allgemein völlig gleichgültig, eine Zuchtwahl wird in keinem Falle getroffen. wie der Mensch auch von Paarung und Geburt seiner Tiere nichts weiß, sondern einen frischen Wurf allgemein erst feststellt, wenn er da ist. Die Trächtigkeitszeiten sind unbekannt. Von verschiedenen Seiten wurde mir versichert, Pferde, Kühe, Schafe und Schweine seien «ungefähr ein Jahr» trächtig. Eine Kastration der Hengste, Bullen und Schafböcke ist nicht bekannt, bei Ebern kommt sie hin und wieder vor, indem der Besitzer — kein Spezialist — den Ferkeln mit einem Messer die Testikel herausschneidet.

Ist der einzige Zweck der Pferdehaltung bei den Paez, deren eine möglichst große Anzahl zu haben, so ist es verständlich, daß man vor allem auf den Besitz von Stuten Wert legt. Die Geburt eines Stutfohlens ist deshalb eine große Freude, und jedermann würde gerne einen ausgewachsenen Hengst gegen ein Stutfohlen eintauschen, «da dieses wieder Fohlen gibt». Leider findet dieser Tausch nur allzu selten statt, da die Kolonisten an den degenerierten Pferden der Calderuner kein Interesse haben. Anders ist es bei den Kühen (kulá; Stier = toló, Färse = novílya). Hier ist die

Calderuner Rasse (schwarzbuntes «Holsteiner» und braunes Rindvieh) gesünder und meist auch kräftiger als die Rinder der Kolonisten. Zudem ist ihr Körper, wegen des etwas kälteren Klimas, fast völlig zecken- und ungezieferfrei, gegenüber den normalerweise von Larven und Maden wimmelnden Kühen der Bewohner tieferer Lagen. Zum Unterschied vom Pferdefleisch wird das Rindfleisch gegessen, die Milch aber nie genossen, «da sich die Calderuner Kühe nicht melken lassen». Das Zuchtziel ist auch hier wieder die möglichst große Zahl. Es wird deswegen nie vorkommen, daß eine Kuh oder ein Kalb geschlachtet würden. Die Bevorzugung einer besonderen Farbe, z. B. schwarz-weiß oder braun-weiß oder einfarbig schwarz oder weiß oder braun, konnte ich nicht feststellen. Alles ist dem Paez gleich lieb, da nur die Anzahl von Bedeutung ist. Eine besondere Verbundenheit eines Menschen mit seinem Vieh besteht nicht, da niemand Vieh verschenkt, weder als Geburtstags- noch als Paten- oder als Hochzeitsgeschenk. Besondere Namen oder Bezeichnungen für das Vieh oder Kosenamen werden nicht gebraucht.

Die Calderuner Rinder und Pferde weiden etwa zur Hälfte ihrer Gesamtzahl auf den Wiesen des Gemeindelandes. Es handelt sich um rund 40 Pferde und 60 Rinder. Die Zahl zeigt, daß nur ein kleiner Teil der Calderuner Familien eine Kuh oder ein Pferd sein Eigen nennt. Das Verhältnis wird noch ungünstiger, wenn man weiß, daß es drei reiche Familien gibt, die je etwa 10 bis 20 Rinder und Pferde besitzen. Die andere Hälfte des Großviehbestandes, sowie Schafe, Schweine und Kleinvieh, bleiben in der Nähe der Häuser und suchen sich dort ihr Futter. Sie können auch in den unbebauten Feldern der Nachbarn ihre Nahrung suchen; das Eindringen in die bebauten Felder ist ihnen durch die Zäune verwehrt.

Jeder Familienangehörige kennt jedes Stück seines Viehbestandes und die Männer auch jedes Stück Großvieh des ganzen Dorfes. Trotzdem sind Eigentumsmarken in Gebrauch, die für die Pferde in Brandstempeln aus Eisen mit dem Anfangsbuchstaben des Besitzers bestehen, wie sie auch bei den Kolonisten in Gebrauch und dort käuflich zu erwerben sind. Die Rinder haben als Eigentumsmarken kleine Einschnitte in den Ohren in Form eines Dreieckes, Viereckes oder Halbkreises oder in entsprechender Durchbohrung der Ohren. Die gleichen Eigentumszeichen bekommen auch die Schweine und Schafe in die Ohren.

Schafe (pila) werden hauptsächlich wegen der Wolle gehalten, obwohl sie auch gegessen werden. Der Gesamtbestand des Dorfes ist aber so gering, daß nur durchschnittlich jede dritte Familie ein bis zwei Schafe ihr Eigen nennt. Die übrigen Familien müssen sich die benötigte Wolle bei den Schafbesitzern gegen anderes eintauschen (s. unter «Handel und Ver-

kehr»). Schweine (čúče) sind wegen ihres Fleisches sehr begehrt, sie sind allerdings nicht zahlreich genug, als daß jede Familie eines besäße, wohl aber etwa jede zweite Familie. Sie laufen, wie alle anderen Haustiere, in der Nähe der Gehöfte frei herum und müssen sich ihre Nahrung suchen. Ihr Eindringen in die umzäunten Felder verhindert man, indem man ihnen ein aus drei Stäben gebildetes Gestell um den Hals hängt.

Ställe für die Tiere oder regelmäßige und besondere Fütterung oder Pflege ist nicht bekannt. Auf den Weideplätzen der Rinder und Pferde legt der Besitzer jeden Sonntag Steinsalz aus. Den Schweinen wirft man gelegentlich Arracacha- oder Maisabfälle vor das Haus, die sie sich dann suchen müssen. Hühner (átały; Hahn = atalyepítstę, Kücken = atalyelúčkwę) werden ab und zu mit Mais gefüttert oder picken von den Arracacha, die in der Wohnung herumliegen. Die kleinen Kücken werden gefüttert, indem die Frau ihnen etwas Mais vorkaut und ihnen den Brei hinspeit. Einige Hühner besitzt jede Familie, ihre Zahl wird jedoch nicht groß, da Fuchs und Nachbarn die frei Herumlaufenden immer wieder wegstehlen. Die Durchschnittszahl hält sich deswegen bei nur zwei bis drei Hühnern und einem Hahn pro Familie. In vielen Häusern laufen Meerschweinchen (fits) herum, die sich von den Abfällen der Küche nähren und deren Braten als Delikatesse geschätzt wird.

Hunde (álko) gibt es fast in jedem Haus. Sie sollen die Hühner vor dem Fuchs und das Haus vor fremden Menschen schützen. Wir haben aber keine wirklich bissigen Hunde angetroffen. Sie sind alle sehr unterernährt und feige, dazu von kleiner, kurzhaariger Rasse. Größere Hunde, etwa von der Größe unserer Schäferhunde, gibt es nicht. Ihre Nahrung müssen sie sich suchen, hauptsächlich besteht sie aus dem Fleisch krepierter Pferde, da die Menschen kein Pferdefleisch essen. Nur sehr selten bekommen sie einmal Reste menschlicher Mahlzeiten zugeworfen. Katzen (mil) sind selten. Nur wenige Familien besitzen eine. Sie dienen dem Menschen, indem sie Haus und Vorratsräume frei von Mäusen halten. Enten (páto) sind ebenfalls sehr selten, wir trafen nur je zwei in zwei Häusern. Sie werden als Braten sehr geschätzt.

Bienen (čí'nç) werden nur von wenigen Familien gehalten. Sie sind kleiner als unsere deutschen Honigbienen und von gelb-brauner Farbe. Besondere Bienenkörbe gibt es nicht, sondern man benutzt einen alten, ausgehöhlten, aber noch stehenden Baumstamm. In einem Falle nisteten sie in einem Hauspfosten neben dem Türeingang. Ihr Honig (čí'nç mil) ist dunkelbraun wie Sirup. Das Bienenwachs (čí'nç) wird zur Festigung der Agavefaserschnüre benutzt, mit denen man zerbrochene Chichaschalen repariert und zur Herstellung von Feuerwerkskörpern.

e) Jagd und Fischfang

Beides spielt im Wirtschaftshaushalt der Paez keine große Rolle. Eine besondere Klasse von Jägern oder Fischern gibt es zudem nicht. Die Jagd wird nur von Männern ausgeübt und erstreckt sich, aus Mangel an Großwild, im allgemeinen auf kleinere Säuger, Kaninchen, Affen und auf Vögel. Nur in den Bergen ist es möglich, die čái und gwágwa zu finden und zu jagen. Ersteres sei eine Art Hirsch, so wurde mir erklärt, und das gwágwa ein kleines Tier, ähnlich einem Dachs.

Die größte Häufigkeit der Jagdgänge eines Mannes liegt etwa bei einem Tag wöchentlich. Meistens gehen die Männer aber noch seltener auf die Jagd. Diese wird in der Nähe der Behausung alleine mit Hunden durchgeführt, während ein Jagdgang in den Bergen allgemein von mehreren Männer ausgeführt wird, da ein Mann alleine Angst vor gělyómp, dem Berggeist hat. Nur einen einzigen jungen Mann von etwa 18 Jahren trafen wir, der wöchentlich einmal alleine in die Berge auf Jagd geht. Er erzählte uns, daß man, um ein guter Jäger zu werden, sich zunächst bemühen müsse, einen Bären (ǵwiy) zu töten. Dessen Fett muß man sich dann in den rechten Unterarm einreiben, dadurch bekäme man gleiche Kräfte wie der Bär. Essen dürfe man dieses Fett aber nicht, da man sonst davon wahnsinnig würde. Nach dem Einreiben des Fettes, so erzählte der junge Jäger weiter, dürfe man eine Woche lang zu allen Mahlzeiten kein Salz essen. Irgendwelche weiteren Regeln oder Zeremonien hätte man nicht zu beachten. Wir erfuhren aber, daß man das Bärenfett auch als Heilmittel benutzen könne, und zwar müsse man bei Knochenbrüchen oder Verstauchungen den betreffenden Teil mit dem Bärenfett einreiben, und danach würde das verletzte Glied sofort heilen und bedeutend stärker werden als je zuvor. Bei seinen Pirschgängen trägt er auf dem Kopf eine Kappe aus dem Fell eines rotblond behaarten Affen (móno), die ihn in erster Linie vor den Dornen des Gebüsches schützen, aber auch das Anschleichen des Wildes erleichtern soll. Für zwei Pesos hat er sie uns ohne weiteres verkauft, da er, wie er sagte, durchaus in der Lage wäre, sich einen anderen Affen zu schießen. Angst vor dem gělyómp-Geist hätte er nicht, wohl aber die anderen Männer. Gělyómp schreit nämlich und lärmt, wenn die Menschen sein Revier in den Bergen betreten, so daß sie ganz verwirrt werden und sich verirren. Mehreren Männern zusammen aber könne der Berggeist nichts anhaben, da könne er lärmen so laut er wolle, sie ließen sich nicht ablenken. Natürlich dürfen die Männer, selbst wenn sie noch so viele sind, den Berggeist nicht beleidigen oder unnötig herausfordern, sondern müssen alles vermeiden, was gělyómp nicht leiden

kana. Er haßt nämlich alles Unreine und Schmutzige. Die Männer gehen deshalb immer nur gut gewaschen auf die Jagd, sie waschen sich sogar den ganzen Körper und auch die Ruana. Zusätzlich reiben sie sich noch mit den Reinigungskräutern šū und šáyuts ein, die sie vom Schamanen bekommen, um auch wirklich ganz sauber im körperlichen und rituellen Sinne zu sein. Wenn jemand aber an einer Beerdigung teilgenommen hat oder auch nur einen Leichenzug aus der Nähe sah, so hat er sehr viel «Pest» von dem Toten abbekommen und muß sich vor der Jagd noch besonders vom Schamanen reinigen lassen. Falls aber die Frau eines Jägers zur Zeit der Jagd gerade menstruiert, so nützt keine Reinigung; der Jäger ist zu «schmutzig» und muß zuhause bleiben, um nicht die Wut des gēlyómp herauszufordern und damit Unglück über die ganze Jagdgesellschaft zu bringen.

Diese besteht allgemein aus sechs Männern mit zwölf Hunden, ohne daß es sich jedoch dabei um eine regelrechte Treibjagd handelt. Die Jäger sind mit Schrotflinten ausgerüstet, deren glatter Lauf bei einem Kaliber von etwa 15 mm aus starkem Eisenblech besteht. Als Schrot nimmt man feinen Sand, das Pulver wird gekauft und mit einem Funken aus dem Feuersteinschloß entzündet.

Schonzeiten für die Tiere gibt es nicht; desgleichen ist gēlyómp nicht böse, weil etwa zu viel Wild gejagt werden könnte, denn «dies kommt nicht vor, da es soviel gar nicht gibt». Nach der Jagd aber befestigt der Jäger die Schwanzfedern der erbeuteten Vögel an der Innenseite des Daches seines Hauses und die sauber abgenagten Schädel der erjagten Vierfüßer an dessen Mittelpfahl oder mittlerem Giebelpfahl. Beides, um das nächste Mal bei der Jagd auf das gleiche Wild wieder Erfolg zu haben. Schwanzfedern der Vögel fand ich unter der Dachbedeckung fast jedes Hauses und häufig auch drei, fünf oder zehn Affen- oder Kaninchenschädel direkt befestigt am Hauspfahl oder übereinander aufgereiht an einer Schnur. Nur einmal fand ich am Giebelpfosten einer kleinen Feldhütte in mannshöhe unter einem Affenschädel eine sehr roh eingeritzte menschliche Figur mit einem ovalen Gesicht und sechs aufrecht stehenden Haaren auf dem Kopf (Abb. 200). Die Augen sind durch Kreise, die Nase durch ein langes Rechteck und der Mund durch ein Dreieck wiedergegeben. Der Körper ist rechteckig. Seitlich des Körpers sind zwei halbkreisförmige Linien eingeritzt. Die Arme setzen an diesen Halbkreisen als zwei gewinkelte Linien an und stehen etwas ab; in gleicher Art sind die Beine dargestellt, zwischen denen ein Dreieck wohl die Geschlechtsteile andeuten soll. An der Seite des Pfostens ist ein christliches Kreuz eingeschnitten. Es wurde mir erklärt, daß die menschliche Figur den «Teufel»

darstelle, aber mit der Jagd nichts zu tun hätte. Diese Erklärung ist natürlich unbefriedigend, aber ich konnte eine ähnliche Einritzung nirgends wiederfinden und auch nirgendwo eine Erklärung erlangen.*

Die Vogeljagd auf die taubengroßen tom-Vögel wird, außer mit der Schrot-Flinte, von fast allen Paez-Familien mit dem Netz (ōka) ausgeübt, das eine Höhe von etwa fünf Meter und eine Breite von zwanzig Meter hat. Man schlägt dazu auf einem Hügel oder dem Kamm eines Höhenzuges eine entsprechend breite Bresche in die Baum- oder Buschbewachsung und befestigt in der entstandenen Lücke das Netz. Die aufgescheuchten Vögel, die an dieser Stelle einen bequemen Durchlaß vermuten, fliegen in das Netz, verfangen sich darin und werden von den Fängern durch Umdrehen des Kopfes getötet. Eine andere Art des Vogelfanges besteht darin, daß man eine Schlinge aus Pferdehaar (nyákiwez; nyák = aufstellen, wez = Schnur) so an dem Zweig eines Baumes oder Strauches befestigt, daß die Schlinge in ein Vogelnest zu liegen kommt. Kehrt der Vogel in sein Nest zurück, verfängt sich die Schlinge an seinem Fuß und der Junge — denn Jungen sind es zumeist, die diese Arbeit der Schlingenstellerei ausüben — kann den Vogel ergreifen. Gleichermaßen mit Schlingen, allerdings aus Agavefaser, werden Kaninchen gefangen, indem man die Schlingen auf ihren Wechseln auslegt.

Der Fischfang wird mit der Angel am Fluß oder an Stauwehren mit Gift ausgeübt. Die Angel (wendyánsyuts) besteht aus gezwirnter Agaveschnur, an die ein Metallhaken und als Senker ein Stein angebunden sind. Als Köder wird am Haken ein kleiner Wurm befestigt. Geangelt wird nur von Männern, und zwar in der Dämmerung oder bei Nacht.

Das Fischen mit Giftpflanzen ist ein Kultur-Charakteristikum fast aller südamerikanischen Indianer. Insgesamt werden von ihnen zu diesem Zweck mehr als hundert Arten von Giftpflanzen benutzt, womit der Erdteil in dieser Hinsicht an der Spitze aller Kontinente steht (Heizer, p. 277). Bei den Paez wird die Giftpflanzenfischerei einmal im Jahr, in der Trockenzeit, als Gemeinschaftsfischerei an Stauwehren betrieben. Dazu wird — so wurde mir erklärt — zunächst von den Männern ein Staudamm aus Steinen und Erde errichtet. In das so abgeteilte Becken wirft man die mittels Steinen zerriebenen Kräuter, welcher nur hoch oben in den Bergen wachsen und einen Giftstoff enthalten. Diese Kräuter werden yúkse bzw. kēse genannt. Die Fische sollen darauf unmittelbar ster-

* Möglicherweise soll hier der «Donner» dargestellt sein, der als bedeutendste mythische Figur und auch als Hilfsgeist der Schamanen als ein kleiner Mann mit Schamanenstab und einer Triangel als Musikinstrument beschrieben wird, der seine Geschlechtsteile zur Schau stellt.

ben. Gefangen werden sie nur von Männern. Da aber die Giftkräuter so weit entfernt und nur schwer zu finden sind, würden die Männer an den Staustellen die Fische teilweise auch unvergiftet mit den bloßen Händen fangen.

f) Waffen

Die Waffen der Paez beschränken sich auf Jagdwaffen und auf Kinderspielzeug, da Kriege nicht mehr geführt werden. Die heute einzig bedeutsame Jagdwaffe ist die Schrotflinte. Als Kinderspielzeug existieren Steinschleuder (isot), Blasrohr (pāt) und neuerdings die Gummischleuder (káučéro).

In früherer Zeit sollen die Paez bei den Kämpfen mit den Spaniern 25 Handspannen lange Lanzen aus dem Holz der Chonta-Palme benutzt haben, sowie Flechtschilde bzw. Schilde aus Tapirhaut (Pittier, p. 327). Für gegenwärtigen oder auch früheren Gebrauch von Lanze und Schild konnte ich keine Bestätigung finden; meinen Gewährsleuten war weder Wort noch Sache geläufig. Von den Chronisten ist aber überliefert, daß die Paez, wie auch andere Gebirgsvölker dieses Gebietes, aus den Kämpfen mit den spanischen Reitern gelernt hatten, sich ihrer mit langen Lanzen zu erwehren. Für einen vorspanischen Gebrauch dieser Art Lanzen fehlt aber jeder Grund. Daß die Paez ursprünglich Geflechtschilde (opimb) hatten, ist nicht unwahrscheinlich. Interessant ist das Wort für den Fellschild (himba-kat), dessen gegenwärtige wörtliche Bedeutung «Pferde-Haut» ist. Ob «himba» in vorspanischer Zeit «Tapir» bedeutet hat, ist nicht zu eruieren.

Zur Verteidigung ihres Gebirgslandes hatten die Paez auch große Felssteine benutzt, die sie von den Höhen auf die Angreifer herabschleuderten. Schon früh gelang es ihnen aber auch, sich Eisen und Eisenwaffen zu verschaffen. Bereits in den Kämpfen zur Zeit der Conquista benutzten sie Schwerter und Macheten.

Mythologisch als von großer Bedeutung bei den Kämpfen mit den «Pijaos» ist die aus Agavefaser geflochtene Steinschleuder, deren Herstellung unten (s. unter «Flechten») beschrieben ist. Aus geographischen Gründen ist sie die typische Waffe der amerikanischen Gebirgsvölker von Feuerland bis Kanada, während das Blasrohr aus gleichen Gründen die typische Waffe vorwiegend des Amazonas- und Orinoco-Waldgebietes ist. Das gemeinsame Vorkommen von Blasrohr und Schleuder findet sich durchgehend von Mexiko bis Ecuador und in Bolivien (Friederici, 1911, pp. 71-73, Taf. 13).

Das Blasrohr der Paez besteht aus einem einteiligen Lauf und ist in seiner Konstruktion sehr einfach. Es wird nur von Männern hergestellt, zur Vogeljagd aber fast nur von Jungen gebraucht. Zur Herstellung benutzt man den dünen, geraden Stamm des fiza-Baumes, dessen Mark mit einem langen, glühend gemachten Eisenrohr von etwa 8 mm Stärke ausgebrannt wird. Die Länge des Rohres beträgt 2-3 m. Ein besonderes Mundstück wird nicht angebracht. Als Visier klebt man ein Stückchen Bienenwachs oberhalb der Mündung des Blasrohres auf. Als Geschosse dienen die kugelförmigen Früchte des ambák-Baumes, die im grünen Zustand gerade das richtige Kaliber haben. Die Schußweite beträgt etwa 20 m. Die Schußgenauigkeit ist nicht groß. Trotzdem gibt es Jungen, die oberhalb der Blasöffnung des Rohres mehr als 20 Kerben als Abschußliste der getöteten Vögel eingeschnitten haben.

4. HANDWERK UND TECHNIKEN

a) Faserbearbeitung

Das bei den Paez zum Flechten, Weben, Netzen oder Seilen verwandte Fasermaterial ist vorwiegend die Agave, die Baumwolle oder Schafwolle. Agave und Baumwolle sind altamerikanische Faserpflanzen, deren Heimat wahrscheinlich Mittelamerika ist, während die Verarbeitung der Schafwolle im peruanischen Hochland ihre Tradition in der Verarbeitung der Lama- bzw. Alpacawolle und der Wolle ihrer wild lebenden Verwandten, Vicuña und Guanaco, hat.

Die Agave (mbäts) wächst in allen Teilen des Tierradentro, und die Fasern ihrer fleischigen, wasserhaltigen Blätter werden zum Flechten, Weben, für die Herstellung der Netze und Seile verwandt. Die Gewinnung der Faser muß unmittelbar nach dem Abschlagen des bis zu 1,50 m langen Blattes von der Staude geschehen, da die Feuchtigkeit sehr rasch vergeht und die Entfernung des trockenen Fleisches von den Fasern dann nur sehr schwer möglich ist. Jedes Haus hat zu diesem Zweck im Schatten des Daches einen schräg gegen die Wand gelehnten Baumstamm, von dessen oberem Teil eine Schnur mit einem Hölzchen herabhängt. Dieses steckt man quer in das mit der Spitze nach unten hängende Blatt, und dann werden mit einem der Länge nach aufgespaltenen, sehr scharfkantigen halben Bambusrohr die fleischigen Teile des Agaveblattes rasch heruntergeschabt, bis nur noch die lang durchgehenden, sauberen Fasern

übrig bleiben (Abb. 177 und 178). Diese werden zum Trocknen lose um einen Balken gebunden, bis sie dann früher oder später versponnen und zum Gebrauch gezwirnt werden.

Um einen Faden aus den Agavefasern zu gewinnen, wenden Männer und Frauen verschiedene Techniken an. Männer drillen den Faden mit der Hand auf dem Oberschenkel, während Frauen die Agavefaser, wie auch die Schafwolle, mit der Spindel zu einem Faden verspinnen. Je nach Form der Spindel und ihrer Haltung werden bei den südamerikanischen Eingeborenen zwei Methoden des Spinnens unterschieden, die O. Frödin und E. v. Nordenskiöld nach ihrem charakteristischen Vorkommen als die Bororo- und Bakaïri-Methode bezeichnen. Die erstere Methode ist die kulturgeschichtlich ältere. Der Spindelstab ist hier von gleichmäßigem Querschnitt, und der Wirtel sitzt allgemein nahe dem unteren Ende. Beim Spinnen wird die Spindel mehr oder weniger waagerecht gehalten und mit ihrem unteren Ende auf eine in den Boden gesteckte Astgabel aufgelegt oder zwischen den Zehen gehalten. Der gesponnene Faden wird zunächst auf den kürzeren, unterhalb des Wirtels gelegenen Teil gewickelt und erst später auf den oberhalb liegenden Hauptteil aufgewickelt. Die Hauptverbreitung dieses Spindeltypes liegt östlich der Anden, in Mojos und im östlichen Ecuador. Die Bakaïrispindel, auch als »Andine Hängespindel« bezeichnet, ist durch eine konische Verdickung an ihrem unteren Ende gekennzeichnet. Der Wirtel ist von oben her auf den Spindelstab gestreift und kann, da bei der Bakaïrimethode nur in senkrechter Lage gesponnen wird, nicht abrutschen. Das obere Ende der Spindel ist oft mit einer Kerbe oder einem Haken versehen. Der Faden wird grundsätzlich an dem oberen, längeren Ende des Spindelstöckchens gebildet, also genau umgekehrt, als bei der Bororospindel. Die Verbreitung des Bakaïrityps ist eine sehr große; er kommt im gesamten Andenraum vor, wie auch im venezolanischen und brasilianischen Waldgebiet.

Die Spindeln der Paez (wágat; als Wollspindel: káswagat) und ihre Spinnmethoden lassen sich weder eindeutig als zum Bororo- noch als zum Bakaïrityp gehörig bezeichnen, da sie Elemente von beiden enthalten. Das schmucklose Spindelstöckchen ist gleichmäßig etwa 3 mm dick, der Wirtel (nyít) kann entweder fehlen oder ist sehr kunstlos in Form einer roh geschnitzten, diskusförmigen Knochen- oder Holzscheibe aufgeschoben. Nicht selten dient als Wirtelersatz ein Stückchen Maiskolben, eine Kartoffel oder eine Bohnenschote. Die Haltung der Spindel ist verschieden. Sie kann senkrecht frei nach unten hängen, in senkrechter Lage mit der Spitze auf einer Unterlage (Oberschenkel) aufliegen, oder sie wird waagerecht in der Luft oder sogar mit dem unteren Teil nach oben

gehalten (Abb. 179 bis 180). Die Haltung der Spindel hängt nicht davon ab, ob Agavefaser oder Wolle versponnen wird, sondern sie scheint willkürlich zu sein. Während diese Merkmale, wenigstens soweit die Spindel freihändig nach unten gehalten wird, auf das Bakaïrispinnen hinweisen, ist die Bildung des Fadens und sein vorläufiges Aufwickeln auf den unteren, kürzeren Teil der Spindel ein Merkmal des Bororospinnens, obwohl deren typische, gabelförmige Auflage bei waagerecht gehaltener Spindel hier fehlt. Die Spindel wird bei den Paez mit der rechten Hand geführt. Die linke zupft die Fasern und bildet den Faden. Die Frauen können dabei sitzen, stehen oder gehen. Soweit es sich um die Verarbeitung von Schafwolle handelt, pflegen die Frauen sie vorwiegend auf dem Wege zum Markt oder bei sonstigen Gängen zu verspinnen; beim Spinnen der Agavefaser sitzen sie vor dem Balken, um den die Fasern zum Trocknen aufgebunden worden sind.

Die Schafwolle (kas) wird grob gereinigt und zum Verspinnen ungewaschen um einen Stab gebunden (Abb. 179). Dieser ist 60-150 cm lang und wird mit seinem unteren Teil unter den Arm geklemmt. An seinem oberen Teil hat er eine Kerbe, in welcher eine Schnur befestigt ist, mit der die Wolle am Stab durch Umwickeln festgehalten wird. Damit sie nicht zu sehr austrocknet, wodurch das Verspinnen erschwert würde, schützt man sie durch Einhüllen in Blätter oder durch ein Tuch.

Nachdem der Faden einige Meter gesponnen und auf den unteren Teil der Spindel aufgewickelt worden ist, löst man ihn dort und wickelt ihn auf den oberen Teil. In dieser aufgewickelten Form, d. h. noch auf dem Spindelstab, kann der Faden nach Entfernung des Wirtels als Schützen beim Weben der Kleidungsstücke verwendet werden. Zum Weben der bunten Frauengürtel jedoch und zur Herstellung der wollenen Kokataschen wird nicht der einfache, sondern der gezwirnte Wollfaden benutzt. Die Agavefäden werden sogar grundsätzlich zu jedem Gebrauch gezwirnt. Dazu werden zwei Einzelfäden zu einem doppelten Faden in einer der Spinnrichtung entgegengesetzten Drehrichtung verdreht. Dieser Vorgang wird von Männern und Frauen verschieden durchgeführt. Erstere zwirnen entweder mit der Hand auf dem Oberschenkel oder benutzen dazu ein besonderes Instrument, die klafica, mit der auch die stärksten Seile hergestellt werden, während die Frauen auch das Zwirnen mit der Spindel vornehmen. Die Drehrichtung des gezwirnten Fadens ist bei Männern und Frauen verschieden. Nach dem vorhandenen Material wenden erstere bei der Handarbeit die Z-Zwirnung an, die Frauen bei Arbeit mit der Spindel die S-Zwirnung. Beim Zwirnen oder Seilen der Männer mit der klafica herrscht die S-Drehung vor. (Für die Angabe der

Drehrichtung nach diesen beiden Buchstaben ist die Richtung des vorne liegenden, schräglaufenden Teiles des senkrecht gehaltenen Fadens maßgebend, der parallel zum Mittelteil eines S oder Z verläuft [Fig. 34]).

Die Frauen streifen zum Zwirnen, nachdem sie den leicht beweglichen Spinnwirtel nach unten abgezogen haben, den gesponnenen Faden von der Spindel, fassen ihn dann in der Mitte und legen ihn in einer Schlaufe von neuem um die Spindel. Dann wird der so doppelt genommene Faden mit der rechten Hand gezwirnt, wobei er mit drei Fingern der linken Hand entwirrt und geführt wird (Abb. 180). Auch hierbei wird zunächst jeweils ein kleineres Stück auf dem unteren, schmaleren Teil der Spindel gezwirnt und erst später auf den längeren, oberen Teil aufgewickelt.

b) Seilen

Die Anfertigung von Seilen ist Männerarbeit. Es gibt zwar auch eine Art von Seilen aus Agavefaser, die von Frauen angefertigt wird (täpe), aber diese Seile werden in Form des Dreierzopfes aus drei Drähten geflochten und sind damit eine Flechtarbeit. Zweidrähtige Seile aus Agavefaser (mémwez) von beliebiger Länge werden in der gleichen Technik hergestellt, wie die dünnen, gezwirnten Agaveschnüre. Man benutzt dazu die klafíca (von span. clavícula?), ein lanzettförmiges, etwa 15 cm langes, flaches Stück Holz, das an seinem einen Ende eine Einkerbung und darunter eine runde Durchbohrung hat (Fig. 26). Durch diese wird waagerecht ein gleichlanger Stab gesteckt, der an seinem einen Ende eine Verdickung aufweist, welche das Abrutschen des Brettchens verhindert. Um die Einkerbung wird die Mitte eines mit der Hand gedrillten Fadens befestigt, und dann läßt man das Brettchen rotieren. Durch seine exzentrisch angebrachte Durchbohrung wirkt der längere Teil als Schwungmasse. Beim Drehen wird der daran befestigte Faden gezwirnt. Natürlich ist zu dieser Arbeit ein Gehilfe erforderlich, der das andere Ende des Fadens oder Seiles gefaßt hält. Auch dreidrähtige Seile (láso) können mit der klafíca hergestellt werden. Dazu werden die drei Spitzen der drei gedrillten Agavedrähte an der Einkerbung der klafíca festgebunden, und dann wird das Instrument auf die gleiche Weise gedreht. Ein Gehilfe sorgt für gleichmäßigen Drall und gleichmäßige Stärke des Seiles. Als dreidrähtiges Seil wird nach der beschriebenen Methode mit der klafíca auch ein Lasso aus Pferdehaaren (séltas) hergestellt. Die einzelnen Drähte werden vorher mit der Hand gedrillt, dann gezwirnt und als dritter Arbeitsgang das außerordentlich feste Seil von etwa 1 cm Durchmesser her-

gestellt. Mit der klafica werden auch die spiralförmig als Lederstreifen aus der Rinderhaut geschnittenen Lassos (kádya) gedrillt. Voraussetzung ist, daß die Haut in frischem oder nassem Zustand verarbeitet wird. Nachdem sie nach dem Drillen eine Zeitlang zum Trocknen ausgespannt ist, behält sie ihre spiralförmige Drehung bei. Diese läßt allerdings bei zu starker Zugbeanspruchung oder bei starker Durchnässung nach.

c) Netztechniken

Bei der Beschreibung der Netztechniken der Paez möchte ich zwischen der Schlingtechnik und der Knotentechnik unterscheiden. Zu den in Schlingtechnik hergestellten Gegenständen gehören die Tragtaschen aus Agavefaser (im folgenden «Fasertaschen» genannt) und die wollenen Kokabeutel, zu den in Knotentechnik hergestellten die Vogelnetze, Hängematten, Beerensiebe und Schleudern. Als Material dient Agavefaser oder Schafwolle, beides in der Form gezwirnter Fäden.

Zu den Arbeiten in *Schlingtechnik* gehört in unserem europäischen Kulturkreis beispielsweise das Stricken und Häkeln, und zwar in der Technik des Verschlingens. Der Einfachheit dieser Arbeitsmethode steht die unangenehme Begleiterscheinung gegenüber, daß man durch Zug an einem Faden das ganze Gewebe zerstören kann. Die Schlingtechnik der Paez-Stofferzeugung ist eine grundsätzlich andere. Sie besteht in der Technik des einfachen Einhängens. Rein äußerlich ist dabei zu bemerken, daß weder Nadel noch Häkelhaken, noch ein anderer Gegenstand zu ihrer Ausübung benutzt wird, sondern alles geschieht mit den Händen.

Zur Verbindung der Schlingen muß man den Faden in seiner ganzen Länge durch jede einzelne Schlinge hindurchführen. Da bei dieser Technik der Fadenvorrat in Form eines dicken Knäuls nicht oder nur unter großen Mühen durch die Schlingen passen würden, mußte man eine andere Art des Legens des Fadenvorrates ersinnen. Dies ist den Paez in einer sehr geschickten Weise gelungen, wobei man aus dem gleichen Material sogar einen brauchbaren Nadelersatz hat bilden können (Abb. 183). Der zu verarbeitende Faden, Wolle oder Agavefaser, wird der Länge nach mehrfach übereinandergelegt, leicht gedrillt und dann in der Mitte mit einem einfachen Faden zusammengefaßt. Dieser wird mehrfach so verknotet, daß er in eine Spitze ausläuft, die gleichzeitig als Flechtnadel dient. Dieser bis zu 4 m lange und 6-8 mm dick zusammengelegte Fadenvorrat kann leicht durch jede Schlinge der Fasertasche geführt werden. Wenn der Faden einmal der Länge nach aufgebraucht ist, läßt sich ohne

weiteres eine Schlaufe des Fadenvorrates durch die «Öse» der «Nadel» nachziehen, solange, bis der Vorrat aufgebraucht ist.

Die Methode der Herstellung der Fasertasche und des wollenen Kokabeutels ist grundsätzlich die gleiche. Die Arbeitszeit dauert zwei bis sechs Wochen. Bei der Fasertasche (yáha), deren größte in Höhe und Breite über einen Meter messen können, wird zunächst ein kleiner Boden geflochten, von dem aus man die Tasche in mehreren Absätzen glockenförmig zum Rande hin arbeitet. Zu Beginn dieses Verfahrens wird zwischen Daumen und Ringfinger einerseits und Zeige- und Mittelfinger andererseits zunächst ein kurzes Stück Faden gespannt, das mit der Fadenfortsetzung in Schlaufen lose und spiralförmig umwickelt wird. Dadurch entsteht die erste Maschenreihe (Fig. 30). Durch diese wird jetzt der folgende Fadenzug wieder zurückgeführt, indem er die vorher gebildeten Schlaufen lose faßt. Ist auf diese Weise fortfahrend der rechteckige Boden in einer Größe von etwa 2x5 cm hergestellt, so beginnt man an seiner einen Ecke mit dem ersten Absatz. Der Faden läuft auch hier, wie bei der ganzen Flechtarbeit, in der gleichen Technik. Um die Tasche zu verbreitern, werden in jede Schlaufe des Bodens soviele zusätzliche Reihen eingeschlungen, wie man den Beutel zu erweitern gedenkt.

Bei Ende der Arbeit wird drei Schlingen unterhalb seines oberen Randes in den Beutel eine breite Lochreihe eingearbeitet, die zur Befestigung des Tragbandes dient. Dieses Band endet, durch die Art des Webens (s. unten) bedingt, an beiden Enden in Schlaufen. Zur Befestigung wird die erste Schlaufe des Bandes von innen her durch eine Randöse geführt und zuerst oben herum nach hinten gelegt. Dann wird die zweite Schlaufe nach unten durch die erste Schlaufe geführt und dann erst durch die Öse des Beutels wieder zurück nach oben-hinten wie vorher. Die letzte Schlaufe des Bandes wird mit dem Anfangs- bzw.Endschußfaden des Tragbandes in einer Öse des Beutels verknotet.

Die Herstellung der wollenen Kokabeutel (kwatandyáha) wörtlich «Kalkbeutel»), deren Größe zwischen 12 und 35 cm schwankt, geschieht in der gleichen Technik, wie die Anfertigung der Fasertaschen. Der Arbeitsgang geht, nach Herstellung des Bodens, in drei Abschnitten vor sich, wobei sich der mittlere äußerlich durch sein farbiges, schachbrettartiges Muster abhebt, das oben und unten von einer Dreieckreihe begrenzt wird. Da dieser farbige Abschnitt ebenfalls in der Richtung vom Boden zum oberen Rand hin geflochten wird, ist für jeden Farbwechsel ein andersfarbiger Faden erforderlich. Diese verschiedenfarbigen Fäden sind in gleicher Art wie bei den Fasertaschen zu Seilen gedreht und mit einem Wollfaden, der als Flechtnadel dient, zusammengefaßt. Die Anzahl der

Farbquadrate in der Flächeneinheit ist konstant und ihre Anordnung verläuft, durch die Flechtarbeit bedingt, zwangsläufig diagonal (Abb. 154 und 203).

Die Befestigung des in Flechtweberei (s. unten) hergestellten Tragbandes an die Kokatasche geschieht in der gleichen Art, wie die des Tragbandes der Fasertasche.

Die in der *Knotentechnik* hergestellten Gewebe sind allgemein weitmaschig und umfassen in erster Linie die verschiedenartigen Netze. Die Knoten entstehen durch straffes Anziehen von geeigneten Schlaufen oder Verschlingungen, so daß sich die mehr oder weniger lockeren Maschen nicht mehr verschieben können. Zur gleichmäßigen Maschenherstellung wird bei den Vogelnetzen (öka) und Hängematten der Paez mit einem Maschenholz gearbeitet, dessen Höhe von etwa 5 cm der Maschengröße entspricht (Fig. 31). Das Material ist der gezwirnte Agavefaden. Zur Herstellung des Netzes — wie auch der Hängematte — werden die Schlaufen der Maschenreihen mittels des «symmetrischen Knotens» (Fig. 34 c) gebildet. Hierzu fährt der aufsteigende Faden von hinten nach vorn über den freien Maschenteil und läuft, diesen waagerecht umfahrend, in der entstandenen Schlaufe wieder nach unten. Das Maschenholz wird von unten her jeweils dicht an die Reihe der oberen Knoten angelegt, wobei es die neuen Knoten an seiner Unterseite straff einbinden. Dadurch ergeben sich völlig gleichmäßige Maschen. Die Maße des Vogelnetzes können — ausgespannt — die Größe von 5x20 m erreichen.

Die Hängematte (máka) ist, wie schon der spanische Name zeigt, Lehngut und allgemein nicht in den Andenkulturen verbreitet. Bei den Paez wird sie nur für Kinder benutzt. Ihre Ausmaße sind bei 100 Maschen etwa 100x100 cm. Die Aufhängung geschieht durch Agave- oder Pferdehaarseile, die durch die oberen und unteren Maschenreihen geschlungen und dann an Hauspfosten festgebunden werden.

Die Beerensiebe (tása) existieren in fast jedem Haushalt. Sie haben rund 30-60 cm Durchmesser und sind innerhalb eines runden Holzrahmens gespannt. Die Maschen werden mittels des «Fischnetzknotens» (Fig. 34 d) gebildet. Dieser zieht sich sehr stark zusammen und ist dann in seiner Struktur kaum zu erkennen.

Die Schleuder (ísut) wird in verschiedener Technik gearbeitet. Zu ihrer Herstellung werden die getrockneten Fasern des Agaveblattes benutzt, so wie sie nach der Entfleischung des Blattes anfallen. In die Spitze des Faserbündels wird ein Knoten gemacht und dieses sodann in zwei Teile geteilt. Beide werden mit der Hand in gleicher Richtung gedreht und danach durch Drehung in entgegengesetzter Richtung gezwirnt. So entsteht

— durch das natürlich sich verdickende Material bedingt — ein zweidrähtiges Seil von stetig wachsender Stärke. Da es nur mit der Hand gedreht wird, droht es bei größerer Dicke an Festigkeit einzubüßen. Nach etwa 50 cm wird deswegen der Strang in drei Teile geteilt und in etwa der gleichen Länge in der Art eines Dreierzopfes geflochten.

Zur Herstellung des Netzes für die Schleudersteinauflage (Fig. 29) werden die drei Flechtstränge in sieben Stränge aufgeteilt, die jeweils mit einem einfachen Fingerknoten von dem geflochtenen Teil getrennt werden. Aus jedem dieser Knoten setzen sich je zwei zweidrähtige Stränge fort, die, diagonal versetzt, durch einen Doppelfingerknoten verbunden werden.

Die Länge des Netzteiles beträgt etwa 20 cm. An seinem Ende geht er mittels eines einfachen Fingerknotens wieder in einen Dreierzopf über. Dabei ist zu bemerken, daß der zu Beginn des Zopfes in der Mitte liegende Strang von den Fäden eines daneben liegenden Knotens umfaßt wird. Damit wird verhindert, daß die Flechtarbeit sich in das Netz hinein auflöst und ihre Festigkeit einbüßt. Die gleiche Sicherung befindet sich auch an der anderen Seite des Netzes beim Übergang zum Zopfteil. Der weitere Arbeitsgang bis zur Fertigstellung der Schleuder geschieht entsprechend dem Anfang. Am einen Ende wird mittels eines Knotens eine bewegliche Schlaufe geknüpft, die zum Gebrauch der Schleuder über den Mittelfinger gezogen wird.

d) Flechten

Die Technik des Flechtens wird bei den Paez nur beim Bandflechten zur Herstellung der Strohhüte (Iwá) und zur Herstellung der dreidrähtigen Seile ausgeübt. Diese letzteren werden von den Frauen in verschiedener Länge und Stärke aus Agavefaser in der normalen Form des Dreierzopfes geflochten. Irgendwelche Arten von geflochtenen Körben, Sieben, Fächern, Bändern o. ä. gibt es bei den Paez nicht.

Die Form der Paez-Hüte scheint denen der Weißen nachgebildet. Sie ist für Männer, Frauen und Kinder gleich. Gearbeitet werden sie nur von Männern. Als Material dienen die trockenen Blätter des Iyéts-Schilfes, die zunächst in Bahnen von etwa 1 cm Breite gerissen werden. Zur Verarbeitung werden sie dann noch einmal durch Längsrisse in fünf bis zehn schmale Streifen von 1 bis 2 mm Breite eingeteilt. Von der Feinheit dieser Streifen hängt die Güte und der Wert des Hutes ab, denn je feiner die Flechtstreifen sind, desto wasserdichter und haltbarer ist der Hut. Er

wird aus einem einzigen geflochtenen Band (čemótč) durch spiralförmiges Aneinandernähen — von der Mitte des Hutes ausgehend — hergestellt.

Das Flechten des Bandes geschieht, ohne Hilfsmittel, in der Form des Diagonalgeflechtes mit elf Streifen (Fig. 33). Zu Beginn der Verarbeitung werden sie in der Mitte umgeknickt und damit doppelt genommen, derart, daß die Oberseite des Schilfblattes nach außen zu liegen kommt. In diese Anfangsknickung wird der zweite Streifen rechtwinkelig eingehängt und ebenfalls umgeknickt. Dies geschieht abwechselnd, bis alle elf Streifen zu dem etwa 6 bis 10 mm breiten Band verarbeitet sind. Die weitere Flechtarbeit wird mit den doppelten Streifen weiter durchgeführt. Dazu wird jeweils der erste Doppelstreifen von außen zur Mitte abwärts umgeknickt, um über den zweiten, unter den dritten und vierten und über den fünften und sechsten geführt zu werden. Von der anderen Seite wird mit dem jeweils äußeren Flechtstreifen entsprechend verfahren, so daß die Streifen von beiden Seiten abwechselnd immer nur bis zur Mitte geflochten werden. Dies ergibt ein sehr gleichmäßiges und festes Band.

Zum Aneinandernähen des Flechtbandes wird ein Faden der Agavefaser benutzt. Um der Hutkrempe eine genügende Steifheit zu geben, werden von unten her an den Nahtstellen Blattrippen mit aufgenäht.

e) Weben

Die Abgrenzung des Flechtens vom Weben ist nicht einheitlich. In der englisch geschriebenen Literatur wird beides allgemein nicht unterschieden. Nach H. Nevermann (pp. 4-6) müssen folgende Voraussetzungen für die einfachste Technik der Weberei, die Stabweberei, wie sie auch bei den Paez ausgeübt wird, gegeben sein: 1) Die Spannung der Fäden oder Fasern in einem Rahmen, 2) lange Schußfäden, 3) rechtwinkelige Kreuzung von Kette und Schuß, 4) mechanische Bildung des ersten und zweiten Faches. Der letzte Punkt ist dabei der entscheidende, denn während beim Flechten jeder Schußfaden einzeln über oder unter jedem einzelnen Kettfaden hindurchgeführt werden muß, geschieht dies beim Weben gleichzeitig über eine gewisse Anzahl von Längsfäden mittels eines Litzenstabes o. ä. Kompliziertere Arten der Weberei, beispielsweise die Brettchenweberei, Kamm- oder Litzengatterweberei, kommen bei den Paez nicht vor.

1. Webapparat für Tragbänder

Der Webapparat für die Tragbänder der Fasertaschen (vitoóläpç) besteht aus einem gegabelten Ast, dessen Schenkel einen nicht zu großen Abstand voneinander haben dürfen und möglichst parallel laufen sollen. Seine Größe beträgt 60 bis 80 cm in der Höhe und zwischen 20 und 60 cm in der Breite. Zwei dem Brust- und Kettbaum (plätegwę) entsprechende Stäbe für die senkrecht gespannten Kettfäden (yáhawes) werden waagerecht auf das Gabelgestell mit Rindenbast aufgebunden (Fig. 35).

Zum Weben in der bei den Paez geübten Methode entfällt eine besondere Schereinrichtung, die sonst beim Weben mit Spiralkette zum vorbereitenden Spannen der Kettfäden in irgendeiner Form erforderlich ist. Die Paez-Weberei geschieht nämlich weder nach der Methode der endlosen, rundlaufenden Kette, noch nach der Methode der endlichen, einebigen Kette, sondern bildet eine Mischung von beiden in der Form der sogenannten «falschen Spiralkette». Die Kettfäden laufen ringförmig um Brust- und Kettbaum und bilden zwei Ebenen, die eine unter, die andere über den Bäumen. Sie sind aber nicht in Spiralform gespannt, sondern wie eine Parallelkette. Ihre Befestigung geschieht durch ein waagerechtes Hölzchen, um das der erste Kettfaden mit einer Schlaufe gelegt wird. Dieser läuft dann um den ganzen Webrahmen bis wieder zum waagerechten Hölzchen, dieses von hinten nach vorne umfahrend, um wieder um den Webrahmen in umgekehrter Richtung zurückzugehen. Derartig alternierend werden sämtliche Kettfäden in der gewünschten Breite gespannt. Nachdem der letzte Kettfaden das waagerechte Hölzchen umlaufen hat, wird er verknotet und gleich als erster Schußfaden benutzt.

Das Weben geschieht nach der Methode der einfachen Stabweberei. Die Bindung ist stets die Leinwandbindung. Statt eines eigentlichen Trennstabes und Litzenstabes bilden bei den Paez Schlaufen aus Bast oder Agavefaser die Hilfsmittel für die mechanische Fachbildung. Die Trennschlaufe (batsnés) faßt die Kettfäden 1, 3, 5, 7 usw. gemeinsam; die Litzenschlaufen (nyúgwç) fassen die Kettfäden der geraden Zahlen einzeln in je einer langen Schlaufe, die oben ihrerseits zusammengebunden sind. Die mechanische Fachbildung geschieht durch wechselseitiges Hochziehen der Trenn- und Litzenschlaufen (Abb. 182).

Der Schützen (bánka) besteht nur aus einem aufgewickelten Fadenknäul; das Schwert (kyíta) ist aus dem harten Holz der Chonta-Palme geschnitzt, an beiden Seiten zugespitzt und von halbkreisförmigem Querschnitt.

Durch ihre Spannart lassen sich die Kettfäden während des Webens in

ihrer Gesamtheit um die waagerecht aufgebundenen Spanstäbe herumziehen, so daß das zu bearbeitende Webstück für den Schuß immer bequem vor der Weberin liegt. Anfang und Ende des Webteiles beginnen in einer Entfernung von etwa 3 cm vom waagerechten Hölzchen. Bei Beendigung wird der letzte Schußfaden am Rand der Kette verknotet. Nach Herausziehen des Hölzchens löst sich das Band vom Rahmen. Da die Kettfäden in Schlaufen auslaufen, kann sich das Gefüge des Bandes nicht lockern.

2. *Webapparat für Stoffe*

Das Weben der größer dimensionierten Stoffe für die Bekleidung geschieht ebenfalls in der Technik der Leinwandbindung und nach der gleichen Methode, wie das Weben der Tragbänder der Fasertaschen. Jede Frau ist hier- wie dazu in der Lage, denn sie muß alle von ihrer Familie für die Kleidung benötigten Stoffe selbst herstellen können; andernfalls hat kein Mädchen Aussicht geheiratet zu werden.

Der Webapparat steht senkrecht und besteht aus zwei kräftigen Pfosten, die in einem Abstand von etwa zwei Metern vor dem Hause, noch im Schutze des Daches, in den Boden gerammt sind. Wenig über dem Erdboden ist in jeden dieser Pfosten eine Kerbe geschlagen, in die der Brustbaum waagerecht eingelegt und festgebunden wird. Seine Lage nach der Höhe ist nicht veränderlich. Der ebenfalls waagerechte Kettbaum kann, je nach der Länge des zu webenden Stoffes, an den vertikalen Pfosten mittels Seilschlaufen höher oder tiefer festgebunden werden, wodurch eine gleichmäßige Spannung der Kettfäden erreicht wird.

Die wollenen, nicht gezwirnten Kettfäden werden in der gleichen Form gespannt wie bei den Tragbändern der Fasertaschen. Die Breite wird durch das zu webende Stoffstück bestimmt. Die Arbeitszeit für einen Frauenrock beträgt insgesamt etwa sechs Monate. Um bei dem fertigen Stück eine gewisse Schmuckwirkung zu erzielen, werden zwischen die ungefärbten schafwollenen Kettfäden gleiche ungefärbte oder andersfarbige Baumwollfäden gespannt, die beim späteren Färbvorgang mit den Pflanzenfarben diese Färbung nicht annehmen.

Der Trennstab besteht aus einem runden, geraden Holzstab. Die Litzenschlaufen werden von einer waagerecht gespannten Schnur gefaßt, die rechts und links, in der Höhe unverrückbar, an den beiden vertikalen Pfosten des Webapparates festgebunden ist. Das Schwert ist von halbkreisförmigem Querschnitt, an beiden Enden zugespitzt, und aus dem dunklen, harten Holz der Chonta-Palme geschnitzt. Seine Breite beträgt

drei bis vier Zentimeter, seine Länge etwa sechzig Zentimeter. Der Schützen besteht aus einem Stab, auf den der Faden quer aufgewickelt ist. Teilweise wird dazu die Spindel mit dem gesponnenen Faden benutzt.

Die Fachbildung zum Einführen des Schützen ist mühselig, da — durch die Breite des Webstückes bedingt — nicht alle entsprechenden Kettfäden gleichzeitig mittels der Litzenschlaufen vorgezogen werden können. Die Weberin vermag nur je etwa ein halbes Dutzend der Litzenschlaufen mit einer Hand zu ergreifen und vorzuziehen, um das Schwert langsam nachzuschieben und das Fach zu bilden. Noch ehe das Fach die Breite einer Schwertlänge erreicht hat, muß der Schützen bereits nachgeschoben werden, so daß der Schuß bei dem durch die Litzenschlaufen gebildeten Fach nur gewissermaßen in Raten durchgeführt werden kann (Abb. 181). Die Fachbildung mit dem hölzernen Trennstab ist wesentlich einfacher, da dieser zur Gegenfachbildung leicht vorgezogen werden kann und die Litzenschlaufen nachgeben.

Anfang und Ende des gewebten Stoffes hören in der Breite des nur dünnen Querstabes auf, da zum Schluß der Trennstab herausgezogen wird und der Querstab dessen Funktion übernimmt. In die stehen gebliebenen Anfangs- und Endschlaufen werden in der gleichen Form der Leinwandbildung mit der Hand Schußfäden nachgezogen, bis die Schlaufen ausgefüllt sind. Der jeweils letzte Schußfaden wird dreifach genommen, so daß ein fester Kantenabschluß entsteht.

3. Webapparat für Frauengürtel

Zum Weben der Frauengürtel (táw), der schwierigsten Webart bei der Paezweberei, war ursprünglich jede Frau in der Lage. Heute ist es fast eine Spezialistenarbeit, gibt es doch in Calderas nur noch fünf Frauen, welche die Frauengürtel selbst weben können. Eine von diesen, Talesia Pame, hat gar eine kleine Industrie aus dieser Fähigkeit entwickelt. Sie webt fast nur noch Frauengürtel und tauscht sich Nahrungsmittel u. a. dafür ein. Sie ist Anfang der dreißiger Jahre alt und hat drei Kinder. Ihre älteste Tochter, etwa zwölf Jahre alt, erlernt ebenfalls das Gürtelweben bei ihrer Mutter.

Der Webapparat (tawkyávitoń) ist grundsätzlich von gleicher Art, wie der für die Bänder der Fasertaschen. Das gabelförmige Gestell des Rahmens ist etwas breiter und entsprechend länger. Das Webmaterial ist Wolle. Die Vorbereitung für das Herstellen der verschiedenfarbigen Muster besteht im Spannen der entsprechenden farbigen Kettfäden, die, wie bei den Fasertaschenbändern, um ein kleines Querhölzchen gelegt werden.

Der Schußfaden ist immer einfarbig weiß und wird in Knäuelform als Schützen benutzt. Die allgemeine Anordnung der Kettfäden ist derart, daß an beiden Seiten außen eine Anzahl weißer Kettfäden gespannt werden, dann folgen vier rote, gelbe, blaue oder andersfarbige, die im fertig gewebten Band jeweils als ein durchlaufender farbiger Streifen erscheinen. Der ornamentierte Mittelteil besteht aus je vier weißen Kettfäden, denen je zwei rote folgen. Die letzteren dienen zur Herstellung des Musters und werden als die einzigen Kettfäden des Gürtels nicht in der Technik der Leinwandbindung gewebt. Sie sind derwegen in die Trennschlaufe, die jeden zweiten Kettfaden faßt, nicht mit eingeschlossen. Von Litzenschlaufen sind zwei vorhanden, deren eine die zur Trennschlaufe korrespondierenden Kettfäden und deren andere die roten Kettfäden der Zierkette des Mittelstreifens faßt (Abb. 187 bis 190).

Beim Weben in der Leinwandbindung werden Trenn- und Litzenschlaufen in normaler Technik benutzt. Die roten Kettfäden der zweiten Litzenschlaufe werden — je nach dem zu bildenden Muster insgesamt oder nur im Teil — hochgehoben, während darunter in normaler Leinwandbindung weiter gewebt wird. So entsteht bei gemeinsamem Hochheben aller roten Fäden als einfachstes Muster ein roter Querstreifen, dessen Höhe von der Länge der Zeit des Hochhebens der zweiten Litzenschlaufe abhängt. Bei der Herstellung von Ornamenten, für deren Bildung nur bestimmte rote Fäden benutzt werden, zählt die Weberin die benötigten ab und hält diese mit einem besonderen Trennstab, der aus einem Stückchen Rohr besteht, solange hoch. Die nicht benötigten roten Kettfäden fallen nach unten durch und erscheinen auf der Rückseite des Bandes teils als Negativmuster, teils werden sie von den weißen Kettfäden verdeckt.

Vorlagen für die Webmuster existieren nicht. Allgemein handelt es sich um traditionelle Formen — Menschen, Rauten, Dreiecke—, wenngleich auch phantasiebegabte Weberinnen lateinische Buchstaben in ihren Ornamentenschatz mit aufnehmen.

Das Ende des Bandes läuft, wegen des benötigten Raumes für die Einrichtung der mechanischen Fachbildung, in etwa 10 cm langen Schlaufen aus, die vom Kreuzstab abgenommen und mit je vier Streifen rund geflochten werden.

j) Flechtweben

Während die Tragbänder der Fasertaschen (yáha) in der Technik der Stabweberei in Leinwandbindung gewebt sind, werden die wollenen Trag-

bänder der Kokabeutel (kwatandyáha) in der Technik der Flechtweberei hergestellt. Darunter seien textile Techniken verstanden, die wegen der fehlenden mechanischen Fachbildung bei ihrer Herstellung nicht gewebt sind, wegen des vertikalen und horizontalen Verlaufes ihrer Fäden aber auch keine Geflechte darstellen. Die Bänder sind etwa 1,5 cm breit und 76 cm lang. Bei flüchtigem Hinsehen erwecken sie wegen ihrer Dicke den Anschein, als seien sie aus freier Hand geflochten. Ihre Dicke entsteht jedoch durch das Drehen und gleichzeitige Kreuzen der Kettfäden beim Flechten (vgl. Abb. 152).

Zur Anfertigung des Bandes ist ein gleicher Rahmen erforderlich wie zum Weben des Tragbandes der Fasertasche. Die Kettfäden sind in gleicher Art gespannt; Anfang und Ende sind an einem gleichartigen Querhölzchen befestigt. Kette und Schuß stehen senkrecht zueinander, eine mechanische Fachbildung findet aber nicht statt.

Zum Flechtvorgang, der von oben nach unten vor sich geht, werden — nach ihrer Reihenfolge — vier rote Kettfäden, vier weiße, vier blaue, vier weiße und wieder vier rote Fäden nebeneinander gespannt. Am Anfang webt man zunächst zwei bis drei Zentimeter in üblicher Leinwandbindung. Dann beginnt das Flechten des Bandes mit dem Rautenmuster. Hierbei wird der aus einem roten Faden gebildete Schuß durch jeweils zwei der gleichfarbigen, übereinandergedrehten Kettfäden hindurchgeführt. Die Drehung der Kettfäden geht zunächst in Richtung nach innen; die rechten Kettfäden werden also nach links gedreht, die linken nach rechts, aber jeweils in einer vollständigen Drehung von 360°. Ihre Reihenfolge ist nach der Drehung genau so, wie vorher. Zur Bildung des Rautenmusters werden gleichzeitig die gedrehten Kettfäden untereinander gekreuzt.

Zum Zurückführen des Schußfadens werden die noch gekreuzten Kettfäden mit einem zugespitzten Trennstab, meist dem Webschwert, von unten her nach oben angeschlagen und der Schußfaden durch die entstandene Öffnung zurückgeführt. Damit ist die Drehung der Kettfäden wieder aufgehoben. Die Lage der Kett- und Schußfäden entspricht jetzt wieder der normalen Leinwandbindung.

Zur Vervollständigung der Raute, d. h. zur Bildung des unteren Teiles, werden jetzt die Kettfäden umgekehrt, von innen nach außen gedreht, und dann wird sinngemäß in gleicher Weise verfahren wie beschrieben.

Die Schußfäden werden recht straff angezogen, so daß sie im Innern der Bindung verschwinden, und nur die Kettfäden zu sehen sind. Ihr Abstand untereinander ist — bedingt durch die gedrehten Kettfäden — verhältnismäßig groß.

Das entscheidende Merkmal dieser Flechtweberei und ihr Unterschied zur Weberei der gemusterten Frauengürtel (táw) besteht darin, daß auf Vorder- und Rückseite des Flechtbandes die gleichen Muster entstehen, jedoch jeweils um die Hälfte ihrer Größen gegeneinander versetzt.

Als Variante des beschriebenen einfachen Rautenmusters können zwei Rauten nebeneinander oder fünf kleine Rauten in diagonaler Anordnung auftreten. Hierbei zeigt die Rückseite allerdings nicht das gleiche Muster, sondern jeweils eines, das durch das Kreuzen der gedrehten Kettfäden entsteht.

g) *Färben*

Nach dem Empfinden der Paez ist schwarz die schönste Farbe. Fast alle selbst gewebten Kleidungsstücke der Männer und Frauen sind deswegen schwarz gefärbt, und selten nur sieht man Kleidungsstücke in der gelblich-weißen Naturfarbe der Schafwolle. Das Färben ist Frauenarbeit und geschieht mittels bestimmter Pflanzen, die jedoch nur tierisches Webmaterial, nicht aber pflanzliches färben. Diese Eigenschaft der Färbestoffe wird von den Paez zur Musterung der Kleidungsstücke benutzt, indem in die schafswollenen Stoffe einige baumwollene Kettfäden mit eingewebt werden, die bei der späteren Färbung ihre alte Farbe behalten.

Zur Schwarzfärbung der selbstgewebten Stoffe ist jede Frau in der Lage. Dazu werden die Stoffstücke in einem Topf etwa zwei Stunden lang mit den Blättern des ł̨al-Baumes oder des zótę-Baumes (nach Hernandez, 1946, p. 944, mit den Blättern eines Phyllanthus) gekocht und danach zwei Tage und zwei Nächte lang mit diesen Blättern in einer Grube in schwarzem, fetten Humusboden (ałáktič) eingegraben. Dann holt man sie wieder heraus, wäscht sie gut und läßt sie trocknen. Die Schwarzfärbung ist jetzt lichtecht und wasserfest. Die baumwollenen Zierstreifen innerhalb der Frauenkleidung, die bei diesem Färbevorgang nicht angegriffen werden, sind entweder naturfarben, rot oder grün. Sie werden von den Frauen bereits in der gewünschten Färbung gekauft, da Baumwolle bei den Paez nicht versponnen wird.

Die verschiedenfarbigen Fäden zur Herstellung der Kokataschen und der Frauengürtel wurden ursprünglich sämtlich von den Paez-Frauen mit Pflanzenfarben gefärbt. Heute geschieht dies nur noch teilweise, denn wer das nötige Geld hat, kauft sich auf dem Markt in Inzá oder Belalcazar Anilinfarben, die wegen ihrer kräftigeren Färbung und größeren Leuchtkraft beliebter sind. Desgleichen ist auch die in bereits gefärbten Fäden gekaufte Baumwolle für die Anfertigung der Frauengürtel beliebter, da sie heller bzw. glänzender ist.

Folgende Farben werden mit pflanzlichen Farbstoffen gefärbt: rot (mbę; auch Farbbezeichnung für rosa, ocker, braun) mit den Wurzeln eines Krautes, das bɛ́woęsę genannt wird. (Nach Hernandez ist dies die Rubiacee (Relbunium hypocarpium). Mit diesen Wurzeln läßt man die Wollfäden etwa eine Stunde lang kochen und legt sie dann in die Sonne. Zur Blaufärbung (sɛ́in; hellblau = sɛ́in-sɛ́in) werden die Fäden mit den Blättern des Nil-Baumes eine Stunde gekocht, zur Grünfärbung (oályę sɛ́in; oályę = Vogelart mit grünem Gefieder, also wörtlich «oályę-blau») mit den Blättern des tamp-Baumes und zur Gelbfärbung (ɪkítç) mit den Blättern des müzeç-Baumes. Die Färbergebnisse sind nicht immer gleichmäßig. Es treten immer einige Abweichungen im Farbton auf. Sie sind aber bei einiger Erfahrung von den gekauften chemischen Farben zu unterscheiden.

b) Töpferei

Die Kunst der Töpferei ist bei den Paez sehr wenig entwickelt und beschränkt sich im wesentlichen auf größere oder kleinere roh geformte, kugelförmige Kopftöpfe (mítç) mit leicht nach außen gebogener Mündung. Im Gebrauch werden sie nicht aufgehängt, sondern zum Kochen zwischen die drei Herdsteine gestellt. Kleinere, flachere Schalen dienen zum Rösten der Kokablätter. Henkelgefäße gibt es nicht. Es findet sich keinerlei Ornamentik, weder Bemalung, noch Einritzung, noch Fingereindrücke. Zum Trinken der Chicha oder zum Wasserholen werden nur Kürbiskalebassen (tóka) benutzt, die genau so unverziert und auf reine Zweckmäßigkeit abgestimmt sind wie die Keramik.

Die Herstellung der Töpfe ist Spezialistenarbeit. In Calderas gibt es drei Töpfer, von denen zwei Frauen sind. Von ihnen arbeitet aber nur einer, Santos Kiskue, auf Vorrat, während die anderen beiden nur auf Bestellung Töpfe anfertigen. Santos Kiskue ist etwa 40 Jahre alt, hat Frau und vier lebende Kinder, vier weitere sind gestorben. Er hat ein Pferd, aber keine Kuh und keine Schafe. Letztere kann er entbehren, da er seine Töpfe hauptsächlich gegen Wolle eintauscht.

Die Technik der Töpferei ist bei den Paez eine Spiralwulsttechnik. Da die Formen sehr einfach sind, ist eine besondere Lehrzeit bei einem Meister nicht unbedingt erforderlich; Santos Kiskue jedenfalls hat nach einem Unfall, von dem er ein steifes linkes Handgelenk zurückbehalten hat, selbständig mit der Herstellung von Töpfen begonnen. Er benutzt dazu den unvermischten Ton, der neben seinem Hause ansteht. Aus diesem formt er, indem er ihn immer wieder anfeuchtet, auf einem auf dem

Boden liegenden Brett eine gleichmäßig runde «Tonwurst», die er anschließend mit der flachen Hand plattdrückt. Daraus baut er spiralförmig seine Töpfe auf. Sie werden mit ihrem Unterteil auf eine flache Tonschale gesetzt, damit er sie beim Verstreichen der Fugen leicht drehen kann (Abb. 184 bis 186). Etwa eine Woche lang läßt er die frisch hergestellten Töpfe unter einem Dach trocknen, dann bringt er sie an einen Ort, an dem sich genügend trockenes Holz befindet. Hier stellt er die Töpfe recht eng zusammen, schichtet Holz und Zweige darüber und läßt sie etwa zwei Stunden lang brennen. Danach sind sie fertig zum Gebrauch.

i) Kerzenherstellung

Zu den drei kirchlichen Jahresfesten wird zur Ausschmückung der Kirche eine große Anzahl von Kerzen (mbéla; span. vela) gebraucht. Diese werden teilweise gekauft, größtenteils aber selbst angefertigt. Den Herstellungsvorgang kennt jedermann, zu den Festen ist es aber Männerarbeit. Das Wachs gewinnt man vom Waldlorbeer (Myrica pubescens Willd), dessen kleine, etwa 5-8 mm im Durchmesser messenden Früchte in großen Massen im April und Mai geerntet werden. Dazu werden die Zweige abgeschlagen und über dem runden Beerennetz, das in der Öffnung einer großen Fasertasche angebracht ist, von den Früchten entleert. Nachdem sie getrocknet sind, schüttet man sie in einen Beutel, kocht sie und drückt sie aus. Das in einem Gefäß aufgefangene und getrocknete Wachs war früher ein wichtiger Handelsartikel im Verkehr mit den Weißen. Zur Herstellung der Kerzen werden die Dochte mit dem Wachs solange übergossen, bis die richtige Stärke erreicht ist.

k) Feuerwerkskörper

Ohne eine möglichst große Anzahl von Feuerwerkskörpern abzubrennen, ist kein Fest und keine kirchliche Feier möglich. Die dazu erforderlichen Knallkörper werden von den Männern selbst angefertigt. Das Pulver aber muß gekauft werden. Über dessen Gewinnung ist man allgemein der Meinung, daß es aus Menschen hergestellt wird. Die Weißen, so glauben sie, mästeten Menschen, um sie dann aufzuhängen und ihnen lebend das Fett abzuzapfen, aus dem sie dann Pulver machen. Die Paez schicken deswegen nicht gerne ihre Kinder weit weg und lassen sie nicht zu den Weißen gehen, weil sie meinen, diese würden sie fangen, um aus ihnen Pulver zu bereiten.

Zur Herstellung der Feuerwerkskörper benutzt man ein Stückchen Schafsdarm, füllt es mit Pulver und umwickelt es fest mit einer Agavesehnur. Diese ist zur besseren Festigkeit mit Bienenwachs eingewachst. Von diesen Pulverkartuschen werden bei den kleineren Feuerwerkskörpern (kofies) eine und bei den größeren Feuerwerkskörpern (kwatóó) zwei übereinandergenommen, und darunter wird die Lunte gelegt, die aus einem 1-5 cm langen mit Pulver gefüllten Bambusröhrchen besteht (Fig. 32). Diese zwei bzw. drei Teile wickelt man in ein Maisblatt und befestigt es an einem Bambusspliß von 20-60 cm Länge. Beim Anzünden steigt der Feuerwerkskörper unter beträchtlichem Pfeifen bis zu 50 m hoch und zerplatzt dann.

5. HANDEL UND VERKEHR

Von einem Handel im kommerziellen Sinne kann man bei den Paez nicht sprechen, da sie untereinander fast nur tauschen und alles das, was mit Geschäften zusammenhängt, verabscheuen. Da es zudem einen Kaufmannsstand unter ihnen nicht gibt, fehlt auch jeder Zwischenhandel. Kaufleute werden als Nichtstuer angesehen, die man zwar braucht, aber trotzdem verachtet. Grundsätzlich herrscht die geschlossene Hauswirtschaft vor, und was die eine Familie nicht hat, tauscht sie möglichst innerhalb des gleichen Dorfes ein. Nur wenn das nicht möglich ist, es sich also um Industrieerzeugnisse handelt, geht man auf den regelmäßig abgehaltenen Wochenmarkt nach Inzá oder Belalcazar, um sich die notwendigen Gegenstände zu kaufen. Dazu gehören vor allen Dingen das Salz, dann auch die Spaten, Macheten, Aluminiumtöpfe, Messer, Scheren, Löffel, Nadeln, der Stoff für eine Hose, sowie alle europäische Kleidung. Weiterhin muß jede Art von Schmuck gekauft werden, wie Halsketten, Ohr- und Fingerringe, dann Baumwolle, da sie feiner ist und besser glänzt als Schafwolle, sowie Anilinfarben zum Färben der Frauengürtel und Kokabeutel, da sie leuchtender und klarer sind, als die einheimischen Pflanzenfarben. Der Weg zum Markt und der nötige Handel wird aber nicht aus Neigung zum Geschäftlichen, aus Freude am Handeln oder Unter- und Überbieten getan, sondern aus der Notwendigkeit des Erwerbes eines nicht selbst erzeugbaren Gegenstandes heraus. Wenn es irgend möglich ist versucht man, die benötigten Dinge im Dorf zu kaufen, beispielsweise von den Missionaren, und der Kauf mit Geld oder der Weg zum Markt ist gewissermaßen die ultima ratio. Dabei wird nicht gehandelt. Der Mann —

und es ist fast immer dieser, der einkauft — fragt nach dem Preis, und wenn er — wie meistens — zu hoch erscheint, sagt er «zu teuer». Geht der Händler herunter, wird meist gekauft, im anderen Falle geht man weiter zum nächsten Verkaufsstand.

Die Händler sind nie Paez, sondern immer weiße und mestizierte Kolonisten. Sie wissen natürlich um die Abneigung der Paez zum Handeln und fordern von vornherein einen zu hohen Preis, um nach dem obligatorischen «zu teuer» einen immer noch überhöhten Normalpreis zu verlangen. Dabei werden die Paez naturgemäß übervorteilt. Zu leicht lassen sie sich von einer schönen Aufmachung oder Verpackung blenden, beispielsweise von der Politur oder vom Silberpapier; auch wird ein teuerer grüner oder roter Kamm einem schwarzen vorgezogen. Glücklicherweise, so möchte man sagen, verfügen sie nie über viel Geld und können deswegen nicht zuviel ausgeben.

Bezeichnend ist die Art, wie ich die bunten Frauengürtel für unsere Sammlung erwerben mußte. Da jede Frau deren nur höchstens zwei, einen für die Befestigung des Rockes und den anderen zum Tragen des Kleinkindes besitzt, war der Kaufversuch immer zwecklos. Ich hatte deswegen auf dem Markt in Inzá einige Frauengürtel gekauft, die von den Guambianos, dem westlichen Nachbarstamm der Paez, angefertigt und in Inzá verkauft werden. Sie bestehen aus Baumwolle, deren weiße Färbung im frisch verarbeiteten Zustand erheblich glänzender ist, als die etwas gelbliche Schafwolle. Zudem glänzen deren Anilinfarben bedeutend frischer, als die pflanzlichen Farbstoffe der Paez-Farben. Leider sind sie kürzer als die Paez-Gürtel. Trotzdem wurde der Tausch meist gerne vorgenommen. Auch die Kokabeutel unserer Sammlung haben wir sämtlich durch Tausch erhalten, beispielsweise für eine Schere zum Bogotaner-Preise von 50 Centavos. Auf dem Markt in Inzá kostet eine solche etwa ein Peso. Dies wissen die Paez. Trotzdem vertauschten die gleichen Leute, die vorher einen Verkauf für fünf Pesos abgelehnt hatten, einen Beutel gegen eine Schere. Ähnlich war es mit den Eiern. Sie verkauften sie nicht für 20 Centavos, vertauschten sie aber für eine Wachskerze, die überall für 5 Centavos zu erhalten war.

Im Falle der eigenen Erzeugnisse findet ein Handel von Dorf zu Dorf nicht statt. Desgleichen gibt es keinen Austausch besonderer Spezialitäten außerhalb des Dorfes, da die Initiative zu besonderen Leistungen oder Außergewöhnlichkeiten immer von den Kolonisten bzw. von den fremden Händlern ausgeht. Untereinander kaufen und verkaufen die Paez allgemein nicht, sondern tauschen nur, da Geld bei ihnen sehr ungern benutzt wird. Dabei mag die Vorstellung mitspielen, daß ein verkaufter

Gegenstand, ein Ei beispielsweise, dem zurückbehaltenen Teil, in diesem Falle dem Huhn, Unglück bringt. Außerdem wird auch heute noch kaum Papiergeld angenommen, einmal deswegen, weil sie meist keinen besonderen Geldbeutel haben, sondern die Scheine in den Kokabeutel stecken, wo sie leicht zerrissen werden können, zum andern, weil viele ihr Geld einzugraben pflegen oder anderweitig verstecken. Dabei verschimmeln die Scheine recht schnell, während sich Hartgeld lange hält. Dieses ist im gesamten Tierradentrogebiet deshalb außerordentlich rar.

Beim Tausch von Lebensmitteln gibt es feste Sätze, die jeder kennt. Da man sich zudem immer bemüht, nur gute Ware zu liefern, entfällt jegliches Anpreisen und jeder Grund zum Handeln oder Feilschen. Es gibt ganz einfach ein: Entweder-Oder, zumal sich Konjunkturerscheinungen nicht auswirken und in Zeiten der Verknappung oder Not die Tauschsätze in keiner Weise erhöht werden. So waren zur Zeit meines Besuches die Schafe und damit die Wolle sehr knapp. Trotzdem wurde an dem Tauschverhältnis der Wolle eines Schafes gegen eine Tasche Mais nicht gerüttelt.

Die Schafe selbst wurden allgemein nicht getauscht, sondern nur die Wolle, die etwa ein Pfund ausmacht. Das Äquivalent ist ein Tomín (span. Stapel) Zuckerrohr, zu einem Haufen von etwa einem Meter Basisbreite und einem Meter Höhe gestapelt. Im Falle eines ausnahmsweisen Schaftausches wurden mir als Gegenwert 10 Tomín Zuckerrohr oder 12 Pfund Kokablätter oder 2 Arroba Mais genannt (1 span. Arroba entspricht etwa 12,5 kg). Hierbei, wie bei vielen Tauschgeschäften, weichen die üblichen Tauschäquivalente teilweise erheblich von den unter den Paez üblichen Marktpreisen ab. (Die offiziellen Markpreise im Handel mit den Kolonisten auf dem Wochenmarkt sind etwa fünfmal so hoch). So hat beispielsweise 1 Tomín Zuckerrohr 20 Centavos Wert, 1 Pfund Wolle eines Schafes aber 1 Peso. Auch Arracacha wird in der Form einer Tomín-Menge getauscht, die etwa 10-12 Stück ausmacht. Der Geldwert beträgt 10 Centavos. Ein Pfund Kokablätter wird gegen ein Pfund Salz (Wert 20 Centavos) oder ein Pfund Reis oder 10 Eier getauscht. Letztere kosten auf dem Wochenmarkt in Inzá das Stück 25 Centavos. Als Pfundgewichte benutzen die Paez Steine, die nach einem in Inzá vom Händler gekauften Pfund Salz geeicht werden. Als Waage dienen zwei Kalebaßschalen, die an einem Waagebalken befestigt sind.

Kartoffeln werden in Quartillas getauscht und in großen Holzschüsseln abgemessen, die von den Paez selbst angefertigt werden und etwa 10 Pfund enthalten. Der Gegenwert besteht in einer halben Flasche Branntwein. Diese würde beim Händler 80 Centavos betragen, wie die Tausch-

mengen eines Tomín Zuckerrohrs oder einer Fasertasche voll Mais zeigen. Gemüse- und Fruchtbananen werden in ganzen Büscheln (tlóits) getauscht, die aber im Tierradentro nur etwa 30 bis 50 Bananen umfassen. Zwei Büschel sind eine Tasche Mais wert. Bohnen werden wie Mais in Fasertaschen vertauscht, den gleichen Wert hat eine Tasche voll Kohl. Chicha wird nicht verkauft, sondern nur verschenkt.

Vieh kann gegen anderes Vieh getauscht werden oder auch gegen Nahrungsmittel. So hat ein Hengst den Wert von 20 Pfund Kokablättern oder einer Männer-Ruana; eine Stute jedoch ist viel teurer, sie wird gegen die Maisernte eines Feldes von etwa 100 Quadratmeter Fläche getauscht, selbst abzuernten vom Käufer. Desgleichen kann man die Ernte eines Maisfeldes gegen einen Stier oder eine Färse tauschen. (Letztere hat einen Geldeswert von 30 bis 40 Pesos). Der Tausch oder Verkauf einer Kuh hingegen ist in keinem Falle möglich. Schweine haben den relativ geringen Wert von nur 3-5 Pesos; sie werden gegen 5 Pfund Koka, 10 Taschen Mais oder 10 Tomín Zuckerrohr getauscht. Man kann auch eine kleine Sau oder einen ausgewachsenen Eber gegen einen Stier tauschen. Letzterer hat etwa 15 Pesos, eine Stute etwa 20-30 Pesos Wert. Hengste werden gerne gegen ein Stutfohlen getauscht. Ihr Wert wird mit 15 Pesos angegeben. Während der Tausch eines Hengstes gegen eine Kuh wegen ihres viel höheren Wertes unmöglich ist, werden oft Hengste gegen Bullen vertauscht, und zwar von Festgebern, die zur Bewirtung der Gäste ein Rind benötigen.

Bezeichnend ist, daß ein Pferd oder ein Rind nicht gegen schnell zu verbrauchende Nahrungsmittel, wie Mais, Arraçacha, Bohnen, Kartoffeln, Bananen u. a. vertauscht werden können, da diese nicht lange genug vorhalten und der Käufer der Nahrungsmittel glaubt, sonst nicht genügend Nutzen von seinem Tausch zu haben. Hingegen sind Kokablätter noch am Baum, Mais auf dem Halm oder ein Zuckerrohrfeld als Tauschmittel durchaus möglich. Victoriano beispielsweise hat sich ein Stutfohlen für ein Zuckerrohrfeld von etwa 50 mal 50 Meter Fläche eingetauscht, die der neue Besitzer bei Bedarf abernten kann. Solch ein Tausch ist aber nur derart strebsamen Leuten wie Victoriano möglich. Allgemein arbeitet der Paez viel zu ungern auf Vorrat, noch dazu, wenn er später nicht einmal den Nutzen davon haben soll; außerdem trinkt er viel zu gerne selbst seine Chicha, als daß er ein zweijähriges Zuckerrohrfeld weggibt.

Die Waren werden von Männern und Frauen zum Markt transportiert, allerdings mehr durch die ersteren als durch die Frauen. Dies scheint recht überraschend, denn die zivilisierten Indios, wie auch viele Kolonisten, pflegen unbeschwert von aller Last zum Markt zu reiten, während die

Frau zu Fuß die Waren hinterher schleppt. Von Calderas aus besuchen mehr Männer den Markt als Frauen. Für beide ist es ein sehr willkommener Anlaß, sich zu betrinken. Das von den Paez gern geübte Stehlen der sehr begehrten Bier- und Schnapsgläser versuchen die Besitzer der Schenken dadurch zu verhindern, daß sie die Gläser an den Ausschanktischen anketten.

An Markttagen pflegt man sehr früh aufzubrechen und transportiert die Lasten in den Fasertaschen auf die übliche Art: die Männer nehmen den Traggurt quer über die Brust und die Frauen halten ihn mit der Stirn. In beiden Fällen hängt der Beutel auf dem Rücken. Man reist allgemein in Gruppen zu zweien oder dreien, nicht selten trifft man aber auch Einzelgänger. Die Verpflegung wird mitgenommen, da unterwegs grundsätzlich nichts gekauft wird außer Chicha oder Branntwein. Sind Übernachtungen nötig, wird für diese nichts bezahlt. Man schläft entweder im Hausflur von Bekannten oder übernachtet auf dem freien Feld.

Zur Reise und für den Besuch des Marktes versucht man, wenigstens ein europäisches Kleidungsstück zu tragen, sei es ein Filzhut, ein Hemd oder eine Bluse. Die Qualität spielt eine nur geringe Rolle, da das schlechteste Hemd immer noch begehrter ist, als die feinste Ruana. Wer gar nichts an Kleidung erstehen kann, bindet sich als wenigstes ein schwarzes Band um den Hut, wie es auch die Filzhüte haben. In der Fasertasche wird die Verpflegung mitgeführt, gerösteter Mais, Kohl, Kartoffeln, Arracacha. Wer es ermöglichen kann, führt zwei oder drei der wollenen Kokabeutel mit sich, in deren einem sich Koka und Kalk, im anderen Geld und im dritten sich das Flechtmaterial für den Strohhut befindet. Dieser Flechtarbeit, die ja eigentlich keine Arbeit ist, sondern mehr eine »blinde Beschäftigung«, gehen fast alle Männer nach, wenn sie nichts weiter zu tun haben, sei es bei Besuchen, auf dem Wege zum Markt oder auch bei schamanischen Zeremonien. Gleich fleißig und immer beschäftigt mit dem Spinnen, dem Flechten der Fasertaschen oder der wollenen Kokabeutel sind die Frauen, wo man sie auch antrifft. Ihr Arbeitsmaterial führen sie, wie auch die Männer, in einem zweiten Wollbeutel mit sich.

Besondere Orientierungsmittel für die Reise sind nicht bekannt und auch nicht nötig, da niemand sein weiteres Wohngebiet verläßt. Wer einen Weg zum ersten Male macht, schließt sich an einen des Weges Kundigen an. Bei Nacht reist man nicht, deswegen fallen die Sterne als Orientierungsmittel fort. Die Durchschnittslast zum Verkauf an Markttagen beträgt etwa 20 bis 25 Pfund für Männer; geht ein Ehepaar gemeinsam, so pflegt der Mann die Last zu tragen und die Frau die Verpflegung. Die zurückgelegten Tagesstrecken sind beträchtlich. Von Calderas über San

Andrés zum Markt nach Inzá sind es fast 20 km. Zu Fuß braucht man dazu etwa sechs Stunden. Zu Pferde sind es nicht viel weniger, da man auf den steilen Wegen des Geländes nicht schnell reiten kann. Viele Paez schaffen diesen Weg an einem Tag hin und zurück, allerdings nur »ohne sich unterwegs zu betrinken», was nicht ganz einfach ist.

Die Verkehrsverbindungen bestehen aus schmalen Fußwegen, auf denen man nur hintereinander gehen oder reiten kann. An Straßen für Wagen oder Autos gibt es zur Zeit nur eine: die den Rio Paez aufwärts führende geschotterte Autostraße von La Plata nach Belalcazar. Seit Ende des Jahres 1952 baut man aber mit modernen amerikanischen Straßenbaugeräten an einer Verbindungsstraße nach Inzá, die dann das südliche, weniger bergige und rein von Kolonisten besiedelte Gebiet des Tierradentro und dessen Produkte, Kaffee und Panela, dem Verkehr erschließt. Diese Straßen werden direkt aus den teilweise sehr steilen Abhängen herausgeschnitten und überqueren die Flüsse und Bäche durch moderne Eisenbrücken.

Auch die Paez pflegen die Wasserläufe mittels Brücken zu überqueren. Ein Durchwaten ist nicht üblich, es sei denn, es handelt sich um ganz flache Bäche. Auch dann legt man meist große Steine hinein, über welche man trockenen Fußes ans andere Ufer gelangen kann. Nach ihrer Konstruktion kann man die Brücken der Paez in drei Gruppen einteilen. Da gibt es als einfachste Art zwei nebeneinandergelegte dicke Knüppel oder Baumstämme ohne Geländer, welche die um die Gehöfte und Gärten gezogenen Gräben überdecken, die einen Zaun ersetzen. Derartige Gräben sollen das Eindringen von Pferden, Rindern und Schweinen verhüten. Über die Flüsse*, beispielsweise den Rio Kokiyó, der das Calderuner Gebiet durchfließt, sind starke Brücken geschlagen, über die auch beladene Pferde ohne weiteres gehen können. Diese Art von Brücken besteht aus zwei in einem Abstand von gut einem Meter nebeneinandergelegten Baumstämmen, auf die als Belag querliegende Knüppel aufgebunden werden. Von den Belagknüppeln wird nur etwa jeder fünfte festgebunden, während die dazwischenliegenden durch je einen über die Hauptträger gelegten Längsbalken festgehalten werden. An beiden Seiten der Brücke werden senkrecht und waagerecht Stangen als Geländer angebunden, die gleichzeitig als Träger der Bedachung dienen. Diese ist ein Charakteristikum aller derartigen Brücken (Abb. 194 und 195). Man findet sie nicht nur bei den Brücken des Kolonistengebietes des Tierradentro, sondern bei-

* Die von H. Pittier (p. 320) aus dem Norden Tierradentros erwähnte einfachste Form einer Brücke, bei der an einer über den Fluß gespannten Liane die Menschen hinüberhangeln, habe ich nirgendwo gesehen.

spielsweise auch bei den Brücken des oberen Rio Magdalena, der Gegend um San Agustín.

Die dritte Art von Brücken sind zwei kunstvoll konstruierte Bogenbrücken aus Bambus über den Rio Paez bei Belalcazar und Avirama (Abb. 191 bis 193 und 196). Sie sind beide völlig gleichartig konstruiert und, wie auch alle anderen Brücken der Paez, ohne Nägel oder andere Eisenteile hergestellt, sondern nur mit Bast und Lianen zusammengebunden. Allerdings hat man jetzt zur Verstärkung zwei Drahtseile untergezogen. Obwohl schon die Spanier der Conquistadorenzeit von den «schwachen und biegsamen Bambusbrücken» und von «Lianenbrücken» des Tierradentro berichten (Hernandez, 1944, p. 189), scheint es sich doch bei diesen beiden genannten, relativ schwierig zu konstruierenden Bogenbrücken, nicht um eine ursprüngliche Paez-Technik zu handeln. Es wären dies nämlich die einzigen Hängebrücken dieser Art im vorspanischen Südamerika. Vielmehr scheint es sich bei diesen Konstruktionen um Lehngut von den Neger-Sklaven zu handeln, die schon in sehr früher Zeit in die Gegend um Belalcazar gebracht wurden, um die dortigen Gold- und Salzminen auszubeuten. Beide Brücken wären dann ein afrikanisches Kulturelement im Tierradentrogebiet. Sie sind nur für den Personenverkehr geeignet. Größere Tiere werden mit Hilfe von Seilen durch den Fluß gezogen und müssen teilweise schwimmen.

Bei beiden Pfostenbündel an jedem Ufer — eine sehr moderne Methode der Brückenverankerung —, an denen der Brückenbogen hängt, werden durch eine Anzahl weiter am Ufer stehender, in den Boden gerammter Pfähle gehalten. Als Verbindungs- und Haltematerial dienen Bambusstangen. Der von oben her gehaltene Laufsteg wird durch gespaltenen und breitgeklopften Bambus gebildet. Weitere Bambusrohre, von Lianen gehalten, bilden das Geländer. Bei der Konstruktion einer derartigen Bogenbrücke kommen die Bewohner der anliegenden Dörfer an beiden Ufern zusammen. Sie graben zwei lange und starke Bambusrohre mit den Enden in die Erde, so daß die Spitzen etwas zum Fluß hingeneigt sind. Dann beginnen die Gobernadores, als die Vorsteher des jeweiligen Gemeinderates, auf die Stangen zu klettern, die sich durch das Gewicht der Mitte des Flusses zuneigen, bis die Stangen zusammenstoßen und sich die beiden Gobernadores von jeder Seite die Hand reichen können. Schnell binden diese dann mit der einen Hand die zusammengefügten Spitzen der Bambusstangen mittels Lianen zusammen, womit der Anfang der Brükkenkonstruktion gemacht ist. Die Vollendung geschieht durch die übrigen Leute (nach Hernandez 1944, p. 190).

III. Gesellschaft

1. POLITISCHE ORGANISATION

DER STAMM DER PAEZ besteht aus den Bewohnern einer Anzahl von Dörfern des Tierradentro-Gebietes, die sich durch Sprache, Kleidung, Gebräuche und Traditionen als zusammengehörig betrachten. Ihre heutige politische Organisation basiert auf der Dorfgemeinschaft. Sie entspricht etwa der ursprünglichen Stammesorganisation. Auch zur Zeit der Conquista bildeten die Paez kein gemeinsames, zusammenhängendes Gemeinwesen und waren von Dorf zu Dorf ähnlich unabhängig und ohne Oberhäuptling wie heute. Lediglich in Kriegszeiten schlossen sich einige Dörfer zu einer Art loser Föderation zusammen, um den spanischen Eindringlingen kräftigeren Widerstand entgegensetzen zu können. Danach lösten sich die «Zweckverbände» aber jeweils wieder auf. Die politische Einflußnahme der Spanier in der Kolonialzeit wirkte sich dahin aus, daß die bis dahin bestehenden Ortschaften, deren jede den Raum eines Talkessels einnimmt, fest abgegrenzt wurden, um klare Verhältnisse gegenüber den weißen Landbesitzern zu schaffen. Die frühere Einteilung der Dörfer war im wesentlichen die gleiche, wie man aus der großen Zahl von alten Eingeborenennamen ersehen kann.

Die Leitung der damaligen Gemeinwesen bestand — wie es dem Charakter der Paez gemäß ist — wohl in ähnlicher Art wie heute in einer demokratischen Dorfführung. In Kriegszeiten lag die Leitung in Händen von Männern, die von den Spaniern — wie allgemein in ihren Kolonien — als Kaziken bezeichnet wurden. Die Paez haben diesen Namen als Rangbezeichnung auch für die Helden ihrer Traditionen übernommen. Tatsächlich entspricht ihr eigenes Wort «sät» für die politischen Führer in ihrer Mythologie mehr einem Kriegsanführer mit schamanischen Fähigkeiten als einem regulären Erb-Häuptlingstum einer klassenmäßig gegliederten Gesellschaft, wie wir es sonst bei den Stämmen des Caucatales oder den Sakralfürstentümern der Chibcha zur Zeit der Conquista antreffen.

Die heutige Zusammensetzung des Dorfrates (Cabildo) als Verwaltungsspitze eines jeden Dorfes schwankt in seiner Stärke je nach der Größe des Dorfes. In Calderas scheint er am vollständigsten zu sein. Seine Zusammensetzung und seine Aufgaben weisen ihn als Spitze eines demokratischen Gemeinwesens aus. Das Dorf ist weder klassenmäßig noch berufsmäßig gegliedert. Das Bewußtsein der Gleichheit aller ist so stark,

daß Außenseiter, die sich durch persönliche Leistung oder persönlichen Erwerb von anderen unterscheiden, gewaltsam auf das allen gemeinsame Niveau gebracht oder getötet werden. Der Leiter des Cabildo hat den pompösen spanischen Titel Gobernador. Im Paez entspricht diss der Bezeichnung tótens. Ihm zur Seite steht in Calderas als sein Stellvertreter der Gobernador Suplente; weitere Funktionäre sind der Alcalde (im Paez ká'nas), von denen es in Calderas zwei gibt, den Alcalde Mayor und den Alcalde Menor, weiter zwei Fiscales, drei Comisarios und ein Comisario Escolor, sowie ein Alguacil. Die Zusammensetzung des Cabildo in Santa Rosa ist folgende: ein Gobernador, ein Alcalde, ein Fiscal, ein Comisario Escolar und ein Alguacil. In Lame gibt es einen Gobernador, einen Gobernador Suplente, zwei Fiscales, einen Comisario und einen Alguacil. Der Cabildo in Togoima besteht aus dem Gobernador, dem Gobernador Suplente, zwei Alcaldes, zwei Fiscales, drei Comisarios, einem Comisario Escolar und einem Alguacil. Sieht man von den Doppel- und Dreifachbesetzungen ab, so stimmt die Zusammensetzung des Cabildo in den vier Dörfern überein. Dabei ist zu bemerken, daß nur für den Gobernador und den Alcalde Paez-Wörter existieren; für die übrigen Funktionäre werden spanische Bezeichnungen verwandt.

Die Autorität des Gobernadors als Leiter des Dorfes beruht mehr auf seinem persönlichen Ansehen als auf amtlichen Machtmitteln. Mit seinen Anordnungen und Aufträgen muß er deswegen sehr vorsichtig sein. Er läßt die gemeinsam gefaßten Beschlüsse des Dorfrates zum Wege- oder Brückenbau oder zur Ausbesserung der Kirche, der Schule oder des Gemeindehauses durchführen. Halten sich seine Anordnungen im Rahmen dessen, was auch die überwiegende Mehrheit des Dorfes für gut hält, so übt die Gesamtheit einen starken Druck auf Abseitsstehende aus. In krassen Fällen von Außenseitertum stehen ihm aber recht drastische Machtmittel zur Verfügung, die heute zwar nicht mehr so streng gehandhabt werden wie früher, deren Einsatz in der Hand eines energischen Gobernadors aber doch recht wirkungsvoll ist. Voraussetzung ist jedoch, daß der Gobernador weder ungerecht noch willkürlich vorgeht, bei allen Arbeiten ein gutes Beispiel gibt und als erster und letzter bei der Gemeinschaftsarbeit tätig ist. Wie wenig der Gobernador in der Lage ist, willkürliche Anordnungen innerhalb seines Dorfes zu erlassen, mag folgendes Beispiel illustrieren: An einem Sonnabend kam der Gobernador von Calderas vom Wochenmarkt in Inzá und besuchte mich in San Andrés. Als ich gesprächsweise erwähnte, am kommenden Montag nach Calderas zu kommen, empfahl er mir, doch recht früh einzutreffen. Er wüßte bereits, daß ich an allem Interesse habe, was sein Dorf angeht, und am Mon-

tag könnte ich einer Gemeinschaftsarbeit der Männer des ganzen Dorfes bei der Feldrodung beiwohnen. Da mein Dolmetscher erst am Montag zur Verfügung stand, konnte ich nicht schon am Sonntag aufbrechen, um am Montag zur Feldbestellung rechtzeitig anwesend zu sein. Ich bat ihn, die Gemeinschaftsarbeit doch um einen oder mehrere Tage zu verlegen. Das wäre ausgeschlossen, antwortete er mir, da diese Arbeit vom Cabildo auf den Montag festgelegt worden sei und er nicht in der Lage wäre, den Termin selbständig zu ändern. Ich bot ihm als Geschenk einen sehr schönen Reise-Machete mit Futteral für den Fall an, daß er die Arbeit zu verschieben in der Lage wäre. Die Paez besitzen nämlich im allgemeinen nur den schweren, breiten Arbeitsmachete zum Fällen der Bäume, den man auf dem Wege zum Markt nur schlecht mitschleppen kann. Als Waffe für die Reise sind deswegen die leichteren, verchromten Machetes sehr begehrt, die sich aber wegen des hohen Preises von zwölf Pesos bisher noch kein Calderuner leisten konnte. Ich hatte dieses Geschenk für den Gobernador schon längere Zeit bereitliegen, aber immer noch keinen rechten Grund zum Schenken gefunden. Diesmal schien mir der Anlaß sehr günstig und auch wirklich des Einsatzes wert. Der Gobernador, obwohl er höchst begierig war, das Instrument als erster Calderuner zu besitzen, erklärte meine Bitte als unerfüllbar, da alle Männer bereits für den Montag benachrichtigt wären. Ich wies daraufhin, daß er doch genügend Boten hätte, um seinen Leuten mitzuteilen, daß die Arbeit erst einige Tage später stattfinden würde. Er könne dies nicht entscheiden, erklärte er immer wieder, außerdem würden die Männer böse werden. Ich bot ihm an, diesen zur Versöhnung auf meine Kosten für zehn Pesos Chicha zu spendieren, soviel, wie sie noch kaum bekommen hatten. Er könne es nicht entscheiden, meinte er schließlich, er wolle es wohl versuchen und am Sonntag mit seinen Leuten reden, und er hoffe auch, mit Rücksicht auf die viele Chicha, daß ihm dies gelingen werde; versprechen aber könne er es nicht. Als ich am Montag in Calderas ankam, erfuhr ich, daß die Männer des Dorfes nicht ein zweites Mal zusammenkommen wollten und daß sie doch mit der Arbeit begonnen hätten.

Die Alcaldes und der Alguacil sind die Boten des Cabildo; sie benachrichtigen die Leute, wenn Gemeinschaftsarbeiten nötig sind. Der Alguacil führt außerdem die Prügelstrafen aus. Die drei Comisarios sind ebenfalls Boten und helfen dem Gobernador bei der Durchführung und Beaufsichtigung der öffentlichen Arbeiten. Den Fiscales obliegt — zusammen mit dem Gobernador — die Schmückung der Kirche. Sie sorgen für Kerzen und gehen dem Priester zur Hand. Nach C. Cuervo Marquez (Bd. II, p. 183) oblag den Fiscales früher auch die Verteidigung der Interessen des

Dorfes gegen die Übergriffe der Kolonisten. Der Comisario Escolar endlich ist verantwortlich für den Schulbesuch der Kinder. An ihn wenden sich die Missionsschwestern, als die Lehrerinnen, und er soll, nötigenfalls mit Gewalt, die Kinder zur Schule bringen.

Nicht unerwähnt soll bleiben, daß Calderas — und scheinbar nur diese Ortschaft — in vier Teile eingeteilt ist, deren jeder etwa eine Himmelsrichtung mit je rund fünfzig Häusern einnimmt. Je ein Alcalde, Alguacil, Fiscal und Comisario ist im Cabildo gleichberechtigter Vertreter eines Viertels. Zur Zeit ist der Alcalde der Vertreter des im Westen gelegenen Gebietes Yocashí, der Alguacil der Vertreter des im Norden gelegenen Gebietes Puélche, der Fiscal der des östlichen Gebietes Aépel und der Comisario der des südlichen Bishók. Die Verbindung eines Amtes mit der Vertretung eines Dorfviertels sei willkürlich, wurde mir erklärt, je nachdem, wo der Posteninhaber gerade wohnt. Die dienstliche Stellung innerhalb des Cabildo wird zuerst verteilt, und sie sei heute das Wichtigere. Je vier von ihnen übernehmen die Vertretung eines Dorfviertels. Der Comisario kann also, wenn er dort wohnt, Vertreter von Yocashí sein und der Alcalde Vertreter von Aépel. Der derzeitige Gobernador beispielsweise war vor zehn Jahren Fiscal. Da er im Dorfteil Puélche wohnt, war er auch gleichzeitig Vertreter dieses Viertels.

Zusätzlich zu dem Cabildo wurde noch in spanischer Kolonialzeit als Vertrauensmann zu den Missionen der Posten des Capitan eingeführt, der den weltlichen Behörden nicht unterstellt war und oft auch nicht demokratisch gewählt, sondern auf Lebenszeit von der Kirche ernannt wurde. Zu diesem Amt werden möglichst die Angehörigen einer alten, einflußreichen Familie ernannt, in denen dann ein Sohn oder Neffe dem Capitan im Amt nachfolgt, so daß diese Stellung in der Praxis oft innerhalb einer Familie erblich war. Der in Calderas am 18. Februar 1953 gestorbene Capitan, der dieses Amt etwa 20 Jahre innehatte, hieß Manuel José Guagáz. Sein Vorgänger war sein Vater Bruno Guagáz. Und obwohl mir der Gobernador erklärte, daß die Familie der Guagáz verblödet sei und zu keiner Arbeit mehr tauge, gab er es als wahrscheinlich zu, daß der Nachfolger des alten Capitan doch auch wieder ein Guagáz sein werde.

Der verstorbene Capitan war in den letzten Jahren seines Lebens krank und schwach, und so kam es, daß der Gobernador die im Cabildo führende Rolle spielte. Die wöchentlichen Ratsversammlungen wurden auch in seinem Hause abgehalten. Nach den Verhältnissen in anderen Dörfern ist es aber so, daß der Capitan praktisch nicht nur im Cabildo präsidiert, sondern daß seine Stimme auch etwas mehr Gewicht hat. Zum mindesten kann er beispielsweise durch sein Veto einen Brückenbau verhindern.

Freilich kann er ihn alleine, gegen den Willen des Cabildo, auch nicht durchsetzen oder gar befehlen.

Ein weiterer Funktionär, der ebenfalls durch die Missionen auf Lebenszeit ernannt wird, ist der Síndico, der die kirchlichen Steuerumlagen festsetzt und die Gelder verwaltet.

Die Wahl des Cabildo geschieht in jedem Jahr am ersten Dezember. Am folgenden 1. Januar muß der gewählte Cabildo vor den Verwaltungsautoritäten des Municipio erscheinen, wo jedes Mitglied seinen Würdestab verliehen bekommt und auf seine Pflichten vereidigt wird. Die Würdestäbe (kampo) gehören dem Dorf und werden von Jahr zu Jahr weitergegeben. Sie sind von rundem Durchmesser, etwa 80 bis 100 cm lang und 3 bis 5 cm dick und aus dem schwarzen, harten Holz der Chonta-Palme geschnitzt. Die Spitzen der Stöcke sind zu ihrem Schutz mit einer Messing- oder Eisenkappe beschlagen. Der Handgriff ist etwas dünner als der übrige Stock und am Ende zu einem Knauf verbreitert, der mit Silberblech beschlagen ist. Unterhalb des Handgriffes ist zusätzlich noch ein halbmondförmiges Stückchen Silberblech angebracht.

In früheren Jahren fand am ersten Tage des neuen Jahres an der schwer zugänglichen Lagune Juan Tama das Páramo de Moras eine mehrere Tage lang dauernde Zeremonie sowohl für den alten, als auch für den neu gewählten Cabildo statt. Sie begann unter Leitung eines Schamanen mit Chichatrinken, wonach dann der Kulturheros Juan Tama und die Geister der Vorfahren (?) vom Schamanen um Rat und Beistand für das kommende Jahr gebeten wurden. Ein Tanz und ein Bad in der Lagune schloß die Zeremonie (Bürg, pp. 340 f). Diese Zusammenkunft an der Lagune wird, nach meinen Informationen, seit einigen Jahren nicht mehr durchgeführt. Als Grund gibt man an, daß es um die Neujahrszeit herum mehrere Jahre hintereinander geregnet hätte. Danach hätten die Schamanen verkündet, daß Juan Tama mit diesem Zeichen auf eine weitere Durchführung der Zeremonie an seiner Lagune verzichte.

Die Wahl des Cabildo geschieht durch die Männer des ganzen Dorfes. Die Kandidaten müssen Bürger der betreffenden Ortschaft sein, d. h. sie müssen dort Landbesitz haben. Nie könnte ein Fremder in einem Paez-Dorf eine Funktion ausüben. Die Kandidaten können sich nicht selbst vorschlagen, sondern müssen von der Versammlung oder vom alten Cabildo nominiert werden. Wer von der Dorfversammlung das erste Mal für ein Amt gewählt wird, darf nicht ablehnen, sondern muß dieses annehmen. Erst die Wiederwahl, die bis zu fünf oder zehn Jahre hintereinander möglich ist, ist freiwillig. Reichtum oder Besitz des Kandidaten spielen keine Rolle. Der gegenwärtige Gobernador, Marcelo Muse, ist

etwa 30 Jahre alt. Zwei Kinder, ein etwa sechsjähriger Sohn und eine vierjährige Tochter leben, vier Kinder sind ihm gestorben. An materiellem Besitz gehören ihm fünf Pferde und zwei Schweine, aber keine Kuh und kein Schaf. Vor zehn Jahren war er bereits ein Jahr lang Fiscal. Nach der allgemeinen Auffassung der Paez soll der Gobernador nicht zu jung und nicht zu alt sein. Das beste Alter liege zwischen 30 und 50 Jahren. Die übrigen Posten, die ja in starkem Maße in Botendiensten bestehen, werden allgemein von jüngeren, unverheirateten Leuten besetzt, obwohl sie auch von verheirateten, bis zu 50jährigen Männern ausgefüllt werden können. Allgemein sucht sich der Gobernador ihm ergebene Leute aus, die für ihn auch die Strafen ausführen müssen, da ein Gobernador selbst nicht straft. Dazu haben vier Vertreter der unteren Posten eine dienstliche Peitsche, die aus einem 10 cm langen Stab mit einem etwa 80 cm langen, geflochtenen Riemen besteht.

Die Wahl selbst geht so vor sich, daß der Capitan die Kandidaten vorstellt mit der Frage: «Diesen als Gobernador, wollt ihr ihn?» und sie antworten: «Wir wünschen» oder «wir wünschen nicht». Interessant war zu beobachten, wie sich nach dem Tode des Capitan einer seiner Verwandten, Cerbelión Guagáz, um eine Ernennung als Capitan bemühte. Der Pfarrer bestand jedoch auf einer Wahl durch das Dorf. Und obwohl er sich sehr dafür einsetzte, daß Cerbelión gewählt würde, lehnte ihn das Dorf immer wieder ab, da er zu autokratisch wäre und man derartige Leute nicht mochte. Ein anderer wieder, der von allen als Capitan gerne gesehen wäre, mag selbst nicht. «Als Capitan bin ich ja nur der Büttel des Padre», antwortete er mir einmal auf meine Frage, warum er die Wahl nicht annehme. Und dazu hätte er keine Lust. Er war einmal Comisario und einmal Gobernador gewesen, und nun wollte er für den Rest seines Lebens seine Ruhe haben.

2. FAMILIENORGANISATION

Die Familie der Paez ist grundsätzlich die patrilineare Kleinfamilie, bestehend aus den Eltern und den unverheirateten Kindern. Diese schlafen, solange sie klein sind, mit den Eltern in der Küche, sobald sie größer sind, in einem Verschlag in einem anderen Teil des Hauses. Nach der Verheiratung errichten sie sich ihr eigenes Haus. Nicht unüblich ist es jedoch, daß die verheirateten Söhne mit ihren Frauen noch ein bis zwei Jahre im Hause des Vaters wohnen, bis sie das Geld für ein zunächst noch kleines Haus beisammen haben. Die Töchter verlassen mit ihrer Verheiratung

das väterliche Haus und wohnen dann bei ihren Männern, d. h. zunächst bei den Schwiegereltern.

Normalerweise hat somit jedes Haus nur eine Kochstelle, an der die Frau des Hauses kocht. Heiratet ein Sohn, so wird eine neue Küche abgeteilt und eine zweite Feuerstelle errichtet, an der die junge Frau kocht. Grundsätzlich hat jedes Ehepaar — und nur dieses — seine eigene Feuerstelle, denn für die Ernährung ist immer die Frau verantwortlich. Männer kochen nicht. Alte, alleinstehende Leute oder unverheiratete Mädchen oder Männer leben bei Verwandten oder Freunden, aber nie alleine, da der Einzelne sich weder schützen noch genügend versorgen kann.

Die Autorität des Vaters ist groß. Frau und Kinder schulden ihm unbedingten Gehorsam. Trotzdem hat der Mann nicht das Recht, persönliche Gebrauchsgegenstände oder selbst angefertigten Besitz der Familienmitglieder zu veräußern. So ist er beispielsweise nicht in der Lage, eine Kokatasche oder Fasertasche seiner Frau oder ein Spielzeug seiner Kinder zu verkaufen.

Die Kinder bekommen den Familiennamen des Vaters, die Frauen behalten aber ihren Mädchennamen auch in der Ehe bei. Ein äußerliches Kennzeichen in Kleidung oder Haartracht o. ä. für unverheiratete Mädchen und verheiratete Frauen gibt es nicht. Die Ehefrau ist verpflichtet, in ihrer Familie für Mann und Kinder zu arbeiten. Darüberhinaus kann sie sich persönliches Eigentum verschaffen, indem sie beispielsweise über den Bedarf ihrer Familie hinaus Stoffe webt und diese gegen Schmuck vertauscht.

Falls die jungen Leute noch bei den Eltern im Hause leben, ist die Schwiegertochter ihrer Schwiegermutter nicht unbedingt untergeordnet, wenngleich es nach der Ansprache bei der Hochzeitszeremonie den Anschein hat. Ein Abhängigkeitsverhältnis ist durch die getrennte Küche ausgeschaltet. Meist aber verstehen sich Schwiegermutter und Schwiegertochter gut, und dann ist es nicht selten, daß nur eine Frau für beide Familien kocht, denn Schwiegerscheu existiert nicht. Beide Frauen teilen sich dann auch die Arbeit der Reinigung des Hauses.

Eheliche Treue wird von beiden Ehepartnern verlangt, beim Mann nimmt man es aber mitunter nicht so streng. Wenn aber ein Mann seine Frau oder diese ihren Mann bei einer ehelichen Untreue überrascht, kann der betrogene Teil beide verprügeln (aber nicht töten) und sie dem Cabildo melden, der den schuldigen Teil noch einmal recht kräftig verprügeln läßt.

Uneheliche Kinder sind bei den Paez nicht selten. Falls ein unverheiratetes Mädchen ein Kind bekommt, erhält sie von ihren Eltern und

vom Cabildo solange Schläge, bis sie den Vater ihres Kindes angibt. Ist dies ein lediger junger Mann, muß er das Mädchen heiraten. Ein verheirateter Mann jedoch wird vom Cabildo verprügelt. Unterhaltszahlungen braucht er nicht zu leisten. Anders ist es, wenn ein verheirateter Mann keine Kinder hat. In diesem Falle wird grundsätzlich die Frau als die Schuldige angesehen. Dann darf er von einem unverheirateten Mädchen ein Kind bekommen, ohne daß er bestraft wird. Er erklärt dem Cabildo einfach, daß er viel Besitz hätte und daß er deswegen Kinder brauchte, die er von seiner Frau nicht bekommen könne. Der Mutter seines leiblichen Kindes gibt er eine Kuh, Kleider und einen hübschen Gürtel, und diese tritt ihr Kind dann an die Ehefrau des Vaters ihres Kindes ab. Dies kann er mehrere Male wiederholen, bis er genügend Kinder hat. Einem armen und besitzlosen Mann sei dies aber nicht erlaubt, wurde mir erklärt, denn «wozu braucht der Kinder?»

Zur Zeit der Menstruation und auch bei der Geburt eines Kindes hält sich die Frau in einem besonderen kleinen Hüttchen (dúyat) auf. Ihr Essen erhält sie entweder von ihrer Mutter, Schwester oder der Nachbarin eines Hauses, in dem mehrere Frauen leben. Diese kocht gleichzeitig auch für die Familienangehörigen der Menstruierenden mit. Die Angehörigen der aushilfsweise kochenden Frau erhalten ihr Essen von einem anderen weiblichen Mitglied in deren Familie. Die für das Essen sorgende Frau schafft auch das Holz für das zum Wärmen nötige Feuer im dúyat herbei. Weibliche Bewohner von Gehöften oder nur wenige Monate benutzten Feldhütten, die kein dúyat haben, gehen für diese Zeit zu einer benachbarten oder verwandten Familie. Im Falle einer Krankheit der Hausfrau übersiedelt diese in das Haus einer ihrer Schwestern oder weiblichen Angehörigen, wo sie gepflegt wird. Die männlichen Angehörigen der Kranken müssen dann zum Essen ebenfalls in das Haus dieser Verwandten gehen.

Neben den patrilinearen Kleinfamilien kennt man bei den Paez keine bewußten patrilinearen Sippen, wohl aber fühlen sich alle Träger des gleichen Familiennamens verwandt und dürfen sich nicht heiraten, selbst wenn sie wissentlich — dieses Wissen reicht nur zwei Generationen zurück — nicht verwandt sind. Unser Dolmetscher Victoriano Piñakuẽ beispielsweise darf nicht nur alle Mädchen des Vaternamens Piñakuẽ nicht heiraten, sondern auch nicht die Mädchen, deren Mütter Piñakuẽ heißen. Besonders schwierig liegen die Verhältnisse bei den Trägern des Namens Guagáz, dem alten Geschlecht, dessen Angehörige den Capitan stellen, und die zahlenmäßig etwa ein Viertel des Dorfes ausmachen. In Calderas finden die jungen Männer dieses Namens nicht immer ihre Frauen. Sie

müssen sie deswegen oft in anderen Dörfern suchen, obwohl dies allgemein nicht gerne getan wird. Wir haben damit bei den Páez exogame Sippen, d. h. Gruppen von Menschen männlicher Abstammung, die zwar zerstreut wohnen, aber ein gemeinsames Festhaus haben und die sich vermöge ihres gleichen Namens nicht heiraten können. Es fehlt ihnen aber das Bewußtsein, vom gleichen Vorfahren abzustammen. Desgleichen gibt es weder ein gemeinsames Sippenoberhaupt, noch besondere Trachten oder irgendwelche gemeinsamen Abzeichen. Die Träger von sechs Familiennamen, die gemeinsam mehr als 60 Prozent der Bevölkerung ausmachen, haben auf dem Dorfplatz je ein Festhaus, in denen die Träger des gleichen Namens zu den großen Jahresfesten, Inmaculada (8. 12.), Semana Santa (Ostern) und San Juan (24. 6.) zusammenkommen und gemeinsam essen und trinken. Die anderen Familien, die kein eigenes Festhaus haben, nehmen in den Festhäusern befreundeter Familien teil.

Die sechs größten Familien von Calderas sind: Guagáz, Piñakuẽ, Petíns, Oléz, Oriága, Pechéne.

Innerhalb der Sippen spielen die Verwandten keine Rolle, wohl aber die Paten (padrino, madrina) denen gegenüber strenge Etikette gewahrt wird. Junge oder Mädchen, Mann oder Frau, die ihre Taufpaten irgendwo treffen, müssen niederknien, um deren Segen zu empfangen.

Die Verwandtschaftsnomenklatur ist teilweise differenzierter als die unsere. Auffallend ist die gemeinsame Anrede für Vater und Kind und Mutter und Kind und die differenzierte Anrede für ältere und jüngere Geschwister. Die Bezeichnungen für Vater und Mutter werden danach unterschieden, ob man von den eigenen oder von fremden Vätern und Müttern spricht. Der eigene Vater ist táta, der fremde néi; die eigene Mutter ist máma, die fremde nihí. Gleichgültig ist dabei, ob ein Mann oder eine Frau die folgenden Beispiele sagt:

mein Vater	ãtç táta	meine Mutter	atç máma
dein Vater	inç táta	deine Mutter	inç máma
sein Vater	kyeç néi	seine Mutter	kyeç nihí
unsere Väter	kweł táta	unsere Mütter	kweł máma
ihre Väter	kyáṅweł néi	ihre Mütter	kyáṅweł nihí

Interessant ist, daß in der Anrede auch der fremde Vater bzw. die fremde Mutter des Gesprächspartners mit táta oder máma, wie die eigenen Eltern, bezeichnet werden.

Die Mitglieder der Verwandtschaft in der Elterngeneration, die unseren «Onkeln» und «Tanten» entsprechen, werden in der Anrede diffe-

renziert, je nachdem, ob es sich um Angehörige der mütterlichen oder väterlichen Linie handelt. In der weiblichen Verwandtschaft der mütterlichen Linie wird das Präfix «pe» vor die entsprechenden Bezeichnungen für die männlichen Verwandtschaftsmitglieder gesetzt. Außerdem fällt auf, daß für Stiefvater und Stiefmutter keine Wortverbindungen mit «Vater» bzw. «Mutter» gebraucht werden, sondern die gleichen Worte wie für Vaterbruder und Mutterschwester, bzw. den Ehegatten der Vaterschwester oder des Mutterbruders.

Vaterbruder	nyok	Vaterschwester	pętsots
Mutterbruder	ká'ka	Mutterschwester	pęnyok
Stiefvater	nyok	Stiefmutter	pęnyok
Vaterschwesters Mann	nyok	Mutterbruders Frau	pęnyok
Schwiegervater	táta	Schwiegermutter	máma

In der Kindergeneration ist das Fehlen von Bezeichnungen für Nichten und Neffen bemerkenswert. In Ermangelung eigener Paez-Wörter und -Begriffe werden spanische benützt. Es ist möglich, daß in vorspanischer Zeit die gesamte Kindergeneration, entweder die einer Großfamilie oder doch die der mütterlichen oder väterlichen Linie, nach Art des «klassifikatorischen Verwandtschaftssystems», von den Gliedern der Elterngeneration mit gleichen Namen bezeichnet wurde. Im Gegensatz zu unserem Verwandtschaftssystem, das auf der Gradnähe der Blutsverwandtschaft beruht, werden nach dem klassifikatorischen System nicht nur die eigenen Kinder als «Söhne» oder «Töchter» bezeichnet, sondern auch die der Geschwister. Entsprechend nennen die Kinder — im extremen Falle — die Geschwister der Eltern, also ihre Onkel und Tanten, gleichfalls «Vater» bzw. «Mutter».

Letzteres ist bei den Paez nicht der Fall, da zwischen den Nachkommen der väterlichen und mütterlichen Linie streng geschieden wird. Innerhalb dieser macht sich aber eine Tendenz zum klassifikatorischen System bemerkbar, einmal wegen der bereits zitierten gleichen Namen für Stiefvater bzw. Stiefmutter und Vaterschwesters Mann bzw. Mutterbruders Frau, zum anderen wegen der Unterscheidung, je nachdem die Geschwister älter oder jünger als der Sprechende sind.

Die Verwandtschaftsbezeichnungen der Kindergeneration sind:

Sohn, kleiner	luč	Tochter, kleine	luč
Sohn, großer	ndyík	Tochter, große	nīs
Brudersohn (vom Mann aus)	sobríno	Brudertochter (von der Frau aus)	sobrína

Schwestersohn (vom Mann aus)	sobrino	Schwestertochter (von der Frau aus)	sobrina
Schwestertochter (vom Mann aus)	sobrina	Schwestersohn (von der Frau aus)	sobrino
Brudertochter (vom Mann aus)	sobrina	Brudersohn (von der Frau aus)	sobrino
Stiefsohn	sobrino	Stieftochter	sobrina
Schwiegersohn	nokwębió	Schwiegertochter	ndó
Brudertochtermann	sobrino	Schwestertochtermann	sobrino
Brudersohnfrau	sobrina	Schwestersohnfrau	sobrina

Innerhalb der eigenen Generation wird zwischen den älteren und jüngeren Brüdern bzw. Schwestern unterschieden. Im Sinne des über das klassifikatorische Verwandtschaftssystem Gesagten haben wir auch hier — nach der männlichen oder weiblichen Linie der Familie hin unterschieden — gleiche Bezeichnungen für Vettern, Basen und Stiefgeschwister.

Bruder (vom Mann)	yaktę	Schwester (v. d. Frau)	yaktę
Bruder (v. d. Frau)	nyił	Schwester (vom Mann)	pęł
älterer Bruder	yaktę ntę (ntę = älter)	ältere Schwester	pęł nóitę
jüngerer Bruder (wenn andere Leute von ihm reden)	yaktę noč (noč = jünger)	jüngere Schwester (wenn andere Leute von ihr reden)	pęł noč
wenn der eigene Bruder oder die eigene Schwester von den jüngeren Brüdern reden	yaktę npéi	wenn Geschwister von der jüngeren Schwester reden	pęł npéi
Vaterbruders Sohn*	yaktę	Mutterbruders Sohn*	yaktę
Vaterbruders Tochter*	pęł	Mutterbruders Tochter*	pęł
Vaterschwesters Sohn*	yaktę	Mutterschwesters Sohn*	yaktę
Vaterschwesters Tochter*	pęł	Mutterschwesters Tochter*	pęł

Bei Anreden von außerhalb der Familie Stehenden werden folgende Bezeichnungen gebraucht:

* Diese Bezeichnungen für Vettern und Basen gelten nur in der Anrede untereinander.

Vaterbruders Sohn oder Mutterbruders Sohn	pokatęnyák
Mutterbruders Tochter oder Vaterbruders Tochter	pokatępěnyí (pokats = Seite)

Stiefbruder yaktę Stiefschwester pęš

Die Bezeichnungen für die Schwäger und Schwägerinnen sind folgende:
Wenn der Bruder spricht:

Gattin des Bruders	só'ǫv	Gatte der Schwester	tsóǫm

Wenn die Schwester spricht:

Gattin des Bruders	tyínas	Gatte der Schwester	só'ǫv

Abseitiger gelegene Schwägerverhältnisse, die in unserer Verwandtschaftsnomenklatur nicht mehr als solche gekennzeichnet sind, werden bei den Paez noch in folgenden Fällen beachtet:

Vaterbrudertochters Mann	tsóǫm	Vaterschwestersohns Frau	só'ǫv
Mutterbrudertochters Mann	tsóǫm	Mutterschwestersohns Frau	só'ǫv

In der Großeltern- bzw. Enkelgeneration werden folgende Termini gebraucht:

Vaters Vater	īši	Vaters Mutter	pęndyi
Mutters Vater	īši	Mutters Mutter	pęndyi
Sohnes Sohn	nzón	Sohnes Tochter	nzón
Tochters Sohn	nzón	Tochters Tochter	nzón

Recht differenziert sind bei den Paez die Bezeichnungen für Menschen in verschiedenen Altersstufen oder Lebensumständen; beachtenswert sind die gemeinsamen Anredeformen für bestimmte Gruppen von Menschen oder von mehreren Menschen bestimmter Verwandtschaftsverhältnisse, die zeigen, daß das Individuum hier nicht losgelöst in der Familie steht, sonder eingeordnet ist als Teil eines Lebensgefüges.

Kind oder Junge	luč
Kleinkind (Junge oder Mädchen)	lučkwę
Säugling (Junge oder Mädchen)	lučléčkwę
Jüngling	pítstaty
Mann	pítstę
verheirateter Mann (außer wenn die eigene Frau von ihm spricht)	yō
alter Mann	īš
Witwer	ečpits
Mädchen	gnáskwę

Jungfrau	gnās
Frau	ōi
etwas ältere Frau	óitę
àlte Frau	pęnī
Witwe	éčoi
schwangere Frau	tóya
sterile Frau	ęma
verheiratete Frau (außer wenn der eigene Mann von ihr spricht)	imī
Gattin (anderer Männer)	nyó
Gatte (anderer Frauen)	nemī
Gattin (vom Gatten angeredet)	íkwę
Gatte (von der Gattin angeredet)	íngya
Ehepaar	ovényi
Waise, Halbwaise	váučo
Verwandter (allgemein)	nuevę́ī

Anreden:

Vater und Mutter gemeinsam (gleichgültig, ob von den eigenen Kindern oder von anderen Leuten)	ovényi oder pětām
Vater und Sohn gemeinsam (von anderen Leuten)	pěndyīk
Vater und Tochter gemeinsam (von anderen Leuten)	pěndyīs
Mutter und Sohn gemeinsam (von anderen Leuten)	pěndyīk
Mutter u. Tochter gemeinsam (von anderen Leuten)	pěndyīs

3. SITTEN IM LEBENS- UND TAGESLAUF

Die Paez machen allgemeinhin den Eindruck zufriedener Menschen, und es scheint, daß das Ehe- und Familienleben überdurchschnittlich gut ist. Natürlich sind die Beobachtungen darüber recht gering, vermag doch der Forscher, wegen der abgelegenen Lage der einzelnen Behausungen, immer nur einen jeweils kurzfristigen Einblick in die Familenverhältnisse zu nehmen. Dieselbe Abgeschiedenheit aber und das Bewußtsein des größeren Aufeinander-Angewiesenseins innerhalb der Familie begünstigt deren Zusammenhalt, wie es Konflikt- und Reibungsstoffe, die durch Weiberklatsch bei zu engem Aufeinanderwohnen entstehen, herabmindert.

Grundsätzlich wünscht sich jede Familie recht viele Kinder — so jedenfalls sagten alle befragten Männer. Zwei Calderuner Frauen jedoch ver-

trauten meiner Frau an, daß es ein Mittel gäbe — das sie und auch andere Frauen natürlich nicht anwenden! —, welches mit Sicherheit eine Empfängnis ausschließe: Man müsse etwas von dem Speichel einer Mula (der weiblichen, unfruchtbaren Kreuzung zwischen Pferd und Esel) essen, und dann würde man keine Kinder mehr bekommen. Dies täte eine Frau aber nur, wenn sie schon sehr viele Kinder geboren hat. Allgemein wünscht sich jedes Mädchen recht viele Kinder, denn dies ist das Haupterfordernis, um geheiratet zu werden. Zudem ist der Prozentsatz der unfruchtbaren Frauen — bei kinderlosen Ehen, sagt man, liege die Schuld immer bei der Frau — nicht gering. Nach Umfrage beträgt er etwa 10 Prozent. Männer wünschen sich im allgemeinen Jungen, die Frauen Mädchen, um eine Hilfe im Haushalt zu haben. Zwillingsgeburten sind selten; sie werden aber nicht als etwas Besonderes angesehen, sondern man freut sich darüber, wie über andere Kinder auch. Krüppelgeburten soll es nicht geben; ich sah aber mehrere Menschen mit Hasenscharten. Sie scheinen sich dessen zu schämen, denn bei Gesprächen mit uns hielten sie immer die Hand vor den Mund. Eine Kindestötung findet nicht statt. Bei Erkundigungen darüber wurde immer ganz entsetzt zurückgefragt, ob dies denn in meinem Lande der Fall wäre. Eine Überbevölkerung wäre auch bei höherer Kinderzahl — der Durchschnitt liegt bei drei bis vier lebenden Kindern pro Familie — nicht zu befürchten, da die Kindersterblichkeit über 50 Prozent beträgt. Die häufigste Todesursache für Kleinkinder ist Keuchhusten.

a) Geburt und Kindheit

Die Sorge der Eltern für das Kind beginnt schon vor der Geburt. Einer Schwangeren, die ihr erstes Kind erwartet, muß der Ehemann sehr oft beiwohnen, da sonst das Kind sehr schwächlich würde. Bei den nächsten Kindern ist dies nach Beginn der Schwangerschaft nicht mehr so oft erforderlich. Zwei Monate vor der Geburt darf die Schwangere das Haus nicht verlassen und kein Schweinefleisch essen, da dies «Pest» verursache und sie Magenschmerzen bekommen würde; dies sei sehr nachteilig für das Kind. Aus dem gleichen Grunde darf sie keine Bohnen und Zwiebeln essen; Fisch deswegen nicht, weil er aus dem kalten Element, dem Wasser, stammt und weil eine Schwangere nicht kalt werden darf.

Nach einem Gewährsmann zieht sich die Schwangere für die letzten zwei bis drei Wochen vor der Geburt ins Menstruationshüttchen (dúyat) zurück. In dieser Zeit kocht ihre Mutter oder eine andere weibliche Verwandte für die Familie. Nach einem anderen Gewährsmann zieht sich die

Frau erst zur Geburt ins dúyat zurück. In jedem Falle erfolgt dort die Geburt, die immer als sehr gefährlich angesehen wird. Grundsätzlich wird eine Hebamme (ndōsoknās) geholt. Diese ist, wie auch der Name sagt, kein Schamane. Sie hat mit schamanischen Funktionen nichts zu tun, sondern ist nur für Geburten oder äußerliche Verletzungen, wie Knochenbrüche oder Fleischwunden, zuständig.

Die Hebamme darf keine alte Frau sein. Sie wird vor der Geburt vom Ehemann der Schwangeren geholt und kommt immer. Mehrmals fragte ich, ob zur Not nicht auch ein Mann oder die Mutter helfen könnte, aber immer hieß es, die Hebamme komme immer, selbst wenn sie noch so beschäftigt wäre. Für ihre Hilfeleistung bekommt sie nur das Essen, es sei denn, daß Komplikationen eintreten. In diesem Falle bekommt sie Wolle oder einige Naturalien als Entgelt für ihre Hilfe.

Grundsätzlich befindet sich im dúyat nur die Hebamme und die Kreißende. Letztere befindet sich in Hockstellung. Sie hält sich mit den Händen an einem Gürtel fest, der um den Dachbalken des dúyat geschlungen ist. Ist kein Gürtel vorhanden, so kann auch der Ehemann anwesend sein, der dann seine Frau von hinten so umfaßt hält, daß sie sich ebenfalls in Hockstellung befindet. Die Hebamme nimmt das Kind in Empfang. Wenn seine Stellung anormal ist, zum Beispiel bei Steißlage des Kindes, wendet sie das Kind so, daß der Kopf nach unten liegt. Wenn das Kind dann noch nicht geboren wird, muß — wie man uns erklärte — die Mutter sterben, denn dann kann man nichts weiteres mehr tun. Es kommt dies jedoch nur selten vor.

Die Hebamme bringt ihre Heilkräuter mit, mit denen sie den Körper der Gebärenden einreibt. Das neugeborene Kind wird zuerst mit kaltem Wasser gewaschen und dann in ein Stück Ruana gewickelt und der Mutter übergeben. Das Abnabeln geschieht nicht mit dem Messer oder der Schere, sondern, nachdem die Nabelschnur (kolwát) zuvor mit einem selbst gesponnenen Wollfaden abgebunden wurde, mit dem scharfkantigen Rohr einer Schilfart. Der Vater darf sein Kind unmittelbar nach der Geburt sehen; die Mutter bleibt mit diesem aber noch etwa zwei Wochen im dúyat. Die Nachgeburt (duyáha) wird zusammen mit der Nabelschnur nahe dem Menstruationshaus vergraben. Der Vater gräbt dazu das Loch und die Mutter wirft beides hinein. Das Loch darf nicht zu flach sein, sonst würden sie die Hunde ausscharren, aber auch nicht zu tief, denn dann bekäme das Kind erst sehr spät und nur sehr schwer seine Zähne. Die richtige Tiefe soll bei etwa 30 cm liegen.

Vier bis sechs Tage nach der Geburt und nach dem ersten Bad bringt der Vater oder einer der Paten sein Kind zum Sakristan des Dorfes oder

zu den Missionarinnen, um es mit Wasser auf den Namen des christlichen Heiligen des Tauftages taufen zu lassen. Jedes Kind hat nur einen christlichen Vornamen und den Paez-Zunamen seines Vaters. Die Taufe durch den Pfarrer mit Öl findet später, bei passender Gelegenheit in Anwesenheit der Paten statt, an die sich ein Trink- und Eßgelage anschließt. An diesem nimmt auch die Mutter teil, nachdem sie das dúyat verlassen und sich, ihr Kind und ihre Kleider gewaschen hat und durch den Schamanen gereinigt worden ist.

Die Erziehung der Kinder liegt in der Hand der Eltern, welche sie ganz selbstverständlich und fast im Spiel die nötigen Fertigkeiten des Lebens lehren. Allerdings werden unfolgsame Kinder auch geschlagen, und zwar meist dann, wenn der Sohn keine rechte Lust hat, seinem Vater bei der Feldarbeit zu helfen. Im Strafen sind die Väter allgemein strenger als die Mütter und schlagen sie gegebenenfalls mit Lederriemen auf alle Körperteile. Auch Ohrfeigen sind zu beobachten. Wenn ein junger Mann sich im späteren Leben als faul erweist, wird dem Vater die Schuld gegeben, weil er seinen Sohn nicht richtig zur Arbeit angehalten habe. Uneheliche Söhne, denen die strenge Hand des Vaters fehlt, sollen oftmals mißraten, obwohl sie an sich sehr beliebt sind. Da sie ihren Vater nicht kennen, sind sie nämlich nicht verpflichtet, auf dessen Feld zu arbeiten. Umso begehrter sind sie als Aushilfsarbeiter auf den Feldern der anderen Familien. Wenn sie älter sind, können sie sich Land leihen und eine Familie gründen. Meist bekommen sie das Land sogar geschenkt. Sie brauchen also keineswegs zu verhungern. Ungünstiger sind uneheliche Töchter dran, da ihre Hilfe meist nicht vonnöten ist und ihre Mutter selbst keinen Haushalt hat. Dennoch sind ihre Heiratsaussichten nicht ungünstig, da ein Mädchen ja keine Mitgift bekommt, sondern nur auf Grund ihrer persönlichen Qualitäten geheiratet wird.

Heute besteht für alle Kinder die allgemeine Pflicht des Schulbesuches in den Missionsschulen, wo sie im Katechismus und in der spanischen Sprache unterrichtet werden und sich täglich unter Aufsicht einmal baden müssen.

Die Mutter stillt ihr Kind während der ersten sechs bis acht Monate ausschließlich, erst dann wird mit der Verabreichung festerer Nahrung begonnen, die sich aber in nichts von der der Erwachsenen unterscheidet, d. h. das Kind bekommt Yuca, Bohnen, Chicha, Branntwein usw. wie die Erwachsenen. Die Mutter säugt das Kind solange, bis das nächste kommt, also drei bis vier Jahre und darüberhinaus teilweise mit dem nächstgeborenen zusammen. Jede Frau, die ein Kind hat, hat allgemein auch Milch, wurde uns erklärt. Nur wenn die Mutter einmal weit weg

sein sollte, beispielsweise zu einer Besorgung auf dem Markt oder zum Holzholen, kann eine andere Mutter mit ihrer Milch dem Kinde aushelfen. In den seltenen Fällen, in denen eine Frau nicht genug Milch für die Nährung ihres Kindes hat, kann sie es irgendeiner anderen Frau geben, die aber dafür nichts bekommt. Es kommt auch vor, daß eine Familie mit zehn Kindern zu zahlreich wird, so daß die Nahrung nicht mehr ausreicht. In diesem Falle kann die Frau eines oder mehrere Kinder ihrer Mutter in Pflege geben. Hat sie aber keine Mutter mehr, muß sie diese selbst behalten. Im Falle, daß die Mutter kleiner Kinder stirbt und einen Säugling von weniger als zwei bis drei Monaten hinterläßt, der außer Milch noch keine andere Nahrung zu sich nehmen kann, sucht der Vater eine Frau, die ebenfalls einen Säugling hat und die mit ihrer Milch das fremde Kind zwei bis drei Jahre großzieht, bis es sprechen kann. Dann bekommt der Vater es wieder zurück und die Amme erhält als «Milchgeld» eine Kuh.

Getragen werden die Kinder normalerweise von der Mutter. Dazu ist der bunte gewebte Gürtel (táw) und das große Umschlagtuch (panyelón oder séntyatç) erforderlich, in das das Kind eingewickelt und von der Mutter auf dem Rücken getragen wird.

Die Spiele der Kinder sind allgemein belehrend für das spätere Leben. Die Jungen gehen mit dem Blasrohr (pāt), der geflochtenen Steinschleuder (ísot) oder der Gummischleuder (kaučéro) auf Vogeljagd, bzw. sie üben mit dem Lasso sich gegenseitig zu fangen, wobei das zu fangende Kind eine Kuh oder ein Pferd darstellt. Die Fähigkeit der Kinder, wie übrigens auch der Erwachsenen, im Gebrauch des Lassos ist nicht groß. Seine Handhabung zum Einfangen von Kühen oder Pferden wird als Sport angesehen, wie ja auch die ganze Viehzucht. Die Tiere lassen sich nicht leicht fangen, sondern müssen regelrecht überlistet werden. Zum Einfangen beispielsweise einer Kuh rennt der Lassoschwinger inmitten einer Gruppe mehrerer Männer oder Burschen zunächst hinter einigen anderen Kühen her, die sich in der Nähe der zu fangenden Kuh befinden. Die letztere fühlt sich recht sicher, da das Geschrei scheinbar nicht ihr gilt. Die Männer treiben die Kühe jetzt so, daß sie in die Nähe der zu fangenden kommen, dann schlägt der Lassowerfer einen scharfen Haken und wirft das Seil aus einer Entfernung von nur etwa drei Metern. Trotz der geringen Entfernung trifft nur etwa jeder dritte Wurf.

Zwei Jungenspielzeuge, als Zeitvertreib der Schuljugend mit Begeisterung geübt, sind der Kreisel (čúnga) und die Lochkugel (hénde). Letztere (Fig. 36) ist eine ausgehöhlte Fruchtkapsel von etwa fünf Zentimeter Durchmesser mit einem einen Zentimeter starken Loch an der Unterseite.

Genau diesem größerem Loch gegenüber ist ein kleines gebohrt. Durch das große und das kleine Loch wird von unten her eine gezwirnte, etwa 20 cm lange Agaveschnur geführt und oberhalb des kleinen Loches verknotet, so daß sie nicht wieder herausrutschen kann. Das andere Ende der Schnur ist in der Mitte eines etwa 15 cm langen Stäbchens verknotet, welches einen etwas geringeren Durchmesser hat, als das Loch auf der Unterseite der Fruchtkapsel. Beim Spiel hängt die Schnur der Kapsel vom Stäbchen herunter, welches mit einer Hand zur Hälfte gefaßt wird. Mit leichtem Schwung wirft man jetzt die am Faden befestigte Kapsel nach oben und versucht, sie mit dem Stab aufzufangen. Anfänger treffen das Loch selten oder nie, während es Geübteren viele Male hintereinander gelingt.

Der Kreisel besteht aus einem doppelkonischen Holzklötzchen von 4 bis 6 cm Höhe, das sich die Jungen selbst zurecht schnitzen und das auf der Oberseite in einen kleinen Knauf ausgeht. In die Spitze der unteren Seite ist ein kleiner Dorn hineingesteckt. In Bewegung gesetzt wird der Kreisel mit einer Schnur, die in zwei Schlaufen endet. Die eine wird über den Mittelfinger der Hand geschoben, die andere auf den Knauf der Oberseite des Kreisels. Von da wird sie zur Unterseite um den Dorn herumgeführt und dann spiralförmig um den unteren, konischen Teil des Kreisels aufwärts gewickelt. Zum Ingangsetzen wird der Kreisel auf den mit Brettern belegten Fußboden der Schule geworfen. Die am Mittelfinger befestigte Schlaufe bewirkt das Abrollen von der Schnur und seine Drehbewegung. Als Wettkampfregel gilt, den sich drehenden Kreisel mit einem anderen drehenden umzuwerfen.

Eine einfachere Art des Kreisels, die wie das Lochspiel ebenfalls «hénde» genannt wird, besteht aus einer runden Samenkapsel, in die ein senkrechter Stab eingesetzt ist, der etwa fünf Zentimeter herausragt. Zum Ingangsetzen sind eine gezwirnte Schnur und ein Brettchen erforderlich. Die Schnur wird mit dem einen Ende spiralförmig um den Stiel des Kreisels gewickelt und mit seinem anderen am Brettchen verknotet und dann abgezogen.

Neben diesen Spielen wird von den Knaben der Ringkampf sehr gepflegt. Im Burschen- und Jungmänneralter wird nicht mehr gerungen. Zu den Festen aber, wenn sie etwas getrunken haben, schlagen sich die jungen Männer, bei ausgestrecktem Arm, mit der Hand oder der Faust auf den Körper. Mehrere von ihnen bilden einen unregelmäßigen Kreis, aber ohne Parteien, und jeder versucht, den anderen von hinten zu schlagen.

Die Mädchen spielen mit Puppen (lõčinyi) von etwa 20 cm Höhe, welche sie sich aus Holz und Stoffresten selbst anfertigen. Auffällig ist, daß diese Puppen keine Kinder, sondern Erwachsene in voller Kleidung

darstellen. Ein Puppenmann beispielsweise besteht aus einem gegabelten Holz, dessen längerer Teil den Körper und dessen Gabel die Beine darstellen. Ein angebundenes Querholz deutet die Schultern an. Die Kleidung besteht aus einem Männerhemd, das mit einem Agavefaden in Höhe der Hüften «auf Taille» gebunden ist. Ein rechteckiges Stück Stoff mit einem waagerechten Loch in der Mitte wird als Ruana darübergezogen. Ein Gesicht ist weder bei der männlichen, noch bei der weiblichen Puppe angedeutet. Die Puppenfrau besteht nur aus einem geraden Stab, um dessen unteren Teil ein Stück Stoff als Rock gewickelt und mit einem roten Faden als Gürtel festgebunden wird. Auf dem Rücken trägt die Frau ein Kind, dargestellt durch ein in ein Stück Stoff eingewickeltes kleines Stück Holz. Der Stoff ist so um das Kind mit einem roten Faden befestigt, wie auch sonst Kinder gewickelt werden. Ihr Kind trägt die Puppenfrau in das große Umschlagtuch eingewickelt, der durch einen roten Faden, der als Gürtel dient, festgehalten wird.

b) Reife

Für die Jünglinge finden heute keine Riten oder Feiern mehr statt. In früherer Zeit wurden sie an die heilige Lagune Juan Tama oder auf die Höhen von Cuetando geführt, und dort mußten sie eine Hütte bauen und ein kleines Saatfeld als Beweis ihrer Fähigkeit als Mann und Hausvater anlegen (Hernandez 1944, p. 203).

Ein Mädchen besitzt mit der Pubertät die Volljährigkeit, d. h. es kann heiraten. Vorheriger und vorehelicher Verkehr ist nicht erlaubt. Anläßlich der ersten Menstruation wurde in früherer Zeit ein besonderer Tanz getanzt (itsa-kó), während welchem das junge Mädchen außerhalb des Festhauses nackt in einer Grube in Chicha gebadet wurde (Castello i Oroso, p. 85). Heute findet dies nicht mehr statt, sondern ein Mädchen nimmt, wenn es mit etwa 15 Jahren zum ersten Male ins dúyat geht, Agavefasern mit und flicht dort während der etwa fünf Tage, die es sich dort aufhält, eine sehr schöne, kleine Fasertasche (yáhaléčkwę) von etwa Faustgröße. Speisegebote o. ä. bestehen weiter nicht. Danach geht sie an einen entfernt gelegenen Fluß, um zu baden. Auf dem Wege dorthin läßt sie die Tasche fallen. Ein vorübergehender verheirateter Mann läßt sie liegen, denn er weiß, daß sie einem jungen Mädchen gehört. Ein junger Mann aber, der zufällig des Weges kommt, sieht die schön gearbeitete Tasche, hebt sie auf und benutzt sie als Geldtäschchen. Ohne daß er weiß, wer das Täschchen angefertigt hat, wird er — so ist man überzeugt — dieses Mädchen heiraten.

c) *Heirat*

Die heutige Eheform der Paez ist die Monogamie. H. Pittier de Fábrega (p. 314) schließt jedoch aus ihren Traditionen, daß die Paez früher polygam waren und erst durch die Erziehung seitens der Missionare zur Einehe übergegangen sind. Für eine regelrechte Mehrehe in früherer Zeit konnte ich nach ihrer Mythologie keinen Anhalt finden. Es verbietet aber das Sozial- und Lebensgefüge der Paez das Alleineleben der unverheirateten Mädchen. Falls diese keine Angehörigen haben oder im Hause von Verwandten kein Unterkommen finden können, nimmt sie ein anderer Mann in seiner Familie auf. Das Mädchen hilft dann bei der Verrichtung von Hausarbeiten, und der Hausvater kann Kinder von ihr bekommen, ohne daß das Mädchen aber — wenigstens heute — als seine zweite Frau im Rahmen einer regelrechten Heiratszeremonie geheiratet wird.

Wenn ein junger Mann heiraten will, so spricht er — im Normalfall — mit seinem Vater und dieser mit dem Vater seiner Auserwählten. Eine Werbung durch dritte, außerhalb der Familie stehende Personen ist nicht üblich, und die beiderseitigen Verwandten treten erst nach der offiziellen Hochzeitsfeier in Verkehr miteinander und tauschen Geschenke aus. Die beiden jungen Leute sind sich in der Regel schon früher einig, ehe die Väter miteinander sprechen. Erforderlich ist das Einverständnis des Mädchens aber nicht, denn das Übereinkommen des jungen Mannes mit den beiderseitigen Vätern ist völlig ausreichend, und das Mädchen wird in diesem Falle auch gegen seinen Willen verheiratet. Es soll dies aber sehr selten oder gar nie der Fall sein, denn es ist für ein Mädchen gefährlich, einem jungen Mann einen Korb zu geben. In diesem Fall würde dieser ausspeien und folgenden Fluch sprechen: «Toblel (unübersetzbar), ich wollte dich heiraten, aber du hast nicht gewollt; nun mußt du sterben!» Ich bezweifelte den Männern von Calderas gegenüber, daß dieser Fluch seine Wirkung tun könnte, aber da erzählte man mir die Geschichte von dem Mädchen, das keinen Paez heiraten wollte. Dieses Mädchen war wunderschön. (Schön sind übrigens nur unverheiratete Mädchen, nie wird eine verheiratete Frau als schön bezeichnet). Es war etwas dick — dünn gilt als häßlich —, immer sauber gewaschen, gut gekämmt, trug schöne Halsketten und Ohrringe, schön gewebte Kleider und einen wunderschönen, selbst gewebten Gürtel. Viele junge Männer von Calderas wollten es heiraten, aber es wollte mit keinem Calderuner verheiratet sein, sondern mit einem Weißen. Sie verließ deswegen ihr Dorf, um nach Popayán zu gehen (der einzigen größeren, bekannten Stadt). Sie lief sehr schnell. Es befand sich aber auf dem Wege im Páramo (Grenzgebirge) ein Pijao. Dieser er-

griff sie und nahm sie lebend mit in sein Haus. Dort zündete er ein Feuer an, tötete sie und fraß sie auf. Erläuternd fügte der Erzähler noch hinzu: Ein Mädchen, das keinen Calderuner sondern einen Weißen heiraten will, weil die Calderuner Männer ihm nicht schön genug wären, würde auf dem Wege nach der Stadt, noch ehe es diese erreicht hat, von einem Pijao gefressen. Es wäre dies deswegen auch von keinem Mädchen versucht worden. Lehrreich ist in diesem Zusammenhang ein umgekehrtes Beispiel. Der kolumbianische Kollege Segundo Bernal Villa, der mit uns zusammen im Park von San Andrés lebte und zu gleicher Zeit seinen ethnologischen und soziologischen Forschungen in Calderas nachging, hatte scherzhafterweise und um sich beliebt zu machen des öfteren erwähnt, daß er die Absicht hätte, sich in Calderas eine Braut zu suchen. Mit einer hübschen Calderunerin wurde er des öftern von Leuten im Dorfe angetroffen, wie er sich mit ihr unterhielt und spazierenging. Als er ihr eines Tages, in Unkenntnis oder Nichtbeachtung des betreffenden Brautwerbungsbrauches eine Flasche Branntwein schenkte, wurde sein Scherzen als Ernst aufgefaßt und sehr übel vermerkt. Das Mädchen wurde vom Cabildo zu schwerer Prügelstrafe verurteilt und nach deren Vollzug am nächsten Tage mit einem jungen Mann des Dorfes verheiratet.

Zur offiziellen Brautwerbung geht der Vater des jungen Mannes zum Hause der Eltern des Mädchens. Er nimmt eine Kürbiskalebasse mit etwa zehn Liter Chicha und fünf Flaschen Branntwein mit. Zunächst unterhält er sich mit der ganzen Familie des Mädchens eine halbe Stunde lang nur so leichthin, man macht viele Witze und unterhält sich über dieses und jenes. Dann fragt er den Vater des Mädchens, ob dessen Tochter nicht seinen Sohn heiraten möchte. Die Eltern antworten darauf, daß sie nur eine Tochter hätten und sie diese leider nicht verschenken könnten, da sie sie selbst so nötig brauchten. Danach unterhält man sich weiter, spricht über dieses und jenes und dann fragt der Vater des jungen Mannes ein zweites Mal, ob die Tochter des Hauses nicht seinen Sohn heiraten möchte. Aber auch diesmal antwortet der Vater des Mädchens, daß er nur eine Tochter habe und sie leider nicht weggeben könne. Dann unterhält man sich weiter, bis der Gast ein drittes Mal fragt: «Könnt ihr mir nicht eure Tochter für meinen Sohn geben?» Der Vater des Mädchens antwortet dann: «Gut, ich schenke deinem Sohn meine Tochter, aber ich erwarte, daß er sie immer gut behandelt und nicht schlecht über sie spricht!» Nun übergibt der Gast seine mitgebrachten Branntweinflaschen, die erste dem Brautvater, die zweite der Brautmutter, dann die dritte der Braut und danach auch ihren Brüdern und Schwestern je eine Flasche. Die mitgebrachte Chicha übergibt er insgesamt dem Brautvater, und dieser verteilt

an alle und gibt dem Überbringer und allen Anwesenden auch von seiner eigenen Chicha zu trinken. Dies wird die ganze Nacht über fortgesetzt, bis alle betrunken sind. Am Morgen geht dann die Schwiegertochter mit ihrem Schwiegervater gemeinsam zurück in das Haus des letzteren, und von da an lebt sie zusammen mit ihrem Mann bis zur Hochzeit.

Falls der Vater des Mädchens mit dem jungen Mann als Schwiegersohn nicht einverstanden sein sollte, würde er praktisch doch nichts gegen diese Verbindung seiner Tochter unternehmen, da er ein Heiratsgut ohnehin nicht zu zahlen braucht. Stellen sich erst einmal Kinder ein, so sind die Eltern ohnehin immer einverstanden. Wenn umgekehrt der Vater des jungen Mannes mit dessen Brautwahl nicht zufrieden ist, kann er ihm sein Haus verweigern. In diesem Falle pflegen die jungen Leute sich sogleich ein eigenes, zunächst kleines Häuschen zu bauen.

Die Hochzeit findet bei den Paez allgemein nicht sobald nach der Werbung statt, sondern erst nach einem Jahr oder später. Zunächst einmal beginnt eine Zeit der Probe, die aber durchaus ehelichen Charakter trägt. In dieser Zeit der «Probeehe» will man die hauswirtschaftlichen Fähigkeiten des Mädchens erproben, denn dieses bekommt in die Ehe keinerlei Mitgift von ihren Eltern oder sonstiges Eigentum mit, außer ihrer Kleidung. Da es soziale Gründe innerhalb der ungeschichteten Paez-Gemeinschaft für eine Brautwahl nicht gibt und ein Anreiz zur Heirat aus Gründen einer hohen Aussteuer oder wegen eines eventuellen geringen Braut-Preises wegfällt, gibt es auch keine Kinderverlobungen. Ein Mädchen hat als Braut und Ehefrau nur den Wert seiner Persönlichkeit und seiner persönlichen Fähigkeiten. Letzteres wiegt schwerer. Man verlangt von einer Frau, daß sie kochen und die Stoffe für die ganze Familie weben kann, daß sie nicht schwatzhaft ist, das Haus in Ordnung hält und vor allen Dingen, daß sie bei Nacht das Feuer unterhalten und morgens das Essen zeitig richten kann. Die Paez pflegen nämlich ihre erste Mahlzeit schon sehr früh, um fünf oder vier Uhr morgens einzunehmen; und schon eine Stunde vorher muß die Frau mit der Vorbereitung des Essens beginnen. Außerdem sind, wie wir gesehen haben, die Wände des Hauses nur aus nebeneinandergestellten Maisstengeln gebildet und geben kaum einen Schutz gegen die Kühle der Nacht ab. Man schläft deshalb um das Herdfeuer gelagert, und dieses muß alle zwei Stunden geschürt und mit Holz versorgt werden. Es ist dies Aufgabe der Frau, die deswegen nächst dem Feuer schläft. Sie kann praktisch ihr ganzes Leben lang keine Nacht durchschlafen.

Entspricht die Braut während des Probejahres nicht den Anforderungen des Mannes, kann sie entweder nicht kochen oder ist sie faul oder mag

sie morgens nicht gerne aufstehen, dann schickt er sie wieder zu ihrem Vater zurück. Da noch keine Hochzeitsfeier stattgefunden hat, führt das Zurückschicken des Mädchens zu keinerlei Verärgerung. Wohl aber, wenn aus der Probeehe Kinder hervorgegangen sind und der junge Mann es sich dann doch anders überlegt. In diesem Falle ist zwar an dessen Entschluß nichts zu ändern — er war ja offiziell noch nicht verheiratet —, er wird aber, da man eine solche Handlung verurteilt, vom Cabildo verprügelt. Danach kann er dann mit einem anderen Mädchen eine neue Probeehe beginnen. Die Kinder der vorherigen Probeehe (sie werden bei den Paez mit dem span. Wort «hijo natural» bezeichnet), bekommen den Namen der Mutter. Derartige «natürliche Kinder» gibt es nicht wenige. Die Mütter sind aber nicht verachtet oder deswegen schlecht angesehen und haben auch für eine spätere Ehe keineswegs schlechtere Aussichten. Die Kinder werden bei späterer Verheiratung der Mutter nicht adoptiert und behalten den Mutternamen bei. Man ist aber der Ansicht, daß derartige «natürliche Kinder» bald sterben. Sie sind nämlich nicht getauft, da der Pfarrer nur eheliche Kinder tauft oder für die Taufe eines unehelichen Kindes eine derart hohe Summe verlangt, daß sie die uneheliche Mutter nicht aufbringen kann.

Die eigentliche Hochzeitsfeier findet nach der Zeit der Probeehe statt. Heute ist mit dieser Hochzeitsfeier meist die vorausgehende kirchliche Trauung durch den katholischen Priester verbunden. Das Geld hierzu, wie zur Ausrichtung der Hochzeitsfeier, muß der junge Mann allein aufbringen. Dazu benötigt er viele Monate. Zuerst einmal muß er, neben den Kosten von zehn Pesos für die Trauung, das Geld für einen Ochsen beisammen haben, dann Chicha in genügender Menge vorbereiten, wozu etwa einen Monat lang Zuckerrohr gemahlen wird und auch noch für das übrige Essen sorgen. Vater oder Brüder helfen allgemein dabei nicht. Da die jungen Männer fast nie eigenes Rindvieh besitzen, müssen sie sich dessen Kaufpreis durch den Verkauf von landwirtschaftlichen Produkten verdienen. Man wählt dazu meist Weizen, da dieser schon ein halbes Jahr nach der Aussaat geerntet werden kann.

Zur Hochzeitsfeier werden etwa fünfzig Männer und Frauen eingeladen, nicht nur Verwandte, sondern auch Freunde, darunter die für die kirchliche Trauung nötigen Paten (padrino, madrina). Letztere sitzen bei dem Brautpaar (nikálo). Die beiderseitigen Eltern und Gäste verteilen sich zwanglos. Padrino und madrina müssen für diesen Hochzeitstag dem Bräutigam und der Braut neue Kleider schenken oder leihen, die sich in ihrer Art aber von der gewöhnlichen Alltagskleidung nur dadurch unterscheiden, daß sie neuer und sauberer ist. Irgendwelcher besonderer

Schmuck wird von niemandem angelegt. Die Hochzeit wird so begangen, daß morgens die kirchliche Trauung stattfindet, wonach die Gäste mit Musik zum Hochzeitshaus ziehen und ein kleines Mittagsmahl einnehmen, zu welchem aber nur wenig Chicha getrunken wird. Der Festochse wird an diesem Tage noch nicht geschlachtet, sondern erst zur «eigentlichen» (wie die Calderuner sagen) Hochzeitsfeier, die etwa einen Monat später im Hause des Bräutigams stattfindet. Der Ochse wird am Morgen geschlachtet, und am Nachmittag treffen die Gäste ein, setzen sich zwanglos zusammen und essen und trinken reichlich Chicha und Branntwein. Dazu spielt die Musik, zu der aber nicht getanzt wird. Vor Beginn des Essens, wenn alle noch nüchtern sind, hält der padrino eine Ansprache an die Brautleute, in der er etwa folgendes sagt: Ihr seid nun Mann und Frau, und du, als der Mann, sollst deine Frau nicht schlagen, und du, als Frau, sollst gegenüber deinem Mann keine schlechten Worte gebrauchen. Auch der Mann soll nicht schlecht über seine Frau sprechen, und die Frau soll gehorchen, wenn der Mann ihr etwas befiehlt und soll ihm in allen Dingen helfen! Danach nimmt er die Hand der Braut und reicht sie der Mutter des Bräutigams, die zu der Braut folgendermaßen spricht: Du bist jetzt in unsere Familie aufgenommen und hast für deinen Mann zu arbeiten und für ihn das Essen zu kochen und die Kleidung anzufertigen und alles für ihn zu regeln, außerdem mußt du mir im Hause helfen und meine Aufträge ausführen, sowie die meines Mannes, und du hast weder deinem Mann noch uns schlechte Worte zu sagen!

Die Hochzeitsfeier bemüht man sich, so glänzend wie möglich auszustatten, das heißt, die Gäste solange wie möglich reichlich zu bewirten. Bei manchen Familien erstreckt sich die Feier auf über eine Woche. Getanzt wird in Calderas nicht, wohl aber in anderen Paez-Ortschaften, wobei kolumbianische Volkstänze, meistens der offene Bambuco, getanzt werden.

Die Auflösung der Ehe durch Scheidung soll auch bei den nichtchristlichen Paez nicht vorkommen. Auch ein Getrenntleben von Eheleuten gibt es nicht, da Mann und Frau aus wirtschaftlichen Gründen aufeinander angewiesen sind. Allerdings kommt es — wie oben berichtet — nicht selten vor, daß verheiratete Männer außerhalb ihrer Ehe mit anderen unverheirateten Mädchen Kinder haben.

Bei Tod eines Ehepartners kann sich der überlebende Ehegatte wieder verheiraten. Er darf aber, während er für die erste Ehe nur Partner gleichen Namens nicht heiraten kann, in der zweiten Ehe auch keinen Partner heiraten, der den Namen des bzw. der Verstorbenen trägt. Es darf also beispielsweise Juán Piñakué, der in erster Ehe mit Ascensiona Kiskué verheiratet war, sich kein zweites Mal mit einer Kiskué verheiraten.

Witwer bleiben in ihren Häusern wohnen und heiraten, falls die Kinder noch nicht erwachsen sind, meist ein zweites Mal; sonst leben sie mit im Hause eines ihrer erwachsenen Söhne. Witwen werden, sofern sie älter sind, meist nicht mehr geheiratet. Sie gehen mit ihren Kindern dorthin zurück, wo sie hergekommen sind, also in das Haus ihrer Eltern. Leben diese nicht mehr, so haben sie Anrecht, zunächst im Hause desjenigen Bruders zu wohnen, welcher zur Zeit im Hause des verstorbenen Vaters wohnt. Falls dies nicht mehr bestehen sollte, so lebt die Witwe bei irgendeinem ihrer Brüder oder bei einem sonstigen Verwandten. Alleine als Frau kann sie jedenfalls nicht in einem Hause leben, sondern immer nur in dem eines Mannes.

d) Tod

Nach dem Glauben der Paez tritt der Tod hauptsächlich durch das Wirken der bösen Schamanen (nyiç) oder der bösen Geister eč, tûs und gělyómp ein (vgl. «Religion»). Dazu gehört auch die nicht seltene Todesursache durch Schwindsucht. Die Todesursachen der Kinder sind hauptsächlich Keuchhusten, sowie Magen- und Darmbeschwerden, letzteres hervorgerufen durch die für die Kinder sehr unsachgemäße Ernährung. Selbstmord ist völlig unbekannt.

Der Tod eines Mitgliedes der Gemeinschaft wird durch Familienangehörige und Nachbarn von Mann zu Mann weitergegeben. Getrauert und geklagt wird öffentlich nicht; beim Tode kleiner Kinder gebärdet man sich, als ob man sich freut, da diese nun ein «Engelchen» seien. (Bei den Kolonisten, wie auch bei den Paez wird das spanische Wort «angelito» benutzt). Früher pflegte man bei Todesfall das Haus zu verlassen und den Toten mit Lebensmitteln darin zurückzulassen (Castillo i Orosco, p. IX).

Die Bestattungsart ist für Männer, Frauen und Kinder gleich; soziale Unterschiede bestehen nicht. Jedoch weichen einige Gebräuche in anderen Paez-Gemeinschaften von denen der Calderuner ab. Es sei deshalb zunächst die Totenbestattung in Calderas beschrieben.

Dem Toten wird zur Bestattung möglichst gekaufte, d. h. «weiße» Kleidung angezogen, selbst wenn er der Allerärmste gewesen wäre und er eine solche Kleidung noch niemals getragen hätte. Den Angehörigen erwachsen aus diesem Grunde beträchtliche Kosten, die oft erst nach einer längeren Zeit beglichen werden können. Die Bestattung findet am folgenden Tag nach dem Todesfall statt. Dem Verstorbenen werden nur die Füße gewaschen. Diese Arbeit, wie auch die der Totenbekleidung, kann von Angehörigen oder auch von Fremden vorgenommen werden; es müssen

allerdings immer Männer sein, auch bei weiblichen Verstorbenen. Der Leichnam wird von zwei Männern auf einer aus zwei Baumstämmen gebildeten Bahre zum neben der Kirche gelegenen Friedhof gebracht, wo zwei weitere Männer, meist Angehörige, schon das Grab gegraben haben. Dies ist trapezförmig, in Höhe des Kopfes gut schulterbreit und an der Fußseite schmaler. Seine Länge ist auf die Größe des Verstorbenen abgestimmt. Die Richtung des Grabes ist absolut willkürlich. Es wird etwa 1.50 m ausgehoben und an seiner Sohle mit einer seitlichen Längsnische von etwa 40 cm Höhe versehen. Diese Nische wird allgemein an der linken Seite ausgehöhlt, manchmal aber auch rechts. Der Leichnam wird dort, ohne Bahre und ohne Beigaben, waagerecht und auf dem Rücken liegend hineingelegt, so daß er nicht mehr in den Schacht des Grabes hineinreicht. Schacht und Nische werden zudem noch durch senkrecht nebeneinander gestellte Pfähle und Stäbe abgetrennt, so daß der Verstorbene von der Erdfüllung des Grabes nicht berührt werden kann. Auf diese wird zur Kenntlichmachung an Kopf- oder Fußende ein etwa 1 m hoher Stein gelegt.

Der Pfarrer ist bei einer Beerdigung nicht anwesend, auch der für den Wohnbereich des Verstorbenen zuständige Schamane nicht. Letzterer betritt auch kein Haus, in dem sich ein Toter befindet. Die Teilnehmer des Leichenzuges, Männer, Frauen und Kinder, gehen gemeinsam zum Friedhof und dann wieder zurück in das Haus des Verstorbenen, wo jetzt eine große Bewirtung mit Essen, Chicha und Branntwein erfolgt. Letzterem wurde auch schon vorher, auf dem Wege zum und vom Bestattungsplatz, zugesprochen. Die Stimmung ist die ganze Zeit über lustig und angeregt, man lacht und macht Witze. Bevor die Teilnehmer bei Rückkehr von der Bestattung das Haus betreten, müssen sie zum Fluß, wo der Schamane sie erwartet, um sie das erste Mal von der «Pest» des Toten zu «reinigen» (vgl. «Religion»). Dann geht man gemeinsam zum Hause des Verstorbenen, das man aber noch nicht betreten darf, ehe der Schamane auch dieses mit den gleichen Mitteln gereinigt hat, mit denen er die Menschen von der «Pest» befreite. Es sind dies Wasser, dem Spezialkräuter und Kuhexkremente zugesetzt sind, das überall hingespritzt wird, sowie Branntwein, der mit Kräutern vermischt, vom Schamanen überall hingeprustet wird.

In Togoima konnten wir an der Bestattung von zwei kleinen Kindern (angelitos) teilnehmen. Die Gräber des Friedhofes dieses Ortes haben sämtlich Ost-West-Richtung. Die Nische ist immer links, der Tote liegt in Rückenlage, mit dem Kopf nach Westen. Die Größe des benötigten Grabes wird mit einem Bambusstab gemessen, der die Länge des Verstorbenen hat. Vor der Beerdigung wird im Hause getrunken, musiziert und

getanzt. Die Musik spielt auch bei der Bestattung und auf dem Wege zum Friedhof.

In dieser Hinsicht unterscheidet sich Calderas von allen anderen mir bekannten Indio- oder Kolonisten-Orten, denn dort wird in keinem Sterbefall musiziert oder getanzt. Beides geschieht beim Tode eines «angelito» aber nicht nur bei den in der Nähe der Kolonisten wohnenden Paez, sondern vor allen Dingen bei den weißen und gemischtfarbenen Kolonisten. So kamen am 1. Januar 1953, bald nach unserer Ankunft im archäologischen Park in San Andrés, zwei kleine Mädchen der Nachbarschaft zu uns und baten, ich möchte doch das «Engelchen» fotografieren. Ich war zunächst ärgerlich, denn kurze Zeit vorher war eine Gruppe von Kindern gekommen, die auf einem blumengeschmückten Tablett eine Puppe von Haus zu Haus trug und sie auch uns als Jesuskind vorstellte, welches Spenden für die am 6. Januar stattfindende Messe sammelte. Die Mädchen sagten mir aber, daß es sich bei dem Engelchen um das verstorbene, zwei Monate alte Kolonistenkind des Nachbarhauses handelte, welches die Mutter schon schön gewaschen und geschmückt hätte. Das Haus lag zwanzig Meter von dem unsrigen entfernt, und schon vor unserer Haustür hörte man die lustige Musik aus dem Nachbarhause, wie wir sie in gleicher Art schon Weihnachten und zur Sylvesterfeier gehört hatten. Im Hause war eine ganze Anzahl von Nachbarn und Verwandten in dem gleichen Raum versammelt, in dem auch das Kind aufgebahrt war. Man lachte, trank, sang und tanzte. Die Kapelle bestand — wie immer — aus einer Guitarre, einer Mandola und Rumbakugeln und wurde von den üblichen Musikanten ausgeführt. Einer von ihnen war der Vater des toten Kindes, ein zweiter dessen Onkel. Verwundert über dieses Treiben, fragte ich die Mutter, ob sie denn nicht etwas traurig wäre über den Verlust ihres Kindes. Sie gab dies zwar zu, sagte aber gleichzeitig, daß ihr Kind jetzt schon ein Engelchen sei, und dies wäre ein Grund zur Freude und zum Tanzen. Ich fragte, bis zu welchem Lebensalter man gestorbene Kinder als «Engelchen» bezeichnet. Man antwortete mir, daß sie, wenn sie noch nicht zwei oder drei Jahre alt wären, Engelchen «sind» und nicht nur so genannt würden. Das kleine Kind, von dem man auch immer nur als von dem Engelchen sprach, lag im Zimmer auf einem Tisch aufgebahrt, um es herum lagen Blumen, an seinem Kopfende stand ein Marienbild, davor vier Kerzen. Die Leute waren von Sylvester her noch nicht ganz nüchtern, und schon wieder kreiste die unvermeidliche Schnapsflasche. Am nächsten Tage fand die Bestattung durch die Verwandten statt. Das Kind war in einen Sarg gelegt worden, der von außen mit Sternen bemalt war. Die weiblichen Anverwandten hatten einen sogenannten «Baldachin» herge-

stellt, eine 2 m hohe Stange, an deren Spitze ein weißer, mit Blumen geschmückter Reif befestigt war, von dem elf bunte Papierbänder herabhingen, deren je eines jeder Teilnehmer trug. Auch ich wurde gebeten, eines zu nehmen, und dann ging es — ohne die Mutter des verstorbenen Kindes — mit Musik zum Friedhof, wo der kleine Sarg noch einmal geöffnet und dann formlos in die Erde gesenkt wurde.

Auch bei den Paez Togoimas wird beim Tode eines Kindes getrunken, getanzt und gesungen, und auch hier nimmt die Mutter an der Beerdigung auf dem Friedhof nicht teil. Die Leiche wird von einer Frau — meist der Patin — in einem kleinen Tragstuhl aus Bambus bei Musikbegleitung von Trommel, Pauke und Flöten zum Bestattungsplatz getragen, wo einige Männer das Grab mit der Seitennische schon ausgeschachtet hatten (Abb. 204 und 207). Das verstorbene Kind hat einige Blumen im Mund. Es wird in ein Tuch gewickelt und in Rückenlage, zusammen mit einem Blumenstrauß, in die Nische gelegt, welche durch die senkrecht nebeneinandergestellten Stäbe des Tragstuhles vom Schacht abgetrennt wurde. Die in die Grube geworfene Erde wird mit Pfählen sehr fest gestampft.

In Calderas geht die Mutter eines zu bestattenden «Engelchens» auch nicht mit auf den Friedhof. Der kleine Leichnam wird von der Patin, nicht in einem Tragstuhl, sondern nur in ein Tuch gehüllt, auf dem Arm getragen.

Die Bestattung der christlichen Indios von San Andrés zeigt in der Form des Grabes Übergänge vom Paez-Nischengrab zur einfachen, rechteckigen Grube der übrigen Christen. Wir nahmen teil an der Bestattung des Capitan, der von seinem betrunkenen Sohn im Streit erstochen worden war. Die Grabrichtung auf dem Friedhof in San Andrés ist immer Ost-West; der Kopf liegt auf der westlichen, im Gelände ansteigenden Seite. Statt einer seitlichen Nische wird am Grunde des Schachtes eine etwa 50 cm tiefe, trapezförmige Eintiefung gegraben, die waagerecht von dicht nebeneinander gelegtem Bambus so bedeckt wird, daß keine Erde herunterfallen kann und der Leichnam praktisch genau so von der darüberliegenden Erde geschützt ist, wie wenn er in einer seitlichen Nische liegen würde (Abb. 206). Man bestätigte mir ausdrücklich, daß man diese Grabform erst seit etwa zwanzig Jahren anwende, und daß man früher regelrechte Nischengräber erstellt hätte. Der Übergangscharakter dieser überdeckten Grube, aus dem Schachtgrab mit Seitennische, wird dadurch noch deutlicher, daß an der Kopfseite der Grube noch eine etwa 30 cm tiefe Nische eingegraben wurde, in die der Capitan ein Stück hineingelegt wurde, «damit wenigstens der Kopf in einer Nische liege».

Der in kolumbianische Kleidung gehüllte Leichnam wurde auf den Schultern zweier Männer auf einer Bahre herangetragen. Diese besteht aus zwei Stangen, welche durch kreuzweis in einem Abstand von 30 cm übereinander gebundene Querstäbe gehalten werden. Die Querstäbe sind paarweise, je oberhalb der einen und unterhalb der anderen Längsstange mit Lianen festgebunden (Abb. 205). Nach der Bestattung wurde die Bahre zerhackt und dann auf dem Friedhof liegen gelassen. Kurz vor dem Hinabsenken des Leichnams verabschieden sich die Familienangehörigen von ihm, indem sie niederknien und eine oder beide Hände vor sich von oben nach unten führen und dabei sagen: «Du gehst jetzt in den Himmel, und wir sehen uns nicht wieder; wir wünschen, daß es dir gut gehe!»

Nachdem der Leichnam hinabgesenkt und mit dem Kopf in die kleine Nische geschoben war, wurde die Bambusbedeckung sehr sorgfältig und dicht darüber gelegt. Dann packte man als Unterstes zunächst die Grasplaggen so lückenlos nebeneinander, wie sie auch auf der Erdoberfläche gelegen hatten. Sodann warfen Familienangehörige und Freunde mit der linken Hand soviele Hände voll Erde ins Grab, als der Betreffende Familienangehörige hat. Gemeinsam füllt man mit den Händen alle übrige Erde in die Grube. Für die Freunde des Verstorbenen ist dies eine Ehre; wer keine Freunde hat, dessen Familienangehörige müssen diese Arbeit selbst vornehmen. Sehr lange und gründlich wird jeweils nach einigen Händen voll Erde die Füllung der Grube mit Baumstämmen festgestampft. Es ist dies eine sehr lang andauernde und eingehende Beschäftigung, und man stampft umso länger, je beliebter der Verstorbene war. Im Falle der Bestattung des Capitan dauerte dies fast zwei Stunden. Durch das sehr feste Einstampfen der Erde hebt sich der Bestattungsplatz von dem umgebenden Gelände weder durch einen regelrechten Grabhügel, noch überhaupt durch eine kleine Erhöhung ab. Als Markierung dient ein Stein von 30-60 cm Größe, der entweder an das Kopf- oder das Fußende des Grabes gesetzt wird.

Während dem Toten keinerlei Beigaben in das Grab mitgegeben und auch keine Opfer verrichtet werden, geschieht dies im darauffolgenden Jahre am 8. Dezember, dem Fest der Inmaculada. An diesem Tag, und jedes Jahr wiederkehrend, opfern die Angehörigen den Geistern (áhimos) ihrer Verstorbenen, die man sich als Wind oder Schatten in ihrem ehemaligen Hause lebend denkt, deren Lieblingsspeisen: Fleisch, Yuca, Kartoffeln, Mais, Chicha, Branntwein, Koka o. a. Diese Gaben werden auf ein Bananenblatt auf dem Fußboden der Kirche niedergelegt, und dazu wird eine Kerze entzündet und daneben gestellt. Die kleinen Kinder bekommen keine Speisen, sondern Blumen als Gaben.

e) Tageslauf

Männer und Frauen verrichten die ihnen gemäßen Arbeiten. Die der Frauen sind am wenigsten abwechslungsreich, da das Essen täglich bereitet und Holz und Wasser zum Kochen bzw. zur Unterhaltung des nächtlichen Feuers regelmäßig herbeigeschafft werden muß. Die Arbeit der Frau ist zudem mehr an das Haus gebunden, während die Männer kürzere oder längere Pausen bei der Arbeit einlegen und dabei die Nachbarn besuchen, bei ihnen Zuckerrohr mahlen helfen und Chicha trinken. Stetigkeit ist ohnehin nicht die Stärke der Paez. Selten nur werden Arbeiten in einem ununterbrochenen Arbeitsgang erledigt, sondern fast immer stellten wir fest, daß die Männer am nächsten Tage mit etwas anderem beschäftigt waren, als am vorherigen. Freilich verlangt auch die Feldarbeit jeweils größere Pausen zwischen dem Roden, Trocknenlassen der umgeschlagenen Bäume, Verbrennen, Errichtung der Zäune aus dem übrig gebliebenen Holz und der Aussaat. Aber auch innerhalb jedes dieser Arbeitsgänge läßt man sich im allgemeinen Zeit. Wohl soll es Leute geben, die mehrere Wochen hindurch, bis zu einem Monat, ununterbrochen beim Roden eines Feldes arbeiten können; ich fand aber immer wieder, daß nach zwei bis vier Tagen Arbeit ein Ruhetag eingelegt wird. An einem Tag wird beispielsweise ein Stück des Feldes von Unkraut gereinigt, am nächsten wird die Zuckerrohrmühle ausgebessert, am übernächsten hilft man dem Nachbarn beim Hausbau oder Zuckerrohr mahlen, dann tut man tagelang gar nichts, weil man betrunken ist, und erst mehrere Tage später geht man dann wieder an das Unkrautjäten. Allerdings lassen sie sich bei einer einmal für den Tag vorgenommenen oder begonnenen Arbeit nicht unterbrechen. Mehrmals kam es vor, daß ich am Abend eine Familie besuchte, um mit ihr irgendetwas, für sie durchaus nichts Unangenehmes, für den nächsten Tag zu verabreden. Wenn diese sich aber schon etwas anderes vorgenommen hatte, mußte ich am übernächsten Tage wiederkommen. Auch auf dem Felde sind die Männer nicht oder nur sehr schwer abzulenken. Bei der Saat, dem Unkrautjäten, der Rodung oder einer anderen Arbeit auf dem Felde ließen sie sich nur während der Kokapausen zu einem Gespräch herbei, sonst konnte man sie bei diesen und ähnlichen Arbeiten, die bei sehr gleichmäßigem Arbeitstempo ausgeführt werden — vorausgesetzt, daß genügend Koka vorhanden ist —, kaum stören. Anders bei den Frauen. Diese lassen sich im Rahmen ihrer täglichen, ohnehin wenig verschiedenartigen häuslichen Arbeiten leicht ablenken. Sie sind es, die eigentlich am meisten innerhalb der Familie arbeiten, da sie, sobald sie verheiratet sind, keine Nacht ganz durchschlafen

können, sondern alle zwei Stunden das Feuer von neuem schüren müssen. Morgens stehen sie zudem früher auf und abends können sie erst später schlafen gehen. Am Tage etwas zu ruhen, ist völlig unbekannt. Trotzdem sind sie mit ihrem Los zufrieden und arbeiten gerne, da ja alle Frauen in der gleichen Art arbeiten und man es seit Generationen nicht anders kennt. Natürlich gibt es Arbeiten, die gerne getan werden und andere, die man weniger gerne tut. Ausschlaggebend scheint das Ziel der notwendigen Betätigung zu sein, denn alle für die Ernährung notwendigen Arbeiten werden gerne getan. So arbeiten die Männer beispielsweise gerne auf dem Feld, «da es für die Nahrung ist», pflanzen gerne Zuckerrohr oder bauen eine Zuckerrohrmühle, «da es zu trinken gibt»; und auch die Frauen schleppen gerne Feuerholz herbei, «da es für das Essen ist». Zu den ausgesprochen unangenehmen Arbeiten gehört bei den Frauen das Wäschewaschen, bei den Männern der Brückenbau. In diesen skizzierten Beispielen scheinen die Geschmäcker aller Paez gleich zu sein.

Während die Männer meist Strohhüte flechten, wenn sie nichts anderes zu tun haben, sind die Frauen mit dem Spinnen, der Herstellung der Kokataschen oder der Fasertaschen beschäftigt. Aber auch dabei wird nicht stetig gearbeitet, in dem Sinne etwa, daß man beispielsweise erst eine Tasche zuende arbeitet oder alle Vorbereitungen zum Weben eines Kleidungsstückes von vornherein trifft, sondern man arbeitet immer einmal ein wenig an jedem Arbeitsstück. Es wird also z. B. erst ein wenig gesponnen, dann Holz geholt, dann an einer Kokatasche gearbeitet und dann setzt man sich vielleicht ein Stündchen an den Webrahmen, um einige Zentimeter am Tragband der Fasertaschen weiter zu weben, sofern gerade Fasermaterial zur Hand ist. Man bereitet nämlich diese Flecht- und Webarbeiten nicht auf lange Sicht vor, sondern besorgt sich Wolle, spinnt sie, webt ein Stückchen weiter und läßt die Arbeit dann wieder eine oder mehrere Wochen hindurch ruhen. Trotzdem kennen die Frauen keine Perioden ausgesprochenen Müßigganges, wie die Männer. Dieses Nichtstun wird bei den Paez mit dem Wort spanischer Herkunft pasnyándo (paseando) bezeichnet. Man darf allerdings das Nichtstun auch nicht übertreiben, d. h. nicht länger als etwa zwei Wochen hintereinander «spazierengehen», denn sonst wird man als «alko» (Hund) bezeichnet, der von Haus zu Haus läuft, überall herumschnuppert und sich von anderen Leuten sein Fressen erbettelt. Es wird dies durch das ungeschriebene Gesetz der Paez begünstigt, einem Hungernden, ganz gleich, wo es sei, zu Essen zu geben, bis er satt ist. Dies wird sehr streng genommen, nicht nur, wenn Erwachsene die Bittsteller sind, sondern auch bei kleinen Kindern, eingedenk eines Vorkommens in der Urzeit, als Chauté eine Anzahl von

Menschen in Steine verwandelte, weil sie einem bittenden kleinen Kinde von ihrem Überfluß nichts zu essen gegeben hatten (vgl. Mythen). Wenn also irgendjemand «pasnyándo» in ein Haus tritt, erhält er zu essen. Besonders jüngere, unverheiratete Leute nutzen dies aus und arbeiten teilweise überhaupt nicht, sondern sie gehen alle Tage in ein anderes Haus. Sie erkundigen sich, wo gerade Zuckerrohr gemahlen wird, helfen dort, bekommen Chicha zu trinken und zu essen und gehen am nächsten Tage woanders hin. So gibt es einige Männer, die weder Haus noch Feld haben, aber doch ganz gut leben. Die Dorfbewohner kennen diese «Spaziergänger» zwar, sagen auch, daß sie Faulpelze seien, die nicht arbeiten; wenn sie dann aber zur Essenszeit kommen, erhalten sie doch ihr Essen und werden meist gerne dabehalten, da sie gut und lustig zu erzählen wissen, überall herumkommen und immer Neuigkeiten mitzuteilen haben. Wenn ein Mann verheiratet ist und Frau und Kinder hat, muß er natürlich sein eigenes Feld bebauen, um seine Familie ernähren zu können. Es gibt jedoch in Calderas auch einen verheirateten «Spaziergänger», der weder ein eigenes Haus noch ein eigenes Feld hat. Er lebt im Hause eines gutmütigen Mannes, dem er auf dem Felde und im Hause hilft. Es wird dies aber als Ausnahme angesehen.

Ein Dank für Gefälligkeiten oder erwiesene Wohltaten, die nach Auffassung der Paez selbstverständlich sind, ist ursprünglich nicht üblich gewesen. Heute bedankt man sich allerdings oft mit einem Dankwort spanischer Herkunft «slopage» (Dios se lo pague), ohne dabei aber das Gefühl einer Dankesschuld, wie gegenüber einem Begüterten oder Höherstehenden zu haben. Es gibt ja innerhalb der Paez-Gemeinschaften keine soziologisch fundierte Obrigkeit, desgleichen fehlt jede Art von Chef oder Brotgeber einer Anzahl von Leuten, die von diesem abhängig und ihm Gehorsam schuldig wären. Man ist deswegen gar nicht gezwungen, irgendjemandem zu gehorchen, den man nicht mag oder etwas zu tun, was man nicht möchte. Dementsprechend fehlt auch dem Ortsfremden und sogar dem Pfarrer gegenüber jeder Respekt, denn wenn die Calderuner sich in ihrem Dorf, «in ihrer Erde» befinden, sieht jeder jeden als gleich an. Nicht zuletzt spricht da auch eine allgemeine Kenntnis der Bewohner untereinander, ihrer Stärken und Schwächen mit, die ein Verstellen, eine unechte, nur von einer Obrigkeit herangetragene Autorität unmöglich macht. Es ist dies ein Grund — vielleicht der Hauptgrund —, weswegen die Calderuner bewußt mit den «Blancos» und deren Autoritäten nichts zu tun haben mögen. Dies aus dem Bewußtsein eigener Inferiorität herleiten zu wollen, hieße den Charakter der Paez völlig verkennen. Ihr Fehlen sozialer Klassen und damit die Unmöglichkeit des Herabblickens auf

den anderen, erklärt die allgemeine Achtung untereinander, die jedem gleichmäßig entgegengebracht wird. Jeder billigt jedem das zu, was er auch für sich ganz selbstverständlich erwartet und beansprucht. Daraus resultiert ein ganz natürliches Selbstgefühl, dessen Verletzung der Paez seitens der «Blancos» als sehr schmerzlich empfindet.

Innerhalb der Paez-Gemeinschaften wird die Pflicht des Grußes (gwéčaya) eines Jüngeren gegenüber einem Älteren streng befolgt. Auch eine «Familienfeindschaft» entbindet die jüngeren Leute nicht von dem respektvollen Gruß «pɛ̨teṅga» (übersetzt mit: «guten Tag») gegenüber den älteren Leuten der anderen Familien, die mit «pɛ̨'taw» danken. Das Abnehmen des Hutes ist dabei nicht üblich. Eine Begrüßung durch Handschlag findet nur unter Familienangehörigen oder gegenüber dem Paten oder der Patin bei dem Gruß «ndyósta utsmṅga» (Pate, wie geht es?) statt, wobei auch der Hut abgenommen wird. Gleichaltrige grüßen sich mit «ɛ̨wča» (wie geht's) und antworten mit «ɛ̨wčataw» (es geht gut). Allgemein unterhält man sich beim Treffen ein wenig, leitet das Gespräch mit einem Witz, einer Neuigkeit im Dorfe ein oder auch nur mit einer Bemerkung über das Wetter.

Wenn der Paez im Grunde als ein Individualist angesehen werden kann, so trifft dies doch nicht generell zu. Wegen des reichlich zur Verfügung stehenden Landes hat er zwar die Möglichkeit, sich abzusondern und sich wochenlang auf sein Einzelgehöft zurückzuziehen, trotzdem trinkt der Paez seine Chicha nicht gerne allein. Und meist helfen Freunde und Nachbarn nicht nur beim Hausbau oder bei der Rodung, sondern auch bei Aussaat oder kleineren Arbeiten. Die Arbeitskraft des Einzelnen bei der gegenseitigen Hilfe ist jedoch nur geliehen, da man sich bei den entsprechenden Arbeiten des Nachbarn wieder zu gemeinsamer Hilfe trifft. Der jeweilige Besitzer muß zu jeder Arbeit auch noch freigiebig Chicha und das Essen zur Verfügung stellen, dadurch ist jede gemeinsame Arbeit ein kleines Fest. Der tatsächliche Nutzeffekt der Gemeinschaftsarbeit ist gering, und man hat als außenstehender Besucher den Eindruck, daß das gemeinsame Essen und Trinken das Primäre sei, unterbrochen von jeweils nur kurzen Perioden der Arbeit. Bei nüchterner Berechnung — die natürlich kein Paez anstellt — kommt der gemeinsame Konsum bei der Gemeinschaftsarbeit den einzelnen teurer zu stehen, als wenn jeder seine erzeugten Produkte für sich alleine, auf einen entsprechend längeren Zeitraum verteilt, für sich verzehren würde. Die Praxis der Gemeinschaftsarbeit und des damit verbundenen gemeinsamen Verzehrens von Essen und Trinken unterstreicht also nicht unbedingt die Notwendigkeit von abgelegenen Einzelgehöften gegenüber einer geschlosenen Dorfanlage.

Aus dem Gesagten über die gemeinsame Arbeit und den damit verbundenen gemeinsamen Konsum ergibt sich, daß bei dieser Methode von Produktion und Konsumtion praktisch niemand große Reichtümer erwerben kann, denn je mehr jemand hat, desto mehr braucht er für die Bewirtung der Helfer. Theoretisch jedoch wäre es leicht möglich, zu Reichtum zu kommen, indem sich beispielsweise ein junger Mann jedes Jahr zusätzlich ein Stück Land zum Anbau von Weizen oder Zuckerrohr rodete und dessen Ertrag für Geld verkaufte oder gegen Pferde oder Kühe eintauschte. Dies müßte er mehrere Jahre hindurch tun, und dann würde sich seine Herde von Kühen und Stuten und damit sein Reichtum von ganz alleine vermehren. Die dazu nötige effektive Arbeit wäre gering. Trotzdem ist dies praktisch nicht möglich; einerseits deswegen, weil die Masse der Paez nicht so weit rechnet und denkt, und andererseits, weil die genügend Intelligenten und Fleißigen dem gefährlichen Neid der übrigen Mitglieder der Gemeinschaft ausgesetzt wären. Die Demokratisierung der Paez-Gemeinschaften begünstigt nicht nur das Gemeinsame, sondern hindert auch die Absonderung von demjenigen, was allen gemeinsam ist — u. a. auch der gemeinsamen Armut.

Man trägt eventuellen Besitz deswegen auch nicht zur Schau. Bezeichnenderweise haben wir erst im Rahmen der Bestandsaufnahme des Viehes, bei Ende unserer Arbeit, erfahren, daß es auch in Calderas so etwas wie reiche Leute gibt. Zu bemerken war dies für den Außenstehenden nicht, da diese Familien sich weder durch Tracht noch durch Lebenshaltung von anderen abheben. Im übrigen gaben sie mir gegenüber ihren Besitz — es handelte sich bei je drei Familien um mehr als zehn Rinder — gar nicht zu. Ich erfuhr es erst mehr oder weniger zufällig durch andere Leute. Einen Grund für das Verschweigen ihres Reichtums konnte ich bei diesen Familien nicht sehen, da sie ja weder irgendwelche Verpflichtungen haben, noch Steuern oder Abgaben zahlen. Eine besondere soziologische Rolle innerhalb ihrer Gemeinschaft spielen sie ebenfalls nicht, denn sie werden weder häufiger noch seltener zu den Dorfämtern gewählt. Sie gelten ganz einfach schon «seit immer» für reich, wobei bemerkt sei, daß es in der Sprache der Paez ein Wort für «reich» oder «arm» gar nicht gibt. Das für «arm» gebrauchte Wort «póre» stammt aus dem Spanischen (povre), und das für «reich» gebrauchte Wort «čáčanas» heißt auch gleichzeitig «stark» im physischen Sinne. Doch trotz dieser offensichtlichen Unwichtigkeit des Reichtums achtet man eifersüchtig darauf, daß kein anderer fleißiger Mann einer armen Familie reich wird und seinen Reichtum möglicherweise — durch kolumbianische Kleidung o. ä. — zur Schau trägt. Die bösen Schamanen würden ihn verzaubern oder vergiften

und die Nachbarn ihm seine Felder verwüsten, indem sie dort ihr Vieh hineintreiben. Er würde von allen geschnitten werden, und in der Trunkenheit würde man mit ihm Streit anfangen, um ihn zu töten. So jedenfalls geschah und geschieht es unserem Dolmetscher Victoriano. Er stammt nicht aus einer reichen Familie, will sich aber durch Fleiß und Tüchtigkeit Geld und Vieh erwerben. Von dem bei den Weißen verdienten Geld hat er sich auch bereits Kleidung der Weißen gekauft, die er nun stolz zur Schau trägt, und an den Festen verkauft er Wachskerzen und Süßigkeiten. Seine Dorfgenossen hassen ihn deswegen. Mehrmals schon mußte ihn der Pfarrer vor den Macheten betrunkener Männer schützen, die mit ihm Streit begonnen hatten, und auch in unserer Gegenwart, wenn wir mit ihm die verschiedenen Häuser besuchten, wurde er gelegentlich von Betrunkenen recht grob angepöbelt. Nicht zuletzt deswegen, weil er nach Auffassung der Calderuner nicht arbeitet. Immer wieder bemühte ich mich, den Leuten zu erklären, daß auch sie mit mir «spazierengehen» und Geld verdienen könnten, sofern auch sie spanisch zu sprechen vermöchten. Da dies nicht der Fall war, blieb mir gar nichts weiter übrig, als nur immer mit Victoriano zu arbeiten. Es half alles nichts: Victoriano wurde immer unbeliebter, und auch ich wurde nur als Nichtstuer angesehen. Von einem Betrunkenen, der statt der einen erhaltenen Zigarette vergeblich ein ganzes Päckchen als Geschenk verlangte, wurde auch ich als ein «alko», als ein Hund geschimpft, der nur immer von Haus zu Haus gehe und nicht arbeite. Ich tat so, als verstünde ich die Worte nicht, machte aber die gleiche Beobachtung, wie auch bei anderen Gelegenheiten von Streitfällen unter Indios, daß nämlich zwei Streitende nicht durch das Dazwischentreten Dritter getrennt werden. Man betrachtet einen Streit vielmehr als eine Angelegenheit der Beteiligten und als interessante Abwechslung im eintönigen Dasein des Tages und beobachtet mit sichtlichem Interesse den Ausgang. Außer dem Eingeborenenwort «alko» haben die Paez interessanterweise kein Schimpfwort in ihrer eigenen Sprache. Das einzige, allerdings in großer Häufigkeit gebrauchte Schimpfwort, ist das spanische «carajo!»

f) Arbeitsteilung zwischen Männern und Frauen

Wie wir an oben Angeführtem gesehen haben, kann das Individuum innerhalb der Paezgemeinschaften auf sich alleine gestellt nicht existieren. Die Männerarbeit wird durch die Frauenarbeit ergänzt und umgekehrt. Beide, Männer und Frauen, sind innerhalb ihrer Daseinsfristung auf ein-

ander angewiesen und selbst zur Bestreitung der primitivsten Lebensbedürfnisse voneinander abhängig. Ein Mann braucht eine Frau, die ihm Kleidung webt, und eine Frau kann kein Feld roden, — um nur ein Beispiel anzuführen. Die traditionellen, auf die Geschlecher bezogenen Arbeiten seien hier noch einmal zusammengefaßt. Dabei sind schon Übergänge zu neueren Lebensformen bemerkbar, so wie sie von den umwohnenden Kolonisten übernommen worden sind.

g) *Feste und Feiern*

Die öffentlichen Gemeinschaftsfeste der Paez, welche im Laufe des Jahres gefeiert und abgehalten werden, finden heute nur zu religiösen Anlässen an den drei Kirchenfeiertagen Semana Santa (Osterwoche), San Juán (24. Juni) und Inmaculada (8. Dezember) statt. Für die Paez sind dies in erster Linie Anlässe zu freudiger Zusammenkunft, um Feuerwerkskörper abzubrennen, um reichlich und ausgiebig zu essen und zu trinken. Ob es früher irgendwelche eigenständigen Feste um Saat und Ernte und den natürlichen Jahreszyklus gegeben hat, ist nicht sicher, und es scheint mir dies nicht einmal wahrscheinlich. Aus den Mythen und erhaltenen eigenständigen Gebräuchen der Paez geht nichts einen ackerbaulichen Lebensrhythmus Auszeichnendes hervor, sondern Religion, Mythologie und zeremonielles Brauchtum sind Reste jägerischer und schamanischer Geisteshaltung. Verständlich wird das Fehlen des zeremoniellen Lebens um Saat und Ernte durch die Möglichkeit, diese zu jeder Jahreszeit vornehmen zu können; eine Übereinstimmung von Jahres- und Wachstumsrhythmus mit einem entsprechenden natürlichen Festzyklus ist nicht gegeben.

Die organisatorische Leitung der Gemeinschaftsfeste hat der jeweilige Gobernador. Die eigentliche Durchführung des Festes, wozu die Bewirtung des ganzen Dorfes und die dazu nötige Gestellung von Essen und Trinken gehört, obliegt den zwei «Fiesteros» und ihren Gehilfen, den «Albaceros» und «Mayordomos». Fiestero zu sein ist eine Ehre, aber auch eine kostspielige Angelegenheit, denn dieses Amt kostet jeden zwei Rinder, die Verpflegung des Dorfes am Festtag und zudem die reichlich auszuteilende Chicha und den Branntwein. Und zwar nicht nur die Chicha, die am Festtage vom Dorf getrunken wird, sondern auch schon diejenige, die die Gehilfen bei der Chichaherstellung vor dem Fest trinken. Selbst wenn ein Fiestero sich schon vor dem Fest monatelang bei den Weißen

verdingt, um Geld zu verdienen, so ist er durch die sich aus dem Fest ergebenden Verbindlichkeiten oft auf Jahre hinaus verschuldet. Trotz der Kostspieligkeit dieses Amtes melden sich die Fiesteros — so wurde mir versichert — immer freiwillig. Gezwungen werden kann ohnehin niemand. Es ist dies aber auch nicht nötig, da immer mehr Anwärter für dieses Amt vorhanden sind als gebraucht werden. Wegen der sehr hohen Kosten kann aber niemand öfter, als insgesamt dreimal Fiestero sein. Diese Zahl ist nicht die absolute Höchstzahl, sondern stellt das sich aus den Vermögensverhältnissen der Paez ergebende normale Maximum dar. Albacero jedoch kann man öfter sein — bis zu zehnmal, wurde mir gesagt —, da dieser zur Bewirtung des Dorfes kein Rind, sondern nur ein Schwein für das Essen am Vorabend des Festes stiftet und die Kosten des Festzubehörs außerhalb der Verpflegung trägt (Schmückung der Kirche, Kerzen, Feuerwerkskörper und die «verrückte Kuh»). Die Mayordomos beteiligen sich nur mit Geldspenden an der Bezahlung des Pfarrers.

Fiestero und Albacero selbst arbeiten nicht, sondern warten nur den Gästen auf. Für die Zubereitung der Speisen haben sie ihre Gehilfen, Männer und Frauen, die freiwillig helfen und am Ende des Festes noch besonders bewirtet werden. Vor allen Dingen das Herbeitragen des Zukkerrohres von den Feldern für die großen Mengen der zu bereitenden Chicha ist eine harte Arbeit, will doch jeder Fiestero die meiste Chicha bereiten, da ein Fest nur dann schön ist, wenn man sich recht lange betrinken kann.

Am Hauptfeiertag der drei im wesentlichen gleichartig gestalteten Jahresfeste beginnen die Frauen im Festhause schon sehr früh mit der Vorbereitung des Festessens. Die Männer finden sich ebenfalls ein, es wird der Chicha kräftig zugesprochen, und die Musikanten spielen bereits vom frühen Morgen an. Nicht mehr ganz nüchtern versammelt man sich zur Messe, die begleitet wird vom Abbrennen der Feuerwerkskörper derer, die vor der Kirchentür geblieben sind. Danach folgt, angeführt von der unaufhörlich spielenden Musik, eine Prozession, ein Umzug um die Kirche mit dem mit Blumen geschmückten Bild des Herrn und denen der Heiligen.

Am Nachmittag ziehen die Fiesteros mit dem Cabildo und einer großen Anzahl Schaulustiger zur Kirche, um dem Pfarrer ein Geschenk an Lebensmitteln, Fleisch, Bananen, Gemüse und Eiern als Dank für die abgehaltene Messe zu überreichen. Danach gehen die beiden Fiesteros mit ihren Albaceros und der Musik durch das Dorf und treffen sich zu einer zeremoniellen Begrüßung vor dem Festhaus. Sie tauschen Branntwein, Chicha und Kerzen aus, wobei jeder dem anderen genau das gleiche gibt,

was er selbst auch empfängt. Nachdem sie sich gegenseitig genügend komplimentiert haben, wenden sie sich an die Umstehenden, halten eine kurze Ansprache, daß sich alle freuen sollen und verteilen alles an die Umstehenden. Bald danach versammeln sich alle auf dem Platz vor der Kirche, wo jetzt die «Vacaloca» angezündet wird. Diese «verrückte Kuh» besteht aus einer Anzahl halbrund gebogener und auf der Unterseite durch Querstäbe zusammengehaltener biegsamer Gerten, die hintereinander befestigt werden, wodurch das Gebilde die Form eines halben Zylinders erhält. Dieser wird mit einem Kuhfell bedeckt und bildet den Rumpf der verrückten Kuh. An dem einen Ende wird ein mit Bast und Zeitungspapier modellierter, möglichst echt wirkender Rinderschädel befestigt und am anderen Ende ein mit Agavefaser umwickelter Stab als Schwanz. Ein kräftiger junger Mann nimmt das Gestell der Kuh auf seine Schultern und dann wird es an den eigens dazu präparierten Stellen an Hörnern und Schwanz angezündet. Während die Musik spielt, läuft der junge Mann im Zickzack über den Platz, wobei sich die Jugend bemüht, die Kuh zu necken, während diese umgekehrt versucht, die Vorwitzigen auf die Hörner zu nehmen. Die Bedeutung dieses Spiels ist den Paez nicht klar. Es hat den Anschein, als handelte es sich um die nicht verstandene Nachahmung eines volkstümlichen Stierkampfes.

Alles geht nun zurück in die Festhäuser, wo die Musikanten auf einer Bank an der Schmalseite des Festhauses Platz genommen haben. Die Frauen hocken in einer großen Gruppe mit ihren Kindern in einer Ecke. Und dann beginnt die Bewirtung, bei welcher jeder, Männer, Frauen und Kinder, soviel essen und trinken kann, wie er vermag, mit Ausnahme allerdings der Fiesteros, die das alleinige Recht des Ausschankes von Chicha und Branntwein haben und sich selbst nicht betrinken, um ihr Amt gut ausüben zu können. Die Festgäste gehen für die Dauer des Festes nicht nach Hause, sondern essen, trinken und schlafen in den Festhäusern, lang hingestreckt auf dem Boden, wo sie sich gerade befinden. Mit mehr oder weniger Intensität — was das Essen und Trinken anbelangt — wird das Fest die ganze Woche hindurch fortgesetzt; arbeiten tut jedenfalls niemand, sondern zieht allenfalls «pasnyándo» von Haus zu Haus.

4. RECHT

Wenn auch das Rechtsleben der Paez, wegen seiner Verwobenheit mit allen Lebensäußerungen, nicht mit einer entwickelten Jurisprudenz zu vergleichen ist, so besitzen sie doch feste, ihren Lebensbedürfnissen ange-

paßte Ordnungen, deren Erhaltung von der gesamten Gemeinschaft gewährleistet wird. Zu diesen Rechtsordnungen gehören die bereits beschriebene politische und Familienorganisation, sowie die Sitten im Lebens- und Tageslauf. Im folgenden seien die Ordnungen des Eigentums, des Erbes und die Auffassungen der Paez über strafbare Handlungen und Strafen beschrieben.

Es gibt in Calderas Gemeindeland und Privatland. Ersteres sind die Ebenen der Flußniederung mit dem Gelände von Kirche, Schule, Gemeindehaus und den Festhäusern, während die Bergabhänge Privatbesitz derjenigen Familien sind, die sie zum ersten Male gerodet haben. An dem Gemeindeland, das im wesentlichen aus Weideland besteht, kann grundsätzlich jeder teilhaben. Hier lassen die Familien ihr Vieh weiden, bauen sich ihre Festhäuser und können sich auch an jeder beliebigen Stelle ein Stück Land abstecken und Wohnhäuser bauen. Letzteres war früher nicht üblich, da man sein eigenes Haus nur auf eigenem Grund und Boden erbaute. Heute wohnen bereits drei Familien, die des Cerbeleón Guagáz, des Clemente Lis und des Agustín Muse, auf Gemeindeland, nahe bei der Kirche und der Schule. Sie haben sich dort ihr Haus erbaut und ein Stück Land abgesteckt, auf welchem sie Gemüse und etwas Zuckerrohr anbauen. Man braucht hierzu niemanden um Erlaubnis zu fragen. Anders ist es bei dem Privatbesitz an den Berghängen. Zwar erbaut niemand sein Haus auf einem Stück Land, das ihm nicht gehört; es kommt aber vor, daß das eigene Land sehr weit abgelegen ist, und da bittet man dann wohl den Besitzer eines in der Nähe liegenden Landstückes um die Erlaubnis («licencia»; span. «behördliche Erlaubnis») zur Anlage eines Feldes für eine Ernte. Oft pflegt dies nicht der Fall zu sein, denn es ist allgemein in jeder Familie genügend Grund und Boden vorhanden. Es haben aber einige Familien erheblich größere Stücke Land als andere, so beispielsweise die Familie Guagáz, die nach meinen Informationen fast die Hälfte allen Privat-Grund und -Bodens besitzt. Die Erlaubnis zur Bodenbenutzung wird nur für Früchte mit kurzer Reifezeit erteilt, also für Weizen, Mais, Bohnen, Kohl, nicht aber für Zuckerrohr, Koka oder Bananen, die mehrere Jahre zur Reife brauchen bzw. jahrelang genutzt werden können. Als Pachtzins erhält der Besitzer einen kleinen Teil der Ernte, die auf dem Halm stehen gelassen wird und die dieser selbst abernten muß.

Grund und Boden kann grundsätzlich nicht verkauft werden, so wurde uns immer wieder gesagt, denn jeder Mann müsse sein Land für seine Söhne hinterlassen. Auch wenn ein Mann keine Söhne hat, darf er sein Land nicht verkaufen, sondern muß es seinen Brüdern übergeben. So lauteten alle Informationen auf meine direkten, diesbezüglichen Fragen.

Praktisch ist es jedoch durchaus möglich, Land zu verkaufen, und es wird dies auch nicht selten getan, nur sieht niemand ein, daß es sich tatsächlich um einen Landverkauf handelt, wenn ein Mann sich ein Stück Land rodet, es bebaut und die gesamte Ernte, einschließlich des Grund und Bodens, gegen ein Rind, ein Pferd o. ä. vertauscht. So machte es beispielsweise auch Victoriano, um ein Pferd zu erwerben. Er rodete und bepflanzte ein Landstück seines Vaters von etwa 2500 Quadratmeter mit Zuckerrohr, und als dies reif war, vertauschte er die Ernte, einschließlich des Landes, gegen eine Stute. Daß damit der Grundsatz, keinen Grund und Boden zu verkaufen, durchbrochen war, wollte niemand einsehen.

Das Land gehört dem Familienvater, der es in der Regel mit seinen erwachsenen Söhnen bewirtschaftet. Wenn die Söhne ihre eigenen Häuser haben, arbeiten sie im allgemeinen weiter mit dem Vater zusammen, da niemand gerne alleine arbeitet. Zur Ernte holen sich die betreffenden Ehefrauen die für ihre Familie benötigte Nahrung vom gemeinsamen Feld. Leben Vater und Sohn nicht in Eintracht, so muß der Sohn sein eigenes Feld mit eigener Ernte anlegen, wozu er sich dann zur Hilfe Freunde nehmen muß. Ihre Bewirtung ist bedeutend teurer, als die Familienhilfe, weil hier die Chicha zur Bewirtung fehlen darf. Aber auch in diesem Falle muß der Sohn den Vater und Besitzer des Familienlandes um Erlaubnis zur Landbebauung bitten. Diese wird allerdings nicht verweigert. Nach der Ernte fällt dieses Landstück, da es ja jetzt etwa zehn Jahre lang brach liegen bleibt, wieder an den Vater zurück, und der Sohn muß im nächsten Jahr den Vater für die Benutzung eines anderen Landstückes erneut um Erlaubnis bitten.

Neben dem Land gehört auch das Wohnhaus, das Menstruationshaus, sämtliche Tiere — einschließlich Hühner und Meerschweinchen —, alles Ackergerät und die Zuckerrohrmühle dem Familienvater. Eigentumsmarken an den Häusern, Feldern und Geräten sind nicht erforderlich, da jeder weiß, wem sie gehören.

Beim Tode des Familienvaters erbt dessen Haus und den Hauptanteil des Viehes der jüngste Sohn. Falls beispielsweise nur eine Kuh vorhanden ist, bekommt er sie. Desgleichen bekommt er alles derzeit bebaute Land. Das unbebaute wird gleichmäßig unter alle Söhne verteilt. Die Witwe, wie auch die Töchter, erben nichts. Erstere lebt dann in ihrem alten Hause weiter in der Familie des jüngsten Sohnes. Daß dieser bei der Verteilung des Erbes so bedeutend besser wegkommt, als die älteren, wird damit erklärt, daß die älteren schon längere Jahre gearbeitet und damit mehr Zeit und Gelegenheit hatten, zu eigenem Besitz zu gelangen. Die Bevorzugung des Jüngsten stelle damit nur einen gewissen Ausgleich dar. Stirbt der Va-

ter jung und hinterläßt er nur einen kleinen Sohn, so verwaltet seine Mutter für ihn den Besitz, bis er etwa 15 Jahre alt ist. Er braucht dann aber noch nicht zu heiraten. Sind mehrere jüngere Söhne vorhanden, so wohnen sie natürlich auch gemeinsam weiterhin im Hause des Vaters.

Abweichende Erbabsichten des Verstorbenen, beispielsweise einem älteren Lieblingssohn mehr zukommen zu lassen oder sein Haus oder Gerät nicht seinem jüngsten Sohn, sondern seinem Bruder zu hinterlassen, sind nicht möglich. Auch wenn ein Vater zehn Töchter und nur einen Sohn hätte und die Töchter alle nicht heirateten, so könnte er diesen doch nichts vererben. In einem solchen Falle würde der einzige Sohn für seine sämtlichen Schwestern mitsorgen müssen, denn Frauen können in einem Hause nicht allein wohnen und zur Landbestellung wären sie allein nicht in der Lage. Hat ein Mann keine Söhne, sondern nur Töchter, so helfen ihm bei der Feldbestellung allgemein die Schwiegersöhne. Vererben kann er ihnen aber nichts. Sein Landbesitz und Gerät bekommt derjenige seiner Brüder, der das Begräbnis ausrichtet, d. h. dem Verstorbenen die Trauerkleidung kauft und Chicha und Essen für die Trauergäste zur Verfügung stellt. Falls der Verstorbene — was kaum vorkommen soll — weder Söhne noch Brüder hat, erbt seinen gesamten Besitz derjenige Dorfbewohner, der das Begräbnis ausrichtet. Die Witwe zieht zu einem ihrer Brüder oder Schwestern oder einem sonstigen Verwandten.

Streitigkeiten und kleinere Vergehen, wie Diebstahl oder Ehebruch, werden innerhalb der Gemeinschaften vom Cabildo abgeurteilt, Mord oder schwere Körperverletzungen von der kolumbianischen staatlichen Justiz. Mord und Totschlag soll es früher nicht gegeben haben, erzählten uns die Alten; sie seien erst eine Folge der «weißen» Einflüsse und der Entmachtung des Cabildo. Man kann dies gut verstehen, denn in Calderas, wo der Dorfrat noch eine gewisse Macht und ein erhebliches Ansehen genießt, wäre es undenkbar, daß der Sohn seinen Vater ersticht. Dies geschah in San Andrés, wo der Cabildo nur noch in der Form von drei im Grunde macht- und ansehenlosen Funktionären existiert und wo die Jugend, durch die Einflüsse der Lebensumstände der weißen Kolonisten, nichts mehr von der alten Zucht und Sitte hält. In San Andrés war es, wo im März 1953 der Sohn des Capitan seinen Vater erstach. Dieser hatte nach dem Tode seiner ersten Frau ein zweites Mal geheiratet, weswegen ihm seine Kinder heftige Vorwürfe machten. Im betrunkenen Zustand kam es zu einer Schlägerei, in deren Verlauf der Vater dem Sohn das rechte Ohr zur Hälfte abschlug und dieser seinen Vater durch mehrere Messerstiche in den Leib tötete. Nach der Tat floh er; da man aber wußte, daß er nur bei Verwandten unterkommen könnte, nahm ihn der Gober-

nador der Ortschaft Lame im Hause seiner Schwester, wo er sich verborgen hielt, nach wenigen Tagen fest. Er wurde gefesselt nach San Andrés gebracht und dem Sindico, der auch gleichzeitig den Posten des Gobernadors inne hatte, übergeben. Dieser, ein älterer Mann im Alter des verstorbenen Capitan, redete auf den Mörder, der einen verschlossenen, fast trotzigen Eindruck machte, längere Zeit ein, hielt ihm das Verwerfliche seiner Tat, des Vatermordes vor, und dann wurde er zur Kirche geführt, in der der tote Capitan aufgebahrt war. Der Sohn sträubte sich zwar heftig, wurde aber gewaltsam vor den Leichnam geführt und brach davor weinend zusammen. Vor seiner Überführung nach Inzá durch zwei Mitglieder des Cabildo von San Andrés, steckten ihm Freunde und Verwandte, auch seine eigenen Familienangehörigen, einige Geldstücke zu, damit er sich im Gefängnis Lebensmittel kaufen könne. Seine Bewacher hinderten niemand daran, wie überhaupt die allgemeine Stimmung für den Mörder bedauernd, aber nicht ungünstig war.

Die in Calderas vom Cabildo verhängten Strafen sind immer Prügelstrafen. Sie wurden früher sehr rigoros durchgeführt. Freiheitsstrafen gibt es nicht. Heute urteilt der Cabildo nur soziale Verfehlungen, Schuldner und Diebstahl von Früchten des Feldes, eines Huhnes oder eines Schafes ab. Pferde- und Rinderdiebstahl wird schon dem Gericht in Inzá zur Ahndung übergeben. Der Geschädigte selbst darf den Übeltäter nicht bestrafen — auch nicht auf frischer Tat —, sondern muß alles dem Cabildo melden. Dort sind Capitan und Gobernador die Richter. Die anderen Mitglieder des Cabildo müssen ebenfalls anwesend sein, sie haben aber kein Stimmrecht. Die Verurteilung geht sehr schnell vonstatten. Der Übeltäter wird in den einen der beiden Räume des Gemeindehauses eingesperrt, und spätestens am nächsten Tage findet die Verhandlung statt. Die Strafsätze stehen fest. Es sind dies Prügelstrafen mit der Peitsche, die sich im Wiederholungsfalle erhöhen. So erhält der Dieb das erste Mal 10 Schläge, beim zweiten Male 20 und beim dritten Male 30 Schläge; bei weiterem Rückfall wird er in den Baumstamm gespannt. Der Diebstahl eines Schafes wird mit 10 Schlägen und dem Ersatz bzw. der Herausgabe des gestohlenen Stückes gestraft. Leugnet der Angeklagte, wird mit einem Mitglied des Cabildo eine Haussuchung durchgeführt. Wird nichts gefunden, muß man ihn wieder freilassen.

Darlehen werden ohne Sicherung bis zu 10 Pesos gegeben, darüber hinaus bekommt der Gläubiger als Sicherheit eine Kuh, ein Pferd, ein Schwein, Weizen oder Zuckerrohr. Man gibt die Darlehen nur bis zu einem Jahr, damit man es nicht vergißt. Zinsen werden nicht erhoben. Wenn der Schuldner nicht zahlen kann, wird ihm eine bestimmte Frist ge-

setzt, wenn er dann nicht bezahlt, wird das Versäumnis dem Cabildo mitgeteilt, der den Schuldigen mit der Peitsche bestraft. Leugnen nützt nichts, denn jedes Darlehensgeschäft wird nur vor Zeugen abgeschlossen. Wenn der Schuldner stirbt, werden die Forderungen des Gläubigers seinem Nachlaß entnommen, beispielsweise ein Machete, Kokabeutel oder Kleidung. Man kann auch Angehörige, beispielsweise Brüder, zur Begleichung der Schulden bitten. Diese sind aber nicht verpflichtet dafür aufzukommen, so daß im Falle eines verstorbenen armen Schuldners der Gläubiger sein Geld meist verloren hat. Verjährung gibt es nicht. Eine vom Schuldner vergessene Schuld kann vom Gläubiger auch nach Jahren noch eingetrieben werden, sofern Zeugen vorhanden sind. Ähnlich ist es beim Diebstahl von Feldfrüchten: Ist kein Zeuge vorhanden, kann niemand verurteilt werden. Ist der Zeuge jedoch als ehrenhaft und nicht lügnerisch bekannt, wird der Angeklagte, auch ohne zu gestehen, verurteilt. Eine dem Eid entsprechende Aussagebekräftigung gibt es nicht, desgleichen hat kein zu Unrecht Verurteilter die Berechtigung, zum Richter nach Inzá zu gehen. Für alle vom Cabildo geahndeten Vergehen ist Capitan und Gobernador die erste und letzte Instanz, wobei diese nicht willkürlich vorgehen, sondern sich weitgehend auf das Herkommen und die Meinung des Dorfes stützen. Dies trifft besonders zu, wenn jemand sich mehrmals hintereinander weigert, an den öffentlichen Arbeiten teilzunehmen; es äußert sich aber — und zwar ungünstig — auch dann, wenn ein armer Mann versucht, aus eigener Kraft zu Reichtum zu kommen. Es brechen nämlich nicht selten unter den Paez Streitigkeiten wegen Flurschadens aus, wenn die Haustiere des einen in die Äcker eines Nachbarn eingebrochen sind. Nun müssen die Zäune um jedes Feld herum immer in einem guten Zustand und entsprechend der Dauer der Benutzung des Feldes angelegt sein. Ein Zaun für ein Maisfeld, das zur Reife nur ein knappes Jahr benötigt, kann also leichter gebaut sein, als ein Zaun um ein Zuckerrohrfeld, das bis zur Reife drei Jahre braucht. Wenn dann fremde Tiere in die Felder mit einer guten Umzäunung einbrechen, kann der Besitzer sie töten oder doch verwunden, indem er beispielsweise einer Kuh den Schwanz abhackt. Schweinebesitzer befestigen ihren Schweinen dreieckförmige Gestelle um den Hals, um sie am Einbrechen in umzäunte Felder zu hindern. Wenn jedoch der Zaun schlecht ist und nicht besonders für das angelegte Feld neu errichtet worden war, hat der Besitzer der in das Feld eindringenden Tiere keine Schuld und der Feldbesitzer darf sie nicht töten. Natürlich ist die Stabilität eines Zaunes in starkem Maße eine Ansichtssache, und es kommt nicht selten vor, daß die Streitenden mit Macheten aufeinander losgehen und sich erheblich verwunden. Der

schuldige Teil wird dann nach Prüfung des Zaunes, gemäß dem Schiedsspruch des Cabildo, bestraft. Zunächst muß Ersatz für das Tier bzw. die zerstörte Feldfrucht geleistet werden, und dann kommt der Schuldige in den «Baumstamm». Es ist dies ein Strafmittel, das früher recht häufig auch in anderen Paez-Gemeinden angewendet wurde. Es besteht eigentlich aus zwei Baumstämmen, in die je zwei Kerben auf den gegenüberliegenden Seiten eingehauen sind. Der Verurteilte wird mit den Füßen in Höhe der Knöchel in diese recht engen Kerben hineingestellt, und dann werden die Baumstämme mit Lianen fest zusammengeschnürt. An dieser Arbeit beteiligen sich alle Mitglieder des Cabildo. Dann werden die zusammengebundenen Baumstämme an der Decke des Ratshauses befestigt, so daß der Verurteilte mit dem Kopf nach unten hängt und die Stämme ganz beträchtlich in das Fleisch einschneiden. Andere Arten der Bestrafung gab es nicht. Das Maß richtete sich nach der Anzahl der Stunden des Hängens, das von einer bis angeblich vierundzwanzig Stunden ausgedehnt wurde.

Die Ungerechtigkeiten gegenüber einem nach Reichtum strebenden Mann äußern sich seitens der neidischen Mitbürger dadurch, daß diese ihr Vieh in dessen gut umzäunte Felder hineintreiben. Dies geschieht so oft, bis der Betreffende keine Neigung mehr verspürt, durch Fleiß und Besitz über andere hinauszuragen. Eine Beschwerde beim Cabildo hat wenig Zweck, da der Gobernador nicht gegen die Meinung des ganzen Dorfes entscheiden kann und sich irgendwo schon eine schwächere Stelle im Zaun nachweisen läßt.

Weitere, nicht seltene Gelegenheiten, in denen der Cabildo als Richter in Tätigkeit treten muß, sind Ehebruch- und Alimentenklagen (s. oben). Um mündliche Beleidigung wird nicht geklagt, wie es dafür auch kein Strafmaß gibt. Man erwidert diese durch entsprechende Ausdrücke. Desgleichen sind unabsichtliche Körperverletzungen, beispielsweise durch einen Machete bei gemeinsamer Arbeit oder auch ein Todesfall beim Baumfällen, straffrei. Nur wenn jemand seinem Nächsten mit einer Gummischleuder bei der Vogeljagd ein Auge ausschösse, würde er bestraft, «aber nicht sehr streng».

IV. Geistige Kultur

1. SPRACHE

NACH A. v. HUMBOLDT werden die Sprachen nach ihrem inhaltlichen und ihrem formalen Element unterschieden und danach die Sprachen in drei Gruppen eingeteilt, die in der Folgezeit irrtümlicherweise auch als Entwicklungsphasen der Sprache gedeutet wurden. Als die älteste Stufe wurden hiernach die isolierenden Sprachen angesehen, welche die Formelemente durch selbständige Wörter mit noch erkennbarer inhaltlicher Bedeutung ausdrücken. Ihre Wörter sind, wie im Chinesischen, einsilbig, isolierend. Die zweite Gruppe bilden die agglutinierenden Sprachen, bei denen das Formelement durch deutlich erkennbare Affixe an das inhaltliche Element, den Stamm, angefügt wird. Hierzu werden besonders die uralaischen und die Bantu-Sprachen gerechnet. Die dritte Stufe nehmen die flektierenden Sprachen ein. Bei ihnen wird das Formelement durch innere Veränderungen des Stammes oder durch mit den Stämmen eng verwachsene Affixe ausgedrückt, wie beispielsweise in den indogermanischen und hamito-semitischen Sprachen.

Wenn auch in der Folgezeit diese Spracheinteilung als Schema einer Entwicklungsreihe aufgegeben wurde, so ist sie doch als ein erste, praktische Orientierung durchaus anwendbar. Für eine genauere Klassifikation einer Sprache ist eine Ausarbeitung der Laut- und Satzlehre erforderlich.

Das Paez ist eine agglutinierende Sprache. Die grammatischen Formen werden durch Aneinanderreihung von Silben gebildet. Die Aussprache ist für den Europäer schwierig. Sie hat Ähnlichkeit mit dem Kechua, von dem es eine Anzahl von Lehnwörtern übernommen hat.

Die ältesten sprachlichen Nachrichten über das Paez stammen von P. Eujenio del Castillo i Orosco, der um 1735 sein Sprachenmaterial als Missionar in Tálaga gesammelt hat. Es wurde 1877 von E. Uricoechea ergänzt und publiziert. Die gesammelten Daten umfassen einen Katechismus, ein Vokabular und eine Grammatik mit den Angaben über Personalpronomen und den Konjugationen von «sein» und «schreiben». Grammatik und Vokabular enthalten teilweise Formen und Wortbildungen, die der ursprünglichen Paez-Sprache fremd sind.

Weitere sprachliche Notizen sind von H. Pittier de Fábrega gesammelt. Es handelt sich um eine Ergänzung des Castillo'schen Vokabulars und um grammatische Daten. Von französischen Missionaren gesammelte Satzbeispiele der Paez von Pitayó veröffentlichte H. Lehmann.

In einer vergleichenden Studie untersuchen H. Beuchat und P. Rivet, basierend auf den oben angegebenen Veröffentlichungen, die sprachliche Einordnung des Paez innerhalb der Sprachgruppen Kolumbiens und ordnen es in die südwestliche der sechs Chibcha-Sprachgruppen ein. (Diese Chibcha sprechenden Stämme entsprechen weder archäologisch noch ethnologisch den eigentlichen Chibcha (Mwiska) der Sabana von Bogota!)

Das im folgenden vorzulegende sprachliche Material ist höchst lückenhaft. Die angegebenen Daten wurden aber meist mehrfach überprüft. Die Schwierigkeiten der sprachlichen Aufnahme lagen, neben der Kürze der zur Verfügung stehenden Zeit, in der fehlenden grammatischen Ausbildung des sonst sehr gut spanisch sprechenden Dolmetschers, der beim Diktat oder bei Übersetzungen den gleichen Satz in der Wiederholung oftmals ganz anders sagte; möglicherweise, weil er ihn so besser übersetzen konnte. Darauf aufmerksam gemacht, war die stereotype Antwort: «So kann man es auch sagen» oder «so sprechen wir halt». Hinzu kam, daß der Dolmetscher die ungewohnte geistige Konzentration für Sprachaufnahmen nur für zwei oder höchstens drei Stunden täglich aufbrachte, verteilt auf Vor- und Nachmittag.

a) Phonetik

Durch die Lage der einzelnen Ortschaften in abgeschlossenen Tälern bedingt, schwankt die Aussprache geringfügig von Ort zu Ort. Da bei der Sammlung der ethnologischen Daten von den Paez von Calderas ausgegangen wurde, ist auch das folgende Wörterverzeichnis mit meinem Calderuner Dolmetscher Victoriano Piñakuē aufgenommen worden.

Im Paez-Alphabet fällt die vollständige Palatalreihe auf, die alle Konsonanten umfaßt. Fast genau so zahlreich sind die Konsonantverbindungen mit englisch w. In der Transkription der Paez-Worte wurde von der spanischen Schreibweise abgewichen und folgendes Alphabet verwandt:

'	«glottal stop», wie im Deutschen ab'ändern
˜	nasaler Vokal
a	kurzes a, wie deutsch Ball
ā	langes a, wie deutsch schmal
ai	kein Diphtong, a+i wie Paez áimę (Stern), ohne «glottal stop»
b	immer stimmhaft, wie deutsch Baum
bw	b mit englisch w
by	palatalisiertes b
č	spanisch oder englisch ch, deutsch tsch
čy	palatalisiertes č
ç	dentaler ch-Laut, wie deutsch ich
d	immer stimmhaft, wie deutsch dumm, englisch and
dy	palatalisiertes d

e geschlossenes e, wie in deutsch Schnee, aber kurz
ē geschlossenes e, wie deutsch Schnee
ę offenes e, wie deutsch wenn, hätte
ę̄ offenes, langes e, wie deutsch Schäfer
ě (ə) zentralisiertes e, wie deutsch gern
ei kein Diphtong, e+i wie Paez néi (Vater), ohne «glottal stop»
f dentilabial, wie deutsch fein
g immer stimmhaft, wie deutsch gut, englisch pig
gw g mit englisch w
gy palatalisiertes g
h starkes h, zwischen h und ch in deutsch ach
hw h mit englisch w
hy palatalisiertes h
i kurzes i, wie deutsch wie, aber kurz
ī langes i, wie deutsch nie
k nicht aspiriert, wie im Deutschen
kw k mit englisch w
ky palatalisiertes k
l wie deutsch laufen; bei Lehnwörtern aus dem Spanischen für r verwandt
ly palatalisiertes l
m wie deutsch mein
mw m mit englisch w
my palatalisiertes m
n wie deutsch nur
nw n und englisch w
ny wie spanisch ñ, französisch gn
ṅ velares n, wie ng in deutsch singen
ṅw ṅ und englisch w
ṅy palatalisiertes ṅ
o kurzes, geschlossenes o, nicht näher festgestellt
ǫ offenes o, nicht näher festgestellt
ō langes, geschlossenes o, wie deutsch Not
oi kein Diphtong, o+i wie Paez ói (Frau), ohne «glottal stop»
p ohne Aspirierung, wie deutsch Paul
pw p mit englisch w
py palatalisiertes p
r nur selten in spanischen Wörtern, soweit dafür kein l gesprochen wird
s immer stimmlos, wie deutsch lassen
sy palatalisiertes s
ł sch wie deutsch schon
łw s mit englisch w
ły palatalisiertes ł
t ohne Aspirierung, wie deutsch Ton
ts wie z in deutsch zwei
tw t mit englisch w
ty palatalisiertes t
u wie im Deutschen gut; ist oft von einem o schwer zu unterscheiden
v dentilabiales v, wie deutsch warm
vy palatalisiertes v
w Halbvokal, wie englisch w
y Halbvokal, wie englisch York

z stimmhaftes s, wie deutsch Rose

zy palatalisiertes z

Die Konsonanten und Halbvokale im Paez sind die folgenden:

	Explosive fortes	Explosive lenes	Frikative fortes	Frikative lenes	Affrikate fortes	Affrikate lenes	Liquide	Nasale	Halbvokale
Hauch	'			h					
Velare -"- (palatal)	k ky	g gy						ṅ	
Palatale	ty	dy	hy ç		č čy		ly	ṅg ny-ñ	y
Alveolare -"- (palatal)	t	d	s sy	z zy	ts		l	n	
Alveolare mit Rausch -"- (palatal)			ł ły						
Labio-dentale -"- (palatal)			f	v vy					
Bilabiale -"- (palatal,	p py	p by						m my	w

Die Vokale sind die folgenden:

a, ā, ai, ę, ę̄, e, ē, ĕ (=ə), ei, i, ī, (ǫ), o, ō, oi, u.

Die Aussprache von ǫ und o wurde nicht genau genug beobachtet, desgleichen war die Aussprache bei o und u bei den verschiedenen Personen schwankend und schwierig zu unterscheiden. Ai, ei und oi sind keine Diphtonge, sondern werden getrennt gesprochen, jedoch ohne «glottal stop». Nicht immer eindeutig ist die Aussprache von ty und ky, z. B. tyita «Webschwert». Vor manchen mit b anlautenden Wörtern ist ein m zu hören, z. B. bei bāts (mbāts) «Agavefaser». Auch bei mit b anlautenden spanischen Lehnwörtern wird gerne ein m davor gesetzt. So wurde von den spanisch sprechenden Paez statt véal immer mbę̄l gesagt. Das ursprüngliche Paez-Alphabet enthält kein r; bei spanischen Lehnwörtern wird statt dessen ein l gesprochen, z. B. trapiče = lapiče, horno = olno, nuestro Señor Jesucristo = nuestlo Senyol Hesuklisto. Schwierigkeiten

macht eine Anzahl von Wörtern, die dem Fremden zunächst völlig gleichlautend erscheinen, sich in Wirklichkeit aber — außer durch den Zusammenhang — durch minimale Nasalunterschiede in der Aussprache unterscheiden. So heißt z. B. atç «ich», «heute», «Ruana» und «Grabstock».

Die Betonung ist durch einen Akzent (') oder durch ein Dehnungszeichen angegeben. Wörter ohne Betonungszeichen werden auf der vorletzten Silbe betont. Ein Akzent (') zwischen Vokal und folgendem Konsonanten hat Lautwert und kennzeichnet einen «glottal stop» (Kehlkopfverschlußlaut).

b) Grammatik

Das *Substantiv:* Einen *Artikel* gibt es nicht. Das Genus wird bei Wörtern für Sachen und Pflanzen nicht unterschieden. Bei Menschen und Tieren tritt eine solche Unterscheidung nur in Ausnahmefällen ein, denn die Terminologie der Menschen nach Geschlecht und Lebensalter bzw. -umständen durch spezielle Worte ist derart reich, daß besondere Bezeichnungen für das Geschlecht im allgemeinen nicht erforderlich sind (vgl. die Verwandtschaftsnomenklatur im Abschnitt «Familienorganisation»). Die Unterscheidung ist nicht nur bei Menschen so genau, sondern es wird z. B. auch der Mais mit völlig verschiedenen Wörtern bezeichnet, je nachdem, ob er reif ist, oder noch grün (kotç bzw. tsot). Zu einer dennoch notwendigen näheren Unterscheidung werden die Suffixe -pits (Mann) für das männliche Geschlecht und -ói (Frau) für das weibliche Geschlecht angewandt, z. B. éčpits «Witwer», éčoi «Witwe». Allgemein sind dies aber künstliche Unterscheidungen, die vorwiegend für Lehnwörter benutzt werden. Dabei geht man vom Allgemeinen oder Typischen aus. So ist átaly das «Huhn», und erst der Hahn wird als Spezielles aufgefaßt und mit dem Suffix -pits (atályepítstę) vom Huhn unterschieden. Das «Pferd» wird als Allgemeines aufgefaßt und als hímba bezeichnet, die speziellen Unterscheidungen sind himbapítstę «Hengst» und himbaóitę «Stute». Außerdem wird das Wort lečkwe (Kind) als Suffix zur Bezeichnung kleiner Lebewesen oder kleiner Sachen angehängt, z. B. luč «Kind», lučléčkwę «kleines Kind»; hímba «Pferd», himbaléčkwę «Fohlen»; átaly «Huhn», atályeléčkwę «Küken»; yat «Haus», yatléčkwę «kleines Haus»; witóñ «Baum», wítoñléčkwę «kleiner Baum».

Bei den *Verwandtschaftsnomen* gibt es zur Bezeichnung der weiblichen Verwandten das Präfix pę-, z. B. pętsots «Vaterschwester», pęnyok «Mutterschwester», «Stiefmutter», «Mutterbruders Frau». Innerhalb der Familie wird mit dem Präfix pę- ein *Dual* bezeichnet, z. B. pětām «Vater

und Mutter gemeinsam», pěndyík «Vater und Sohn gemeinsam» oder «Mutter und Sohn gemeinsam», pěndyis «Vater und Tochter gemeinsam» oder «Mutter und Tochter gemeinsam».

Das Suffix -nas kennzeichnet oft einen Zustand oder eine Tätigkeit und wird vorwiegend zur Bildung neuer Wörter verwandt: fisnās «Schreiber», ātycatynās «Schneider», yāsnās «Täufer» (Namengeber), pāsnās «Fremder, Ankommender», ká'nas «Bürgermeister», ndōsoknās «Hebamme», gnās «Jungfrau». «Sich betrinken» heißt toṅ, der «Betrunkene» tónas, ein «sich Betrinkender» tónyę. Die Formen tátyinas «Schöpfer» und tótenas «Gobernador» werden nur im Satz gebraucht. Als Einzelwort sagt man tákiyi bzw. tótens. Möglicherweise ist die Endung -nas nur eine in bestimmtem Zusammenhang gebrauchte, ähnlich, wie die nicht selten anzutreffenden Suffixe -pas und -sa. Von den Adjektiven enden einige im Positiv, andere im Komparativ auf -nas: čačanas (stark), waç nyíčkwęnas (schöner), waç ǵwnas (besser).

Einen allgemeinen *Plural* gibt es nicht. Zur näheren Bezeichnung wird entweder eine Zahl oder ein Indeterminativpronomen dazugesetzt, z. B. teč «eins», oder in der Mehrzahl ǵ'nzi «beide» (von ǵ'nz «zwei»), ko «mehrere», tak «viele». Als Personenplural wird teilweise das Suffix -weł benutzt, z. B. pítstewel «Menschen», Mogwel Stamm der Guambianos, čí'mewel «Weiße» (či'me = weiß).

Eine *Deklination* gibt es nicht. Die Satzstellung ist allgemein: Subjekt, Objekt, Prädikat. Der Nominativ ist nur aus seiner Stellung am Anfang des Satzes zu ersehen. Der Akkusativ steht nach dem Nominativ und allgemein vor dem Verb.

Atya na himbása vítępitsna óson «ich dieses Pferd diesem Mann gebe», ātya táwas tyaóinat ípak «ich den Gürtel (taw) von dieser Frau (ói) erhielt», kwéła élpas kyéhi óratępa óṅwetáw «wir Koka zu jeder Stunde essen», čōosoṅ pítstęčāta mahē, yátdę oíčāta mahē «im Feld Männer nur arbeiten, im Haus Frauen nur arbeiten», pálkitę táwala kíma ōsya «im Park viele Sandflöhe es gibt», aber: ātya evít kyákulása «ich verlor diese Kuh» (kula = Kuh), ātya pákan teč pęsnye «ich erhalte ein Geschenk».

Der *Genitiv* wird durch Voranstellung vor das Subjekt ausgedrückt. Pítstę łwáa «der Hut des Mannes» (łwa = Hut), ói táwa «der Gürtel der Frau» (taw = Gürtel), pítstę álko «der Hund des Mannes», tótęnas nyó «die Frau des Gobernadors».

Die *Negation* wird allgemein durch męt ausgedrückt, z. B. hip męt «ich habe nicht»; ṅéndya «mögen», ṅéndyi męt «nicht mögen»; ātya uwęt «ich habe Hunger», ātya ūwęmęt «ich habe keinen Hunger»; ātya teč nyákča hipt «ich einen Bruder habe» (Bruder = yactę), ātya teč nyákča

hip mę «ich habe einen Bruder nicht»; ātya teč pę́lča nyópa «ich eine Schwester nicht habe» (Schwester = pęl; «nyópa» wurde mir ebenfalls als «nicht haben» übersetzt).

Adjektive: Im Paez werden die Adjektive nachgestellt und nach Geschlecht und Zahl nicht verändert: yat īl «das alte Haus», pits īl «der alte Mann». Die Bedeutung der Adjektive ist teilweise differenzierter als im Deutschen, z. B. «stark»: pītstę čačat «der starke Mann», hímba čačāt «das starke Pferd», aber: mbę́ka pōs «die starke Chicha». Für «dick» werden folgende Adjektive verwandt: pítstę nyīl «der dicke Mann»; víton hōt «der dicke Baum». Desgleichen gibt es verschiedene Worte für jung oder alt, je nachdem es sich um Männer oder Frauen handelt.

Steigerungen werden durch waç «mehr» ausgedrückt: hímba ę́w «das gute Pferd», hímba waç ę́wnas «das bessere Pferd»; ói nyíčkwę «die schöne Frau», ói waç nyíčkwęnas «die schönere Frau»; ganl «häßlich», waç ganl «häßlicher»; wéča «wenig», waç wę́ «weniger».

Numeralia: Die Grundzahlen und Ordnungszahlen sind gleich. Das dezimale Zählsystem ist auf dem Zählen mit den Fingern aufgebaut. Die Zahlen sechs bis neun sind Zusammensetzungen mit «sáki» (sechs), wobei sieben als «sechs und zwei», acht als «sechs und drei» gebildet wird. Über zehn wird nicht gezählt. Für «sehr viele» wird im Paez «teč kwat» gesagt, wörtlich «ein Stein». Heute hat es die Bedeutung von «hundert».

1 teč	7 é'nzsáki
2 é'nz	8 téksaki
3 tek	9 pánssaki
4 pans	10 kosę́mba
5 tats	(wörtlich kóse pémba
6 sáki oder téčsaki	«Hände zuende»)

Pronomen: Die *Personalpronomen* sind für die Konjugation absolut notwendig. Sie werden vorangestellt. In der 1. Pers Sing. wird ausnahmslos nach mask. und fem. unterschieden, in der 2. Pers. Sing. nur in besonderen Fällen. Diese Fälle sind die Anreden von Ehegatten untereinander, von Geschwistern untereinander und Anreden an Respektspersonen. Sonst wird nach dem Geschlecht weder in der 2. Pers. Sing. noch bei anderen Formen des Singular und Plural unterschieden.

ich (mask.): atç; in der Verbindung mit dem Verb: ātya; bei den Konjugationen wird oft das Suffix -pa «auch» an die Personalpronomen angehängt: ātypa «ich auch»,

ich (fem.): ōk

du (mask. und fem.): inç. Jugendliche reden Ältere weder mit «inç» noch mit deren Namen an. Bei Männern müssen sie sich vorher nach dem Namen von dessen Sohn erkundigen (wenn nicht vorhanden: dessen Tochter) und reden ihn dann mit «Vater des ...» an. Falls der Betreffende keine Kinder hat, redet man ihn wie unter Gleichaltrigen mit dem Vornamen an, «da ein Mann, der keine Kinder hat, kein Mann ist». Ältere Frauen werden respektvoll mit «ïkf» angeredet.

du (Vater oder Mutter zum Sohn):	kwę
du (Vater oder Mutter zur Tochter):	ſča
du (Ehefrau zum Ehemann):	ſngya
du (Ehemann zur Ehefrau):	ſkwę
du (Bruder zum Bruder bzw. Schwester zur Schwester):	yaktę́
du (Bruder zur Schwester):	pę'ï
du (Schwester zum Bruder):	ndyïł
Sie (fem):	ïkf, respektvolle Anrede für ältere Frauen
er, sie es:	kya
wir (mask. und fem.):	kweł
sie (mask. und fem.):	kyáńweł

ihr: nicht bekannt; in der sinngemäßen Übersetzung wurde manchmal das Wort çúkai (alle) benutzt. In der Grammatik von Castillo i Orosco wird für «vosotros» das Paezwort «icuexs» (ikweł) angegeben. Dieses übersetzte mir der Dolmetscher mit «Ustedes». Zur Konjugation der Verben wird es nicht benutzt.

Die *Possessivpronomen* entsprechen — außer in der 3. Pers. Sing. — den Personalpronomen. Sie werden vorangestellt.

Die maskulinen Formen sind:			Die femininen Formen sind:		
mein Pferd	ätç	himba	mein Gürtel	ök	táwa
dein Pferd	inç	himba	dein Gürtel	inç	táwa
sein Pferd	kyeç	himba	ihr Gürtel	kyeç	táwa
unser Pferd	kweł	himba	unser Gürtel	kweł	táwa
ihr Pferd	kyáńweł	himba	ihr Gürtel	kyáńweł	táwa

Die *Demonstrativpronomen* sind: «na» (dieser, diese, dieses) und wítę (wörtl. «das andere») in Verbindung mit dem vorangestellten oder

nachgestellten «na» im Sinne von «jener, jene, jenes». Na ãtç «diese Ruana», wítęna ãtç «jene Ruana»; na hímba «dieses Pferd», wíte hímbana «jenes Pferd». Teilweise wird als Demonstrativpronomen die 3. Pers. Sing. des Personalpronomen benutzt (kya).

Als *Interrogativpronomen* hat «ma» die Bedeutung von «welcher, welche, welches» und «wieviele». Ma hímba «welches Pferd» ma hímbanang inç uwáy «welches Pferd hast du gekauft»; ma pits «welcher Mann», ma pítsnang inç ói «welchen Mann hast du gesehen»; ma ãtç «welche Ruana», ma ãtynak kya om «welche Ruana hat sie gewebt»; ma ói «welche Frau», ma óiwel twétsyo «welche Frauen laufen dort», mãnstyin «wieviele», mans vyó hípong «wieviel Geld hast du».

Indeterminativpronomen sind:

alle:	çúcai; çúcai pits «alle Männer», çúcai ói «alle Frauen»;
jeder:	tečteč (vgl. 1 = teč);
beide:	ę́'nzi (vgl. 2 = é'nz); é'nzi pits «beide Männer», ę́'nzi ói «beide Frauen»;
genug:	ãhna; ãhna vyó «genug Geld»;
irgendwer:	mãpa
niemand:	tẽčanyópa; tẽčanyópa máhimę́ta «niemand arbeitet»;
mehrere, verschiedene:	ko; ãtya ko hímba hipt «ich mehrere Pferde habe»;
viele:	tak; tak násа «viele Menschen»;
wenig:	wę́; sehr wénig: táwala wę́ha.

Verben: Die Nennformen der Tätigkeitswörter enden auf -ya. Die einzigen über das Konjugationssystem bisher veröfftenlichten Angaben finden sich bei Castillo i Orosco, der das Verbum «schreiben» in allen Paradigmen nach der lateinischen Grammatik konjugiert. Wortbildung des Musterzeitwortes, wie auch die Konjugation, sind künstlich und auf den Unterricht an Missionsschulen angelegt. In Calderas wird nicht so gesprochen.

Die im folgenden angegebenen Konjugationen einiger Verben stellen nicht alle Konjugationsmöglichkeiten dar, da — wie erwähnt — dem Dolmetscher die Kenntnis der spanischen Grammatik fehlte. Das Schema der Paradigmen ist deswegen weitgehend theoretisch. Gesprochen wird in der Umgangssprache anders, und besonders in der Erzählung verwandte der Dolmetscher Formen, die er im Spanischen mit Partizipialkonstruktionen wiedergab. Dennoch sind die hier wiedergegebenen For-

men «richtig» in dem Sinne, daß man so sprechen «kann» und bei Anwendung der Formen verstanden wird.

Neben den hier wiedergegebenen vier Zeitformen (Präsens, Futur und zwei Formen des Perfekts) gibt es wahrscheinlich auch dem Konjunktiv entsprechende Formen, die der Dolmetscher in spanisch aber weder verstand, noch wiedergeben konnte. Die Formen des Futurum werden nicht immer gebraucht. Sehr oft verwendet man das Präsens mit dem Zusatz «morgen» oder «später», z. B. ãtya gwágwan kúskay «ich spreche morgen» statt ãtya gwágwahípt «ich werde sprechen». Die Formen der beiden Vergangenheiten werden scheinbar willkürlich gebraucht. Auf diesbezügliche Fragen bekam ich immer nur die Antwort «man kann es so und auch so sagen». Auch hier ist allgemein der Zusatz óṅna «gestern» (im Zusammenhang: óṅnaha) oder esę «vor einiger Zeit» üblich.

Das abstrakte Hintereinander-Aufzählen der Formen einer Konjugation ist den Paez kaum möglich. Immer mußte ich Beispiele leicht faßlicher Art abfragen. Waren diese außerhalb des eben besprochenen Zusammenhanges, wurde ich oftmals aufgefordert, selbst die entsprechende Form zu bilden, was mir zur freudigen Überraschung der Paez jeweils an Hand meiner Musterbeispiele gelang. Ihre Bestätigung jedenfalls, «man kann es auch so sagen» erlaubt mir die Niederschrift der folgenden Paradigmen. Phonetische Unstimmigkeiten werden bewußt beibehalten, z. B. in der 2. Pers. Sing. die Endungen -eg und -eng, in der 3. Pers. Pl. die Endungen -yin oder yen. Im Präsens sind die 1. und 3. Pers. Sing. im allgemeinen gleich. Die zu allen Formen dazugehörenden Personalpronomen stehen vor dem Verb. Die feminine Form der 1. Pers. Sing. und die verschiedenen Formen der 2. Pers. Sing. wurden bei den Musterverben zugunsten der einfachen maskulinen Formen weggelassen.

õpya «leben»

Präsens:	ãtya õpon		*Futur:*	ãtya apohípt	
	inç õponeṅg			inç opohípeneṅg	
	kya õpon			kya opohípa	
	kweł õpontkaw			kweł opohíptaw	
	kyáṅweł õpotyin			kyáṅweł opohíptyin	
Perfekt:	ãtya õpokot	oder:	óṅnast	(óṅnaha)	
	inç õpoing	oder:	opnásiṅg	(óṅnaha)	
	kya õpok	oder:	óṅnasa	(óṅnaha)	
	kweł õpotaw	oder:	óṅnastaw	(óṅnaha)	
	kyáṅweł õpotç	oder:	óṅnastyin	(óṅnaha)	

Entsprechend wird óhoya «gehen» konjugiert, also

Präsens:	ātya óhon	*Futur:*	ātya ohohípt
	inç óhoneg		inç ohohípeneńg
	kya óhon		kya ohohípa
	kweł óhontkaw		kweł ohohíptaw
	kyáńweł óhoyen		kyáńweł ohohíptyin

Perfekt:	ātya óhokot	oder:	óhonast	(ęsę́)
	inç óhoing	oder:	ohonásińg	(ęsę́)
	kya óhok	oder:	ohonása	(ęsę́)
	kweł óhotaw	oder:	ohonástaw	(ęsę́)
	kyáńweł óhotç	oder:	ohonástyin	(ęsę́)

Entsprechend wird ústya «geben» konjugiert: Präsens: átya úson, inç úsoneńg, usw.

gwábya «sprechen»; hier verwandelt sich in der Konjugation das «b» in «g»:

Präsens:	ātya gwágwan	*Perfekt:*		
	inç gwágwaneńg, usw.		ātya gwágwakot	(óńnaha)
(bei anderer Gelegenheit wurde mir jedoch für «ich spreche» átya gwábal genannt).			inç gwáving	(óńnaha)
			kya gwáok	(óńnaha)
			kweł gwáotaw	(óńnaha)
Futur:	ātya gwágwahípt		kyáńweł gwáotç	(óńnaha)
	inç gwágwahípeneńg			
	usw.			

Im Futur und Perfekt etwas abweichend wird básya «antworten» konjugiert:

Präsens:	ātya báson	*Futur:*	ātya basohípt
	inç básoneg		inç básmańg
	kya báson		kya básmak
	kweł básontkaw		kweł básĕntaw
	kyáńweł básotyin		kyáńweł básmatç

Perfekt:	ātya bást	(ęsę́)
	inç básińg	(ęsę́)
	kya básk	(ęsę́)
	kweł bástaw	(ęsę́)
	kyáńweł bástç	(ęsę́)

Ähnlich píyeya «lernen»:

Präsens:	ātya píya'n	*Futur:*	ātya piyahípt
	inç piyáneṅg		inç píymaṅg
	kya piyán		kya píymak
	kweł piyántkaw		kweł píyĕmtaw
	kyáṅweł piyátyin		kyáṅweł píymatç

Perfekt: ātya píyt (óṅnaha)
inç píyiṅg (óṅnaha)
kya píyik (óṅnaha)
kweł píyĕtaw (óṅnaha)
kyáṅweł píyitç (óṅnaha)

«Sein» als Hilfsverb ist nicht bekannt, sondern nur ōsya als Verb im Sinne von «sich befinden».

Präsens:		*Futur:*
ich bin in Calderas	ātya Caldelaste ōst	ātya ōsohípt
du bist in Calderas	ínçpa Caldelaste ōsiṅg	inç ōsohípenen
er ist in Calderas	kyápa Caldelaste ōsĕn	kya ōsohípa
wir sind in Calderas	kwéłpa Caldelaste ōstaw	kweł ōsohíptaw
sie sind in Calderas	kyáṅwełpa Caldelaste ōstyin	kyáṅweł ōsohíptyin

Perfekt:	ātya ōsot	oder:	ōsnast
	inç ōsoing	oder:	ōsnasiṅg
	kya ōsok	oder:	ōsnasa
	kweł ōsotaw	oder:	ōsnastaw
	kyáṅweł ōsotç	oder:	ōsnastyin

Ohne Hilfsverb werden gebildet:

ich bin stark:	ātya čáčat	ich bin müde:	ātya wátyt
du bist stark:	inç čáčaing	du bist müde:	inç wátyenen
er ist stark:	kya čáča	er ist müde:	kya wátyin
wir sind stark:	kweł čáčataw	wir sind müde:	kweł wátytau
sie sind stark:	kyáṅweł čáčatyin	sie sind müde:	kyáṅweł wátytyin

Als Hilfsverb dient «haben» hípoya, das normal konjugiert wird:

Präsens:	ich habe	Flöhe	ātya pá'pa hīpt
	du hast	Flöhe	inçpa pá'pa hípĕneṅg
	er hat	Flöhe	kyápa pá'pa hípĕnen
	wir haben	Flöhe	kwéłpa pá'pa híptaw
	sie haben	Flöhe	kyáṅwełpa pa'pa híptyin

Futur:	ātya hípohīpt	*Perfekt:*	ātya hípokot
	inç hípohípeneṅg		inç híponiṅg
	kya hípohípa		kya híponeḳ
	kweł hípohíptaw		kweł hípoktaw
	kyáṅweł hípohítyin		kyáṅweł hípokotç

Entsprechend wird konjugiert:

ich habe Wasser: ātya yó hipt
inç yó hípĕneṅg, usw.

c) *Vokabular deutsch — paez*

Ader	wétsę (cf. Wurzel)

Uebersetzung

Der Menschenjaguar

Ein Mann war ein Menschenjaguar. Er ging in die Berge, um zu jagen. Beim Gehen trug er ein Messer in der Hand. Um sich auszuruhen, setzte er sich mitten auf den Berg, der sich da befand.

Da kam ein Pijao, der Mitglied des Cabildo war, mit seinem goldenen Würdestab. Er setzte den Goldstab auf den Boden. Dann entzündete er ein Feuer. Holz schichtete er zu einem Stapel aufeinander. Dann zog er aus der Achselhöhle Feuer hervor. Dann entzündete er es.

Der Menschenjaguar bemerkte, daß der, der da ging, ein Pijao war, ein Mitglied des Cabildo. Es war ein Mitglied von geringem Rang, so bemerkte er. Dann trug (der Pijao) Bananen herbei, und eine Schlange trug er herbei. Diese Bananen briet er im entzündeten Feuer. Ebenso briet er die Schlange. Kurz darauf zischte die Schlange. tsẽ.

Der Menschenjaguar überlegte, wie er diesen Stab in die Hand bekommen könnte. Mit einem Messer in der Hand sprang der Menschenjaguar plötzlich los. Er sprang auf den Pijao los, um dessen Stab in die Hand zu nehmen. So überlegte er, als er auf den Pijao lossprang. Der Pijao jedoch unterbrach das Essen der Bananen. Er ergriff seinen Stab und lief davon, ohne zu essen.

Den Stab hielt er in der Hand, so fing er an zu laufen. Dann lief der Menschenjaguar hinter dem Pijao her. Fast tötete er den Pijao. Dieser ließ seinen Stab nicht los, während er lief. Er fiel hin, seinen Stab ließ er nicht los.

Es waren drei Stunden voll, solange lief er. Als drei Stunden zu Ende waren, kamen sie an einen Felsen. Dann verwandelte sich der Jaguar auf dem Felsen in einen Menschen und setzte sich nieder. Der Pijao stieg vom Felsen herab und ging zu einer großen Ebene. Er ging in sein Haus.

Nach einem Augenblick gehen die Pijaos heraus und kommen gelaufen, um diesen Jaguar zu ergreifen. Darauf verwandelte sich der Menschenjaguar ein anderes Mal in einen Jaguar und kehrt zurück und läuft weg. Drei volle Stunden (lief er zurück). Die gebratene Schlange lag auf der Erde, als er zurückkam.

Als er zurückkam, sah er die Schlange an ihrem Platz. Dann verwandelte er sich in einen Menschen zurück. Auch die Fasertasche war da. Auch die Bananen waren da. Die Schlange mit Wasser gefüllt (d. h. halb gar, noch wässerig) war da.

Es wurde Nachmittag, als er in sein Haus ging. Die Tasche brachte er seiner Frau. Er kam mit dieser Tasche zu seiner Frau. Als er angeklopft hatte, trat er ein.

1. ORIENTIERUNG UND ALLGEMEINE KENNTNISSE

Über das alte Weltbild der Paez läßt sich nichts Sicheres aussagen, da die christliche Beeinflussung in starkem Masse modifizierend gewirkt hat. Jedenfalls gibt es im Vokabular der Paez das Wort «tátyinas», das teilweise mit «Gott», teilweise — und der Wortbedeutung mehr entsprechend — mit «Schöpfer» übersetzt wird. Für die Bezeichnung des christlichen Gottes wird das Wort «Dios» verwandt. Tátyinas lebt, wie man mir sagte, im Himmel, auf der Erde und in der Erde. Er hat alle Menschen gemacht. Opfer bekommt er nicht. In schamanischen Zeremonien wird er nicht erwähnt.

Aus dem Vokabular geht hervor, daß neben der Erde und der Vorstellung eines Himmels bzw. des Firmamentes noch zwei Stätten des Todes geläufig waren. Das glückliche Todesland mbéka kígwę wird mit dem Himmel gleichgesetzt. Wörtlich heißt es «Land der Chicha», und wenn man die Paez kennt, versteht man, daß es sich dabei in jedem Falle um

ein glückliches Land handeln muß. Das der «Hölle» entsprechende Totenland wird als eĉ kígwę bezeichnet. Die eĉ sind die bösesten aller Geister. Sie wohnen in der Erde, weswegen bei dieser Bezeichnung wohl ein unterirdisches Land verstanden werden muß.

An natürlichen Zeitabschnitten sind nur Tage und Monate bekannt, sowie Arbeitstage und nicht-Arbeitstage (ki'sen). Letztere Bezeichnung wird heute für den Sonntag verwendet. Ursprünglich lag dieser Tag nicht fest, sondern man arbeitete und feierte, wie man sich gerade innerhalb einer größeren oder kleineren Gemeinschaft die Zeit einteilen konnte. Auch heute noch arbeiten die Leute zu Zeiten der Rodung mitunter wochenlang im Felde, ohne einen arbeitsfreien Tag einzulegen.

Der Zeitabschnitt eines Tages wird unterteilt in den Tag (ẽn) und die Nacht (kos). Die Morgenfrühe heißt kosẽ, der Nachmittag zur Zeit des Endes der Arbeit, die man nach dem Sonnenstand feststellt, fl'nze. Weitere Unterteilungen des Tages werden nach dem Zeitabschnitt eines élnetç vorgenommen, worunter man den Zeitraum des Kauens einer Dosis Koka versteht. In der Übersetzung wird diese Bezeichnung für die «Stunde» verwandt. Der größte Zeitabschnitt ist der Monat «āte» für dessen Bezeichnung das gleiche Wort wie für «Mond» benutzt wird. Für den Zeitraum eines Jahres verwendet man das spanische Wort año. Früher benutzte man das Wort enztę. Es ist die Bezeichnung für das jährlich einmal stattfindende große Gemeinschaftsfischen am Stauwehr zur Trockenzeit im Februar. Nicht als Zeitabschnitt, sondern als Jahreszeit werden die beiden Regenzeiten mit nospá'nye und die beiden Trockenzeiten des Jahres mit sek bezeichnet. Letzteres ist auch gleichzeitig das Wort für «Sonne».

Irgendwelche größeren geographischen Orientierungen oder regionale eigenständige Einteilungen waren nicht zu erfahren. Das gesamte Tierradentro ist ohnehin von zivilisierten Gebieten eingeschlossen — selbst eine Autostraße führt nach Belalcazar —, so daß viele Paez-Männer die umliegenden Landschaften und sogar Städte mit eigenen Augen gesehen haben. Nur in den westlichen Grenzbergen der Zentralkordillere, in Richtung Popayán, vermutet man die Wohngebiete der schrecklichen Menschenfresser, der Pijaos. Geographische Orientierungsmittel sind nicht bekannt. Man reist nur am Tage in Gruppen und schließt sich einem des Weges Kundigen an. Von den Sternen weiß man nur, daß es bewegliche und unbewegliche gibt, ohne sie jedoch näher oder nach ihren Bildern zu unterscheiden.

Erstaunlich ist, daß die Paez trotz der Siedlung in Einzelgehöften keinerlei optische oder akustische Verständigungsmittel über größere Ent-

fernungen besitzen. Bei dringenden Nachrichten oder Fragen schickt man Kinder.

Zahlen gibt es nur von 1 bis 6 und 10. Für die Bezeichnungen 7 bis 9 werden die entsprechenden spanischen Zahlwörter benutzt. Das Paez-Wort für «zehn» (kóeg pémba) heißt wörtlich «Hände zuende» und weist darauf hin, daß zum Zählen die Finger genommen wurden. Die Zehen werden zum Zählen nicht benutzt, sondern was über zehn hinausgeht, wird als «viel» (teč kwát), wörtlich «ein Stein», bezeichnet. Es ist heute die Bezeichnung für «hundert».

Die medizinischen Kenntnisse der Paez sind nicht bedeutend. Fast alle Krankheiten werden ohnehin als auf magische Ursachen beruhend angesehen und von den Schamanen behandelt (siehe unten). Knochenbrüche werden von der Hebamme behandelt, die Kuhfett darauf streicht und Blätter darüber wickelt. Geschient wird das gebrochene Glied nicht. Die Hebamme vermag bei schwerer Geburt das Kind in die richtige Lage zu drehen, wenn dann die Geburt nicht vonstatten geht, ist ihre Kunst zuende. Gegen Schlangenbisse weiß man kein Mittel. Bei Kopfschmerzen bindet man sich ein Blatt vor den Kopf. Bei Magenblähungen streicht man sich etwas Holzasche auf den Bauch. Bei Verletzungen durch den Machete, die stark bluten, wird das betreffende Glied oberhalb der verletzten Stelle abgebunden und die Wunde mit einem Stückchen Stoff abgedeckt. Der Schamane läßt den Verletzten fest mit allen Zähnen auf den eisernen Machete beißen.

3. RELIGION

Die Paez sind heute nominell Christen. Sie sind getauft und meist durch den katholischen Priester getraut. Die christliche Missionierung setzte bereits im 16. Jahrhundert ein, anfangs freilich mit geringem Erfolg, der sich auch nicht vergrößerte, als von 1630—1654 jesuitische Missionare die Missionstätigkeit übernahmen. Erst in den letzten Jahrzehnten stellten sich größere Fortschritte ein. Hand in Hand mit der Missionierung zum Christentum geht die Lehre und Einführung der spanischen Sprache und die Annahme von kolumbianischen Sitten und Gebräuchen. Heute befindet sich in fast jedem Dorf eine Missionsstation und eine Schule, deren Lehrerinnen meist die Missionarinnen sind. Die Eltern schicken ihre Kinder im allgemeinen nicht ungerne in die Schulen, da sie erkannt haben, daß die Kenntnisse des Spanischen und des Lesens und Schreibens gewisse Vorteile im Verkehr mit den Weißen mit sich bringen. Mit der

Schulerziehung ist naturgemäß eine gewisse Entfremdung von den alten Sitten und Gebräuchen der Paez verbunden, besonders denen religiöser und soziologischer Art. Dennoch sind in allen Paez- Gemeinschaften, in denen vom Großteil der Bevölkerung das Spanische nicht verstanden wird, zur Aufrechterhaltung insbesondere des sozialen Lebens noch die alten Funktionäre der ursprünglichen Paez-Religion vonnöten. Diese werden gemäß ihrem Wirken von der Religionswissenschaft als «Schamanen» bezeichnet. Sie bilden durch die Andersartigkeit ihrer religiösen Tätigkeit keineswegs eine unüberbrückbare Konkurrenz für die christlichen Missionen, sondern beide, christlicher Glaube und schamanisches Wirken, können im gegenwärtigen Kulturstadium der Paez durchaus nebeneinander existieren.

Faßt man bestehende religionswissenschaftliche Feststellungen ins Auge, so findet man Amt und Würde des Kultpriesters im Vollzug heiliger Handlungen beruhend, deren Ablauf als Notwendigkeit erfüllt werden muß, damit der natürliche und normale Werdegang im menschlichen Dasein keine Stockung erleidet. Ihre Aufgabe ist es, durch die Weihe der sakralen Handlungen die vorhandene Ordnung der Welt zu bestätigen. Die Schamanen aber wollen — im Gegenteil! — die gegebene Ordnung in Natur und Umwelt überbieten und durchbrechen. Ihre Größe und Autorität beruht darin, daß sie übernatürliche Dinge tun, daß sie Kranke heilen, mit Geistern kämpfen, ja, Tote zu neuem Leben erwecken. So jedenfalls wird von den größten dieser Art gesagt, deren Begabung in ihren geistigen, übernatürlichen Kräften, in der Meisterung außergewöhnlicher Zustände liegt. Dem «so ist es» des Kultpriesters setzt der Schamane das «so sollte es sein» entgegen (A. Friedrich).

a) Kennzeichen des Paez-Schamanismus

Die Paez-Schamanen sind in dem dargelegten Sinne keine Funktionäre eines Opferkultes, sondern Menschen, die übernatürliche Dinge tun. Es gibt von ihnen zwei Arten, die tęyu und die nyiç. Während der tęyu (als Mann tępits, als Frau tę́oi) ein guter Schamane, ein guter Arzt und Helfer der Menschen ist, ist der nyiç ein böser Schamane, ein böser Zauberer, ein Hexer. Beider schamanisches Wirken jedoch, als Religionsphänomen, ist längst nicht so ausgeprägt, wie wir es beispielsweise vom sibirischen oder nordamerikanischen Schamanismus her kennen.

Ob die Paez in früherer Zeit ein Kultpriestertum neben den heute tätigen Schamanen gekannt haben, ist nicht sicher. Sie gebrauchen jedenfalls zur Bezeichnung der Priester und Missionare das Wort tikwę, wel-

ches zu nichts anderem sonst verwendet wird. Das heutige eigenständige Denken der Paez, ihre gesamte geistige Haltung, kreist trotz Missionierung und Christentum um Zauber und Gegenzauber. Keine Verletzung, keine Krankheit, kein Mißwuchs, kein schlechter Viehstand wird auf natürliche Ursachen zurückgeführt, sondern alles ist das Werk bösen Zaubers. Da die Menschen selbst völlig von dieser Überzeugung durchdrungen und in dieser Idee eingefangen sind, entspricht der tatsächliche Erfolg der bösen Zauberer dem gewünschten; das heißt, ein Mensch, der weiß, daß er verzaubert ist, wird, das Unausweichliche seines Schicksals vor Augen, auch wirklich krank und stirbt. Opfer sind fast immer die sparsamsten und fleißigsten Mitglieder der Gemeinschaft, diejenigen, die durch Erfolge über die anderen hinausragen.

Irgendwelche bevorzugt betroffene Personen nach Alter, Geschlecht oder sozialem Stand — mit Ausnahme der guten Schamanen, die ununterbrochen das Angriffsziel der bösen sind — gibt es nicht. Wer sich in Kleidung und Lebensweise den Sitten der Weißen anpaßt, mit diesen Umgang pflegt, nicht mehr Koka kaut, mit modernen Werkzeugen arbeitet und seinen Ackerbau nach den Grundsätzen der Kolonisten betreiben will, wird durch die nyiç bekämpft.

Aber nicht nur das äußerliche Herausragen des Individuums aus der Menge ruft den Neid der nyiç hervor, sondern auch die allgemeine Beliebtheit eines Einzelnen, und damit ein gewisser persönlicher Einfluß innerhalb des Dorfes. So war beispielsweise der Vater unseres Victoriano Opfer einer bösen Zauberei. Er gilt als sehr intelligent, ist ein guter Arbeiter, weiß am besten Häuser und Brücken zu bauen und hat sogar eine Reise nach der Stadt Popayán unternommen. Wegen seiner Beliebtheit und seines immer guten Rates — so berichtet man — versuchte ein nyiç ihn aus Neid zu töten. Eines Nachts, als er schlief, raubte dieser ihm seine Seele. Sein Bruder aber merkte es und spie Koka auf sie. Am nächsten Tage wurde das Auge des Verzauberten weiß und wäre beinahe ausgelaufen, wenn nicht ein tęyu geholfen hätte. Auf diesem Auge blieb er aber bis heute blind.

Besonderes Ziel der bösen Zauberer sind die weißen Kolumbianer. Man fürchtet sich zwar, öffentlich etwas gegen sie zu unternehmen, aber die zauberischen Manipulationen der nyiç gegen diese sind allgemein bekannt. Davon betroffen sind in erster Linie die Weißen, die den Paez Land geraubt haben, wozu auch die Missionare gehören. Die nyiç versuchen dann, die Seelen der Weißen in ihre Gewalt zu bekommen, sie mit Kräutern zu behandeln und so träge zu machen, daß sie nicht mehr ins Tierradentro zurückkehren. Man sagt auch, daß die nyiç ihre Mittel

in der Kirche niedergelegt hatten, damit der Missionspfarrer aus Belalcazar nie mehr dorthin komme und sie nie mehr betrete.

Opfer der bösen Zauberei sind aber nicht nur Menschen und Tiere, sondern auch die bebauten Felder, die mittels Eier, Salz oder Schamhaaren verhext werden können. Die betroffenen Familien können sich dann nicht mehr ernähren, und die Familienväter müssen in manchen Fällen das Dorf verlassen, um sich bei den Weißen zu verdingen. Die Entfernung des Mißliebigen ist damit erreicht. Seine Rückkehr wird auf magischem Wege verhindert, indem der nyiç auf die Verbindungswege Spezialkräuter legt, die der betreffende nicht überschreiten kann.

Die Hilfsmittel der bösen Zauberei sind nicht etwa Gegenstände der zu verzaubernden Personen, die in einer pars-pro-toto-Handlung verwendet werden, sondern ausschließlich Teile oder Mittel aus dem Besitz des Zauberers, die zu ihrer Wirkung mit den Opfern selbst oder dessen Seele in enge Berührung gebracht werden müssen. Wünscht der nyiç seinem Opfer einen Unfall, so legt er diesem an irgendeine Stelle seines Hauses einen glatt polierten Stein aus dem Fluß. Die betreffende Person wird dann bald ausgleiten und stürzen und sich dabei die Knochen brechen oder verrenken. Eine andere Möglichkeit der Verzauberung besteht darin, daß der nyiç auf die Nahrungsmittel seines Opfers seine Mittel streicht. So berichtet ein Schamane von Santa Rosa, wie der ehemalige junge und tüchtige Gobernador Leonidas von der nyiç Dolores Dinó getötet wurde. Diese besuchte ihn eines Tages, als er alleine in seinem Garten arbeitete und warf einige ihrer eigenen Schamhaare in das Essen in seinem Kochtopf und dazu ein Bruchtstück von einem vorgeschichtlichen Tontopf der Pijao. Leonidas aß von diesem Mahl. Danach begann seine Kehle auszutrocknen und er konnte nur noch mit Mühe atmen, bis er schließlich starb.

Die bösen Schamanen sind allgemein öffentlich nicht bekannt. Es können aber tęyu und nyiç sowohl Männer als auch Frauen sein. Ja, der berühmteste und klügste tęyu, den wir trafen, war eine alte Frau, Felisa Ipia in Santa Rosa, die allerdings gleichzeitig auch als die böseste Zauberin gilt, die je existierte. Alle Krankheiten und Unglücke in Santa Rosa werden ihrem Wirken zugerechnet. Der Cabildo hat deswegen auch schon einmal alle ihre Heilkräuter verbrannt und ihren Schamanenstab zerbrochen. Doch wagt man gegen sie nichts Ernstliches mehr zu unternehmen, da man sie, wie alle bösen Zauberer, fürchtet. Früher hat man die überführten nyiç jeweils ganz schwer bestraft, nachdem aber viele Mitglieder des Cabildo durch Zauberei gestorben waren, wagt heute niemand mehr, die bekannten nyiç anzuklagen.

Zu dem Problem der männlichen und weiblichen Schamanen erklärte ein tęyu aus Calderas, daß Frauen an sich ein ausgezeichnetes Gefühl und damit beste Anlagen zum Schamanen hätten. Da sie aber verschlagener und hinterlistiger als die Männer seien, würden sich die weiblichen Schamanen jederzeit in eine böse Zauberin verwandeln können. Und gerade das mache sie so gefährlich und damit ungeeignet für den Beruf eines guten Schamanen.

Die Grenze zwischen tęyu und nyiç ist also fließend. Beide Aspekte des Schamanentums können in einer Person vereinigt sein, oder es kann der tęyu zu einem nyiç werden und umgekehrt. Deshalb sei im folgenden die Erscheinungsform des Schamanismus der tęyu beschrieben. Die nyiç basieren im Geistigen auf gleicher Grundlage. Sie zeigen ohnehin niemals ihre Kräuter und Hilfsmittel und lassen niemanden an ihren Zeremonien teilnehmen. Die tęyu hingegen gaben bei näherer Bekanntschaft bereitwilligst über ihr Wissen Auskunft und ließen uns auch an ihren Séancen teilnehmen.

b) Die Werdezeit des Schamanen

Die mir bekannten tęyu sind auf zweierlei Art Schamane geworden. Entweder haben sie bei einem tęyu mehr oder weniger lange Zeit gelernt, bis sie die «Zeichen» bekamen oder sie wurden unmittelbar durch eine Vision zum Schamanen berufen. Letzteres, als Folge einer besonderen Erwähltheit durch ein von höheren Wesen verursachtes Erlebnis, ist die ursprünglichere Art der Schamanenberufung, während eine regelrechte Lehre bei einem erfahrenen tęyu kennzeichnend ist für die Schamanen, die das Amt ihres Vaters und zum Teil auch das ihres Großvaters weiterführen. Diese «Erbschamanen» sind durchwegs nicht so magisch-kräftig, wie die durch eine Vision erstmalig Erwählten. Die Erbschamanen sind nur mehr die Fortführer gelernten schamanischen Handwerkes, während die erstmalig Erwählten die Fortführer der Tradition eines Menschen- und Tierschöpfers, eines heldischen Kriegsanführers und Befreiers ihres Volkes sind. Diese mythische bedeutende Figur der Paez-Tradition ist der Donner, der auch als der erste und magisch-kräftigste aller Schamanen gilt. Seine menschlichen Nachfolger als Schamanen standen ihm in früherer Zeit kaum nach, während die heutigen in ihren magischen Fähigkeiten allgemein bedeutend zurückstehen.

Die tęoi Felisa Ipia aus Santa Rosa ist etwa 70 Jahre alt (Abb. 199). Ihr Mann sowie sechs Kinder sind gestorben. Drei Kinder leben. Außer einigen Hühnern und Puten hält sie keine Tiere. Über ihre Berufung erzählt sie, sie habe ihren Ruf als Schamanin vom Donner empfangen.

Dieser lebe in der Lagune von Taibe. Er erschien ihr in einer schwarzen Wolke und stieg zu ihr in menschlicher Gestalt zur Erde herab und übergab ihr ihren Schamanenstab und ihre Heilkräuter, wobei er sagte, daß sie von ihm als tçoi berufen wäre. Sie übte dann ihre Kunst lange Zeit aus; die Leute sagten aber, daß sie ein böser Schamane, ein nyiç, wäre und brachten sie vor den Cabildo, damit sie bestraft würde. Da die Leute sich vor den nyiç sehr fürchten, hat sie dort viele Schläge bekommen, und zwar mit ihrem eigenen Schamanenstab. Danach hat man diesen zerbrochen und auf dem Dorfplatz samt ihren Heilkräutern verbrannt. Dann schickten sie sie in ihr Haus zurück, ohne ihren Stab und ohne ihre Heilkräuter. Als aber wieder jemand krank wurde, kamen die Leute doch wieder zu ihr und baten sie, dem Kranken zu helfen. Daraufhin fertigte ihr Mann, der aber kein Schamane war, einen neuen Stab an; sie selbst suchte sich wieder ihre Heilkräuter und konnte den Kranken helfen. Seitdem ist sie wieder als guter Schamane anerkannt und hilft allen, die zu ihr kommen. Ein anderer Schamane in Santa Rosa erklärte, daß er seine Berufung schon mit sechs Jahren erhalten hätte. Als er eines Tages auf dem Felde arbeitete, kam seine Mutter, schwarz gekleidet und mit einem Hut auf dem Kopf zu ihm und schalt ihn wegen seiner schlechten Arbeit. Als sie wegging, folgte er ihr, aber sie verschwand im Fluß. Als er nach Hause kam, stellte er fest, daß die Frau, die er sah, nicht seine Mutter gewesen sein konnte, da diese sich zu der Zeit auf dem Gemeinschaftsfeld befunden hatte, wo sie für die Arbeitenden kochte. Zweifellos war diese Frau ein Geist, bekannte er, die ihm sagen wollte, daß er Schamane werden sollte. Dies bestätigten ihm auch zwei Fasertaschen, die sie mit sich trug, und die genau denen entsprechen, wie sie auch die Schamanen für ihre Heilkräuter benutzen. Ein Schamane von Calderas erzählte, daß in einer Nacht ein wunderschönes blondes Kind mit der Haartracht der Frauen zu ihm kam, das aber der Donner war, und ihn aufforderte, Schamane zu werden.

Wenn man von selbst keine Visionen bekommt, kann man sie, um Schamane zu werden, auch willentlich suchen. Man dürfe dazu nur ganz wenig essen und müsse sich mindestens während eines Monates völlig des Ají (eines sehr scharfen Gewürzes) und des Salzes enthalten. (Das gleiche geschieht auch mit einem Jugendlichen, nachdem dieser unwillentlich eine Vision bekommen hat.) Der eine Vision Suchende geht dann ganz allein in die Berge, wo er lange über Berg und Tal wandert, bis er an einen schönen Platz kommt, wo er einen älteren Mann trifft. Auch dieser kaut, wie er selbst, Koka. Durch sein Aussehen und sein freundliches Verhalten flößt er dem Jungen Vertrauen ein, und dieser erzählt

ihm von seinen Wünschen, Schamane zu werden. Er erwähnt dabei, daß es in seinem Dorfe so viele kranke Leute gäbe, die seiner Hilfe bedürfen und daß er in die Berge gegangen sei, um die Heilkräuter, wie sie auch die Schamanen haben, zu suchen. Der Angesprochene erwidert, daß es in den Bergen wohl viele gute Heilkräuter gäbe, um damit die Menschen gesund zu machen. Damit überreicht er ihm eine Fasertasche voll mit Kräutern und erklärt ihm, bei welcher Krankheit dieses und bei welcher jenes helfe. Derart erklärend macht er den Jüngling mit allen Kräutern vertraut und erklärt ihm deren Anwendung. Dann zeigt er ihm die Herstellung des Schamanenstabes und läßt ihn schließlich die «Zeichen» fühlen, ohne deren Kenntnis die der Heilkräuter wertlos wäre, da diese ja nur in Verbindung mit den entsprechenden «Zeichen» angewendet werden können. (Vgl. dazu unter «Folklore» die ähnlichen Mythen von Llivan!) Wieder nach Hause zurückgekehrt, beginnt der Jüngling zunächst bei einem erfahrenen Schamanen zu lernen, um dann mit einer Krankenheilung innerhalb seiner eigenen Familie zu beginnen. Hat er Erfolg, kommen auch die anderen Leute, um seine Dienste in Anspruch zu nehmen.

Auch ohne eine Vision gehabt zu haben, kann man Schamane werden. Man geht dazu bei einem guten Schamanen in die Lehre und lernt dort mehrere Jahre hindurch die praktischen Handgriffe. Dazu gehört die Handhabung des Schamanenstabes, die Kenntnis der Heilkräuter und die Interpretation der «Zeichen», um die Krankenbehandlung erfolgreich werden zu lassen. Auch hier geschieht die erste Behandlung bei den Familienangehörigen unter Aufsicht des Schamanenlehrers. Vom Ausgang dieser Behandlung hängt sein Ansehen und sein weiterer Zuspruch innerhalb der Gemeinschaft ab.

Auf diese letztere Art sind einige der Calderuner «Erbschamanen» zu ihrem Amt gekommen. So der tępits Martin Chukue. Er ist etwa fünfzig Jahre alt. Seine Frau ist vor sechs Jahren gestorben. Von ihr hatte er vier Kinder, von denen drei ebenfalls gestorben sind. Von seiner zweiten Frau hat er ein Kind. Er wohnt in einem kleinen Haus, hat aber kein Feld, keine Kühe, Schafe oder Schweine. Sein Onkel war tępits. Mit diesem lebte er viele Jahre zusammen, bis er etwa dreißig Jahre alt wurde. Da empfing er zum ersten Male die «Zeichen» in seinem Arm, machte sich seinen Stab und wurde selbständig. Nach seiner Meinung kann man schamanieren nicht erlernen, sondern dies sei eine Vererbungsgabe. Er selbst hat keinen Sohn und keinen Schüler.

Der tępits Francisco Cuskue ist etwa vierzig Jahre alt, verheiratet, hat vier Töchter und einen Sohn. Zwei Kinder sind gestorben. Er hat weder

Kühe noch Schweine, Pferde oder Schafe und ist sehr arm. Seit seiner Kindheit hat er gelernt, denn Vater und Großvater waren auch Schamanen. Er will, daß auch sein Sohn Schamane wird. Dieser, etwa zehn Jahre alt, hat aber noch nicht mit der Lehre begonnen. Auf meine Frage, ob auch ich, als Fremder, Schamane werden könnte, bestätigte er, daß dies möglich wäre, erklärte aber, daß die Ausbildung sehr lange und schwierig sei. Man müsse von Kindheit an lernen, bis man etwa 25 oder 30 Jahre alt ist. Ich, in meinem Falle, sei bereits zu alt, um noch zu beginnen.

Der in der Nähe des Schamanen Francisco wohnende tepits Cerbeleón Niunda (Abb. 153), Sohn eines Schamanen, lernte bei seinem Vater und hat schon mit zehn Jahren «Zeichen» gehabt. Er ist jetzt schätzungsweise 55 Jahre alt (kein Paez weiß, wie alt er ist) und hatte zehn Kinder, von denen sechs gestorben sind. An Besitz hat er weder Pferd noch Kuh noch Schaf. Während alle Paez sich die Bergbächlein so ableiten, daß ein kleiner Wassergraben an ihrem Hause vorbeifließt und sie immer nur fließendes Wasser verbrauchen, haben die Schamanen Francisco und Cerbeleón ein gemeinsames, kleines Staubecken unterhalb einer Quelle, aus dem sie trinken und in das sie vor dem Trinken eines ihrer Heilkräuter, lü, hineinlegen. Auf Befragen erklärten beide, daß sie dies nicht aus einem besonderen Grunde täten und in dem Becken auch nichts entdecken könnten, weder Krankheiten noch die Zukunft.

So wie der gute Schamane durch eine Vision erwählt worden ist, so gilt dies auch für den bösen Zauberer. Für ihn gilt als Vorzeichen, ein nyiç zu werden, wenn er beispielsweise im Traume einen Vogel sieht, der in seinem Schnabel einen Esel hält, in dessen geöffneten Mund Fliegen hineinkriechen, oder ganz einfach der Traum von Schweinen. Seine Vision kann der angehende nyiç tagsüber oder nachts bekommen; man sagt, daß Leute, die viel während der Nacht unterwegs sind, am anfälligsten für die böse Zauberei seien, da sie zu diesen Zeiten die meisten Möglichkeiten zum Zusammentreffen mit bösen Geistern haben. Einen Lehrer brauchen sie im allgemeinen nicht, sondern sie können sich alleine ihre Kräuter suchen. Es gibt allerdings auch viele Leute, die die Zauberei gerne von anderen nyiç erlernen möchten wie es auch nyiç geben soll, die andere in ihrer Kunst unterweisen.

Meidungsvorschriften und Tabus erstrecken sich für den Schamanen auf eine gewisse geschlechtliche und ernährungsmäßige Enthaltsamkeit, ohne allerdings sonderlich umfangreich oder streng zu sein. Der Umgang mit seiner Frau ist ihm verboten, wenn er seine «Zeichen» fühlt. Außerdem darf er möglichst keinen Ají essen, um den Donner nicht zu sehr zu erzürnen. Auch Salz darf er nur sehr wenig essen, da der Donner auch

kein Salz ißt. Zu den Séancen, die immer in der Nacht stattfinden, tastet er den ganzen Tag, da ein voller Magen das Fühlen der «Zeichen» erschwert. Die sonstigen Meidungsgebote sind für den Schamanen die gleichen, wie für alle anderen Menschen auch. So darf man beispielsweise keine Schnecken töten, denn wenn man sie anrühren würde, würde man faul werden. Desgleichen darf der Schwarzspecht (ánza) nicht getötet werden, da man sich sonst bei der Arbeit den Machete in ähnlicher Art spalten würde, wie der Schwanz des Spechtes gebildet ist. Einem Fuchs ein geraubtes Huhn abzunehmen ist jungen Männern verboten, denn dann würde ein anderer Mann diesem die Braut oder die Frau wegnehmen. Nur alte Männer dürfen ein solches Huhn ruhig essen, wenn sie vorher mit einem Feuerbrand um das Haus gelaufen sind.

c) Schamanische Hilfsmittel

Unter den schamanischen Hilfsmitteln sind die «Zeichen» das wichtigste Erfahrungsmerkmal, während das äußere Zeremonialgerät gleich karg ist, wie die gesamte Paez-Kultur. Das einzige Zeremonialgerät ist der schmucklose Schamanenstab, dessen funktionelle Bedeutung aber hinter den schamanischen «Zeichen» (Itok) weit zurücktritt. «Sie sind wie das Picken eines Vogels», erklärt sie der Schamane Cerbeleón Niunda, und Francisco Cuskue schildert sie als verschieden schnelle Schläge seines Pulses. Sie empfangen und interpretieren zu können, ist die Grundlage des Schamane-Seins. Die Kenntnis der Heilkräuter, die Handhabung des Schamanenstabes, ja selbst die visionäre Schau des Donners alleine sind wertlos, wenn der Schamane keine Zeichen empfängt. Durch sie erfährt der tęyu die Krankheitsursache und die zur Heilung anzuwendenden Mittel, die immer in der Verabreichung von Kräutern bestehen. Jeder Schamane hat deshalb immer seine Fasertasche mit allen seinen Heilkräutern bei sich, um diese jederzeit zur Hand zu haben und anwenden zu können. Da eine Krankheit nach Auffassung der Paez aber keine physische Ursache hat, finden die zur Heilung verwendeten Kräuter ihre Anwendung auch nicht nach den medizinischen Erfahrungen des Schamanen, sondern nur nach seinen Zeichen.

Die von den Schamanen benutzten Kräuter sind die folgenden* čandúr, eš (Erythroxydon Coca), bičač (Hevea?) čulko (Oxalis sp.), čáyuts (Scutellaria racemosa Per.), čuwét, fisa, ečyútsę čime (Labiada?),

* Diese, wie auch einige weitere Daten zum Schamanismus der Paez entnehme ich der ausgezeichneten Zusammenstellung bei S. Bernal Villa (III).

gwepekas (Urera boccifera L.), kwése (Lonchocarpus?), limonsílyo (Cymbopogon citratus) nyika, nyundayuskey, łü (Spagnum sp.), łuwés (Peperomia sp.), łulápe, łupenyí (Peperomia sp.), tátsę, táyuskę (Peperomia sp.), ul níny (Hibiscur abelmoschus L.), umsim (Myrcia acuminata DC. Vell, aff., vitubítskwę, wáhi (Nicotiana Tabacum L.), yakúma, yúskay (Scleria cattarinensis Boeck).

Die meisten dieser Kräuter werden zunächst vom Schamanen gekaut und dann über die erkrankte Stelle gespien. Wenn ein Mensch im Sterben liegt, und seine Seele den Körper vom Herzen, über die Oberarme, den Puls der Unterarme und über die Fingerspitzen verläßt, wird beispielsweise das Kraut čáyuts von dem Schamanen von den Fingerspitzen her in Richtung zu den Achselhöhlen gespieen, um dem Verlassen der Seele Einhalt zu gebieten. Selten nur wird aus den Blättern ein Tee gekocht.

Außer den Mitteln, die der Schamane für die Krankenheilung anwenden muß, sagen ihm seine Zeichen auch Schicksal und Zukunft voraus oder verkünden ihm, ob sich Krankheiten bessern oder verschlechtern werden. Sie teilen ihm auch Ereignisse mit, die unmittelbar bevorstehen. So erfährt er durch sie, daß beispielsweise Kranke am nächsten Tage zu ihm mit der und der Krankheit oder dem und dem Anliegen kommen werden. Für alle diese Anlässe hat jeder Schamane seine Zeichen an bestimmten Körperstellen, von denen die auf der linken Körperhälfte allgemein etwas Ungünstiges bedeuten, die auf der rechten Körperhälfte irgendetwas Gutes. So bedeutet das Aufsteigen der Zeichen von der rechten Fußaußenseite zum Knöchel, daß die Heilkräuter wirken. Wenn die Zeichen von der linken Fußaußenseite aufwärtssteigen, so ist dies der Beweis, daß der nyiç siegen und der Verzauberte sterben muß. Steigen die Zeichen am rechten Fuß bis zum Schienbein, wird ein Familienangehöriger sterben und seine Seele in den Himmel gehen. Gehen die Zeichen die Innenseite des linken Fußes entlang, wird «Pest» kommen, der Kranke wird geisteskrank werden. Sind die Zeichen zwischen dem rechten Schienbein und der Ferse zu spüren und gehen sie nach der linken Seite, so ist dies ein Anzeichen für einen Kampf zwischen dem tęyu und dem nyiç. Ziehen sich die Zeichen vom linken Knöchel bis zu den Kniekehlen hinauf, so ist das bestellte Feld verzaubert. Zeichen in der linken Wade zeigen den Besuch einer bösen Schamanin an, Zeichen in der rechten Wade den Besuch einer guten alten Frau; Zeichen an den Außenseiten der rechten oder linken Waden zeigen entsprechend die Besuche eines nyiç bzw. eines guten alten Mannes an. Zeichen, die von der rechten Kniescheibe abwärts laufen, zeigen den Tod eines Menschen durch tûs oder gělyómp («Regenbogen» oder «Berggeist» als Geistwesen, s. u.) an. Zeichen an der

linken Kniescheibe bedeuten, daß der tęyu im Kampf mit dem nyiç siegen wird, Zeichen von den Oberschenkeln bis zu den Kniekehlen der rechten Fußes, daß der Patient an einer bösartigen «Pest» sterben wird. Gehen vom linken Oberschenkel die Zeichen abwärts, läuft draußen ein schlechter Mensch vorbei. Gehen die Zeichen von der rechten Hüfte bis zum Fuß, so wird die Ehefrau menstruieren. Sind die Zeichen an der zehnten Rippe der rechten Seite spürbar, wird der Kranke bald sterben, da er vom Berggeist gestochen worden ist. Die Zeichen an der zehnten linken Rippe künden die Ankunft eines schlechten Menschen an. Gehen die Zeichen vom rechten Ringfinger den Arm hinauf zum Herzen, so wird der Betreffende am nächsten Tag einen Verwandten beerdigen. Zeichen in der rechten Handfläche bedeuten, daß der Kranke gesund wird, Zeichen in der linken Handfläche, daß der Berggeist die Gaben nicht annimmt und der Kranke sterben muß. Durch Zeichen auf dem Handrücken der linken Hand gibt der Berggeist bekannt, daß die Opfergaben ungenügend sind. Gehen die Zeichen von der rechten Handfläche zum Hals, so bedeutet dies «Pest» von den Pijaos. Zeichen im rechten Daumen und in der Hand kündigen das Erscheinen des verlorenen oder verirrten Tieres an, Zeichen im linken Augenwinkel, daß das verlorene Tier geraubt und bereits von dem Dieb verspeist wurde; Zeichen im linken Arm kündigen die Ankunft des eč-Geistes an; Zeichen im rechten Oberarm kündigen dem Schamanen an, daß gute Leute ihn als Taufpaten bitten. Zeichen auf dem Kopf des Schamanen kündigen an, daß der nyiç die Pest schickt, und wenn die Zeichen vom Kopf in die linke Hand gehen, ist die Person bereits verhext. In dieser und ähnlicher Art der Interpretation ihrer Zeichen erfahren die Schamanen die Art aller Erkrankungen und die zur Hilfe benötigten Mittel. Ihr einziger Erfahrungsschatz sind damit ihre Zeichen, spüren sie diese nicht oder nicht mehr, so haben sie das wesentliche Merkmal ihres Schamane-Seins verloren.

Neben den beschriebenen schamanischen Zeichen sind den tęyu, wie auch den gewöhnlichen Menschen jeden Alters und Geschlechtes, die Träume ein wesentliches Erfahrungsmittel für die Schau des Zukünftigen, wie auch zur Bestätigung eines fremden — meist bösen — Einflusses auf die eigene Person. Wie der Erfolg des bösen Zaubers auf das Individuum durch die Selbstsuggestion wirkt, so auch das im Traum Erschaute. Letzteres durch das eigene, unmittelbare Traumerlebnis vielleicht noch intensiver; nur so ist das geradezu fatalistische Verhalten der Betroffenen zu verstehen. Unser Dolmetscher Victoriano beispielsweise ist einer der fleißigsten und tüchtigsten Calderuner. Er ist gewillt, sozial nicht auf dem Indio-Stand seines Dorfes stehenzubleiben. Er nimmt des-

halb von Zeit zu Zeit bei den weißen Kolonisten Arbeit an, um sich das Geld für kolumbianische Kleidung zu verdienen. Er wird deswegen im Dorf sehr gehaßt. Im betrunkenen Zustand haben die Männer schon oft gedroht, ihn umzubringen. Eines Tages kam er zu uns und sagte, wir müßten uns mit der Arbeit beeilen, denn er werde bald sterben. Dies sagte er keineswegs verstört, sondern lächelnd und mit dem Ausdruck völliger Überzeugung. Auf die Frage, warum, erklärte er, daß er in der Nacht träumte, wie er sich selbst im Grabe gesehen habe. Dies sei ein sicheres Zeichen, daß er sterben müsse. Er ließ sich von uns auch nicht beruhigen, denn er wisse, so sagte er, daß er unbeliebt im Dorfe sei, und man hätte ihn sowieso mit dem Tode bedroht, da er mehr gesehen habe als die anderen, bessere Kleidung trüge und Fleisch äße, anstatt im Dorfe zu arbeiten. Deswegen würden die nyiç ihn ganz bestimmt zu Tode bringen. Es bedurfte mehrerer Tage und aller Überzeugungskunst, um ihn von diesem Gedanken abzubringen. Immer wieder mußten wir darauf hinweisen, daß er doch ein Christ sei, und wir mußten ihm viele unserer Medikamente vorsorglich geben, bis er glaubte, daß er vielleicht doch nicht zu sterben brauchte. Sein Marienmedaillon jedenfalls, welches er immer bei sich trägt, hülfe nicht unbedingt gegen bösen Zauber. Im folgenden einige weitere Beispiele für Träume, die in irgendeiner Hinsicht von Bedeutung sind: wenn man träumt, daß einem eine Schlange beißt, so ist das ein Zeichen von Verzauberung; wenn jedoch im Traume ein anderer Mensch diese Schlange im Augenblick des Beißens tötet, wird ein tęyu die Verzauberung aufheben. Von Jaguaren und Katzen zu träumen zeigt an, daß sich unter dem Hause Gräber der Pijaos befinden. An der «Pest» der Pijaos wird jemand sterben, wenn man träumt, daß ein Jaguar die Hühner frißt. Von einem Scheiterhaufen zu träumen bedeutet, daß sich dort Gold befindet. Wenn man von einer Kuh träumt, wird die Frau sterben. Tötet man im Traum einen Stier oder ein Pferd, wird eine gute Person (ein Schamane) sterben. Wird man im Traum von Wespen gestochen, bedeutet das zukünftige Bestrafung. Im Traum Balken oder einen Chichatrog tragen, bedeutet bei einer baldigen Beerdigung zu helfen. Im Traume zu ersticken bedeutet Krieg, Gefangenschaft oder die Einlieferung ins Gefängnis. Weiterhin ist es immer ein schlechtes Zeichen, von Arracacha zu träumen; im Falle einer Reise würde einem beispielsweise ein Jaguar im Páramo fressen. Auch wenn man träumt, man würde unterhalb eines Felsens hindurchgehen können, so heißt dies ebenfalls, daß einen ein Jaguar fressen wird. Wenn jemand von einem pętę-Kürbis träumt, dann wird man von Pijaos gefressen werden, denn dieser Kürbis hat schwarze Kerne, und die Pijaos als Menschenfresser haben

schwarze Zähne. Falls man sich im Traum in der Nacht köstlich amüsiert und sehr viel gelacht hat, dann wird man am Tage sehr viel Ärger haben. Hat es in der Nacht im Traume sehr stark geregnet, so wird am nächsten Tage ein Huhn o. ä. gestohlen werden. Wenn jemand im Traum mit einem braunen Pferd sehr schnell die ganze Nacht hindurch geritten ist, so wird es einen schönen Tag geben, denn die braune oder rote Farbe ist die Farbe der Sonne (braun und rot ist das gleiche Wort); ein Traum von einem Ritt auf einem schwarzen Pferd hingegen bewirkt am nächsten Tag den Aufzug einer schwarzen Wolke, und dann wird es regnen. Wenn jemand vor der Aussaat von einer großen Lagune träumt, die ganz grün erscheint oder viel grüne Bewachsung um sich hat, so bedeutet dies, daß die darauffolgende Aussaat eine gute Ernte ergeben wird. Wer im Traum ein schwarzes Schwein sieht, hat in Wirklichkeit das Herz eines bösen Schamanen gesehen, d. h., er hat als guter Mensch die wandernde Seele eines schlechten Schamanen getroffen; es ist dies kein gutes Zeichen, aber es ist auch nicht so schlecht, daß man nun deswegen krank werden müßte. Von einer Schweineschlachtung zu träumen bedeutet, daß ein böser Zauberer sterben wird. Wenn man träumt, daß man sich auf dem Wege einen Dorn in den Fuß getreten hat, wird einem eine Schlange beißen. Fällt einem im Traume ein Zahn aus, so wird ein naher Angehöriger sterben. Tötet jemand anders einen großen Hahn, dann wird dessen Vater sterben, denn der Hahn ist das Herz des Vaters. Wenn man aber selbst im Traume einen großen Hahn schlachtet, so wird man seinen eigenen Vater umbringen. Träumt man, daß man an einem Tag sehr viel in seinem Felde gearbeitet hat, dann werden in dieses Feld wilde Tiere einbrechen, die die ganze Frucht vernichten. Träumt ein Mensch, daß er in ein tiefes Loch fällt, woraus er nicht wieder herauskommen kann, dann ist dies ein Zeichen, daß er sterben wird; denn ein böser Zauberer hat so die Seele eines Menschen geraubt, sie in einem tiefen Loch vergraben und die Erde wieder festgestampft.

Lassen Träume und schamanische Zeichen von einer relativ entwickelten spirituellen Verhaltensweise auf ein entsprechendes äußeres Zeremonialgerät des Schamanen schließen, so werden wir enttäuscht. Schmucklos, arm und unkünstlerisch wie die gesamte Kultur der Paez ist auch der Schamanenstab (tama), zu dem bei gewissen Zeremonien noch eine Liane (nika) hinzu tritt. Sonst gibt es weder besondere Kleidungs- oder Ausrüstungsstücke, noch irgendwelche weiteren Zeremonialgeräte, wie Kristalle, Masken oder Rasseln.

Der Schamanenstab besteht aus einem 50 bis 60 Zentimeter langen, glatten Stab aus dem harten Holz der Chonta-Palme. Er ist an der einen

Seite zugespitzt und von halbkreisförmigem Querschnitt. Diesen Stab macht sich jeder Schamane selbst vor seiner ersten Krankenbehandlung und gibt ihn nie aus der Hand. Wenn er stirbt, wird er mit ins Grab gegeben. Vor Beginn einer Séance steckt er ihn in den Boden, aber nicht direkt vor sich, sondern etwas seitwärts. Nur selten hat ihn ein Schamane während der Séance in der Hand. Als die einzige Ausnahme der ungeschmückten Schamanenstäbe kenne ich nur den der alten Felisa Ipia aus Santa Rosa. An ihrem Stab hat sie eine Anzahl von bunten Wollfäden festgebunden, die sie selbst gesponnen und mit selbst hergestellten Farben gefärbt hat. In diese Fäden hat sie die Seelen aller Dorfbewohner von Santa Rosa gesammelt. Wird jemand im Dorf krank, erfährt sie durch ihre Zeichen oder durch den Donner persönlich davon und kann auf diese Weise dem Kranken besser helfen, da sie sofort ihre Heilkräuter, vermischt mit Branntwein, auf die Wollfäden pusten und damit dem Kranken besser Hilfe bringen kann.

S. Bernal Villa weist darauf hin, daß die Bezeichnung für den Schamanenstab mit dem Namen des bedeutendsten Kulturheros der Paez, Juan Tama, übereinstimmt, der nach der Tradition Gesetzgeber, berühmter und siegreicher Heerführer, erster Häuptling und Schamane war. Nach anderen Überlieferungen war er der Sohn der Sterne, der Sohn des Donners, oder der Donner selbst. Die jetzigen Schamanen sehen den Stab als eine Gabe des Donners an und als ein Zeichen der geistigen Verbundenheit mit ihm. Ein Schamane von San Andrés berichtet über den Ursprung des Schamanenstabes, daß nach den Erzählungen der Alten der tama vom Donner selbst eingeführt wurde. Danach hatte einstmals ein Mann in den Bergen seine Hütte und sein Kartoffelfeld. Mit seinem Sohn erntete er das Feld ab. Eines Tages weigerte sich der Sohn, seinem Vater auf das Feld zu folgen, sondern wollte lieber in der Hütte zurückbleiben. Am nächsten Tage war der Sohn verschwunden, ohne irgendeine Spur zu hinterlassen. Vergeblich versuchte der Vater, seinen Aufenthaltsort zu ermitteln. Aber nach acht Tagen erschien der Sohn wieder in der Hütte. Er erzählte, daß er beim Großvater war, der ihn mit Branntwein, Arzneimitteln und diesem Stab beschenkte, den er in Händen hält, und der tama genannt würde. Der «Branntwein» war kaltes Wasser aus einem See, und die Arzneimittel in der Fasertasche waren Bergkräuter. Nachdem er dies gesagt hatte, fiel er in Trance und blieb wie tot liegen. Vierzehn Tage später bat er sterbend seinen Vater, ihm doch seinen tama zu reichen, denn der Donner hatte ihm gesagt, daß er sich damit verteidigen könnte und daß er im Falle von Krankheit die Arzneimittel nehmen sollte, die ihm dieser gegeben hatte. Er preßte den

Saft aus und trank ihn. Rasch wurde er gesund. Als er ihn auch anderen Kranken gab, wurden diese ebenfalls schnellstens gesund. Mit seinem Stab und seinen Arzneimitteln wurde er der beste Arzt weit und breit. Er starb in hohem Alter.

Ein anderer Schamane erklärte, daß der tama von einer Rettungstat der heiligen Jungfrau Maria herrühre. Als das Meer einmal unaufhörlich höher stieg und fast die ganze Erde bedeckt hatte, kamen die Menschen in große Gefahr. Die Jungfrau Maria hatte Mitleid mit ihnen. Sie zog den tama hervor und machte mit ihm die gleichen Bewegungen, wie sie heute die Schamanen machen. Daraufhin gingen die Wassermassen zurück. Ihren Stab ließ sie demjenigen Menschen zurück, der Schamane wurde. Dies sei der Ursprung des tama.

Wenn auch in der letzteren Erzählung nicht nur die Figur der Jungfrau Maria, sondern möglicherweise auch das Sintflutmotiv nicht dem Gedankengut der Paez entstammt, so ist doch der Ursprung des tama als Gabe einer höheren Macht bemerkenswert. Diese Macht, die für die Schamanen von größter Bedeutung ist als Geistwesen und als erster Schamane, ist der Donner. Er hat nach den Berichten durchaus auch den Charakter eines Hilfsgeistes, wenngleich er von den heutigen Schamanen fast nur noch gefürchtet wird. «Die alten Schamanen», versichern die jetzigen immer wieder, «waren noch magisch-kräftig genug, um mit dem Donner unmittelbar und zu jeder Zeit in Kommunikation zu treten; wir heutigen vermögen es nicht mehr». In früherer Zeit hatten die Mitglieder des Cabildo, unter Anleitung eines Schamanen, gemeinsam in der Lagune Juan Tama gebadet und dort ihre Würdestäbe weihen lassen. Heute findet dies aus Mangel an guten Schamanen nicht mehr statt. Die heutigen Schamanen haben nicht mehr die starken Visionen, wie die früheren, und deshalb sind sie auch nicht mehr so magisch-kräftig. Sie können nicht mehr so einfach mit dem Donner sprechen, wie ihre Vorgänger, und da sie schwächer sind, so glaubt man, würde der Donner sie töten.

Allgemein wird der Donner als von kleiner Gestalt beschrieben, der wie ein Paez-Mann mit Hut und schwarzer Ruana bekleidet ist. Eine Hose, so berichtet man, trüge er nicht, sondern stelle seine Geschlechtsteile zur Schau. Bei sich hätte er wie ein Schamane seinen tama, eine Fasertasche mit Arzneimitteln und ein «tíngalo» (Triangel) genanntes Musikinstrument. Es ist nicht unmöglich, daß sein Bild, zusammen mit einem christlichen Kreuz, in den Giebelpfosten einer Hütte in der Nähe des Parkes von San Andrés eingeritzt ist, das einen Mann mit großen, dreieckförmigen Geschlechtsteilen darstellt (Abb. 200).

Der Donner gilt bei allen Paez als größter Schamane und bei den tęyu als deren Meister. In der Folklore (s. unten) trägt er wohl oft andere Namen, wie Juan Tama, Llivan, Chauté, Juan Chiracol, es sind aber seine Züge, die darin zutage treten, sei es, daß er als sāt (Kazike) gegen die Pijaos kämpft, und sein Volk verteidigt, sei es, daß er — so ist man überzeugt — auch einmal wieder die verhaßten Weißen aus dem Tierradentro hinausjagen wird. Einen bösen Weißen, der in Tierradentro zu Besuch kommt, kündigt er den Paez durch einen Donnerschlag aus heiterem Himmel an. Wenn er über einem bestimmten Hause donnert, so zeigt er damit an, daß sich «Pest» darin befindet, und donnert er erst über dem Hause eines nyiç und dann über dem eines tęyu, so tut er dem guten Schamanen damit kund, daß er soeben verhext wurde.

Einige Geschichten wissen auch von Kämpfen der Schamanen gegen den Donner zu berichten, denn dieser raubte den Paez einstmals Vieh und Menschen. Das aber ist lange her, denn heute würde niemand mehr wagen, etwas gegen den Donner zu unternehmen. Die Calderuner Schamanen erzählen, daß die früheren tęyu in der Lage waren, jederzeit mit dem Donner zu sprechen und sich von ihm Rat zu holen. Die heutigen vermögen dies nicht mehr. Die alte Filisa aus Santa Rosa jedoch, die selbst vom Donner erwählt und in ihr Amt eingeführt worden ist, vermag auch heute noch mit dem Donner in Kommunikation zu treten. Allerdings kann sie das nicht immer, aber oftmals hat sie ihn in seiner Lagune aufgesucht, ist untergetaucht in das Wasser, auf dem Boden der Lagune bis zum Hause des Donners gegangen und hat von ihm Rat erbeten. Einer der Söhne des Donners, ebenfalls Schamane, war sogar ihr ständiger Begleiter, der sie überall beschützt hat. «Früher», erzählte sie, «hatte der Donner selbst die Leute geheilt. Heute ist es anders». Der Donner weiß, wenn jemand krank ist; wenn dann die Leute zu ihr kommen, um ein Mittel zu erbitten, dann kündigt der Donner vorher persönlich der Schamanin an: Es werden heute die und die Leute mit der und der Krankheit kommen. Er sagt ihr auch gleich, welche Mittel sie nehmen soll. Wenn dann die Leute kommen, um die Krankheit anzuzeigen, dann kann sie, da sie eine gute Freundin des Donners ist, immer mit besten Mitteln den Leuten helfen.

Der Donner, erzählte sie, hat viele Kinder. Diese kommen in die Welt durch eine Quelle oder durch einen Erdspalt, aus dem Wasser heraussickert. Sie haben die Größe kleiner Menschenkinder, sind aber sehr gut und mit einem schönen táw (Gürtel) gekleidet. Zum Aufwachsen und zu ihrer Ernährung brauchen sie drei Frauen als Dienerinnen. Diesen saugen sie die Milch ab, worauf die Frauen sterben müssen. Die Donnerkinder

selbst sind unfruchtbar und haben keine Kinder. Sie sind aber als Kinder des Donners immer große Kaziken und Schamanen gewesen.

Eines Tages zeigte sie mir einen kleinen Astknorren, eingehüllt in ein Stückchen Stoff. «Dies ist ein Kind des Donners, das ich von ihm habe», sagte sie dabei, «es sieht aus wie ein Ast, in Wirklichkeit lebt es aber und kann sprechen».

d) Krankheiten, Geister- und Seelenvorstellungen

Alle Krankheiten werden bei den Paez als durch magische Einflüsse entstanden erklärt, die ihre Ursache vorwiegend in böswilligem, absichtsvollen Wirken haben. Diese magischen, übernatürlichen Einflüsse sind entweder Verzauberungen durch die nyiç, magische Schädigungen durch die Geister eč, tũs oder gẽlyómp oder allgemein Ausflüsse des Unreinen, der «Pest» (uwẽ). Derartige Gründe, Pest zu erlangen und dadurch von Krankheit heimgesucht zu werden, resultieren vielfach aus der Unterlassung der vorgeschriebenen schamanischen Reinigungen. Diese müssen nach einer Beerdigung stattfinden oder wenn jemand auch nur einen Leichenzug gesehen oder ein Haus betreten hat, in dem sich ein Leichnam befindet. Genau so streng sind die Gebote um die gebärende oder menstruierende Frau. Zieht sich diese zu der entsprechenden Zeit nicht in das Menstruationshüttchen zurück, kohabitiert sie während dieser Tage oder unterläßt sie das anschließende Bad nach Menstruation und Geburt, so sind die Folgen gleich schwerwiegend. Den Mann befällt die Pest, wenn er das Essen von einer Menstruierenden annimmt. Die gleichen Folgen fallen auf denjenigen, der bei Hausbau oder der ersten Ernte nicht die entsprechenden Zeremonien durch den Schamanen durchführen läßt.

Die meisten Menschen sterben durch böse Einwirkungen der nyiç, der bösen Zauberer. Diese können — so ist man überzeugt — sowohl Einzelpersonen töten, als auch ganzen Dörfern die Pest schicken. Ihre Macht zum Bösen sieht man als fast unbegrenzt an. Außer durch Verhexung seitens eines nyiç gibt es für einen Menschen drei weitere Möglichkeiten krank zu werden oder zu sterben. Diese Ursachen sind gẽlyómp, tũs und eč. Alle drei sind sehr komplexe Begriffe und können grob mit «Berggeist», «Regenbogen» bzw. «Glühwürmchen» übersetzt werden, ohne daß allerdings der Paez-Begriff und die Übersetzung völlig identisch wären. Der tęyu weiß die Krankheitsursache sogleich durch seine Zeichen, die übrigen Menschen jedoch meist erst nach dem Tode des Kranken. Und zwar erkennt man den tũs als Krankheitsursache daran,

daß der Leichnam mit einem gekrümmten Glied (Arm oder Bein) daliegt, während beim eč als Todesursache Blut aus Mund oder Nase tritt. Es ist auch möglich, daß beide gemeinsam, tūs und eč, dem Menschen den Tod bringen, z. B. dann, wenn der Mensch gekrümmt daliegt und Blut aus Mund oder Nase tritt.

Der gělyómp-Geist wohnt vorwiegend in den Bergen, aber auch im Tal, an den Ufern der Bäche und Flüsse. Er verführt gerne die Wanderer in den Bergen, indem er dort oben lärmt und schreit; bei Nacht hört man sein Geschrei — wie das eines Menschen — auch im Tal, beim Dorf. Er ist ein wütender Feind alles Schmutzigen. Ein Jäger, der sich und seine Ruana vor der Jagd nicht gewaschen hat oder dessen Frau sich zur Zeit im Menstruationshäuschen befindet, wird von ihm bestraft. Er hat die Gestalt eines Menschen, manchmal die eines Mannes, manchmal aber auch die einer Frau oder eines Kindes. Gělyómp, sowie tūs und eč können dem Menschen Pest geben, so daß dieser stirbt. Pest kann man an und für sich an allen Orten und bei allen Gelegenheiten bekommen, gleichgültig, ob man wacht oder schläft. Die Pest der drei genannten Geister wird vorwiegend durch Stiche hervorgerufen, die nicht nur in den Körper, sondern auch in die Seele gehen. Dort, wo sie in den Körper eingedrungen sind, hinterlassen sie Einstiche, von roter Farbe beim gělyómp, von blauer beim tūs und von schwarzer beim eč. Die durch gělyómp verursachten Krankheiten äußern sich durch allgemeine Schmerzen, hervorgerufen durch das Eindringen eines seiner Haare. Es geschieht dies auf folgende Art: Es geht jemand einen Weg entlang und fühlt auf einmal einen stechenden Schmerz im Arm oder einem anderen Körperteil, wie wenn eine Nadel piekt. Obwohl man keinen Einstich entdecken kann, bleibt der Schmerz. Der Betreffende geht also zum tęyu, und dieser kann die Schmerzursache beseitigen, indem er mit seinen Kräutern über die erkrankte Stelle reibt, bis er aus dieser ein schwarzes Haar von 10 bis 15 Zentimeter Länge herausholt. Dieses Haar ist vom gělyómp, und wenn es der Schamane nicht herausgeholt hätte, müßte der davon Befallene sterben. Man kann sich in gewisser Weise auch selbst vor den Haaren des Berggeistes schützen, indem man sich, wenn man von einem Weg über die Berge oder einem Nachtmarsch heimkehrt, mit einem Feuerbrand über Füße und Körper fährt, um ein eventuell eingedrungenes Haar vom gělyómp zu verbrennen

Tūs, der «Regenbogen», lebt am Ufer von Wasserläufen und besonders an Quellen. Es gibt viele tūs, und zwar überall da, wo es auch Wasser gibt. Es gibt tūs, groß wie eine Schlange, rot und gelb gefärbt, und andere von der Größe nur eines Fingers. Die Menschen erkennen Krank-

heiten des tüs daran, daß der Befallene über und über mit Bläschen bedeckt ist und sich dauernd kratzen muß. Wenn es bei Sonnenschein regnet, geht tüs vom Ufer eines Flusses, wo er lebt, in den Himmel und von da wieder in einem Halbkreis zurück zur Erde. Besonders für Kinder ist der Regenbogen gefährlich. Wenn es bei Sonnenschein regnet, dürfen diese das Haus nicht verlassen, da sie sonst Kopfkrankheiten bekommen. Es sind dies nicht Kopfschmerzen, sondern Wunden, wie durch einen Machete hervorgerufen. Die tęyu haben aber Mittel, um den Regenbogen zum Verschwinden zu bringen, so daß die Kinder wieder ins Freie können.

Eč, die dritte der genannten Krankheits- und Todesursachen, ist die unangenehmste und gefährlichste, da eč die meisten Menschen tötet. Eč lebt in der Erde, kein Mensch hat ihn gesehen, außer einigen Schamanen. Um ihn zu sehen, brauchen diese aber nicht in die Erde einzudringen, sondern der eč selbst kommt, wenn ein tęyu ihn ruft. Er hat das Aussehen eines Menschen. Mit eč werden auch die Glühwürmchen bezeichnet, welche als seine Boten angesehen werden, die er ausschickt, um den Menschen die «Pest» zu bringen. Die Leute töten deshalb die Glühwürmchen, wenn sie sie fangen können. Aber der eč ist nicht böse, wenn die Menschen seine Boten töten, wenn er nur immer genug Opfer bekommt. Deshalb geben die Leute von jeder Flasche Branntwein ein Schnapsglas voll dem eč, d. h. sie schütten diese Menge auf den Boden; desgleichen bekommt der eč von jedem getöteten Tier (Huhn, Schwein, Kuh usw.) seinen Teil. Die Leute fragen dazu ihren tęyu, welche Teile vom Tier der eč verlangt und welche sie ihm opfern sollen. Wenn die Leute ein Tier töteten und äßen, ohne dem eč etwas anzubieten, tötet er dafür ein Kind dieser Familie. Wenn dann der Vater zu dem tęyu kommt und fragt, warum sein Kind gestorben sei, so sagt ihm dieser — der natürlich weiß, daß der Mann ein Schwein geschlachtet hat, ohne dem eč etwas zu geben —, daß dieses die Strafe des eč sei. Aber das kommt sehr selten vor, sondern der Mann übergibt die vom eč gewünschten Teile des Tieres, z. B. die Leber, Eingeweide oder Fleisch, dem Schamanen, und dieser übergibt sie dem eč, indem er sie in der Nacht an den von diesem gewünschten Ort bringt. Außerdem geben die Menschen dem eč vorsorglich Kräuter und Branntwein, die ihnen der Schamane aufgibt, je nach den Zeichen, die er vom eč empfangen hat.

Ist das Eindringen von Pest in den Körper eines Menschen eine Krankheitsursache, die den Tod bringen kann, so ist dieser schlimme Ausgang noch wahrscheinlicher, wenn einer der drei Geister oder auch ein nyiç eine menschliche Seele geraubt hat. Über diesen Fall erhielt ich verschie-

dene Angaben: Zunächst einmal gibt es zwei Wörter für Seele, ũns (u = nasal) und tafí, die jedem Menschen geläufig sind, über deren Unterschied man sich aber nicht im klaren ist. Die Schamanen Francisco und Cerbeleón erklärten, daß beides dasselbe sei; beide erklärten aber auch, daß ũns oder tafí, wenn diese im Traum den Menschen verlassen hätten und unterwegs seien, vom tũs, eč oder nyiç gefangen werden könnten, ohne daß der betreffende Mensch dies sofort merkte, sondern noch weiterlebte. Auf meinen Einwand, daß ũns oder tafí da doch wohl verschieden wären, wußten sie nicht zu antworten. Cerbeleón erklärte, daß, wenn der Mensch stürbe, seine ũns in den Himmel ginge und der Mensch selbst zum tafí würde. Er, sowie andere tęyu, wären auch in der Lage, die ũns eines Menschen zu fangen. So käme beispielsweise, wenn jemand bestohlen worden sei, der Bestohlene zum Cerbeleón. Dieser nimmt Koka, Tabak und Branntwein, und dann kann er die ũns des Diebes herbeiholen, sie ergreifen und töten. Der Dieb muß daraufhin sterben. Um die ũns in seine Gewalt zu bekommen, muß er vorher seine Hände mit den Kräutern ĩũ und vitubítskwe, sowie mit Branntwein reinigen. Die ũns habe die Form eines kleinen Tieres, erklärte er, sie könne fliegen und leuchte und sei etwa drei Zentimeter lang. Sie sei einem Glühwürmchen sehr ähnlich im Aussehen, aber anders als eč.

An diesem Punkt seiner Erklärung angelangt, verstummte Cerbeleón, und unser Dolmetscher Victoriano erklärte, wir müßten jetzt aber schnell weggehen. Damit verließ er geradezu fluchtartig das Haus, und wir mußten folgen. Draußen erklärte er uns, daß Cerbeleón ein «mal Brujo», ein nyiç, wäre, was er zwar schon immer geahnt habe, aber eben hätte dieser sich insofern verraten, als er erklärte, wie er die ũns von Menschen fangen und töten könne. Die Leute von Calderas erzählten sich, er besäße auch Kräuter, die er in Eier, Chicha oder andere Nahrungsmittel tun könne, worauf die Leute diese äßen und dann stürben. Einer der Söhne Cerbeleóns war ein Dieb und sei daraufhin auf folgende Weise gestorben: Der Bestohlene hätte zur Virgen Santisima gebetet, und Gott habe den Dieb mit dem Tode bestraft. Der Vater selbst, d. h. der Schamane Cerbeleón, sei ebenfalls ein Dieb und töte die Leute aus Neid um ihren Besitz.

Die Missionsschwestern bestätigten diese Aussage insofern, als Cerbeleón mehrmals versucht hätte, sie durch das Streuen von Kräutern in ihren Trinkwassergraben zu töten. Jetzt hätte er es aber aufgegeben. Uns selbst erschien er nur als ein eitler Schwätzer; er machte nicht den Eindruck, als ob er tatsächlich Zeichen empfinge oder mit Ernst bei der Sache wäre, sondern es schien, als ob er nur etwas von seinem Vater abge-

guckt hätte und dies handwerksmäßig ausführe, ohne innere Anteilnahme. Auch Francisco hatte Vater und Großvater als Schamanenvorgänger. Er war ebenfalls ziemlich unwissend, aber augenscheinlich guten Willens. Er tat sein Bestes, den Menschen zu helfen.

Völlig von seiner Berufung und Aufgabe durchdrungen, mit gutem Wissen, Ernst und Würde bei der schamanischen Arbeit, war Martin Chukue. Er war der für dessen Wohnung zuständige Schamane, als der Capitan von Calderas starb, und er führte auch die Reinigungszeremonie nach dessen Begräbnis durch. Martin erklärte die Todesursache des Capitans folgendermaßen: Der Capitan mußte sterben, weil der tüs die tafí-Seele des Capitans geraubt hatte. Der Capitan starb mit einem angezogenen linken Bein. Er starb sehr dünn, weil er lange nichts gegessen hatte, denn seine tafí-Seele wurde schon vor fünf Jahren geraubt. Damals begann der Kranke Schmerzen zu empfinden, und während der ganzen Zeit hatte er, Martin, mit dem tüs gekämpft, ihm Medikamente angeboten und versucht, ihn zu besänftigen.

Wenn die üns-Seele (üns hat auch gleichzeitig die Bedeutung von Herz!) den Körper verläßt, dann ist der Mensch endgültig tot. Und zwar verläßt üns den Körper auf dem Wege über die Oberarme, Unterarme, Fingerspitzen. Kurz bevor sie den Menschen verlassen hat, kann man sie noch ganz schwach als Pulsschlag bemerken, und wenn der Pulsschlag ganz aufhört, hat die üns den Körper verlassen und geht sofort in den Himmel. In welcher Form sie in den Himmel geht, konnte mir niemand genau sagen. Im Himmel hat sie jedoch wieder das normale menschliche Aussehen. Kindern legt man, wenn sie krank sind, um Hand- und Fußgelenke Wollfäden an, die man straff anzieht, um das Entweichen der üns zu verhindern oder doch mindestens zu erschweren.

Die alte Celia Uriaga aus Calderas, die uns zwei Märchen erzählte, aber selbst keine Schamanin ist, berichtete folgendes: Wenn der Mensch schläft und träumt, verläßt seine tafí den Körper, geht überall hin und erlebt das, was der Mensch im Traum erlebt. Wenn der Mensch stirbt, dann verläßt üns den Menschen über die Adern der Ober- und Unterarme, wo man den Puls spüren kann, und endlich über die Fingerspitzen. Tafí verläßt den Menschen ebenfalls, aber in Form eines Menschen mit weißer Kleidung. Während üns in den Himmel geht, bleibt tafí entweder beim Körper im Grabe oder geht auf der Erde umher, aber nicht als tafí, sondern als áhimos (Gespenst). Es kann von den Schamanen bei Nacht gesehen werden, aber auch von den Menschen um Mitternacht oder um zwei Uhr nachts, in Form einer menschlichen Gestalt am Wege sitzend. Aber es ist kein wirklicher Mensch, sondern mehr wie ein Wind.

Ahimos ist allgemein auf dem Begräbnisplatz, dort, wo der Leichnam begraben ist und wo die Knochen sind.

Nach Auskunft der alten tçoi Felisa verläßt die üns beim Tode des Menschen den Körper und geht in den Himmel. Sie verläßt den Körper über Unterarme, Hände und Fingerspitzen. Die Felisa selbst versucht, die üns eines Sterbenden zurückzuhalten, indem sie kräftig auf dessen Fingerspitzen bläst, nachdem sie vorher den Mund mit den Kräutern čáyuts und łuwéz sowie mit Branntwein vollgenommen hat. Gleichzeitig streicht sie mit den gleichen Kräutern in ihren Händen dem Kranken von den Fingerspitzen her die Arme aufwärts, um üns zurückzuhalten. Tafí verläßt den menschlichen Körper vor dem Tode. Dabei pfeift sie. Die Felisa kann sie sehen. Sie wandert einen Weg entlang, in guter Kleidung, und die Schamanin kann sie dadurch zurückholen, daß sie ihr mit einem sehr scharfkantigen Schilfrohr (nyíka) die Kleider zerreißt, und dann muß sie zum Körper zurückkehren (vgl. Abb. 199).

Außer den Schamanen kann nach ihrer Überzeugung niemand tafí sehen, mit Ausnahme der Hunde, wenn sie manchmal scheinbar grundlos heulen. Während üns in den Himmel geht, bleibt tafí auf der Erde und lebt in ihrem Hause als áhimos in Form eines Lufthauches weiter. (Dem Toten werden keinerlei Beigaben in das Grab mitgegeben, aber am folgenden 8. Dezember, dem Fest der Inmaculada und alle Jahre wiederkehrend, opfern die Angehörigen dem áhimos ihrer Verstorbenen deren Lieblingsspeisen: Fleisch, Mais, Chicha, Branntwein, Koka, Yuca usw. Diese Gaben werden auf einem Bananenblatt auf dem Fußboden der Kirche niedergelegt, und dazu wird eine Kerze angezündet). Auch den áhimos können nur Schamanen sehen.

Wann und woher ein Kind üns und tafí bekommt, weiß sie nicht. Sie glaubt, sobald das Herz des Kindes im Mutterleibe schlägt, hat das Kind üns; tafí bekommt es erst nach der Geburt. Tiere haben keine tafí; üns nur, wenn sie Menschen fressen.

e) Schamanische Séancen

Jede der schamanischen Séancen, sei es eine Krankenbehandlung, sei es eine Zeremonie beim Hausbau oder zur Beerdigung, ist im Grunde eine Reinigung von der «Pest» und damit eine Zeremonie magischer Praktiken. Alle diese Zeremonien und Séancen sind daher auch ihrem Wesen nach gleich. Sie unterscheiden sich nur in Einzelheiten, beispielsweise den verschiedenartigen Heilkräutern oder der Reihenfolge der verschiedenen Reinigungen. Zunächst möge die Beschreibung einer Reinigungszeremonie

durch den Schamanen Martin Chucue nach einer Beerdigung folgen. (Vgl. Abb. 208 bis 213.)

Am Begräbnis nimmt der Schamane nicht teil. Er betritt auch weder das Haus eines Verstorbenen, in dem sich noch der Leichnam befindet, noch begleitet er einen Trauerzug zum Friedhof. Die Trauergäste, Männer, Frauen und Kinder, gehen gemeinsam zum Friedhof und dann wieder zurück zum Trauerhaus. Bevor sie dies aber betreten dürfen, müssen sie zum Fluß, wo sie der Schamane erwartet, um sie das erste Mal zu reinigen. Danach geht man gemeinsam zum Trauerhaus, welches aber von den gereinigten Leuten noch nicht betreten werden darf, da es noch unrein ist. Der Schamane muß erst mit seinen Gehilfen das Haus mit den gleichen Mitteln reinigen, mit denen er die Menschen gereinigt hat, d. h. mit Wasser, dem Kräuter und Kuhexkremente zugesetzt sind. Danach können auch die Leute das Haus betreten und essen und trinken.

Den Termin der zweiten Zeremonie und Hauptreinigung erfährt der Schamane durch seine Zeichen vom eč. Er teilt diesen Termin den Teilnehmern der Beerdigung mit. Die zu Reinigenden — in erster Linie die nächsten Angehörigen — versammeln sich am Fluß und an einem eigens dazu bestimmten Platz, gekennzeichnet durch eine Anzahl von flachen Steinen. Diese sind unbedingt erforderlich; ohne Steine kein Reinigungsplatz. Die Leute sitzen zunächst vor den Steinen, und die Helfer des Schamanen tragen in Kalebassen Wasser herbei, das mit lũ-Kraut durchsetzt ist und an welches jeweils etwas von Kuhexkrementen getan wird, die in einem Topf am gleichen Platz bereitstehen. Der Schamane hat seinen Stab mit einer Liane umwickelt. Schon vor der Zeremonie kaute er ununterbrochen Koka und Tabak und trank reichlich Branntwein. Er geht zunächst mit Stab und Liane nach links und schlägt mit beiden in die Luft, wie wenn er gegen unsichtbare Geister kämpft. Dann geht er weiter, immer kämpfend, die anderen Richtungen des Platzes ab und zum Schluß noch einmal nach links. Dort haben seine Helfer ein Loch von etwa 30 Zentimeter Tiefe und 15 Zentimeter Durchmesser gegraben.

Nun wird zunächst die Wäsche des Verstorbenen und die Wäsche der Trauergäste herbeigetragen, die diese am Beerdigungstag benutzt haben. Man legt sie auf die Steine, und dann wird sie von Witwe und Tochter des Verstorbenen sehr lange und kräftig gewaschen und nachgespült.

Auch die übrigen Trauergäste haben, wie der Schamane, die ganze Zeit über Kokã gekaut und vom tęyu Branntwein zu trinken bekommen.

Nach der Wäsche kämpft der Schamane zunächst wie vorher, so, als ob er unsichtbare Geister vom Platz der Reinigungszeremonie wegtreiben wollte. Mit weitausholenden Schlägen fährt er langsam mit tama

und Liane durch die Luft. Besonders wendet er sich wieder nach links, denn links wohnt der böse ec, und zwar in der Erde*.

Danach gehen alle, der Schamane zuletzt, zum Loch auf der linken Seite und speien Koka hinein, anschließend nimmt jeder Branntwein und prustet diesen in Richtung nach links in die Luft. Danach beginnen die zu Reinigenden sich zu entkleiden, und jeder nimmt auf einem der Steine Platz. Die Gehilfen des Schamanen tragen in ihren Kalebassen gewaltige Wassermengen herbei — immer mit Kräutern und Kuhexkrementen versetzt —, und dann beginnen die sehr kräftigen körperlichen Waschungen. Das Wasser wird zunächst über den Kopf, dann über den Körper vorne und hinten so reichlich ausgegossen, daß jeder mindestens 25 Liter Wasser über sich ergehen lassen muß. Die Betreffenden selbst reiben sich den Körper sehr gründlich. Zum Schluß legt der Schamane jedem einige Kräuter auf den Kopf. Auch danach muß der Schamane wieder seinen Kampf mit Stab und Liane in der Luft kämpfen und Branntwein nach links prusten. Darauf steht jeder einzelne auf und wird mit Schamanenstab und Kräutern seitlich von links nach rechts und von unten nach oben vom Schamanen umfahren. Immer wieder trinken der Schamane und die Leute Branntwein, den sie nach links in die Luft ausspeien.

Nach den Waschungen der Leidtragenden, an die sich die Waschungen der Helfer und des Schamanen anschließen, setzen sich alle wieder auf ihren alten Platz, gegenüber den Steinen nieder. Der Schamane setzt sich daneben, den Stab vor sich in den Boden gesteckt, den Mund völlig mit Koka und Tabak gefüllt. Er nimmt dazu in kurzen Abständen einen Schluck Branntwein. So sitzt er etwa 20 Minuten, kauend und trinkend, und dann sagt er, daß die Zeichen in seiner Hand sehr schlecht seien und daß bald jemand sterben würde. Einer der anwesenden jungen Männer, Neffe des Verstorbenen und Gehilfe des Schamanen bei der Reinigung, fragt, wer sterben wird oder ob er es sogar selbst sein würde. Der Schamane, der monoton vor sich hinsprach und immer auf einen Punkt starrte, antwortete, ohne den Kopf zu wenden, er wisse nicht, wer sterben wird. Noch eine Weile bleibt der Schamane, immer weiter Koka kauend und Branntwein trinkend, sitzen, und dann erhebt er sich, und die Leute nehmen hinter den Steinen in einer Reihe Platz, erst die Männer, dann die Frauen. Der Schamane nimmt Kräuter in seine Hände, speit die eben gekaute Koka mit Tabak dazu und fährt damit um die Körper aller Anwesenden, immer von links unten die Seite aufwärts bis zum Kopf und wieder herunter zur rechten Seite, dann den Rücken auf-

* Die Linksrichtung hat nichts mit einer geographischen Richtung zu tun, auch nichts mit der Flußrichtung. Man sitzt mit dem Rücken zum Fluß.

wärts und die Vorderseite, und zum Schluß «saugt» er, indem er beide Fäuste übereinanderhält, alles Schmutzige, die letzten Reste der Pest, an drei Stellen aus dem Körper heraus. Zunächst rechts vom Hals in der Schlüsselbeingrube, dann auf der Mitte des Kopfes, und dann fährt er mit beiden Händen die Arme von den Schultern entlang abwärts bis zu den Fingerspitzen und saugt auf beiden Handflächen. Danach säubert er sich selbst auf die gleiche Weise, indem er sich den ganzen Körper mit seinen mit Kräutern gefüllten Händen von unten nach oben entlangfährt, worauf er nach links an das Loch geht, seinen Stab hineinsteckt und sichtlich etwas aus seinem Magen herauswürgt, wobei er diesen Vorgang durch Druck in die Magengrube mit seinen Händen unterstützt. Dann spuckt er das Herausgewürgte kräftig in das Loch. Danach nimmt er noch einmal Kräuter und Branntwein, sowie Koka in den Mund und spuckt sie ebenfalls in das Loch. Nun nimmt er von neuem Koka, Kräuter und Branntwein, kaut dieses und speit es auf seine Stabspitze und umfährt mit dieser die Körper aller Personen, wobei er erst langsam, dann schneller werdend von unten nach oben streicht, wie wenn er etwas im Körperinnern Befindliches von unten nach oben herausdrücken müßte. Dabei murmelt er Worte, die nicht zu verstehen sind und schleudert schließlich die Pest, die an der Stabspitze hängt, nach Reinigung jeder Person im hohen Bogen von sich. Mit dem Stab säubert er auch den Wäscheberg auf die gleiche Weise. Danach nimmt er wieder Koka und Kalk in den Mund sowie Kräuter, unter ihnen vor allem immer wieder Iũ, und gibt das gleiche den Leuten in den Mund. Danach reibt er sich die Hände mit Iũ ab, spuckt Branntwein darauf und nimmt die gleiche Reinigungszeremonie wie vorher an den Leuten vor, indem er wieder den Körper von unten nach oben entlangfährt und zum Schluß an Hals, Kopf und Händen die Pest aussaugt.

Die Beteiligten sind im Augenblick der Reinigung mit großem Ernst bei der Sache. Zwischenhindurch aber lachen sie und sprechen, und die Männer gehen ihrer Beschäftigung des Strohhutflechtens nach.

Nach diesen drei Reinigungen im Stehen folgt eine weitere Reinigung im Sitzen, wobei der Schamane seinen Stab vor jedem der Leute in den Boden steckt. Nach jeder Reinigung geht er an das Loch und speit alles kräftig hinein, wobei er jeweils anschließend den Mund mit Branntwein reinigt und diesen prustend ausspuckt. Nach dieser letzten Reinigung fährt er mit seinem Stab, vor dem Loch stehend, mehrere Male kreisförmig von unten nach oben durch die Luft und sticht mit der Spitze des Stabes dreimal in das Loch, wie wenn er von oben her mit dem Stab etwas Körperliches in das Loch hineinstecken wollte. Mehrere Male geht

er den ganzen Platz ab, mit seinem Stab schlagend, immer von rechts beginnend und etwa zehnmal Branntwein nach links prustend.

Zum Abschluß der Zeremonie wird das Loch mit einem Stein zugedeckt und Wasser mit lü-Kräutern darübergegossen. Alle Beteiligten spucken die vom Schamanen gegebenen Kräuter in ein zweites, etwa 50 Zentimeter daneben befindliches Loch, spülen den Mund kräftig mit Branntwein nach und spucken diesen gleichfalls in das danebenliegende Loch. Zum Abschluß der über vier Stunden dauernden Zeremonie bekommen alle vom Schamanen einen Schluck Branntwein und prusten diesen gemeinsam in Richtung nach links.

Wird der tçyu zu einer erkrankten Person gerufen, so muß er vor der eigentlichen Behandlung in einer besonderen Séance die Ursache der Erkrankung feststellen. Sie beginnt, wie bei allen Krankenzeremonien, etwa um acht Uhr abends und endet meist mehrere Stunden nach Mitternacht. Für seine Séancen benutzt er einen bestimmten Ort (kači), an welchem er im Beisein des Kranken seine Zeichen empfängt. In schweren Fällen von Krankheit kann die Behandlung auch im Hause stattfinden, doch sollen dann möglichst nicht Ají und Salz in der Nähe sein, Dinge, die der Donner nicht mag. In Fällen besonders schwerer Krankheit kann der Schamane auch an einen stillen, von Menschengeräuschen und Hundegebell verschonten Ort gehen, um dort alleine seine Zeichen zu empfangen.

Vor Beginn der Séance muß der Kranke dem tçyu eine halbe Fasertasche voll Koka, eine Flasche Branntwein und einige Zigarren übergeben, da es dem Schamanen ohne diese Mittel nicht möglich ist, die Zeichen zu empfangen. Seinen Stab steckt er etwas seitlich in den Boden, und dann setzt er sich dem Kranken gegenüber. Er entnimmt nun seiner Fasertasche die Heilkräuter und macht zunächst zwei gleiche Päckchen von verschiedenen gemischten Kräutern, deren jedes er in ein Maisblatt einwickelt. Mit jedem Kraut, das er seiner Fasertasche entnimmt, umfährt er zunächst seinen eigenen Körper, um sein Blut anzuregen und um besser seine Zeichen zu empfangen. Schon hier kann es sein, daß seine Zeichen ihm sagen, seine Mühen werden aussichtslos sein, weil der Kranke doch sterben muß. Nur wenn die Zeichen günstig sind, beginnen er und der Kranke das Päckchen mit den Heilkräutern zu kauen. Der Schamane nimmt nun seinen Stab und speit etwas von den gekauten Heilkräutern darauf, um zu vermeiden, daß die von dem nyiç geschickte Pest auf ihn selbst übergehen und ihn töten könnte. Dann steckt er den tama mit der Spitze in den Boden, um dem Donner kund zu tun, daß er nicht schlecht und fahrlässig, sondern genau nach seinen schamanischen Regeln verfahren will. Neben seinen Schamanenstab stellt er die Flasche mit

Branntwein, in die er einen Stengel des čayuts-Krautes steckt. Bleibt dieser senkrecht, ist es ein gutes Zeichen, fällt er zur Seite und geht er unter, ist es ein sehr schlechtes Vorzeichen. Auf die Mündung der Flasche setzt er noch ein kleines Kalebaßgefäß, ebenfalls mit čayuts-Kraut, das verhindern soll, daß die Pest den Schamanen überrascht und tötet. Dieser nimmt nun eine Handvoll Koka in den Mund und beginnt zu kauen. Unbeweglich schaut er auf seinen Stab, bereit zum Empfang seiner Zeichen. Von Zeit zu Zeit nimmt er mehr Koka und Kalk, teilt dem Kranken mit, daß die Zeichen günstig wären, daß seine Krankheit, die von der Pest käme, sich bald bessern würde. Dann steht er auf, geht auf den tama zu und speit das Gekaute kräftig aus. Er leert eine ganze Kalebasse Branntwein und prustet ihn in die Luft. Wieder kehrt er an seinen Platz zurück, nimmt von neuem Koka und Kalk und etwas Zigarrentabak in den Mund und bleibt wieder unbeweglich hocken. Nach etwa einer Stunde speit er das Gekaute in Richtung auf den Stab aus, ein gleiches tut der Kranke, und dann erheben sich beide. Der Schamane teilt dem Kranken nun mit, daß der Donner ihm eine Heilungsmöglichkeit gezeigt habe. Er würde jetzt seine speziellen Heilkräuter sammeln gehen und der Kranke müsse für eine gute Reinigung ein Pfund Kokablätter, sechs Zigarren, einen Liter Branntwein und Chicha mitbringen und zusätzlich noch einige Pfund Fleisch. Eindringlich schärft ihm der tęyu noch ein, ja keine Medikamente der Weißen einzunehmen, da er sonst bestimmt sterben müsse. Bei dieser wie auch bei anderen Séancen erklärten die Schamanen übereinstimmend, daß weder sie selbst den Platz der Séancen verließen, noch ihre Seelen ihren Körper verließen, um auf Reisen zu gehen. Ihr einziges Erfahrungsmerkmal seien die Zeichen, auf die allein sie lauschen.

An dem zur Reinigung von der Pest vereinbarten Abend bringt der Kranke dem Schamanen die benötigten Mittel, und dieser teilt alles in zwei Teile, einen für die Durchführung der Séance und den anderen als Opfer für den Donner. Letzteren Teil nimmt er zunächst und geht an einen bestimmten Platz, um ihn dem Donner anzubieten. Einen Teil des Branntweins speit er in die Luft, einen anderen trinkt er selbst, sobald der Donner seine Einwilligung zur Reinigung von der Krankheit und seine Zufriedenheit über die Gabe ausgedrückt hat.

Zur Reinigungszeremonie hocken sich der tęyu und der Kranke in der bei den Paez üblichen Art nebeneinander auf den Boden. Der tęyu steckt seinen Stab in die Erde und stellt die Branntweinflasche daneben. Mit Kokakauen und Branntweintrinken verrinnen die Stunden, unterbrochen nur von dem zeitweiligen Ausspeien des Gekauten seitens des Schama-

nen. Durch seine Zeichen erfährt er nach und nach die Ursache der Krankheit und auch die benötigten Heilmittel, die er nun dem Kranken verabreicht. Ein Päckchen mit den gleichen Kräutern legt er ihm noch auf den Kopf, als Schutz gegen den bösen eč-Geist. Der tęyu geht nun zur Seite und schlägt mit dem tama in die Luft, um die anwesende Pest zu entfernen. Dann fährt er mit diesem den ganzen Körper des Kranken aufwärts, beginnend an den Füßen und endend am Kopf, um die Pest aus dem Körper seines Patienten gewissermassen von unten nach oben herauszudrücken. An verschiedenen Körperteilen, der Schlüsselbeingrube, dem Nacken und auf dem Kopf, «saugt» er die Pest ab. In ein wenige Meter vor dem Platz der Zeremonie ausgehobenes Loch speit er nun den Inhalt seines Mundes hinein: Koka und Heilkräuter, vermischt mit der dem Kranken abgesogenen Pest. Einen Schluck Branntwein prustet er nun in die Luft, damit die Pest vollends entweiche und trinkt einen weiteren selbst, damit die Pest nicht in seinen Körper eindringe. Nun wird der Kranke gerufen. Dieser muß zunächst die Mischung von Koka mit Heilkräutern, die er die ganze Zeit über gekaut hat, in das gleiche Loch hineinspeien, und dann muß auch er zwei Schluck Branntwein zu sich nehmen; den einen muß er in die Luft prusten, den anderen schluckt er hinunter. Weitere Reinigungen des Kranken schließen sich an, indem dieser mit verschiedenartigen Kräutern umfahren und die Pest mehrmals abgesaugt und ins Loch gespien wird. Zum Abschluß folgt eine körperliche Reinigung des Kranken mit Wasser, dem šũ und yakúma als Heilkräuter beigegeben sind, damit er nun völlig von der Pest befreit sei. Der tęyu bittet zum Schluß den Donner, er möge verhindern, daß jemand dieses Loch, in dem die gefährliche Pest vergraben ist, aufdecke. Er bittet den Donner weiter, ihm auch bei den folgenden, späteren Krankenbehandlungen zu helfen. Dem Kranken wird mitgeteilt, daß die Zeichen günstig wären und ihm nochmals eingeschärft, weder Medikamente der Weißen zu benutzen, noch an diesem Loch, das die Pest enthält, jemals vorbeizugehen.

Neben diesen beiden bedeutendsten schamanischen Zeremonien, der Krankenbehandlung und der Reinigung der Angehörigen nach einem Begräbnis, werden die Fähigkeit des Schamanen und seine magischen, übernatürlichen Kräfte, auch zu vorbeugenden Zeremonien und Handlungen in Anspruch genommen. Dies ist besonders nötig, wenn Krankheitsepidemien — Pocken, Keuchhusten — innerhalb des Dorfes oder einer Familie auftreten. Im ersten Falle bittet der Cabildo einen Schamanen, von dem man weiß, daß er mit dem Donner sprechen kann, um die Abhaltung der entsprechenden Schutz-Zeremonien, im letzteren Falle bittet

ihn das älteste Mitglied der betroffenen Familie. Zunächst muß dazu ein Schwein getötet werden. Von allen Körperorganen der linken Seite schneidet man ein Stück ab und steckt alles in eine neue Fasertasche. Schamane und Cabildo brechen dann am Nachmittag nach der Lagune auf, in der man sich den Donner wohnend vorstellt, um diesen mit der Bitte um Abwendung der Krankheitsepidemie die Tasche mit den Fleischstückchen zu übergeben. Während dieser Zeit haben die zurückgebliebenen Frauen das übrige Fleisch zu einer Mahlzeit vorbereitet, die aber erst gemeinsam genossen wird, wenn nach zwölf Stunden Schamane und Cabildo von ihrer Zeremonie zurückkehren.

Bei mehreren Krankheits- und Todesfällen innerhalb einer Familie ist ebenfalls die Hilfe eines guten Schamanen erforderlich. Als die Ursache dieser, nur eine Familie betreffenden Todesfälle, wird allgemein die Pest angesehen, während nach einer Nachricht bei S. Bernal Villa hierfür die verstorbenen und erzürnten Familienmitglieder verantwortlich gemacht werden. In diesem Falle besorgt der Familienälteste Branntwein, Koka und Tabak, ruft die Familienmitglieder zusammen und bittet den Schamanen herbei. Dieser opfert den erzürnten Ahnengeistern ein fettes Schwein, das man zunächst eine ganze Nacht vor dem Haus festgebunden hat, während der Schamane in dieser Zeit mit den Geistern spricht, ob diese das Opfer annehmen. Getötet wird es von Angehörigen einer anderen Familie, da die Betroffenen keinerlei Arbeit oder Betätigung verrichten dürfen. Gebrüht wird das Schwein über einem Loch, in das man die Haare und Abfälle hineinwirft. Die Teile des Schweines, die die Ahnengeister durch die Zeichen des Schamanen als Opfer wünschen, werden mittels eines Holzstäbchens in eine Fasertasche getan. Die Frauen backen während dieser Zeit kleine Maisfladen, und zwar soviele, wie die Familie Tote zählt. Diese werden ebenfalls in die Tasche getan und dazu eine Menge anderer Nahrungsmittel. Außerdem schnitzt man in der gleichen Anzahl der Toten kleine Holzpüppchen, die wie die lebenden Paez gekleidet sind. Etwa vierzig Meter vom Haus entfernt gräbt man ein Grab mit Seitennische, genau so, wie es auch für die verstorbenen Menschen angefertigt wird. Am Abend geht der Schamane mit den Familienangehörigen dorthin und nimmt an ihnen die zeremonielle Reinigung vor. Danach bedeckt sich der Himmel mit dicken, schwarzen Wolken, nach deren Richtung hin der tęyu seine Heilkräuter speit. Nach zwei Stunden ziehen die Wolken nach links ab und geben die Sicht auf den sternenklaren Himmel frei. Nun legt der Schamane die Puppen (als Darstellungen der Totengeister) in die Seitennische des Grabes hinein, stellt eine Wachskerze dazu und bläst seine Heilkräuter darüber. Mit einem

Stein deckt er die Seitennische ab und legt nun die Tasche mit den Nahrungsmitteln in die Grube. Nachdem diese wieder mit Erde gefüllt ist, schreitet er zu einer erneuten Reinigung der Familienmitglieder, die ein drittes Mal im Hause und gleichzeitg an den Helfern beim Schweineschlachten und Backen vorgenommen wird. Gemeinsam ißt man nun zum Abschluß die eine Hälfte des Schweines, während die andere Hälfte dem Schamanen als Honorar gehört.

Eine weitere wichtige schamanische Zeremonie wird bei der Neukonstruktion eines Hauses vorgenommen. Hierbei speit der tęyu zur Einweihung auf den künftigen Feuerplatz des Hauses seine Kräuter und gräbt ein kleines Loch, in das er die Kräuter šũ und šulápe hineintut. Auf einem kleinen Holzstapel verbrennt er weitere Kräuter, deren Asche er aus dem Hause trägt. Von neuem entzündet er nun ein Feuer, in welchem er einen jungen Maiskolben brät und diesen einem Hund zu fressen gibt. Stirbt dieser nicht daran, so gilt dies als Zeichen, daß hier keine Pest mehr existiert und die Bewohner hier ruhig wohnen dürfen. Im anderen Falle müßten sie das Haus verlassen.

Im Sinne aller schamanischen Séancen der Paez, als eine Reinigung von der Pest oder zu ihrer Abwehr, ist auch die folgende Zeremonie vor der ersten Ernte eines neu gerodeten Feldstückes aufzufassen. Der Besitzer geht mit Koka, Chicha und Branntwein mit seinen Familienangehörigen und dem tęyu auf das Feld. Letzterer besprengt mit Wasser, dem Kräuter zugesetzt sind, zunächst das Feld und verteilt dann an alle Anwesenden kleine Päckchen mit Heilkräutern. Von jeder Fruchtart nimmt er nun eine Probe und formt daraus ein Bündel, um es dem Donner anzubieten. Nach dieser Gabe erntet der Besitzer von jeder Fruchtart eine Fasertasche voll und trägt sie nach Hause. Vor der linken Seite des Einganges stellt er alle Taschen nebeneinander nieder, und dann speit der Schamane seine Kräuter über sie, um sie von der Pest zu reinigen, die ohne diese Zeremonie sonst ins Haus getragen worden wäre. Nachdem die Früchte gekocht sind, werden sie dem Schamanen übergeben, der an jeden einzelnen der Anwesenden je eine Frucht verteilt und den Rest dem Donner als Gabe anbietet, der seinerseits alles dem Schamanen zurückgibt.

Ein guter Schamane kennt keine Kräuter oder sonstigen Mittel, um die Menschen zu schädigen oder sie zu töten. Diese Handlungen sind das Kennzeichen der nyiç. Wie wir aber gehört haben, ist die Grenze zwischen den guten und bösen Schamanen nicht sehr scharf gezogen; jeder könnte auch die Tätigkeiten des anderen ausführen, wenn auch der Donner — so ist man überzeugt — einem nyiç seine Hilfe nicht angedeihen läßt, so daß dieser allein auf seine schlechten und bösen Mittel

angewiesen ist. Zwischen dem tęyu und dem nyiç herrscht ein ständiger Kampf; nicht öffentlich zwar, aber im Geheimen. Ständig fühlen sich die tęyu von den bösen Machenschaften der nyiç verfolgt, und wer nur einen Augenblick in seiner Aufmerksamkeit nachläßt, wird von ihnen getötet. Siegesaussichten hat in diesem Kampf der magisch stärkere; da aber die nyiç ihre Erfolge über die guten Schamanen nicht öffentlich bekanntgeben, kann man nur von den Siegen der tęyu über die bösen Schamanen erfahren. So erzählt ein Schamane von Santa Rosa, daß er in seiner Jugend sehr heimtückisch und verschlagen gewesen sei und bereits viele Mittel kannte. Eines Tages erklärte ihm ein nyiç, der schon seine Mutter und seine Brüder getötet hatte, seine Feindschaft, weil er auf dem besten Wege war, ein guter Schamane zu werden. Er wurde krank, und seine Zeichen kündigten ihm an, daß er bald sterben würde. Nun gab es aber in Huila einen berühmten Schamanen, und diesen suchte er mit viel Branntwein und Koka auf. Sogleich erkannte dieser, daß es sich um Verzauberung seitens eines nyiç handelte. Die einzige Möglichkeit, mit dem Leben davonzukommen bestand darin, sofort die Seele des bösen Zauberers zu töten. Gemeinsam gruben sie dazu ein Loch und warteten darin während vieler Nächte auf die Seele des nyiç. Diese kam auch; da sie aber sehr argwöhnisch war, ließ sie sich nicht ergreifen. So verging mehr als ein Monat. Nacht um Nacht waren beide ohne zu schlafen auf der Lauer, und dann kam eines Nachts bei Tagesanbruch die Seele des bösen Zauberers. Der Schamane war aber bereit, er erhob seinen Stab, und mit einem kräftigen Schlag fiel sie in das Loch. Sofort wurde Erde daraufgehäuft und das Loch völlig zugedeckt. Zischend starb die Seele.

Da der junge Schamane aus Santa Rosa nun wieder gesund war, schickte ihn der alte Schamane nach Hause zurück. Er riet ihm aber, Kräuter mit sich zu führen, da es auf dem Wege Räuber gab. Vorsichtig ging dieser bis zu der gefährlichen Stelle, und da zeigten ihm schon seine Zeichen an, daß die Räuber in der Nähe waren. Sofort blies er seine Kräuter, und die Räuber fielen in tiefen Schlaf. Weiter auf dem Heimweg traf er auf einige Leute, die einen Verbrecher verfolgten. Sie gaben ihm Branntwein und Koka und baten ihn, ihnen von seinem Hause aus bei der Gefangennahme des Verbrechers zu helfen. Er streute sich darauf čayuts auf seine eigenen Füße, und der Verbrecher konnte daraufhin nicht mehr laufen, so daß ihn die Leute fangen konnten.

Andere Schamanen berichten, daß im Falle einer Verzauberung durch einen nyiç, der Verzauberte und seine Familienangehörigen ein Schwein schlachten und von jedem Organ ein Stück in eine Fasertasche tun. Die-

se bringen sie dem Schamanen, zusammen mit Branntwein, Koka und Zigarren. Das Fleisch dient als Köder für die Seele des Zauberers, denn beim ersten Hahnenschrei, wenn alle Anwesenden Koka kauen, komme diese, um sich die Tasche zu holen. Sie fällt aber in das darunter gegrabene Loch. Der Schamane wirft dann sofort Kräuter hinein, die Anwesenden die gekauten Kokapäckchen, und dann wird so schnell wie möglich die Grube zugedeckt. Wenn so seine Seele getötet ist, muß auch der Zauberer sterben.

Die gleiche Art des Seelenfanges, wie sie hier von den tgyu berichtet ist, üben auch die nyiç als häufigste Art der bösen Zauberei aus. Dazu gräbt der nyiç ein Loch und stellt sich darüber, um die umherziehende Seele seines Opfers zu erwarten. Diese ist wie eine leuchtende Kerze sichtbar. Befindet sie sich über dem Loch, versetzt ihr der nyiç mit seinem Stab einen kräftigen Schlag, so daß sie in das Loch fällt. Soll sie recht schnell sterben, wirft der nyiç stark wirkende Kräuter über sie und bedeckt das Loch mit Friedhofserde. Im anderen Falle hat er viele Möglichkeiten, der Seele und damit seinem Opfer langsamer wirkenden Schaden zu tun. Streut er das Kraut baw (aracea) über sie, bläht sich der Magen ihres Besitzers so stark auf, daß dieser stirbt. Wenn der nyiç Kalk über die Seele streut, erblindet der Mensch. Bei dem giftigen Kraut boračero (Datura sp.) wird der Besitzer der Seele wahnsinnig, auch der beißende Rauch der Agave ruft Wahnsinn hervor. Das Zusammentun der Blätter des čuwét (Krameria ixina?) mit der Seele bringt den Tod. Tod rufen auch die Kräuter kaspi (Toxicodendron striatum Kuntze), lečero (Euphorbia cotinifolia L.) und Pringamoza hervor.

f) Der soziologische Aspekt des Schamanismus

Wenn auch die schamanischen Zeremonien und die ihnen zugrunde liegenden Vorstellungen religiöser Art sind, so ist doch das Wirken des Schamanen ein ausgesprochen soziologisches Faktum. Ohne die Tätigkeit des tgyu kann weder die Familie noch die Dorfgemeinschaft existieren. Nur der Schamane ist es, der durch seine persönlichen Fähigkeiten das böse Wirken der nyiç, der tüs, eč und gělyómp-Geister ausgleichen und zum Guten wenden kann. Dabei besteht sein Wirken aber nicht nur in der Abwehr des bereits Eingetretenen, in der Heilung des Befallenen, sondern sein Wirken ist auch vorbeugend, ja prophetisch, indem er zukünftige Erkrankungen oder Todesfälle voraussagt. Kein Hausbau, keine neue Ernte kann zudem vorgenommen werden, ohne daß der tgyu zuvor die Früchte bzw. den Bauplatz von der Pest reinigt.

Er ist aber damit nicht nur Schützer des Einzelwesens oder der Einzelfamilie, sondern auch verantwortlich für das gedeihliche Nebeneinanderleben der Mitglieder des ganzen Dorfes. So ist es nicht verwunderlich, daß es die Schamanen sind — neben dem Donner unter seinen verschiedenen Namen —, die in den mythischen Überlieferungen die Kriegsanführer waren. Sie führten ihr Volk, vermöge ihrer magischen Begabung und Stärke, erfolgreich gegen die Pijaos und die Spanier. Mehrmals erzählten uns die Alten der verschiedenen Dörfer, daß der Donner die weißen Eindringlinge einmal wieder aus dem Tierradentro der Paez hinaustreiben und töten wird. Und es ist nur folgerichtig, wenn der Schamane von Santa Rosa, als Nachfolger des mythischen Donners, noch 1952 bei dem bevorstehenden Einfall einer bewaffneten Gruppe weißer Umstürzler, seine magischen Kräuter auf den zum Dorf führenden Weg spie, um sie zu verderben. Entsprechend handelt die alte Felisa Ipia, wenn sie in den Fäden ihres Schamanenstabes die Seelen aller Dorfbewohner gesammelt hält, um sie so besser gegenüber bösen, magischen Einwirkungen beschützen zu können.

Wegen dieser ihrer gewissen übernatürlichen Fähigkeiten, deren Wirkungen sich niemand innerhalb der Gemeinschaft entziehen kann, besitzen die tegu ein gewisses inoffizielles Ansehen. Hinzu kommt, daß sie alle mindestens dreißig bis vierzig Jahre alt sind und damit durch ihr Alter schon eine der natürlichen Voraussetzungen für die Anerkennung durch die Gemeinschaft erfüllen. Nicht wenige fühlen sich dadurch geehrt, herausgehoben aus der großen Menge, viele aber bestätigten mir, daß sie nur ungern Schamane seien, zwar berufen durch ihre Fähigkeit, die Zeichen zu empfangen, aber auch bedrückt durch die Last der Bürde ihrer Verantwortung.

In Zeiten von Krankheitsepidemien oder unerklärlichen, «übernatürlichen» Todesfällen sind sie der Mittelpunkt der Gemeinschaft, an den sich niemand vergeblich wendet. Und im Gespräch mit ihnen hatten wir im allgemeinen durchaus den Eindruck, uneigennützigen, hilfsbereiten Menschen gegenüber zu stehen. Aus ihrer Tätigkeit machen sie kein Geheimnis, und so gut es ging versuchten sie, uns ihre Erfahrungen und Kenntnisse mitzuteilen, die sie zum Wohle der Gemeinschaft anwenden.

4. MUSIK

In keinem Bereich der Kultur der Paez zeigt sich eine solche Armut, wie im Gesang und Tanz, den hervorragenden Äußerungen des Charakters und Geistes aller Völker. Kein eigenständiger Tanz wird bei den

Paez geübt und kein Lied habe ich singen hören. Es stellt dies zweifellos eine Verarmung dar, denn aus der Folklore ist zu ersehen, daß früher auch getanzt wurde. Der entsprechende Schluß ist zwingend auch aus der Ausübung einer sehr angenehm klingenden Musik zu ziehen. Die Kenntnis der Musik aber macht auch den Gesang höchst wahrscheinlich, zumal bei einem im Grunde lustigen und zu dauerndem Scherzen aufgelegten Volk. Ist es doch für das Mädchen, das träge bei scherzhafter Rede ist, sehr schwer, einen Mann zu bekommen. Und auf die Frage der bei Uricoechea verzeichneten Paez-Vokabel für «Singhaus» konnte mir der gute Victoriano zu seiner eigenen, größten Überraschung, sofort ein besonderes Wort seiner Sprache angeben «mémyat».

Was von den heute bei den Paez gebrauchten Musikinstrumenten ursprünglich ist, läßt sich nicht mit Sicherheit sagen. Auffällig ist das Fehlen jeder Art von Rasseln, dem hervorragenden Instrument der amerikanischen Eingeborenen*.

Das sich in jedem Haus befindliche Kuhhorn (káčn) ist im eigentlichen Sinne kein Musik-, sondern ein Signalinstrument. Es ist völlig schmucklos und gibt, aus einem an der Spitze abgesägten Horn bestehend, nur einen Ton her, der auf die gleiche Art hervorgerufen wird, wie der Ton eines Waldhornes oder einer Fanfare. Dieses Horn wird von den Männnern benutzt, wenn sie aus den Bergen nach dem gemeinsamen Fällen der zum Hausbau benötigten Bäume herabkommen, um dem Dorf von der Rückkunft Nachricht zu geben.

Die eigentliche Paez-Musik wird von einer Musikantengruppe ausgeführt, deren Instrumente aus einer mehr oder weniger großen Anzahl von Querflöten, einer Pauke, einer Trommel, einem Tamburin und einer Triangel bestehen (Abb. 202). Die Anzahl der Flöten schwankt zwischen fünf und fünfzehn. Tamburin und Triangel (číngalo) können fehlen. Letztere ist immer gekauft, desgleichen im allgemeinen der einseitig bespannte und mit Blechschellen versehene Tamburin (pandęrę́ta).

Dem Namen nach ist die Querflöte (koi) ein Paez-Instrument. Eine Untersuchung über Verbreitung oder kulturhistorisches Alter dieser Art von Flöten liegt für Amerika noch nicht vor; in der alten Welt ist sie jedenfalls jünger als Langflöte und Panflöte (Sachs, p. 147). Bei den

* Allerdings erwähnt Pittier de Fábrega (p. 325) unter den Musikinstrumenten der Paez eine Rassel (tsoóts) in Form einer Kalebasse mit einem Griff, die mit kleinen Steinen gefüllt war. Ob es sich nicht möglicherweise um ein Instrument der Neger von Belalcazar handelt, sei dahingestellt.

Paez hat sie 65 cm Länge und etwa 2,5 cm Durchmesser. Sie ist aus einer Rohrart hergestellt, die ebenfalls koi heißt und die nur in den Bergen wächst. Ihre Anfertigung ist Spezialistenarbeit. In Calderas ist Vicente Puche der derzeitig einzige Hersteller. Eine Flöte kann nur bei Vorlage einer anderen angefertigt werden, die aber keine Modellflöte eigens zur Konstruktion anderer ist, sondern irgendeine, die Vicente gerade zur Verfügung hat. Mir persönlich hat er beispielsweise ohne weiteres sein damals einziges Instrument verkauft. Zur Neuanfertigung würde er sich, wie er sagte, eine Flöte von einem Nachbarn leihen.

Das Flötenrohr ist zylindrisch und knotenlos. Die Abdichtung an der Seite des Blasloches geschieht mittels eines Stückchens ausgepreßten Zuckerrohres, das einige Zentimeter in die Flöte hineingeschoben wird. Die sechs Grifflöcher haben keinen gleichen Abstand untereinander. Das erste ist vom Blasloch 25 cm entfernt, das zweite Griffloch vom ersten 4,2 cm, das dritte vom zweiten 4,5 cm, das vierte vom dritten 4,2 cm, das fünfte vom vierten 3,8 cm und das sechste vom fünften 4 cm.

Die sieben, sehr scharfrandigen Löcher der Flöte haben gleichen Durchmesser. Sie werden mittels eines glühend gemachten Eisenrohres (barílya) von gleichem Durchmesser hineingebrannt. Ihre Lage und ihre Abstände werden von einer daneben gehaltenen Flöte übertragen und durch Einschnitte mittels eines Machete markiert (Abb. 203). Trotz der relativ übereinstimmenden Löcher hat jede Flöte eine etwas andere Abstimmung, hervorgerufen durch den wechselnden Durchmesser des Rohres.

Nach der von meinem Bruder Wilfried freundlichst vorgenommenen Untersuchung der von mir erworbenen Musterflöte des Vicente Puche, liegt deren Stimmung zwischen c und cis. Ihre sechs Grifflöcher ergeben eine anhemitonische Siebentonskala. Allerdings sind alle Tonschritte etwas unsauber, also nicht genau einen Ganztonschritt auseinander. Dies ist besonders auffällig vom dritten zum vierten Ton, wo wir spürbar weniger als eine große Sekunde haben, allerdings auch bedeutend mehr als einen Halbton. Es ist dies deswegen bemerkenswert, weil auch bei unserer diatonischen Durtonleiter zwischen diesen beiden Tönen ein entscheidender Halbtonschritt liegt.

Geblasen wird rechts- oder linksseitig. Die durch die schwere Feldarbeit verarbeiteten Finger bedecken die Grifflöcher, lang ausgestreckt, mit dem ersten oder zweiten Fingerglied.

Der Wert der Flöten ist nicht sehr hoch. An den Festtagen pflegt man sich in den Festhäusern zu betrinken, und dann werden die Flöten bei den folgenden Raufereien als Schlaginstrument benutzt und dabei zerbrochen.

Zu jeder Musikantengruppe gehört mindestens eine kleine zylindrische Trommel (káka) oder eine Pauke (kut), die beide zweiseitig bespannt und in ihren Dimensionen breiter als hoch sind. Trommel und Pauke sind in dieser Form wahrscheinlich Lehngut und in ganz Südamerika von den ehemaligen Negersklaven übernommen worden. Die Anfertigung bei den Paez ist Spezialistenarbeit. Zur Zeit ist Vicente Puche Hersteller der Flöten, wie auch der Trommeln. Früher gab es jedoch auch einen besonderen Meister, der nur Pauken und Trommeln hergestellt hat. Die Arbeitszeit für ihre Anfertigung beträgt 10 bis 14 Tage, da für jeden Arbeitsgang (Holz schneiden, trocknen lassen, für die verschiedenen Arbeitsgänge bei der Fellbearbeitung usw.) je ein Tag gerechnet wird. Der zylindrische Trommelkörper wird aus dem Holz des utsę-Baumes hergestellt. Die beiden Trommelfelle (katç) sind aus Kalbfell. Die Spannung geschieht mittels Schnüren aus Agavefaser, die zickzackförmig von Spannrahmen zu Spannrahmen über den Trommelkörper laufen. Sie werden durch eine endlose Schlaufe angezogen, die jeweils zwei Stränge der Spannschnüre umfaßt und gleichzeitig um den ganzen Trommelkörper liegt. Quer über das untere Fell ist als Rasseleinrichtung eine Schnur mit einem Hölzchen gespannt. Die Art der Konstruktion der Trommel und der Pauke ist in Calderas gleich. Eine Trommel in Santa Rosa ist insofern abweichend, als der obere und untere Spannrahmen aus je einer doppelt genommenen Rute besteht, zwischen die die Enden des Trommelfelles eingespannt sind (Fig. 37). Die Maße der kleinen Trommel ligen bei 16 cm Höhe und 22 cm Durchmesser, die der Pauke bei 40 cm Höhe und etwa 60 cm Durchmesser.

Bei Ausübung der Musik, zu der kein Text (mehr) bekannt ist, schlagen Trommel und Pauke den gleichen Rhythmus, aber in verschiedener Weise. Die Trommel wird mit zwei Trommelstöcken, die einfach zwei gewöhnliche, ungegliederte Stückchen Holz sind, auf dem Fell geschlagen. Die Pauke wird mit der einen Hand mit einem regelrechten, aus einem Stock mit einer Stoffumwicklung bestehenden, Schlägel geschlagen, während die andere Hand mit einem Stöckchen auf den Rahmen schlägt. Beim Dreivierteltakt, der hauptsächlichen Taktart, wird bei der Pauke mit dem Schlägel der einen Hand das erste und dritte Viertel einfach und das zweite Viertel in Achteln geschlagen. Die andere Hand schlägt mit dem anderen Stock auf dem Rahmen nach.

Ob dieser Paez-Rhythmus ursprünglich ist oder zusammen mit der Trommel übernommen wurde, ist nicht mit Sicherheit festzustellen. Wie in der Geschichte «Der Paez mit der Axt» ausgeführt wird, haben nach Überlieferung der Paez die Pijao-Frauen in früherer Zeit, als es noch

keine Trommeln gab, bei den Tänzen mit den Händen auf ihren Brüsten den Takt geschlagen. Wir dürfen annehmen, daß dies auch bei den früheren Paez zum Teil der Fall war. Nach E. Castillo i Orosco benutzten die Paez früher aufgehängte Chichacanoas als Trommeln (kwimb). Diese bestanden aus ausgehöhlten Baumstämmen und wurden jeweils bei dem kwimbkó-Tanz von allen Männern gemeinsam geschlagen, während die Frauen dabei sangen. Der derzeitige, auf den Trommeln geschlagene Rhythmus scheint jedoch weniger fest verankert als die Melodie. Letztere ist ihnen so lieb, daß sie zur Messe in der Missionskirche keine Choräle singen, sondern mit den gleichen Instrumenten die üblichen Melodien spielen, allerdings unverhältnismäßig langsamer. Trommel und Pauke kommen dabei aus dem Rhythmus, sie wissen mit ihren Instrumenten nichts Rechtes anzufangen und schlagen einfach gleichmäßige Sechzehntel. Es scheint damit, daß die Melodie ursprünglicher und somit in der Überlieferung der Paez fester verankert ist, und daß mit dem Lehngut der Trommel auch der entsprechende moderne Rhythmus übernommen wurde. Darin bestärkt mich eine Beobachtung bei der Musik der Neger von Tumaco, in der kolumbianischen Hafenstadt an der Pazifischen Küste. Dort, bei den Nachkommen einstiger Sklaven, sind heute noch westafrikanische Musikinstrumente mit entsprechenden Negerbezeichnungen in Gebrauch, unter anderem die xylophonähnliche Marimba, und zwei Trommeln, die konische, einseitig mit Fell bespannte Konuno und die doppelseitig bespannte, zylindrische Pauke, die Bombo. Letztere weist die gleiche Bespannungsart auf, wie die Paez-Pauke und wird ebenfalls mit zwei Schlägeln bearbeitet, von denen der eine, mit einem Rohgummikopf versehene, auf das Fell schlägt und der andere, ein einfacher Stab, auf den Rahmen des Trommelkörpers.

Die Musikanten sind immer Männer. Sie üben die Musik als Amateure aus, die aus Liebhaberei das eine oder andere Musikinstrument erlernen. Dabei ist die Trommel das beliebtere Instrument, während die Flötisten weniger zahlreich und vorwiegend auf bestimmte Familien beschränkt sind.

Die heute getanzten Tänze, die übrigens nicht jeder beherrscht, entsprechen dem kolumbianischen Bambuco, ohne allerdings die dazu nötige Gewandtheit und Leichtigkeit der Bewegungen, wie bei der kolumbianischen Landbevölkerung in anderen Teilen des Landes, erkennen zu lassen.

Anmerkungsweise seien die Tänze zitiert, die H. Pittier de Fabrega (nach E. Castillo i Orosco) von den Paez erwähnt und die in einigen Bezeichnungen auf eine eigenständige Kultur hinweisen: onza-kó «Mäu-

setanz», nwi-kó «Bussardtanz», itsa-kó Pubertätstanz der Mädchen, ek-koi-kó Tanz der Geisterflöte, tel-koi-kó Tanz der langen Flöte oder Kriegstanz, la-kó Tanz zur Einweihung eines Hauses u. a.

5. FOLKLORE

Das heutige Erzählgut der Paez ist weder reichhaltig noch vielgestaltig. Auch hierin hat zweifellos eine gewisse Verarmung stattgefunden, wie Bruchstücke größerer Mythenkomplexe erkennen lassen. Dazu gehören die «Geschichte von der Frau, aus deren Körper Nutzpflanzen hervorgehen», Geschichten um verwandelte Tiere und Menschen, wie auch Geschichten um Werjaguare. Auch die Erzählung von dem geisterhaft einherrollenden Menschenkopf hat in nord- und südamerikanischen Märchen eine außerordentlich große Verbreitung und eine vielfältige mondmythologische Bedeutung. Im Gegensatz dazu ist das völlige Fehlen von typischen Erzählungen über den Waldgeist (gëlyómp) bemerkenswert, obwohl dieser in den religiösen Vorstellungen der Paez eine wichtige Rolle spielt. Nur sehr schwach und farblos sind auch Tier- und Verwandlungsmärchen vertreten.

Leider wirkt sich bei der Mythenaufnahme die Kargheit der Mitteilungsbereitschaft der Paez besonders hemmend aus. Sind es doch vorwiegend die Alten, die Geschichten zu berichten wissen. Aber gerade diese stehen dem Fremden besonders ablehnend gegenüber. Die Chronisten und frühen Berichterstatter teilen uns über die Folklore der Paez nichts mit, und auch die jüngsten Reisenden der dreißiger Jahre wissen nur die Geschichte von Juan Tama zu berichten bzw. sprechen den Paez alle Mythologie ab.

Sicherlich ließen sich die von S. Bernal Villa und die von mir gesammelten Erzählungen bei noch besserem Kennenlernen der Alten vermehren. War doch die Unbeliebtheit unseres Dolmetschers gerade bei den Alten mitunter ein so großes Hindernis, daß Victoriano manche der mitgeteilten Erzählungen über seinen Vater oder Onkel von den entsprechenden Gewährsleuten erfragen mußte.

Die Themen der Erzählungen umfassen in der Hauptsache Geschichten um den Donner (Nr. 1—12), meist unter seinen Namen Juan Tama, Llivan, Chauté oder Juan Chiracol. Er ist in den Mythen der erste Schamane und Lehrmeister der heutigen Schamanen (vgl. unter «Religion») und bedeutend mächtiger als die Menschen. Er ist aber keine erhabene, numinose Figur. Im Gegenteil, die Menschen haben ihm in alter Zeit

manchmal recht übel mitgespielt, ihm Giftkräuter in seine Lagune geworfen und ihn sogar in einen Kasten eingesperrt. Eine zweite Gruppe von Erzählungen (Nr. 13—14) behandelt Geschichten um Geister, eine dritte (Nr. 15—16) Geschichten um Pijaos, die gefürchteten Menschenfresser und schrecklichen Feinde der Paez. Damit stehen in gewissem Zusammenhang Geschichten von Werjaguaren (Nr. 17—18). In der letzten Gruppe (Nr. 19—22) sind die restlichen, nicht näher zu klassifizierenden Erzählungen mitgeteilt. Um eine gewisse Vollständigkeit zu erzielen, sind die Erzählungen Nr. 1 und 2 von Juan Tama hier nach G. Bürg (p. 34 f) bzw. G. Hernandez de Alba (1946, p. 953) wiedergegeben und die Nr. 4, 9, 10 nach S. Bernal Villa (I).

1. Juan Tama, der Wassergeborene

Unter den Indianern von Vitomcó lebt folgende Erinnerung an Juan Tama: Vor langer Zeit herrschte eine Kazikin in Vitomcó, die kinderlos und daher stets traurig war, wenn sie darüber nachdachte, wer ihr in der Herrschaft folgen würde. Eines Tages, als sie am Zusammenfluß des Rio Paez mit einem Bach, der aus dem Páramo de Moras (aus der heute Juan Tama genannten Lagune) kommt, Wäche wusch, sah sie im Wasser ein schwimmendes Stück Holz, auf dem ein kleines Kind lag. Sie fischte es heraus, und da es ein Knabe war, nahm sie sich seiner an, erzog ihn und machte ihn, als er großjährig wurde, zum Kaziken. Dieser Kazike — heute Juan Tama genannt — war sehr weise und stark und führte sein Volk gegen die Spanier, als diese sich am Magdalenenstrom festsetzten. Das letztemal wurde er in der großen Schlacht von San Vicente am Paez gesehen, wo es ihm mit seinen Truppen gelang, die Spanier zu besiegen. Da er auf dem Wasser einhergeschwommen war, betrachtete man ihn nicht als einen gewöhnlichen Menschen, sondern man nahm an, daß er der Kazikin von deren Vorfahren geschickt wurde, oder aber auch, daß er direkt von den Göttern abstamme, die sich mit der Lagune von Juan Tama paarten, so daß diese seine Mutter ist. Als Juan Tama bei San Vicente sah, daß seine Leute siegten und seines Schutzes nicht mehr bedurften, verschwand er wieder. Er gab noch seinen Unterkaziken Anweisungen und zog sich dann zu seiner Mutter, der Lagune de Juan Tama zurück, wo er auch heute noch lebt, und von wo aus er die Geschicke seiner Indianer im Tierradentro leitet.

2. *Juan Tama, der Sohn des Morgensternes*

Eines Tages, als der Morgenstern besonders schön glänzte — so erzählt man sich bei den Paez von Lame —, fanden einige Leute ein Kind in einer Schlucht, die seitdem Sternenschlucht genannt wird. Dieses Kind war Juan Tama. Sie nahmen es und brachten es zu einer Frau, damit sie es aufzöge. Juan Tama aber saugte ihr die Milch so stark ab, daß sie der Frau ausging. Sie brachten ihn deswegen zu einer anderen Frau, aber mit der machte er es genau so. Die Leute sagten daher, daß er nicht von einer Frau genährt werden könnte und gaben ihm normale Erwachsenenkost.

Als er aufgewachsen war, heiratete er die Kazikin von Huila und wurde Häuptling aller Indios. Er belehrte sein Volk und befahl, daß sie ihr Land nur für sich behalten und sich nicht mit den Weißen mischen sollten, dann würden sie unbesiegbar sein. Als er seinen Tod nahen fühlte, ging er zur Lagune in den Páramo de Moras und sank im Wasser unter. Von dort war er gekommen, dorthin ging er wieder zurück. Er hatte keine Erben.

3. *Llivan, der Schamane und Retter der Paez*

Früher lebten die Pijaos in Plata Vieja und kamen jedes Jahr nach Calderas, um die Leute zu töten und zu fressen. Dabei zerstörten sie die Maisfelder. Die Calderuner hatten sehr große Angst und wußten nicht, was sie machen sollten. Es gab aber in Calderas zwei Männer, die stärker waren als alle anderen Männer. Dies waren Llivan und sein Bruder. Bei einem neuerlichen Einfall der Pijaos wurde Llivans Bruder gefangengenommen, während er selbst entkommen konnte. Die Pijaos töteten den Bruder und zogen ihm dann die Haut ab «wie einer Kuh» und schnitten das Fleisch von den Knochen und frassen es auf. Die Knochen legten sie dann wieder in die Haut und füllten an Stelle des Fleisches Asche in die Haut; dann nähten sie diese wieder zusammen, taten ein Mittel (yútsę) dazu und bekleideten den Bruder mit seinen Kleidungsstücken und der Ruana und setzten ihm seinen Hut auf und schickten ihn zu seinem Bruder zurück. (Hierzu erklärte der Berichterstatter: Das Mittel, das die Pijaos zur Wiederbelebung des Bruders verwandt hatten, kennen die Paez heute nicht. Das Wort wird auch heute für keinerlei Mittel oder Medizin der eigenen Schamanen oder weißen Ärzte verwandt. Es bezeichnet ein Mittel zur Wiederbelebung Toter, das es heute nicht mehr gibt.) Das Mittel wirkt aber nur so lange, bis ein ande-

rer den auf diese Weise Wiederbelebten anspricht. Als der Bruder Llivans nun auf sein Haus zukam, sah ihn Llivan zuerst, machte seine Mutter und seine Schwester darauf aufmerksam, und alle drei stürzten aus dem Haus, und Llivan rief: «Da kommt ja mein Bruder; ich dachte, die Pijaos hätten ihn getötet.» Bei diesen Worten fiel der Bruder in sich zusammen und blieb nur als ein Häufchen Staub mit etwas Haut und einigen Knochen liegen. Llivan, seine Mutter und seine Schwester weinten darauf sehr. Llivan sagte, er könnte jetzt nicht mehr im Hause leben. Er verließ es und ging in die Berge, ohne Salz, noch Gewürze, noch Fleisch zu essen, sondern er lebte nur von Kräutern. So ging er lange Zeit durch die Berge und litt furchtbaren Hunger. Schlafen mußte er unterhalb von Felsen. Er ging am Ufer des Baches Guacharaca entlang und stellte fest, daß das Wasser sehr schmutzig war. Er beschloß daraufhin, nachzusehen, wer das Wasser so schmutzig machte, und fand, flußaufwärts gehend, einen großgewachsenen, schönen Mann sitzend, der Steine in den Bach warf. (Auf meine Frage, ob davon das Wasser so schmutzig geworden sei, antwortete der Berichterstatter: «Ich glaube, der Llivan war ein Schamane; und weil er so lange Zeit nichts gegessen hatte, hat er geträumt, und in Wirklichkeit war das Wasser gar nicht schmutzig, sondern er hat es nur schmutzig gesehen. Und der andere Mann, der in Wirklichkeit der Donner war, war auch Schamane, und auf diese Weise bestand die Möglichkeit, daß sie zusammengetroffen sind.»)

Als Llivan den Mann am Bach sitzend antrifft, kommt er näher, ohne daß der andere ihn gewahr wird. Erst im letzten Augenblick dreht sich der andere um und fragt Llivan: «Was gehst du hier entlang?» Llivan antwortete: «Die Pijaos haben unsere Männer und meinen Bruder getötet und die Felder verwüstet». Der Mann fragte darauf: «Weswegen kämpfst du nicht mit den Pijaos, warum bist du so feige?» Llivan antwortete: «Mit was soll ich kämpfen, ich habe ja keine Waffe». Darauf sagte der andere: «Ich habe eine Schleuder, die ich dir leihen werde und mit der du kämpfen kannst». — «Aber wie soll ich damit kämpfen?» fragt Llivan. «Das will ich dir zeigen», antwortet der andere Mann, der in Wirklichkeit der Donner war, «paß gut auf!» Und Llivan schaute gespannt zu, wie der Donner die Schleuder nahm, sie hoch in die Luft warf und wie beim Niederfallen ein Blitz entstand mit starkem Donnergetöse und Wind und Regen, so daß der niederfallende Blitz Bäume zersplitterte und sie selbst beinahe getötet hätte. Dann gab der Donner Llivan die Schleuder, und Llivan warf sie ebenfalls, und er hatte die gleiche Wirkung. «Gut», sagte der Donner, «du kannst damit umgehen, nimm die Schleuder und kämpfe damit gegen die Pijaos. Hüte sie gut,

und wenn du damit gekämpft hast, werde ich dich rufen, und dann kommst du in mein Haus, das dort oben liegt.»

Llivan ging mit der Schleuder in das Haus seiner Mutter, zeigte die Schleuder aber niemand. Er legte sie in einen Topf und deckte einen Deckel darauf.

Eine Woche darauf kamen die Pijaos bis in die Gegend von Togoima und zogen in Richtung auf Calderas zu. Es war eine riesenhafte Zahl von Pijaos. Die Leute sammelten sich in Llivans Haus und hatten große Angst. Auch die Mutter und Schwester hatten Angst. Llivan aber sagte nichts. Er sagte weder, daß sie ruhig sein sollten, da er kämpfen würde, noch sagte er, daß er eine Schleuder hätte. Und als die Pijaos bis vor Llivans Haus gekommen waren, schickte er seine Mutter, daß sie ihm die Schleuder aus dem Topf hole. Die Mutter ging hin und sah aber in dem Topf nur eine grüne Schlange, keine Schleuder. Sie bekam daraufhin große Angst und lief zu ihrem Sohn zurück und sagte: «Es gibt dort in dem Topf keine Schleuder, sondern nur eine große, grüne Schlange; die kann ich nicht herausholen.» «Dummes Zeug», sagte Llivan, «bring mir die Schleuder, die in dem Topf ist; da ist keine Schlange drin.» (Hier erklärte der Berichterstatter, daß Llivans Mutter die Schleuder nicht habe sehen können, da sie ja kein Schamane war, wie ihr Sohn.)

Aber die Mutter hatte Angst und ging nicht. Währenddessen drangen die Pijaos in das Haus ein, und Llivan ging selbst an den Topf, um die Schleuder herauszuholen, die auch tatsächlich darin war. Ehe er mit ihr ausholte, um Blitz und Donner auf die Pijaos niederzuschleudern, sagte er noch zu Mutter und Schwester: «Kriecht unter den Topf, damit euch die Pijaos nicht fressen», aber da er im gleichen Augenblick die Schleuder warf, hatten sie keine Zeit mehr, sich so zu schützen, und der niederfahrende Donner und Blitz tötete alle Pijaos, sowie seine Mutter und Schwester. Daraufhin beugte er sich zu seiner Mutter nieder und schrie mit Donnerstimme in ihr Ohr «Ooooh», worauf sie wieder zum Leben erwachte. Und das gleiche machte er mit seiner Schwester. Llivan verließ daraufhin das Haus, um zu sehen, wieviel Pijaos tot waren; er ging bis Togoima, in einer Hand hielt er eine Schere, in der anderen einen Beutel und schnitt allen toten Pijaos Ohrringe und Halsketten ab und sammelte sie in seinem Beutel ein. Bei Togoima fand er in einem Loch einen jungen Pijao sitzen, der noch nicht getötet war und der bei sich ein menschliches Bein hatte, um es zu essen, da er Hunger hatte. «Ah», sagte Llivan, «du bist noch nicht tot?» — damit schleuderte er seinen Blitz und tötete auch diesen Pijao.

Llivan trug daraufhin allen Schmuck, den er den Pijaos abgenommen

hatte, in eine der unterirdischen prähistorischen Grabhöhlen (koátkaç), wie sie die Paez zur Bestattung ihrer Verstorbenen nicht benutzen. Diese Höhle war nahe an einem Fluß angelegt, und nachdem Llivan den Schmuck hineingelegt hatte, wuchs der Fluß an und überdeckte die Grabstätte mit den Schätzen.

Llivan kehrte daraufhin zu dem Hause seiner Mutter zurück und sagte: «Jetzt habe ich alle Pijaos getötet, und niemand wird mehr zurückkommen von ihnen. Aber jetzt kann ich nicht mehr bei euch wohnen. Da ich so viele Pijaos getötet habe, wäre es möglich, daß ich euch auch töte. Ich muß euch deswegen verlassen. Ich habe mir ein sehr schönes Haus in den Bergen gekauft und werde von nun an allein leben, aber nie sterben.» Die Mutter und die Schwester weinten beide, er aber nicht. Mutter und Schwester boten ihm an, ihn zu begleiten, aber er lehnte es ab. Daraufhin machte sich Llivan auf. Die Schwester ging hinterher, um zu sehen, wo Llivan entlangginge, aber Llivan wurde vom Wind begleitet, so daß er so schnell ging, daß ihm niemand folgen konnte. Die Schwester konnte nur noch sehen, wie sich Llivan weit hinten in die Luft erhob. Dann fing es an zu regnen, und die Wolken waren sehr tief, und Llivan fiel herunter in die Lagune Hipĕndyk. Von da an lebte Llivan in der Lagune und wurde Donner.

Diese ausführliche Geschichte erzählte mir Victoriano, nachdem er sie von seinem Vater und seinem Onkel erfahren hatte. Ähnlich, aber bedeutend unvollkommener, erzählte sie mir die alte Celia Uriaga in Calderas.

4. Juan Chiracol, der Sohn des Jaguars

Juan Chiracol stammt von zwei Mestizenmädchen ab, die von dem Berg Zenzepechi herabgekommen sind, nachdem sie vor den Pijaos flüchten mußten. Sie ernährten sich von Kartoffeln und anderen Produkten des Feldes, die sie dem Gebirgsboden mit viel Fleiß und mittels ihrer steinernen Werkzeuge abgewannen. Eines Tages wurden sie von den Pijaos überrascht. Sie fraßen das eine der Mädchen auf, das andere blieb alleine zurück.

Nach der Umarmung durch einen Jaguar wurde sie schwanger und gebar Juan Chiracol. Er war sehr intelligent. Er wußte von dem Leid, das die Pijaos seiner Mutter zugefügt hatten. Deswegen kämpfte er solange gegen sie, bis er alle ausgerottet hatte. Seine Mutter gewöhnte ihn an die Gegenwart des Jaguars und dieser umsorgte seinen Sohn Juan und brachte ihm viel Fleisch aus den Bergen. Als er groß war, verschwand der Jaguar.

Mutter und Sohn siedelten nun zu den Paez über und begannen mit dem Bau einer Kirche. Juan Chiracol gab den Paez viele Ratschläge. Er warnte sie, Land zu verkaufen, da dieses nur für die Paez sei, zu dessen Sicherung er ja gegen die Pijaos gekämpft hatte. Dann erklärte er ihnen, daß er nun nach der Lagune El Caspe gehen und nie mehr zurückkehren würde. Wenn er wütend wird, hört man ihn heute noch «uuuh» schreien.

Die Lagune El Caspe liegt sehr weit weg, an der Grenze von Ata. Sie soll sehr bösartig sein. Man glaubt, daß, wenn ein Baum umfällt oder ein Felsblock herunterstürzt, es Juan Chiracol ist, der damit seinen Unmut kundtun will. An Frauen, so sagt man, hatte er kein Interesse; deshalb gäbe es von ihm auch keine Nachkommen.

5. *Chauté verwandelt Menschen in Tiere*

Chauté richtete viel Unheil an, und deswegen brachten ihn die Menschen weit weg, dorthin, wo die Sonne herkommt. Dies geschah folgendermaßen: Früher gab es nur Menschen. Chauté aber machte aus Menschen Tiere, indem er sagte: du bist jetzt das und das! Der Chiguaco war früher ein Sakristan, weil er gut beten kann; der Chicao konnte gut pfeifen und die Guacharaca war früher ein großer Schwätzer. Das Kaninchen war früher ein sehr trügerischer Mensch; wenn der Hund es heute jagt, läßt es sich — boshafterweise — nicht greifen, sondern schlägt Haken und nochmals Haken.

Der Zimmermann konnte große Kästen machen, so große, daß man da einen Menschen hineinlegen konnte. Er versprach Chauté, ihm einen großen Kasten zu schenken. Als er ihn fertig gebaut hatte, zeigte er ihn Chauté, und dieser legte sich hinein, um zu prüfen, ob er groß genug wäre. Der Zimmermann machte den Deckel zu, und damit Chauté nicht herauskommen und noch weiteres Unheil anrichten konnte, vernagelte er ihn sorgfältig. Chauté bat den Zimmermann, ihn doch herauszulassen, dieser öffnete aber den Kasten nicht. Er bat ihn, doch wenigstens zwei Löcher in den Deckel zu schneiden, damit er etwas sehen könnte. Der Zimmermann nahm den Meißel und machte ein schönes Loch, und wie er das zweite anfertigen wollte, rutschte ihm das Handwerkszeug aus und schlug ihm ein Auge aus. «Ich werde blind!» schrie er, doch wie er das sagte, sah er Bäume und nur noch Bäume und nichts weiter. Er hatte sich in einen Specht verwandelt und meißelt mit seinem Schnabel von nun an nur noch Löcher in die Bäume und zieht darin seine Jungen auf. Chauté aber blieb in dem Kasten. Und wenn er sich darin bewegt, dann bebt die Erde.

6. Chauté läßt den Rio Paez entstehen

Ein Mann namens Chauté lief einen Weg sehr lange entlang, bis in den Páramo. Er hatte großen Durst, aber kein Wasser. Da stieß er in den Bergen auf einen Sumpf. Er suchte sich ein Rohr von ähnlicher Art, aus welchem die Flöten hergestellt werden, steckte dies in den Sumpf hinein und sog damit soviel Wasser heraus, bis er genug hatte. Vorher hatte das Wasser keinen Abfluß, jetzt aber folgte es Chauté, als er weiterging. Dieser fragte sich, warum es ihm nachliefe, und er fing an zu rennen. Aber das Wasser folgte ihm. Er kletterte vor Angst auf einen Baum hinauf. Das Wasser blieb zu seinen Füßen und bildete einen großen See, ohne nach irgendeiner Seite hin abzulaufen. Da kletterte der Mann wieder herunter, und das Wasser folgte ihm wieder. Chauté lief nun sehr schnell. Das Wasser blieb etwas zurück; um zu vermeiden, daß er eingeholt würde, lief Chauté nun zickzack. Seit der Zeit läuft der Fluß bei La Plata in vielen Windungen. Einen ganzen Tag lief er so weiter. Als er sehr müde wurde, ließ er sich in den großen Fluß (Rio Magdalena) hineinfallen. Seit der Zeit mündet dort der Rio Paez.

7. Chauté bestraft San Tomás

Ein Mann namens San Tomás verwandelte sich selbst in einen Vogel, ähnlich einem Aasgeier. Er fraß dann immer die Kadaver und Gedärme der gestorbenen Pferde. Jedesmal bat er seinen Neffen, den Schwarzspecht, um Erlaubnis. Dieser aber verweigerte sie ihm, da er selbst keine so guten Zähne hatte, um auch Kadaver zu fressen. San Tomás aber hatte gute Zähne, so daß er alles fressen konnte. Eines Tages kam ein Mann namens Chauté. Dieser hatte großen Neid auf San Tomás, da er soviel Fleisch fraß, sowie die Gedärme, Augen und Zunge. Um San Tomás zu strafen, verwandelte er sich in ein totes Pferd. San Tomás kam und dachte, es wäre ein gewöhnliches Pferd und begann es zu fressen. Als er seinen Kopf in den Bauch des toten Pferdes hineinsteckte, zog Chauté seinen Bauch zusammen und klemmte San Tomás ein. Dieser starb fast dabei und schlug nur noch matt mit den Flügeln. Danach öffnete Chauté wieder ein wenig den Bauch, so daß San Tomás den Kopf herausziehen konnte. Dieser war sehr verschrammt, seine Augen waren verschwollen und er hatte starke Kopfschmerzen. Er mußte sich ein Tuch um den Kopf binden und ging nach Hause.

Chauté verwandelte sich daraufhin wieder in einen Menschen und machte sich auf, San Tomás zu besuchen. »Ich habe wunderschönes

Fleisch» begrüßte er San Tomás, doch dieser schüttelte nur den Kopf und sagte: «Sprich nicht soviel, ich habe Kopfschmerzen und kann nicht essen.» Danach ging Chauté wieder weg.

8. Chauté verwandelt Menschen in Steine

Eines anderen Tages verwandelte sich Chauté in einen Kamm und legte sich auf den Weg. Eine Frau kam vorüber, nahm den Kamm auf und steckte ihn in ihren Beutel. Als sie eine Weile gegangen war, suchte sie ihren gefundenen Kamm vergeblich, er war verschwunden. Als sie dann ein Stück weiterging, begegnete sie einem kleinen Kinde. Dieses bat die Frau um etwas Zuckerrohr aus ihrer Fasertasche. Da es nur ein Kind war, lehnte sie ab. «Dann sollst du Stein sein», sagte das Kind, welches in Wirklichkeit Chauté war. Seitdem ist die Frau ein Stein.

Ähnliches machte Chauté bei einer anderen Gelegenheit. An einem Festtage, als die Leute viel Fleisch hatten, kam Chauté, als kleines Kind verwandelt, hinzu und bat die Erwachsenen um etwas Fleisch. «Du bekommst nichts, es reicht kaum für die Erwachsenen», sagten die Leute, «da bekommen Kinder nichts». «Nun, dann sollt ihr Stein sein», sagte das Kind, und die Menschen wurden zu Steinen.

9. Der Besuch des jungen Unbekannten

Eines Tages kam ein junger Mann nach Calderas, um auf einem der Höhenzüge der Ortschaft zu wohnen. Ein Mädchen besuchte ihn sehr häufig. Seine Mutter schalt es deswegen, es aber erklärte ihr, daß eine Schlange aus den Zweigen der Büsche Torcasa-Vögel herauszöge, und daß es diese einsammeln gehe. Bald bekam das Mädchen ein Kind, einen Sohn, aus dessen Körper eine Art von Würmern herauskamen. Seine junge Mutter befahl, diese nicht zu berühren oder gar herauszuziehen, da sie mit dem Leben ihres Kindes verbunden wären.

Eines Tages ging sie auf das Feld und hielt sich etwas länger auf. Ihr Kind, das sie zuhause gelassen hatte, wachte auf, und als es seine Großmutter in die Arme nahm, bemerkte diese die Würmer. Voller Ekel zog sie alle heraus. Das Kind starb danach.

Als die Mutter des Kindes zurückkam, klagte sie über dessen Tod und stürzte sich weinend in die nahe Lagune. Sie ertrank aber nicht, sondern verschwand nur darin. Desgleichen verschwand darin der junge Mann,

um mit ihr zusammen in der Lagune zu leben. Der Mutter des sich in der Lagune befindlichen Mädchens gelang es, einen Schamanen zu einer Zauberei zu veranlassen. Er nahm dazu die benutzten Tücher einer menstruierenden Frau und warf sie zusammen mit Kräutern in die Mitte der Lagune. Der junge Mann und das Mädchen verließen daraufhin die Lagune in einer schwarzen Wolke und gingen nach Santa Rosa. Die Lagune in Calderas trocknete ein. Einige Erdwälle auf den Wiesen bilden heute die Reste.

10. Wie der Donner die Frauen raubte

Einstmals hatte ein Mann ein Kartoffelfeld in Pueblito. Als er eines Tages dorthin ging, um zu ernten, traf er einen alten, häßlichen Mann mit einem großen, aus Zweigen geflochtenen Hut. Der Mann wandte den Blick und bemerkte, daß der Alte von einem umgestülpten Baum kam. Der Alte fragte, ob schon geerntet wäre. Der Besitzer antwortete, daß er einige Kartoffeln geerntet hätte. Der Alte bat daraufhin den Mann, ihm das Landstück zu verpachten, damit sie gemeinsam ernten könnten. Der Besitzer war damit nicht einverstanden, er hätte dafür aber andere große Felder, die er verpachten könnte. Der Alte aber bestand darauf, gerade mit dem Besitzer zusammen zu arbeiten. Sie setzten sich zu einer Unterhaltung nieder, aber sie konnten sich nicht einigen.

Auf einmal zog eine dicke schwarze Wolke auf, und es begann kräftig zu regnen. Die Leute liefen in die Feldhütte, um sich zu schützen, aber der Regen drang doch hinein. Der Alte folgte ihnen, blieb aber draußen und setzte sich auf einen Baumstamm. Die Leute bemerkten mit Erstaunen, daß ihm der Regen nichts anhaben konnte. Sie luden ihn ein, doch hereinzukommen, er aber lehnte ab. Das Wasser stieg jetzt immer höher, so daß die Leute wegrannten. Der Alte aber raubte die Frauen. Die Schamanen stellten später fest, daß der Alte der Donner gewesen war.

Nach einem anderen Erzähler trug sich die Geschichte folgendermassen zu: Auf einem Kartoffelfeld erntete eine alte Frau mit vier weiteren Personen aus ihrer Familie. Da setzte ein Wolkenbruch ein. Das jüngste Mädchen lief den Abhang des Feldes hinauf, und als es sich umschaute, verwandelte sich das Kartoffelfeld mit den Leuten darauf in eine Lagune. Das kleine Mädchen sah von oben, wie ein alter Mann mit einer Ruana und einem großen, aus Zweigen geflochtenen Hut kam und die Leute raubte.

11. Wie die Menschen den Donner vertrieben

Der Donner lebte einstmals in Calderas und seine Frau ebenfalls. Er hatte aber neben seiner Frau auch noch eine Geliebte. Diese wohnte in Santa Rosa, dort, wo jetzt die Lagune Bugta ist. Zusammen mit seiner Geliebten hatte er eine Tochter und ein sehr schönes Besitztum mit schönen, bebauten Feldern. In Calderas hatte der Donner aber die Leute erzürnt, weil er eine Frau und deren Tochter geraubt hatte, indem er ein Lasso auf den Weg legte. Die Calderuner taten deswegen Gift in einen Kürbis und warfen ihn in die Lagune. Der Donner mußte diese deswegen verlassen und die Lagune trocknet seit der Zeit ein.

Er ging daraufhin mit seiner Frau nach Santa Rosa. Da es dort aber noch keine Lagune gab, ließ er es über dem Ort der jetzigen Lagune stark regnen, so daß sich das Wasser in einem kleinen Teil sammelte und immer höher stieg. Als das Wasser das ganze Becken auffüllte, konnte der Donner nun darin mit seiner Frau und seiner Geliebten leben. Aber auch den Leuten von Santa Rosa fügte der Donner allerhand Übles zu. So fraß er eines Tages den Leuten von Santa Rosa eine Kuh auf. Die Menschen wurden darauf sehr böse und bauten einen Abflußgraben, um die Lagune trocken zu legen. Aber da bat der Donner um Verzeihung, und daraufhin ließen die Leute ihn in Ruhe, bis er wieder Übles tat. Da warfen die Schamanen von Santa Rosa, ebenso wie es auch die Calderuner getan hatten, Giftkräuter in das Wasser, so daß der Donner auch diese Lagune verlassen mußte. Seitdem lebt er in Barbacoa, wo sich ebenfalls eine Lagune befindet. Die Frau des Donners aber ist noch heute in der Lagune von Santa Rosa. Die alte Schamanin Felisa hat sie schon besucht, desgleichen den Donner selbst, wenn er manchmal zurückkehrt. Beide sehen wie Paez aus, sind sehr gut gekleidet und tragen genau die gleiche Tracht, wie die anderen Paez auch.

12. Der Kampf des Donners mit den Sternen

Als die Schamanin Felisa noch sehr jung war, stellte sie eines Tages an der Umzäunung der Lagune Vogelfallen auf, mit denen sie viele Vögel fing. Eines Tages traf sie dabei den Donner. Dieser war sehr böse. Er war überhaupt ein schlechter Mann, der alles Wasser der Lagune schmutzig machte, indem er viele Bäume in das Wasser geworfen hatte.

Nun gibt es unter den Sternen eine besondere Art, genannt püavel, die konnten den Donner nicht leiden. Sie stürzten sich vom Himmel in die Lagune herunter, um sie zu reinigen. Um den Donner zu ärgern, hatten sie die Lagune fast trocken gelegt. Der Donner war darüber sehr böse.

Aus Wut brüllte er so schrecklich, daß er seinen Mund bis zu den Ohren aufriß und die ganze Zunge heraushing. Daraufhin bekamen die pūsvel Angst und stiegen hinab auf den Grund der Lagune, wo der Donner sein Haus hatte und fragten ihn, warum er so laut brüllte. «Wegen euch natürlich!», antwortete er. Er bat dann aber die pūsvel um Entschuldigung, da er die Lagune zum Leben brauchte, und die Sterne haben ihm dann verziehen. Er mußte aber versprechen, nicht mehr so laut zu brüllen. Daraufhin gaben sie ihm ein Mittel, worauf sein Mund wieder zu einem schmalen, normalen Spalt zusammenwuchs. Die Sterne sind dann wieder an den Himmel zurückgekehrt, wo sie auch jetzt noch sind. Sie unterscheiden sich von den anderen Sternen dadurch, daß sie sich am Himmel bewegen.

13. Der rollende Kopf

Ein Mann aus Palma kam nach Calderas, um einen Schamanen zu besuchen. Dieser Besuch erstreckte sich bis um zwei Uhr nachts, um welche Zeit er Calderas verließ, um nach Palma zurückzukehren. Auf dem Wege kam er an einen Stein, auf dem ein menschlicher Kopf lag, wohl der eines Pijao. Zuerst sah er nur die Zähne in der Dunkelheit weiß blinken. Da der Mann aus Palma einen Stab bei sich hatte, hieb er mit den Worten «was grinst du hier auf dem Stein wie ein Maiskolben?» den Kopf vom Stein herunter. Der Kopf fiel herunter und rollte in einen Bach. Der Palmamann bekam daraufhin Angst und rannte seinen Weg weiter. Der Kopf aber verließ den Bach und eilte dem Manne nach, wobei er dauernd pfiff. Der Mann lief immer schneller und schneller, und da der Weg sehr steil war, konnte er bald nicht mehr laufen. Der Mann nahm daraufhin Tabak in seine Hände und fing den Kopf mittels seiner Ruana auf und warf ihn wieder im hohen Bogen in den Bach zurück. Er lief dann schnell weiter, bis er an einen sehr hohen Baum kam, den er rasch hinaufstieg und sich in der allerhöchsten Spitze versteckte. Der Kopf hatte in der Zeit sein Bachbett auf einem unterirdischen Wege verlassen und lief wieder hinter dem Manne her, aber da dieser auf dem Baum war, konnte der Kopf ihn nicht sehen und lief an dem Baum vorbei. Der Kopf lief und lief immer weiter, und da er den Mann nirgends finden konnte, kehrte er wieder zurück und fand am Fuße des Baumes den Geruch des Mannes. Er blickte nach oben und sah den Mann in der höchsten Spitze des Baumes sitzen. Der Kopf konnte aber den Baum nicht hochsteigen, und um den Mann zu erreichen ging er etwas zurück und sprang in die Luft. Er konnte den Mann aber doch nicht ganz erreichen und fiel wieder zu Boden. Daraufhin versuchte er es wieder und wieder, mehr als

hundert Mal, aber immer konnte er den Mann nicht erreichen, da er zu hoch saß. Daraufhin wurde der Kopf von den vielen vergeblichen Anstrengungen furchtbar müde, und da er weit nach Hause zu laufen hatte, mußte er von dem Mann, den er töten wollte, ablassen und zurückkehren, um nicht am Tage den Menschen zu begegnen. Der Palmamann kletterte darauf von seinem Baum herunter und konnte glücklich nach Hause gelangen.

14. Der weiße Hund

Der Vater des Victoriano ging an einem Samstag nach Belalcazar, wo er sich betrank. Nachts um zwei Uhr machte er sich auf den Rückweg. Unterwegs sah er einen weißen Hund, der sehr dünn war. Der Vater dachte, es wäre ein richtiger Hund, aber es war gar kein Hund, sondern die tafí-Seele eines Menschen. Auf einmal verwandelte sich dieser Hund in einen Menschen, sehr dünn und mager von Gestalt, dem das Herz aus dem Körper heraushing, so daß er vor der Brust baumelte. Der Vater versetzte daraufhin dem mageren Hund einen Schlag mit seinem Reisestecken, der diesen aber nicht traf. Daraufhin bekam der Vater Angst und riß aus. Aber der magere Mann lief immer hinter ihm her, so daß der Vater vor Angst außer Atem geriet und fast gestorben wäre. Daraufhin stellte sich der Vater ganz dumm und setzte sich einfach an den Weg, legte die Hände auf die Knie und schlief ein. Der magere Mann verließ ihn darauf. Als der Vater am Morgen erwachte, suchte er den Platz, wo er den mageren Hund zuerst getroffen hatte, aber er fand nur ein Gesträuch mit weißen Blüten. Der Vater war aber überzeugt, daß er eine tafí getroffen hatte.

(In der Nacht pflegt kein Paez weite Strecken zu gehen, da nachts die tafí-Seelen unterwegs sind. Und wenn eine tafí auf einen Menschen trifft, so ruft sie sofort eine ganze Anzahl anderer tafí herbei («etwa fünfzig») und diese bewirken den Tod eines Menschen, indem der Betreffende vor Furcht selbst stirbt.)

15. Begegnungen mit Pijaos

Ein junger Paezmann arbeitete bei einem reichen Grundbesitzer auf dessen Finca im Caucatal, etwa bei Popayán. Die Finca stand nahe am Berge. Eines Tages ging er in die Berge, da sein Herr sehr viel Vieh hatte. Auf dem Wege begegnete er einer Pijaofrau, die ihn ergriff und ihn in ihr Haus trug, um ihn zu fressen. In ihrem Hause waren viele Leute, und da sie ihn alleine fressen und nicht mit den vielen anderen Pijaos teilen

wollte, steckte sie ihn in einen großen Topf. Dieser war so groß wie ein Paez-Haus. Dort ließ sie ihn drei Tage lang drin. Während dieser Zeit tranken die Pijaos, aßen und tanzten. Nach drei Tagen, als alle Pijaos müde waren und schliefen, ging die Frau in die Berge, um Holz zu holen und Feuer zu machen, um den Paez-Jüngling zu braten. Dieser schaute währenddessen aus dem Gefäß heraus, in dem er gefangen war und erblickte auf den Herdsteinen zwei kleine Mädchen, die Töchter der Frau. Sie spielten und stießen die betrunkenen und schlafenden Pijaos an, die sich aber nicht rührten. Der Jüngling kletterte schnell aus seinem Gefäß heraus, nahm ein Stück Holz und schlug die beiden Mädchen tot. Rasch ergriff er einen Topf mit Gold und lief davon.

Als die Frau mit genügend Holz in ihr Haus zurückkehrte, fand sie ihre beiden Kinder tot vor. Sofort guckte sie in den Topf, und als sie darin den Paez-Jüngling nicht mehr fand, wurde sie wütend und lief schnell hinter ihm her. Der Jüngling lief drei Stunden lang, bis er auf eine große Rinderherde seines Herrn stieß, worin er sich inmitten der Rinder versteckte. Die Frau wollte ihn verfolgen, da sie aber so schlecht roch, wurden die Rinder böse, brüllten und stießen nach der Frau, und diese konnte den Jungen nicht ergreifen. (Die Pijaos kennen keine Rinder und keine Hunde, erläutert der Berichterstatter. Wenn ein Hund und ein Pijao zusamentreffen, tötet der Hund den Pijao auf der Stelle. Die Pijaos riechen nämlich völlig verschieden von den übrigen Menschen, ähnlich wie Tiere.) Als die Frau nun den Paez nicht erreichen konnte, kratzte sie sich vor Wut den Kopf mit den vielen Läusen. Sie konnte aber nichts machen, und deshalb kehrte sie in ihr Haus zurück und fraß ihre eigenen beiden toten Kinder auf.

Der Paez-Jüngling konnte jetzt in das Haus seines Herrn gehen und zeigte ihm den Topf mit Gold und berichtete von seinem Erlebnis. Das Gold schenkte er seinem Herrn. Dieser gab ihm viel Fleisch zu essen und gab ihm auch ein schönes Bett, worin er schlafen konnte. Als der Jüngling sich hineinlegte, starb er.

Anm. des Erzählers: Ein Paez, der eine Begegnung mit einem Pijao oder einem Jaguar hat, darf diese frühestens nach einem halben Jahre oder noch besser, erst nach einem Jahre den Leuten mitteilen. Tut er dies früher, so muß er sterben, wie auch die folgende Geschichte beweist.

Ein Pijao traf in den Bergen zwei Paez-Männer, von denen der eine sehr häßlich und schmutzig und der andere sehr sauber und schön war. Der Pijao tötete den sauberen und fraß ihn auf der Stelle auf. Den häßlichen und schmutzigen wollte er erst waschen und ging deshalb mit ihm an einen Bach. Der schmutzige Paez-Mann aber konnte schwimmen,

tauchte im Wasser unter und schwamm davon. Der Pijao-Mann konnte, wie alle Pijaos nicht schwimmen und warf Steine und Erde in das Wasser, aber es half ihm nichts. Der Paez-Mann konnte entkommen. Der Pijao blieb darauf sehr traurig am Ufer zurück. Der schmutzige Paez ging in sein Haus und erzählte seiner Familie sein Erlebnis, und daraufhin mußte auch er sterben.

16. Der Paez mit der Axt

Ein Pijao ging in die Berge, um Vögel zu fangen. Er benutzte dazu einen Stock, an den ein Mittel ähnlich wie Leim gestrichen war, mit dem er die Vögel anrührte, so daß sie daran hängen blieben. Dies tat er viele Jahre. Eines Tages kam er an ein Haus eines Paez, dessen Besitzer aber nicht anwesend war. In dem Haus lag nur eine Axt (wie der Erzähler hinzufügte: aus Eisen, denn die Pijaos kennen keinerlei Werkzeug, weder Messer noch Beile. Ihre Felder zur Aussaat können sie nur so anlegen, daß sie mit Steinen die Rinden der Bäume durchschlagen, worauf diese im Laufe eines Jahres vertrocknen. Nach dieser Zeit säen die Pijaos auf dem mit abgestorbenen Bäumen bestandenen Feld ihren Mais an. Sie können also, da sie keine Macheten zum Umschlagen der Bäume haben, noch keine richtigen Brandfelder anlegen wie die Paez, obwohl sie das Feuer kennen).

Der Pijao war über die Axt in dem Paez-Haus sehr erstaunt. Er rührte sie nicht an, hatte aber den Wunsch, sie zu besitzen. Am nächsten Tag kam er wieder zurück und traf den Besitzer an und bat ihn, ihm die Axt zu verkaufen. Aber der Paez wollte nicht. (Der Paez-Mann und der Pijao-Mann konnten gut zusammen reden und sich verstehen, erläutert der Erzähler, denn beide hatten in früherer Zeit dieselbe Sprache.) Der Pijao bot daraufhin einen ganzen Topf voll Gold für die Axt. Er müßte es sich natürlich aus dem Hause des Pijao abholen. Der Paez war damit einverstanden, und so machten sich beide gemeinsam auf den Weg zu dem Dorfe des Pijao. Da dieser wie alle Pijaos, zwar unbekleidet, aber viel größer als der Paez war, nahm er diesen auf die Schulter und trug ihn in sein Dorf. In der einen Hand hatte er die Axt, mit der er am Wege mit nur einem Schlag je einen Baum umhieb. Er hatte nämlich, wie alle Pijaos, unheimliche Kräfte.

Im Dorf angekommen, waren keinerlei Leute vorhanden, da minga-Tag war, ein Tag, an dem das ganze Dorf zu gemeinsamer Arbeit (Wege- oder Brückenbau) verpflichtet war. Der Pijao kam mit dem Paez-Mann in sein Haus, in welchem nur seine Mutter anwesend war, und er

bat sie, niemandem etwas zu verraten, denn dieser Paez sollte nicht, wie sonst, gefressen werden. Wenn nämlich die anderen Pijaos wüßten, daß in diesem Hause ein Paez sei, würden sie ihn fressen wollen. Mutter und Sohn gruben deshalb in einem Winkel der Hütte ein Loch, wo sie den Paez hineinsetzten und deckten eine große Holzschüssel darüber. Am Abend kamen viele Pijaos in dieses Haus und unterhielten sich und tranken, bis auf einmal mehrere Pijaos feststellten, daß es hier so angenehm nach Paez dufte. Die Mutter des Hauses antwortete darauf, daß dies, was so dufte, kein Paez sei, sondern ihr eigener Gestank. Alle lachten. Sie aßen dann immer weiter und betranken sich mit Chicha und fingen an zu tanzen. Die Musik machte ein Pijao-Mann mit seiner Querflöte, während die Frauen auf ihren Brüsten den Takt klopften. (Die Pijao-Frauen haben alle lang herunterhängende Brüste.)

Die Pijaos tanzten drei Tage und drei Nächte hintereinander, ohne zu schlafen. Danach fielen alle in Schlaf. Das ganze Haus war voll von den Tänzern. Sie schnarchten wie die Schweine; nur der Pijao, der den Paez gebracht hatte und seine Mutter schliefen nicht. Sie holten den Paez aus seinem Versteck und führten ihn in ein Zimmer, das ganz mit Gold angefüllt war. Hier durfte sich der Paez aussuchen, was er wollte. Er nahm sich einen Tontopf und füllte ihn ganz voll mit Gold und steckte diesen in seine Fasertasche. Der Pijao nahm ihn daraufhin wieder auf seine Schulter und trug ihn nach dessen Hause im Walde auf den Berg zurück. Erst nach einem Jahr wagte dieser den anderen Paez mitzuteilen, daß er Gold habe, und er verteilte dies unter die Leute des Dorfes.

Anmerkung des Erzählers: Die Pijaos hatten immer sehr viel Gold, das sie aus einer mit Wasser gefüllten Lagune herausholten. Sie mußten dazu einen Knaben oder Jüngling am Ufer der Lagune ins Wasser werfen, und sofort strömte das ganze Wasser an diesen Punkt und fraß den Jüngling auf. Dabei wurde für kurze Zeit die Lagune völlig trocken, und die Pijaos konnten das Gold, das sich am Grunde der Lagune befand, mit Töpfen herausholen. Immer wenn sie Gold haben wollten, mußten sie auf diese Art dem Wasser einen Knaben opfern. Und sie haben es oft getan, denn die Pijaos waren unermeßlich reich an Gold.

17. Der Menschenjaguar, der den Goldstab eines Pijao rauben wollte

Ein Mann, der ein Menschenjaguar war, ging zur Jagd in die Berge des Páramo. Als er sich auf dem Berg ausruhte, kam ein Pijao, der ein Mitglied niederen Ranges des Cabildo war. Er hatte einen sehr schönen

Stab aus Gold. Diesen steckte er in den Boden. Ohne den Menschenjaguar zu sehen, schichtete er Holz auf einen Stapel, zog aus seiner Achselhöhle Feuer hervor und entzündete das Holz. Dann trug er Bananen und eine Schlange herbei und begann sie zu braten. Tsẽ, zischte die Schlange.

Währenddessen überlegte der Menschenjaguar, wie er den Goldstab rauben könne. Er verwandelte sich in einen Jaguar, und mit einem Messer, das er in der Hand trug, sprang er auf den Pijao los, um ihm den Stab zu rauben. Der Pijao jedoch unterbrach sein Essen, nahm seinen Stab und lief davon. Der Stab war sehr schwer, aber er ließ ihn nicht los. Der Menschenjaguar lief hinterher. Fast tötete er den Pijao, dieser aber ließ seinen Stab nicht los. So liefen sie drei Stunden lang, bis sie an einen Felsen kamen, in dessen Nähe die Pijaos wohnten. Dort verwandelte sich der Jaguar wieder in einen Menschen und setzte sich dort hin. Der Pijao aber stieg herab in sein Dorf, das in einer großen Ebene lag. Er ging in sein Haus. Darauf kamen die Pijaos angelaufen, um den vermeintlichen Jaguar zu fangen. Dieser verwandelte sich vom Menschen wieder in einen Jaguar und rückte vor den Pijaos aus. Drei volle Stunden lief er wieder zurück an den Platz, wo der Pijao die Bananen und die Schlange gebraten hatte. Beides war noch da, auch die Fasertasche. Die Schlange war nur halb gar. Der Menschenjaguar setzte sich nieder und aß alles auf. Am Nachmittag ging er dann wieder in sein Haus zurück und nahm auch die Tasche mit, um sie seiner Frau zu zeigen. Nachdem er angeklopft hatte, trat er in sein Haus ein. (Hierzu bemerkte der Berichterstatter: Der Menschenjaguar war wahrscheinlich ein böser Schamane, denn früher konnten sich diese in Jaguare verwandeln, um Rinder und Schafe zu rauben. Wenn sie dann wieder in ihr Haus zurückkehrten, verwandelten sie sich wieder zurück in Menschen. Heute vermag sich niemand mehr in einen Jaguar zu verwandeln. Man braucht dazu ein besonderes Mittel (yutsę), das so aussieht, wie eine Raupe. Man kann es im Caucatal erhalten, aber niemand weiß, wo.)

18. Der Zweikampf zwischen Menschenjaguar und Bergjaguar

Auf einem Berge gab es einen Jaguar, der den Leuten alles Vieh raubte. Er raubte Hühner, Truthähne, Fohlen, Rindvieh. Er kam immer vom Berge herab und fraß diese Tiere. Die Leute waren deshalb sehr böse. An einem Tage machten sich sechs Männer auf, um den Jaguar zu töten. Bei sich hatten sie viele Hunde und viele Gewehre. Sie fanden den Jaguar auf dem Berge, dieser aber fraß alle Hunde auf und jagte den Leuten furchtbare Angst ein. Sie kehrten deshalb am Nachmittag wieder zurück, sehr

traurig und ohne Hunde. Sie hatten nun keine Hunde mehr, um an einem anderen Tage auf die Jagd zu gehen. Sie gingen deshalb am nächsten Tage zu einem Mann, der als sehr stark bekannt war und fragten ihn: «Warum gehst du nicht mit uns? Warum bist du so feige?» Dieser Mann war aber ein Menschenjaguar. Er konnte sich in einen Jaguar verwandeln, und er beschloß, den Bergjaguar zu töten. Er sagte den Leuten natürlich nicht, daß er sich in einen Jaguar verwandeln könnte, sondern er erklärte sich ganz einfach nur bereit, den Jaguar zu töten.

Am nächsten Morgen machte er sich sehr früh auf, nur mit seinem Machete bewaffnet. Die anderen Männer wollten den Menschenjaguar begleiten, dieser aber sagte: «Bleibt nur hier, ihr seid ja doch zu nichts nütze». Der Menschenjaguar ging dann ohne seinen Hund los, nur mit seinem Messer bewaffnet. Um etwa acht Uhr war der Jaguarmann in den Bergen und traf den Bergjaguar schlafend an. Der Mann verwandelte sich daraufhin in einen Jaguar, ließ sich die Krallen wachsen und begann Sträucher und Bäume umzuhauen, als hätte er eine Axt in den Händen. Als er sich dieserart gut die Krallen geschärft hatte, begann er laut zu brüllen. Der Bergjaguar wurde wach und erhob sich wütend. Sie gingen beide auf einen freien Platz und begannen zuerst nur zu spielen. Der Bergjaguar aber wollte nicht spielen und begann gleich ernsthaft zu kämpfen. Sie kämpften dann wild, etwa drei Stunden lang. Dann konnte der Bergjaguar den Menschenjaguar verwunden. Da aber dieser zuerst nur gespielt hatte, hatte er zum Schluß doch noch mehr Kräfte und konnte den Bergjaguar töten. (Anm. des Erzählers: Der Menschenjaguar ist immer stärker als der Bergjaguar, da ersterer Salz ißt.) Der Menschenjaguar verwandelte sich nun wieder zurück in einen Menschen, schnitt sich mit seinem Machete, den er mitgebracht hatte, die vier Füße des Bergjaguars ab und steckte sie in seinen Beutel. Den Tierkörper aber stellte er so auf, als ob der Jaguar noch lebte, den Kopf abwärts in Richtung zum Dorf der Menschen gerichtet.

Der Menschenjaguar ging nun als Mensch zurück ins Dorf und erzählte seiner Frau und den Leuten, daß er den Jaguar der Berge getötet habe. «Ich habe den Bergjaguar getötet, geht hin und seht nach, ob es so ist.»

Am anderen Tage machten sich die Leute auf und gingen in die Berge, um zu sehen, ob der Jaguar wirklich tot war. Sie führten Gewehre und Hunde mit sich. Diese hatten sie sich von woanders her besorgt. Sie kamen dahin, wo der Kampf stattgefunden hatte. Aber statt eines toten Jaguars fanden sie einen lebenden, der im Begriffe war, sich auf sie zu stürzen. Die Leute bekamen daraufhin furchtbare Angst. Sie gingen aber doch langsam näher, und da der Jaguar immer mit geschlossenen Au-

gen dastand, ohne sich zu rühren, gingen die Leute doch näher und entdeckten, daß er gar keine Füße mehr hatte. Dann sahen sie, daß er schon tot war und trugen ihn ins Tal in ihre Häuser.

19. Wie die Menschen das Feuer bekamen

Eine alte Frau besaß das Feuer. Eines Tages kam ein kleines Mädchen, um einen Feuerbrand zu erbitten. Die Frau gab ihm aber nur einige kleine Späne, die unterwegs ausgingen, ehe das Kind zuhause ankam. Es kehrte zurück, um bei der Alten einen neuen Feuerbrand zu erbitten, aber auch dieser reichte nicht bis nach Hause. Wieder kehrte das Mädchen zurück. Diesmal aber war die alte Frau nicht zuhause. Im Innern des Hauses brannte jedoch ein großer Holzstoß. Das Mädchen nahm einen großen, brennenden Zweig und lief weg. In diesem Augenblick kam die Alte zurück, sah das Kind und lief hinter dem Mädchen her, um ihm den Feuerbrand wieder abzunehmen. Dieses warf ihn vor Angst in einen trockenen Strohhaufen. Die Leute, die bis dahin noch kein Feuer gekannt hatten, holten sich von hier ihr Feuer. Der Ort heißt seitdem ipikwe = «Feuerberg».

Diese Geschichte wird in verschiedenen Versionen erzählt. Nach einer hatte die alte Frau immer das Feuer an die Leute verteilt, und als sie dies eines Tages nicht mehr wollte, ließ sie ihr Feuer ausgehen und verschwand mit einem glimmenden Feuerbrand. Die Leute merkten dies aber und verfolgten sie. Als die Alte feststellte, daß sie eingeholt wurde, versteckte sie den Feuerbrand neben dem Wege und verschwand im Fluß. Durch den Rauch aber fanden die Leute das Feuer und verteilten es unter sich und besaßen es von nun an.

In einer weiteren Version zog die alte Frau das Feuer jeweils aus ihrer Achselhöhle hervor, wenn die Leute sie darum baten. Als die Missionare kamen, erklärten sie das Feuer für Zauberei und verlangten, daß es geweiht würde oder sie müßte es abgeben. Die alte Frau aber wollte es weder weihen lassen, noch abgeben und floh deshalb. Beim Laufen wurde sie von den Flammen erfaßt, und als diese über sie zusammenschlugen, stürzte sie sich in den Fluß.

20. Das Mädchen, das sich in eine Schlange verwandelte

Eines Tages kam aus einer Quelle ein kleines Kind, das die Tochter des Donners war, hervor. Die Leute nahmen es auf, und ein Ehepaar erbot sich, es aufzuziehen. Als eines Tages der Pfarrer in das Dorf kam, um eine Messe zu lesen, gingen alle Leute in die Kirche. Auch die Pflege-

eltern des kleinen Findelkindes. Das kleine Kind wollte auch mit. Da es aber keine Kleider hatte, nahmen es seine Eltern nicht mit. Als diese weggegangen waren, ging das Kind hinterher, nur mit einem schlechten Stück Stoff bekleidet, um auch an der Messe teilzunehmen. Die Eltern waren schon in der Kirche, da kam das Kind an einen Bach und verwandelte sich in eine Schlange. Diese wuchs und wuchs und war bald so groß wie der Regenbogen. Sie schlängelte sich zur Kirche, die voller Menschen war, umfaßte mit ihrem Leib den ganzen Bau und steckte ihren Kopf zur Tür hinein. Sie fraß alle Menschen auf, mit Ausnahme ihrer Pflegeeltern, die sie laufen ließ. Sie reckte sich dann hoch auf bis zum Himmel, um auch noch die Jungfrau Maria aufzufressen. Als sie mit ihrem Kopf ganz hoch war, kamen zwei Adler herbeigeflogen und bissen sie mitten durch. Tot stürzte sie zu Boden. Darauf kam ein Mann mit einer Mula, zerstückelte die Schlange und lud die Teile seiner Mula auf und brachte sie weit weg. Dort verfaulte sie wahrscheinlich.

Es gab aber daraufhin Schlangen in allen Gegenden. Eine vor allen Dingen roch abscheulich, wenn die Sonne warm am Himmel stand. Auf den umliegenden Feldern raubte sie die Menschen und fraß sie auf. Diese baten daraufhin einen Engländer, die Schlange zu töten. Dieser kam und hängte in einen Baum eine große Fasertasche, in die er als Köder einen Menschen hineintat. Als die Schlange kam, um den Menschen zu fressen, schlug er ihr mit einem Säbel Kopf und Schwanz ab. Der Kopf flog in hohem Bogen durch die Luft und landete an einem Ort, der Ulnenga genannt wird. Der Schwanz flog bis zu einem Ort, der Luto genannt wird, wo sich heute noch viele Schlangen befinden.

21. Die getötete Frau, aus deren Körper Nutzpflanzen entstehen

Eine alte Frau von der Art von Menschen, die öho, Menschenfresser genannt werden und entweder Mann oder Frau, aber immer sehr alt sind und ein sehr großes Gesicht haben, ging in das Dorf Calderas, um Kinder zu rauben, die sie fressen wollte. Dort waren viele Menschen mit ihren Kindern. Sie erzählte den Leuten, daß sie die Kinder sehr liebe, und die Leute vertrauten ihr die Kinder an, damit sie sie bewache. Sie aber fraß die Kinder immer auf. Eines Tages versammelten sich die Leute und beschlossen, die alte Frau zu töten. Sie lebte in einem abseits gelegenen Haus. Die Leute trugen viel Holz herbei, schichteten es an den Wänden auf, so daß es bis zum Dach reichte und steckten es an. Das Haus und mit ihm die Alte verbrannte. Kurz vor ihrem Tode sprach sie die folgenden Worte: «Aus meinem Herzen werden Kartoffeln, Kür-

bisse und Zwiebeln entstehen.» Darauf starb sie. Ein halbes Jahr danach war an der Stelle, an der sie starb, ein Feld mit den genannten Früchten, die man vorher nicht gekannt hatte. Die Kartoffeln, sowie die anderen Früchte waren sehr groß, und als die Leute sie zerschnitten, befand sich in der Mitte von Kartoffel und Kürbis ein Blutstropfen.

22. Die gestohlenen Augen

Ein Mann lebte in seinem Haus auf dem Berge und hatte auf dem Hausboden eine große Anzahl von Kartoffeln aufbewahrt, um sie auf dem Felde zu setzen. Eines Tages, als der Besitzer abwesend war, kam ein Dieb, holte sich einige Kartoffeln herunter, entfachte das Feuer und briet sie darin. Danach entfernte er sich wieder. So machte er es viele Male, und der Besitzer wurde schon sehr böse, da er immer weniger Kartoffeln hatte. Als der Dieb wieder einmal kam, sich Kartoffeln herunterholte, ein Feuer entfachte und sie darin briet, nahm er sich, bevor er aß, «aus Dummheit» beide Augen heraus und legte sie auf einen der drei Herdsteine. Da trat der Besitzer der Kartoffeln, den der Dieb ja nicht sehen konnte, hinzu, erblickte die Augen und stieß sie mit dem Fuß ins Feuer, so daß sie mit einem Knall verbrannten. Der Dieb hörte zwar den Knall, dachte aber bei sich, wie schön knallen und zischen doch die Kartoffeln!

Als der Dieb alle Kartoffeln gegessen hatte, suchte er seine Augen, konnte sie aber nicht finden. Er verließ das Haus daraufhin sehr traurig, ohne Augen, und machte sich auf den Weg zu seinem eigenen Hause. Unterwegs begegnete er einer Ratte, die dort spazieren ging, und sie begannen ein Gespräch. Der Dieb klagte, daß er seine Augen verloren hätte und es ohne Augen sehr schwierig wäre, sie wieder zu finden. Er bat die Ratte, ihm doch eines der ihrigen zu leihen, nur solange, bis er seine eigenen Augen gefunden hätte. Die Ratte lieh ihm eines, aber da seine beide Augen verbrannt waren, konnte er sie natürlich nicht finden. Der Mann verwandelte sich daraufhin in Wind.

Die Ratte suchte zwar den Dieb ihres Auges lange Zeit, konnte ihn aber nicht finden. Ihr Sohn hatte, wie seine Mutter, auch nur ein Auge. Der Sohn hatte wieder einen Sohn, und dieser hatte auch nur ein Auge. Seit der Zeit haben die Nachkommen dieser Rattenfamilie nur ein Auge. Und deswegen kann man heute noch Ratten finden, die zwar Nase, Mund, Füße, Fell und Ohren einer Ratte, aber nur ein Auge oder sogar keines haben; diese gehen auf die Ratte zurück, die damals ihr eines Auge verliehen hatte.

V. Zusammenfassung und kulturhistorische Einordnung der Paez-Kultur

FASSEN WIR KURZ das Lebensbild der Paez und die Elemente ihrer Kultur zusammen, so stehen wir einem demokratischen, 25 000 Menschen umfassenden Bauernvolk gegenüber, in dem niemand Herr und niemand Knecht ist. Seit Jahrhunderten von der spanischen Kultur umgeben, haben sie ihre Sprache in weiten Teilen ihres Siedlungsgebietes bewahrt. Freilich müssen wir gleichzeitig eine kulturell in mancher Hinsicht beträchtliche Verarmung bei diesem im äußeren Erscheinungsbild recht nüchternen und sachlichen Volk feststellen.

Anthropologisch gehören sie zu der amerikanischen zentraliden Rasse (v. Eichstedt), bei auffälligem Vorwalten der Blutgruppe O. Wenn auch die letztere Feststellung nur eine Komponente des somatischen Erscheinungsbildes ausmacht, so ist es doch höchst interessant, das Vorherrschen dieser Blutgruppe bei einer großen Anzahl von amerikanischen Eingeborenen zu finden. Bei den Paez sind es 88,78%, bei den benachbarten Guambianos 84,25% (Lehmann, Duque y Fornaguera, p. 200), bei den Eingeborenen von Caldas 92,25% (Duque 1944, p. 626), bei den Sibundoy 84,42%, bei den Santiagos 94,23% (Paez-Perez y Freudenthal, p. 413) und bei den Pijaos findet sich die Blutgruppe O fast zu 100% (Reichel 1944, p. 517). Diese Untersuchungen an kolumbianischen Stämmen entsprechen einem weiter gefaßten Bild. Nach der Zusammenstellung bei G. Arcila Velez (p. 11) finden sich Menschen mit der Blutgruppe O bei den Eskimos zu 80,6%, bei den reinen nordamerikanischen Indianern zu 91,3%, bei den Navajo zu 72,7%, bei den Yucateken zu 97,7%, bei den Matacos zu 79% und bei den Guarani vom Rio Grande do Sul zu 100%.

Die Siedlungsform der Paez innerhalb der stark zerklüfteten Gebirgslandschaft des Tierradentro ist die lose Anordnung von Familieneinzelgehöften an den Berghängen, möglichst weit entfernt vom Nachbarn. Der Siedlungsbereich des Dorfes ist geographisch unveränderlich und umfaßt den natürlichen Bereich der Wohnhäuser und Gemarkungen eines Talkessels. Das Haus, als Familienmittelpunkt und soziales Zentrum für jeweils eine Familie, wird auf eigenem Grund und Boden errichtet. Man benützt es — je nach Art der Konstruktion — für eine Ernteperiode oder auch 10 bis 15 Jahre lang. Das Land gehört der Familie, die es das erste Mal gerodet hat. Daneben gibt es Gemeindeland zur freien Nutzung für alle Mitglieder des Dorfes. Das Innere der normalerweise

mit einem Walmdach versehenen Rechteckhäuser ist in zwei Räume unterteilt, deren einer als Küche und Wohnraum, der andere als Vorratsraum dient.

Die Kleidung der Männer und Frauen bedeckt Ober- und Unterkörper. Das Männerobergewand, kolumbianisch «Ruana», peruanisch «Poncho» genannt, ist ein an den Seiten offenes, ärmelloses Hemd. Es ist altamerikanisch, sowohl vom Relief des sog. «Sonnengottes» von Tiahuanaco, als auch aus einem Grabe aus vorspanischer Zeit aus Arica (Nordchile) bekannt (Montell, pp. 173—183). Bald nach der Conquista, seit der zweiten Hälfte des 16. Jahrhunderts, wurde dieses andine Kleidungsstück, das einfach aus einem rechteckigen Stück Stoff mit einem Längsschlitz für den Kopf besteht, über das ganze Gebiet der andinen Gebirgskulturen verbreitet. Sein Name, «atç», bei den Paez hat sprachlich allerdings keine Parallele. Die Männerhose ist eindeutig spanisch. Die Frauentracht ist höchst einfach: zu einem Rock wird als Obergewand nur ein quer genommenes, rechteckiges Stück Stoff um den Oberkörper gelegt.

In wirtschaftlicher Hinsicht steht der Feldbau an erster Stelle. Er wird von den Männern in der Form des Brandrodungssystems mit zehnjährigem Rodungsturnus ausgeübt. Das einzige Feldbaugerät ist der Grabstock. Die Minimalfläche des bebauten Landes beträgt für eine Familie etwa einen Hektar. Die Hauptanbaufrüchte sind Mais und Zuckerrohr. Letzteres ist erst nach der Conquista eingeführt worden. Das Paezwort bedeutet «süß». Die Paezbezeichnung für Mais, «kotç», hat keine Parallele zu den entsprechenden Wörtern der Chibcha-, Kariben- oder Aruaksprachgruppe, sondern zum Kechua, wo der Mais «kuts» genannt wird (Birket-Smith, pp. 22—30). Die Genußmittel sind Koka und die Chicha aus Zuckerrohrsaft. Beide Paez-Worte, «eš» bzw. «mbéka», haben keine Parallele in anderen Sprachgruppen.

Hervorstehende, eine Pflanzerkultur auszeichnende Feste oder Riten um die Produkte des Feldbaues gibt es nicht, desgleichen geht aus den Mythen und dem religiösen Brauchtum der Paez nichts einen ackerbäuerlichen Lebensrhythmus Auszeichnendes hervor. Mythologie und zeremonielles Brauchtum sind Reste jägerischer Geisteshaltung. Es scheint, als hätten die Paez ihren primitiven Feldbau erst zur Zeit der Conquista oder kurz davor übernommen und nur die mechnische Anwendung der Handgriffe eines einfachen Grabstockbaues, ohne das sonst bei Pflanzervölkern ausgeprägte zeremonielle Brauchtum um Saat und Ernte, übernommen. Es ist nicht unwahrscheinlich, daß sie diesen Feldbau so betrieben haben, wie sie es von den Pijaos berichten. In der Erzählung

von dem Paez mit der Axt (Nr. 16) heißt es darüber, daß die Pijaos früher keine Werkzeuge kannten und dementsprechend zur Anlage eines richtigen Brandfeldes die Bäume nicht fällen konnten. Um Felder für ihre Aussaat zu erlangen, mußten sie mit Steinen die Rinde der Bäume durchschlagen. Nachdem diese vertrocknet waren, säten sie ihren Mais zwischen den vertrockneten Stämmen.

Bei der wirtschaftlich heute bedeutungslosen Jagd umgeben den Jäger eine Anzahl von Geboten, wie wir sie allenthalben bei Jägervölkern in der Welt finden. Der Fischfang wird mit Giftpflanzen an Stauwehren vorgenommen. Er fand als gemeinsamer Fischfang des ganzen Dorfes zur Februartrockenzeit bei dem niedrigsten Wasserstand des Jahres statt. Dieser große Jahresfischfang hieß enztę. Mit dem gleichen Wort wurde auch der Zeitabschnitt eines Jahres bezeichnet. Die Großviehzucht ist fast ein reiner Sport bzw. eine Sache des Ansehens und des Reichtums. Pferde werden nicht genutzt, Rinder nur zu den drei großen christlichen Jahresfesten (Semana Santa, San Juán, Inmaculada) geschlachtet.

An Waffen ist heute nur noch die Schrotflinte für die Jagd von Bedeutung. Als Kinderspielzeug wird das Kugelblasrohr und die Steinschleuder benutzt. In der Mythologie spielt letztere eine bedeutende Rolle als kriegsentscheidende Kampfwaffe.

Bei den handwerklichen Techniken des Flechtens und Webens herrscht die Verwendung von Agavefaser und Schafwolle vor, allgemein in der Form gesponnener und gezwirnter Fäden. Nach der Methode der Schlingtechnik werden die Tragtaschen aus Agavefaser und die wollenen Kokabeutel hergestellt, in der Knotentechnik Hängematten, Vogelnetze, Beerensiebe und Steinschleudern. Geflochten werden nur Strohhüte. Aus Agavefasern gewebt werden die Bänder der Fasertaschen, aus Schafwolle die Frauengürtel und die Kleidungsstücke der Männer und Frauen. Die Webmethode ist die einfache Stabweberei mit Leinwandbindung. Die Frauengürtel haben eine im Webvorgang gebildete Zierkette. Der Webrahmen ist senkrechtstehend, vom sogenannten «araukanischen» Typ (O'Neale, p. 115). An Stelle des Trennstabes haben wir je eine einfache Schlinge, statt des Litzenstabes ein Schlingenbündel. Die Kettfäden sind in der Form der «falschen Spiralkette» gespannt, einer Vermischung der Methode der endlosen, rundlaufenden Kette mit der Methode der endlichen, einebigen Kette. Diese echt amerikanische Form der Kettspannung findet sich sowohl bei den Nordwestküstenindianern, als auch bei den Stämmen des Gran Chaco (Olson, pp. 114—121). Kulturhistorisch sieht H. Nevermann die verschiedenen Formen der amerikanischen Weberei

als auf der Grundlage einer einheimischen oder vorpolynesischen Flechtweberei entstanden an. Bei den Paez finden wir in der Flechtweberei der Tragbänder der Kokataschen dieses technische Stadium.

Zum Färben werden Pflanzenfarben benutzt, die nur Schafwolle, nicht aber Baumwolle färben.

Die Töpferei ist sehr einfach. Es gibt nur in Spiralwulsttechnik hergestellte Halbkugeltöpfe und Schalen, beide ohne jede Verzierung.

Die heutige politische Organisation der Paez beruht auf der Dorfgemeinschaft. Sie wird von einem Dorfrat (Cabildo) geleitet, dessen Mitglieder für ein Jahr von den Männern des Dorfes gewählt werden. Die Bezeichnung der Mitglieder des Cabildo und ihre Funktionen sind zum Teil spanisch. In früherer Zeit waren die Führer der Paez oft Männer mit schamanischen Fähigkeiten. Das Dorf ist weder klassenmäßig noch berufsmäßig gegliedert. Niemand braucht einem anderen für Lohn zu dienen; Wort und Sache sind den Paez unbekannt. Der Familienvater bearbeitet mit seinen Söhnen oder Brüdern seine Felder, und wenn Freunde oder Nachbarn ihre Arbeitskraft dazu leihen, so wird dies durch die Mithilfe auf deren Feldern ausgeglichen.

Die Familienorganisation ist grundsätzlich die patrilineare, monogame Kleinfamilie, bestehend aus den Eltern und den unverheirateten Kindern. Hierin hat wohl die geringste Änderung innerhalb der Paez-Kultur stattgefunden. Die Kinder erhalten den Familiennamen des Vaters. Die Frau bekommt zur Ehe keinerlei Mitgift von ihren Eltern und behält ihren Mädchennamen bei. Da soziale oder finanzielle Gründe für eine Eheschließung entfallen, hat eine Frau nur den Wert ihrer Persönlichkeit und ihrer Fähigkeiten. Diese werden vor der eigentlichen Eheschließung in einem «Probejahr» geprüft.

Die Verwandtschaftsnomenklatur zeigt Reste eines «klassifikatorischen» Systems, in dem das Individuum eingeordnet ist als Teil eines Lebensgefüges und nicht profiliert, losgelöst innerhalb der Familie steht. Die Menschen werden nach bestimmten Alters- und Lebensumständen in der Anrede unterschieden und u. a. die Geschwister in der Anrede differenziert, je nachdem sie jünger oder älter als der Sprechende sind.

In der Kunst und Mythologie hat eine beträchtliche Verarmung stattgefunden. Es findet sich weder Gesang noch eigenständiger Tanz. Hervorzuheben ist die mit großer Begeisterung ausgeübte Musik mit Querflöten und Trommeln. Die derzeit von den Paez benutzte zylindrische, zweiseitig mit Fell bespannte Trommel ist in allen Teilen Amerikas Lehngut von den Negern. In früherer Zeit wurden zum Tanz und zur Nachrichtenübermittlung aufgehängte, ausgehöhlte Baumstämme benutzt, wie

sie heute als Tröge für die Chichabereitung Verwendung finden. Die früher vorhandenen Rasseln werden heute nicht mehr verwendet. Die von den Paez benutzten Querflöten mit sechs Blaslöchern sind postkolumbisch; jedenfalls finden sie sich in dieser Art weder archäologisch, noch rezent bei unbeeinflußten Indianern. Aus vorspanischer und gegenwärtiger Zeit sind als Querflötenform nur an beiden Enden verschlossene, mit zwei Blaslöchern versehene Flöten bekannt (Izikowitz, pp. 298 ff).

Im Erzählgut tritt kein geschlossenes Weltbild hervor. Die Hauptfigur in den Mythen ist der Donner, der als erster Schamane und als kriegerischer Anführer hervortritt. Er bildet jedoch keine erhabene, numinose Figur, sondern trägt teilweise Züge, wie sie in anderen Teilen Südamerikas den Waldgeistern zukommen. Einen besonderen Waldgeist (gëlyómp) gibt es bei den Paez ebenfalls. Er hat die Gestalt eines alten Mannes, mit großen, heraushängenden Geschlechtsteilen, und seine von ihm als Strafe für rituelle Unreinheit bei der Jagd verursachten Stiche bringen dem Menschen Krankheiten und Schmerzen. Mythologisch tritt er allerdings nicht hervor. Bruchstücke größerer Mythenkomplexe sind die Geschichte von der Frau, aus deren Körper Nutzpflanzen hervorgehen, die Geschichte um den geisterhaft einherrollenden Menschenkopf, Geschichten um verwandelte Tiere und Menschen, wie auch Geschichten um Werjaguare.

In der Paez-Religion gibt es kein Kultpriestertum mit Opfer und Gebet, wie es auch Kult und Verehrung numinoser Wesen nicht gibt. Die Paez-Religion ist ein Schamanismus, dessen zwei Formen durch den bösen Zauberer und durch den guten Schamanen als Arzt und Helfer gegen die böse Zauberei gebildet werden. Als Religionsphänomen ist der Paez-Schamanismus nicht so ausgeprägt wie der sibirische oder nordamerikanische. Hilfsgeister und Seelenreise als schamanische Mittel sind mit den schamanischen «Zeichen», dem «Donnerkind» und den Reisen des Schamanen zum Haus des Donners auf dem Grunde der Lagune nur rudimentär, Zeremonialgeräte fast nicht vorhanden. Dennoch ist die Tätigkeit besonders des guten Schamanen als Arzt und Helfer bei den durch magische Praktiken verursachten Krankheiten, wie auch seine Funktion als soziologischer Kristallisationspunkt der Gemeinschaft, durchaus ein schamanisches Phänomen.

Sprachlich gehört das Paez zu den agglutinierenden Sprachen, in denen das Formelement durch Affixe gebildet wird, die ganze Wortklassen charakterisieren. In der Phonetik fällt die alle Konsonanten umfassende Palatalreihe auf, sowie das häufige Vorkommen nasaler Vokale.

Die sprachliche Einordnung des Paez ist schwierig. Seit den Forschungen von H. Beuchat und P. Rivet wird es als Glied der Chibcha-Sprachen angesehen. Dies war nicht immer so. E. Castillo i Orosco betont 1735, daß sich das Paez in seiner grammatischen Struktur sehr vom Chibcha unterscheide (p. 63). Erst C. Cuervo Marquez hält das Paez für eine Chibcha-Sprache (p. 199). H. Pittier de Fábrega betont 1907, daß sich die Verwandtschaft des Paez nur auf die Regeln der grammatischen Konstruktion beziehe; das Vokabular ist völlig verschieden (p. 341). Beuchat und Rivet untersuchten dann 1910 in einer groß angelegten Studie die Gesamtheit der nordandinen Sprachen und stellten danach die Verbreitung der Chibcha-Sprachen von Nicaragua bis Ecuador fest. Die Mehrheit der kolumbianischen Stämme sprach danach Chibcha (pp. 193—198). Diese Einteilung ist von der Linguistik bislang weder näher überprüft, noch widerlegt worden. Es sei dies den Sprachwissenschaftlern überlassen. Hier seien nur einige Bemerkungen zu dem Problem der Chibchasprachen im allgemeinen und dem des Paez als angenommener Chibcha-Sprache im besonderen gestattet. Die Schwierigkeit des Sprachvergleiches im Nordandenraum liegt an dem völlig ungenügenden Vergleichsmaterial. Die Mehrzahl der untersuchten Stämme ist längst ausgestorben und von den wenigen lebenden ist selten ein genügend vollständiges Material vorhanden. Auch das eigentliche Chibcha (Mwiska) auf der Hochebene von Bogotá wird seit zweieinhalb Jahrhunderten nicht mehr gesprochen und ist nur literarisch bekannt. Für ihren Sprachvergleich wählen Beuchat und Rivet die lexikographische und die grammatische Methode. Das Gesamtvokabular der untersuchten Sprachen umfaßt rund 200 Wörter. Diese dienen als Vergleichsmaterial für 49 Sprachen, und zwar für das eigentliche Chibcha (Mwiska) und 23 weitere Sprachen und Dialekte in Nordkolumbien und Panama, sowie für 25 Sprachen und Dialekte südkolumbianischer Sprachen! Methodisch wird also so vorgegangen, daß eine lexikographische Übereinstimmung der Sprache A mit der Sprache B gefunden wird, eine andere Übereinstimmung der Sprache B mit der Sprache C, eine weitere Übereinstimmung der Sprache C mit der Sprache D usw. Im Beweis ist die Sprache A mit den Sprachen B, C, D usw. verwandt. Auf das Paez bezogen: In dem bei Beuchat und Rivet angeführten Vokabular findet sich keine direkt übereinstimmende Vokabel des Paez mit dem Chibcha! Dabei wurde nicht einmal eine Auswahl der Wörter nach ihrem qualitativen Gewicht vorgenommen. Es ist daher das völlige Fehlen von übereinstimmenden Bezeichnungen für Nahrungsmittel, Tiere, Nutzpflanzen, Metalle (Gold), Körperteile, Verwandtschaftsbezeichnungen usw. besonders

bemerkenswert. Nach dem Vokabular ist es also nicht möglich, das Paez als Chibchasprache zu bezeichnen. Wie weit dies für die anderen südkolumbianischen Stämme, von denen meist nur ein sehr geringes Vokabular existiert, zutrifft, kann hier nicht erörtert werden. Jedenfalls finden sich — durch die enge Nachbarschaft mit kechua sprechenden Völkern in allen diesen Sprachen eine große Anzahl von Kechuawörtern. (Für das Paez vgl. die Zusammenstellungen bei Castillo i Orosco und Pittier de Fábrega). Grammatische Übereinstimmungen des Chibcha mit dem Paez sind vorhanden. Gleichzeitig aber weisen Beuchat und Rivet ausdrücklich daraufhin, daß das Paez die größten grammatischen Unterschiede innerhalb der verglichenen Sprachen mit dem Chibcha aufweist (p. 190/191). Zusammenfassend sei somit festgestellt, daß die Einordnung des Paez als Chibchasprache nicht als gesichert gelten kann. Die grammatischen Übereinstimmungen können genau so gut Reste einer älteren oder Überlagerungen seitens einer jüngeren Bevölkerungsschicht sein. Hinzu kommt, daß in den teilweise jahrhundertelangen Kämpfen seit der Conquista beträchtliche Bevölkerungsverschiebungen und -vermischungen stattgefunden haben. Möglicherweise sind die heute bestehenden oder überlieferten Stämme nur versprengte Reste oder Gruppierungen, die sich erst nach der Conquista aus anderen Stämmen gebildet haben.

Kulturell haben die Paez mit der Chibcha*kultur* gar nichts gemein. Die von H. Beuchat und Paul Rivet aufgestellte Chibcha-Sprachgruppe ist ein linguistischer Begriff, der auf einer lückenlosen Ausdehnung von Nicaragua bis Ecuador völlig verschiedenartige Kulturen umfaßt! So sind beispielsweise die Chibchasiedlungen auf der Hochebene von Bogotá eng geschlossene Dörfer, während die Paez in Einzelgehöften wohnen. Der Feldbau der Chibcha ist mit dem Gebrauch eines hölzernen Spatens, gegenüber dem Grabstock-Brandrodungsbau der Paez, relativ entwickelt. In der Technik steht die Herstellung der Chibchakeramik hoch über der der Paez, und Goldarbeiten sind von den Paez mit Sicherheit nicht hergestellt worden. Bei den Paez war die Schleuder die Hauptwaffe, bei den Chibcha Keule und Speer mit Speerschleuder. In der Chibchareligion haben wir einen Schöpfergott bzw. eine Stamm-Mutter mit einem Pantheon anderer Götter, mit Opfern von Gold und Smaragden, wir finden Heroen-Tempel, heilige Plätze und sakrale Könige, bei den Paez nur Schamanen.

Wir haben damit einen klaffenden Zwiespalt zwischen der Chibchasprachgruppe und der Chibchakultur. Wissenschaftliche Termini sollten jedoch eindeutig sein und nicht mit den gleichen Wörtern verschiedene Begriffe bezeichnen. So wird es richtigerweise in Europa z. B. mit

der indogermanischen Sprachfamilie, der dinarischen Rasse oder der bandkeramischen Kultur gehalten.

Der kulturelle Begriff der Chibcha ist der ältere. Um nicht die Kulturgruppe mit der davon völlig verschiedenen Sprachgruppe gleichzusetzen und zu verwechseln, sollte die Sprachgruppe anders benannt werden, zumal nicht sicher ist, ob das in Vokabular und Sprachaufbau Gemeinsame auf das Chibcha zurückgeht oder auf ein sprachlich anderes Substrat. Analog trifft das für die archäologischen Kulturen des Nordandenraumes zu, die sich auch in manchen Zügen gleichen, aber nicht auf die Chibchakultur zurückgehen.

Es bliebe die Frage nach der ethnischen Verwandtschaft der archäologischen Tierradentro-Kultur. Nach ihrem kargen materiellen und künstlerischen Kulturbesitz waren die Paez technisch zu den im Tierradentro existierenden Äußerungen einer entwickelten Kultur nicht in der Lage. Mit ihrem streng demokratischen Sozialgefüge fehlt ihnen auch die zur Erhaltung einer solchen Kultur nötige ständische Gliederung. Auch in den mythologischen Überlieferungen der Paez findet sich für eine Verwandtschaft mit der archäologischen Kultur kein Anhalt. Ähnlich scheint nur die Bestattungsart der Paez in einem Nischengrab; es ist dies aber typologisch nicht identisch mit dem Schachtgrab. Hinzu kommt die Differenz der Brandbestattung in der archäologischen Kultur, gegenüber der Skelettbestattung des ganzen Leichnams bei den Paez. Die Paez sind zudem ein lokal relativ eng begrenzter Stamm; die archäologische Kultur hingegen hat weiteste geographische Beziehungen in der Kunst*, im Stile ihrer steinernen Statuen, wie auch in der Bestattungsart in Schachtgräbern.

Künstlerische Beziehungen aber machen sprachlich weitere Beziehungen wahrscheinlich, als es faktisch für die Paez und ihre Nachbarn zutrifft. Es ist unter diesem Gesichtspunkt auch ein relativ entwickelter Handel zu vermuten. Die Veranlagung und gegenwärtige Tätigkeit der Paez bietet uns aber auch in dieser Hinsicht keine Stütze. Wir müssen deshalb das Vorhandensein der Paez in ihren heutigen Wohngebieten des Tierradentro als zeitlich auf die archäologische Kultur folgend ansehen. Ob sie als spätere Einwanderer innerhalb einer größeren Völkerbewegung die Zerstörer der archäologischen Kultur waren oder ob sie sich erst im Laufe der Kämpfe mit den Spaniern an den Stätten der archäologischen Kulturen niedergelassen haben, ist zur Zeit nicht zu klä-

* G. Hernandez de Alba (IV) fand in einer Grabkammer eine Halskette aus Sodalithfigürchen. Dieses Material ist sonst in Kolumbien nicht belegt. Es stammt aus einer bolivianischen Mine, und Kunstwerke daraus finden sich sowohl in Tiahuanaco, wie auch in peruanischen und argentinischen Fundstätten.

ren. Für letztere Annahme spricht, daß die Nachrichten der frühen Spanier über die angetroffenen Stämme und über deren geographische Lage nicht immer eindeutig sind. So läßt der P. Manuel Rodriguez (1684) die Paez im Páramo de las Papas wohnen, dem Páramo westlich San Agustín, in dem der Magdalena, Cauca und Caqueta entspringen. Auffällig ist auch, daß die ersten spanischen Berichte die Guambianos, die heutigen westlichen Nachbarn der Paez nicht erwähnen. Für die Annahme der Zugehörigkeit der Paez zu einer neu eingewanderten, kriegerischen Bevölkerung spricht, daß auch der im Kulturgebiet von San Agustín zur Zeit der Conquista wohnende Stamm der Andaki nichts mit der archäologischen Kultur zu tun hatte, sondern möglicherweise als deren Zerstörer anzusehen ist.

VI. Verzeichnis des fremdsprachlichen und Fachausdrücke

Alcalde	Kolumbianische Bezeichnung für den Bürgermeister eines Ortes oder Leiter eines Landkreises. Auch Bezeichnung für die örtlichen Eingeborenenautoritäten.
Ají	Sehr scharfe Mischung von Ajípfeffer mit Zwiebeln und anderen Gewürzen.
Arroba	Spanisches Gewichtsmaß von 12½ kg.
Cabildo	Kolumbianischer Gemeinderat. Bei den Paez Bezeichnung für den demokratisch gewählten Dorfrat.
Chaquira	Kolumbianische Bezeichnung für Glasperle.
Chicha	(spr. Tschitscha) Eingeborenenbier. Bei den Paez aus Zuckerrohr, bei den meisten anderen Andenindianern aus Mais, bei den südamerikanischen Waldindianern meist aus Maniok hergestellt.
Conquista	Zeit der spanischen Eroberung.
Conquistador	Spanischer Eroberer zur Zeit der Entdeckung Amerikas.
Finca	Plantagengehöft oder Landgut zum Anbau von Kaffee, Zuckerrohr, Bananen o. ä.
Gobernador	Span. Leiter der Verwaltung einer Provinz. Bei den Paez Leiter des dörflichen Gemeinderates.
Guaquero	Raubgräber prähistorischer, indianischer Grabstätten.

Hacienda	Im Tierradentro größerer Landbesitz.
Kazike	(Cacique) Westindische Bezeichnung für den Häuptling eines Dorfes oder Eingeborenenstammes, von den Spaniern allgemein als Bezeichnung für die Eingeborenenhäuptlinge innerhalb ihres Machtbereiches gebraucht. Die in der deutschsprachigen Literatur gebrauchte Übersetzung «Fürst» ist irreführend.
Lagune	See, Teich.
Machete	Buschmesser, langes Haumesser.
Milpa-System	Mittelamerikanische Bezeichnung für den periodischen Feldbau mittels vorausgehender Brandrodung; in Kolumbien roza, bei den Paez wáts genannt.
Minga	System dörflicher, unentgeltlicher Gemeinschaftsarbeit.
Municipio	Im Tierradentro eine Anzahl von Dörfern, etwa unserem Verwaltungskreis entsprechend.
Nyiç	Böser Schamane, böser Zauberer.
Panela	Eingedickter Zuckerrohrsaft. In Barrenform zu je etwa 1/2 kg transportiert und gehandelt. Übliche Form des Zuckerkonsums bei der kolumbianischen Landbevölkerung.
Páramo	Hochsteppe. Allgemeine Bezeichnung für die Kordillerenkämme.
Parcialidád	Im Tierradentro: Dorf mit dazugehörenden Ländereien.
Poncho	Ärmelloser Mantel der Andenindianer in Form einer rechteckigen oder quadratischen Decke mit einem Loch für den Kopf. In Kolumbien Ruana genannt.
Roza	Kolumbianisches Brandfeld. Vgl. Milpa.
Ruana	Kolumbianische Bezeichnung für Poncho.
Schamane	Populär: Medizinmann. Bei den Paez wird unterschieden zwischen bösen Schamanen (nyiç) und guten (tgyu). Erstere rauben Seelen, bringen Krankheiten oder Tod. Letztere sind als Gegenspieler der nyiç Ärzte im geistigen Bereich.
Tafí	Seele, die den Menschen im Schlafe verlassen kann.
Tama	Zeremonialstab des Schamanen.
Tgyu	Paez-Bezeichnung für den guten Schamanen.
Trapiche	Zuckerrohrmühle.
Tumba	Große, unterirdische Grabkammer.
üns	Seele, die den Menschen beim Tode verläßt.

Abb. 87 Eingangsschacht mit Deckstein der Grabkammer Nr. 36 von Segovia.

Abb. 88 Der Guaquero Marcos Narváez hat mit dem «halben Rohr» den Eingangsschacht einer unterirdischen Grabkammer sondiert.

TAFEL LXII

Abb. 89 Der dreieckförmige, mit schwarzer Humuserde gefüllte Grabschacht hebt sich inmitten des helleren gewachsenen Bodens deutlich ab.

Abb. 90 Zu den Ausgrabungsarbeiten waren nur die Kolonisten, nicht aber die Paez-Indianer bereit. Am Schachtrand Streuscherben.

TAFEL LXIII

Abb. 91 und 92 Dreieckförmiger Eingangsschacht der Grabkammer Nr. 10 von Segovia.

TAFEL LXIV

Abb. 93 und 94 Bestattungsurnen der Grabkammer Nr. 11 von Segovia in situ. Die flache Decke der Kammer ist mit einem wabenförmigen Muster versehen.

CXVI [End plate]

TAFEL LXV

Abb. 95 Eingangsschacht der Grabkammer Nr. 26 von Segovia.

Abb. 96 Eingangsschacht der Grabkammer Nr. 32 von Segovia. Deutlich sichtbar ist das halbkreisförmige «Knochenloch» unmittelbar hinter dem Eingang.

TAFEL LXVI

Abb. 97 Dreifußgefäß mit nach außen gebogener Gefäßmündung. Ockerfarbiger Ton mit Spuren schwarzer Bemalung; Gesamthöhe 27 cm; Durchmesser 18 cm, Archäologisches Museum der Universität Popayan Nr. 42-2-18.

Abb. 98 Teller mit leicht nach außen gewölbtem Rand; roter Ton, schwarz bemalt; Höhe 6 cm, Durchmesser 18 cm (Grabung Alto de San Andrés).

Abb. 99 Keramikbruchstück aus der Grabkammer Nr. 28 des Filo de El Aguacate; Rot-schwarze Bemalung mit später angebrachter Dekoration in Form von mit weißer Paste ausgefüllten Punkten.

Abb. 100 Doppelausgußgefäß mit Bügelhenkel; ockerfarbiger, hartgebrannter Ton, rot bemalt; Höhe 17 cm, Durchmesser 14 cm (Grabung Alto de San Andrés.)

Abb. 101 Kugeltopf mit nach außen gebogener Mündung und zwei Henkelösen; Roter, hartgebrannter Ton, Spuren roter Bemalung, sowie Gebrauchsspuren in Form von Ruß; Höhe 11,5 cm, Durchmesser 12,5 cm (Grabung Alto de San Andrés).

Abb. 102 Kugeltopf mit nach außen gewölbter Gefäßmündung; brauner Ton; Höhe 9,5 cm, Durchmesser 12,5 cm (Grabung Alto de San Andrés).

TAFEL LXVII

Abb. 103 Knochenurne mit halbkugelförmigem Unterteil, grauer, stark mit Sand vermischter Ton, graue Bemalung; Vertikalriefen auf der Außenseite des Gefäßkörpers; Höhe 15 cm, Durchmesser 22 cm (Grabkammer Nr. 11 Segovia).

Abb. 104 Glockenförmige Knochenurne; ockerfarbiger Ton, unbemalt, an der Unterseite Rußspuren; Höhe 21 cm, Durchmesser 21 cm (Grabkammer Nr. 10, Segovia).

Abb. 105 Kugelförmige Knochenurne mit konkavem Hals; ockerfarbiger Ton; graue Bemalung; Vertikalriefen von der Schulter bis zur Gefäßunterseite; Höhe 13 cm, Durchmesser 10,5 cm (Grabkammer Nr. 32, Segovia).

Abb. 106 Knochenurne mit gezackter Gefäßmündung. Ockerfarbiger Ton, an der Unterseite Rußspuren; Höhe 19 cm, Durchmesser 19 cm (Grabkammer Nr. 11, Segovia).

Abb. 107 Knochenurne in Form einer flachen Schale ohne Standfläche; ockerfarbiger Ton, graue Bemalung; Höhe 10 cm, Durchmesser 31 cm (Grabkammer Nr. 11. Segovia).

TAFEL LXVIII

Abb. 108 Knochenurne mit halbkugelförmigem Unterteil und fast zylindrischem Oberteil. Mündung leicht nach außen gebogen. Ockerfarbiger Ton, innen rot bemalt, außen schwarze Negativmalerei mit dreieckförmigen Mustern auf rotem Grund. Im Boden ein kreisrundes Loch wie bei Abb. 109. Gesamthöhe 35 cm, Durchmesser 45 cm. (Grabkammer Nr. 11, Segovia).

I: Nachtigall SC15 Paez

[End plate]

Abb. 109 Knochenurne der gleichen Art und mit ähnlicher Dekoration wie Abb. 110. Auf der Gefäßunterseite ein kreisrundes Loch von 3 cm Durchmesser; Gesamthöhe der Urne 36 cm, Durchmesser 32 cm. (Grabkammer Nr. 11, Segovia).

Abb. 110 Knochenurne; Halbkugeliger Gefäßkörper mit konkavem Hals, beide durch einen horizontalen Wulstring getrennt; ockerfarbiger Ton, mit innerer und äußerer Bemalung. Auf der Außenseite Dekoration durch spiralförmige Punktreihen, die mit weißer Paste ausgefüllt sind; Höhe 45 cm, Durchmesser 37 cm (Grabkammer Nr. 11, Segovia).

Abb. 111 Knochenurne mit halbkugelförmigem Unterteil und konkavem Oberteil. Ockerfarbiger Ton, graue, zum Teil abgeplatzte Bemalung. Dekoration am Hals durch acht parallele Reihen mit weißer Paste ausgelegter Punktlinien. Höhe 38 cm, Durchmesser 33,5 cm. (Grabkammer Nr. 11, Segovia).

TAFEL LXIX

Abb. 112 Knochenurne mit Relief-Schlangen (restauriert). Roter Ton, rote Bemalung. Vertiefungen mit weißer Paste ausgefüllt. Höhe 30 cm, größter Durchmesser 25 cm. Museo Nacionál Bogotá, Nr. 46-XIII-6509.

Abb. 113 Knochenurne mit halbkugelförmigem Unterteil und konkavem Oberteil. Die Mündungsweite entspricht dem größten Durchmesser des Gefäßkörpers. Rote Bemalung innen und außen. Dekoration durch mäanderförmige, mit weißer Paste ausgefüllte Punktreihen auf rotem Grund. Höhe 45 cm, Durchmesser 43 cm. (Grabkammer Nr. 10, Segovia).

TAFEL LXX

Abb. 114 Bruchstücke eines Gefäßhalses mit Reliefdekoration. Sehr flach gestaltete menschliche Gesichter überragen den Gefäßrand und laufen in Vertikalwülsten aus, die untereinander durch gleiche Wülste verbunden sind. Auf ockerfarbigem Ton finden sich Reste schwarzer Bemalung. Die Reliefs sind durch mit weißer Paste ausgefüllte Punktreihen verziert. Gesamthöhe 25 cm. Archäologisches Museum der Universität Popayan Nr. 42-1-4.

Abb. 115 Bruchstück eines Gefäßrandes mit einem die Mündung überragenden menschlichen Gesicht. Von diesem laufen zwei Wülste, ähnlich Zöpfen, nach außen-abwärts. In dem sehr flach gestalteten Gesicht sind die Augen durch Kreise, die Pupillen durch Punkte dargestellt. Durch zwei gleiche, mit weißer Paste ausgefüllte Punkte sind die Nasenlöcher angedeutet. Über die Stirn laufen zwei waagrechte Linien. Ohren fehlen. Gesamthöhe 12,5 cm. Archäologisches Museum des Parkes von Tierradentro.

Abb. 116 Menschliche Relieffigur mit gewinkelt erhobenen Armen auf dem Bruchstück eines Gefäßrandes. Gesamtbreite 11 cm, Gesamthöhe 5 cm. Archäologisches Museum des Parkes von Tierradentro.

Abb. 117 Bruchstücke eines Gefäßrandes mit der Relieffigur eines Menschen (?). Höhe 14,5 cm, Breite 10 cm. Archäologisches Museum des Parkes von Tierradentro.

erkennbar. Spuren roter Bemalung neben kreisförmigen, mit weißer Paste ausgefüllten Vertiefungen. Gesamthöhe des Bruchstückes 19 cm. Privatsammlung des Herrn Ricaurte Hurtado, Inzá.

Abb. 119 Gefäßhenkel mit zwei übereinander modellierten menschlichen Gesichtern. Gesamthöhe 21 cm. Privatsammlung des Herrn Ricaurte Hurtado, Inzá.

Abb. 120 Menschliche Figur aus braunem bis grauem Ton als Bruchstück einer Gefäßverzierung. Arme, Beine und linkes Ohr sind weggebrochen, das rechte Ohr ist in Form einer Öse gestaltet. Augen und Mund sind durch mit weißer Paste ausgelegte Vertiefungen gebildet. Drei ringförmige Vertiefungen bilden einen Brustschmuck. Höhe 13 cm. Archäologisches Museum des Parkes von Tierradentro.

TAFEL LXXII

Abb. 122 und 123 Menschlicher dreieckförmiger Kopf mit sehr flachem Gesicht und hakenförmig vorspringender Nase. Augen und Mund sind durch gleich große kreisförmige, mit weißer Paste ausgefüllte Vertiefungen dargestellt. Gleichartige Kreise finden sich als Ornamente an den Seiten des Kopfes. Stirn, Kinn und Wangen sind durch parallele Linien eingefaßt. Eine gleiche Linie läuft über den Nasenrücken. Höhe 9 cm, Breite 8,5 cm. Archäologisches Museum des Parkes von Tierradentro.

Abb. 124 und 125 Menschlicher Kopf mit sehr flach gestaltetem Gesicht. Augen und Mund sind durch kreisförmige Vertiefungen angedeutet, die Zunge hängt heraus. Die Ohren setzen henkelförmig an und haben kreisförmigen bzw. halbmondförmigen Gehörgang. Die Umrisse des Gesichtes werden durch geradlinige Einschnitte abgegrenzt, außerhalb deren der Kopf mit punktförmigen Vertiefungen versehen ist. Alle Vertiefungen sind mit weißer Paste ausgefüllt. Höhe 9,5 cm, Breite 10 cm. Archäologisches Museum des Parkes von Tierradentro.

TAFEL LXXIII

Abb. 126 Dreieckförmiges menschliches Gesicht mit geöffnetem Mund. Bruchstück eines Gefäßrandes. In Höhe der Schläfen zwei kreisförmige Ornamente als Andeutungen von Ohrpflöcken. Gesamthöhe 16 cm, Gesamtbreite 18,5 cm. Archäologisches Museum der Universität Popayan.

Abb. 127 Menschliches Gesicht mit der Darstellung von zwei zylindrischen, horizontal durch die Ohren gesteckten Pflöcken. Diese sind auf der Vorderseite mit sieben Vertiefungen versehen. Um die Mitte der Pflöcke spannen sich die Ränder der Ohren. Über die Stirn laufen zwei horizontale, über die Wangen je zwei vertikale Linien. Die Augen sind durch kreisförmige Vertiefungen dargestellt. Gleichartige Kreise bilden die Dekoration des Halses. Der Kehlkopf steht kropfartig hervor. Gesamtbreite 12 cm. Archäologisches Museum des Parkes von Tierradentro.

Abb. 128 Menschlicher Kopf. Durch die Ohren sind vertikal zwei große, zylinderförmige Pflöcke gesteckt. Dekoration durch mit weißer Paste ausgefüllte Punkte auf Stirn und Oberteilen der Ohrpflöcke. Höhe 5 cm, Breite 8 cm. Archäologisches Museum der Universität Popayan Nr. 42-2-15.

ETHNOGRAPHIC AND LINGUISTIC NOTES ON THE PAEZ INDIANS OF TIERRA ADENTRO, CAUCA, COLOMBIA

By H. PITTIER DE FÁBREGA

Introduction

Very little is known of the ethnology of the aboriginal inhabitants of the western and central cordilleras of Colombia and the intervening broad valley of Cauca. The early historians and chroniclers have left only long lists of more or less confused tribal names, along with the recital of the protracted war of extermination conducted with conscienceless and selfish cruelty by the conquistadores. With few exceptions modern writers have found little or no opportunity to deal with what is left of these interesting people. 121

With special reference to the Paez Indians, who are the subject of these notes, our notions have hitherto been derived almost exclusively from the materials collected by Castillo y Orozco about 1735, and published in 1877 with brief analytical notes by the late Colombian scholar, Señor Don Ezequiel Uricoechea.[1] 127

Early in 1906 the writer visited the section of the central cordillera inhabited by the Paez, staying a few days at two of their principal villages, namely, at Tacueyó, at the headwaters of the Palo river on the western side of the mountains, and at Huila, at the junction of the Paez and San Vicente rivers, on the Indian reservation known as Tierra Adentro. The personnel of the expedition, in addition to the author, with a few friends and two servants, consisted of native Indians, so that good opportunities were afforded for becoming familiar with the Paez language and to gain an insight into native manners and customs. 114 [361]

SC15 Paez SC15

121 The present object is not in any way to contribute an exhaustive monograph on the Paez, but simply to give a summary of our former knowledge of them, together with the chief results of the personal information collected during the visit referred to.

ETHNOGRAPHIC NOTES

Former Occupants. "Planos de Indios." Huacas

101 174 In addition to the still existing tribes, traces of the former occupancy of the Cauca valley and the adjacent mountains by a dense Indian population are found at every step. The names of extinct groups, like the Hilamas, Ocaches, Jamundies, and others, impressed on the minds of the former Spanish inhabitants by reason of some of their more gruesome customs, have come down to the present generation, although the tribes, as such, have disappeared. Of the Hilamas and Ocaches it is said they were cannibals. At present their more or less mixed descendants still live in the villages of Las Pavas and Vijes, near Cali; the "Paveños" have become inveterate legal fighters, keeping their judges and alcaldes constantly occupied; while the "Vijeños," on the other hand, are now so peaceful that the court-house is known to have been closed for eighteen months at a time. [192 181 162]

101 114 Of the Jamundies I was told that they were indefatigable warriors, having fought the Spanish invaders to the last of their strength. Their name is perpetuated in that of the little town of Jamundi, near which I visited the very interesting vale of Agua Sucia, which may have been one of their principal strongholds, as well as a rich gold-washing place. The hills were and still are partly covered with graves, or *huacas*, and these have been found so abundant in gold objects as to have induced enterprising miners, or *huaqueros*, to conduct a stream of water from a long distance in order to completely wash the slopes. [103] [135] 172 I do not attempt to mention the fabulous riches that are said to have been extracted from this place and from several other no less rich discoveries. An immense amount of pottery, often highly ornamented, together with grinding-stones, hatchets,

emeralds, and other objects, were ruthlessly destroyed or scattered about, without consideration for their archeological or even for their intrinsic value. Among the pieces of pottery more commonly found are the small elegantly designed disks, or spindle-whorls, of which I procured several specimens for the United States National Museum (plate II, 1). I obtained also a minutely wrought spider, and one of the gold fish-hooks that are often met with on sand beaches along the streams. 172

The principal Jamundi relic of Agua Sucia, and which is not likely to be displaced for some time, is the so-called "Piedra de los Sacrificios," an immense block of old eruptive stone, covered with pictographs (plate III, 1). The miners and peasants living in the district believe that a definite meaning is attached to these rude drawings, and possibly some speculative archeologist will see in them more or less mystic symbolism that my lesser imagination fails to discover; for I think we must be contented with regarding them simply as the product of representative art in its infancy. A few of the glyphs are reproduced here, some giving an idea of the geometric notions of the draftsmen, while the others are rudiments of the art of designing (plate II, 1, and figures 1, 2). 172 212 [531]

On the way to Tacueyó I became acquainted for the first time with a so-called "plano de Indio," such as are found at short intervals on the mountain ridges of the entire Cauca region. While pursuing our way on the top of a very narrow spur, we suddenly found that the crest was cut across by a very deep ditch that showed every evidence of having been the work of man. Beyond this ditch the top of the hill had very probably been artificially leveled off so as to form a plane surface of about 15 meters in width and 20 meters in length. At the end of this esplanade the hill is cut by another ditch, identical with the first. The distance between the two ditches is very much greater than the length of the esplanade, amounting to more than 100 meters. 172

According to all indications, the level space was the site of an Indian house, and that part of the hill between the ditches is generally found to be full of graves, those on the house site 172 361

172 containing, as a rule, gold objects and pieces of superior pottery.
361 We observed many of these "planos de Indios" on the road between Corinto and Tacueyó, their situation corresponding ex-

172
212

FIG. 1. — Pictographs on the "Piedra de los Sacrificios."

172 actly with what we know of the present habits of isolation of
361 the Paez Indians. The number of graves at each site does not however seem to agree with the former custom of these Indians
[844 of abandoning a house as soon as a birth or a death had taken
768] place in it.

As a very good example of the altitude at which the former

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

inhabitants of these valleys established their residences, I may 172
mention that the highest "plano" on the cordillera was found 361
at about 3,300 meters at El Alto de las Cruces, one of the spurs
of the Páramo de Buena Vista, the limit of the forest being here

172
212
531

FIG. 2.—Geometrical figures on the "Piedra de los Sacrificios."

at about 3,600 meters. The greatest altitude of the abodes of 172
the present Indians scarcely exceeds 2,600 meters. 361

While on this subject I shall mention an explanation of the 173
"planos" as it was given by one of our Indians. "In old days," 202
205

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

173 he said, "the caciques or chieftains, had their messages trans-
202 mitted from valley to valley by means of runners who were
205 stationed at short intervals along the main roads. Each runner kept himself in readiness to start on the arrival of a message, thus insuring rapid transmission." As the "planos" and also the old trails are found on almost every ridge, it is difficult enough to judge of the value of this explanation; but, if I am not mistaken, such a system of communication existed without doubt at a short distance southward among the Incas of Ecuador and Peru, and perhaps extended into the Cauca valley.

172 On our return from Huila, while traveling between Toribió and Tacueyó, I noticed on the left an isolated hill with a part of its ridge separated from the rest by a deep cross-cut, evidently artificial. The top of the separated part looked in the distance as if also isolated by a ditch. My friend, Mr Emile Bizot, a mining engineer of wide experience in these parts, informs me that this is a common feature of the hilly district formerly inhabited by the natives, and that the enclosed surface always contains numerous graves (plate III, 2).

172 The high peaks of the most rugged districts of Tierra
532 Adentro are often crowned by isolated *huacas*, which are especially sought by treasure-hunters. At Tacueyó we had the opportunity of admiring a set of gold objects found in such graves and of which we made the photograph reproduced in plate II, 2. The frogs are of a type quite distinct from those with which I became familiar in Costa Rica. The representative of a human being recalls certain Chibchan idols, or, according to Mr W. E. Safford, Kitšua amulets. As to the thirteen remaining pieces of gold, quite thin and almost uniform in shape, they are perfectly new to me.

Former and Present Distribution

131 According to Father Ródriguez[1] the Paez, or Paós, Indians
114 lived on the summit and slopes of the *Cordillera de Guanacas*,
133 "sierra muy fria que llaman el Páramo de las Papas," a defini-

[1] P. Manuel Rodriguez, *El Marañon y Amazonas. Historia de los descubrimientos, entradas y reducciones de Naciones*, Madrid, 1684.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

tion which would correspond pretty well with the explanation given by subsequent authors, except for its last, untranslated member, which seems to imply a lack of geographical knowledge on the part of Father Rodriguez. According to modern maps, indeed, the term "Alto", or "Cordillera", de Guanacas, seems to apply only to the group or node of mountains north of the Coconucos and Puracé volcanoes, and south of the towering Huila. This includes the "Páramo de Moras," which we crossed on our return from Tierra Adentro, but not the *Páramo de las Papas*, which is situated south of the Puracé, at the headwaters of the Cauca, Caquetá, and Magdalena rivers. 131 114 133

If we admit, then, that in Father Rodriguez's description the name Páramo de las Papas is merely a lapsus for Páramo de Moras, the area given by him corresponds pretty well with that which is recognized as such by Uricoechea in his introduction to Castillo's work, excepting that the latter extends this area northward to include the upper Yaguará basin. According to Castillo, this last was probably inhabited by another *parcialidad*, which he calls Bemb, "indios infieles de nación pijaos." At Huila, when pointing northward to the valleys on the eastern slope of the volcano and asking who lived there, the Indians answered, "Los Pijaos", and among the Spanish people it is generally understood that the Paez and the Pijaos are one and the same. This is also the opinion of Reclus,[1] who says: "Among the various tribes that wandered through the thick forests of this [eastern] slope of the [central] Cordillera, the most barbarous were the *Pijaos* or *Paez*, who selected innocent victims to offer to their divinities. The enemy killed in a fight could be only indifferent to the gods; but a woman, a child, an inoffensive stranger, the pure ones, were welcome to the bloodthirsty genii." And these monstrous sacrifices must be repeated at short intervals to insure the permanent good-will of the gods. 131 114 101 [782 727]

The area given on the accompanying map (plate I)[1] corresponds with the above-mentioned description by Rodriguez, 101 103

[1] Reclus, *Géographie universelle*, XVIII, p. 305.

SC15 Paez SC15

101 only it might be necessary to modify it slightly if we were able
103 to localize all of the thirty-four villages or hamlets reputed to be of Paez stock and included in the following systematic list:

1. *Paez Basin*

As-at	Inzá	Suín
Chinas	Líme	Tálaga
Chitoco	Mosoco	Toés
Cuetandó	Nátaga	Vitoncó
El Pital	San Andrés de la Plata	Yaquirá
El Naranjal	San José	

2. *Palo Basin*

Jambaló	San Francisco	Toribío
Pitaió	Tacueyó	

3. *Orejas, Corre, and Pienlama Mountains*

Cajibio	Caldonió	Paniquitá

4. *Vagnará Basin*

El Retiro		Iquirá

5. *Locality Uncertain*

Abirama	Oayó	Ricaurte
Caldera	Pueblo Nuevo	Tobóima
La Troja	Pusó	

101 The principal neighbors of the Paez Indians, according to the above description of their territory, were to the north — the Quimbayas on the western slope of the central cordillera, and the Pijaos on the eastern slope. To their east were the Manipos, in the Magdalena valley; the Guanacos were on both watersheds of the central cordillera southward; and westward on the plains of the Cauca valley, the Kitšua and the Jamundies. The Kitšua were probably the most advanced in culture of all these different stocks, and the ones whose influence is more easily recognized
[177 in the customs and idiom of the Paez. Their language is also
191] the only one which has come down to us in its integrity.

101 There is no positive proof of the identity of the Paez and
174 Pijaos, and it is fair to state that there are many data pointing to the fact that originally they were merely neighbors, and allied against the Spaniards, as, for instance, in 1641, when they de-

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

stroyed the city of Caloto, then on the Magdalena river, according to Alcedo. But it is not unlikely that, later on, during their decline, the Pijaos, Paúa, and perhaps several other tribes became mixed, and those whom we now call *Paez* are the survivors in blood, customs, and traditions, of all these frequently named *parcialidades* or *naciones*. 101 174

Physical Characteristics

There is no special reference by former writers respecting the physical characteristics of these Indians, probably because of the apparent uniformity in type of all the tribes of tropical South America. According to my own very fleeting observations the Paez are small, broad-shouldered, with small bony hands, and feet broadened toward the extremities. Their skin is very dark, a character common to all Indians living at great altitudes. In the case of almost every adult, both male and female, coming under my observation, I observed a fine black pubescence covering all visible parts of the body. They appear to be generally strong and healthy, and their physical endurance is not below the average. On our trip across the cordillera each adult man carried at least thirty kilograms, and many of them more than fifty, and none complained of being too heavily laden, although the trail up to nearly 4,000 meters and down again was exceedingly rough and steep, requiring at times not only much exertion but equal presence of mind. 142 147

It is well to mention, after Uricoechea, that the Paeces are naturally inclined to warfare, and invariably join one side or the other in the unceasing Colombian revolutions. In early times they raided the Spanish establishments, the destruction of Caloto on two occasions (the first time in 1641) being still held by them in vivid remembrance as glorious feats of their ancestors. I was even assured that not long ago, during the last war, they were with difficulty prevented from making an incursion on the neighboring Cauca cattle ranches. 181 721

I was quite surprised to find among the Paez Indians a character that I had noticed previously in Central America, but of which no record could be found in current literature. I refer to 147

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

147 the odor peculiar to the Indians, which becomes quite noticeable when they are sweating and which so closely resembles that of the secretion of the so-called *sahino*, or wild hog (*Dicotyles tajacu* L.), that I have more than once been deceived into believing that our trail crossed the path of a drove of these animals.

516 When at rest the Paez men almost invariably sit on their heels, the toes sustaining the whole weight of the body, while the women sit with their legs stretched together on the ground, [514] even when near the fire in their houses. In micturition young 481 girls remain standing. The gait of both men and women is short-paced and easy, the body being always slightly inclined forward, probably on account of the habit of carrying heavy loads.

824 Like all children of Nature, the Paez Indians are very keen 126 observers of their surroundings, as is shown by the minuteness of their differentiation in plants and in certain groups of insects. Castillo, for instance, gives the names of no fewer than six different varieties of ants —

[552]

kan-kik	*cĭi-kik-ne*	*oĭa-i*
kik-fants	*gnne-kandi*	*to-fiti*

and I collected very few plants for which they did not have a ready name.

Reproduction and Death

881 When a girl reached puberty the event was celebrated among the old Paez Indians by a special dance called *itsa-ko*, during which the young naked female was placed in a hole dug outside the hall-house and thoroughly washed with *chicha*. We have no 836 notice of pre-marital liberty being conceded to women, nor of the relation of children to parents in the family organization. As 595 tradition has it, the pre-conquest Paez were polygamous, and notwithstanding the efforts of the missionaries, it is almost certain that this practice has not completely disappeared. We know nothing about the existence of marriage ceremonies before 581 the introduction of the Catholic ritual. It is likely, however, [586] that marriages were endogamous and free, and, as such, a very frail institution, as Castillo informs us that even in his time

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

marriage bonds were not definitely made until experiment indicated the fecundity of the woman, and that the union was dissolved at the will of the husband if the wife proved to be barren. The same authority informs us that the wife had to give her husband the necessary clothing, while the husband provided food for the family. 581 [586] [585]

A custom mentioned by Castillo was that during menses the women spent the time sitting in small huts expressly built for that purpose, for fear of contaminating the common dwelling and of bringing disease and death to its occupants. 841

Rodriguez relates another custom in connection with childbirth and death: ". . . y siempre que pare la mujer, ó que muere alguno de su familia, desamparan la casa, dexando en ella al difunto con cantidad de bastimento y de la chicha, brebage, que beben: y á las casas donde parió la mujer, las dejan con las inmundicias de el parto, y acabadas de nacer las criatures, las laban, y se vañan sus madres, poniendose en viaje á buscar nuevo paraje para su habitacion, que siempre procuran sea en parte muy fragosa, por no ser visitados." 844

These details are confirmed by Castillo and were probably still observed in his time. As to what is done at present, and regarding the family organization in general, it is very difficult to obtain reliable information. The Indians are very jealous of their women, do not tolerate in them any intercourse with strangers, and become instantly distrustful when questioned about family matters. 152 593 609

With reference to death, Castillo differs from Rodriguez in that he states that a dying person was taken from the house, so that he did not actually die in it, and that the dwelling was destroyed by fire. He does not mention the custom of leaving food near the corpse, but states that the body was buried and a fence built around the grave. 768 763 764

Diseases

No diseases came under my observation during my stay at Huila and Tacueyó, and the Indians rather impressed me as being a healthy people. But if their vocabulary affords suffi- 164 [114]

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

164 cient testimony, they have their share of physical ailments. Besides itch (*lel*), tumors of several kinds (*lol-sek*, tonsilitis; *koü*, tumor in the groin), they have original names for smallpox (*buzgné*), which I was told often rages among them, for diarrhœa (*u-tšilš*), dysentery (*mengné*), and intermittent or malarial fevers (*ya-ya-gné* in the ancient dialect, *kné-kné-né* in that spoken at the present day).

757 114 Of the practices and superstitions made use of in the cure of these diseases I could gain no information, but it is very probable that the Paez still have their own medicine-men.

Clothing. Personal Adornment

291 286 [231] At present the wool obtained from the numerous sheep kept by the Paez Indians plays the most important part in the clothing of both sexes. I cannot find any direct information on the fabrics used before the introduction of sheep by the Spaniards, [174 439] but it is most likely that the Paez obtained cotton from the Indians of the Cauca and Magdalena plains, the cultivation and the manufacture of which into thread must have formed one of the principal industries in the latter. I have already referred [172 174] to the great number of clay spindle-whorls found in the graves and on old dwelling sites throughout the Cauca valley. Judging by these we may feel sure that the former inhabitants were great spinners. On the other hand, the present Paez Indians still weave most of their own clothing, and there is no reason why they should not have done so formerly.

291 [177] The dress of the men consists of a pair of short trousers (*hiü*), that are evidently a concession to modern civilization. These are made of raw cotton cloth, or of imported fabrics, and reach from the waist to about the knees. Over the shoulders is worn a broad rectangular piece of white woolen homespun cloth, split in the middle in the form of a poncho so as to allow the head to pass through, and hanging free front and back. This is called *tund-atš*, i. e., 'the cloth that binds, or covers.' It is generally worn next to the skin, but sometimes a light cotton shirt, called *atš-petš*, is first put on. Over the *tund-atš* they carry on their left [276] side, hanging by straps that pass over the right shoulder, the coca

bag and the small receptacle that contains the quicklime used 297.
with the former. When out of doors a second piece of woolen [276]
cloth, longer and narrower than the first and called simply *atß*, is thrown over the shoulders, with the head likewise thrust through the middle. A narrow-brimmed hat (*tsua*) the like of which is found among the Kitšua, is the usual complement of this dress. It is made of the outer skin of a tall grass (*Gynerium* [824]
saccharoides), resembling sugar-cane and common along rivers.

The women all dress in the same way, with fabrics invariably woven by themselves. The underwear, which is often dispensed with, consists of a narrow piece of woolen tissue used as a loin cloth, passing between the legs and then rolled around the hips. Over this article is worn a broad piece of dark woolen cloth, wrapped along the body and limbs in the form of a skirt. This is the *anaco*, or *pamb-atß*, and it is attached to the waist by means of a sash called *vilia*, the elaborateness and ornamentation of which vary with the wealth of the owner. The upper part of the body is covered with a ruana called *atß-tul*, sewed along the right side and on the right shoulder, but open at the left side, being simply pinned on the left shoulder with a wooden peg or a fish-bone. When traveling the women provide them- [482]
selves with another broad piece of cloth (*spatß*) which is used either as a cover or for wrapping the baby on the back. In the latter case the cloth is secured by means of a belt (plate IV, 1).

Women also wear necklaces, made now of common glass [301]
beads, silver coins, or small sea-shells, the number of strings [554]
depending on the wealth of the husband. The mention in Castillo's vocabulary of a word for bracelet (*kaschand-gunc-tsa*) indicates the former use of such ornament. Females have no [291]
headgear. Married women part their hair along the median 302
line of the head and allow it to hang back in two braids. Little girls wear their hair loosely behind the shoulders. In former times women painted their faces blue with the juice of a fruit called *kii*. Speaking of this custom, which seems to be obsolete now, Castillo facetiously says: "fruta . . . con cuyo zumo se pintan el rostro las Indias (*i aun las que no lo son*)." Men formerly decorated their bodies and faces with *tok*, the red color [824]

THE VILLAGE OF HUILA

The Houses are in the Patches of High Vegetation Scattered in the Savanna. In the Distance is the Huila Volcano, but the Extreme Summit is not Visible

302 extracted from the seeds of *Bixa orellana*, which they applied
[524] by means of a cylinder of clay (*kaanda*) on which certain designs were carved. Specimens of such cylinders are often found in graves.

291 Children are very scantily clothed. The boys go about naked
515 until they reach their twelfth year, and the little girls wear only a short *atß-tul*. The clothing of the male and female adults seems to be worn as long as it lasts. As is the case with all Indians living at high altitudes, the Paez are not especially fond of bathing, and cleanliness is not a cardinal virtue with them.
[513] In retiring for the night, they simply wrap their garments tighter around them, the children using old rags in lieu of blankets.

386 The ornamentation of the *tilia*, or sash, with several brilliant
[182] colors and the desire of giving a uniform hue to the darker clothing of the women, gave origin to the art of dyeing, which very likely is to-day in its decline. The dyes were derived chiefly from plants. Black was obtained from *ßal*, an arborescent *Phyllanthus* that has a semi-domesticated appearance and forms characteristic thickets around inhabited places, like Vitoncó; the same color is also contained in the young pods of the *huarango* (*Cæsalpinia tinctoria*), a spiny tree often seen near the houses and extensively used at the present time for dyeing wool. The roots of *tuk-nétse*, a Rubiacea (*Relbunium hypocarpium* Hemsl.) akin to the madder, produce a scarlet color. Different kinds of blue dyes were extracted from the fruit of the jagua (*kii*, probably *Genipa* sp.) and from an *Indigofera*.
[177] Many other tinctorial plants very likely escaped my observation and are gradually passing out of use on account of the introduction of foreign fabrics.

DWELLINGS

342 The Paeces have permanent houses in their thirty-four villages and temporary abodes on their corn plantations. These latter are merely small huts, the walls of which are more or less elaborate according to the altitude, being made tighter near the upper limit of culture. They represent the primitive type of

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

They represent the primitive type of
habitation, the agglomerations being the result of the efforts of the missionaries. 342 [177]

The villages are generally in the open grazing districts at the bottom of the valleys, on side plateaus, or on broad ridges. They are not compact in the common sense of the word, but consist of isolated groups of houses, the approximate common center of which is often indicated by the whitewashed thatch-roofed church (plate v). 361

The walls of the permanent houses are made of a kind of *bajareque*, i. e., a skeleton of canes filled in with clay. In the better homes the interior is divided into two or more rooms, usually very small, with a hearth in the middle; but oftener there are no interior partitions, the dwelling consisting of a single square apartment. In every case that came under my observation the interior was very untidy. 342 353 [354] [356]

The Indians openly objected to our entering their houses, hence I could gain only casual glimpses of their domiciles, the furnishing of which seems to be an imitation of that of the dwellings of the few Spanish people living among them or in the immediate neighborhood. 352 123 177

Outside the houses they generally have a cane-crusher of primitive type, with horizontal smooth cylinders moved by means of levers at each end. A loom and a grinding stone are also seen occasionally under an adjacent shelter (plates IV,[1] and VI).[2] 407 286 412

There may often be seen, either about or inside the housse, very large jars used as receptacles in the elaboration of the chicha. These utensils seem to be almost the only survival of the ancient earthenware industry. The smaller pottery vessels which were seen occasionally had been taken from old graves. 415 [192]

Each group of houses, in which several generations of a single family dwell, is surrounded by a small enclosed field, planted with sugar-cane, plantains, oranges and other fruits, and greens and roots of daily use. The garden enclosure is formed by a ditch, inside of which is a wooden fence or a stone wall, the latter often crowned by a hedge of maguey (*Furcraea*), lechero (*Euphorbia*), borrachero (*Solanum*), and other bushes. 351 [592] [247]

351 In this way an efficient protection is afforded against depreda-
[347] tions by cattle or sheep.

Construction of Bridges

491 The Paez Indians are very clever bridge builders and are often called considerable distances to employ their skill in this direction. I observed three different types of native bridges, two of which were entirely new to me. The more primitive one consists simply of a vine stretched across a river, and crossed by hanging and progressing with the hands and arms. The second type is a frail-looking bamboo structure, the base of which is an arch free in the air, or suspended somewhat like our suspension bridges (plates VII, 2). 1

The third type of bridge is a much more substantial structure,
491 built of heavy timbers apparently with an understanding of the
335 laws of gravity. On each side of the river a pair of strong beams are built into pillars of stonework, so that the weight upon the immured extremities counterbalances the free ends independently of the supports by which the latter are upheld. Thus solidly fixed, the two pairs are opposite each other with a more or less wide space between their extremities. To span this, the ends of both pairs are first connected by means of transverse ties, inserted between beams and props, the whole being solidly lashed together with vines. On these ties two more beams of sufficient length are laid, which serve to complete the span. The main structure of the bridge being thus formed, a heavy floor, generally of round stems, is laid over it, and the whole is protected by a roof of elaborate construction (plates VII, 1, and VIII). It is useless to say that not a single nail is used to unite the numerous parts of the structure, a vine called *Makuia* being exclusively used for this purpose.

491 We saw two of these large structures, one on the Paez river near Huila, the other on the Moras river, on the trail from Vitoncó to Mosoco. But we were informed that most of the larger rivers in Tolima and elsewhere in the Magdalena valley are bridged in the same way, and that Paez Indians are in frequent requisition elsewhere as bridge-builders.

FOOD. CULTIVATED AND OTHER USEFUL PLANTS

The principal food of the Paez Indians is maize, or Indian corn, of which they grow several varieties, belonging to three distinct types, namely, a sweet corn (*tlulpi*), a soft corn (*kapio*), and the common flint corn. The words *tlulpi* and *kapio* belong to the Kitšua language, a fact that points to the southern origin of these varieties. Judging from tradition, as well as from the varietal names used elsewhere in the Cauca valley, the flint corn that is grown all over the country may possibly be of northern origin. The Paez language has only one word to designate all varieties of corn, and it is interesting to note that the one now in use (*kutš* or *kukš*) is quite distinct from that employed in Castillo's time (*kokari*). It is not unlikely that the present name was introduced by some of the tribes subsequently incorporated with the Paez.

262 243 [192 174] [192]

The *tlulpi*, or sweet corn, is usually eaten roasted or boiled on the cob. Of soft corn, or *kapio*, they make a kind of dough called *χtiouts*, which is the base of several culinary preparations, among them the tortilla (*kuáts*). *Kaš* is a gruel made of black corn; *mutši*, or *motši* (the Kitšua *motc*), is prepared by shelling the kernels without disintegrating them. Last, but not least, large quantities of the grain are used in the preparation of chicha (*kcha*).

262 252 [273]

Beans are generally cultivated along with maize. I noticed two varieties — *us kutš*, black beans, and *us kc*, red beans. The *osgual*, cited by Castillo as special to the village of Suin, are the seeds of the *Erythrina edulis* Triana, which I collected under the name of *us ual*; they are large, and when boiled taste almost exactly like the common horse-bean (*Faba vulgaris*).

244 262 [252]

Of scarcely less value as a food-staple are the several varieties of squashes, so generally cultivated and eaten as to have caused Castillo to express the opinion that "most of the Indians would perish should these fail in the province." The larger variety, *ápe-tots* (*Cucurbita maxima?*), is less common, and may have been introduced, although it already existed in Tierra Adentro in Castillo's time; *ápe*, the zapallo or pumpkin (*Cucurbita pepo*), is perhaps indigenous to the region, since the last native name,

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

244 now widely used all over Spanish America, is of Kitiua origin
262 (*zapayú*); *ápe-te*, the most extensively cultivated variety, is called *Mejicano* by the Spanish natives, although it seems to have been cultivated in the country from time immemorial.

Several interesting edible roots or tubers, mostly under cultivation, are relished by the Paez Indians. Thus *ãs*, or *ans* (*Arracacia esculenta*), a celery-like umbelliferous plant with large white roots; *unt*, a peculiar yam (*Dioscorea*); *uia* the cassava root; *kâka*, the potato, of which there are certainly several species; *tsqvi*, or *ñuil* (*Ullucus tuberosus*), a very remarkable *Chenopodiacea*, of the high Andean region; *puil*, *Tropæolum tuberosum*, another species, the cultivation of which seems to be restricted to a limited district of western South America. All these plants are more or less under cultivation, but the Indians also eat many wild roots which I had no opportunity to identify. *Kambitã* (*Cyclanthera pedata*), the singularly-shaped fruit of a Cucurbit, is used as a green vegetable along with the tender sprouts of several other plants.

245 Among the favorite fruits the plantain naturally ranks first,
262 and is conspicuous around the houses even at an altitude of 1,800 meters. The generic names are *plau*, suggesting the Spanish *plántano* or *plátano*, and *tulú*, a word that forms the root of *Tuluá*, the name of a town in a territory formerly occupied by the Quimbayas. The banana or *guinco*, corrupted into *kuiú*, is probably an imported variety, as are several others rarely met with.

Other fruits are the *papaya*, *paiá*, not mentioned by Castillo, and the name of which indicates a modern acquisition; *ñal*, one of the granadillas (*Passiflora edulis*); *ñahú*, the pineapple, which grows only in the lower region; *ãytse*, the aguacate (*Persea gratissima*); and also several species of *Inga*, the white pulp around the seeds of which is eaten.

There are two varieties of edible guavas, the one sweet (*Psidium guayaba*), the other sweet sour (*Ps. pomiferum*); and the berries of several *Melastomataceæ*, many of which escaped my observation, are enjoyed by both children and adults.

276 A plant very important in the Indian economy is the coca

(*cl*). It is very little cultivated in Tierra Adentro, however, and the dry leaves are imported from the lower Paez and Tolima basins. To this product the Paez is indebted for his disgusting chewing and spitting habit, the use of which is still doubtful to me. Coca leaves are said to be a powerful reconstituent, allowing the Indians to endure long marches and great privation. But the women do not use it, and however often they may participate in these hardships, it is with the same endurance. At all events the Paez men never cease chewing and spitting. Each of them carries a supply of coca leaves in his *tiisa*, and the quicklime or *kwetaw* in a small gourd, both hanging at his left side. Now and then he ejects a mouthful of green saliva, making sure that there be a clean whitewashed wall near by, in order thus to decorate it. He then takes a new handful of leaves, sprinkles them with a little *kwetaw*, and fills his mouth again, ceasing this everlasting process only long enough to eat, drink, and sleep. 276 [249] [439] [461]

Tobacco is known in Tierra Adentro under the name of *wii-hi*, but it is never smoked or chewed. The sugar-cane, *wissa*, is cultivated in small patches. The only textile plant observed by me is a short-leaved agave called *sasto* (Span. *sagguy*). The larger part of the district inhabited by the Paez is above the region in which grows the bamboo called *gnadua*; but this beautiful grass is known to them under the name of *mom*, or *mam*. They transport canes of it from a distance for use in the construction of their lighter bridges; and at Huila, about 1,800 meters above sea-level, there was a small plantation of it, showing a primitive attempt at cultivation. 249 [248] 245

Several useful plants have been mentioned in connection with dyeing (page 318). Although in the Huila mountains there is at least one species of rubber-yielding *Sapium*, the Indians do not seem to have known of the elastic properties of its gum. 249

A most striking feature of the upper forest zone of the Palo valley is the wax-palm, *lime* (*Ceroxylon andicola*), which is also for the Indians an important economic plant on account of the wax which they obtain by scraping the lofty trunks (plate IX). This product they use mainly for illuminating purposes. Un- 314

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Page SC15

314 fortunately the tree is being rapidly destroyed, either in the gathering of the wax or through clearing for cultivation.

Religion, Customs, Superstitions

114 According to Rodriguez the Paez did not know of any reli-
771 gion. But this is diametrically opposed to Castillo's repeated mention of pagan rites still practised among his flock. Moreover, it is not reasonable to suppose that these Indians would have lived in close contact with the Kitšua, who were veritable sun-worshippers, without being influenced by their beliefs.

771 *Itaki*, the sun, was worshipped at special shrines built on the
786 cut-off summits (*itaki finô*) of high mountains. At certain dates,
821 fixed by their priests (*diçi*) in accordance with their omens, they
[787] congregated at these places and for many consecutive days gave themselves up to chicha drinking and all the lubric manifestations provoked by drunkenness. On these occasions no blood relation was respected; nor was there any limit to adultery. Later, after the missionaries had undertaken their civilizing work, the Indians secretly continued these hideous practices; indeed, it is even asserted that they have not yet given them up completely, although they may not commit the excesses that were formerly attributed to them, as such would be contrary to their present ideal standards.

535 Dances played an important part in all the diversions of the Paez. They were of several kinds, varying with the occasion. Castillo mentions the *guciô-kô*, money-begging dance (baile de pedir dinero), or *šita-ko* (sea-shell dance, baile de caracol), in
[534] which two sea-shells (bocinas), the one giving a low tone (bajon destemplado) and the other the treble, were played alternately for whole nights, remembering, "(a los cristianos) la noche de la prision de Nuestro Señor Jesucristo, i á los indios, la chicha, baile i maldades que ejecutan." Other dances of which we generally have no description were *onza-kô*, the mouse dance; *neui-kô*, the buzzard dance; *itza-ko*, the puberty dance of females, to which allusion has already been made (page 314); *etš-kobi-ko*, the dance of the phantom reed; *tel-kobi-ko*, the dance of the long reed, or war-dance; *la-ko* the new-house dance; *kimb-ko*,

the drum-dance, in which the women sang to the accompaniment of a drum; *vito-ko*, or *fitz-ko*, the stick-dance, etc. 535

In addition to the shells and reeds, the Indians also accompanied their dances with a kind of drum (*kimb*), consisting of a long wooden trough hung by its extremities; and the *tsoòts*, or rattle, a calabash containing small stones or hard canna seeds and provided with a handle. 535 534

According to Castillo the Paez had also other deities, corresponding somewhat to the lares of the ancient Latins, carved images of which were often found in the houses. The *dizi*, who were at one time priests, sorcerers, and medicine-men, lived in retirement and were considered as the keepers of the doctrines of a traditional civilizer of the nation, called *Guckiuii*. So strong was their influence in Castillo's time that he complains rather bitterly about it, and proceeds to explain how the true God, wishing to free the Paez from such a devilish guide, simply employed a subterfuge to drown him in the Paez river, together with two of his apostles! 776 778 [79]

The belief in a future existence is indicated, as Uricoechea relates, by the fact that the Indians never molested white dogs, in order that they might not be bitten by them at the doors of the house beyond the grave. 825 795

There were birds and other signs of good or of evil omen. A woman would never step over a leather rope stretched on the ground, but would lift it up and pass beneath. During the construction of bridges, two men constantly beat the waters to frighten away evil spirits. The death of a person was often attributed to witchcraft, and he whose face bore some likeness to that of the dead person was often regarded as the culprit, provided the patient in his cavings had not given the name of the supposed sorcerer. The soul of a cow whose fat had been used for illumination during religious ceremonies was believed to go directly to heaven: this last belief, however, must be of post-conquest origin. 787 761 754 825 774

Among themselves the Indians are jovial and contented. The approach of the men whom we often met on the trails around Huila was usually first detected by the sound of the 157 533 283

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

151 pipes they play while walking along, unless their hands are kept
533 busy plaiting braids of gynerium bark in the manufacture of
583 their hats. This is the exclusive occupation of the men.
[463] Women almost invariably walk along spinning wool, their distaff under the left arm and the spindle in the left hand, while the right hand is busy at the wool.

883 The Paez maidens are fond of flowers and are very playful.
157 On one occasion I observed several of them going up the hill
481 beyond the river, in front of the church at Huila, their arms entwined about one another's necks; then they began running up the steep hill as in a contest of endurance. As they became exhausted they threw themselves on the grass, while their movements showed that they were playing and joking all the time. These children of Nature are not unpleasant to look at,
[515 except for their usual lack of cleanliness; nor are they wanting
142] in coquetry, and they are often pretty. But in the presence of
[609] strangers they are extremely bashful, doing their utmost to keep in the background.

291 The old women are generally very ugly. Their clothing con-
515 sists only of dirty rags, and their skin is covered with the filth of years.

593 Relations between the sexes, especially between husbands
562 and wives, seem to be easy and without an air of superiority on the part of the former. On the few occasions that I had to entertain these people at their houses, the women took the same interest and the same part in the proceedings as the men, which was very different from what I observed among the Central American Indians.

609 Toward strangers, and especially toward Colombians of other
186 races, the attitude of the Indians is decidedly hostile. Unless induced by the prospect of profit they will neither sell anything nor lend any service, often refusing money and accepting only articles which they especially desire. They will not allow white
[563] or black people in their homes, and at Huila they are even unwilling that the only white family living there should share the practically inexhaustible supply of fuel scattered about in the near-by forest, or have horses or cattle pasturing on the almost

SC15 Paez SC15

deserted savannas. It must be said, in extenuation, that they have been subjected to much abuse by their neighbors of the "superior race." Moreover, the Paeces are naturally hostile to strangers, descending, as we have seen, from a warlike people. The old Paeces always went about armed, carrying a lance or javelin in the hand and ready to protect their bodies from the darts of an enemy by means of a shield of basket-work (*opimb*), or of tapir hide (*yimba-kât*). The warlike tendencies of the tribe were stimulated by means of periodical contests in which the most valiant warriors fought each other in the presence of the multitude.

To-day, as we have seen, the descendants of these have abundant opportunity to satisfy their fighting propensity by taking sides in the frequent quarrels of the political parties that thus far have kept Colombia in an almost continual turmoil.

Sexual intercourse between Paez women and men of other races is said not to exist; barbarous chastisement would be the fate of the offending female. It is to be expected, however, that the closer contact brought about by the gradual penetration of the Tierra Andentro by whites and negroes will soon overcome the purity of the Paez blood and open the way to amalgamation with the neo-Colombian race.

Reclus, cited above (page 311), gives us to understand that the Paez were cannibals, and the tradition current in the villages along the western foot of the cordillera confirms his intimation with reference to the Pijaos; for the coming of "el Pijao" is still a menace to children. The early chroniclers tell us of several anthropophagous tribes which lived in this region, and it is not unlikely that the Paeces had a share in that custom.

GRAMMATICAL NOTES

Castillo's *Nociones gramaticales* is limited to a list of the personal pronouns and the conjugation of the verbs 'to be' and 'to write.' A few more grammatical indications are incorporated in the vocabularies, but on the whole these data are very meager, and much remains to be done in this direction.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194

I. — Phonetics

Vowels

	a	*a*	*ä*		
e	*ẻ*		*o*	*ö*	*ö*
i	*ỉ*		*ü*	*u*	*ü*
ä	*ẻ*	*ɪ*	*ö*	*ü*	

Consonants

		ḣ	*h*		
k	*g*	*χ*	*ẋ*		*ñ*
tɕ	*dz*	*ʒ*			
ts	*dz*				
t	*d*	*s*	*z*	*l*	*n*
p	*b*	*f*	*v*		*m*

194 In his introduction to Castillo's vocabularies, Uricoechea as-
114 serts, on the faith of the latter, that the Paez vowels are numerous, distinct from those of the Spanish language, and difficult of pronunciation. The Castilian language has only the five fundamental Latin vowels, while the Paez has three more, *ä*, *ö*, and *ü*, not including the nasalized vowels, which are not specifically distinct.

This can scarcely be called rich, but if by richness Uricoechea means euphony, then he is certainly correct. Indeed, the diphthongs *ai*, *eu*, *io*, *ua*, *ue*, *ui*, *uo*, recur with extreme frequency, and there are none of the half-mute vowels so often
194 met with in the dialects of the Chibchan group. Again, it cannot be said that the Paez, in its present phonetics, offers any serious difficulty to the student so far as pronunciation is concerned. I have given careful attention to this special question, and think that the above table of vowels and consonants is fairly adequate to an exact transcription of the language.

When we come to the comparison of consonants we find that the Paez has all the consonants used in classical Castilian except the *z* (*ð*, English *th*), and that it has *χ̇*, *tɕ*, *dz*, *ʒ*, *ts*, and *dz* in addition. Here we may be justified in speaking of abundance, inasmuch as these fundamental consonants are accompanied by quite a formidable array of compound ones, either

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

initial like *bll, ft, kb, kl, kn, kp, ks, kt, mb, pk, pl, pi, pt, it, tsk,* 194
or terminal like *fχ, kχ, pχ, mb, ni, nt.*

A further comparison of Castillo's material with my own 194
shows three chief points of divergence in the transcription of 114
words. One of them, namely, the prefixing of an initial *g* to words beginning with *na* or *ne*, is general among Spanish authors, there being as much difficulty for a Spaniard to pronounce correctly that broad diphthong as to express any foreign word beginning in *st, sp*, etc., without an initial *e*. Just as a Spaniard will say 'estreet,' 'esprout,' 'estyle,' he is sure to pronounce 'gwatchman,' if not 'gwatchiman,' 'gwarbler,' and so on. This misspelling, then, may be regarded as an idiosyncrasy of our author.

A second difference, often repeated and which must be considered as an error in the reproduction of the original text, is that the words ending in my vocabulary in *ts, fχ, kχ*, etc., end respectively in *ti, fi, ki*, etc., in Castillo's vocabulary, the terminal *s* and *χ* having almost uniformly been mistaken for an *i*. Examples: [192]

efi	for *efχ*,	eye-tooth.
equi	" *ekχ*,	fuel.
cafi	" *kafχ*,	gargante de.
cati	" *kats*,	hide, skin, peel.
conchi	" *kuntl*,	black.
miti	" *mitl* or *mits*,	pot.
tambi	" *tampχ*,	flank.

Unwritten languages are subject to rapid alteration. This is sufficient to explain the frequent change of *o* to *u*, and the suppression of the initials *a, e*, and *i*, in certain words. Following are a few examples of both cases: [192]

doj	has become	*duχ*,	weight.
rito	" "	*ftu*,	tree.
guaco	" "	*uâku*,	tick.
onza	" "	*kunza*,	mouse.
ioc	" "	*iuk*,	wood, fuel.
aloch	is now	*lutl*,	child.
alauech	" "	*lauetl*,	lizard.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

194	*efench*	is now	*fent*,	old (applied to female only).
114	*isos*	" "	*sus*,	urine.
[192]	*ahamp*	" "	*taap*,	fog, cloud.

In Castillo's vocabularies *xs* stands for *ś*, *z* for *ts* and *tz*, *ch* for *tš*. The final *h* is used only to prevent the coming together of the consonants *i* or *s* ending a word and the initial vowel of the following word in compound terms. For instance, we have *mesha*, for *mis-a*, it is not; *izhe* for *its-i*, to join, to marry, etc.

II. — WORD-FORMATION

192 *Remarks.* — A few preliminary remarks as to the vocabulary
114 given hereafter are necessary. In a general way it includes only words that are not found in Castillo's work. This is true especially of all isolated terms, but exceptions have been made when one of them is or contains a root of a whole family of words, in which case a few terms have been taken from Castillo's
114 vocabulary and their orthography adapted to our own.
192 Among those words not included in Castillo's, some have
197 simply escaped him, as, for instance, a number of plant names.
174 But many others are to-day replaced by quite distinct expressions, and this is perhaps one of the strongest indications that the present Paez are in reality a mixture of the remnants of several ancient tribes, like the Paez, the Pijaos, the Jamundies, and probably others, which resulted after Castillo's first survey of the language. As, with the exception of the Paez, we have not even fragmentary vocabularies of the tribes thus amalgamated, it is rather difficult to sustain such an hypothesis with linguistic testimony; but traditions still current and well-known examples of similar cases in other countries can be offered in support of it.

As we have in every case given Castillo's equivalent in the vocabulary, it is needless to reproduce here a list of the differences noted.

193 *Compound Nouns.* — The Paez language, like most of the
114 languages belonging to the Chibchan group, has suffixes indica-
[171] tive of form, size, matter, people, etc., that characterize whole classes of words. Castillo's vocabulary being far from exhaustive and written in a somewhat capricious way, it is not always

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

easy to determine the words that form such families, and it remains for the future student to systematize and complete them. We are able, however, to give a few examples:

Kuė is indicative of smallness, fragility, and is found also in several terms referring to childhood or parental relations. Examples:

kuė	child.
a-kuė	monkey.
ala-kuė	child.
anl-kuė	nephew.
anl-tsun-kuė	grandson.
atl-kuė	nephew.
doz-kuė	nephew.
etl-kuė	orphan (phantom's son).
ñu-kuė	uncle, father's brother.
fe-ñu-kuė	aunt, father's sister.
tuku-kuė (onomatope)	a small dove.
uesa-kuė	girl.
ues-kuė	thread.
uitla-kuė	bird.

In the following words, however, the signification of the suffix is not apparent:

ak-kuė	burial.
eiz-ka-kuė	ant.
ia-kuė	ceremonial feather-dress.
ka-kuė	body.
imeta-kuė	dorsal spine.
ne-kuė	challenge, contest.
sa-kuė	heart of a tree.

Guė, meaning disease, is found as a suffix in a few known cases:

atla-guė	hectic fever (lit. hot-ache).
buts-guė	smallpox.
iaia-guė	intermittent fever.
su-guė	a medicinal plant.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193
192 *Ñin* signifies a small, round object, and is found in:

ipi-ñin	ember, red-hot coal (lit. fire-seed).
kigue-ñin	clay bullet, used with the blow-gun.
sogua-ñin	powder.

The verbal desinence *nâs*, corresponding to the gerund tense, is largely used to form nouns that indicate condition or state, as in the following examples:

aknuk-nâs	coward, from *aknuk*, to be frightened.
atî-kats-nâs	tailor (*atî*, a piece of dress; *kats*, to sew).
do-nâs	lying-in woman (*do*, to bring forth, to give birth).
fis-nâs	the writer (*fis*, to write).
idîs-nâs	the one named (*idîs-a*, to call oneself).
idîse-nâs	he who baptizes (*idîs-e*, to baptize).
ikas-nâs	the chief, he who commands (*ikas-a*, to command).
ipons-nâs	he who is powerful (*ipons*, the Pleiades).
χip-nâs	the owner (*χip*, to have, to own).
pang-nâs	he who is sentenced (*pang*, to sentence, to condemn).
pas-nâs	the stranger, he who arrives (*pas*, to arrive).
sikia-nâs	he who knows (*sikia*, to know).
tôte-nâs	the governor, he who talks loud (*tôt*, to yell, to talk loud).
ukoments-nâs	a kind of wasp.

193 It is also found that large groups of compound nouns have the same initial word, generally in the form of a monosyllabic prefix. Among them, two are of peculiar interest, on account of the apparent specialization of the prefixes *ne* and *pe*, the first of which seems to indicate only relationship, while the second is still more restrictive and refers almost exclusively to relations between father, mother, and children. The signification of *ne* is obscure; while *pe*, used as a prefix before a noun, evidently indicates the coming together of two or of several things or persons. Both groups have been incorporated in the vocabulary, as have a large group of verbs with the same prefix *pe*, but which have seemingly no relation to each other.

Formation of Adjectives.—A good number of adjectives also end in *kui*, but this suffix seems to correspond to a form of the

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

verb 'to be,' following what may be a noun or another adjective, and may be regarded as a predicate adjective or denominative verb: 193

ampa-kuł, lean, sad.
dità-kuł, pretty (Cast.).
dità-kuł, pretty (Pitt.).
dzuns-kuł, frail, slender.
its-kuł, lean.
łàla-kuł, small.
nu-kuł, small, low, of a river. [192]
o-kuł, plane, even.
pats-kuł, ugly.
pets-kuł, thin, like paper.
uàts-kuł, lazy.

It should not be inferred from the scarcity of this class of words in the examples given that the Paez language is lacking in them. On the contrary, a few examples show that, like many other primitive idioms, the Paez distinguishes gradations and categories in the qualities he attributes to an object or to different objects or persons. Thus, Castillo gives four different words for 'thick,' all of which, and one more, are still in use to-day. Now it is found that every one of them has a distinct signification or is applied in distinct cases:

ftse, thick, viscous, semi-liquid (of soup, mud, etc.). [192]
ȝot, thick (of a tree).
łiš, thick, stout (of a person).
iot, thick, bulky.
tat-a, thick or dense (of a forest, a jungle).

In the same way we have four expressions for 'large' three for 'soft,' etc., but without data to exemplify their use.

Reduplication is frequent in adjectives and seems to correspond to a superlative gradation.

The adjectives for 'young' and 'old' differ according to the sex of the person to whom they apply. The first is translated by *taki* when it applies to males, as in *pits-taki*, 'young man,' and by *kuc-nas* when applied to females. 'Old' is *inĩ*, or *tei* when referring to males, and *pcnĩ* (or *e-pcnĩ*) when used for females. [562] [561]

Formation of Verbs. — Owing to the brevity of my stay among the Paez Indians, I felt from the first a certain reluctance to enter into the intricate study of the verbs, fearing that, should 193 114

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 I begin it, I might be induced to accept *a priori* as true
114 apparent rules which would then draw me into further mistakes. My former experience shows that a reliable comprehension of the infinite variations of the verbs, as bearing on flexion, derivation, etc., is not really acquired until one is fully cognizant of the spirit of the language to which they belong and is able to handle this almost as easily as his own.

In consequence of this, the few notes that follow are based mainly on the verbal terms included in Castillo's vocabulary.

193 (*a*) *Primitive Verbs.* — We find first that there are terms,
192 expressive of condition, action, or motion, that can be considered as essentially verbal, and could be called, for simplicity's sake, "primitive verbs." Here are a few of them:

dẽ, to sleep	*ôts*, to burn.
gugu, to run	*peû*, to beg, to ask.
ios, to fly	*pos*, to stretch.
kis, to fast	*pot*, to breathe.
ktond, to carry	*si*, to attend, to serve.
o, to eat	*so*, to take, to receive.
ô, to die	*sunî*, to soften, to knead.
ôp, to shut, to close	*tet*, to beat, to knock.
os, to give	*tetî*, to lick.
ôs, to plant	*tis*, to touch.
ots, to work wood (labrar madera).	

It is not unlikely that most of these verbs were originally nouns or adjectives, and that a few of them are still in use as such, although they do not so appear in the vocabulary. The following are given with a nominal, or a qualificative, and a verbal signification, and may be considered as true

(*b*) *Denominative Verbs* — susceptible of all flexions corresponding to person, mode, or time:

asptô-kuî, sad, to be sad.
atlatî, warm; *atlaô*, to be warm (*ô-atî*, to warm one's self).
ios-ô, standing, to be standing.
ipe-inka, thoughtful, to be thoughtful.
yuend, laying, to be laying.
paio-ki, careless, to be careless.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

A3
A2

ttitan, hung, hanging, to be hanging.
ít, hiccough, to gasp, to breathe one's last.
iz, rut, menstruum, to be in heat (applied to a female animal).
kami, to lie, lie.
hik-hi, light, to dawn.
kit, tooth; *kit-ik*, to lie on the abdomen (estar boca abajo).
ko-ín, food, to cook.
uetta, be merry, to be merry.

(*c*) *Verbal Prefixes.* — But more generally the transition from the adjective or from the noun is indicated by the prefix *i*, the exact sense of which is not clear. Thus —

ne-ío, wife;	*i-ío*, to marry (when the man marries).
ne-mi, husband;	*i-mi*, to marry (when the woman marries).
ñuns-a, arm-pit;	*i-ñuns*, to carry under the arm.
sus, urine;	*i-sus*, to urinate.
tíw, short;	*i-tíw*, to shorten.

Sometimes the radical word is already a verbal form, as in —

i-pi-ñas-á, to be jealous, to accuse; derived from *ñas-á*, to hit.
i-pet, to smell like; derived from *pet*, to stink.

In other cases of this class the prefix is *pe*, or *ka*, the meaning of which is equally obscure:

ñuts, to fix, to nail;	*pe-ñu*, to put together.
kit, a tooth;	*pe-kit*, to masticate.
tlantl, to suck;	*petlantl*, to suck.
gúgu, to run;	*ka-gú*, to roll down.
itse, to join;	*ka-itse*, to join, to put together.
kond, to break;	*ka-kond*, to carry off violently.
pang, to sentence;	*ka-pangó*, to punish.

III. — Parts of Speech

A. — *The Noun*

1. *Gender of Nouns.* — When gender is indicated, it is usually by means of suffixing the word *pits*, male, or *úi* (Cast. *ói*), female. Examples:

atall-pits, rooster;	*atall-úi*, hen.
de-pits, lover;	*de-úi*, sweetheart, concubine.

2: Pittier de Fábrega E-4, 5 (1906) 1907
' SC15 Paez SC15

193 This rule, however, applies only to persons or animals.
192 Plants and inanimate objects have no gender, so far as known. Moreover, many usual terms, mostly personal, have distinct forms according to sex. We have for instance:

doq-kuè, nephew;	*doq-nès*, niece.
inì, grandfather;	*nentì*, grandmother.
e-ît / *ne-î* } father;	*ne-sì*, mother.
ne-mì, husband;	*ne-úi*, wife.
ne-tson, brother-in-law;	*ne-soú*, sister-in-law.
sat, cacique, chieftain;	*eìa*, woman principal, cacique's wife.

2. *Number of Nouns.*—The prefix *pe*, already alluded to, may be considered as indicating duality; at least such is distinctly the case in the following instances:

pe-ndii, to be or to go together sister and brother.
pe-niit, son and father, or mother and daughter.
pe-peì, to be or to go together brother and sister.
pe-tam, male and female, together.
pe-tsik, son and mother, or son and father, together.

Plurality seems to be indicated in most instances simply by means of the determinative *uei* or *gueì*, many, except in the case of nouns designating persons, when the suffix *ueì*, or *gueì*, is used. But the same suffix appears also as a distinctive of collectivity, so that this point is not altogether clear. We have:

pits, man;	*pits-ueì*, men.
teì, adult;	*teì-ueì*, adults.

But also

E-it-ueì hus atlatl meng-a? Did you annoy your father? (Lit. Did you make your father's heart hot?)
father heart hot made

193 3. *Double Gender.*—It is interesting to find in the Paez lan-
601 guage a few cases of what De la Grasserie in a recent work[1] calls "double gender," i. e., nouns that express in a single word the sex of the person who speaks and the sex of the person

[1] Raoul de la Grasserie *De la Catégorie du Genre*, Paris, 1906.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193
[601]

spoken of. These nouns all have reference to parental relations:

dii, brother of a sister.
cfei, sister of a brother.
iak-tè, elder sister of a sister.
ne-iak, younger sister of a sister.
ne-udii, brother of a brother.
ne-tè, elder brother of a brother.
pe-ré, younger brother of a brother.

B.— *The Adjective*

As in all languages of the Chibchan group, the Paez adjectives are invariable in gender and in number. The lists at hand are poor and incomplete, but the little we have seems to show a great choice of expressions to indicate degrees or shades in the use of qualificatives.

The superlative gradation seems to be indicated only by the adverb *atła*, 'very,' placed before or after the adjective. There is apparently no way to express a comparison.

C.— *Pronouns*

Our data on this subject are also very meager, and so incomplete that we are at a loss how to give any definite explanation.

In his *Nociones gramaticales* Castillo gives a table of the personal pronouns, from which we infer that there are two forms, according to gender, for both the subjective first and second person of the singular number. From the texts given by the same author, we also deduce that all the personal pronouns are used as possessive, and those of the third person as demonstrative.

In the conjugation of verbs the subject appears to be expressed chiefly by means of a suffix.

Following is Castillo's table:

I	Masc. *anki*, *antl* Fem. *oku*	we	*kuc-k-utl*, *kuc-k-u*, *ku-k-uel*
thou (you)	Masc. *inui* Fem. *itła*	you	*in-k-uel*, *i-k-uel*
he, that	Masc. *kina*, *kiana* ?	they, those	*kina-k-uel*

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193 The middle *k* of the plural forms is inserted apparently for the sake of euphony.

D.—*The Verb*

[121 114] As explained above, I did not endeavor to collect material for the study of verbs, by reason of the limited time at my disposal. Castillo's data are also very defective, but the paradigms presented by him as examples of conjugations are sufficient to afford an insight into the mechanism of conjugation. We reproduce the principal tenses with the object of showing that the verbal modifications referring to person, mode, and time, consist of a combination of the verbal root with the copulative or substantive verb and a suffix or ending that expresses the person. Our spelling differs somewhat from that used by [114] Friederich Müller,[1] who had no practical experience with the language:

(1) To be:

	Singular	Plural
	Præsens	
1st p.	*anki-t*, I am;	*ku-k-uel ta-u*, we are;
2d p.	*inui-ng*	*ik-uel ik-u*
3d p.	*kinâ-a*	*kinâ-(g-)uel i-a.*
	Perfectum	
1st p.	*anki-kit*, I was;	*ku-k-uel ta-u id*, we were;
2d p.	*inui-ng-id*	*ik-uel uek-u id*
3d p.	*kinâ-k-id*	*kina-g-uel ta id.*
	Futurum	
1st p.	*anki-uet*, I shall be;	*ku-k-uel uet-ka-u*, we shall be;
2d p.	*inui-ueng*	*ik-uel uek-u*
3d p.	*kinâ-uen*	*kina-k-uel pat-in.*

(2) To write, or to paint, *fiz*:

	Præsens	
1st p.	*anki fiz-ats-t*, I write;	*kuł-k-u-fiz-ats-ta-u*, we write;
2d p.	*inui fiz-ats-eng*	*ik-uel fiz-ats-ku-a*
3d p.	*kina fiz-ats-k*	*kina-g-uel fiz-ats-ki.*

[1] *Grundriss der Sprachwissenschaft*, Bd. II, 358, Wien, 1882.

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

193

Perfectum

1st p. *anki-i fis*, I wrote;	*kui-k-uel ta-u fis*, we wrote;
2d p. *imui-ug fis*	*ik-uel ik-u fis*
3d p. *kinú-k fis*	*kinú-g-uel tink fis.*

Futurum

1st p. *anki fis an-et*, I shall write;	*kui-k-uel fis an-et ka-u*, we shall write;
2d p. *imui fis an-eug.*	*ik-uel fis an-ek*
3d p. *kina fis an-en*	*kinú-g-uel fis a-tin.*

Castillo gives two more forms for the Præsens:

1st p. *fis ats-it*, I am writing, or painting;	*fis ats-i-ta-u*, we are (etc.);
2d p. *fis ats-ing*	*fis ats-ik-ua*
3d p. *fis ats-ik*	*fis ats-i-ta*

and

1st p. *fis n-op-i*, I am writing, or painting;	*fis op-ta-u*, we are (etc.);
2d p. *fis op-ugu*	*fis n-op-kua*
3d p. *fis n-op-a*	*fis n-op-ta.*

The infix *ats* is an affirmative particle; *op* is a kind of auxiliary verb, corresponding with 'to be,' or 'to have.' The *k* and *g* of the plural forms (1st and 3d pers.) are simply euphonic intercalations.

The imperative tense is often formed by prefixing or suffixing *mã*, with a frequent elision of the *ã*, as in the following examples:

Tund-e-mã! Run! (Hurry up!)
Tata mã-palla! Go (and) call (your) father!
Atta-mã! Go away!
Kta m-ue (*mã-ue*)! Catch the cow!
Io m-pis! Give (me) water!
Mi-io! Come!

E. — *Borrowed Words*

192
(1) *From the Spanish.* — As might have been expected, we find in Paez quite a number of Spanish words, most of which are included in the following list: 177

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

192.	*kmisa,*	for *camisa,*	shirt.
.177	*kuela,*	" *guinao,*	a variety of banana.
	kisu,	" *queso,*	cheese.
	kstil,	" *cuchillo,*	knife (machete).
	kuthi,	" *cocha,*	pig.
	leiti,	" *leche,*	milk.
	mama,	" *mamá,*	mother.
	mil,	" *miel,*	honey.
	pango,	" *banco,*	bench.
	sapi,	" *sapo,*	toad.
	sonda,	" *cinta,*	ribbon.
	tlapon,	" *eslabon,*	fire-steel.
	tiele,	" *tigre,*	jaguar.

(2) *From the Kitiua.* — In describing the territory occupied by the Paez and the neighboring tribes which later became consolidated with them, we have seen that it was, and is still, in close proximity to the northern end of the area occupied by the Kitiua (see the map, plate 1). Intercourse between these peoples has been necessarily frequent, and many words have become common to both languages. Castillo's editor, the late Professor Uricoechea, obtained a list of some of these words from Mr G. Pacheco Zegarra, who had perused Castillo's vocabulary. To these I added a few, notwithstanding which the list still remains very incomplete, as the lack of an extensive Kitiua dictionary, including the northern dialects, forbade any further effort on my part to make it longer:

[177]

Paez	*Kitiua*
ahuto, cinder	*ahiu,* cinder
atsi, to sneeze (onomatope)	*atsii,* to sneeze
atsil-pito, rooster	*atsil-pu,* rooster
anaku, part of woman dress	*anaku,* part of woman's dress
do-a, to stink	*as-nana,*
atta, very	*atta (aatta),* much, very
alko, dog	*alko,* dog
ai, yes	*ai,* yes
hipa-hi, to overtake by following	*hipa,* behind, after
hillim, drivel, dirt	*hilil,* drivel, dirt
handui, vulture (condor)	*hunter,* vulture
ia-yi, blooming sugar-cane	*ia-yia,* blooming sugar-cane, also a vine

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

killka, paper, letter, book	*killka*, paper, letter, book	192
kattoni, to lick	*kattoni*, to bite	177
kikin, again	*kikin*, again	
kakka, father-in-law	*kakka*, father-in-law	
laki, lax, feeble, lazy	*llaki*, feeble faint, sad	
mutlai, to kiss	*mutlai*, kiss	
mil, cat	*misi*, *mitti*, cat	
miski, honey	*miski*, honey	
muti, boiled corn	*muti*, boiled corn	
ña, to complete, to finish	*ña*, so (Span. *ya*! ya se acabó = *ña*)	
ñuca, sugar-cane, sweet cane	*ñuk-ñu*, sweet, applied to any fruit	
piña-shia; to hate, to quarrel	*piña-tsina*, to be angry	
pisko, turkey	*pilku*, bird	
puki, watershed	*pucyu*, watershed	
pin, to ask	*pin?* who is it?	
tlumbe, sash to support the *anaku*	*tlumbi*, sash, girdle	
tlpi-pi, turkey	*tlumpi*, brown	
ukupa-ki, to push	*ukupa-tlii*, to push	
uás, a hut	*huási*, house	
vite-pasak, one hundred	*pattak*, one hundred	

(3) *From other Languages.* — It is likely that the Paez language borrowed many other terms from neighboring tribes, but thus far we lack the necessary material for comparison. As explained above, since Castillo's residence among these Indians their language seems to have undergone considerable change, especially in its vocabulary, a fact readily explained if we admit that the present Paez are composed of the remains of several tribes, greatly reduced in number by their wars with the Spanish conquerors and the hardships they suffered after their submission to the new rule. With the Chibcha, the analogies seem reduced to the rules of construction, the vocabulary being totally distinct. 192 174

F. — *The Numerals* 802

1. *Jas, vitett*	*tett*
2. *Ens*	*ens*
3. *Tek*	*tek*
4. *Pans*	*tans*

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

802

5.	*Tats*	*tats*
6.	*Sanki*	*tesets, tesekẓ*
7.	*Ens-sanki*	
8.	*Tek-sanki, puki-pans*	
9.	*Pans-sanki*	
10.	*Kose-pemba*	*ksemba*
20.	*Ens-kose-pemba*	
30.	*Tek-kose-pemba*	
40.	*Pans-kose-pemba*	
100.	*Pasats-tla, vite-pasak*	
1000.	*kose-pemba-pasàts-tla*	

As indicated by the above examples, the Paez Indians formerly counted upon their fingers, so that their numeration was necessarily decimal. It is difficult, not to say impossible, to determine the meaning of the word *sanki*, for 'six,' but it seems to have been, as Castillo expresses it, a base for the series between five and ten. Thus *ens-sanki*, means the 'second six'; *tek-sanki*, the 'third six'; *pans-sanki*, the 'fourth six.' We also find that *puki-pans*, a second expression for *eight*, means the 'return of four.'

Kose-pemba, ten, means 'the hands completed,' an expression similar to that found in many other primitive languages. At present this system is found only in a mutilated form, including the numerals one to six, and ten. For other numbers Spanish is used. *Vitetl* has become reduced to *tetl*; and another expression, meaning apparently 'second one' (*tetl-ens?*), has been substituted for *sanki*.

IV. — Vocabulary

192 [26] The following vocabulary includes all words collected by the author and not found in Castillo's work, and also expressions of the latter that complete families of words with a common root. *H* means Huila, and *T* Tacueyó, villages in which words were collected. *Cast.* signifies Castillo; *Span.*, Spanish.

a, an (*ani, ati?*)	mine, my; our, ours
a-enẓ (T), *ia-enẓ* (H)	eye — Cast.: *ia-fi*
á-enẓ (T), *gué-gua* (H)	*Inga edulis*, a tree
alko (Kitlua word)	dog

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

ālko + mut-kuł	*Solanum mammosum*, a plant; Span. *tetilla* 192 [601]
ain + de (T)	son-in-law. See *anł-indezá*
ain + hītl-kua (T)	son — Cast. has *ne-thik*; in the modern word is found the root of *a-łeft*, medieval word for boy, or girl
anio + ũés (T), *pũs* (H)	the Pleiades, a constellation
anł (nasal *a*, *ā*)	may signify my, mine
anł + indezá (H)	son-in-law [601]
anł + kuł (H), *aft + kuł* (T)	nephew — Cast.: *dez-kuł*
anł + māma (H), *māma + señor* (T)	maternal grandfather
anł + tāta (H), *tāta + señor* (T)	paternal grandfather
anł + tāta (H), *aft + bāba* (T)	father-in-law
anł + trán-kuł (H), *a-trán* (T)	grandson
anł + wasāk-ua (H), *aft-wāset* (T)	niece — Cast.: *dez-uet* [601]
anł + āi (H), *aft-āi* (T)	wife — Cast.: *ne-iõ*; see *āi*
ap	fly
ap + uēs	mosquito — (*uēs* means worm)
ātā	moon, month
ātā-łuft	crescent moon
ātā-łuft-a	new moon
ātā-tansa (T) / *ātā-tansia* (H)	waning moon
a-trán (T), *anł-trán-kuł* (H)	grandson — Cast.: *ne-tsom* (*tsom* = *trán*) [601]
aft (onomatope)	to sneeze
aft	ruana, a piece of native dress
aft + kas-nas	tailor (*kafs* = to sew)
aft + pitł	a piece of native male dress — Cast.: (*atipeft*)
aft + tul	a piece of woman's dress
aft + kuł (T)	nephew [601]
aft-ua-set (T)	niece
aft-āi (T)	wife; see also *anł*
ałā, ałān (H)	bed — Cast. has *de-hi-ue*; *dē* = sleep, *hi-ue* = place: a place to sleep
bamb (H)	shoulder — Cast.: *am-bamb*

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

192

ben-dziki (H)	pillow — Cast.: *pe-ki-di-ki*
biún, viú, viún (H)	money — Cast.: *gut-iú*
biún + mbé	gold — Cast.: *guc-iú-mbé*
biún + tlime	silver money (Span. *plata blanca*)
bás	fly — Cast. has *ap*; *buts* is a small beetle that eats maize and other crops when they show their first leaves.
bufta	trumpet-tree (*Cecropia* sp.)
bátl	*Salvia* sp., a labiate plant — Span.: *parendera*
di	sleep
di + χek (T)	to sleep
di + χ ek-a (H)	to sleep
di + ki-ne	bed (= place to sleep)
di + ntl	sleepy, lazy
di + pits	lover
di + s-e	to sleep (Cast.)
di + ši	concubine
dits	egg
dits + kak (H)	penis
dí-na + kátl (T), *i-nil-kátl* (H)	mouth — Cast.: *i-ni*
dslt (H)	bone — Cast.: *dit*
dslts (H)	testicle
dúχ, dunk	heavy — Cast: *doχ*, to weigh
dúχ-a	very heavy
dtl, zl	trail, path — Cast.: *di*
dziχ (H), *nast-uml* (T)	medicine-man — Cast.: *dχi*, hechicero
dzik-io (T), *ši* (H)	woman, female
dzik-tl	head — Cast.: *dik-ti*
dzik-tl nasa dzik-tl (H), *dzit* (T)	skull
dzik-tl + tupχ (H), *iχ-kudt-kátl* (T)	forehead
dzip	face — Cast.: *dip*
dzins-kus	thin, slender — Cast.: *pis-kus*
dzit-cuχ	*Rhus juglandifolia*, a poisonous tree
i, ki	field (Span. *rosa*), blood

SC15 Paez SC15

192

ĩ + pasta (T) *ĩ + pas* (H)	jungle, old field (Span. *rastrojo*)
ĩ + ul-tsz (H)	artery, vein
ĩ̃ĩ,	eye-tooth
ĩkĩ, ĩk-ge, ĩk̃	fuel, timber — Cast.: *ek-i*
ens	two
ens + ĩla uzla	few
ens, ẽs, esk	spring, dry season: according to Cast. *ens* or *ẽs* means also to fish; the dry season was called *ens-te*, i. e. fishing time, because the Indians fished only while the rivers were dry [221]
i-pil	midday
ĩs	louse
ĩl	coca
i-la-ĩ (H), *-i-la-ul* (T)	antbear — Cast.: *e-la-ki*
ĩslĩ-uet (H)	hip
ĩts	humming-bird (Span. *tomineja*)
etl	phantom, dumb
etl + guatl (Cast.)	caringano, large louse
etl + kuĩ	orphan (= phantom's son)
etl + ui (T) *etl + ui-ia*	widow (phantom's wife)
e-ul, pĩw-ze	shooting-star (Cast.: *kitti-tin*)
fĩ̃	wood, tree — Cast.: *nile, nill*
fĩ̃ + kiĩk	wood
fĩ̃ + kĩs, fĩ̃-kats	bark — Cast.: *cetl*
fĩ̃ + tĩs	root
fĩ̃ + tkep (H)	post — Cast.: *nuwyd*
fĩ̃ + tsime	*Tibouchina lepidota* Baill., a small tree with showy flowers
fuĩ (H)	ladder — Cast.: *aguĩ*
gua-kĩs (T), *kuĩ-kĩs* (H)	beard, bearded or white man — Cast.: *gua-gaz, in-guĩ-kas*
guĩ̃ĩ, uĩ, kett-uĩ (H)	hammock
kak (H)	cough
kĩkui-kil (T), *tĩ-pil* (H)	a myriapod (Span. *ceutopiés*)

SC15 Paes SC15

192 *hā* (H) — blood

hin-ze, hás-utsa — the afternoon — Cast.: *finze*

hiá, giá (H) — trousers

hún — to grind

hún-ku-kuit, hil-kuet (H) — grinding-stone — Cast.: *hune kuet*

hunza — mouse — Cast.: *onza*

hũs (H) — heart — Cast.: *agnus*

hápe (H) — fence, hedge — Cast.: *ha-find*

hu-ák (H) — death

iá-a-uts (H) — net

iá-cuẽ (H), *a-cuẽ* (T)
iá-cuẽ + kats (H)
iá-ẽ + hatt (T) — eye — Cast.: *ia-fi*; eyelash

iéf-ats-ke (H) — tears

iánt, — volcano

[276] *iás,* — *Datura arborea*, a small tree, with large white flowers, having narcotic properties

ieh-tálin (T) — brother

[601] *ieh-tálin neel-te* (T) — elder brother — Cast.: *ne-teé*; *teé* = old

ieh-tálin mutl (T) — younger brother

ieh-tí (H) — brother

ieh-tí intí-ha (H) — elder brother

ieh-tí-mutl-hua (H) — younger brother

i-hats (Cast.) — to dress (when a man dresses)

i-hats-att, — inner piece of dress, a kind of shirt

i-huét (H) — knee, knee-cap

ins, — to dress (used by females only)

ins-att, — inner part of female dress

io-téz, téz-io — bunch

ip, iés — light, candle — Cast.: *ip-i*

ip + e-uéle (T) — fire

ip + iá, á — smoke

ip + ih-péts — spark

ip + imke-yetsa (H) — fire

ip + i-ñin — embers, red-hot coal

2: Pittier de Fábrega E-4, 5 (1906) 1907
SC15 Paez SC15

192

ip + iot	fire-place (Cast.)
ip + kat (H)	hearth, fireplace
ip + kult	hearthstone (Cast.), flint (T.)
ip + petti	flint (Cast.)
ip + ons	the Pleiades, a constellation
ip + sik (T)	firebrand
ip + ttanfia	coal (Cast.)
ip + tsik (H)	firebrand
ĩt	old — Cast.: *ins*
ĩt-kua	old, old man
ĩt-kats	hair on the body of grown people
ĩts	nose — Cast.: *ints*
ĩts-k-aeuɣ (T) / *ĩts-kafɣ*	nostrils — Cast.: *ints kaß*
itt-kuè	lean — Cast.: *tso-e*
itt-kuè-a	very lean
iù	silver
iú, iò	water
iù + ak-ti (H)	wound
iù-g-udla (T)	river, stream — Cast.: *io-mbo*
iù + its	headwaters of a river.
iù + kar (T) / *iù + lett-kuá* (H)	brook, spring
iù + pukà	border, river bank
iù + ti (T) / *iù + ti* (H)	otter — Cast.: *io-ti*
iù + uál (H)	river, stream
iùk (H)	breech — Cast.: *kuts*
iùk	wood, forest — Cast.: *iok*
iùk + ia-uès (T), *tàg-ia* (H)	vine
iùk-pèko (T) / *iùk-puka-so-iùk* (H)	forest edge
iùk-ua (H), *kbàm-ba* (T)	chin
iu-uè-gua	peace
ɣimba	horse
ɣimba + blill (H)	hoof
ɣimba + kàt	shield (Cast.)
ɣimba + kutt	tapir
ɣimbe-kuè-kuè (H)	thigh

kuēt + mâl	stony beach, stony field (Span.: *pedregal*)
kuēt + muzē	sand
kuēt + lkin (T) *kuēt + lin* (H)	flint
kuhui (H)	lung
kuīya	food — Cast.: *kui-ia*
kukī (H) *kufi-kâl, kufi* (T)	corn — Cast.: *kokavi*
kukī + bā	red corn
kukī + kunfi	black corn
kukī + teul-i *kukī + tui*	corn-ear
kukī + tlime *kukī + nâ-ua*	white corn
kukī + unde-âte, unten-âte	harvesting season
kunfi	black — Cast.: *kunfti*
kûpi, lufi-kupi (H)	birth
kûs, kûsku	evening, night — Cast.: *kos*
kûs + ia *kûs + ii*	the morning — Cast.: *kos-kai*
kûs + utsa, kinze	afternoon — Cast.: *finze*
kusā	hand — Cast.: *kose*
kusā + bia (H)	finger
kusā + bia sēfuel	major finger
kusā + bia nûfi-kuē (H)	little finger
kusā + gûla (H)	thumb
kusā + mâl (H)	hand
kusā + pēts (H)	wrist — Cast.: *kose-peti*
kusā + pil (H)	fore-arm
kusā + pop (H)	palm of hand
kusā + uēttc	tendon
kusā + ûns (H)	pulse
kus-bē (T), *âl* (H)	snake — Cast.: *ol*
ksuns, tsuns, tsuts	thorn — Cast.: *tsons*
lâme	wax-palm (*Ceroxylum andicola*)
lanfi	a large rodent (*Cavia* sp.)
lefi-kua	small, narrow, low
lēfi-kuē tsa	piece, fragment
lûl	to grind — Cast.: *lol*

Aspects of Paez Culture
Mythology and Tales from the
Parcialidad of Calderas, Tierradentro
by Segundo Bernal Villa

/Page 280 is blank /

/281/ Chapter I

131 Geographic location.--In the northeastern part of the de-
133 partment of Cauca, like a spearhead embedded in the depart-
ment of Huila, is found the region of Tierradentro, formed by the numerous eastern spurs of the Central Cordillera. It has the shape of a triangle formed by the water divides of the hydrographic basins of the rivers Páez and Yaguará to the east and La Plata and Páez to the south. Toward the west, the Central Cordillera rises like a backbone, along which the paramos of Guanacas (3,518 meters), Las Delicias (3,750 meters), and Moras (3,670 meters) stand out. Toward the north, like a gigantic colossus and dominating the vertex of this geometric figure, stands Nevado del Huila (5,750 meters), the highest in Colombia, except for the Sierra Nevada de Santa Marta.

133 Topography.--Actually, Tierradentro is a complex of mountains running in every direction, although along general lines they are oriented from west to east on the right bank of the Páez and from north to south on its left bank, rugged, steep, with lofty peaks and great gorges, canyons and hills, ravines and valleys, terraces and escarpments, ridges and plateaus, numerous gullies, rivers, and streams with violent
[484] currents and thundering noise. To travel through this region "is to go up or down," as was said by Fr. Pedro de Aguado (1).

1. Cited by Hernández de Alba (Gregorio), p. 925. /See the bibliography in the foreign text, p. 309./

/281 cont./

487 Routes of communication.--Until the fourth decade of the present century, the routes of penetration were horse paths which passed through the paramos of Guanacas, Las Delicias, and Moras, or through Inzá, Pedregal, Topa, and La Plata. The three first ones communicated with the Cauca valley, and the second with the /282/ Magdalena valley. These were the routes of the colonial era and, to a large extent, of the times [648] of the republic. The Guanacas route was the first to serve for communication between the kingdom of Quito and Santafé de Bogotá, owing, of course, to the more favorable attitude of the Guanaca Indians toward the conquistadores, who, taking advantage of their relationship with the Paez, made them their 797 allies and assistants. The first religious mission was established 175 in Guanacas in 1613. By way of the Paramo de Moras Captain 175 Juan de Ampudia entered Paez territory to take exemplary re- 648 venge for the tragic death of his colleague-at-arms, Captain Pedro de Añasco. To his disgrace and that of Spain, he met a terrible death on the cliffs of Togoima. By way of the same Paramo de Moras came the Adelantado Don Sebastián de Belalcázar, who had the same aims as his unfortunate predecessor, but this time his death, too, was added. The Paez gave him the most crushing defeat on the Peñón de Tálaga, and the Adelantado had to flee, leaving on the field of battle 491 the body of the heroic Captain García Tovar. The intense [484] traffic through these dangerous peaks and cold paramos decreased considerably with the opening of the Quindío road, and even much more with the inauguration of the La Plata-Belalcázar road. Tierradentro is connected by road with Popayán and 487 Neiva. Nowadays only the Indians from Mosoco, San José, and Vitoncó, and the Paez from Toribío, Tacueyó, and [788] Jambaló travel by way of the Paramo de Moras. That of Las Delicias is traveled by the Moguex, especially on their annual pilgrimages to the religious festivities of Our Lady of Nátaga. The Guanacas route is practically abandoned. There is also another route, traveled relatively frequently, which follows the

/282 cont./

487 Páez waters upstream, continues along the river Negro, climbs over the cordillera, and reaches Tacueyó.

133 Hydrography.--From north to south in a deep and steep bed runs the great Páez, whose frothy waves rush rapidly through the vertigo of the torrents, run swiftly while tracing spirals in the frenzied force of the whirlpools, or leap, being broken into a thousand fragments by the violent shock in the numerous falls and rapids. Born of the thaws on Huila, it receives along its eighty-kilometer course the turbulent /283/ rivers Muesga (San Vicente), Moras, Kukiyú, Ullucos, and La Plata on its right bank, and the Símbola and Negro de Narváez on its left. The Páez river drains all of Tierradentro.

137 Vegetation.--In the major part of the region there no longer exist the "dense and impenetrable forests" mentioned by Carlos Cuervo Márquez. The timber and medicinal species have practically disappeared. The Cinchona genus was heavily exploited during the second half of the past century, when the quinine industry flourished and constituted one of the most vigorous lines in the national economy. The large and dense forests have been cut down systematically by the Indians and colonists to such an extent that the latter are found as far as the steep crags of the Central Cordillera and the hydrographic [314] valleys of the Símbola and Negro de Narváez rivers. On the ridges where virgin forest has miraculously remained intact, it has been noted that it has been entirely cut down within a week in order to make a pasture for the llamas; it is not used, not even for firewood, much less for charcoal, the techniques for which seem to be unknown. In the plains and small valleys of the streams and rivers there is a thriving vegetation which for the most part is of cultural origin, since it was planted to shade the numerous coffee plantations. Gramineae abound. On the hills and plateaus, thickets and shrubs are common, while on the steep slopes pastures present their opulent greenness in winter /the rainy season/ and their yellow-brown tones in summer /the dry season/. The fields are prepared with

The fields are prepared with
/283 cont./
241 machetes and fire. They are the so-called rozas, a barbarous, primitive, and criminal method of agriculture. Burning is a habit of natives and colonists alike and goes so far that even the vegetation of the cliffs, crags, and escarpments is burned, where obviously no practical use can be derived and in addition it leaves the denuded rock at the mercy of the agents of erosion.

136 Fauna.--The fauna consists of a few classes of ophidians and small mammals: tinajos, coatis, pacas, armadillos, porcupines, foxes, deer, tapirs, sloths, and rabbits. Bears, ocelots, and pumas are found in the virgin montañas. Birds, such as wild pigeons and chachalacas, abound.

132 Climate.--There are no data on the rainfall, temperatures, /284/ and winds of this zone. The climate on the whole is temperate, or, to put it better, it is a coffee-growing climate.

361 Owing to the unevenness of the terrain, the natives inhabit
133 a region that extends from 1,000 meters (Itaibe) up to 2,500
132 meters above sea level (Suin, Mosoco, Vitoncó, and Lame). According to Dr. Gregorio Hernández de Alba, at the time of the Conquest the Paez peoples of Tierradentro inhabited "altitudes and climates between 2,620 meters with 13 degrees centigrade and 1,650 meters with 17 degrees centigrade on the average" (1).

1. Hernández de Alba (Gregorio), p. 917 /see the bibliography in the foreign text, p. 309/.

132 The atmospheric humidity and the rainfall increase as the cordillera becomes higher and snow-capped Huila draws nearer, with two summers and two winters, influenced, of course, by the topography, the vegetation, and proximity to the summit. There is an intense summer during the months of January and February, and another in July, August, and September. The winters are intense during the months of March-June and, on a smaller scale, in October-December. Snow-capped Huila

/284 cont./

132 gives rise to cold local winds that blow through the valley of the Páez, affecting chiefly the areas of Vitoncó, Suin, Chinas, San José, Mosoco, and also the parcialidad /a territorial division/ of Calderas itself. The variation in temperature is noticeable in these zones sometimes having hot days and very cold nights. Nebulosity is almost constant, especially in the northern zones.

241 Economy.--The topographic and climatic characteristics permit the cultivation of various plants, such as maize, beans, bananas, sugar cane, yuca, arracacha, and gourds in the temperate zones, and in the cold ones potatoes, maize, ullucos, [433] beans, gourds, and cabbage. The produce barely leaves a [439] surplus for trade with the parcialidades and urban centers of [438] Belalcázar, Inzá, and Valencia. The potato crops of Mosoco, Vitoncó, and San José serve for an active trade with the Paez of the western slope of the cordillera, across the Páramo de Moras.

433 Coffee and the production of panela are important lines 245 in the economy of the colonists and also of numerous groups 249 of acculturated natives. The coffee of Tierradentro is con- 177 sidered one of the best in the country, owing to the quality and mildness of the bean.

231 /285/ The raising of livestock flourishes among the civilized 437 groups. For the natives it serves for maintaining a barter trade with their neighbors, the white and mestizo colonists.

311 On the whole, native production is relatively scant, 433 giving rise to times of "hambruna" /ravenous hunger/ when [731] the summers or winters are rather harsh. The workable land lies in the small plains and valleys of rivers and streams, on the alluvial terraces, and on the plateaus. Comparing the size of Tierradentro with that of its arable land, the latter appears scant, a problem that is aggravated by the increase in population and the habitual burning.

101 Population.--Tierradentro is the country of the Paez, 361 who at the time of the Conquest were settled to the north of

/285 cont./

101 the Ullucos river, since to the south of it were found the Topas,
361 Yaguiváes, and Guanaca. It seems that in the fifteenth century,
[166 193] under the rule of the cacique Calambás, the Paez went over the cordillera and settled in Pitayó, Toribío, and Tacueyó.

162 Dr. José Pérez de Barradas gave a number of 30,000 souls.
[161] The census of 1938 gives a total of 17,578 inhabitants distributed as follows: municipio of Páez (Belalcázar), 13,861; municipio of Inzá, 3,717. The censuses of 1951 give a total of 25,495 inhabitants, with 15,388 in the municipio of Páez and 10,103 in that of Inzá. It is obvious that the census of 1938 was defective, especially with regard to the population of this last municipio.

[177] Of this population, approximately 80 per cent is Indian, acculturated for the most part, except for those of Calderas, Suin, and Chinas, where traditions are strong and their contacts with the white scant, and in addition there is great resistance to living with him.

142 The Paez are of medium height, with light brown skin, dark brown eyes, straight black hair, broad foreheads, rather pronounced cheekbones, pentagonal rather than oval faces,
361 robust constitutions, and rather broad shoulders. Their pueblos
796 consist of a church, a school, the house of the priest and of
342 the cabildo, and a few other houses which are occupied only at the times of religious fiestas; they live in ranchos that are rectangular in plan, with thatched roofs and walls made of tight rows of maize stalks, /286/ located on privately owned land and a considerable distance apart.

291 Dress.--The Paez dress simply. The man wears linen trousers, a poncho tied to the waist with a leather strap and another that falls freely from the shoulders, and a hat which they manufacture themselves with palm or bamboo leaves. The woman wears a wide skirt tied around the waist with a multicolored band preceding the folds made at the back, a poncho similar to the one worn by the men and also tied around

/286 cont./

291 the waist, and over it a rebozo or shawl of foreign make; they wear hats of masculine manufacture. They carry a thin stick
283 one meter long more or less, called kasguat, held under the left armpit, and at its upper end there is a bundle of wool to be spun, a task which they do at any time, while walking or sitting in the house, regardless of whether a child is resting on their backs or, when they are walking along the road, a heavy
301 load. Only the women wear ornaments consisting of multi-colored necklaces, earrings, and sometimes rings.

293 Both men and women usually carry three woolen pouches,
415 aside from others of fique, a very small one for money, a larger one for mambe /coca and lime for chewing/, and the third, which is the largest of all and holds the other two, is used to carry palm leaves or the plaited work made with them for the men, and other things for the women.

276 Coca.--All the Paez are "mambe chewers," men, women,
[461] and children, regarding coca as an article that gives strength,
[261] frees one from laziness, and mitigates hunger. Without it, of
[273] course, they will not work. Coca and chicha, fermented sugar-
[262] cane juice, play the role of real foods, given their starchy and scant diet.

631 Parcialidades and cabildos.--Politically, the Indians are
621 organized into parcialidades, each headed by a cabildo made up of a gobernador and substitute, a major alcalde and another minor one, two alguaciles, three fiscales, a comisario, a capitán, and a síndico elected each year and put in office by the respective alcaldías of the municipio, except for the last two, who are named for life and put in office by the /287/ Church. Their functions are administrative and police work, but in reality they exercise functions of social, legal, and religious control.

631 The parcialidades are bounded by the craggy peaks and the deep, rugged beds of the streams and rivers in such a way that each one circumscribes specific kinds of geography, and even of

/287 cont./

631 climate and vegetation. Although Paez culture is certainly unitary, each parcialidad presents different nuances which are evident even in the mythology and language. The antropomimia is quite different in each parcialidad.

Nowadays there are 16 parcialidades, four of which belong to the municipio of Inzá and the remaining 12 to that of Páez (Belalcázar).

771 Magic and medicine.--There are three institutions which
772 go in unison and encroach upon others, which explain the causation of sicknesses, the treatment for them, and serve as escape valves for aggression. They are:

a) The one made up of the trilogy of supernatural beings named Duende /ghost/, Echi, and Arco /rainbow/;

b) The institution of the medicine man, and

c) Sorcery.

753 a) Duende, Arco, and Echi are the causers of illnesses,
776 each of them producing a specific symptomatology which serves
[758] as the basis for the diagnostics of common people, a diagnostics
[787] corroborated by the divining activities of the medicine man. These supernatural beings cause illnesses by puncture, aroused by the annoyance that they suffer because of the sorcerers' practices, or by those who had contact with corpses and did not go through the mandatory purification, or because people have passed through places that are taboo, such as bogs and lagoons, or have failed to comply with the rites and ceremonies when slaughtering cattle or when harvesting new clearings, or because they have not observed "custom" at the first menstruation or childbirth.

756 b) In the institution of the medicine man the functions of
787 divination, magic, and medicine are entwined. More precisely, the medicine man is a diviner-shaman-curer who has undergone an /288/ apprenticeship in the profession with an esteemed and experienced master or with the help of a guardian spirit seen in actuality or in dreams; the latter are the best

medicine men,

000 /288 cont./

756 medicine men. To cure the patient, he divines which of the
755 supernatural beings caused the illness, proceeds to placate him,
[787] and then prescribes medicines to the patient. If the placation
is not successful, the patient literally sinks into despair. The
indispensable articles for all curing are coca, tobacco, and
[462] aguardiente. The medicine men are persons well along in years
[754] and belonging to the masculine sex. They cannot cure the
effects of sorcery, although they can protect themselves against
it.

754 c) Fifty per cent of all illnesses, the informants state,
[753] are caused by sorcery, and by the same token 50 per cent of
[761] the deaths, since sorcery is incurable. The sorcerers conceal
their activities, and it seems that all adults are potential sor-
754 cerers. The institution of sorcery is a true escape valve for the
154 strong aggressive impulses of the natives and to some extent
plays the role of a social regulator. Through it are channeled
the jealousy, resentment, and vengefulness of the natives.
The victims of sorcery are the most skillful and hard-working
individuals, those who have a good house, good crops, and a
growing number of domestic animals. Harvests and plantings
[683] generally are the object of sorcery. Sorcerers who are publicly
unmasked are exposed to the anger of the community and even
to exile, a measure taken not so much on account of their be-
[685] ing sorcerers as of their being thieves. All sorcerers are thieves.
Sorcery appears with considerable frequency in the symbolism
of dreams.

583 Marriage.--Marriage is monogamous and patrilocal. Both
[595] the chroniclers and Dr. Gregorio Hernández de Alba speak of
[591] the custom of the year of probation to acquaint the man with
[177] the skill, energy, and fecundity of his future wife. A thriving
[797] institution in times past, it is now in sharp decline owing to the
action of mission work. Obviously, the purpose of this insti-
tution is to find out whether the woman is hard-working, faith-
ful, not a thief, and to understand her ways in order to establish
a lasting union. Nowadays the Paez, before being married

/288 cont./
583 in the church, live together for a period of indeterminate duration, explaining that /289/ the man does not have enough money at hand to marry as soon as he asks the woman, and it is necessary to work in order to obtain it.

771 Religion.--The religion of the Paez is formally Catholicism,
177 but many of their traditions are hidden in it. The principal
[796] fiestas of the natives are religious ones, which acquire true strokes of splendor. The Catholic priest is called upon for the ceremonies of baptism, marriage, and cases of death.

Chapter II

631 Calderas.--Incrusted in the very heart of Tierradentro is the
131 Parcialidad of Calderas, bounded on the north by a high ridge
133 that separates it from Chinas and Avirama; on the east, La Muralla, the very model of a fault, separates it from Avirama, just as a ridge separates it from Togoima; to the south, deep gorges and high peaks separate it from San Andrés and Togoima; to the west, the Quebrada Guacharaca divides it from the Parcialidad of Lame.

133 It is crossed from west to east by the Quebrada Kukiyú,
631 actually a river in terms of the volume and violence of its waters, whose bed is deep, enclosed, and inaccessible. Its
[423] left bank is somewhat softened by a beautiful plateau of about 20 hectares, with fertile lands, abundant waters, and on which the pueblo rises; it belongs to the community, whereas the other lands are private property guaranteed by the fact that the owner either personally cleared the montaña or inherited it from his ancestors who cleared the forest. The right bank is steep, harsh,
[161] rugged. Numerous clearings are to be seen on these sloping
[311] lands, indicating the increase in population that compels them to cultivate lands of low fertility and great danger for the laborer.

[Parcialidad of Calderas]

/289 cont./

142 The Calderuno /native of Calderas/ is rather tall, with a light copper skin, straight black hair, a straight nose somewhat flattened and broad at the base, slightly prominent cheekbones, dark brown eyes reminiscent of the Mongolian eye, a broad forehead, long and robust extremities, a slightly pentagonal face; many have mustaches, and, on the whole, the
157 features are rather /290/ handsome. On the other hand, he is talkative, communicative, deeply traditionalistic, proud
[361] of himself, and has a deep love of the land. Isolated as they
[177] are from the other parcialidades by natural accidents and far removed from the urban centers of Inzá and Belalcázar, they are shy, sullen, and withdrawn with the white, stubbornly opposed to contact with him, and, as a result their institutions, have suffered less from the impact of cultural mestization.
797 Not even the very church that has worked so persistently for the
177 catechization of these tribes, especially in this century through the Lazarist missionaries active since 1905, has been able to penetrate fully into the soul of these people.

114 I have carried out my research in this parcialidad since
773 the month of August of last year, with several interruptions.
[124] The myths and tales which I now present were gathered with patient labor after much waiting, for the natives, when questioned about these themes, nearly always reply with the word himeto ("I don't know"). There is no need to stress the importance of mythology as an institution in the so-called "primitive" cultures. Nor is it my intention to theorize on the subject. It is enough to say, in the words of Herskovits, that "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones /mythology is the constitutional charter of beliefs and gives meaning to the ritualistic behavior that is derived from its consecrations/" (1). The chroniclers tell

1. Herskovits, p. 409 /see the bibliography in the foreign text, p. 309/.

/290/

114 us nothing about the religion and mythology of the Paez. Nor
773 do systematic modern studies exist. Nor do those who have had the opportunity to be in contact with them and to describe their customs and ways of life tell us about their religion and mythology. Furthermore, there are those who state that the Paez have no mythology. José Pérez de Barradas collected the myth of Juan Tama. Gregorio Hernández de Alba refers to it, and the Lazarist missionary Fr. David González also collected it and has it in his unpublished work, Los Paeces /The Paez/, in quite elaborate and synthetical form, as does G. Burg. It is obvious that a large part of the myths and tales which I am presenting, not to say all of them, have suffered modifications in the avatar of time, as the institutions also changed. Since mythology is the rationalization of conflicts created by the culture itself, it is subject to the directives /291/ of that society and culture. Its roots are inevitably of a sociological and cultural nature.

773 Many of the myths collected have a marked similarity to
776 that of Juan Tama. The predominant central motifs refer to
538 sex and aggression. The personages in the myths are Thunder, Llíban, Juan Chiracol, Chaute, and Santo Tomás. Llíban is regarded as Thunder's son, but everyone maintains that he is Thunder himself; he was a cacique, and the natives state that many of their caciques took refuge in the turbulent waters of the river. The last two personages merge and in reality form a single being. It is to be noted that in some accounts the tricky personage presented is not Tomás, who is a saint, but Pedro Dimales, his brother.

186 There is no need to emphasize the role played by the Pijao
793 in these accounts. The recollection of this people inured to
628 war is still fresh in the memory of the Calderunos, the characteristics of the struggle sustained against them still manifest, the fear that the name Pijao awakened still alive. To the Calderun mentality they seem like monsters, like animals of uncommon size and power, who drew fire from their armpits.

[Parcialidad of Calderas]

/291 cont./

773 They are in fact legendary personages who go beyond the
[186 boundaries of legend to enter the territory of myth, not only
[628 by their symbolism, but in their dramatic force, their socio-
logical framework, and their cultural function.

The mythology gravitates around the behavior of the natives, their attitudes toward the whites, the organization of the cabildo, illnesses, and death. Of Juan Chiracol, a 23-year-old informant says: "He warns when the mob is coming, he no longer warns, so." And of Thunder, it is said that he almost killed a padre because he went to the montaña to get wood to board up the school. "Thunder was defending the
538 wood," they say. The tales were always told around the fire,
773 with men, women, and children present, who sometimes laughed, at other times kept silent, but always corroborated, corrected, elaborated, or confirmed. The storytellers sometimes put on a serious face, accompanied their tale with mimicry, and once in a while they would burst into mocking laughter, as if to signify that what they were saying was worthless and they did not believe it. I was soon able to ascertain
115 their sociological and cultural value. The myths and tales
773 were collected with the help of an interpreter, a mestizo from San Andrés, about 35 /292/ years old, tall, muscular, quiet in manner, intelligent, calculating, with great charm and a knowledge of Paez and the Spanish language; he was familiar with the customs of the Calderunos, esteemed by them, and
773 skilled in his questioning. We present below the myths and
128 tales collected, leaving the other aspects of the culture for presentation in a complete monograph.

1. Thunder

*539 The old people related that at one time the area was full of Pijao. Thunder lived in Sukafi. In view of the growing number of Pijao, he decided to kill them. He stood on a tall stone that is to be found there, threw his lariat /boleadora/

[Parcialidad of Calderas]

292 cont./

*539 and killed the Pijao up to Kuetando. Then he said to the medicine men that they could clear all the montañas, since all the animals were already dead. Saying this, he went to the lagoon of Vichaguau. This is why the cabildos of old went on nocturnal pilgrimages to the lagoon to speak with him. The medicine men believed that if the staffs of command were cooled off /enfriar/, very few people would die, since Thunder himself helped to sustain them with his remedies. The medicine men of today are not qualified to speak with Thunder; they cannot go because he kills them on the spot.

Informant: Mártin Kuskue, 50 years old, speaks very little Spanish.

Interpreter: Marco Antonio Penkue.

2. Thunder

The old people said that the lagoons abducted people. Actually it was Thunder.

Once a man had a potato field in Puelbits. It was a hollow, and there was a montaña. He went to harvest it. Around two o'clock in the afternoon there came an old man with a hat of twigs and massive and ugly in appearance. The harvester looked around and saw that he was coming along a fallen tree. The old man asked: "Are you already harvesting?" The man replied that he was and that he had already gathered a few. The old man asked if he would lease him the land so that they could work /293/ together. The owner replied that he did not know about leasing, because for this purpose there were large areas of land where one could work. The old man insisted that he greatly desired to live and work with him. He puzzled the people and they did not want to speak to him anymore because he was a very ugly old man and unknown to them. He sat down to converse with them, but they did not respond very much. He then drew to the place a black cloud which began to pour down a heavy rain on the potato field. The people took

[Parcialidad of Calderas]

/293 cont./

*539 shelter in the rancho that they had, but it was penetrated by the rain. The old man followed behind them and sat down on a log outside the rancho. They invited him to come in, but he refused. They were further puzzled to see that the old man did not feel the rain. They did not lose sight of him. The water was up to the legs and it did not matter to their visitor. The people took flight, but the old man abducted the women. When the great medicine men were consulted, they declared that the old man was Thunder. They chased him away, and a bog was left at the place where he had been.

Informant: Rosario Iko, 80 years old, does not know Spanish.
Interpreter: Marco Antonio Penkue.

Version I

Some young men had a large piece of cultivated land shaped like a funnel. They had potatoes, and the harvest was good. When all the potatoes had been gathered, they left the mamma /mamá/ with a granddaughter there. In the afternoon a terrible storm arose; the field began to be flooded. An old man with a very large hat of twigs arrived. The water was nearly knee-high. The old woman and the old man remained sitting there. The little girl climbed up, asking the old people to come also; she reached a high place and was safe. The old people did not move. The field was transformed into a lagoon.

Informant: Justo Muse, 33 years old, speaks Spanish.
Interpreter: Marco Antonio Penkue.

Version II

In a potato field an old woman and four other members of her family were harvesting. Suddenly there was a downpour, and one of them, a little girl, climbed to the crest, and when she reached the heights the potato field was transformed into a lagoon. The others remained inside it. The /294/ girl saw

[Parcialidad of Calderas]

/294 cont./

539 from above that an old man in a cloak and a large hat of twigs went in. It is believed that those who remained inside the lagoon continued to live, since it seems that Thunder (the old man who went in) abducted them.

Informant: Juan Petins, 60 years old, knows Spanish.
Interpreter: Marco Antonio Penkue.

3. The Visit of the Young Stranger

The first inhabitants of Calderas related that a young man came to live on a ridge of the Parcialidad. A young girl visited him often. Her mother chided her for this, but she told her that a snake drew out dead pigeons for her from the branches and that she was going to collect them. Soon the girl was pregnant. She had a strange son, on whose body it could be seen that worms of some sort came out. The mother asked that great care be taken not to remove the worms because they were the child's very life. On one occasion the mother went to the fields and remained there for some time. Meanwhile the child woke up. The grandmother came to the hammock, took him in her arms, saw the worms, and removed them all. The child died. Its own mother returned and complained that there was no reason to kill the child. Since she was near a lagoon, she threw herself into it, but she did not drown. She merely vanished. So did the stranger. The medicine men said that the woman was living with the stranger in the lagoon. The grandmother decided to have magic performed on her and arranged for a meeting of medicine men. They asked for a Quito sapallo and the rags of a menstruating woman. They put them together and tossed them into the middle of the lagoon. The stranger and the girl fled to the lagoon of Santa Rosa. The one in Calderas dried out. The bogs in the pastures of Calderas are the remains of this lagoon. It is certain that the pair left at four o'clock in the afternoon in the midst of a black cloud. This is how it is known where they are.

Informant: Juan Petins.
Interpreter: Marco Antonio Penkue.

[Parcialidad of Calderas]

/295/

*539

4. Llíban, the Son of Thunder

Some medicine men once had a meeting, when there was gold among the Indians. The first medicine man wore a gold hat. He called on the medicine men to make a medication. He called a stream into existence and there picked up the son of Thunder. He had him nursed at the breast of girls 13 or 14 years old, who could only endure it for three or four months and then died. Finally, Llíban was able to eat special foods. He grew up and was given the name of Llíban. He became the best medicine man in Tierradentro. A Pijao tribe came to kill Thunder's son. They came by way of the Alto de Belén, the Muralla, the Quebrada Kukiyú, from every side. He was blockaded. Then the cacique decided to send for the necessary weapon: the lariat. Since he was at the mercy of the enemy, he sent a servant for it, telling him that it was inside a jar. Inside the jar he found a very large green snake. He was afraid. He returned to the cacique to tell him what he had seen. The latter went in person to get it and was not afraid. He took out the snake. The enemy was surrounding him on all sides. He threw the snake as a lariat, and all the Pijao as far as Togoima fell dead. He remained alive. And since he was the son of Thunder he went to his father. He did this to prove that he was indeed the son of Thunder.

According to another informant, the snake was lightning, and this is why sometimes there is loud thunder.

Informant: Celia Urriaga, 65 years old, does not speak Spanish.

Interpreter: Marco Antonio Penkue.

Version I

Llíban is said to have resulted from a gathering of some medicine men who were called together at the time by a cacica /female cacique/. The medicine men called into

[Parcialidad of Calderas]

/295 cont./

*539 being a great flood in whose turbulent waters came the son of Thunder. They picked him up and took him to the cacica. They first fed him with the blood of selected girls who had not yet reached puberty. They became scarce because they died very soon. Llíban began to eat. They could not tame him, and they gave him the name of Llíban. He could not get used to living in a house and moved to Eshufi Ik ("bone lagoon."). When he left, he /296/ decided to exterminate the Pijao. The old people tell that at one time he made a plot in Calderas, with potatoes, maize, peas, and cabbage. He waited for the Pijao to come and take it. Thus it came to pass. He figured that they were all in the plot, turned himself into a Kuetaguata (stone of the seat /piedra de la silla/) and killed several at one blow. Those who remained alive thought that it was Llíban who had hurt them and decided to kill him. They went looking for him. Llíban killed them at the first climb.

Llíban advised the cacicas that they should make people respect the elders, see to it that the land did not fall into the hands of foreigners, and, if the Pijao returned, call him through the medicine men in order to exterminate them.

One day he said that he was leaving, and in spite of the entreaties he left Eshufi Ik and went on.

Informant: Felisa Ñunda, 70 years old, does not know Spanish.

Interpreter: Marco Antonio Penkue.

Version II

Once the water was dirty. A young boy went to see why the water was dirty. He met an old man called Llíban, who gave him a small object. "You can fight the Pijao," he told him. That small object was called isot (lariat), he took it and kept it in a jar. The Pijao came and he sent a servant, surely a relative, to bring it. When he returned, he said that there was no lariat, but only a snake; he did not bring it

[Parcialidad of Calderas]

*539 /296 cont./

because he was afraid. The boy went in person to fetch it; he threw with it, making a sound like thunder; he killed the Pijao as far as Kuetando. This boy was called Liîban, but he was a son of human beings. "I will go to live in a lagoon. I shall never die," he said. He must still be alive. Thunder sent a young boy so that he might turn into Thunder himself.

Informant: Victoriano Piñakué, 18 years old, speaks Spanish quite well.

/297/ 5. Juan Chiracol

It was known that Juan Chiracol had come from two "chinitas" /darlings/ who had come from above, from the Zenzepechi ridge, fleeing from the Pijao.

For food they had potatoes and other produce of the earth. With much labor, and with stone tools, they managed to clear the montaña.

At one time the Pijao came and ate one of them. The other one remained alone. She became pregnant by a jaguar, and from this union Juan Chiracol was born. He was very intelligent. He knew the sufferings that his mother had gone through; for this reason he fought the Pijao until he had exterminated them. The mother became used to the company of the jaguar, for the latter looked after his son Juan and brought meat from the mountain. When the child was grown, the jaguar left. Mother and son moved to the place where the cemetery now stands and began to build the church.

Chiracol gave much advice. He advised them not to sell the land, which was theirs alone and for which they had fought the Pijao. He said that he was leaving and that he would not return, but that he would watch them from the El Caspe Lagoon. When he is angry, he says uuuuh.

The lagoon of El Caspe is said to be very far away, on the borders of Atá. It has the reputation of being very rough. It is believed that when a tree falls or a rock slides down, it is

[Parcialidad of Calderas]

/297 cont./

539

Juan Chiracol who is coming to scold them. Juan Chiracol is said not to have liked women, and for this reason he left no descendants.

Informant: Agustín Muse, 80 years old, does not know Spanish.

Interpreter: Marco Antonio Penkue.

6. Llîban and Juan Chiracol

Llîban was a sat (cacique) of Calderas in its western part, and this is why the first house located in the Puelchí hollow is called Llîban. Nowadays it is called Eshufi Ik. Juan Chiracol was also a sat, but in the eastern part. He hid in El Caspe, a very big lagoon located on the borders of Belalcázar, /298/ while Llîban went to the borders of Chinas. After vanquishing the Pijao, the two had a talk and disappeared, each to his own destination, at the places mentioned. Llîban advised good management; he told them that they were now free from the Pijao and that, in case the latter should return, he should be called through the medicine men. No one knows how he appeared. He had not been baptized, but seemed to be a Christian.

Informant: Agustín Muse.

Interpreter: Marco Antonio Penkue.

7. The Little Girl Who Became a Snake

On a certain occasion and during a flood, a little girl came out. The people took her in, and a married couple undertook to bring her up. When the priest came to celebrate a fiesta, the married couple and the people went to mass. The little girl also wanted to go, but because she had no dress they did not take her. The couple had gone far when the little girl went after them, impelled by her ardent desire to attend mass and covered only with an old shawl. When the couple reached

[Parcialidad of Calderas]

534 /298 cont./

the church, she reached the stream Yutuk. There she turned into a snake. The church was full of people. The snake approached the temple; it was as long as the rainbow and had two ears like a donkey. With its body it surrounded the church, encircling it, and put its head through the door. It ate all the people, except the couple raising it, who begged it to wait a while. They went out sorrowfully. After having eaten the people, the snake rose to the sky to devour the Virgin. When it was high, very high, two animals came (oh = eagles) from Puelchí, went through the air to the plaza, and bit the snake in two, nearly destroying it. It fell to the ground, undoubtedly dead. A man came with his mula /female mule/ to destroy it, mounted the mula, and ran far away. The snake probably rotted away there, but snakes appeared everywhere. In Ulnengá there was one in a bog that smelled horrible when warmed by the sun. It would come up and eat people who had fields. They told this to an Englishman, who with his sword cut off its head and its tail, both blue in color. The head flew through the air /299/ and fell in Ulnengá, while the tail fell at the spot called Loto.

Informant: Victoriano Piñakué.

8. Creation of the Páez River

537 823 Chautéh made the Páez river appear. He went very far along the path, certainly by way of the paramo. He was very thirsty and there was no water. On the mountain there was a marsh; he took a mountain reed, sank it into the marsh, sucked, abundant water came out, and he quenched his thirst. This water did not run in any direction. The man went on and the water followed him. Then he wondered why the water did not stay put. He ran and the water did too. He climbed on a branch, and the water remained stretched out at his feet, in a large pool, without overflowing anywhere. The man went on, and the water followed him. He would run for a long

[Parcialidad of Calderas]

*539 /299 cont./
823 time, and the water would stay put for a little while, so that he could rest while the current approached. Chautéh ran in a zigzag to avoid being overtaken by the water. This is why in La Plata the river runs with many bends. The man was getting very tired, so he left the watercourse at the big river (Magdalena).

Informant: Victoriano Piñakué.

*539

9. Chautéh

Chautéh was causing much damage, and he was taken far away, to where the sun rises. He is inside a large box, but he has only one eye. Chautéh made all the animals. Before that they were people. The chiguaco was a sacristan because he can pray; the chicao can whistle, and the chachalaca is very talkative. The rabbit was a very mendacious man; when the dog gives chase, he does not allow himself to be caught, but constantly changes direction. There was a carpenter who knew how to make chests large enough to hold a man. He told Chautéh that he would make him one as a gift. He accepted the offer. The carpenter made it with great care; he finished it and showed it to him. Chautéh got in to measure it, and the chest was closed, never to open again. The carpenter nailed him in so that he would cause no more damage. Chautéh begged: "Open it, please." /300/ but no one opened it. Then he asked that two holes be made so that he could see. The carpenter took out his chisel and made one hole properly; when he was making the other, the tool slipped and put out one of his eyes. He has made me one-eyed, he said to himself, but while I am here he will be looking at tree trunks and opening tree trunks, nothing more. The carpenter turned into a little bird that opens up a hole in a tree trunk, lays eggs, and raises its young.

Informant: Victoriano Piñakué.

[Parcialidad of Calderas]

/300 cont./

10. The Sea

*539 823 On a certain occasion Tomás Dimales said to Pedro, his brother, that he had set up a test. Tomás would make a river, and Pedro would have to stop it. He accepted the proposal and set out running. In those days no one knew where the waters went. Pedro told his brother ahead of time that he would tell him when the river was stopped. So it came to pass. When Santo Tomás went to look, he found the sea there where Pedro was. The latter told him to note carefully whether the river was running. He had stopped the waters at this spot.

Informant: Vicente Puchi, 56 years old, speaks Spanish.

Interpreter: Marco Antonio Penkue.

11. Piedra Alta

Pedro and Tomás Dimales were two brothers, the former evil, the latter good. They lived together and went about as companions. In those days Calderas was flat. On a certain occasion they were passing the boundaries of the Muralla together; there were no rocks. Pedro said to Tomás: Look at the cliff that have formed; Tomás replied that that was not possible, since the region was flat. When he pointed to the spot, a large rock arose: it is the Piedra Alta /tall stone/.

Informant: Vicente Puchi.

*539 12. Pedro and Tomás Dimales

Tomás, being good, received Pedro when he was out walking. The latter would state his desire to help him in his work, and for a few days he would do it well. Once Tomás sent him to sow maize. He sowed it, but he threw all the seeds into a single hole. Another time Pedro /301/ went to weed maize, but all he did was to cut down the maize. On another occasion, Pedro was angry at Santo Tomás; he went to him and told him

[Parcialidad of Calderas]

/301 cont./

539 that he looked like a stone. His intention was to turn him into a stone. Since Tomás was a saint, his plan failed.

Informant: Guillermo Guagás, 35 years old, does not know Spanish.

Interpreter: Marco Antonio Penkue.

13. Santo Tomás

Santo Tomás was the brother of María Santísima, but he was very tricky and very ugly. To give an idea of what people said to him: he had lice, scabies; he was loathsome. If someone mumbled something, he turned him into stone. His sister was displeased by all the things he did, and she often admonished him, because if he went on like this he would destroy the world. It was he who left so many cliffs, rocks, and ugly stone . With one footstep he rocked the world. As for the Christians, sons of María Santísima, he turned them into stone. He committed so many offenses that María Santísima became angry. She went to the sky so as not to see all these iniquities. Her brother followed her; he reached the sky and María ordered him to return to the world; he went down in a gust of wind. Then he sent him to the end of the world, where he is. His annoying behavior came to an end. Sometimes he becomes angry and makes the earth shake, because he wants to get out, which María will not permit. It is said that María Santísima put him in bronze boxes /cajones/ by means of a trick. He cannot come out, but he makes the world shake.

Informant: Agustín Muse.

Interpreter: Marco Antiono Penkue.

Version I

In Lame they caught Santo Tomás. It is said that in Lame there is a stone on which he put his goad /rejo/ and sat down.

*539 [Parcialidad of Calderas]

/301 cont./

The marks are said to be there. While he was resting, he saw a beautiful bird. He was looking at it, fascinated, when they caught him and put him in a box. They put him to sleep; they buried him and planted a tree called tachi (tachuelo /Pictetia aristata; P. aculeata/).

[823] /302/ Earthquakes are caused by Santo Tomás when, tired of one position, he changes it in order to rest.

Informant: Corpus Guagás, 18 years old, knows Spanish.

Interpreter: Marco Antonio Penkue.

14. The Petrified Fiesta-house

At the place called Uikuet it is said that there was a house where a fiesta was celebrated. It is petrified. When the fiesta was in progress, a rather tattered little boy came to ask them for food. An old woman grumbled that there were so many people, why should they give anything to that boy? The latter left, saying, "I see stone." The entire house was turned to stone. The little boy grew large. It is said that one can still see the fallen jars. That little boy was Santo Tomás.

Informant: Corpus Guagás.

Interpreter: Avelino Penkue.

15. The Stones of Chaikin

[823] The two stones of Chaikin were made by Chautéh. Two women were carrying sugar cane. He asked them to give him sugar cane and they did not give him any. Then he turned them into stone.

Informant: Victoriano Piñakué.

[Parcialidad of Calderas]

/302 cont./

*539

16. The Mother of Salt

The old people could see the mother of salt. They saw a little old woman with tufts of hair that were balls of salt. The old people said that she was the mother of salt.

Informant: Justo Muse.

Interpreter: Marco Antonio Penkue.

*539
372

17. Fire

A little old woman possessed fire. A little girl went to ask her for a few small firebrands. The old woman merely gave her a few smoldering twigs, /303/ which went out before she got home. She came back again to ask for another firebrand, but the old woman was not there. The fire burned inside in thick firebrands. The girl took a big one. The old woman found out and went in pursuit of her, being niggardly about the brand. The girl ran, but when the old woman overtook her, she threw the fire into straw "ready" /jecha/ and good. The people who needed fire took it from this spot, which for this reason was called Ipikué (Plan of fire).

In those days they were making the pueblo. They were thinking about a name. If fire comes out, they said, it shall be called Calderas /caldrous/; if not, Buktá. The former came out, and the pueblo was called Calderas.

Informant: Victoriano Piñakué.

Version I

The old people relate that there was an old woman who possessed fire and who distributed it to the other people. Once she refused to give them any more fire, and she extinguished it in order to leave them without it. She saved only one burning stick and she ran off with it. The Indians ran after her, and as they were overtaking her, she dropped the brand

[Parcialidad of Calderas]

* /303 cont./

539 at one side of the path and hid in a river. By the smoke they
372 found the fire, and all the people were able to supply themselves from it. This one was not extinguished again. It is believed that the old woman was a Pijao.

Informant: Vicenta Tumbo, 40 years old, does not know Spanish.

Interpreter: Marco Antonio Penkue.

Version II

When religion had recently been introduced, there was an old woman who drew fire from her armpit and gave it to anyone who asked for it. The missionaries came and said that this fire was witchcraft and thus had to be blessed. The old woman fled so that the fire would not be taken from her and the blessing would not be given. As she went running off, the old woman set herself on fire, and the flames covered her completely. When she reached the river, which was in flood, she threw herself into it. The old woman is said to have been a monster (Pijao); she had a very large face, hair like a mane and rather gray.

Informant: Juan Petins.

Interpreter: Marco Antonio Penkue.

/304/ Version III

The old people related that once there was a little girl who had nothing. María Santísima appeared to her and asked her what she was doing, to which she replied that she was there. "You will have to blow on the fire," she said, "because even I am cold." Ordering her to fetch some kindling, María Santísima drew fire from her armpit. She warned her to preserve it, for without it they could not live. From it fire was
[103] obtained for everyone. This is why they gave the place the name of Calderas

[Parcialidad of Calderas]

* /304 cont./

539 name of Calderas. María Santísima gave the fire and disappeared.

18. The Mine-armadillo

*539 823 825 My father was inside a house. Suddenly he saw an animal that shone like a lamp; the light went up to the sky. The animal was a mine-armadillo which was climbing up the hill. If one succeeds in catching him, one puts him in a large box and gives him maize to eat. He turns into a mine, pure gold. Before catching him, one must have the silver ready, 50 or 100 pesos; one wraps him in a new kerchief and lifts him; he is very light. Without the silver, he is seen in the stream or on the path, but one cannot catch him; one puts his hand there where the armadillo is, withdraws it, and he does not move.

Informant: Victoriano Piñakué.

19. The Thin Man

* 539 774 781 My father bought a jar and carried it on his back. At night, drunk, he met the thin man sitting by the path; it was a soul. He was about to fall into the ditch, but the soul did not let him fall and accompanied him home as if he were his brother. Father, frightened, started falling, but the soul held him up; he carried a light, making the night very clear. Nevertheless he did not speak. The man looked like the Sisters; he was quite white.

*539

20. The Devil

My father, with a friend, was coming from Belalcázar on horseback; I was behind my father. The friend came last; he

[Parcialidad of Calderas]

/305/

*539 carried a big load. As they went down the El Tablón slope, they saw a man coming out in front of them. It rained a little there, but it soon cleared up; a cloud that was there rose and went away. The man ran hard, he was on a black, colimocho horse, and he woré a black rubber raincoat. My father went down to the El Tablón stream and found nothing. In the stream there was a door; he was unable to open it; the horse jumped. He looked all around, but found nothing. He looked for tracks and did not find them either. Then he thought that it was the devil.

21. The Jaguar Man

In the old days there were jaguar people, who were the same as the mountain jaguar that eats sheep. The men went out once with guns and dogs to hunt it, but without any success. They asked a jaguar man to hunt it. He went to the mountain with a machete /peinilla/, found the real jaguar, and started to play with it, until he became angry and killed it. The jaguar man was much stronger, because he ate salt. He put it on the path and told the other men to bring it down. They went with guns; the jaguar seemed alive; they believed that it was and went back. The jaguar man assured them that it was dead, so they came back and picked it up. Far, far away, there are jaguar men. In Cali. The white men themselves are jaguars. Jaguar men are thieves.

Version Number 1

Thieves turn into jaguars and take cattle to Garzón and Neiva. They go back home and again turn into human beings.

A man was walking in the paramo, hunting alone. He saw a Pijao who made fire by piling up kindling and drawing fire from his armpit. The Pijao had a gold staff, and the hunter said to himself, I shall take this staff from him.

[Parcialidad of Calderas]

* /305 cont./

539 He turned into a jaguar, while the Pijao took out bananas and a snake to eat. Once changed into a jaguar, he wanted to take the staff, and the Pijao ran for about three hours, closely followed by him, until he reached his pueblo. The jaguar changed into a man in order to see the pueblo, while the Pijao told his relatives, and the latter went out in pursuit of him. The man again turned into a jaguar, ran back to the starting point, and took home with him in a pouch /306/ the roasted bananas; he turned back into a man and told his wife what had happened.

22. The Man and the Thin Dog

My father was coming from the market and drinking chicha. He was drunk and fell asleep along the way. At midnight he woke up and went on. He saw a thin dog. He caught it. At once a very thin man came out with his heart hanging out. The man ran. My father also ran. Much farther on my father lashed out /fuetio/ at him. Without thinking, he fell flat and went to sleep. He woke up at dawn and only saw that he had grabbed at the flowers, for they were crushed. He had grabbed without thinking.

23. The Head

The head goes about alone. It comes from very far away. It goes about at night. It is merely a head with one tooth, one ear, and without a body. A man who was sitting on a stone with his staff saw it, caught it, and sent it to the river. The man set out running. The head came out of the stream to pursue him and went on beyond him, for the man had climbed a very high tree in order to hide. It came back and looked for the man with the odor. It saw him in the tree, but the head could not go that far. It bobbed and bobbed until the cock crew, at which time it went home. There it has relatives.

[Parcialidad of Calderas]

* /306 cont./

539 If dawn comes and it has not reached home, it asks for shelter from its relatives. On the following night it reaches its own home. The man climbed down the tree in fear and went home, telling everyone (wives, sisters, children, parents, and relatives) that he had seen this head.

The head may appear to any man, whether he is drunk or not. The animal goes downhill easily, but has a hard time going uphill.

It travels underground and comes out in the field.

24. The Animals

A man went to see a relative who lived far away. He drank chicha with a cousin. He got drunk and walked through the night. /307/ He carried a machete /peinilla/ and also a shotgun to kill chachalaca. He made a shot. Something came out that looked like a pig. He could not see anything, although he looked all around him. He took out his machete to defend himself, but he could not see anything. He shot his gun once more into the air, and then many animals came out, to judge by the noise that they made in the leaves of the trees, but nothing was to be seen; only the noise was heard and nothing more. The night was very dark; he struck matches, but they immediately went out. Then he shouted. A female relative heard him and went looking for him, accompanied by her little daughter. She carried a burning twig with which she frightened away the animals. They found the man in a ditch, took him out, and went off in fear. The women ahead and the man behind. Along the way there was a small stream, and an animal seemed to move in the water. The man looked behind and saw only two eyes shining and shouted, "look, here comes an animal," and passed the women. They did not see anything. They held up the light, and the animals remained quiet.

[825] At nine o'clock the animals are already walking about. During Holy Week they walk about a great deal. People cannot go out.

25. The Sky

Informant: Agustín Muse.
Interpreter: Marco Antonio Penkue.

Once when I was near death my soul climbed to the sky, which is a flat plain where the view extends to the horizon. The entrance is wooded. The Virgin told me that this land was for her sons and that I would have a piece. To reach the sky, one first goes along a good path and soon becomes lost; the most hidden one leads to the Virgin's palace. It is said that it is bad for one to eat the porcupine, because he will come before María Santísima dressed in its skin. He will go to the devil, and although the latter cannot pick him up, he has hooks with which to grab him. This is why, at the hour of retiring or rising, I pray to my God and to María.

[262]
[825]

The palace of María is of blinding splendor. It is very beautiful. The Virgin always holds the Child; only rarely does she put him down somewhere.

I tell my fellow men what I saw but they make fun of my account.

/308/ It is holy, they should respect it.

Good people go to heaven, that is to say, those who do not abuse other persons, say evil things, or are loutish.

*539
824

26. Origin of the Plants

The old people said that every kind of seed had been given by María Santísima, who drew them from her womb and gave them to the Christians in order for them to maintain themselves. Plants are thus inherited from María Santísima. She gave away every kind of seed when her brother was around. Hence his rage, since he wanted to give seeds and animals and could not. Perhaps the snakes were made by Santo Tomás. /The bibliography on p. 309 is omitted in the translation; see the foreign text./

CAPITULO I

Situación geográfica—En el Departamento del Cauca y en su parte noreste, como una punta de lanza que se enclava en el Departamento del Huila, se halla la región de Tierradentro formada por los numerosos contrafuertes orientales de la Cordillera Central. Tiene la figura de un triángulo formado por las divisorias de aguas de las cuencas hidrográficas de los ríos Páez y Yaguará al oriente y La Plata y Páez al sur. Hacia el occidente, como espina dorsal, levántase la Cordillera Central en la que sobresalen los páramos de Guanacas (3.518 metros), de Las Delicias (3.750 metros) y de Moras (3.670 metros). Como coloso gigantesco y dominando el vértice de esta figura geométrica encuéntrase hacia el norte el Nevado del Huila (5.750 metros), el más alto de Colombia si se exceptúa la Sierra Nevada de Santa Marta.

Topografía—En realidad, Tierradentro es un comprimido de montañas que siguen las direcciones más caprichosas si bien en rasgos generales están orientadas de occidente a oriente en la margen derecha del Páez y de norte a sur en su margen izquierda; áspero, abrupto, de soberbias cuchillas e inmensas depresiones, de cañones y cerros, de hondonadas y valles, de terrazas y acantilados, de filos y altiplanicies, de numerosos ramblas, ríos y quebradas, de corrientes violentas y ruidos atronadores Transitar por estas regiones "ha de ser bajando o subiendo", según el decir de Fray Pedro de Aguado (1).

Vías de comunicación—Hasta la cuarta década del presente siglo las vías de penetración eran caminos de herradura que pasaban por los páramos de Guanacas, Las Delicias y Moras o por Inzá, Pedregal, Topa y La Plata. Los tres primeros comunicaban con el valle del Cauca y el segundo con el valle del Mag-

(1) Citado por Hernández de Alba (Gregorio). P. 925.

dalena. Eran los caminos de la época colonial y de gran parte de los tiempos de la república. El camino de Guanacas fue el primero que sirvió de comunicación entre el reino de Quito y Santafé de Bogotá, debido naturalmente a la mejor disposición de los indios Guanacas con los conquistadores, quienes aprovechando las dimensiones de aquéllos con los Paeces los convirtieron en sus aliados y ayudantes. En Guanacas se estableció la primera misión religiosa en 1613. Por el Páramo de Moras hizo su entrada al país de los Paeces el Capitán Juan de Ampudia, quien iba a tomar ejemplar venganza de la trágica muerte de su colega de armas el capitán Pedro de Añasco. Para desgracia suya y de España encontró terrible muerte en los acantilados de Togoima. Por el mismo Páramo de Moras hizo su entrada el Adelantado don Sebastián de Belalcázar, quien llevaba los mismos propósitos de su desgraciado antecesor, pero esta vez se sumaba también la muerte de éste. Los Paeces le propinaron la más estruendosa derrota en el Peñón de Tálaga y el Adelantado tuvo que salir en huída dejando en el campo de batalla el cadáver del heroico capitán García Tovar. El intenso tránsito por estas peligrosas breñas y los frígidos páramos disminuyeron sensiblemente con la apertura de la carretera del Quindío y mucho más aún con la inauguración de la carretera La Plata-Belalcázar. Tierradentro está unido por carretera con Popayán y Neiva. En la actualidad sólo transitan por el Páramo de Moras los indios de Mosoco, San José y Vitoncó y los Paeces de Toribío, Tacueyó y Jambaló. Por el de Las Delicias caminan los Moguex, sobre todo en sus anuales peregrinaciones a las festividades religiosas de Nuestra Señora de Nátaga. El camino de Guanacas está prácticamente abandonado. Existe también otro camino, transitado con relativa frecuencia, que sigue por el Páez aguas arriba, continúa el cauce del río Negro, trasmonta la cordillera y llega a Tacueyó.

Hidrografía—De norte a sur corre por profundo y encañonado cauce el caudaloso Páez, cuyas espumosas ondas se precipitan rápidamente en el vértigo de los raudales, siguen veloces formando espirales en la fuerza soberbia de los remolinos o saltan convertidas en mil pedazos por el choque violento en los numerosos cantos y bloques. Nacido de los deshielos del Huila, en sus ochenta kilómetros de recorrido recibe los turbulentos

ríos Muesga (San Vicente), Moras, Kukiyú, Ullucos y La Plata por su margen derecha y el Símbola y Negro de Narváez por la izquierda. El río Páez es el desagüadero de todo Tierradentro.

Vegetación—En la mayor parte del territorio ya no existen los "densos e impenetrables bosques" de que hablara Carlos Cuervo Márquez. Las especies madereras y medicinales están prácticamente desaparecidas. El género cinchona fue muy explotado en la segunda mitad del siglo pasado cuando la industria de la quina era floreciente y constituía uno de los más vigorosos renglones de la economía nacional. Los gruesos y espesos bosques han sido talados sistemáticamente por indios y colonos de tal manera que éstos se encuentran hacia las escarpadas breñas de la Cordillera Central y las hoyas hidrográficas de los ríos Símbola y Negro de Narváez. En las cuchillas donde el bosque virgen milagrosamente ha permanecido intacto, se ha observado que a la vuelta de una semana ha sido talado totalmente para ser, luégo, pasto de las llamas; no se aprovecha ni siquiera la leña, mucho menos el carbón cuyas técnicas de obtención parecen ser desconocidas. En las vegas y pequeños valles de las quebradas y ríos se encuentra una vigorosa vegetación en su mayor parte resultado cultural, pues ha sido sembrada para sombrío de las numerosas plantaciones de café. Abundan las gramíneas. En las lomas y altiplanicies los matorrales y arbustos son comunes en tanto que en los declives pinos los herbazales presentan su opulento verde en el invierno y la coloración pardo-amarillenta en los veranos. Las tierras de labor se preparan con machetes y fuego. Son las llamadas rozas, sistema bárbaro, primitivo y criminal de agricultura. La quema es un hábito de nativos y colonos y llega hasta tal punto que aún la vegetación de los riscos, breñas y acantilados es quemada donde evidentemente ninguna utilidad práctica puede obtenerse y en cambio sí deja la roca desnuda a merced de los agentes erógenos.

Fauna—La fauna está compuesta por algunas clases de ofidios y pequeños mamíferos: tinajos, cusumbes, guaguas, armadillos, erizos, zorros, venados, dantas, pericos ligeros y conejos. Los osos, tigrillos y pumas se encuentran en las montañas vírgenes. Abundan los volátiles como torcazas y guacharacas.

Clima—No existen observaciones de lluviosidad, temperatu-

ras y vientos de esta zona. El clima en su mayor parte es templado, mejor dicho, es clima de café.

Dado lo accidentado del terreno los naturales pueblan una área que se extiende desde los mil metros (Itaibe) hasta los dos mil quinientos metros sobre el nivel del mar (Suin, Mosoco, Vitoncó y Lame). Según el doctor Gregorio Hernández de Alba en el momento de la conquista los pueblos Paeces de Tierradentro habitaban "alturas y climas entre 2.620 metros con 13 grados centígrados y 1.650 metros con 17 grados en promedio" (1).

La humedad atmosférica y la lluviosidad aumenta a medida que asciende la cordillera y se acerca al nevado del Huila, notándose dos veranos y dos inviernos influídos, desde luego, por la topografía, la vegetación y la proximidad del nevado. Un verano intenso durante los meses de enero y febrero y otros en julio, agosto y septiembre. Los inviernos son intensos en los meses marzo-junio y en menor escala en octubre-diciembre. El nevado del Huila origina unos vientos locales, fríos que corren por la hoya del Páez afectando sobre todo las regiones de Vitoncó, Suin, Chinas, San José, Mosoco y aún la misma parcialidad de Calderas. La variabilidad de temperaturas es sensible en estas zonas, haciendo a veces días calurosos y noches muy frías. La nebulosidad es casi constante especialmente en las zonas del norte.

Economía—Las características topográficas y climáticas permiten el cultivo de varias plantas tales como el maíz, fríjol, plátano, caña de azúcar, yuca, arracacha, calabazas en los climas templados y en los fríos, papa, maíz, ullucos, habas, calabazas y repollos. La producción apenas si deja un excedente para sostener un comercio con las parcialidades y los centros urbanos de Belalcázar, Inzá y Valencia. La producción de papa de Mosoco, Vitoncó y San José sirve para un comercio activo con los Paeces de la vertiente occidental de la cordillera, a través del Páramo de Moras.

El café y la producción de panela son renglones sustantivos en la economía de los colonos y también de numerosos grupos indígenas aculturados. El café de Tierradentro es considerado como uno de los mejores del país por la calidad y suavidad del grano.

(1) Hernández de Alba (Gregorio). P. 917.

La ganadería es floreciente entre los grupos civilizados. A los indígenas les sirve para mantener un comercio de trueque con sus vecinos los colonos, blancos y mestizos.

En general la producción indígena es relativamente escasa originándose épocas de "hambruna" cuando los veranos o los inviernos son bastantes fuertes. Las tierras laborables se encuentran en las pequeñas vegas y valles de ríos y quebradas, en las terrazas aluviales y en las altiplanicies. Comparando la extensión de Tierradentro con sus tierras aptas para los cultivos, éstas resultan ser escasas, problema que se agudiza con el aumento de la población y la quema consuetudinaria.

Población—Tierradentro es el país de los Paeces que en el momento de la conquista estaban establecidos al norte del río Ullucos, pues al sur de éste se encontraban los topas, yaquiváes y guanacas. Parece que en el siglo XV, bajo el mando del cacique Calambás, los Páeces trasmontaron la cordillera y se establecieron en Pitayó, Toribío y Tacueyó.

El doctor José Pérez de Barradas asignaba un número de 30.000 almas. El censo de 1938 arroja un total de 17.578 habitantes repartidos así: municipio de Páez (Belalcázar) 13.861; municipio de Inzá, 3.717. Los censos de 1951 dan un total de 25.495 habitantes correspondiendo 15.388 al municipio de Páez y 10.103 al de Inzá. Salta a la vista que el censo de 1938 fue deficiente especialmente en lo que concierne a la población de este último municipio.

De esta población un ochenta por ciento, aproximadamente, es indígena, aculturados en su mayor parte, excepto los de Calderas, Suin y Chinas, donde las tradiciones son vigorosas y sus contactos con el blanco escasos, presentando, por otra parte, gran resistencia a la convivencia con el mismo.

Los Paeces son de mediana estatura, piel morena clara, ojos castaños oscuros, cabellos negros lisos, frente amplia, pómulos un tanto pronunciados, rostro más pentagonal que oval, complexión robusta y un tanto ancha de hombros. Poseen pueblos formados por la iglesia, la escuela, la casa cural y del cabildo y algunas otras casas que sólo son habitadas en las épocas de fiestas religiosas; viven en ranchos de planta rectangular, techo de paja y paredes compuestas por hileras de varas de caña de

maíz apretadas, situados en los terrenos de propiedad particular y a trechos considerables.

Vestido—Visten los Paeces de manera sencilla. El hombre usa calzón de lienzo, una ruana atada a la cintura con una correa y otra que se descuelga libremente de los hombros y un sombrero manufacturado por ellos mismos con hojas de pindo o caña brava. La mujer usa falda larga envuelta alrededor de la cintura sujeta con una faja multicolor previo los dobleces que se hacen en la espalda; una ruana semejante a la que usan los hombres, también sujeta a la cintura y sobre ésta un reboso o pañolón de fabricación extraña; portan sombrero de manufactura masculina. Llevan un palo delgado de un metro más o menos de largo, llamado *kasguat*, sujeto con la axila izquierda y en cuyo extremo superior va atado la lana para hilar, labor que realizan en todo momento, sea que esté caminando o sentada en la casa, sin detrimento, desde luego, de que sobre sus espaldas repose el niño o una pesada carga cuando deambula por los caminos. Unicamente las mujeres llevan adornos consistentes en collares multicolores, aretes y a veces anillos.

Tanto hombres como mujeres llevan generalmente tres jigras de lana, aparte de otras de fique, una muy pequeña para el dinero, otra más grande para el mambe y la tercera, mayor de todas, y que contiene a las otras dos, sirve para llevar las hojas de pindo o el trenzado de éste en el hombre y otros objetos en la mujer.

La coca—Todos los Paeces son "mambeadores", hombres, mujeres y niños, considerando la coca como artículo que da fuerza, quita la pereza y amortigua el hambre. Sin ella evidentemente no trabajan. La coca y la chicha, jugo de caña fermentado, desempeñan el papel de verdaderos alimentos dado su régimen alimenticio farináceo y escaso.

Parcialidades y cabildos—Políticamente los indígenas están organizados en parcialidades al frente de cada una de las cuales se encuentran un cabildo compuesto por un gobernador y suplente, un alcalde mayor y otro menor, dos alguaciles, tres fiscales, un comisario, un capitán y un síndico elegibles cada año y posesionados por la respectiva alcaldía del municipio, excepto los dos últimos que son vitalicios y posesionados por la

3: Bernal Villa SG15 Paez

Iglesia. Sus funciones son administrativo-policivas, pero en realidad ejercen funciones de regulación social, penal y religiosas.

Las parcialidades tienen como límites las fragosas cumbres o los profundos y borrascosos cauces de las quebradas y ríos de tal manera que cada una circunscribe modalidades geográficas específicas y aún de clima y de vegetación. Si bien es cierto que la cultura Páez es unitaria, cada parcialidad ofrece matices diferenciativos perceptibles hasta en la mitología y la lengua. La antropomimia es bastante peculiar en cada parcialidad.

En la actualidad existen diez y seis parcialidades, cuatro de las cuales pertenecen al municipio de Inzá y las doce restantes al de Páez (Belalcázar).

Magia y medicina—Existen tres instituciones que marchan al unísono e invaden otras, que explican la causación de enfermedades, el tratamiento de las mismas y sirve de válvula de escape a la agresividad. Ellas son:

a) La compuesta por la trilogía de serés sobrenaturales denominados. Duende, Echi y Arco;

b) La institución del médico bueno, y

c) La brujería.

a) El Duende, el Arco y el Echi son los causantes de las enfermedades, cada uno de los cuales produce una sintomatología específica que sirve de base para el diagnóstico del común de las gentes, diagnóstico que es corroborado por las actividades adivinatorias del médico bueno. Estos seres sobrenaturales producen las enfermedades por picadura, excitados por el enojamiento que ellos sufren debido a las manipulaciones de los brujos, o por los que han estado en contacto con cadáveres y no se han efectuado las purificaciones de rigor o porque las gentes han transitado por lugares tabú como barriales y lagunas o no han cumplido con los ritos y ceremonias en el degüello de ganado vacuno o en las cosechas de rozas nuevas o porque no han observado la "costumbre" en la primera menstruación o el partó.

b) En la institución del médico bueno se entrelazan las funciones de adivinación, magia y medicina. Más exactamente, el médico bueno es adivino-shaman-curandero que ha efectuado el

aprendizaje de la profesión con un maestro ponderado y de larga experiencia o mediante el auxilio del espíritu protector visto realmente o en sueños; éstos son los mejores médicos. Para curar al enfermo adivina cuál de los seres sobrenaturales es el causante de la enfermedad, procede a su contentamiento y luégo receta los medicamentos al paciente. En caso de que el contentamiento no se logre el enfermo queda virtualmente desahuciado. Son artículos imprescindibles en toda curación la coca, tabaco y aguardiente. Los médicos son personas entradas ya en años y pertenecientes al sexo masculino. No pueden curar los efectos de la brujería aunque sí están en capacidad de defenderse de ella.

c) El cincuenta por ciento de las enfermedades, afirman los informantes, son producidas por la brujería; por lo mismo el cincuenta por ciento de las muertes, puesto que la brujería es incurable. Los brujos están encubiertos y parece que todos los adultos son brujos en potencia. La institución de la brujería es una verdadera válvula de escape del acentuado impulso agresivo de los indígenas y juega en cierto modo un papel de regulador social. Por ella se canalizan la envidia, el resentimiento y la venganza de los naturales. Son víctimas de la brujería las personas más hábiles y trabajadoras, las que tienen buena casa, buenos cultivos y crecido número de animales domésticos. Las cosechas y en general las sementeras son objeto de la brujería. Los brujos públicamente señalados son acreedores al aborrecimiento de la comunidad y aún al destierro, medida que se toma no por ser propiamente brujo sino por ser ladrón. Todo brujo es ladrón. La brujería aparece con bastante frecuencia en el simbolismo de los sueños.

Matrimonio—El matrimonio es monógamo y patrilocal. Tanto los cronistas como el doctor Gregorio Hernández de Alba hablan de la costumbre del año de amaño, a fin de que el hombre pueda cerciorarse de la habilidad, actividad y fecundidad de la futura cónyuge. Institución vigorosa en tiempos pasados se encuentra en la actualidad en plena decadencia debido a la acción de la obra misional. Evidentemente el propósito de esta institución es convencerse de si la mujer es activa, fiel, nada ladrona y comprender su modo de ser para establecer una unión duradera. Hoy los Paeces antes de contraer nupcias por la iglesia viven un tiempo de duración indeterminada, explicando que

el hombre no tiene el dinero disponible para casarse tan pronto pide a su mujer y que es menester trabajar para conseguirlo.

Religión—La religión de los Paeces es formalmente la católica, pero dentro de ella se involucran muchas de sus tradiciones. Las principales fiestas de los indígenas son las religiosas, adquiriendo éstas verdaderos rasgos de pomposidad. Utilizan al sacerdote católico para las ceremonias de bautizos, matrimonios y casos de muerte.

CAPITULO II

Calderas—Incrustada en el corazón mismo de Tierradentro se encuentra la Parcialidad de Calderas, limitada hacia el norte por un elevado filo que la separa de Chinas y Avirama; hacia el este La Muralla, verdadero espejo de falla, la separa de Avirama de igual modo que un filo la separa de Togoima; hacia el sur los profundos ramblas y las elevadas cuchillas la separan de San Andrés y Togoima; hacia el oeste la Quebrada Guacharaca la limita con la Parcialidad de Lame.

De occidente a oriente la atraviesa la Quebrada Kukiyú, verdadero río por el caudal de aguas y la torrentuosidad de las mismas, cuyo cauce es profundo, encañonado, inaccesible. La margen izquierda es un tanto suavizada con una bella altiplanicie de unas veinte hectáreas aproximadamente, de tierras fértiles, abundantes aguas y sobre la cual se levanta el pueblo; pertenece a la comunidad en tanto que las otras tierras son de propiedad particular garantizada en el hecho de que el propietario o descuajó personalmente la montaña o la heredó de sus padres que derribaron los bosques. La margen derecha es empinada, abrupta, accidentada. Sobre estas tierras pinas se observan numerosas rozas indicativas del aumento de población que los obliga a labrar tierras de poca fertilidad y de gran peligro para el trabajador.

El calderuno tiene estatura más bien alta, cutis cobrizo claro, cabellos negros lisos, nariz recta, un tanto achatada y ancha en la base, pómulos ligeramente pronunciados, ojos de color castaño oscuro, recordando el ojo mongólico, frente amplia, extremidades largas y membrudas, rostro ligeramente pentagonal; muchos tienen bigotes y en general las facciones son más bien

hermosas. Por otra parte, es locuaz, comunicativo, profundamente tradicionalista, orgulloso de sí mismo, con un acendrado amor al terruño. Aislados como están de las demás parcialidades por accidentes naturales y distantes de los centros urbanos de Inzá y Belalcázar con el blanco son ariscos, hoscos, huraños, decididamente reacios a su contacto y por lo tanto sus instituciones han sufrido menos el impacto del mestizaje cultural. Ni aún la misma iglesia que tan tesoneramente ha venido laborando por la catequización de estas tribus, sobre todo en lo que llevamos del presente siglo por medio de los misioneros lazaristas que actúan desde 1905, ha podido penetrar de lleno en el alma de estas gentes.

En esta parcialidad he venido realizando mis investigaciones desde el mes de agosto del año pasado con muchas soluciones de continuidad. Los mitos y cuentos que ahora presento fueron recogidos tras de paciente labor y larga espera, pues los naturales al ser interrogados sobre estos temas casi siempre contestan con la palabra *himeto* (no sé). No hace falta recalcar la importancia de la mitología como institución en las culturas llamadas "primitivas". Ni está dentro de mi ánimo teorizar acerca de este tópico. Basta decir con las palabras de Herskovits que la "mitología es como la carta constitucional de las creencias y presta sentido a la conducta ritual que se deriva de sus consagraciones". (1) Nada nos dicen los cronistas acerca de la religión y mitología de los Paeces. Y estudios modernos sistemáticos tampoco existen. Quienes han tenido oportunidad de estar en contacto con ellos y escribir sus costumbres y formas de vida tampoco nos hablan de su religión y mitología. Aún más, alguien afirma que los Paeces no tienen mitología. José Pérez de Barradas ha recogido el mito de Juan Tama, Gregorio Hernández de Alba hace referencia del mismo y el misionero lazarista R. P. David González también lo ha recogido y lo tiene en su obra inédita, *Los Paeces*, en forma bastante elaborado y sintético, de igual manera que G. Burg. Es evidente que gran parte de los mitos y cuentos que presento, por no decir todos, han sufrido modificaciones en el avatar de los tiempos, puesto que las instituciones también han cambiado. Siendo la mítica racionalización de conflictos creados por la misma cultura está sujeta a las directrices

(1) Herskovits. P. 409.

3: Bernal Villa SC15 Paez

de esa sociedad y de esa cultura. Sus raíces son forzosamente de índole sociológica y cultural.

Muchos de los mitos recogidos presentan marcada semejanza con el de Juan Tama. Los motivos centrales predominantes se refieren a sexo y agresión. Los personajes de los mitos son el Trueno, Lliban, Juan Chiracol, Chaute y Santo Tomás. Lliban considérase como hijo del Trueno, pero todos sostienen que es el Trueno mismo; era cacique y los naturales afirman que muchos de sus caciques fueron recogidos en las ondas tumultuosas de los ríos. Los dos últimos personajes se identifican y forman en realidad un solo ser. Llama la atención que en algunos relatos que presenta el personaje pícaro no es Tomás, que es Santo, sino Pedro Dimales, su hermano.

No hace falta resaltar el papel que los Pijaos juegan en estos relatos. El recuerdo de este aguerrido pueblo está fresco aún en la memoria de los calderunos, patentes las características de la lucha sostenida con ellos, vivo el temor que despertaba el nombre Pijao. Ante la mentalidad calderuna aparecen como fenómenos, como animales, de proporciones y fuerzas descomunales que sacaban la candela de sus axilas. Constituyen de hecho personajes legendarios que traspasan las fronteras de la leyenda para invadir el territorio del mito no sólo por su simbolismo, sino por su dramatismo, su marco sociológico y su función cultural.

La mítica gravita en la conducta de los indígenas, en sus actitudes frente al blanco, en la organización del cabildo, en las enfermedades y en la muerte. De Juan Chiracol dice un informante de 23 años: "El avisa si llega la chusma, él no más avisa, pues". Y del Trueno afirman que casi mata a un padre, porque fue a la montaña a sacar madera para entablar la escuela. "El Trueno estaba mezquinando la madera", dicen. Los relatos fueron hechos siempre alrededor del fogón estando presentes hombres, mujeres y niños, los cuales unas veces reían, otras callaban pero siempre corroboraban, rectificaban, aumentaban o ratificaban. Los relatantes a veces adquirían el aspecto severo, acompañaban de mímica a sus relatos y de cuando en vez prorrumpían en una risa burlona como queriendo significar que lo que decían no tenía valor ni creían en ello. Luego he podido establecer su valor sociológico y cultural. Los mitos y cuentos fueron recogidos con el auxilio de un intérprete, mestizo de San Andrés, de unos treinta y

cinco años de edad, alto, musculado, de ademanes reposados, inteligente, calculador, magnífico don de gentes, con dominio de Páez y la lengua castellana; buen conocedor de las costumbres de los calderunos, estimado por ellos y atinado en sus interrogaciones. Presentamos a continuación los mitos y cuentos recogidos dejando los demás aspectos de la cultura para presentarlos en una monografía completa.

1—*El Trueno*

Contaban los ancianos que en un tiempo la región estaba llena de Pijaos. El Trueno vivía en *Sukafi*. En vista del crecido número de Pijaos resolvió matarlos. Se paró en una alta piedra que por allí existe, boleó la boleadora y mató los Pijaos hasta *Kuetando*. Dijo, entonces, a los médicos que podían tumbar todas las montañas, puesto que ya están muertos todos los animales. Diciendo esto se fue para la laguna de *Vichaguau*. Por eso es que los cabildos de antes marchaban en peregrinaje nocturno hacia la laguna a hablar con él. Los médicos tenían fe que haciendo enfriar las varas de mando moría muy poca gente ya que el mismo Trueno ayudaba a sostenerlos con sus remedios. Los médicos de ahora no son capacitados para hablar con el Trueno; no pueden ir porque de pronto los mata.

Informante: Martín Kuskue, 50 años, habla muy poco castellano.

Intérprete: Marco Antonio Penkue.

2—*El Trueno*

Decían los antiguos que las lagunas se robaban las gentes. En realidad era el Trueno.

Una vez un hombre tenía un papal en *Puelbits*. Era un hueco y había una montaña. Fue a cosecharlo. Cerca de las dos de la tarde llegó un viejo de sombrero de ramo, macizo, de mirada fea. El cosechador volvió la vista y observó que venía por un árbol derribado. El viejo preguntó: "¿Ya está cosechando?". El hombre contestó que sí y que ya tenía unas pocas recogidas. El viejo solicitó que le arrendara la tierra para trabajar en compa-

ñía. El dueño contestó que no sabía de arrendamiento, pues para eso había grandes extensiones de terreno dónde trabajar. El viejo insistió que tenía muchos deseos de vivir y trabajar con él. Causó admiración a las gentes y no quisieron hablar más con él porque era un viejo muy feo y desconocido. Se sentó a conversarles pero poco le contestaban. Atrajo, entonces, una nube negra empezó a llover a chorros en el papal. Guarneciéronse las gentes en el rancho que tenían, pero éste fue traspasado por la lluvia. El viejo los siguió detrás y se sentó en un palo fuera del rancho. Lo invitaron a que entrara y no quiso. Causó más extrañeza al ver que el viejo no sentía el agua. No le perdieron de vista. El agua llegaba a las piernas y al visitante no le importaba. Salieron las gentes en huída, pero el viejo se robó las mujeres. Averiguando a los grandes médicos manifestaron que el viejo era el Trueno. Lo corrieron quedando un barrial en el sitio donde estaba.

Informante: Rosario Iko, 80 años, no sabe castellano.

Intérprete: Marco Antonio Penkue.

Versión I

Unos muchachos tenían una labranza grande en forma de embudo. Tenían papas y la cosecha era abundante. Recogida toda la papa dejaron allí a la mamá con una nieta. A la tarde cayó una recia tempestad; la labranza empezó a lagunarse. Llegó un viejo con sombrero de ramo muy grande. El agua alcanzaba casi hasta la altura de la rodilla. La vieja y el viejo se quedaron allí sentados. La niña subió invitando a los viejos también a subir, alcanzó la altura y se salvó. Los viejos no se movieron. La labranza quedó convertida en laguna.

Informante: Justo Muse, 33 años, habla castellano.

Intérprete: Marco Antonio Penkue.

Versión II

En un papal estaba una vieja y cuatro personas más de su familia cosechándolo. De pronto cayó un aguacero y uno de ellos, una niña, subió al filo y cuando alcanzó la altura el papal se convirtió en laguna. Los otros se quedaron dentro de ella. La

niña vio desde arriba que entró un viejo de capa y sombrero grande de ramo. Se cree que los que se quedaron dentro de la laguna siguieron viviendo, pues parece que el Trueno (el viejo que entró) se los robó.

Informante: Juan Petins, 60 años, sabe castellano.

Intérprete: Marco Antonio Penkue.

3—*La visita del joven desconocido*

Contaban los primeros vivientes de Calderas que llegó un jovencito a vivir en un filo de la Parcialidad. Una muchacha lo visitaba muy a menudo. La madre la regañaba por esto pero ella le decía que una culebra le tiraba torcazas muertas desde unas ramas y que iba a recogerlas. De pronto la muchacha apareció en estado interesante. Tuvo un hijo raro, en el cuerpo se veía que le salían una especie de gusanos. La madre recomendaba tener mucho cuidado no quitarle los gusanos porque constituían la misma vida del niño. En una ocasión la madre salió hacia la labranza demorándose allí. Despertóse mientras tanto el niño. La abuela acercóse a la hamaca, lo tomó en sus brazos, observó los gusanos y se los quitó todos. El niño se murió. Regresó la propia madre y se quejó de que no había razón de haberle matado al niño. Como estaba cerca de una laguna se botó a ella pero no se ahogó. Desapareció únicamente. También el desconocido. Los médicos dijeron que la mujer vivía con el desconocido en la laguna. La abuela resolvió hacerla brujiar y promovió una reunión de médicos. Estos pidieron un sapallo quiteño y los trapos de una mujer menstruante. Los juntaron y los lanzaron a la mitad de la laguna. El desconocido y la muchacha se corrieron para la laguna de Santa Rosa. La de Calderas se secó. Los barriales de los potreros de Calderas son restos de esa laguna. De seguro que la pareja salió a las cuatro de la tarde en medio de una nube negra. Por eso se sabe dónde están.

Informante: Juan Petins.

4—*Lliban, el hijo del Trueno*

Reuniéronse cierta vez unos médicos cuando el oro existía entre los indios. El médico primero llevaba un sombrero de oro. Convocó a los médicos para hacer un medicamento. Hizo crecer una quebrada y allí cogió al hijo del Trueno. Lo crió con el pecho de muchachas de trece y catorce años, las cuales sólo resistían tres o cuatro meses y se morían. Al fin *Lliban* pudo comer alimentos especiales. Se crió y le pusieron el nombre de *Lliban*. Resultó ser el mejor médico de Tierradentro. Una tribu Pijao venía a matar al hijo del Trueno. Lo rodearon por el Alto de Belén, por la Muralla, por la Quebrada *Kukiyú*, por todos los lados. Estaba bloqueado. Entonces el cacique resolvió mandar a traer el arma precisa: La boleadora. Como estaba pendiente del enemigo, envió a un criado por ella diciéndole que estaba dentro de una olla. Dentro de ella encontró una culebra verde muy grande. Tuvo miedo. Volvió donde el cacique a decir lo que había visto. Este en persona fue a traerla y no tuvo miedo. Sacó la culebra. El enemigo se acercaba por todos los lados. Boleó la culebra y murieron todos los Pijaos hasta *Togoima*. El quedó vivo. Y como era hijo del Trueno se fue donde su padre. Esto lo hizo para demostrar que sí era hijo del Trueno.

Según otro informante la culebra era el rayo, por eso es que a veces truena muy fuerte.

Informante: Celia Urriaga, 65 años, no habla castellano.

Intérprete: Marco Antonio Penkue.

Versión I

Lliban dizque había resultado de la reunión de unos médicos ordenada a la sazón por la voluntad de una cacica. Los médicos hicieron venir una soberbia creciente en cuyas ondas tumultuosas venía también el hijo del Trueno. Lo cogieron y se lo llevaron a la cacica. Empezaron a mantenerlo con sangre de escogidas muchachas impúberes. Comenzaron a escasear puesto que se morían muy pronto. *Lliban* empezó a comer. No pudieron domesticarlo y le pusieron el nombre de *Lliban*. No se amañó a vivir en casa y se trasladó a *Eshufi Ik* (laguna del oso). Al irse resol-

vió acabar con los pijaos. Cuentan los antiguos que en una ocasión estableció una huerta en Calderas con papas, maíz, alverjas, repollo. Esperó que vinieran los pijaos a quitársela. Así fue. Calculó que todos se encontraban en la huerta, se hizo en *Kuetaguata* (piedra de la silla) y en un azotón mató a muchos. Quienes quedaron vivos pensaron que era *Llíban* el que les ocasionaba daños y se propusieron matarlo. Salieron en su búsqueda. *Llíban* los mató en la primera subida.

Llíban aconsejó a las cacicas que hicieran respetar a los mayores; velaran porque las tierras no cayeran en manos de extranjeros y en caso de que volvieran los Pijaos lo llamaran por medio de los médicos para exterminarlos.

Un día dijo que se iba y a pesar de las súplicas salió de *Eshufi Ik* y se marchó.

Informante: Felisa Ñunda, 70 años, no sabe castellano.

Intérprete: Marco Antonio Penkue.

Versión II

Una vez estaba el agua sucia. Un muchacho fue a ver por qué estaba el agua sucia. Se encontró con un viejo llamado *Llíban*, quien le dio una cosita. "Ud. puede pelear con los Pijaos", le dijo. Esa cosita se llamaba *isot* (boleadora), la recibió y la guardó en una olla. Llegaron los Pijaos y mandó a un criado, seguramente un pariente, a traerla. A su regreso dijo que no había tal boleadora y que sólo existía una culebra; no la trajo porque tuvo miedo. El muchacho fue personalmente a traerla; boleó con ella, sonando como un trueno; mató a los Pijaos hasta *Kuetando*. Ese muchacho se llamaba *Llíban*, pero era hijo de gente. "Yo me iré a vivir a una laguna, yo no muero jamás", dijo. Tiene que estar vivo aún. El Trueno mandó a un muchacho para que se vuelva Trueno mismo.

Informante: Victoriano Piñakué, 18 años, habla bastante bien el castellano.

5—*Juan Chiracol*

Se sabía que Juan Chiracol había resultado de dos "chinitas" que habían venido de arriba, del filo de *Zenzepechi*, huyendo de los Pijaos.

Tenían para alimentarse papas y otros productos de la tierra. Con mucho trabajo y con herramientas de piedra alcanzaron a tumbar la montaña.

En una ocasión entraron los Pijaos y se comieron a una de ellas. La otra quedó sola. Se hizo embarazar de un tigre y de esta unión nació Juan Chiracol. Era muy inteligente. Sabía de los sufrimientos que la madre había pasado; por eso luchó contra los Pijaos hasta exterminarlos. La madre se enseñó con la compañía del tigre, pues éste cuidaba a su hijo Juan y traía carne del monte. Cuando éste estuvo grande el tigre se fue. Madre e hijo se trasladaron al lugar que ocupa el panteón y empezaron a construír la iglesia.

Chiracol dio muchos consejos. Les previno no vender las tierras, las cuales eran solamente de ellos y por cuya razón había luchado contra los Pijaos. Manifestó que se iba y que no volvería más, pero que estaría viéndolos de la Laguna de El Caspe. Cuando se enoja dice uuuuh.

La laguna de El Caspe dizque está muy lejos, en los linderos de Atá. Goza de la fama de ser muy brava. Se cree que cuando se cae un árbol o se desliza una peña es Juan Chiracol quien viene a regañarlos. A Juan Chiracol no dizque le gustaban las mujeres, por eso no dejó descendencia.

Informante: Agustín Muse, 80 años, no sabe castellano.

Intérprete: Marco Antonio Penkue.

6—*Lliban y Juan Chiracol*

Lliban era un *sat* (cacique) de Calderas en su parte occidental, de allí que la primera casa situada en la bajada de *Puelchí* se llame *Lliban*. Hoy se llama *Eshufi Ik*. Juan Chiracol era también un *sat* pero de la parte oriental. Se escondió en El Caspe, laguna muy grande situada por los linderos de Belalcázar mien-

tras que *Llíban* se hizo hacia los linderos de Chinas. Después de vencer a los Pijaos, conversaron los dos y desaparecieron siguiendo cada cual su propio destino, por los lados mencionados. *Llíban* aconsejó buen manejo; les manifestó que quedaban libres de Pijaos y que en caso de que éstos volviesen lo llamaran por medio de los médicos. No se sabe cómo apareció. No conoció el bautismo, pero parecía cristiano.

Informante: Agustín Muse.

Intérprete: Marco Antonio Penkue.

7—*La niña que se volvió serpiente*

En cierta ocasión y en una creciente de agua bajó una niña. La recogieron las gentes y un matrimonio se encargó de su crianza. Habiendo llegado el padre para celebrar una fiesta, el matrimonio y las gentes salieron para misa. La niña también quería ir pero como estaba sin vestido, no la llevaron. El matrimonio iría lejos cuando la niña salió detrás impulsada por sus ardientes deseos de asistir a la misa y cubierta apenas con un pañolón viejo. Cuando el matrimonio llegaba a la iglesia ella llegaba a la quebrada *Yutuk*. Allí se convirtió en serpiente. La iglesia estaba llena de gentes. La serpiente se acercó al templo; era larga como el arco iris y tenía dos orejas como de burro. Con su cuerpo rodeó la iglesia, circunscribiéndola y entró la cabeza por la puerta. Se comió a todas las gentes, menos al matrimonio que la estaba criando, el cual le suplicó se esperase un poquito. Salieron tristes. Acabando de comerse a las gentes, la serpiente se irguió hasta el cielo para devorar a la Virgen. Cuando estaba alta, muy alta, salieron dos animales (*Ok* = águilas) de *Puelchí* y por el aire se dirigieron a la plaza, mordieron a la sierpe en dos partes casi destrozándola. Esta cayó al suelo, seguramente muerta. Un hombre vino con una mula a destrozarla, montó la mula y corrió muy lejos. Allí posiblemente se pudrió la serpiente, pero aparecieron culebras por todas partes. En *Ulnengá* había una, en un chupadero que olía muy feo cuando calentaba el sol. Subía y se comía a las gentes que tenían labranzas. Avisaron a un inglés quien con su espada la destrozó por la cabeza y el rabo, ambos de color azul. La cabeza voló por el aire

y cayó en *Ulnengá* en tanto que el rabo cayó en el punto llamado Loto.

Informante: Victoriano Piñakué.

8—*Formación del río Páez*

Chauténh hizo nacer el río Páez. Iba muy lejos por el camino, seguramente por el páramo. Tenía mucha sed y no había agua. En el monte había un pantano; tomó un carrizo de monte, lo clavó en el pantano, absorbió, salió abundante agua y tomó hasta saciarse. Esta agua no corría para ningún lado. Caminó el hombre y el agua lo siguió. Entonces pensó por qué no se quedaba el agua. Corrió y el agua también. Se subió a un palo, el agua permaneció estancada a sus pies, haciendo charco grande sin desbordarse por ningún lado. Se fue el hombre y el agua lo siguió. Corrió mucho, el agua se quedaba un poquito, pudiendo entonces descansar mientras la corriente llegaba. *Chauténh* corría en zig-zag para evitar ser alcanzado por el agua. Por eso en La Plata el río corre con muchas vueltas. Como el hombre se cansaba mucho dejó a la corriente en el río grande (Magdalena).

Informante: Victoriano Piñakué.

9—*Chauténh*

Chauténh estaba causando muchos daños y se lo llevaron lejos, a donde sale el sol. Está dentro de un cajón grande pero con un solo ojo. *Chauténh* hizo todos los animales. Antes eran gentes. El chiguaco fué un hombre sacristán porque sabe rezar; el chicao sabe silbar y el guacharaca es muy charlón. El conejo fue un hombre muy mentiroso, cuando el perro caza no se deja coger, da vuelta y más vuelta. Había un hombre carpintero que sabía hacer baúles grandes como para acostar a un hombre. A *Chauténh* le dijo que le iba a hacer uno para regalárselo. Aceptó la promesa. El carpintero lo hizo cuidadosamente; lo terminó y se lo mostró. *Chauténh* se metió en él para medírselo y el baúl se cerró para no abrirse jamás. El carpintero para que no volviera a hacer más daños lo clavó. *Chauténh* suplicó: "Abrame, hágame el favor",

pero no le abrieron. Pidió entonces que le abrieran dos huecos para ver. El carpintero metió el escoplo y un hueco quedó bien; en el otro se le fue la herramienta y le sacó un ojo. A mí me hizo tuerto, se dijo, pero mientras yo esté aquí él estará mirando palos, y abriendo palos, nada más. El carpintero se convirtió en un pajarito que en un palo abre un hueco, pone huevos y hace cría.

Informante: Victoriano Piñakué.

10—*El mar*

Cierta ocasión Tomás Dimales díjole a Pedro, su hermano, que hiciera una prueba. Tomás sacaría un río y Pedro se encargaría de atajarlo. Aceptó la propuesta y echó a correr. Por aquel tiempo no se sabía dónde paraban las aguas. Pedro advirtió previamente a su hermano que le avisaría cuando el río hubiese sido atajado. Así fue. Cuando Santo Tomás fue a ver encontró el mar donde Pedro estaba. Este le dijo que se fijara bien si el río corría. En ese punto había detenido las aguas.

Informante: Vicente Puchi, 56 años, habla castellano.

Intérprete: Marco Antonio Penkue.

11—*Piedra Alta*

Pedro y Tomás Dimales eran dos hermanos, malo aquél y bueno éste. Vivían juntos y andaban en compañía. Por ese entonces Calderas era plano. En cierta ocasión recorrían juntos los linderos de la Muralla; no había peñas. Pedro le dijo a Tomás: Mira los peñones que se han formado; Tomás replicó que aquello no era posible siendo la región plana. Cuando señaló el sitio se levantó una gran peña: es la Piedra Alta.

Informante: Vicente Puchi.

12—*Pedro y Tomás Dimales*

Tomás siendo bueno recibía a Pedro cuando iba. Este le manifestaba sus deseos de ayudarle a trabajar y por unos días lo hacía bien. Una vez Tomás le mandó a sembrar maíz. Lo sembró pero toda la semilla la echó en un solo hueco. Otra vez Pedro

fue a desyerbar maíz pero su labor fue únicamente cortar el maíz. En otra ocasión, Pedro andaba enojado con Santo Tomás, llegó donde éste y le dijo que parecía una piedra. La intención era convertirlo en piedra. Como Tomás era Santo no logró su propósito.

Informante: Guillermo Guagás, 35 años, no sabe castellano.

Intérprete: Marco Antonio Penkue.

13—*Santo Tomás*

Santo Tomás era hermano de María Santísima, pero muy pícaro y muy feo. Para apreciar lo que la gente le decía tenía piojo, sarna; era asqueroso. Cuando alguien murmuraba lo convertía en piedra. A la hermana le disgustaba que hiciera todas estas cosas y muchas veces lo amonestó porque de seguir así acabaría con el mundo. El fue quien dejó tantos riscos, peñas, piedras feas. Con una pisada movía el mundo. A los cristianos, hijos de María Santísima, los convertía en Piedra. Cometió tántas faltas que María Santísima se enojó. Se marchó al cielo para no ver tántas iniquidades. Su hermano se fue detrás; llegó al cielo y María le ordenó que volviese al mundo; bajó en un ventarrón. En seguida lo mandó al fin del mundo, donde está. Se acabaron sus molestias. A veces se enoja y hace temblar la tierra, pues quiere como salir, cuestión que no permite María. Dixque María Santísima lo puso en cajones de bronce, mediante un ardid. No puede salir pero hace temblar al mundo.

Informante: Agustín Muse.

Intérprete: Marco Antonio Penkue.

Versión I

En Lame cogieron a Santo Tomás. En Lame dixque hay una piedra donde colocó el rejo y se sentó encima. Allí dixque están las señas. Cuando descansaba vió un pájaro bonito: embelesado en ello estaba cuando lo cogieron y lo metieron en un cajón. Lo hicieron dormir; lo enterraron y sembraron un palo llamado *tachi* (tachuelo).

Los temblores son producidos por Santo Tomás cuando cansado de una posición la cambia para descansar.

Informante: Corpus Guagás, 18 años, sabe castellano.

Intérprete: Marco Antonio Penkue.

14—*La casa de fiesta petrificada*

En el punto denominado *Uikuet* diaque había una casa que celebraba una fiesta. Está petrificada. Cuando la fiesta se efectuaba llegó un niño bastante harapiento a pedirles comida. Una vieja rezongó que habiendo tanta gente para qué iban a darle a ese pequeño. Salió éste y dijo: Yo veo piedra. Toda la casa se convertió en piedra. El pequeño se volvió grande. Todavía diaque se ven las ollas cayéndose. Aquel pequeño era Santo Tomás.

Informante: Corpus Guagás.

Intérprete: Avelino Penkue.

15—*Las piedras de Chaikin*

Las dos piedras de Chaikin las hizo *Chauté̂h*. Dos mujeres llevaban caña. Aquel les pidió que le regalasen caña y no le dieron. Entonces las convirtió en piedra.

Informante: Victoriano Piñakué.

16—*La madre de la sal*

Los antiguos veían a la madre de la sal. Veían una viejita con los moños que eran pelotas de sal. Los antiguos decían que esa era la madre de la sal.

Informante: Justo Muse.

Intérprete: Marco Antonio Penkue.

17—*La candela*

Una viejita poseía la candela. Una niñita fue a solicitarle unos tizoncitos. La vieja apenas le regaló unos bagacitos prendidos,

que se apagaron antes de llegar a la casa. Volvió nuevamente a pedir otro tizón, pero la vieja no estaba. La candela ardía adentro en gruesos tizones. La niña tomó uno grande. Se dio cuenta la vieja y salió en su persecución mezquinándole el tizón. La niña corría, pero cuando la vieja la alcanzó botó la candela en una paja "jecha" y buena. Las gentes que carecían de candela la sacaron de ese punto, llamado por tal razón, *Ipikué* (Plan de la candela).

En esos días estaban haciendo el pueblo. Pensaron en el nombre. Si sale la candela, dijeron, se le pone Calderas, de lo contrario *Buktá*. Salió lo primero y el pueblo se llamó Calderas.

Informante: Victoriano Piñakué.

Versión I

Los viejos cuentan que había una vieja poseedora de la candela y que la repartía a las demás gentes. Una vez no quiso darles más candela y la apagó con el fin de dejarlos sin ella. Conservó únicamente un palo encendido y se fugó con él. Los indios la persiguieron y cuando la alcanzaban abandonó el tizón a un lado del camino y se escondió en un río. Por el humo encontraron la candela y todas las gentes pudieron proveerse de ella. Esa sí ya no se volvió a apagar. Se cree que la vieja era pijao.

Informante: Vicenta Tumbo, 40 años, no sabe castellano.

Intérprete: Marco Antonio Penkue.

Versión II

Cuando recién entró la religión, había una vieja que se sacaba la candela del sobaco y se la daba a quien se la solicitaba. Llegaron los misioneros y dijeron que esa candela era bruja y que por lo tanto era menester bendecirla. La vieja salió en huída para no dejarse quitar la candela ni dejarse coger de lo bendito. Al salir corriendo la vieja se ardió y las llamas la cubrían íntegramente. Al llegar al río que estaba muy crecido se arrojó en él. La vieja dizque era un fenómeno (pijao); cara muy grande, pelo como crin y bastante cana.

Informante: Juan Petina.

Intérprete: Marco Antonio Penkue.

Versión III

Contaban los antiguos que una vez había una niña que nada poseía. Se le apareció María Santísima y le preguntó qué hacía, respondiéndole que allí estaba. "Vas a tener que soplar la candela, le dijo, porque hasta yo tengo frío". Ordenó que buscara unas chamicitas, María Santísima sacó la candela del sobaco. Le previno que la conservara, pues sin ella no podían vivir. De allí nació la candela para todos. Por eso le pusieron al lugar el nombre de Calderas. María Santísima dio la candela y se perdió.

Informante: Agustín Muse.
Intérprete: Marco Antonio Penkue.

18—*El armadillo de mina*

Mi papá estaba en una casa. De pronto miró un animal que alumbraba como lámpara; la luz subía hasta el cielo. El animal era un armadillo de mina que subía por el monte. Al lograr cogerlo se le echa en un baúl grande y se le pone maíz para que coma. Se vuelve mina, puro oro. Antes de cogerlo hay que alistar la plata, unos cincuenta pesos o cien; con un pañuelo nuevo se lo envuelve y se lo alza, es livianito. Sin la plata se lo ve en la quebrada o en el camino pero no se lo puede coger; mete la mano donde está el armadillo, la levanta y no se menea.

Informante: Victoriano Piñakué.

19—*El hombre flaco*

Mi papá compró una olla y se la cargó a la espalda. Por la noche borracho se encontró al hombre flaco, sentado en el camino, era un alma. El se iba a caer a la zanja, pero el alma no lo dejó caer y lo acompañó hasta la casa, como si fuera hermano. El papá asustado se caía pero el alma lo contenía; llevaba la luz, haciendo la noche muy clara. Sin embargo no hablaba. El hombre se parecía a las Madres, era bien blanco.

20—*El diablo*

Mi papá venía de Belalcázar a caballo, con un compadre; detrás de mi papá iba yo. El compadre se quedaba atrás; venía

con mucha carga. Tomando la bajada de El Tablón vieron que al frente salió un hombre. Allí llovió un poquito pero escampó pronto; una nube que estaba, se fue elevando. El hombre corrió mucho, iba en un caballo negro, colimocho y portaba un caucho negro. Mi papá bajó hasta la quebrada de El Tablón y no encontró nada. En la quebrada había una puerta, no pudo abrirla, el caballo saltó. Miró por todas partes y no halló nada. Buscó los rastros, tampoco los halló. Entonces pensó que era el diablo.

21—*El hombre Tigre*

Antes sí había gente tigre, que eran lo mismo que el tigre de monte, que se come las ovejas. Los hombres salieron, una vez, con escopeta y perro a cazarlo, sin éxito alguno. Convidaron a un hombre tigre para que lo cazara. Este se fue al monte con una peinilla, encontró al tigre verdadero y se puso a jugar con él, hasta que se enojó y lo mató. El hombre tigre tenía mucho más fuerza pues comía sal. Lo colocó en el camino y mandó a las demás gentes a traerlo. Fueron con escopetas; el tigre parecía vivo, así lo creyeron y se devolvieron. El hombre Tigre les aseguró que estaba muerto, regresaron y entonces ya lo cogieron. Lejos, muy lejos, hay hombres tigres. En Cali. Los blancos mismos son tigres. Los hombres tigres son ladrones.

Versión número 1

Los ladrones se vuelven tigres y se van a traer vacas a Garzón y Neiva. Regresan a su casa y nuevamente se convierten en hombres.

En el páramo andaba un hombre cazando solo. Vio a un pijao que prendió candela, amontonando chamiza y sacando fuego del sobaco. El pijao tenía un bastón de oro y el cazador dijo, yo le quito esa vara. Se volvió tigre, mientras el pijao sacaba plátano y culebra para comer. Cuando convertido en tigre quiso quitarle la vara, el pijao corrió como tres horas, seguido de cerca por él, hasta que llegó a su pueblo. El tigre se convirtió en hombre para mirar el pueblo, mientras el pijao avisaba a sus parientes y salían éstos en su persecución. El hombre se convirtió nuevamente en tigre, corrió, llegó al punto de partida y en una jigra

se llevó el plátano asado para su casa; volvióse hombre y contó a su mujer lo acaecido.

22—*El hombre y el perro flaco*

Mi papá venía del mercado, tomancho chicha. Se emborrachó y se durmió en el camino. A la media noche se despertó y siguió. Vió un perro flaco. Le pegó. Luégo salió un hombre bien flaco con el corazón colgando. El hombre corrió. Mi papá también corrió. Bien adelante mi papá lo fuetió. El sin pensar cayó en el plan y se durmió. Se despertó al amanecer y sólo vio que había pegado a las flores, pues estaban machacadas. Pegaba sin pensar.

23—*La cabeza*

La cabeza anda sola. Esa se levanta bien lejos. Anda de noche. Sólo es una cabeza con un diente, una oreja y sin cuerpo. Un hombre que estaba con un bordón sentado en una piedra la vió, le pegó y la mandó al río. El hombre salió corriendo. La cabeza salió de la quebrada a perseguirlo traspasándolo, pues el hombre se había trepado en un árbol altísimo, para esconderse. Se vuelve y busca al hombre con el olor. Lo mira en el árbol, pero hasta allí no alcanza la cabeza. Esta cabecea y cabecea hasta que canta el gallo, hora en que se fue para su casa. Allí tiene parientes. Si es hora del amanecer y si acaso no ha llegado a su casa pide posada donde sus parientes. A la siguiente noche llega a su propia casa. El hombre se bajó del árbol asustado y se fue a la casa avisando a todas las gentes (esposas, hermanas, hijos, papás, o parientes) de que había visto esta cabeza.

La cabeza puede salirle a cualquier hombre sea que ande borracho o no. El animal baja las pendientes fácilmente. En tanto que las escala con dificultad.

Va por debajo de la tierra y sale en el campo.

24—*Los animales*

Un hombre se fue donde un pariente que vivía lejos. Tomó chicha con un primo. Se emborrachó y caminó por la noche. Lle-

vaba una peinilla y además escopeta para matar guacharaca. Hizo un tiro. Se vino algo así como un puerco. No veía a nadie a pesar de que miraba por todas partes. Sacó la peinilla para defenderse, pero no veía nada. Disparó nuevamente su escopeta al aire, entonces salieron muchos animales, a juzgar por el ruido que hacían en las hojas de los árboles, pero no se veía nada, se oía el ruido y nada más. La noche estaba muy oscura, prendía fósforos pero se le apagaban pronto. Gritó entonces. Oyó una parienta y se fue a verlo en compañía de su hijita. Llevó un bagazo prendido, con el cual ahuyentó los animales. Al hombre lo encontraron en un zanjón, lo sacaron y se marcharon con miedo. Las mujeres adelante y el hombre atrás. En el camino había una quebradita y en el agua parecía que se movía un animal. El hombre miró atrás y vio brillar únicamente dos ojos y gritó: "ve, allí viene un animal" y se adelantó a las mujeres. Estas no vieron nada. Alumbraron y los animales se quedaron.

A las nueve de la noche ya están andando los animales. En Semana Santa andan mucho. La gente no puede salir.

25—*El cielo*

Informante: Agustín Muse.

Intérprete: Marco Antonio Penkue.

Una vez que estuve moribundo mi alma ascendió hasta el cielo, que es una planada donde la vista se pierde en el horizonte. Es boscoso a la entrada. La Virgen me dijo que ese terreno era para sus hijos y que yo tendría un pedazo. Para llegar al cielo primero se va por buen camino y luégo se pierde; el más emboscado, conduce al palacio de la Virgen. Dizque es malo comerse el erizo, porque ante María Santísima llega vestido con ese pelo. Va donde el diablo aunque éste no pueda cogerlo, tiene garabatos con los cuales se lo lleva. De allí que a la hora de acostarme o de levantarme invoco a mi Dios y a María.

El palacio de María enceguese con su resplandor. Es muy bonito. La Virgen siempre tiene el Niño, sólo rara vez lo coloca en algún sitio.

Lo que yo vi lo cuento a mis semejantes, pero ellos se burlan de mi relato.

Es sagrado, debían respetar.

Van al cielo los buenos, entendiéndose como tales los que no maltratan a las personas, ni hablan mal, ni son patanes.

26—*Origen de las plantas*

Los viejos decían que toda clase de semillas habían sido dadas por María Santísima, quien las sacaba del vientre y las daba a los cristianos para que se mantuviesen. Las plantas son, pues, herencia de María Santísima. Ella dejó toda clase de semillas cuando estuvo el hermano. De allí la rabia de éste, que deseando dar semillas y animales no podía. Tal vez las culebras las hizo Santo Tomás.

I

Point of Departure

631 To the north of the municipio of Inzá and to the west of
[361] the confluence of the Ullucos and Páez rivers, two hours on horseback from the points just mentioned, the corregimiento /district governed by a corregidor/ of San Andrés is found on the left bank of the Pisimbalá torrent, an affluent of the
[175] Ullucos. Its name has been registered in the parochial books
[103] since 1736, when the priest José Fernández Belalcázar, as the
[797] representative of the Bishop of Popayán, initiated in San Andrés de Pisimbalá pastoral visits to the Paez pueblos.

361 San Andrés de Pisimbalá is a pueblo with the same characteristics that we have noted in other Paez centers; that is to say, it consists of a church, a school, the rectory, the house of the cabildo, and some others used solely for the celebration of religious fiestas. It is located on a small plateau, a ledge hanging on the declivity.

563 At the present time it is inhabited by whites and mestizos
177 whose ways of life, norms of behavior, and labor practices
361 have been imposed on the natives. Resistance to contact has
[648] been overcome, but active resentment against the white still
[566] crops out among the old people. Almost completely acculturated, many of them have sunk to the state of tenant farmers. The phenomenon of the colonization of Indians and land is the same everywhere. The Indian loses his land and sinks into servitude.

In 1926 the Municipal Council of Inzá created a settlement area with clearly delineated boundaries in a common agreement /178/ between the municipal authorities and the cabildo. The colonists established themselves in that area. The valley of the Pisimbalá torrent is narrow, but extremely fertile. It belongs in its entirety to a few families of colonists,

/178 cont./

361 who have established coffee and sugar-cane plantations and
[563] cattle ranches. The natives occupy the steep and barren sec-
177 tions.

The pueblo of San Andrés consists of 23 bahareque houses
[342] /houses with walls made with two faces of sticks with mud and stone between them/ with thatched roofs. Only one is of brick and tiles. In its general lines the plan is reminiscent of that of Spanish centers: a central plaza with houses around it.
346 The church, which is large, thatched, and white, has a hand-
361 some façade, with a bell tower, arches and columns, a style reminiscent of colonial architecture; it stands in the center of the plaza and was built in the first decade of the nineteenth century by Padre Joaquín Núñez y Tobar. On its south side there stands a large, very old and dilapidated building where the school and the rectory functions; on the other sides it is surrounded by the colonists' houses.

366 There are two stores with a regular supply of merchandise, and on Wednesdays there is a small market where one beef, a few agricultural products, and chicha are sold.

133 Toward the end of the Pisimbalá valley are found the not
175 very extensive plateaus of Argentina and El Rodeo. El Rodeo has marked historical significance; for a long time it was called Segovia. In the spirit of conquest and colonization, the town of Nueva Segovia was founded there by Captain Hernando Arias Saavedra in accordance with the mandate of Governor Sancho Espinar, who in 1578 gave up these lands after his vainglorious campaign against the Paez. It was short-lived. On this same plateau Mosquera's rebellion against the government of Don Mariano Ospina Rodríguez was won by his spectacular victory over the government forces headed by
[317] General Joaquín París (1). In spite of this, the markets for

1. González, David. Los paeces /The Paez/, manuscript.

/178 cont./

several leagues around were supplied for a long time with the salt extracted from the three salt deposits that still exist in Segovia. Across from these and on the other side of the Ullucos, in Vivorá, another salt deposit was also exploited.

At the confluence of the small stream called El Escaño and the Pisimbalá, on the right bank of the latter and at the foot of the ridge of Aguacate, the Archeological Park of /179/ Tierradentro, a branch of the Instituto Colombiano de Antropología, is located on an alluvial terrace covering an area of two hectares. Founded some 15 years ago, it is in charge of the care and conservation of the archeological monuments, which have been known to the scientific world since 1936, but to which reference was made as early as around the penultimate decade of the last century, when Dr. Carlos Cuervo Márquez carried out his explorations through the "lands of the Paez and much of the Nevado del Huila." Subterranean necropolises with columns, colonnades and niches, black and red geometric painting on a white background, statuary very similar to the Augustinian, ceramics and metalwork are the principal exponents of this culture hardly known in descriptive form.

The Archeological Park of Tierradentro has served as the center of operations for the scientific expeditions which the national government has sponsored, fostered, and supported during the last 15 years.

II

Over the Zigzags of the Road

In order to travel on winding roads one needs horses resistant to fatigue; a dashing spirit must yield to a solemn step, firm tread, and steady pace.

/179 cont./

123 At 11 o'clock in the morning we left the Park, bound for
484 Calderas. The road climbs through the Pisimbalá valley, at
491 first on its right bank and soon on the left, after crossing a wooden bridge with a plank roof; from this bridge to the pueblo of San Andrés, three streams have to be crossed: Chapéquís, La Virgen, and the cemetery stream. Along this short distance and at the edge of the road we counted ten houses, all of them thatched except one of masonry, tiles, oil paint, modern manufacture; the others have white washed walls, painted doors, and are generally clean and orderly. They are the houses of mestizos and colonists settled on their respective fincas.

At 11:30 we left the settlement and took the path that leads to Calderas; the road goes ever upward, in slow and slippery
123 zigzags. As we go along, we see houses with graphite-colored
342 roofs and walls which are black when made of mud or (and these are in the majority) yellow when they are of maize stalks; they lie as if submerged /180/ in the plantings of bananas, sugar cane, and yuca; bluish smoke rises vertically in thick columns from the openings.

123 At 12 o'clock we came out on the Mesón, Supok in the
133 Paez dialect, a small plateau oriented from north to south
[361] and bounded on the east and west by great depressions. Many native huts stand there.

[137] The beautiful valley of the Pisimbalá torrent comes into view in its entirety; contracted at times, then widening more, extensive in length and generally narrow, it descends in a gentle slope in pursuit of the noisy Ullucos; covered with thriving vegetation, it looks like a carpet of living green blending in its tones the stateliness of the cachimbos /búcare, Erytrina umbrosa/, cedars, guamás, gadua bamboo, and yarumos /Cecropia peltata/, and the splendor of the plantings of sugar cane and bananas and the pastures of the herders.

[131] An hour later we reached the Yukaichí ridge, the boundary of the parcialidades /territorial divisions/ of San Andrés and

/180 cont./

123 Calderas, and the water divide of the Kukiyú river and the
133 Pisimbalá torrent, the former a deep gorge, the latter an
[131] elongated basin. Toward the north, the outline of another ridge bounds the horizon and divides the parcialidades of Suin and Chinas. Prominent along it, the Vichaguau peak, the hill Dondotá with the double crests, between which, when the sky is clear, one can see Huila with its eternal snows, where the golden rays of the sun break into a silvery radiance. Toward the east one sees the hills of Chindavá and Potrerito, the heights of Togoima, and the canyon of the Páez. Toward the south stand the mountain ranges of Pangok and El Aguacate, which separates the valleys of the Pisimbalá and the Ullucos; the tablelands of Pedregal, Turminá, and Inzá; the sharp peak of Trueno /Thunder/, the "Kapich" of the natives, a summit
823 of silence, lightning, thunder, and storms. In the place where
173 the sun sets, there rises, stately and challenging, the sharp
648 peak of Hipinjí (1), on which, according to some Indians, lie
[133]
[104]

1. H = the English h.
   J = the French j.
   Sh = the French sh.

the images of saints, the bells, the clothing, the gold, and the silver which the Paez army carried away from San Sebastián de la Plata after murdering all of its white inhabitants, setting fire to the town, and filling up the famous silver mines which had given the town its name and brought large numbers of ad-
173 venturers and not a few misfortunes to the Indians. This legend
823 has fired the imagination of the whites and has led not a few to search for them. It is said that several whites went to the Hipinjí in search of the legendary treasure. At the /181/ /illustration appears here/ top of the peak a white flag was waving. One day there appeared on it the following mysterious order: "At 12 o'clock you may clear out this opening." Their enthusiasm was renewed, their fatigue forgotten, and they went to work eagerly. One worker was rewarded by blind

/181 cont./

173 fortune: his efforts brought to light a large jar overflowing with
823 gold. In his great joy he went running to his companions to tell

142
291
302

173 them of the coveted find; in their eagerness they all flew to the
823 lucky spot, and oh! supreme misfortune, the treasure had vanished. Minutes later, the powder flask exploded, killing several, mutilating others, and leaving only a few alive. The whites localize the Hipinjí legend in Tumbichukue.

487 /182/ The descent to the Kukiyú is effected along a
499 vertical ridge, following a path with innumerable zigzags, an

/182 cont./

487 authentically native achievement which is a true work of
499 engineering; it could not have been done in any other spot or in any other way. The bridge over the Kukiyú was built with two thick beams over which thin cross-pieces have been fastened together with lianas; like all Paez bridges, it has a thatched roof and side rails.

III

Black, Smoking Dots on the Horizon

24/36/ From Yukaichí one can see almost the entire parcialidad
[133] of Calderas, exept for the left bank of the Kukiyú. On the ridge of a hill, at the end of a canyon, on a slight plateau, discreetly hidden on a gentle slope or on a bold declivity, one sees trapezoidal figures that glow like graphite, surrounded by rows of golden stalks of maize. They are the Indians' huts, built far apart, submerged in the green landscape of the plantings of bananas and sugar cane, and through whose openings a thick bluish smoke is always emerging, a sign of life and activity.

311 While to the Guajira /Goajiro/ livestock is a symbol of sustenance and the tending of herds its concomitant activity, to the Paez the land is the sustainer of man; the black layer that covers the rocks feeds the woodland /monte/ after the harvest; time will tell when it will be mature and ready for fencing in anew the clearings that will yield the longed-for maize, the plenteous arracacha, the small beans, the blooming cabbage, the thick and abundant santo wheat /trigo del santo/; in the grasslands graze the cattle with bright and variegated hides, small, swift horses of great endurance, the many herds of pigs that fight over the tender roots of shrubs, and the mild sheep that yield wool for the men's ponchos, the women's skirts, and the kuetand yahas of both.

/182 cont./

423 The work on the land is a daily exercise in co-operation.
461 Owership by an Indian is an unquestionable right, and its de-
[173] fense a categorical imperative. Lliban and Juan Chiracol
[628] fought the Pijao for the ownership of the land and to defend an
[648] inalienable right. Likewise, because the whites covet their land, they do not like to have them around /183/ and avoid receiving them under some pretext or other. Their security and
[795] their happiness lie in the ownership of land. Poverty as they understand it, a shortage of food and livestock, is due solely to the laziness of those who suffer it.

857 Children grow up in continuous communion with the
868 activities of their parents. While the girl helps her mother in household tasks and goes out with her to bring firewood from their respective clearings, the boys with their machete on their shoulder and their pouches of coca and mambe /lime/, exactly like their fathers, clean the clearings, build fences, weed their plantings, and when the maize ripens and the wheat grows tall, they spend the day defending them against the attacks of parrots, guaras, borugos, squirrels, and coatis. At an early age they are already doing the same tasks, but with the hope of building a house, marrying, raising children, and owning livestock, large quantities of coca, and sugar cane for their
342 chicha. In a way, the house is a necessary supplement to their pieces of land; furthermore, many are for the period of the clearings. The selection of a site for the house does not take into account either the beauty of the landscape or the levelness of the terrain, but rather the inaccessibility of both. Only when the house is to last for more than one generation will they attend to certain requisites: solidity, construction or privately owned land, and the selection of an adequate site by the medicine man (té éu). One fine day the owner selects
[759] a site: "This is a good place to build a house and to live," he
[787] says. Then he takes there the medicine man, who during the night "thinks about" whether the site is suitable or unsuitable; he chews coca and remedies, takes mouthfuls of aguardiente

/183 cont./

342 and blows them into the air; with a small staff called "tama"
756 he cleaves the air in such a way that sometimes he appears to
787 be frightening away the spirits, sometimes threatening them,
[823] and sometimes clubbing them. If the signs (reflex movements)
are felt on the right side, the site is favorable; the opposite
denotes that the site is uninhabitable. The spirits are angry,
[761] or there are Pijao bones and gold at the site. If the site has
not been selected by the medicine man, even if the house is a
handsome one it cannot be occupied, for its occupants would
die, beginning with the children, continuing with the mother,
342 and ending with the father. The medicine man himself pro-
756 hibits people from living in a house built without the fulfill-
ment of this requisite. The medicine man's dictum is rewarded
with a bottle of aguardiente, an egg (1) of coca, tobacco, a

[804] 1. A measure of weight equivalent to the weight of a hen's egg.

calabash of chicha, and usually a meal with chicken. /184/
[789] This is called "care" /cuido/. When the house is finished,
the medicine man will place special remedies at the ridgepole
to prevent the ghosts or echi from descending by way of it or
from being angered.

342 Then come the mingas /communal work-parties/. A house
476. is built with the help of others. The people are invited, in-
cluding the medicine man himself, who goes to work as a
laborer. The work is organized. First, they go to the wood-
land for wood; under the influence of the guarapo, voices re-
sound, loud laughter is heard, and the deep sound of the
"cacho" /horn/ rumbles in the montañas, multiplied by its
342 echoes. Soon they report to the man in charge. They level
335 out the ground that will serve as the house floor; they dig holes
476 in which to sink the posts approximately two meters apart,
driven in solidly, and tied at the top to cross-pieces with lianas
(guák); the posts outline the shape of the house, and they will

/184 cont./

342 bear its entire weight. Over this frame are placed transversally
335 the pikas, beams that go from one wall to another, to strengthen
476 the entire structure. Then the four-slope roof will be raised and covered with bundles of sugar-cane leaves (flushets) or straw (sits) which are fastened around the frame, starting at the bottom; it is completed by the ridgepiece, more massive and notched in a straight line on both sides to a depth of some 50 centimeters; at the apex, some mounds of straw are piled up at regular intervals and a cross is set in each one of them. The man in charge directs the last touches from the ground: "There is not enough straw over there; there is too much here," he notes in a commanding voice.

The walls are made with tall stalks of maize placed in a row between the posts and tied with crosswise bindings, likewise of stalks. The partitions of the interior rooms and the doors, generally one, which leads to the exterior, are made in the same way.

342 In the construction all do the same tasks, except for the
476 man in charge, who supervises. Neither the man in charge nor
465 the workers are paid anything, "it is not customary to pay among the Indians"; they are merely treated to chicha, aguardiente, a meal with meat, and coca. A calabash of chicha and a bottle of aguardiente are presented to the man in charge and shared with the helpers. When the work is done, they get drunk and dance.

342 The women do not participate directly in the /185/
462 /illustration appears here/ construction work; they cook, distribute
476 food, keep the house supplied with firewood and water, talk, and delouse and comb one another.

342 Three types of dwellings may be differentiated among the
177 Paez, in accordance with the greater or lesser introduction and acceptance of foreign architectural features, since nowadays elements of foreign origin are spreading and taking root: bahareque construction, interior division into rooms, the square

/185 cont./

342 house-plan, the use of nails, plank doors, and even locks and
177 keys to safeguard the dwelling; likewise, whitewashing is not unknown.

342
576

342 The rectangular hut is the most primitive type of dwelling:
352 tiny and light, crude and totally artless; a two-slope roof, walls
353 of stalks laced together with an /186/ entrance door; an earthen
23/ floor; a kitchen in the center, with hides all around it; pouches suspended from the posts; on a three-legged beam, the grinding stone; a smoke-blackened interior; and living intimately with the guinea pigs.

/186 cont./

660 with the guinea pigs. These ranchos give the impression of
342 extreme poverty in their dwellings. None of them is of bahareque.

342 The second type of dwelling, which is more widespread
177 and shows a larger number of foreign architectural elements, is the large rectangular house with a four-slope roof, 15 to 20 meters long by four or five meters wide, with one or two doors and two or three rooms, one of which takes up two-thirds of the space made, and the last third is subdivided into the room intended for the kitchen and the other for the chicha troughs and
[841] pantry. Not a few of the dwellings of this type have a compart-
[343] ment for menstruating women (du yate léchukue), although as a rule small huts are built outside the house for this purpose.

[573] In this type of dwelling one commonly finds bahareque,
[352] sleeping platforms, plank doors, and sometimes whitewashed walls.

361 The settlement of Calderas is made up of this kind of
342 dwelling. It consists of 14 houses scattered at random on a
[312] beautiful plateau of some 20 hectares, covered with pastures
[796] and crossed by drainage ditches that bring water to five of the
[346] houses, which are permanently occupied; the others, although they have owners, serve only for religious fiestas when the fiestero /fiesta leader/ moves there with his retinue of mayordomos, laborers, cooks, and the utensils for serving
346 aguardiente, chicha, and food. These houses are spacious, 25
796 meters long by six meters wide; thick mud walls, with a plank door at the entrance; the enormous sala, fiuhne wala, is 13 meters long; here stand the sugar mill, the metate (ûkukuat), the notched ladder for climbing to the garret, the pango pil, crudely hewn rectangular beams on which the men sit, one of which is 10 meters long; firewood is piled in one of the corners; the floor is of earth unevenly smoothed. The concentrations of people who visit the fiestero in a daily stream gather in these spacious salas; here music echoes, the albacero /fiestero's assistant/ is taken care of, the dances take place, the drunks sleep, and the sugar cane is milled.

/186 cont./

346 There are four other small rooms, five meters /187/ long
796 by three meters wide. Two of them are independent of each other, with their respective doors opening into the sala; one serves as a kitchen and the other to roast the maize griddle-cakes. At the other end of the house are the two other rooms, connected with each other by one door and with the sala by another. The workers sleep in one, and in the other are the troughs of chicha, the bottles of aguardiente, and the laurel candles.

342 The third type of dwelling, very scarce in Calderas, has
249 a square floor plan. It has the sala, two kitchens, and the du yate léchukue. Whatever type of dwelling a Paez family may own, they all have as an indispensable accessory the sugar mill,
[262] either inside the house or outside it. Actually, if it is kept in
[273] mind that the basic sustenance of the natives is provided by
[276] maize, cabbage, chicha, and coca, this instrument is indispensable.

342 In addition, each house is supplied with water, taken from
312 springs, streams, or falls, through the extremely skillful construction of ditches which skirt the valleys, hills, and slopes. Their lands have abundant water. They are not familiar with artesian wells.

342 In a way, the enormous salas in the houses of Calderas
177 represent the ramadas which are found among the whites,
249 mestizos, and acculturated Indians of San Andrés; they are built independently of the dwellings, with a sugar mill and an oven to boil down the cane juice and make panela. In this parcialidad, the panela industry is quite well developed. In Calderas it does not exist.

584 Among the Paez, land, marriage, family, and house form
583 a close and indissoluble unit. It lends warmth and meaning to
[183] a number of emotional, sentimental, and sociological complexes. This begins when the pubescent boy feels the need for a partner who will help him in his work and assuage to some extent the rigors of solitude. The love awakened by a dark, shapely maiden impels him to ask her parents for her. "Give my your daughter. I am alone and need help in my work."

/187 cont./

583 says the youth after he has conferred upon the parents-in-law
[584] bottles of aguardiente and calabashes of chicha according to his means. The parents always accede to the request.

At midnight he goes off with her to the house of his parents, if he does not have one of his own. They will live together for several months, one year, two...; during this time he will find out whether the woman can cook, grind maize, carry water and firewood, weave ponchos and /188/ pouches, and he will become familiar with her fidelity, temperament, and
583 character. Only then will he look for a sponsor /padrino/,
585 seek out the priest, take communion and receive the nuptial
[608] blessing, and return to his house, where the bubbling troughs of chicha, the savory "mute" /maize stew/ boiling in the pot, the crude guitars and the pleasing chirimías /a kind of orchestra/ will complete the sealing of the union. They will go through the night, and sometimes days as well, drinking, eating, and dancing.

462 The building of the house on the land of his property will
594 soon follow. Gradually, the man will furnish it with pangopil
[372] for sitting, crude plates and spoons for eating, pots for cooking, hides and sometimes raised platforms for sleeping, a sugar mill to mill the juicy cane; he will bring water from distant sources, provide troughs in order to ferment chicha, purchase machetes, axes, and picks to work the land, plant bananas, sugar cane, onions, and cabbages in his garden; he will put together the barzos where he will keep the bundles of wheat, the ears /caspas/ of maize, the mulberry-colored beans; he will acquire a dog and also -- why not? it has been his ambition and his hope -- he will buy cattle for the fiestas and a horse to race for San Juan and to operate the sugar mill. The woman, on her part, will tend the guinea pigs, breed her chickens and turkeys, look after the pigs so they will not be lost, shear the sheep, weave her yaha gwala (fique bags) for carrying the compact ears of maize, the rustling beans, and the green cabbages

/188 cont./

462 from the plantings; she will laboriously make the multicolored
594 kuetand yahas which she will give as tokens of love to her hus-
[257] band. The children, who "are a blessing of God," will come and help the man work the land or lighten the woman's kitchen chores.

594 The household lends individuality, a sociological frame-
183 work, status, and function to the family. Land, a house, and a family are specific ambitions of the Paez people. Possibly they represent their most cherished ideals in life.

IV

Live Ritual Fire

372 In the mind of every individual, and in the spirit of the family, fire is a symbol, a symbol of the house and of the home. A house without fire is a dead, abandoned house.

372 In ancient times, when the Pijao went about spreading
773 terror and death, when the caciques came down on the /189/ /illustration appears here/ roaring waters of the great rivers beneath the imposing dark night sprinkled with stars, and even much earlier, the Indians began their daily round by requesting fire from an old, white-haired woman. This fire died out when night spread its dark cloak over the world. Only the old woman's fire was immortal. The monotony of this daily request for fire was transmuted into anguish when the wicked old woman decided to leave and take the fire with her in a piece of wood. They all ran after her, seized the firebrand, and obtained fire from it for all the Indian households. This fire could be preserved.

Thus run the mythical accounts of the origin of fire. They reflect its importance. The manner in which it is preserved, the care which is exercised so that a fire is always /190/ burning in the house, seem to be superstitious attitudes from an ancient

/190 cont./

372 cult of fire. In times past, fire was obtained with "steel and
773 tinder." Whatever the case may be, the mythical accounts

346
291

372 disclose the usury of the owner of fire and anxiety when they were
773 on the verge of losing it. Nowadays, when through carelessness
[177] it goes out in a household, the matches of the whites are used to revive it.

513 The Indians go to bed early. At seven o'clock at night the
512 parents and the children lie down in a common bed on the dry hides of cattle, keeping on their bodies the clothes that covered

P /190 cont./
513 them during the day. They use no blankets. The woman
512 leaves sufficient wood on the fire for heat to protect them from
P the rigors of the cold of the night which filters through the
[262] stalks of the walls. In addition, over the fire there is a pot
[264] of "mute," beans, and cabbage, which, when cooked, will
P constitute the meal at daybreak. The fire is revived by the
[462] woman at 11 o'clock, an operation that is repeated about two o'clock in the morning. At four o'clock in the morning everyone is up. At dawn the woman distributes the food, and then the men come out of their houses with machetes in their belts, kuetand yaha filled with coca and mambe, to clear the woodland, weed the fields, or help with the hard work of their neighbors.

V

Anger, Rancor, and Politics

P
829 The Calderas Indians are arch conservatives. Tradition, pride, and a rebel spirit have much to do with their passion for politics. I do not speak of the conservative doctrine or of political concepts. They are conservatives by temperament and group solidarity. By the same token, their fanaticism is
P proverbial. The mere mention of the word "liberal" makes
829 609 them break out in a rash. Anyone who comes to Calderas for the first time is approached by the Indians out of curiosity. "What is your name?" "What do you want?" "Why did you come?" "What are you, liberal or conservative?" These are the questions with which the natives and even the local cabildo besiege the visitor. It should be added that those who wish to save their skins or to avoid being run out of town must main-
P tain that they are conservatives. It is said that in 1952 they
[797] [871] did not want to accept the Missionary Sisters who came to run
C the school which is supported by the national government.
[658]

/190 cont./

609 It was necessary for someone to tell them that they were sent by
797 /191/ Laureano Gómez before they all said: "Well, then, let
871
829 them remain."

666 In spite of their stubborn conservatism, the leaders of the
829 municipio cannot manage to make them vote for their chosen candidates unless they first get their ration of meat, chicha, and aguardiente. The ration and the vote form an indivisible unit.

829 "I am godo /Goth, pejorative for Spaniard/ to the marrow, a true conservative," exclaimed one of the important men of
[773] Calderas while he was drunk. "Juan Chiracol also was a conservative," said another.

829 The Indians of Tierradentro have been liberals since 1860,
175 thanks to the victor's aura gained by Mosquera on the plains
648 of Segovia. "The battle of Segovia" --says the padre David González--"in which the Indians took part and in which Mosquera encouraged the native ferocity, and the march on Bogotá, which fell to the rebel general, made him a demigod
[464] in the eyes of the Paez. Since the first days of the colony they have venerated the name Mosquera; the Marquis don Cristóbal Mosquera y Figueroa had been their master, their encomendero, he had taken them to Popayán in gangs to work on his haciendas, he had given to them the huge lands of his
[665] encomienda... Naturally the Indians of Tierradentro have been strongly bound since 1860 to the political faction which represented Mosquera, liberalism. In the armed struggles which later scourged the nation, the Paez staunchly bore the liberal standard."

829 In view of this, the political affiliation of the Calderas
665 Indians is an odd one; up to less than a decade ago, they formed a conservative island in the midst of a liberal majority. Possibly this attitude conceals a great desire to defend their lands. The Calderas people have no marked sympathy for the neighboring parcialidades. "They are Reds," say the natives,

/191 cont./

829 while the others contend for their land and reduce the extent
665 of the parcialidad. This is what the people of Avirama, Togoima, and Lame have done. Nowadays, their relations appear to be cordial, for their political differences, at least, seem to have been obliterated.

157 The Paez are extremely pugnacious, aggressive by nature; they are easily aroused and only with difficulty erase rancor from their minds. Their psychological characteristic seems [648] to be the explosion. History gives many authentic proofs. [669] Adverse to the Spanish yoke, destroyers of the colonial settlements, /192/ in the times of the republic they have served as instruments for blind ambitions and political revenge, and nearly all the civil uprisings have been nourished with their blood. They adjust easily to the military, guerilla, barbarian [579] spirit. The riots that have taken place in the present century are memorable: La Quintinada, La Collada, and the 28th of January, the first of which took place in 1916, the second in 1932, and the third in 1950, out of motives of racism, religion, and political rancor, respectively.

Persistence in vengeance, hair-raising and fearsome crimes, and the spilling of blood characterize many aspects of the social and political life of these Indians.

VI

Fiesteros, Albaceros, and Mayordomos

796 About three months before the celebration of the fiesta,
623 the cabildo begins to select the names of the fiesteros /fiesta leaders/ for the following year. When the candidates have been chosen, the entire cabildo goes to their home, where after much dilatory chatting they announce the authorized choice. The offer is rejected at first, but eventually the great honor is accepted.

/192 cont./

796 Then the new fiesteros look for assistants, called albaceros and mayordomos. At the close of the fiesta, accompanied by the cabildo and the old fiesteros, they go to the priest to be put on record and announced as the fiesteros for the following year. Each receives a church banner, and then in procession they walk round the church and proceed at once to one of the houses of the pueblo, previously requested from its owner, amidst the bursting of firecrackers and the strains of music. [273] There, chicha and aguardiente will be served to the albacero, mayordomos, and the others present, even before they have finished drinking the liquor of the old fiestero. They will also be given a meal, for which a bull has been slaughtered.

794 796 The months go by. The need for money to cover the costs is pressing. Fiesteros and albaceros, with their wives and sometimes also with a few friends, leave their land and, keeping to themselves, set out for Inzá, La Plata, or Popayán to sign up as laborers on haciendas which they know personally or through [465] trustworthy references. Their daily pay will be one peso and food. Not even coca /193/ /illustration appears here/ is part of their ration. Husband and wife do the same work and earn the same pay.

After two months they return once more to their land, carrying in their pouches gunpowder, wicks, and salt. Some- [574] times, a machete fastened to the belt. The fiestero bears the brunt of the expense: camarico (1) /footnote 1 is missing; the camarico is the gift customarily given to a guest/ for the priest and the latter's fees; candles for the altar; gunpowder for the Mass and the social functions; the cleaning of the church; "care" for the albacero and hospitality to visitors for the period of three weeks. The albacero is in charge of the celebration of vespers: lights for the church, the vacaloca /"crazy cow," a feature of the fiesta/, fireworks, and gunpowder.

The mayordomos contribute money (one peso) for the priest's fees and candles to light the church.

/194/
796 Both the fiestero and the albacero have laborers whom they select themselves. The fiestero has the following: three for the

[133]
[788]

distribution of food; three chicha-makers, two men and one woman; two millers of sugar cane; one fireworks-maker and two women as
796 cooks. The transporting of the sugar cane is done by volunteers
465 who help out daily in exchange for drink. The albacero has the same laborers, and although he does not kill a beef to reward them, he does sacrifice a pig to this end, especially for the fireworks-maker, with all the honors of the table and the demands of etiquette.

[p. 22 skipped in paginating - Analyst]

[p.22 skipped in paginating-analyst]

/194 cont./

796 The albacero and fiestero with their respective wives do not work; their task is to look after the people.

796 554 Every religious fiesta has a chief fiestero and a secondary one, with their respective retinues of albaceros, mayordomos, and laborers. There is no difference of rank between the two. Both spend the same amount of money and perform the same tasks. Only the chief one performs them first; he thus has [578] primacy. Nevertheless, a certain rivalry seems to exist between the two. According to the extravagance and hospitality, there are comments as to whether the fiesta of one was better than that of the other. Prestige is also involved here. Thus, of the two fiesteros who gave the fiesta of San Juan this current year, that of the second one was said to be better, since he did not get drunk, attended all the religious ceremonies, and [273] looked after people very well. Only the last of these remarks is valid, because the abundance of food, chicha, and aguardiente was fundamental; continuous drunkenness is the mark of a good fiesta. On the other hand, he knew how to look after the people because he had already been fiestero at another time.

796 Three weeks before the festive day activity begins in the households of the fiesteros: milling the sugar cane, the distillation of the aguardiente, entertainment of visitors, and the making of candles and firecrackers.

Two weeks before the Mass, the fiesteros, accompanied by the cabildo, music, and firecrackers, go to take over the pueblo house, with their wives, cooks, chicha-makers, and food distributors.

All the public entertaining will be done in the spacious sala. The church banner will wave in front of the house.

/195/

VII

The Milling, the Chicha and the Chicha-makers

796
249 It remains to be said that the fiesta begins with the milling.
461 Although it is common to use a horse to operate the sugar mill,
[492] it is more usual at fiesta time to move it with human arms, masculine or feminine. It makes no difference. The two laborers for the milling squat on either side of the sugar mill, and one hands over the cane while the other receives the bagasse, which is piled up at one side to be handed back again; this is done up to 12 times in order to extract as much juice
[273] as possible. The millers do their work in silence when they are not drunk; while they do it with diligence, there is relaxation, laughter, shouts, and imprecations when they are under the influence of alcohol.

273 The juice is gathered in troughs, or less frequently in
249 calabashes and pots; it is heated to near the boiling point and
796 then emptied into the troughs, in which, inasmuch as they
[415] are well "cured," fermentation is rapid. The troughs are made of huge tree trunks that reach up to one meter and 50 centimeters in thickness and four or five meters in length. As they are depleted through consumption, they are refilled with fresh
[285] cane juice. The troughs are covered with small mats made
273 exclusively for the purpose. On the following day it is bubbly,
796 yellowish, with a pungent, sweetish flavor. It is the beka pes (strong chicha) of the natives, who drink it with relish and delight. Five gourdfuls of this liquor are sufficient to make them
273 drunk. Elsewhere called guarapo, while the Paez call it chicha,
182 it is of great importance in their social life and diet. With its
796 help the religious fiestas gain meaning, the mingas are carried
[262] out, baptisms and weddings are made more pleasant, and visitors are entertained.

273 Work without chicha is inconceivable, and while they work
461 they get no food whatever; they merely drink chicha and chew
262
276

/195 cont./

262 coca. Chicha thus provides the calories for work, while coca
273 dulls the feeling of hunger. The consumption of chicha is
461 general among men and women, old people and children.
[276] There is no household without chicha for any length of time.
And during the short lapses when it runs low, they buy it or
[431] visit the households that have some. Among friends it is not
sold, but given as regalement: /196/ "talking, laughing, regaling," as the Indians accurately describe the situation.

249 Milling for the fiestas takes place daily and is in direct
273 proportion to the number of visitors. Milling for the mingas
461 lasts two days, one week for baptisms, and up to a month for
weddings.

273 The largest containers for chicha are the troughs, but use
415 is also made of pitchers and large earthenware pots buried in
the ground up to their rims.

273 The chicha-makers are the absolute masters of the troughs
463 while they are fulfilling their function. They distribute the
796 chicha, and even the fiestero himself must ask them for the
amount desired. No one takes chicha without their consent.
Furthermore, they accept the gifts which the visitors give to
the fiestero. The latter merely voices his thanks. Although
they keep taking chicha, they do not get drunk, so as to perform their task properly. They will have their day when they
can do so.

VIII

Sugar-cane Aguardiente

273 At fiesta time, aguardiente is distilled every two or three
[796] days. The distillation is quite easy. The still is prepared in
the following way:

[415] A good-sized earthenware pot, 50 to 60 centimeters high
and 25 to 30 centimeters in diameter, is filled with guarapo

/196 cont./

273 fermented for two days, mixed with anise, dill, cloves, cinna-
415 mon, anisillo, and bitopiskue. Sometimes verbena is also added. It rests on three stones which make up the hearth. Over the edges of this pot, and with the interstices filled with a paste of ashes to avoid any loss of steam, is put another pot of regular size: 30 centimeters high and 20 centimeters in diameter. Inside this one is put an ovoid wooden bowl, grooved, with a handle likewise grooved, which is connected to a reed tube that runs through the pot at mid-height, and through which the aguardiente runs into the containers (liters /litros/ and bottles). The base of this pot is pierced to permit the guarapo steam to go through. Above this pot is placed a copper pan about 15 centimeters high and 30 centimeters in diameter; the junctures are covered with a paste of ashes. On this pan there falls a continuous jet of cold water brought from the outside through a bamboo channel; the surplus comes out through a /197/ /illustration appears here/ reed tube set in an opening near the rim. When this fall of water is not feasible, the women undertake to change constantly the warm water for cold.

Stills of this kind distill approximately 15 liters.

The amounts of the ingredients are as follows:

Guarapo, two-thirds of the container.

Anise, three eggs /a measure; see footnote 1, p. 9/ (from Silvia or Neiva).

Dill, approximately 1 pound.

Anisillo (an aromatic herb), one egg.

Bitopiskue (a pungent herb), approximately half a pound.

Cloves, ten centavos (one ounce).

/198/Cinnamon, ten centavos (one ounce).

273 The distillation has nothing mysterious about it, although
784 it does have its precautions. Anyone can be present, but no one can say "venda" /bandage/, because the distillation would not produce anything. If someone goes out, he must do so in silence, but preferably he should not go out, because he will

/198 cont./

273 take with him the "heart" of the aguàrdiente, thus reducing the
784 quantity and detracting from its quality, for it will be "cold

133
534
291

273 and tasteless."
[784] The distillation is done on any day and at any hour; the tax collectors do not go this far; control of this kind has never been permitted, and anyone who dared to do it would risk his
[186] life. Children drink this liquor from the age of three. Abstainers are inconceivable; "only Protestants do not drink," they conclude.

/198 cont./

IX

The Wax Comes from the Woodlands

796 Before the fiestero goes to stay in the pueblo, the laborers make the candles and distill the aguardiente while the fireworks-maker produces the firecrackers and rockets.

388 824 The candles are made with the wax of the wild laurel (1)

1. Myrica pubescens Willd.

recently extracted from seeds gathered months earlier from the bushes in the woodlands. Laurel, of course, is a shrub with lanceolate leaves, which grows wild in the clearings after the harvest. During the months of April and May the branches are heavy with lead-colored and tiny seeds very similar in form to the fruit of the coffee tree. They are a favorite food of the wild pigeons, and for this reason, while they are ripening, the owner, or preferably his children, constantly frightens them [756] away. This is a reinforcement of the magic protection supplied [789] by the medicine man at the suggestion of the owner of the woodland. He has performed the exorcism to frighten away the unwanted birds: he has loaded his shotgun with chayuts (2) and

2. Escrofulareacea.

shot at the pigeons. They will not return.

[415] The seeds are gathered in fique bags. Ten workers gather approximately one arroba in one day. /199/ For the period of one month the seeds will be left to dry, scattered in a corner of the house, so that the wax will come out white and not green as would happen if this were not done.

388 To extract the wax, the seeds are packed into small sacks or bags, boiled, and pressed at once. The wax falls with the hot water into a round container; on the following day, the water that remains at the bottom of the container is removed, and the wax is left to solidify further.

/199 cont./

388 Up to a few years ago, the extraction of laurel wax was the
43 only industry among the Calderas people that brought them monetary returns. And it was the sole article of active trading with the whites. At first the price was good; one peso a pound; nowadays it is barely worth 40 centavos. Thus, there is no
388 market for this article. The fiesteros and the albaceros have chunks of wax in their chambers. The laborers melt it in a copper pan and pour it at once into bamboo tubes, mixed with hot water so that it will not solidify at once. Into it they dip the notched wicks of different lengths so as to saturate them with wax, then bring them out into the air so that they will harden, saturate them once more with wax, and continue in this way until the candle has acquired the desired thickness. Several dozen are made; some large ones for the table, others of medium size for the church, and smaller ones for the mayordomos.

X

Gunpowder

389 The Paez are totally unfamiliar with the method of making
829 gunpowder. And to explain how it is obtained, they tell the
648 painful legend that it is made from human beings. It comes from a fat man, they say, fattened expressly for this purpose. He is hung up, a red-hot iron rod is inserted in his rectum; lard drips down; and this lard is the gunpowder. For this reason, they do not want to send their children to distant lands where the white man lives. They believe that they would be used to obtain gunpowder. "The white men greatly desire Indians in order to obtain gunpowder."

389 The Indians buy gunpowder in the urban centers. They
439 work it up. The technique is almost universally known.

/199 cont./

389 Explosive charges are made in the following way. The powder is packed into small sheepskin cartridges; these cartridges /200/ are tied tightly with maguey thread. Then they are pierced in such a way that the powder can come in contact with the correspondent fuse. They make with these explosive charges:

Firecrackers: a charge attached to a short stick.

Skyrockets: reed tubes full of powder, with one explosive charge, attached to a long pole. They rise to considerable heights and end with an explosion.

Stingers: firecrackers made of three charges attached to a stick.

Castle: a structure resembling half an ellipse, made of flexible rods to which the explosive charges are attached.

[796] The fireworks-maker is selected especially by the fiestero or the albacero, and at the time of the fiesta he distributes the firecrackers personally among the elders with a great show [465] of deference. The albacero must kill a pig or a sheep to reward him for his work.

[461] The making of these objects is slow: a month or even more, not because it is complicated, but because steady work on it is tiresome.

389 During the making of these firecrackers, with the relative 787 tranquility that this implies, a man may come to know of a 75 destiny which he possibly had not suspected: becoming a medicine man. While sitting at his work he may feel the "signs" that herald his future activity. This was the case with a medicine man of Calderas. As a young man he knew nothing about remedies or "signs." But as he was making firecrackers, he felt the signs. He had five children at the time. After that he learned what the good and the bad remedies were from another famous medicine man. He put his knowledge into practice, cured a sick man, and devoted himself to being a medicine man. The signs, they say, are sent by God.

4:Bernal Villa--31 E-5 (1952-1953) 1953 SC15 Paez SC15

/200 cont./

XI

Gourd Vessels and Etiquette

415 554 273 There are three types of gourd vessels in which chicha is distributed and whose traditional order of use reflects hierarchy, majority, and high status; some gourd vessels are used for all those present, of both sexes and all ages; others, only for a specific class of people.

[192] The first type is small with an ovoid opening, made of half a gourd. In the Paez dialect it is called shup /201/ /illustration appears here/ shachi. All visitors, without distinction as to sex, age, or status, are presented with two matés of this type: the first one contains "strong water" to quench thirst, while the second contains chicha, the authentic strong chicha.

The second type of container is the shachi pitán (gourd-vessel capitan), of greater capacity than the first, ovoid in shape, and open at one end. The most respected persons of both sexes, adults and elders, are given chicha in these gourd vessels, /202/ after taking it from the shup shachi. They indicate a certain deference on the part of the host, and by the same token he wishes them to get drunk. Those who are favored with these gourds offer them to all present, who take them, taste the contents, and return them to the hands of the owner. The shachi pitán has gone from mouth to mouth, but the contents remain practically untouched; the owner is to drink it.

The laborers and mayordomos who are in his service, the albacero, the síndico /trustee/, and the highly respected elders, after having received chicha in the shup shachi and in the shachi pitán, receive a larger gourd vessel in which there is a tiny one (shachi léchukue), which is called suilté. The presentation of this has an etiquette of its own. The host comes out with the suilté in his hands, fills the shachi léchukue with

/202 cont./

415 chicha, and hands it to a person favored and respected by him;
554 the latter takes it, drinks from it, and returns the small gourd;
273

133
291

415 then he is given the suilté. In turn, he fills the small gourd and
554 gives it to the man who presented it to him. Then he distributes
273 the chicha among all those present, beginning with the adults,

/202 cont./
415 men first and then women, and ending with the children of both
554 sexes. No one is left without a share.
273

XII

The Cleaning of the Church

346 The so-called church of Calderas, a masonry structure, is a dilapidated old building, long and tall, with a two-slope thatched roof and a hemispherical bell tower supported by four beams set into the ridgepiece. Only the front of four columns with cornices and semicircular arches which form an antechamber lends the whole a certain charm.

346 What is called the cleaning of the church is the removal
794 of a few weeds that grow in the pavement in front of it and
796 clearing a line that encircles a small plaza. The task is minimal, but it is always performed. The act is symbolic more than anything else; what matters is the meeting of the fiesteros with their respective albaceros and laborers; an occasion for taking care of the albacero, an opportunity for merriment, talk, jokes, and even games.

Some 12 days before the fiesta and on a Thursday, accompanied by the cabildo, music, and firecrackers, the fiestero leaves his house and goes to occupy one in the pueblo. He takes /203/ along the bull that will be sacrificed on the following day. Two days later, that is to say, on Monday, the cleaning of the church is carried out. On rare occasions
[202] it is done on a Wednesday. The ringing of bells announces the invitation and later tells the people that the cleaning is over, whereupon they drink the two calabashes of chicha which each fiestero has brought; the firecrackers are set off; "the albacero has earned a meal," they say, and deserves the honors of the table. The fiestero will take care of him with

/203 cont./
346 meat and "mute," as well as more chicha and aguardiente.
794 After lunch the albacero goes home. There he waits for the
796 fiestero, who in the afternoon will bring him more chicha, more aguardiente, and more food.

796 A week after the cleaning of the church, the priest will
793 come to officiate at the religious ceremonies.

XIII

Instruments, Music and Dance

533 The musical groups of the Calderas people, true chirimías, /a kind of orchestra/, are deservedly famous both for the number of the musicians and for the beauty of their interpretations. Many are soft and delicate, most of them sad tunes,
534 but there are joyous ones as well. The musical instruments are few.

The flute (kuvi), made of a reed some 70 centimeters long; it has seven holes made by burning: the one in the upper part which serves for blowing, and 35 centimeters farther down are found the others, which correspond to the fingers of the hands, at intervals of three centimeters apart. They distinguish two types of flutes: those that produce melodic sounds, kuvinéhuish (major flute) and those that produce low tones, kuvinuch (minor flute).

[281] The bass drum (kut), made with the skin from sheep, calf, goat, or deer, the hair of which has been removed by fermentation underground.

The tambourine, around the edge of which is put several pairs of movable circular pieces of tin which produce a rhythmic sound.

The side drum or snare drum and the triangle to mark the rhythm.

/203 cont./

534 Some natives own and play guitars acquired in Popayán,
237 but there are some that they make themselves out of armadillo
439 shells.

The following are the compositions of ceremonial type
533 which are not accompanied by dancing.

/204/ /Illustration appears here./

Kulá ik kui (bull-slaughter-piece). Musical composition which is played at the moment of killing the beef to which the albacero and the laborers of the fiestero will be taken care of. Informants claim that this musical piece has no significance other than to entertain the people.

Plaza pá kui, a musical composition played when the musicians reach the church.

Misa kase kui, played when the Mass is over.

Chichi pékue kui, played when the meat is cut in pieces to treat the albacero. The workers place the chunks of meat on a trunk and cut them into small pieces with a machete /peinilla/.

There are other compositions peculiar to wedding ceremonies.

/205/ Novio mesa úku, played at the start of the wedding meal.

Úpiate kui, played halfway through the nuptial banquet.

Tunzi kamba kui, played at the close of the nuptial banquet.

All of these compositions are melodious and in 3/4 or 4/4 time.

The religious fiestas, mingas, weddings, and baptisms are occasions for music. There is no music at burials or at wakes for children.

[868] Musical compositions are learned from the "elders" out of personal interest. From childhood they learn how to play the bass drum, the side drum, and the triangle with great skill. They try the flute later. While rhythm instruments

/205 cont./

533 are played by a large number of people, those playing the melody (flutes) are few and usually restricted to a few families.

291
534

533 The women do not play any musical instrument.

Secular singing is unknown; only religious songs are sung at the hours of prayer, the Mass, and the procession.

535 The dancing of the Calderas people is stylized and very
[171] similar to the Colombian bambuco. It is danced by mixed couples, separately or joined together. As a rule the dancers take on a certain air of gravity and concentration, and the onlookers follow their movements attentively. The woman always

/205 cont./

535 keeps her head low, with her eyes on the ground, attentive to the musical notes which she seems to interpret with her movements. One foot forward, then one back, in swift alternation; she suddenly stands in her partner's way, then does an about-face. She keeps her arms motionless against her abdomen.

The man, on his part, dances with his forehead held high, his arms motionless against his thighs, his face joyous. From time to time he shouts: "Viva the Conservative Party!" or "Viva el Cauca!"

It is customary for the fiestero and the albacero to dance with each other's wives, after their respective "care."

535 It is the rule for the newlyweds and the sponsors to open
608 the dancing at weddings. In the midst of the dancing and at
585 different times the bride and groom kneel before their sponsors /padrinos/ to receive /recitarles/ the blessing, the bride before the padrino and the groom before the madrina. The latter
[576] bless them and give them their hands to help them rise. After the dance of the newlyweds and the sponsors, the others present may dance, and in the midst of the dancing they, too, greet one another /206/ by placing the right hand over the other person's left shoulder and pressing it.

535 Although one colonial writer speaks of specific dances, nowadays they are only a memory; it is said that there is performed in Avirama the dance of the little bird (vicha ku), danced by young girls at dawn. Calderas informants say that it is very ugly and for this reason they do not dance it. It may possibly correspond to the Itza-ko noted by Pittier de Fábrega.

XIV

The Great Day

796 Before dawn raises its pale face above the black rims of the eastern peaks, the women have already left their hard beds

/206 cont./

796 of cowhide and are busy cooking the food, hastily reviving the kitchen fire. Meanwhile, the men talk and laugh hilariously.

[264] The house of the fiestero is bustling with activity. At six

[262] o'clock in the morning men and women have breakfasted on "mute," cabbage, bananas, yuca, and meat. Then, the women put on to cook, in a copper pan with a diameter of one meter and 50 centimeters, the mute for the laborers' lunch and for feasting the albacero after vespers. Next to this vessel they place another one of clay, slightly smaller, full of shelled maize with ashes. About four arrobas of maize will be consumed during this day.

With the bundles of firewood piled in one corner of the kitchen, and the water stored in jars, the women sit around the fire to nurse their children, spin wool, weave their pouches, and converse about matters of daily life.

In the course of the day there will be the sacrifice of the beef; the presentation of the "camarico" to the priest; the greeting of the albacero; the celebration of vespers with the vacaloca game; concluding with the meal given by the fiestero at midnight. On the following day there will be the Mass, a procession, the handing over of the banners to the new fiesteros, and the care given to the albacero.

/207/ XV

Scene between the Second Fiestero and Albacero

[805] The position of the sun indicates that it is nine o'clock in the morning. In the house of the albacero the muffled sounds of the bass drum and the melody of the flutes are heard.

While they play, the fiestero and his wife visit the albacero with a pot of stew /sancocho/, a bottle of aguardiente, a skyrocket, and a candle. The fiestero hands over what he has

[539] brought to the albacero, and his wife to the latter's wife. They sit around the fire. The dialogue is interesting:

/207 cont./

796 Albacero: The albacero is always behind the fiestero.
539 We shall make him dance.

Fiestero: We shall take chicha and have a good time.

The offers of chicha and aguardiente are repeated.

--Let us go to the slaughter of the little bull.

--And all of a sudden the bull would kill me, replies the albacero, cutting short the invitation of the fiestero. And he adds:

--You do a great deal in taking care of people; you seem to have more. I do not have anything.

--We are not just any family. We are Muse, replies the fiestero.

--What do you want from me that you do so much for me? Asks the albacero.

Meanwhile other men express their thoughts in sentimental and philosophical tones:

--This is our pueblo... We must talk... When we die, we shall not return.

--Because now that we are alive, and on our land, we must see each other often.

The old master of the house interrupts the conversation:

--It is well if you go with us. (Eviuha guechi pikin ustau.)

It is time to slaughter the beef. The fiesteros leave the house of the albacero. The musicians follow them.

XVI

Sacrifice of the Beef

231 Since the previous day the beef has remained in front of
796 the house tied to a post. Next to it are several piles of long, dry pieces of wood.

/208/ /Illustration appears here./

/208/

231 796 At about ten o'clock in the morning the special guests of the fiestero get ready to kill the beef. They are four. The

142 534 291

231 796 musicians intone the kula kui while other men begin to cut the long, [533] dry pieces of wood into small fragments. Woodcutters, slaughterers, and musicians all begin their activities at once. The wood will serve to roast the maize griddlecakes.

[825] One of the slaughterers gathers the blood in a pan, while another one holds the head and tries to cover the eyes; he believes that if he does not do so, some other cow will attack him when he goes to catch it.

/208 cont./

231 After skinning it, they quarter it following a definite
796 sequence: the lower part of the hind legs (chinda), the lower
192 part of the front legs (kuse), the upper part of the hind legs (himbé), the upper part of the front legs (pala), the tail (mens), the flesh of the neck (chikichichi), the fat (sepo), upper intestine (chunchullo), lower intestine (meto), stomach (tuchi), /209/ trachea (pechita), lungs (mechto), heart (ús), liver
[827] (mechi), the gall (muahi), pancreas (shape)... They are familiar with most of the organs and their names, but not with their specific physiology.

262 Some of the pieces of meat go directly into the pan of
796 "mute," which is boiling and which the workers will eat for
252 lunch; others, to the barbecue where they will get the smoke from the kitchen.

Inside the house, in the fluhne wala, the women grind shelled maize on two metates to make maize griddlecakes. With maize flour and water they make a dough which various women shape with their hands into circular form. In a separate kitchen, two women and two men are busy roasting them. First they let them harden on a piece of broken earthenware and then complete the cooking in the embers of the hearth. An elderly man gathers those that are cooked into a bag. Another one occupies himself with singing religious songs and praying. The maize griddlecakes are used to take care of the albacero on the following day.

796 This work is performed enthusiastically by the women.
[462] --The days of the fiesta are for talking, says one woman.
[829] --One can live through life only by getting drunk, says
[273] another.

XVII

"Camarico" for the Priest

796 At four o'clock in the afternoon the fiestero and fiestera,
793 accompanied by their mayordomos, the cabildo, the musicians,
43/ and other people, with the church standards in front and with a profusion of gunpowder, parade past the rectory. Each one bears a gift for the priest, called camarico, which consists of victuals and meat: green bananas, potatoes, eggs, meat, and salt. First the man presents his, and then his wife. This represents a testimonial to the priest for having come to celebrate the Mass for them. The mayordomos also present him with eggs.

In the house of the albacero flutes and drums resound and shouts go up, indicating that he is ready to receive the greeting of the fiestero.

XVIII

Extravagance and Protocol

796 It is five o'clock in the afternoon. In the house of the
43/ fiestero firecrackers resound, while in that of the albacero there is much excitement. /210/ Both have their own chirimías. The time for the greeting and the exchange of gifts has come.

The fiestero and his wife, preceded by the church banners and followed by many attendants, the indispensable melodies of the chirimías, and the bursting of firecrackers and skyrockets, have left their home, each with a plate covered with a brightly colored kerchief, on which they bear the gift for the albacero and his wife, respectively, consisting of a cake /bizcochuelo/, a bottle of aguardiente, one large candle of laurel wax and

/210 cont./

796 two small ones, a skyrocket, and a firecracker; in addition, an
431 assistant carries a pot of chicha. The procession moves slowly forward. The albacero and his wife, on the other hand, have also left their home, with their retinue of attendants, the shooting of firecrackers, and the strains of music, carrying with them the same gifts as those brought by the fiesteros: chicha, aguardiente, cake, firecrackers, skyrockets, and
[354] candles. An assistant carries a showy lamp, made of flexible rods in hemispherical shape, adorned with a white pellicle similar to paper, obtained from the cabuya (1), and flowers

1. Fourcroya andina.

of various colors; it has four reeds to hold the candles.

The albacero waits for the fiestero very close to his home.

At the moment of the meeting, the fiestero and his wife each take one of the church banners and they take candles, which in turn are also lighted by the albacero and his wife. They exchange them: the fiestero with the albacero, and
796 their wives with each other. Then they kneel, with the men
576 face to face and the women likewise. The fiestero presents
431 the ceremonial greeting:

--"My friend: we are meeting at this spot. I have come to see you. Accept this small cake, even though it is quite tasteless."

--"Here we are together at this spot," replies the albacero.

796 While they are saying these words, they touch each other's
431 left shoulder with the right hand and press it; the wives greet
[576] each other in the same manner; following this, the fiestera greets the albacero, and the fiestero greets the latter's wife. The same protocol is observed. Immediately afterwards they exchange the gifts, the husbands on the one hand, and the wives on the other. Everything is distributed among their respective attendants. Only the candles are retained.

/210 cont./

796 Throughout all these actions, the music has not failed to
[533] sound, /211/ the ensemble of the albacero alternating with that of the fiestero. The tunes are joyous, the enthusiasm grows, and the bursts of firecrackers are frequent.

When everything has been consumed, the plates, kerchiefs, and pots are returned with mutual expressions of deep appreciation. The albacero invites the fiestero:

--"My brother: now let us go to my house. I have nothing to offer you, but what can we do."

--"Do not worry. I, too, am in the same situation as you."

They all remain in the house of the albacero until the ringing of the bells announces the hour of prayer. Very few attend, but the fiestero and albacero have an obligation to do so. The musicians go behind. The albacero sets in place the lamp which he exhibited at the greeting two hours earlier.

796 The lighting of the church is adequate. There are some
346 72 candles, of which those on the altar are from the fiestero
373 and the remainder from the albacero. There are four hanging lamps of the type already described. On cross-pieces supported by vertical beams and placed so that one is close to the altar and another at the exit door, numerous candles are held in fresh clay, in the same manner as in the cornices of the walls.

796 The religious performances are accompanied by native
533 music; monorhythmic and sad tunes alternate with joyous airs.

XIX

Torches and Vacaloca

796 While at the house of the fiestero the men kill the beef
532 and make up the bundles of firewood and the women roast the maize cakes, in the house of the albacero the chirimía plays, chicha is drunk from gourd containers, the lamp is made, and

/211 cont./

796 the vacaloca /"crazy cow"/ is fashioned. From the angles of
532a rectangle made of four rods tied with lianas, flexible rods are attached in a semicircle; over these is hung the hide of a cow; the skull of a cow, with its horns, is attached to the front part; the facial bones are covered with newspaper on which the cow's eyes, nose, and mouth are drawn with charcoal; the horns are wrapped in cloth soaked in laurel wax; at the hind part, a bunch of defibered cabuya forms the tail. In addition, with the same waxed cloth, three /212/ torches and one large match in the shape of a cross are made, exclusively for illumination.

On leaving the prayer session, a strong, husky youth puts the crude vacaloca on his shoulders, the waxed horns and the torches previously seized by other youths are set afire, the music sounds, the firecrackers are picked up, and the game begins. The young men attempt to set the tail on fire, while the vacaloca tries to pursue them and butt them with its burning horns. The clamor and mad frenzy begin. Everyone runs, everyone defies the charges of the symbolic animal. Soon the vacaloca takes a false step and falls with a crash, causing general hilarity. The fiestero and albacero, the musicians, the participants in the game, and the others present begin to move toward the house of the albacero. There they stop the game when the fuel of the torches is exhausted and the players are overcome by fatigue.

796 Inside the dwelling, in the ñuhne wala, the musicians in one corner, the women seated on the ground, the men on the pangos, their faces made golden by the rays from the torches, wait for the distribution of the calabashes of chicha and the liters of aguardiente with which the albacero is paying attention
[273] to the fiestero. In the middle of the sala and next to one of the pangos there is a crude table, blackened by smoke, dirt, and time, with two lighted candles at the ends of it; three calabashes of chicha set on sugar-cane bagasse, two bottles of aguardiente next to the end gourds, and next to the center

/212 cont./

796 one a liter of aguardiente. The fiestero sits at the center of
273 the table, his wife sits on his right and the síndico on his left. The albacero approaches, takes the liter in his hands, measures out a cup, and offers it to the fiestero. The latter accepts it, drinks, and returns it. From the hands of the albacero he receives the cup and the liter. The proceeds in the same fashion with the calabash inside of which is the shachi léchukúe. In the same manner he offers the other bottles and gourds to
[431] the wife of the fiestero and to the síndico. The distribution begins, for which the fiestero, fiestera, and the síndico call on three men to take charge of distributing the generous gift. The aguardiente is distributed by its owners themselves, who in each cup put small pieces of cake. The clamor increases in direct proportion to the consumption. Everyone drinks
796 alike: men, women, and children. This is the time for off-
522 color, rich, and abundant joking. The hour when fantasy
273 shines and takes wings. There is practically only one theme,
831 sex in all its forms and manifestations: desires, /213/ feats, wooing, pregnancy, childbirth, genitalia, and even sham coitus in public. Any allusion to sex causes hilarity; many aspects of life, attitudes, and work are associated with sex.

796 At midnight the bottles and calabashes are empty. The
[273] music has been continuous, the drunkenness has increased ... But it is not yet over. At the house of the fiestero they are awaited with another gift.

The fiestero and the albacero dance with each other's wives. When the dance is over, everyone goes out and vanishes in the darkness of the night on paths that cannot be seen, only divined. The sound of the bass drum indicates that the people, the nasa wala, are on their way to the house of the fiestero.

There they will find the pale yellowish light, the table next to a pango and toward the center of the ñuhne wala, with its two lighted candles, its calabashes of chicha, and its bottles of aguardiente. This time it is the albacero who will

/213 cont./

796 sit in the center, his wife on his right and the síndico on his left. The same etiquette and the same courtesies will be ob-
[264] served. When the liquor has been drunk, there will be a meal of cabbage and meat: large bowls for the albacero, his wife, and the síndico. For the others it will be served on platters. All of them will sip the broth, squeeze out the meat and cabbage with their hands, and put it in their pouches.

796 Overcome by the fatigue induced by several sleepless
513 nights, by the chicha, and the food, they will sleep on the ground. When dawn heralds the new day, the enormous sala, the fluhne wala, will present the sight of groups of people sleeping in a promiscuity of sex and age.

XX

The Saint's Procession

796 Immediately after the Mass, with the presence of those
788 who attended it and those who did not, the procession begins, the essence of the fiesta, according to Padre González. The image of San Juan, adorned with many flowers, is carried on a litter by the faithful, who frequently relieve one another, go round the church with a great profusion of gunpowder, and
[533] finally set off the fireworks castle. The music plays incessant-
796 ly and includes the singing of religious canticles. When the
492 procession is over and the saint has been placed on the altar,
526 the men mount their horses, most of them bareback, and set out to race madly /214/ across the plains of the locality. They give free rein to their enthusiasm, allow their spirits to expand, and whet their appetite for play. Groups of horsemen in clamorous flight leave behind them their shouts of "Viva San Juan." In everyday life action has been slow. Now the movement and excitement seem to counteract the sluggishness and heaviness of everyday life. The sweating animals

526 /214 cont./
796 reach the houses, where they have a short rest while their
492 owners greedily drink the guarapo offered them by the occupants.

The fiesteros and albaceros, accompanied by a great
796 number of people, go once more to the priest. They bring
793 him the names of the fiesteros for the following year. The priest reads aloud the names of the fiesteros, the albaceros, and the mayordomos. The pronunciation of each name is accompanied by the ringing of a bell which is entrusted to a fiscal; when the announcement is over, there is a general pealing of bells. Each fiestero is advised by 15 to 20 mayordomos.

796 Then, kneeling in front of the church door, the old fiesteros hand over the banners to the new ones. They form a procession, and upon ending it, in the same spot where the banners were exchanged, they hand them over to the síndico, who waves them in the air one by one and ends by seeming to
[787] drive them into the ground. If by chance the banner wraps it-
[763] self around its own staff, some misfortune will befall the new fiestero. As a rule it is an omen of death, which fills with great sadness the fiestero whose banner had this happen to it.

Now each fiestero goes home, bearing in his hands the banner of the saint.

XXI

Banquet for the Albacero

796 After the procession the fiestero goes to the house of the
574 albacero, where he receives attention with the above-mentioned calabashes of chicha and bottles of aguardiente. When this feast is over, the company moves to the house of the fiestero. In the center of the sala there stands next to the pango the table with two burning candles at the ends, the calabashes of chicha, and the liters of aguardiente. The albacero, síndico,

/214 cont./

796 and their respective wives do the honors of the table. With
574 the etiquette and courtesies already mentioned, the gift is
[576] presented to them and the corresponding distribution is made.
[431] /215/ The laborers and the fiesteros move from the sala
[576] to the kitchen and from there to the sala. "Guechi pikin ustau" (we are coming along), they say, upon entering the fiuhne wala. "Anjiha," reply those present.

The kitchen is full of prepared food, and the women are busy filling plates of various sizes; large ones, others medium-sized, and the smallest. The distributors are in charge of handing them out to the recipients. This time they will serve three different dishes:

[262] 1st, maize griddlecakes and meat; 2nd, stew made with bananas, potatoes, arracacha, and chopped meat; and 3rd, yuca, raw and cooked cabbage, and meat.

The albacero and wife and the síndico and spouse are congratulated with a bowlful of each of these three "courses." The mayordomos receive a smaller amount, and the rest of those present plates for everyday consumption.

Of these "courses," only the last one is distributed when there are many persons present. Everyone is equipped with a pouch. They sip the broth, squeeze out the solid food with their hands, and store it away in it. Drunkenness and fatigue permit little talk.

After eating, or rather, after having collected food, the
[535] music sounds. The fiestero and albacero dance with each other's wives. They carry lighted candles in their hands. The dance is slow, deliberate, halting. At the end, they all go to the house of the second fiestero to give him the church banners. He will repeat the same religious and social acts, with the same etiquette and the same courtesies.

/215 cont./

XXII

A Bath for San Juan

796 At four o'clock in the morning on June 24, the men, women, and children are up in every household. In that of the fiestero the kitchen fire is burning, the food is being cooked, [541] and everyone is drinking and talking. Outside, in the darkness of the night, numerous lights are shooting upward, ending with a flash accompanied by an explosion: they are the skyrockets fired out of the huts. To each explosion are added the cries: San Juan! San Juan! San Juan!

796 On the previous day and in each of the houses, a jet of 515 water was arranged to serve as a shower. Now everyone bathes. This bath is accompanied by firecrackers and shouts. /216/ This is one of the few occasions when the native bathes. For, although it is true that in childhood baths are quite frequent, adults bathe only for the fiesta of San Juan, in the washing of the dead, or when they have fever.

796 The bath of San Juan has the purpose of preventing both 515 persons and the animals that belong to them from getting sores 751 (scabies). Nevertheless, one of those who awoke in the house of the fiestero and who did not bathe palliates his fear: "I did not bathe. I have no animals. It does not matter if I get scabies."

--"You do have some, even if only 'two animals.' Bathe," replies his neighbor in a taunting, jesting tone.

--"I will bathe, but not my entire body, just my ...only."

The dialogue continues, loud and merry.

796 After the bath they catch a chicken. They all answer its squawks in chorus: San Juan, San Juan, San Juan. They [264] kill it. At six o'clock in the morning they are eating chicken stew.

In the house of the fiestero the following dialogue between parents is overheard as they hear their son crying:

/216 cont./

796 Father: "I want to beat this child because he cries too much."

Mother: "Why should you beat your child? It is not his fault. It is the fault of your penis."

431] At five o'clock in the morning the fiestero and his wife go to the house of the albacero with their "camarico": chicha, aguardiente, firecracker, skyrocket, candles, chicken, bananas, arracacha, yuca, meat, cumin seeds, and salt. At six o'clock they return.

The musicians play their instruments and the people make 522] jokes. One of them makes a taunting, jesting one referring to the activity of the previous night: "I am not going to mass, because I have no trousers. I have some, but they are stained." As the bells ring, the musicians and a few people go to mass.

XXIII

The Laborers' Day

796 When everything is over, the priest has left for Belalcázar, 465 the musicians with their swollen lips and aphonic throats have 574 gone home, and the people are gorged with chicha and aguardiente, the fiestero still has to pay attention to--to care for--his obliging laborers. /217/ /Illustration appears here./ They did not have the opportunity to parade to the house of the albacero or to vespers or in the procession. Not even to get drunk to the same degree as the guests. The fiestero is also grateful for their services. Now, in payment for it, he must take care of them. For this he has left part of the beef under the smoke of the hearth. They will have their trough of chicha, their bottles of aguardiente, their firecrackers. They will be served at the table where the albacero was attended to

/217 cont./

291
492

796 and in the same fashion. Abundant food and drink will be the
465 testimonial of his gratitude. They will also have the musicians
574 and dance. They will wake up in the morning, like those at the fiesta, lying on the ground.

/218/

XXIV

The Race for the Rooster at Tumbichukue

103 The name of Tumbichukue is familiar to the colonists throughout Tierradentro. It is synonymous with fabulous treasures. In this place, it is said, the Paez buried all the gold and silver that they collected in the ill-fated settlement of Sebastián Quintero destroyed by them.

[131] Tumbichukue is a pass /vereda/ formed by the eastern slopes of the paramo of San Lucas and located between the Kukiyú and the Yusayú gorge (Guacharaca). It belongs to the parcialidad of Lame, and the road that goes from San Andrés [491] to Lame passes precisely there. This road is well traveled, its people more accessible to the whites.

796 On June 24 the men race their horses along the road.
541 It is a custom of Indians and whites "to race on the day of San Juan." The whites say that those who do not race their horses on the day of San Juan get scabies. The small, husky horses pant under the demands of their drunken riders. A wild race and shouts in an unsteady voice: Viva San Juan!

The people of the pass go to a small square along the road, near which lives the capitán of Lame. Indians from
184 San Andrés come to watch the race for the rooster. On the
796 other hand, in spite of the nearness, no Calderun /person from
291 Calderas/ is seen there. The women who are seen are clean,
177 with neatly braided hair; they wear black skirts, navy-blue
301 rebozos, pink blouses, numerous multi-colored necklaces,
541 bright earrings, and cloth hats. The monotonous dark or black necklaces characteristic of Paez apparel are nearly absent among these people. The classic pindo hat worn by the [491] Calderas people is absent. Spanish is spoken more frequently.

796 All the riders are concentrating on the cage and the
541 roosters.

/218 cont./

796 The cage is very similar to the lamp of the Calderun
541 albacero, with the added detail that the rods are adorned with panela candy (taffy) and carry four small flags. One of the riders reaches the cage, and on the following year he must return it exactly as it was when he took it. /219/ The candy is shared among those present, and the little flags are taken by the friends of the man who seized the cage; they must contribute to the expense.

Then comes the race for the rooster. It is spectacular. All those present closely watch the course of the game. The riders race quickly from one end to the other. As they pass beneath the rooster, they raise their hand in order to grab it, but merely graze it. The frenzy of the riders, the clamor of the people, and the bursting of firecrackers grow. Soon there is a terrible squawk, followed by a sudden silence. Two riders seized the rooster at the same time and in their hands hold fragments still quivering with life. The following year they will have to contribute a live rooster.

An informant explains that the man who gets the cage corresponds to the fiestero, the rooster to the albacero, and the flags to the mayordomos.

What follows is in the sphere of bacchic gaiety.

A chirimía delights the audience.

XXV

The Fiesta and the Numbers

796 The fiesteros are very reticent about supplying information
435 concerning the amount of their expenses. They merely say that they spend a great deal of money and among the things that they buy are arracacha, bananas, yuca, sugar cane, gunpowder, wax, salt, coca, and beeves.

/219 cont./

796 Nevertheless, here is the value of the expenses that a
435 fiestero provided, thanks to the suggestion made at the time by the priest who officiated at the religious ceremonies.

As a rule, they kill three beeves: one for being accepted for the fiesta, another for the cleaning of the church, and the third for the attentions shown to the albacero.

Articles purchased	Cost
1 bull	$40.00
1 heifer	35.00
1 female calf	12.00
20 arrobas of maize, at 60 centavos each	12.00
Sugar cane	2.50
2 pounds of gunpowder	7.00
/220/	
1 pound of candle wick	2.50
Bananas	2.50
Arracacha	7.50
1 arroba and a half of salt	7.50
2 pounds of anise	20.00
Fees for the priest	20.00
Total....	$168.50

To this must be added the purchase of coca for the laborers.

The fiesta is thus extremely costly for the Indians, who have no money, who do not produce to sell, and whose live-
[426] stock is exchanged, not for cash, but for goods. It is true that the mayordomos contribute one peso to pay the priest's fees and that the majority of the guests bring victuals to the fiestero; nevertheless, the fiestero is left with nothing but debts, which he will not pay off in less than three years.

/220 cont./

XXVI

Religious Fiestas

796 Among the Paez there are no secular collective celebrations. All are religious. They celebrate with pomp and grandeur: San Andrés, Semana Santa, San Juan, San Pedro and San Pablo, La Santa Cruz, El Día de Difuntos, La Inmaculada Concepción...

[178] The Lazarist missionary, David González, says that as
[179] far back as 1689 the fiestas were organized as they were found
[177] in 1905, that is to say, as they are today. Each pueblo was granted a patron saint and various other protectors. In spite of this, only San Juan Bautista and San Pedro and San Pablo, whose fiestas are celebrated when maize is eared /en macollaje/, the rains are heavier, and the winds are violent, the day of the dead /el día de difuntos/ with its offerings to the souls, the Inmaculada Concepción, when grain is abundant, and the Semana Santa (El Resucitado /The Resurrected/) were the fiestas and saints that aroused the most enthusiasm and sank the deepest roots in the souls of these natives.

771 The Paez, and especially those of Calderas, are religious
796 in externals, not in conviction; they are more concerned with
182 form than with substance. This is revealed in the religious fiestas of these natives. /221/ Few of them attend mass, and fewer yet pray at vespers. To the great majority of them, religious fiestas mean a squandering of gunpowder, lights, aguardiente, and chicha. An abundance of food. The pleasure of getting together. The joy of contact. The music, which assuages hardship, and the dancing, an exteriorization of feelings. It is the expansiveness that leads to gatherings, the sexual jokes that spring up among them without misgivings; it is the continuous drunkenness. It is the display of generosity, the exercises in co-operation and altruism.

796 The priest, as a punishment for failure to attend the Mass
793 on the part of the chief fiestero and albacero, refused to carry
718

/221 cont./

793 out the procession. The latter, reeling from chicha and lack
796 of sleep, arrived at the end of the Mass and learned of the
783 decision of the priest, who in addition advised them to save the gunpowder for the procession on the following day. They left. And although they did not march around the church and did not bear on their shoulders the image of the saint, they fired all the firecrackers, the skyrockets, and the fireworks castle to the strains of their native music. The procession was carried out symbolically.

796 The women and the men are dark in complexion and in
142 apparel. At these celebrations it is not unusual to see them
291 dressed in bright colors and brightly colored beads.

ASPECTOS DE LA CULTURA PAEZ

La Fiesta de San Juan en Calderas, Tierradentro

Por Segundo Bernal Villa

I

PUNTO DE PARTIDA

Hacia el norte del municipio de Inzá y al occidente de la confluencia de los ríos Ullucos y Páez, a dos horas de distancia a caballo de los sitios mencionados, se encuentra localizado el corregimiento de San Andrés sobre la margen izquierda del torrente Pisimbalá, afluente del Ullucos. Su nombre aparece registrado en los libros parroquiales desde 1736 cuando el sacerdote José Fernández Belalcázar, en representación del obispo de Popayán, inició por San Andrés de Pisimbalá la visita pastoral a los pueblos paeces.

San Andrés de Pisimbalá es un pueblo con las mismas características que observamos en otros núcleos paeces; es decir, consta de una iglesia, una escuela, la casa cural, la casa del cabildo y algunas otras utilizadas únicamente en la celebración de las fiestas religiosas. Está situada en una pequeña meseta, repisa suspendida en el declive.

En la actualidad, está poblado por blancos y mestizos cuyos métodos de vida, normas de conducta, formas de trabajo, se han impuesto entre los naturales. La resistencia al contacto ha sido vencida, pero todavía afloran en los viejos los resentimientos agresivos contra el blanco. Aculturados casi completamente, muchos de ellos están sumidos en la condición de terrazgueros. El fenómeno del colonizaje de indios y de tierras es el mismo en todas partes. El indio pierde sus tierras y queda postrado en la servidumbre.

En 1926 el Concejo Municipal de Inzá creó una área de población con límites claramente establecidos en común acuer-

do entre las autoridades municipales y el Cabildo. Dentro de esta área se establecieron los colonos. El valle del torrente Pisimbalá es estrecho pero fertilísimo. Todo él pertenece a unas pocas familias de colonos, que han establecido cafetales, cañaverales y hatos. Los indígenas ocupan las partes escarpadas y estériles.

El pueblo de San Andrés consta de veintitrés casas de bahareque y techo pajizo. Una sola es de ladrillo y teja. Su trazo recuerda las líneas generales de las fundaciones españolas: plaza central y casas en su derredor. La iglesia larga, pajiza, blanca, tiene un frontis hermoso, con un campanario, arcos y columnas, estilo que recuerda la arquitectura colonial; ocupa el centro de la plaza y fue construída en la primera década del siglo XIX por el Padre Joaquín Núñez y Tobar. En su costado sur se levanta un vetusto caserón donde funciona la escuela y la casa cural; por los otros puntos la circuyen casas de colonos.

Existen dos tiendas con un regular surtido de mercancías y los miércoles se realiza un pequeño mercado en el que se expende una res, algunos productos agrícolas y chicha.

Hacia la terminación del valle de Pisimbalá, encuéntranse las mesetas no muy extensas de Argentina y El Rodeo. El Rodeo tiene señalada importancia histórica; por largo tiempo se llamó Segovia. Con el espíritu de conquista y colonizaje, fundóse allí la ciudad de Nueva Segovia por el capitán Hernando Arias Saavedra en obedecimiento del mandato del Gobernador Sancho Espinar, quien en 1578 abandonó estas tierras después de su pomposa campaña contra los paeces. Tuvo vida efímera. En esta misma meseta se decidió en favor de Mosquera la revolución que había emprendido contra el gobierno de don Mariano Ospina Rodríguez al derrotar espectacularmente las fuerzas gobiernistas comandadas por el general Joaquín París (1). Asimismo, por mucho tiempo los mercados de muchas leguas a la redonda fueron abastecidos por la sal que se extraía de tres salares que todavía existen en Segovia. Frente a éstos y al otro lado del Ullucos, en Vivorá, también se explotaba otro salar.

En la confluencia de la pequeña quebrada denominada El Escaño con el Pisimbalá, sobre la margen derecha de éste, al pie del filo del Aguacate, sobre una terraza aluvial de dos hectáreas de extensión, hállase situado el Parque Arqueoló-

(1) González, David. Los paeces, manuscrito.

gico de Tierradentro, dependencia del Instituto Colombiano de Antropología. Fundado hace aproximadamente tres lustros, tiene a su cargo el cuidado y conservación de los monumentos arqueológicos conocidos en el mundo científico desde 1936 pero cuyas referencias se remontan hacia la penúltima década del siglo pasado, cuando el doctor Carlos Cuervo Márquez realizó sus exploraciones por tierras de los paeces y gran parte del nevado del Huila. Necrópolis subterráneas, con columnas, columnatas y nichos, pintura negra y roja geometrizada sobre fondo blanco, estatuaria muy semejante a la agustiniana, cerámica y orfebrería, constituyen los principales exponentes de esta cultura apenas conocida en forma descriptiva.

El Parque Arqueológico de Tierradentro ha sido el centro de operaciones de las expediciones científicas que el gobierno nacional ha auspiciado, estimulado y sostenido durante los últimos quince años.

II

POR LOS ZIG-ZAGS DEL CAMINO

Para viajar por caminos tortuosos ha menester de caballos resistentes a la fatiga; el brío debe ceder al paso reposado, pisada firme, marcha continua.

A las once de la mañana partimos del Parque rumbo a Calderas. El camino asciende por el valle del Pisimbalá, primero por su margen derecha y luego por la izquierda atravesando un puente de madera con techo de tabla; desde este puente hasta el pueblo de San Andrés, tres riachuelos cortan su paso: Chapequís, La Virgen y el riachuelo del cementerio. A lo largo de este corto trayecto y a la vera del camino contamos diez casas, pajizas todas excepto una que es de mampostería, teja, pintura al óleo, factura moderna; las otras tienen blancas las paredes, pintadas las puertas y por lo general son limpias y arregladas. Son las casas de mestizos y colonos asentadas en sus respectivas fincas.

A las once y media dejamos el poblado y tomamos la senda que conduce a Calderas; el camino va siempre en ascenso, en zig-zags lentos y resbalosos. A medida que avanzamos van apareciendo casas con techo color grafito, paredes negras cuando son de bahareque, o amarillas, que son las más, cuando las paredes son de caña de maíz; están como hundidas en

los platanares, cañaverales y yucales; el humo azuloso sale vertical y en espesos grumos, de las troneras.

A las doce del día salimos al Mesón, **Supok** en dialecto Páez, pequeña meseta orientada de norte a sur y limitada por este y oeste por grandes depresiones. Levántanse muchas casitas indígenas.

El hermoso valle del torrente Pisimbalá aparece a la vista en toda su extensión; recogido a veces, dilatado más allá, largo siempre y estrecho en la generalidad, desciende suavemente inclinado en busca del ruidoso Ullucos; vestido de una vigorosa vegetación, semeja una verdeante alfombra en cuyos matices participan la soberanía de los cachimbos, los cedros, guamos, guaduas y yarumos y el esplendor de los cañaverales, platanares y los herbazales de los potreros.

Una hora después alcanzamos el filo de **Yukaichi**, límite de las Parcialidades de San Andrés y Calderas y divisoria de aguas del río **Kukiyú** y el torrente Pisimbalá; aquel una profunda garganta y este un cuenco largo. Hacia el norte, el reborde de otro filo limita el horizonte y separa las parcialidades de Suin y Chinas. Destácase en él el pico de **Vichaguau**, el cerro **Dondotá** de doble cresta por medio de las cuales aparece, cuando el firmamento está despejado, el Huila de inmarcesibles amposé donde los áureos rayos solares se quiebran en argentinos resplandores. Hacia el oriente se mira los cerros de **Chindavá** y Potrerito, los collados de **Togoima** y el cañón del Páez. Hacia el sur, distínguense las sierras de **Pangok** y El Aguacate, que separa los valles del Pisimbalá y el Ullucos; las mesas de Pedregal, Turminá e Inzá; el picacho del Trueno, el **Kapich** de los indígenas, cima de silencios, rayos, truenos y tempestades. Por donde se oculta el sol levántase soberbio y desafiante el picacho de **Hipinji** (1), en el cual según el decir de algunos indios, reposan los santos, las campanas, las ropas, el oro y la plata que las huestes paeces arrastraron de San Sebastián de la Plata, después de haber asesinado a todos los moradores blancos, incendiado la ciudad y tapado las famosas minas de plata que dieron nombre a la ciudad, atrajeron gran número de aventureros y no pocas desdichas a los indios. Esta leyenda ha alimentado la fantasía de los blancos y ha impulsado a no pocos a su búsqueda. Cuéntase que al **Hipinji** fueron algunos blancos en busca del legendario tesoro. En la

(1) H = a la h inglesa.
J = a la j francesa.
Sh = a la sh francesa.

cresta del picacho ondeaba una bandera blanca. Un buen día apareció en ésta la siguiente orden misteriosa: "A las doce pueden abrir ese hueco". Se encendieron los afanes, se olvidaron las fatigas y se entregaron con tesón al trabajo. Un peón fue favorecido por la ciega fortuna: sus esfuerzos dieron con una olla, grande, rebosante de oro. En el colmo de su alegría salió en carrera a participarles a sus compañeros el anhelado hallazgo; impulsados por la ambición volaron todos al sitio de la fortuna: y oh! desdicha suma: el tesoro había desaparecido. Minutos después explotaba el polvorín que poseían matando a muchos, mutilando a varios y dejando con vida a muy pocos. La leyenda del **Hipinji** la localizan los blancos en **Tumbéchukue.**

El descenso al **Kukiyú** se efectúa por un filo vertical siguiendo un sendero de innumerables zig-zags, obra auténticamente indígena, es una verdadera obra de ingeniería: ni podía ser por otra parte y sólo podía ser como es. El puente sobre el **Kukiyú** está construído con dos vigas gruesas sobre las cuales se han cosido con bejucos travesaños delgados; como todo puente páez tiene un techo pajizo y barandas laterales.

A las dos de la tarde llegamos al lugar de nuestro destino.

III

PUNTOS NEGROS Y HUMEANTES EN EL HORIZONTE

Desde **Yukaichí** se divisa casi toda la parcialidad de Calderas, al menos la margen izquierda del **Kukiyú**. En el lomo de un collado, a la vuelta de un requiebro, en una meseta ligera, discretamente perdida en un suave declive, o en atrevida pendiente, vénse figuras trapezoidales con resplandores de grafito, sostenidas por hileras de doradas cañas de maíz. Son las casitas de los indios construídas a trechos distantes, hundidas en el verde paisaje de los platanares y cañaverales y por cuyas troneras despiden siempre un espeso y azulado humo, señal de vida y movimiento.

Mientras que para los guajiros el ganado es un símbolo de sustentación y el pastoreo la actividad concomitante, para los paeces la tierra es la sustentadora de los hombres; el negro manto que recubre las rocas, alimenta el monte después de las cosechas; el tiempo dirá cuándo estará maduro y "jecho" para cercar nuevamente las rozas que darán el apetecido maíz, la opulenta arracacha, el menudo fríjol, la lozana col, el grueso y abundante trigo del santo; en los herbazales se nutren las vacas de brillantes y abigarradas pieles; el menudo caballo de veloz carrera y acerada resistencia; las numerosas piaras que se disputan las tiernas raíces de los arbustos; la mansa oveja que brinda la lana para la ruana de los hombres, los anacos de las mujeres y las **kuetand yahas** de ambos.

El trabajo de la tierra constituye un ejercicio cuotidiano de la cooperación. La posesión por el indio es de un derecho indiscutible y la defensa un imperativo categórico. Por poseer la tierra y defender un derecho inalienable Lliban y Juan Chiracol lucharon contra los pijaos. Asimismo, porque los blancos codician sus tierras son enemigos de su convivencia

y se excusan de aceptarlos pretextando cualquier cosa. En la posesión de la tierra está su seguridad y su ventura. La pobreza, tal como ellos la entienden, como carencia de comida y animales, no se debe más que a la desidia de quienes la padecen.

Los niños crecen en comunión continua con las actividades de sus padres. Mientras que la niña ayuda a su madre en los quehaceres del hogar y sale en su compañía a traer la leña de sus rozas respectivas, los niños con su machete al hombro y su jigra de coca y mambe, parejos con su padre, limpian las rozas, hacen cercos, deshierban sus cultivos y cuando la mazorca graha y el trigo espiga, pásanse los días defendiéndolas de los ataques de los loros, guaras, borugos, ardillas y cusumbes. Jóvenes ya, realizan las mismas actividades pero con la esperanza de levantar su casa, casarse, crear hijos, tener animales, coca en abundancia y caña para su chicha. En cierto modo la casa es un apéndice necesario de sus parcelas; aún más, muchas tienen la duración de las rozas. La localización de éstas no contemplan ni la vistosidad del paisaje ni la suavidad del terreno, más bien la inaccesibilidad de las mismas. Unicamente cuando la casa rebasará la vida de una generación llenarán ciertos requisitos: fijeza, edificación en propiedad particular y escogencia del lugar adecuado por el médico bueno (té éu). Un buen día, el dueño determina el sitio: "Está bueno para hacer casa y vivir", dice. Entonces lleva al médico quien por la noche "piensa" si el sitio es conveniente o inconveniente; masca coca y remedios; toma buches de aguardiente y sopla al aire; con un pequeño bastón llamado "tama", hiende el aire en forma tal que a veces parece que asusta a los espíritus, otras los amenaza y en otras los garrotea. Si las señas, movimientos reflejos, se dan en el lado derecho el sitio es bondadoso, lo contrario denota que el sitio es inhabitable. Los espíritus están bravos o en el sitio existen huesos y oro pijaos. Cuando el lugar no ha sido escogido por el médico, aunque la casa sea hermosa, no pueden habitarla, porque los moradores se mueren, comenzando por los hijos, la madre luégo, terminando con el padre. El médico mismo prohibe a las gentes vivir en una casa construída sin llenar este requisito. El dictamen del médico es recompensado con una botella de aguardiente, un huevo (1) de coca, tabaco, un calabazo de chicha y generalmente con una comida de gallina.

(1) Medida de peso equivalente al peso de un huevo de gallina.

Esto se denomina "cuido". Cuando la casa esté terminada el médico pondrá en la cumbrera remedios especiales para evitar que el duende o echi desciendan por allí o puedan enfurecerse.

Después vienen las mingas. Una casa se construye con la ayuda de los demás. Se invita a las gentes, incluso el mismo médico va a trabajar como peón. Se organiza el trabajo. Primero van a traer la madera al monte; bajo la influencia del guarapo la algarabía es resonante; ruidosas las carcajadas; el sonido profundo del "cacho" retumba en las montañas multiplicándose en sus ecos. Luego se ponen a la disposición del maestro de obra. Aplanan la tierra, que formará el piso de la casa; abren los huecos para colocar los horcones, distantes el uno del otro dos metros aproximadamente, bien clavados y sujetos en la parte superior con travesaños amarrados con bejucos (**guák**); los horcones dibujan la forma de la casa y sobre ellos descansará todo su peso. Sobre esta armazón se ponen transversalmente las pikas, vigas que van de una pared a la otra, para dar solidez al conjunto. En seguida se levantará el techo a cuatro vertientes y se cubrirá con haces de hojas de caña de azúcar (**ñushets**) o de paja (**sits**) que se van sujetando en contorno y de abajo para arriba; se remata en la cumbrera, más abultada, recortada en línea recta en ambas vertientes a una caída de unos cincuenta centímetros; en el vértice y a espacios proporcionales se hacen unos amontonamientos de paja en cada uno de los cuales se clava una cruz. El maestro de obra dirige desde el suelo el remate: "Allí falta paja; acá tiene demás", observa con voz de mando.

Las paredes se forman con las altas cañas de maíz, colocándolas en hilera en medio de los horcones y atadas con bejucos a-travesaños, igualmente de caña; de la misma manera se construyen las divisiones de los cuartos interiores y las puertas que por lo general es una: la que da al exterior.

En la construcción todos desempeñan el mismo oficio, salvo el maestro de obra que dirige. Ni el maestro de obra ni los peones cobran, "no es costumbre entre los indios cobrar"; únicamente se cuida con chicha, aguardiente, comida con carne y coca. Al maestro de obra se le obsequia con un calabazo de chicha y una botella de aguardiente, los cuales son repartidos entre los mismos asistentes. Terminada la obra se emborrachan y bailan.

Las mujeres no toman parte directamente en la construc-

ción; ellas cocinan, reparten comida, proveen la casa de leña y agua, conversan, se espulgan mutuamente y se peinan.

Tres tipos de vivienda podemos distinguir entre los paeces, según la mayor o menor introducción y aceptación de elementos arquitectónicos extraños, pues, en la actualidad se generalizan y echan raíces elementos de ajena procedencia: la construcción en bahareque, divisiones interiores en departamentos, plantas de casas en forma de escuadra, utilización de clavos y puertas de tablas y aún hasta de chapas y llaves para asegurar la habitación; en igual forma no es desconocido el blanquimiento de las mismas.

El bohío de planta rectangular es el tipo de habitación más primitivo; menudo y liviano; tosco y sin estética alguna; techo de dos aguas; paredes de caña entretejida con una puerta

de entrada; piso de tierra; la cocina al centro, cueros a su alrededor; jigras colgadas de los horcones; sobre un madero de tres brazos la piedra de moler; interior ennegrecido por el humo; convivencia íntima con los cuyes. Estos ranchos dan la idea de pobreza extrema en sus moradores. Ninguno de éstos es de bahareque.

El segundo tipo de vivienda y el más generalizado y en el cual encontramos más elementos arquitectónicos extraños es la gran casa de planta rectangular, techo de cuatro vertientes, de 15 a 20 metros de largo por cuatro o cinco metros de ancho, con una o dos puertas y dos o tres departamentos, uno de los cuales ocupa las dos terceras partes del espacio construído y el tercio último se subdivide en los cuartos destinados a la cocina uno y para las canoas de chicha y despensa el otro. No son escasas las viviendas de este tipo que llevan el departamento para las mujeres menstruantes (**du yate léchukue**), aunque por lo general se construyan ranchitos aledaños a la casa para tal fin.

En este tipo de vivienda es común encontrar el bahareque, tarimas para dormir, puertas de tabla y a veces el blanquimiento de las paredes.

Esta casa de construcciones forman el pueblo de Calderas, constituído por catorce casas desordenadamente distribuídas en una hermosa meseta de unas veinte hectáreas, cubierta de pastos y atravesada por acequias que conducen el agua a cinco de las casas que son habitadas permanentemente; las otras, aunque tienen propietarios, sirven sólo para las fiestas religiosas cuando el fiestero se traslada allí con su séquito de mayordomos, peones, cocineras y utensilios para servir el aguardiente, la chicha y la comida. Estas casas son espaciosas, de 25 m. de largo por 6m. de ancho; gruesas paredes de barro, con una puerta de tabla a la entrada, la inmensa sala, **ñuhne wala**, tiene trece metros de largo; aquí están el trapiche, el metate (**úkukuat**), la escalera de muesca para subir al zarzo, los **pango pil**, vigas imperfectamente labradas en forma rectangular donde se sientan los hombres; uno de ellos tiene 10 m. de longitud; en uno de los rincones se amontona la leña; el piso es de tierra irregularmente aplanado. En estas espaciosas salas se verifican las concentraciones de gentes que en desfile diario visitan al fiestero; aquí resuena la música, se cuida al albacero, se efectúan los bailes, duermen los borrachos y se muele la caña.

Existen otros cuatro cuartos pequeños de cinco metros de

largo por tres de ancho. Dos de ellos son independientes entre sí con sus respectivas puertas que dan acceso a la sala; uno sirve de cocina y el otro para tostar la arepa. En el otro extremo de la casa están los otros dos unidos entre sí por una puerta y a la sala por otra. En el uno duermen los peones y en el otro están las canoas de chicha, las botellas de aguardiente y las ceras de laurel.

El tercer tipo de habitación, muy escaso en Calderas, es de planta en forma de escuadra. Tiene la sala, dos cocinas y el **du yate léchukue.** Sea cualquiera el tipo de habitación que una familia páez posée, todos tienen como aditamento inseparable, el trapiche, ya en el interior de la casa o ya ya fuera de ella. En realidad, si se tiene en cuenta que la sustentación básica de los indígenas está dada por el maíz, coles, chicha y coca, esta máquina es imprescindible.

Por otra parte, cada casa está provista de agua, tomada de los manantiales, arroyos o quebradas, mediante la habilísima construcción de acequias que sortean los valles, collados y pendientes. Sus tierras tienen abundantes aguas. Desconocen los pozos artesianos.

En cierta forma, las inmensas salas de las casas de Calderas representan las ramadas que se observan entre los blancos, mestizos e indígenas aculturados de San Andrés; aquí se construyen independientemente de la casa de habitación, con trapiche y horno para cocer el jugo de caña y fabricar la panela. En esta parcialidad, la industria de la panela está bastante desarrollada. En Calderas es desconocida.

Entre los paeces, tierra, matrimonio, familia y casa constituyen una unidad íntima, indisoluble. Da calor y sentido a una serie de complejos emotivos, sentimentales y sociológicos. Comienza cuando el muchacho púber siente la necesidad de una compañera que le ayude a trabajar y mitigue un tanto los ardores de la soledad. El amor despertado por una moza morena de formas tentadoras, lo impulsa a solicitarla a sus respectivos padres. "Dame tu hija. Estoy solo y necesito ayuda en mi trabajo", dice el muchacho una vez que, de acuerdo con sus posibilidades, ha cuidado a los suegros con botellas de aguardiente y calábazos de chicha. Los padres siempre acceden a los solicitantes.

A la media noche sale con ella para la casa de sus padres, cuando no tiene la propia. Vivirán juntos varios meses, un año, dos...; durante ese tiempo conocerá si la mujer sabe cocinar, moler maíz, acarrear agua y leña, tejer las ruanas y

las jigras, se dará cuenta de su fidelidad, temperamento y carácter. Sólo entonces buscará padrino, acudirá a donde el cura, comulgará y recibirá la bendición nupcial y regresará a su casa donde las burbujeantes canoas de chicha, el apetitoso "mute" que hierve en la paila, los rústicos tiples y las gratas chirimías, terminarán de sellar la unión. Con la bebida, la comida y la danza vencerán la noche y, a veces, también los días.

Luégo vendrá la construcción de la casa en terreno de su propiedad. Paulatinamente el hombre la irá llenando de **pangopil** para sentarse; de rústicos platos y cucharas para comer; de ollas para cocinar; cueros y a veces tarimas para dormir; del trapiche para moler la jugosa caña; traerá el agua de las fuentes distantes; la proveerá de canoas para fermentar la chicha; comprará machetes, hachas y barretones para labrar la tierra; sembrará plátanos, cañas, cebollas y coles en su huerta; coserá los barzos donde colocará los haces de trigo, las caspas de maíz, el morado fríjol; adquirirá su perro y también —¿por qué no? ha sido su ambición y su esperanza— comprará sus vacas para las fiestas y su caballo para correr San Juan y mover el trapiche. La mujer por su parte criará los cuyes, multiplicará sus gallinas y pavos, velará porque los puercos no se pierdan, esquilará su oveja, tejerá sus **yaha gwala** (jigras de fique) para traer las apretadas mazorcas, los sonoros fríjoles y las verdes coles de las sementeras; hará laboriosamente las multicolores **kuetand yahas** con las cuales rendirá un presente de amor a su marido. Vendrán los hijos que "son una bendición de Dios" con quienes trabajará la tierra el hombre o aliviará las faenas de la cocina la mujer.

La casa da individualidad a la familia, marco sociológico, status y función. La tierra, la casa y la familia son específicas ambiciones de las gentes paeces. Posiblemente representan sus más caros ideales de vida.

IV

FUEGO VIVO PARA UN CULTO

En la conciencia de cada individuo, en el espíritu familiar, el fuego es un símbolo; un símbolo de la casa y del hogar. Casa sin fuego es casa muerta, abandonada.

En la antigüedad, cuando vivían los pijaos sembrando el terror y la muerte, cuando los caciques descendían en las tu-

multuosas ondas de los caudalosos ríos, bajo la imponencia de la negra noche agujereada de estrellas, y mucho más antes todavía, los indios comenzaban su diario trajín solicitando el fuego a una vieja de cabello blanco. Este fuego fenecía cuando la noche extendía su negro manto por el mundo. Unicamente la hoguera de la vieja era inmortal. La monotonía de esta diaria demanda del fuego se convirtió en angustia cuando la perversa anciana resolvió marcharse llevándose consigo el fuego en un trozo de leña. Persiguiéronla todos, le arrebataron el tizón, del cual obtuvieron el fuego para todas las casas de los indios. Este fuego se pudo conservar.

Así rezan los relatos míticos del origen del fuego. Refleja, desde luego la importancia del mismo. La manera como lo conservan, el cuidado que tienen porque el fuego siempre esté

ardiendo en casa, parece que fueran actitudes supérstites de un antiguo culto del fuego. En tiempos pasados el fuego lo obtenían con "el eslabón y la yesca". Comoquiera que sea, los relatos míticos revelan usura de la poseedora del fuego y ansiedad cuando estuvieron a punto de perderlo. Hoy, cuando por descuido se ha extinguido en una casa, utilizan las cerillas de los blancos para reavivarlo.

Los indígenas se acuestan temprano. A las siete de la noche, sobre pieles secas de res, se tienden en cama general los padres y los hijos, conservando en sus cuerpos las ropas que los cubrieron en el día. No usan cobijas. La mujer deja abundante leña en el fogón con cuyo calor se defienden de los rigores del frío de la noche que se filtra por las paredes de cañas. Además, sobre el fogón está una olla de "mute", fríjoles y coles que, cocidos, constituirán el menú de la madrugada. El fuego es reavivado por la mujer a las once de la noche, operación que se repite a las dos de la mañana más o menos. A las cuatro de la mañana todos están en pie. Al amanecer la mujer reparte la comida y en seguida los hombres salen de sus casas con machete al cinto, **kuetand yaha** repleta de coca y mambe a rozar el monte, desyerbar la labranza o ayudar en la dura faena del vecino.

V

LA SAÑA, EL RENCOR Y LA POLITICA

Los indios calderas son conservadores cerrados a la banda. La tradición, el orgullo, la rebeldía tienen mucho que ver en su pasión política. Ni qué hablar de la doctrina conservadora ni de los conceptos políticos. Son conservadores por temperamento, por solidaridad de grupo. Por lo mismo el fanatismo es proverbial. El sólo nombre liberal les produce sarpullidos. Quienquiera que llegue a Calderas por primera vez, la curiosidad del indio estimula el contacto con el mismo. "Cómo te llamas?" "Qué quieres?" "A qué vienes?" "Qué eres, liberal o conservador?" Son las preguntas con que los indígenas y el propio cabildo asedian al visitante. Sobra decir que quien quiere salvar el pellejo o evitar que lo saquen en carrera desenfrenada debe decir inflexiblemente que es conservador. Cuéntase que en 1952 no querían aceptar a las Hermanas Misioneras que llegaban a dirigir la escuela que la nación sostiene. Fue menester que alguien les dijera que eran enviadas por

Laureano Gómez para que todos contestaran a boca llena: entonces, que se queden.

A pesar de su calado conservatismo, los jefes del municipio no logran hacerlos votar por las listas de sus preferencias si previamente no reciben su ración de carne, chicha y aguardiente. Ración y voto forman una unidad indisoluble.

"Yo soy godo hasta los tuétanos, conservador fino", exclamaba uno de los principales de Calderas en medio de su borrachera. "Juan Chiracol también fue conservador", decía otro.

Los indios de Tierradentro han sido liberales desde 1860, gracias a la aureola de vencedor que Mosquera conquistó en los llanos de Segovia. "La batalla de Segovia —dice el padre David González— en la cual tomaron parte los indios y en que Mosquera le dio pábulo a la ferocidad indígena, la marcha sobre Bogotá, que cayó en poder del General rebelde, convirtió a éste a los ojos de los paeces en un semidiós. Ellos desde los más antiguos tiempos de la colonia veneraban el apellido Mosquera; el Marqués don Cristóbal Mosquera y Figueroa había sido su amo, su encomendero, los había llevado a Popayán en cuadrillas a trabajar en sus haciendas, les había dado las inmensas tierras de su encomienda... Naturalmente los indios de Tierradentro desde 1860 quedaron ligados fuertemente al bando político que representaba Mosquera, el liberalismo. En las contiendas guerreras que en lo sucesivo azotaron a la nación los paeces estuvieson indefectiblemente bajo las toldas liberales".

Resulta, pues, singular la filiación política de los indios calderas; hasta no hace una década de años, formaban un islote conservador en medio de una muchedumbre liberal. Posiblemente esta actitud esconda el prurito de defender sus tierras. No son muy marcadas las simpatías de los calderas con las parcialidades limítrofes. "Son rojos" dicen los naturales, mientras los otros les disputan sus tierras y reducen la extensión de la parcialidad. Así han hecho los aviramas, los togoimas y lames. En la actualidad sus relaciones aparecen cordiales, pues, al menos, parecen haberse borrado las diferencias políticas.

Los paeces son extremadamente belicosos, de natural agresivo; se ensañan con facilidad y difícilmente borran el rencor de su alma. Parece que su característica psicológica es la explosión. La historia da muchas pruebas fehacientes. Reacios al yugo español, destructores de las fundaciones coloniales, en

tiempos de la república han servido de instrumentos de ciegas ambiciones y enconos políticos y con su sangre se han alimentado casi todas las contiendas civiles. Se plegan fácilmente al espíritu militar, caudillesco y bárbaro. Son memorables las asonadas habidas en el presente siglo: La Quintinada, la Collada y el 28 de enero, acaecidas en 1916 la primera, en 1932 la segunda y en 1950 la tercera, por motivos racistas, religiosos y rencores políticos, respectivamente.

Porfía en la venganza, crímenes espeluznantes y estremecedores, vertientes de sangre patentizan muchos aspectos de la vida social y política de estos indios.

VI

FIESTEROS, ALBACEROS Y MAYORDOMOS

Faltando más o menos tres meses para la celebración de la fiesta, el cabildo empieza a barajar los nombres de los fiesteros del próximo año. Elegidos los candidatos, el cabildo en pleno se traslada a la casa de éstos, donde después de charlas dilatorias manifiestan la determinación acordada. Las proposiciones se rechazan en principio, pero terminan aceptando el señalado honor.

En seguida, los nuevos fiesteros se dedican a buscar sus ayudantes llamados albaceros y mayordomos. Al finalizar la fiesta, acompañados del cabildo y de los viejos fiesteros, acuden donde el señor cura a hacerse anotar y anunciar como fiesteros del próximo año. Cada cual recibe la bandera de la iglesia, en procesión dan la vuelta a la misma y luego se marchan a una de las casas del pueblo previamente solicitada a su dueño, con el reventar de los cohetes y los acordes de la música. Allí se servirá la chicha y el aguardiente al albacero, mayordomos y asistentes, cuando todavía no han acabado de consumir los licores del viejo fiestero. Igualmente, se dará una comida, para la cual se ha matado un toro.

Pasan los meses. La búsqueda del dinero para sufragar los gastos es imperiosa. Fiesteros y albaceros, con sus mujeres y a veces también con algunos familiares, abandonan sus tierra y retraídos sobre sí mismos toman el camino de Inzá, La Plata o Popayán a contratarse como peones en las haciendas conocidas por ellos personalmente o por referencias fidedignas. Un peso y la comida será su jornal. Ni siquiera la coca

entra en su ración. Marido y mujer realizan los mismos trabajos y devengan el mismo jornal.

A los dos meses regresan nuevamente a su tierra portando en sus jigras la pólvora, el pabilo y la sal. A veces machete fajado al cinto. Sobre el fiestero recae el mayor número de gastos: camarico (1) para el señor cura y los derechos del mismo; bujías para el altar; pólvora para la misa y los cumplidos sociales; limpiada de la iglesia; "cuido" al albacero y atención a los visitantes por espacio de tres semanas. El albacero tiene a su cargo la celebración de las vísperas: alumbrado de la iglesia, vacaloca, castillo y pólvora.

Los mayordomos contribuyen con dinero (un peso) para los derechos del señor cura y velas para el alumbrado de la iglesia.

Tanto el fiestero como el albacero tienen sus peones nombrados por ellos mismos. El fiestero tiene los siguientes: tres para el reparto de la comida; tres chicheros: dos hombres y una mujer; dos moledores de caña; un cohetero y dos cocineras. El acarreo de la caña queda a cargo de los hombres de buena voluntad que asisten diariamente en pos de bebida. El albacero posee los mismos peones y aunque no mata res para gratificarlos sí sacrifica un cerdo para tal fin, especialmente al pirotécnico, con todos los honores de la mesa y el aparato de la etiqueta.

Albacero y fiestero con sus respectivas mujeres no trabajan; su oficio es atender a las gentes.

Toda fiesta religiosa tiene un fiestero principal y otro secundario, con sus respectivos séquitos de albaceros, mayordomos y peones. No existe diferencia de rango entre los dos. Ambos gastan y realizan los mismos actos. Unicamente que el principal verifica primero los actos; lleva, pues, la primacía. No obstante, parece existir cierta competencia entre los dos. Según el derroche y las atenciones se comenta si la fiesta del uno estuvo mejor que la del otro. Además, cierto prestigio implica esto. Así, de los dos fiesteros que acabaron la fiesta de San Juan en el presente año, la del segundo se dice que estuvo mejor, puesto que no se emborrachó, asistió a todas las ceremonias religiosas y atendió muy bien a las gentes. De estas apreciaciones sólo la última es válida, pues fue fundamental la abundancia de comida, chicha y aguardiente; la borrachera continua es índice de buena fiesta. Por otra parte, sabía atender las gentes ya que había sido fiestero en otra época.

Tres semanas antes del día festivo, en casa de los fiesteros se ponen en movimiento. Moliendas de caña, destilación del aguardiente, atención a los visitantes, fabricación de velas y cohetes.

A quince días de la misa los fiesteros, acompañados del cabildo, música y cohetes salen a tomar posesión de la casa del pueblo, con su mujer, sus cocineras, chicheros, repartidores de comida.

En la espaciosa sala se llevarán a cabo todas las atenciones populares. En frente de la casa estará flotando la bandera de la iglesia.

VII

LA MOLIENDA, LA CHICHA Y LOS CHICHEROS

Sobra decir que la fiesta comienza con la molienda. Aunque es común utilizar un caballo para mover el trapiche, lo más general en tiempos de fiesta es que lo muevan brazos humanos, masculinos o femeninos. Es igual. Los dos peones de la molienda colocados a lado y lado del trapiche, en cuclillas, pasa el uno las cañas mientras el otro recibe el bagazo que se va amontonando a un lado para luego repasarlo, labor que se hace hasta por doce veces con el fin de exprimir todo el jugo posible. Los moledores desempeñan el trabajo en silencio cuando no están borrachos; en tanto que lo hacen con diligencia, solaz, risa, gritos, imprecaciones, cuando padecen los efectos del alcohol.

El jugo se recoge en canoas y con menos frecuencia en calabazos y calderos; se lo calienta hasta cerca de la ebullición, para luégo vaciarlo a las canoas, en las que por estar completamente "curadas" la fermentación es rápida. Las canoas están hechas de enormes troncos que alcanzan hasta un metro con cincuenta centímetros de espesor por cuatro o cinco metros de largo. A medida que disminuyen con el consumo, se van rellenando con el jugo fresco de la caña. Las canoas permanecen tapadas con esterillas fabricadas exclusivamente para ese fin. Al día siguiente amanece burbujeante, amarillento, con un sabor dulce picante. Es el **beka pes** (chicha fuerte) de los indígenas que lo toman con fruición y deleite. Cinco totumadas de este licor son suficientes para emborracharlos. Guarapo se llama en otras partes, mientras que los paeces lo llaman chicha, de gran importancia para la vida social, y dietética de los mismos. A base de ella tienen significado las fiestas religiosas, se realizan las mingas, se ameniza los bautizos y matrimonios, se gratifica a los visitantes.

El trabajo sin la chicha no se concibe y en tanto trabajan no reciben alimento alguno; sólo se bebe chicha y se mambea. La chicha, pues, suministra las calorías para el trabajo mientras la coca amortigua la sensación de hambre. El consumo de chicha es general para hombres y mujeres, viejos y niños. No existe casa donde la chicha falte por largo tiempo. Y durante los cortos lapsos que escasea, la compran o frecuentan las casas que la poseen. Entre amigos no se vende, se regala:

"conversando, riendo, regalando", dicen acertadamente los indios para pintar esta situación.

Las moliendas de las fiestas son diarias y están en relación directa con el número de visitantes. Las moliendas para las mingas son de dos días, de una semana para los bautizos y hasta de un mes para los matrimonios.

Los recipientes más extendidos de la chicha son las canoas, pero también se utilizan cántaros y grandes ollas de arcilla, enterradas hasta el borde de las mismas.

Los chicheros son dueños absolutos de las canoas, mientras cumplen con su función. Ellos reparten la chicha y aún el mismo fiestero debe solicitarles la cantidad deseada. Nadie toma chicha sin su consentimiento. Asimismo, ellos reciben los regalos que los visitantes dan al fiestero. Este apenas agradece. Aunque siempre toman chicha, no se emborrachan, para cumplir bien con su oficio. Su día tendrán en que sí puedan hacerlo.

VIII

EL AGUARDIENTE DE CAÑA

En los días de la fiesta el aguardiente se destila cada dos o tres días. La destilación es bien fácil. Se prepara el alambique en la siguiente forma:

Una olla de arcilla de buen tamaño: 50 a 60 ctms. de altura por 25 a 30 ctms. de diámetro; contiene guarapo fermentado en dos días, mezclado con anís, eneldo, clavo, canela, anisillo y **bitepiskue**. A veces agregan berbena. Descansa sobre tres piedras que componen el fogón. Sobre los rebordes de esta olla y tapando los intersticios con una pasta de ceniza para evitar el escape del vapor, se coloca otra olla de regular tamaño: 30 cms. de altura por 20 cms. de diámetro. En el interior de ésta se pone un platón de madera ovoidal, acanalado, con un mango, igualmente acanalado, que se une a un tubo de carrizo que atraviesa la olla a la mitad de su altura, por donde corre el aguardiente a los envases (litros y botellas). El fondo de esta olla está perforado con el fin de que pase el vapor del guarapo. Encima de esta vasija se coloca una paila de cobre de unos 15 cm. de altura por unos 30 de diámetro; las junturas van cubiertas con pasta de ceniza. Sobre esta paila cae permanentemente un chorro de agua fría traída por un canal de guadua del exterior; el excedente sale por un tubo

de carrizo colocado en una abertura existente junto al borde. Cuando esta caída de agua no es factible, las mujeres se encargan de cambiar constantemente el agua caliente por fría.

Alambiques de este tipo destilan 15 litros más o menos.

La cantidad de los componentes son los siguientes:

Guarapo, las dos terceras partes del recipiente.

Anís, tres huevos (procedente de Silvia o Neiva).

Eneldo, una libra aproximadamente.

Anisillo (yerba aromática), un huevo.

Bitopiskue (yerba picante), media libra aproximadamente.

Clavo, diez centavos (una onza).
Canela, diez centavos (una onza).

La destilación no encierra ningún misterio. Aunque tiene sus prevenciones. Cualquiera puede asistir pero no puede decir "venda" porque la destilación no rinde. Si sale debe hacerlo en silencio, siendo preferible no salir, porque se llevaría consigo el "corazón" del aguardiente, disminuyendo consiguientemente la cantidad y desmejorando la calidad, pues se pone "frío y desabrido".

La destilación se verifica en cualquier día y a cualquier hora; hasta allá no llegan los celadores de rentas; jamás han permitido control de esta naturaleza y quien tiene la osadía de hacerlo arriesga la vida. Los niños consumen este licor desde los tres años. No conciben los abstemios; "sólo los evangélicos no toman", concluyen.

IX

LA CERA SE DA EN EL MONTE

Antes de que el fiestero salga a radicarse al pueblo, los peones labran las velas, destilan el aguardiente, mientras que el pirotécnico manufactura los cohetes y los castillos.

Las velas se fabrican con cera de laurel silvestre (1), obtenida no ha mucho tiempo de las pepitas colectadas en meses anteriores en los matorrales del monte. Evidentemente, el laurel es un matorral de hojas lanceoladas, que cría silvestre en las rozas después de la cosecha. Por los meses de abril y mayo las ramitas están cargadas de plomizas y menudas pepitas muy semejante a la forma como carga el café. Son comida predilecta de las torcazas y por lo mismo mientras maduran, el dueño, preferentemente los niños, las asustan constantemente. Es un refuerzo a la defensa mágica que ha realizado el médico bueno por insinuación del dueño del monte. Este mismo ha realizado el conjuro para ahuyentar las indeseadas aves: en la carga de su escopeta ha puesto **chayuts** (2) y ha disparado a las torcazas. No regresarán más.

La recolección de las pepitas se hace en mochilas de ilque. Diez peones recolectan en un día una arroba más o menos.

---

(1) Myrica pubescens Willd.
(2) Escrofularéacea.

Por espacio de un mes las secarán dejándolas regadas en un rincón de la casa, para que la cera salga blanca y no verde como saldría de no hacer así.

Para extraer la cera se empacan las pepitas en pequeños costales o mochilas, se cocen así, para luego prensarlos. La cera desprendida cae con agua caliente a un recipiente circular; al día siguiente, se saca el agua que ha quedado en el fondo del recipiente y se deja allí la cera para que solidifique más.

Hasta no hace muchos años la extracción de la cera de laurel era la única industria entre los calderas que les daba ingresos monetarios. Y era el único artículo de comercio activo con los blancos. Desde luego, el precio era remunerativo, se vendía a peso la libra; en la actualidad, apenas vale cuarenta centavos. No existe, pues; mercado para este artículo. Los fiesteros y los albaceros tienen bloques de cera en sus estrados. Los peones la diluyen en una paila de cobre, la echan luego en tubos de guadua mezclada con agua caliente para evitar que se solidifique pronto. Allí van metiendo los pabilos recortados en diversos tamaños, para impregnarlos de cera, sacarlos al aire para que endurezcan, nuevamente impregnarlos de cera y así sucesivamente hasta dar a la vela el grosor deseado. Varias docenas se fabrican; unas grandes para la mesa, otras medianas para la iglesia y otras más pequeñas para los mayordomos.

X

LA POLVORA

Los paeces desconocen en absoluto el método de obtener pólvora. Y para explicar su obtención circula la dolorosa leyenda de que se hace de los seres humanos. Procede de un hombre gordo, dicen; engordado expresamente para ese fin. Lo cuelgan, le introducen una varilla de hierro al rojo vivo por el recto; chorrea manteca; esa manteca es la pólvora. Por eso no quieren mandar a sus hijos a tierras lejanas donde vive el blanco. Creen que servirán para obtener pólvora. "Los blancos quieren mucho a los indios para obtener pólvora".

Los indios compran la pólvora en los centros urbanos. La elaboran. La técnica casi es de dominio común.

Los granos explosivos los hacen de la siguiente manera. En cartuchitos de piel de oveja se llena la pólvora; estos cartuchos

se lían fuertemente con hilos de fique. En seguida se agujerean de manera que la pólvora pueda hacer contacto con la mecha correspondiente. Con estos granos explosivos se manufacturan:

Cohetes: un grano atado a un corto palito.

Voladores: tubos de carrizo lleno de pólvora con un grano explosivo, atado a una vara larga. Se elevan a alturas considerables y terminan con una explosión.

Pedreros: cohetes de tres granos atados a un palito.

Castillo: figura semejante a la mitad de una elipse, hecha con varas flexibles y sobre las cuales van atados los granos explosivos.

El pirotécnico es nombrado especialmente por el fiestero o el albacero y en el momento de la fiesta distribuye personalmente los cohetes entre los mayores, reluciendo su deferencia. El albacero tiene que matar un cerdo o una oveja para gratificarlo por su trabajo.

La elaboración de estos artefactos es morosa: un mes y hasta más; no porque sea complicado sino porque el trabajo continuo de esto es aburridor.

En la elaboración de estos cohetes, con la relativa quietud que esto implica, puede el hombre conocer un destino que posiblemente era insospechado: ser médico. Al estar sentado en su oficio puede sentir las "señas" que le anuncian su futura actividad. Así sucedió con un buen médico de Calderas. De joven nada sabía de remedios ni de "señas". Pero al estar haciendo cohetes sintió las señas. Tenía cinco hijos entonces. En seguida se puso a aprender con otro médico afamado cuáles eran los buenos o malos remedios. Puso en práctica sus conocimientos, curó a un enfermo y se consagró como buen médico. Las señas, dicen, son mandadas por Dios.

XI

TOTUMOS Y ETIQUETA

Existen tres tipos de totumos con los cuales se reparte la chicha y en cuyo orden de uso se vislumbra jerarquía, mayoridad y status elevado; unos totumos sirven para todos los asistentes de ambos sexos y de todas las edades; otros únicamente para determinada clase de gentes.

El primer tipo es pequeño, abierto ovoidalmente, formado por la mitad de un totumo. En dialecto páez se llama Shup

shachi. A todos los visitantes, sin distingos de sexo, edad, ni status se les brinda con dos mates de éstos; el primero es de "agua fuerte" para calmar la sed, en tanto que el segundo es de chicha, de la auténtica chicha fuerte.

El segundo tipo de vaso es el **shachi pitán** (totumo capitán), de mayor capacidad que el primero, de forma ovoidal y abierto por uno de los extremos. Las gentes de mayor respeto de ambos sexos, adultos y viejos, reciben chicha en estos totumos,

después de haber tomado en los **shup shachi**. Significa cierta deferencia de parte del anfitrión y por lo mismo quiere que se emborrachen. Los favorecidos con estos totumos brindan a todos los asistentes, quienes lo reciben, lo prueban y lo devuelven a manos del dueño. El **shachi pitán** ha pasado de boca en boca, pero el contenido permanece casi intacto; tiene que tomárselo el dueño.

Los peones y mayordomos que están a su servicio, el albacero, el síndico, los ancianos de gran deferencia, después de haber recibido chicha en el **shup shachi** y en el **shachi pitán**, reciben un totumo más grande y dentro del cual va un totumito pequeñito (**shachi léchukue**), se denomina **suilté**. La donación de esto tiene su etiqueta. El anfitrión sale con el **suilté** en las manos, llena el **shachi léchukue** de chicha y lo pasa a la persona de su preferencia y respeto; este recibe, bebe y devuelve el totumito; en seguida recibe el **suilté**. Este a su vez llena el totumito y obsequia a quien así lo atiende. Luego sigue repartiendo la chicha entre todos los asistentes, empezando por los mayores de edad, hombres primero y luego mujeres, y terminando con los niños de ambos sexos. Nadie se queda sin su ración.

XII

LIMPIADA DE LA IGLESIA

La llamada iglesia de Calderas, obra de mampostería, es un vetusto caserón, largo, alto, techo pajizo, de dos vertientes, con un campanario semiesférico sostenido por cuatro maderos que se afirman en la cumbrera. Solo un frente de cuatro columnas con cornizas y arcos de medio punto que forman una antecámara, le dan cierta gracia al conjunto.

Limpiar la iglesia llaman a la sacada de algunas hierbas que crecen en el empedrado de la parte frontal y a la aclaración de una línea que dibuja una plazuela. El trabajo es mínimo, pero se realiza siempre. La actividad es más que toda simbólica; lo que importa es la reunión de los fiesteros con sus respectivos albaceros y peones; el motivo para cuidar al albacero, la oportunidad para el esparcimiento, la charla, los chistes y aún para el juego mismo.

Faltando unos doce días para la fiesta y en un día jueves, acompañados por el cabildo, la música y los cohetes, el fiestero abandona su casa y pasa a ocupar una del pueblo. Trae

consigo el toro que será sacrificado al día siguiente. Dos días después, es decir, lunes, se efectúa la limpiada de la iglesia. Raras veces se realiza los miércoles. El repique de campanas anuncia el convite y el mismo avisará a las gentes que la limpiada ha terminado; siendo así, beben los dos calabazos de chicha que cada fiestero ha llevado; suenan los cohetes; "el albacero se ha ganado la comida", dicen y por lo tanto merece los honores de la mesa. El fiestero lo cuidará con carne y "mute", aparte de más chicha y aguardiente. Después de almorzar el albacero se marcha a su casa. Allí esperará al fiestero, quien a la tarde irá portando más chicha, más aguardiente y más comida.

Ocho días después de la limpiada de la iglesia llegará el señor cura a oficiar los actos religiosos.

XIII

INSTRUMENTOS, MUSICA Y DANZA

Los conjuntos musicales de los calderas, verdaderas chirimías, tienen merecida fama tanto por el número de los músicos como por la belleza de sus interpretaciones. Muchas de ellas son suaves y delicadas, tonadas tristes la mayoría pero también las hay alegres. Los instrumentos musicales son pocos.

La flauta (**kuvi**), hecha de carrizo de unos setenta cms. de longitud; consta de siete huecos labrados con fuego: el de la parte superior que sirve para soplar; treinta y cinco cms. más abajo encontramos los otros que corresponden a los dedos de las manos mediando tres cms. entre y uno y otro. Distinguen dos clases de flautas: las que dan sonidos melódicos, **kuvinéhuish** (flauta mayor) y las que dan sonidos bajos, **kuvinuch** (flauta menor).

El bombo (**kut**), hecho con piel de oveja, becerro, cabro o venado, peladas mediante la fermentación sufrida bajo la tierra.

La pandereta, en cuyo ruedo lleva varios pares de latas circulares movibles que producen un ruido acompasado.

El redoblante o caja y el triángulo para llevar el ritmo.

Algunos indígenas tienen y tocan tiples adquiridos en Popayán, aunque hay algunos facturados por ellos mismos con conchas de armadillo.

Las siguientes son las composiciones de tipo ceremonial que no van acompañadas de danza:

Kulá ik kui (toro—matanza—pieza). Composición musical que se toca en el momento de matar la res, con la cual se va a cuidar al albacero y a los peones del fiestero. Los informantes manifiestan que esta pieza musical no tiene más significado que el de divertir a las gentes.

Plaza pá kui, composición musical que se toca cuando los músicos llegan a la iglesia.

Misa kase kui, se toca al finalizar la misa.

Chichi pékue kui, tocan cuando pican la carne para cuidar al albacero. Los peones toman los trozos de carne sobre un tronco y con la peinilla la cortan en pedacitos.

Hay otras composiciones propias de la ceremonja del matrimonio.

Novio mesa úku, se tocan al comenzar la comida de los novios.

Úpiate kui, tocada a la mitad de la consumisión del banquete nupcial.

Tunzi kamba kui, tocada al final del banquete nupcial.

Todas estas composiciones son melodiosas, con tres o cuatro compases.

Las fiestas religiosas, las mingas, los matrimonios, los bautismos son las ocasiones para la música. Está ausente en los entierros, de igual manera que en los velorios de los niños.

Las composiciones musicales se aprenden de los "mayores" y por propio interés. Desde niños aprenden a tocar con maestría el bombo, el redoblante y el triángulo. Con la flauta ensayan después. Si bien los instrumentos de ritmo los tocan gran número de gentes, los de la melodía (flautas), son escasos, concentrándose más bien en contadas familias.

Las mujeres no manejan ningún instrumento musical..

El canto secular es desconocido; solo letrillas religiosas se cantan a la hora del rezo, de la misa y de la procesión.

El baile de los calderas es estilizado y recuerda con mucho al bambuco colombiano. Se baila por parejas mixtas, sueltas o amarradas. Por lo general los bailadores adquieren un cierto aire de gravedad y concentración y los espectadores siguen con atención sus movimientos. La mujer mantiene siempre la cabeza agachada con su mirada dirigida al suelo, atenta a las notas musicales que parece interpretarlas con su movimiento. Un pie adelante seguido de un traspiés; alternan luego; rápidamente corta el camino al parejo; da media vuelta. Los brazos los inmoviliza en el abdomen.

El hombre, en cambio, lleva la frente levantada, los brazos inmóviles sobre los muslos, su rostro refleja alegría. De cuando en cuando lanza un grito: "Viva el partido conservador!" "Viva el Cauca!"

Es costumbre el baile del fiestero y el albacero con sus mujeres intercambiadas, después de los "cuidos" respectivos.

En los bailes de matrimonio es regla iniciarlos los novios y padrinos únicamente. En medio del baile y por varias veces los novios se arrodillan a sus padrinos para recitarles el bendito. La novia al padrino y el novio a la madrina. Aquellos los bendicen y les pasan la mano para que se levanten. Después del baile de novios y padrinos pueden bailar los demás asistentes, quienes en medio del baile también se saludan colo-

cando la mano derecha sobre el hombro izquierdo correspondiente y estrechándoselas luego.

Si bien que algún escritor de la colonia habla de danzas específicas en la actualidad sólo se recuerda y dícese practican en Avirama: la danza del pajarito (**vicha ku**), bailada por las muchachas al amanecer. Los informantes de Calderas dicen que es muy fea y que por lo mismo no la bailan. Posiblemente corresponda al Itza - ko anotado por Pittier de Fábregas.

XIV

EL GRAN DIA

Antes de que la alborada asome su tez blanca por los negros rebordes de las cumbres de oriente, las mujeres ya han abandonado el duro lecho de las pieles de res y activan el cocimiento de los alimentos, atizando presurosas el fuego de la cocina. Entre tanto, los hombres conversan y ríen a mandíbula batiente. La casa del fiestero está en pleno movimiento. A las seis de la mañana hombres y mujeres han desayunado con "mute", coles, plátano, yuca y carne. En seguida las mujeres ponen a cocer en una paila de cobre de un metro con cincuenta centímetros de diámetro, el mute con que almorzarán los peones y se atenderá al albacero después de las vísperas. Junto a esta vasija se coloca otra de arcilla, ligeramente inferior en tamaño, rebosante de maíz deshollejado con ceniza. Cuatro arrobas de maíz, aproximadamente, se consumirán en este día.

Con los haces de leña apiñados en un rincón de la cocina, y el agua almacenada en ollas, las mujeres se sienten en derredor del fuego a dar de lactar a sus críos, hilar la lana, tejer sus jigras y conversar sobre cosas del diario vivir.

Con el correr del día habrá sacrificio de la res; donación del "camarico" al señor cura; saludo al albacero; celebración de vísperas con juego de vacaloca; concluyendo con la comida que el fiestero dará a la media noche. Para el día siguiente habrá misa, procesión, entrega de las banderas a los nuevos fiesteros y cuido al albacero.

XV

ESCENAS ENTRE FIESTERO Y ALBACERO SEGUNDOS

El sol del día señala las nueve de la mañana. En casa del albacero se oye los sordos sonidos del bombo, y la melodía de las flautas.

Mientras tocan, llega el fiestero y su mujer a visitar al albacero con una olla de sancocho, una botella de aguardiente, un volador y una vela. El fiestero entrega lo suyo al albacero y su mujer a la esposa de éste. Se sientan cerca del fuego. El diálogo es interesante:

Albacero: El albacero siempre está detrás del fiestero. Vamos a hacerlo bailar.

—Fiestero: Tomando chicha nos reiremos.

Reitéranse los ofrecimientos de chicha y aguardiente.

—Vamos a la matanza de un torito.

—De golpe el toro me mata a mí, replica el albacero cortándole la invitación al fiestero. Y agrega:

—Usted cuida mucho; parece que tuviera más cosas. Yo no tengo nada.

—Nosotros no somos cualquier familia. Somos Muse, responde el fiestero.

—¿Qué quiere de mí que está cuidando mucho? Pregunta el albacero.

Entre tanto otros hombres expresan conceptos en tono sentimental y filosófico:

—Este es nuestro pueblo... Tenemos que hablar... Cuando nos muramos no volveremos más.

—Porque ahora que estamos vivos, y en nuestra tierra, debemos vernos con frecuencia.

El viejo dueño de la casa interrumpe la conversación:

—Está bien que estén acompañando. (Eviuha guechi pikin ustau).

Es la hora de matar la res. Los fiesteros abandonan la casa del albacero. Los músicos siguen detrás.

XVI

SACRIFICIO DE LA RES

Desde el día anterior la res ha permanecido frente a la casa amarrada en un poste. Contiguo a ella están varios montones de largos maderos secos.

A eso de las diez de la mañana los invitados especiales del fiestero se alistan para matar la res. Son cuatro. Los músicos entonan el **kula kui** mientras otros hombres empiezan a formar trozos pequeños de los largos maderos secos. Leñadores, matadores y músicos inician a un tiempo la actividad. La leña servirá para asar la arepa.

De los matadores uno recoge la sangre en un caldero, otro la sujeta de la cabeza y procura taparle los ojos; piensa que de no hacer así, lo embestirá otra vaca cuando vaya a cogerla.

Después de desollarla, la descuartizan siguiendo determinado orden. Las patas traseras (**chinda**), las patas delanteras (**kuse**), los muslos (**himbé**), los brazos (**pala**), la cola (**mens**), la carne del pescuezo (**chikichichi**), el sebo (**sepo**), intestino delgado (**chunchullo**), intestino grueso (**meto**), estómago (**tu-**

chi), tráquea (pechita), pulmón (mechto), corazón (ús), hígado (mechi), hiel (muahi), páncreas (shape)... Conocen la mayoría de los órganos con sus nombres, pero desconocen su fisiología específica.

De los pedazos de carne unos van directamente a la paila del "mute", que está hirviendo y con lo cual almorzarán los peones; los otros a la barbacoa donde pueden recibir el humo de la cocina.

En el interior de la casa, en el ñuhne wala, las mujeres en dos metates muelen maíz deshollejado para hacer arepa. Con harina de maíz y agua forman una masa que varias mujeres se encargan de darle una forma circular con las manos. En cocina aparte, dos mujeres y dos hombres se ocupan de asarlas. Primero las endurecen en un tiesto y terminan el cocimiento en el rescoldo del fogón. Un hombre de edad recoge las que están cocidas en una mochila. El otro se ocupa en entonar letrillas religiosas y en rezar. La arepa sirve para cuidar al albacero en el día siguiente.

Esta actividad la realizan con entusiasmo las mujeres.

—Los días de la fiesta son para charlar, dice una mujer.

—La vida sólo se la vive emborrándose, pregona otra.

XVII

"CAMARICO" PARA EL SEÑOR CURA

A las cuatro de la tarde fiestero y fiestera, acompañados de sus mayordomos, del cabildo, de los músicos y demás gentes, con los estandartes de la iglesia adelante, y con derroche de pólvora, desfilan hacia la casa cural. Cada uno lleva un presente al sacerdote llamado "camarico" y que consiste en vituallas y carne: plátano verde, papas, huevos, carne y sal. Primero entrega el hombre y luego la mujer. Representa un testimonio al señor cura por haber asistido a celebrarles la misa. Los mayordomos también lo obsequian con huevos.

En casa del albacero suenan flautas y tambores y salen gritos dando a entender que están listos para recibir el saludo del fiestero.

XVIII

DERROCHE Y PROTOCOLO

Son las cinco de la tarde. En casa del fiestero suenan los cohetes, mientras que en la del albacero se nota agitación.

Uno y otro poseen sus chirimías. La hora del saludo y del intercambio de regalos ha llegado.

El fiestero y la mujer, precedidos por las banderas de la iglesia y seguidos por numerosos acompañantes, las imprescindibles melodías de las chirimías y el reventar de los cohetes y voladores, han salido de su casa con sendos platos cubiertos con pañuelos de vivos colores y sobre los cuales llevan el regalo para el albacero y la mujer, respectivamente, consistente en un bizcochuelo, una botella de aguardiente, una bujía grande de cera de laurel y dos pequeñas, un volador y un cohete; un ayudante lleva, además, un caldero de chicha. El cortejo avanza parsimoniosamente. El albacero y esposa, por otra parte, también han salido de su casa, con su séquito de acompañantes, el tronar de los cohetes y los acordes musicales, llevando consigo el mismo regalo que traen los fiesteros: chicha, aguardiente, bizcochuelo, cohetes, voladores y velas. Un ayudante lleva una vistosa lámpara, hecha con varas flexibles en forma de semiesfera, adornada con una película blanca semejante al papel, obtenida de la cabuya (1) y flores de variados colores; cuatro carrizos tiene para clavar las velas.

Es albacero espera al fiestero muy cerca de su casa.

En el momento del encuentro, el fiestero y su mujer toma cada uno las banderas de la iglesia, prenden velas, que a su turno también son encendidas por el albacero y su mujer. Las intercambian: el fiestero con el albacero y las mujeres entre sí. Luégo se arrodillan quedando vis a vis los varones y las hembras. El fiestero presenta el saludo ceremonial:

—"Mi compañero: Nos encontramos en este punto. Vine a verlo. Reciba este bizcochito aunque esté muy desabrido."

—"Así estamos acompañando en este punto", responde el albacero.

Mientras los labios pronuncian esas palabras, las diestras de ambos tocan los hombros izquierdos respectivos y estrechan luégo las manos; las mujeres se saludan en idénticos ademanes; acto seguido la fiestera saluda al albacero y el fiestero a la mujer de aquél. Obsérvase el mismo protocolo. Inmediatamente intercambian los regalos: los maridos por una parte y las esposas por la otra. Todo se reparte entre sus acompañantes respectivos. Unicamente las velas conservan.

En todos estos actos la música no ha dejado de sonar, alter-

(1) Fourcroya andina.

nando el conjunto del albacero con el del fiestero. Las tonadas son alegres, el entusiasmo creciente, nutridas las explosiones de los cohetes.

Cuando todo se ha consumido devuélvense los platos, los pañuelos y los calderos expresándose mutuamente sus profundos agradecimientos. El albacero invita al fiestero:

—"Mi hermano: Ahora vamos a mi casa. No tengo nada que ofrecerle, pero qué vamos a hacer."

—"No tenga cuidado. Yo también estoy en las mismas condiciones que usted."

En casa del albacero permanecen todos hasta que el repique de las campanas les anuncia el reso. Asisten muy pocos y por obligación el fiestero y albacero. Los músicos van detrás. El albacero coloca la lámpara que ha dos horas exhibió en el saludo.

El alumbrado de la iglesia es suficiente. Consta de unas setenta y dos velas, de las cuales las del altar son del fiestero y el resto del albacero. Existen cuatro lámparas flotantes del tipo ya descrito. Sobre atravesaños sostenidos por vigas verticales y situados uno cerca del altar y el otro a la puerta de salida, vénse numerosas bujías sostenidas en barro fresco, de igual modo que en las cornisas de las paredes.

Los actos religiosos son acompañados con la música indígena: tonadas monorrítmicas y tristes alternan con aires alegres.

XIX

ANTORCHAS Y VACALOCA

Mientras en la casa del fiestero los hombres matan la res, forman los haces de leña y las mujeres tuestan las arepas, en casa del albacero suena la chirimía, se bebe en totumas la chicha, se manufactura la lámpara y se forma la vacaloca. De los ángulos de un rectángulo, hecho con cuatro varas atadas con bejucos, amárrase en semicírculo varas flexibles; sobre éstas envuélvese un cuero de res; en la parte anterior átase un cráneo de vaca con sus astas; los huesos frontales se cubren con papel periódico en el cual, y con carbón, se dibuja los ojos, nariz y boca de la vaca; los cuernos se envuelven con una tela saturada de cera de laurel; en la parte posterior un atado de cabuya desflibrada forma la cola. Además, se manufacturan con la misma tela encerada, tres an-

torchas y un mechón a manera de cruz, exclusivamente para el alumbrado.

A la salida del reso, un muchacho fuerte y membrudo agarra sobre sus hombros la rústica vacaloca, encienden los encerados cuernos y antorchas que previamente las han tomado otros jóvenes, suena la música, se prenden los cohetes y se comienza el juego. Los jóvenes bregan por quemar la cola y la vacaloca por perseguirlos y cornearlos con sus encendidas astas. Comienza la algarabía y el loco frenesí. Todos corren, todos desafían las embestidas del simbólico animal. De pronto la vacaloca pisa en falso, cae estruendosamente, provocando la hilaridad general. Fiestero y albacero, músicos, acompañantes y jugadores empiezan a desplazarse a casa del albacero. Allí terminan el juego cuando el combustible de las antorchas se agota y los jugadores caen vencidos por la fatiga.

Dentro de la habitación, en el **fukue wala**, los músicos en un rincón, las mujeres sentadas en el suelo, los hombres en los **pangos**, con sus rostros dorados por los resplandores de las antorchas, esperan el reparto de los calabazos de chicha y los litros de aguardiente con que el albacero atiende al fiestero. En el centro de la sala y contiguo a uno de los **pangos** está una tosca mesa, negra de humo, mugre y tiempo con dos velas encendidas en sus extremos; tres calabazos de chicha asentados sobre bagazos de caña; dos botellas de aguardiente junto a los calabazos de los extremos; junto al del centro un litro de aguardiente. El centro de la mesa lo ocupa el fiestero, a su derecha se sienta su mujer y el síndico a su izquierda. Se acerca el albacero, toma el litro en sus manos, mide una copa y la brinda al fiestero. Este la recibe, bebe y se la devuelve. De manos del albacero recibe la copa y el litro. En idéntica forma procede con el calabazo, en cuyo interior se encuentra el **shachi léchukue**. De la misma manera brinda las otras botellas y calabazos a la mujer del fiestero y al síndico. Se inicia el repartimiento para el cual fiestero, fiestera y síndico llaman tres hombres para que se encarguen de distribuir el generoso presente. El aguardiente lo reparten sus propios dueños poniendo en cada copa pedacitos de bizcochuelo. La algarabía crece en proporción directa del consumo. Todos beben por igual: hombres, mujeres y niños. Es el momento del chiste verde, nutrido y abundante. La hora en que la fantasía se aclara y vuela. La temática es casi única: el sexo en todas sus formas y manifestaciones: deseos, reali-

naciones, galanteos, embarazos, partos, genitalia y aún simulacros de coito en público. Cualquier alusión al sexo causa hilaridad; muchos aspectos de la vida, actitudes, trabajo se asocian al sexo.

A la media noche han secado botellas y calabazos. La música ha sido contínua, la borrachera creciente... Pero todavía no se ha terminado. En la casa del fiestero los esperan con otro presente.

El fiestero y albacero bailan con sus mujeres intercambiados. Terminada la danza todos salen y se sumergen en la negrura de la noche por senderos que no se ven, se adivinan. El sonido del bombo indica que las gentes, los **nasa wala**, se encaminan a la casa del fiestero.

Allí se encontrará la luz pálida y amarillenta, la mesa contigua a un pango y hacia el centro del **ñuhne wala** con sus dos velas encendidas, sus calabazos de chicha y sus botellas de aguardiente. Esta vez es el albacero quien se sentará al centro, su mujer a su derecha y a su izquierda el síndico. Se observará la misma etiqueta y los mismos cumplidos. Terminados los licores, vendrá la comida de coles y carne: grandes bateas para el albacero, la mujer y el síndico. A los demás se servirá en platones. Todos sorberán el caldo, exprimirán carne y coles con la mano y las guardarán en sus jigras.

Vencidos por la fatiga de varias noches en vela, por la chicha y la comida dormirán en el suelo. Cuando la alborada anuncie el nuevo día la inmensa sala, el **ñuhne wala**, presentará el espectáculo de grupos de gentes dormidas en promiscuidad de sexo y de edades.

XX

LA PROCESION DEL SANTO

Inmediatamente después de la misa, con asistencia de los que la oyeron y de los que no la oyeron también, se da comienzo a la procesión, esencia de la fiesta según el decir del Padre González. La imagen de San Juan adornado con muchas flores es paseada en andas por los devotos que se relevan con frecuencia, dan la vuelta a la iglesia con gran derroche de pólvora y al final queman el castillo. La música no cesa de tocar e incluso se entonan cánticos religiosos. Terminada la procesión y colocado el santo en el altar, los hombren montan en sus caballos, la mayoría en pelo, y se lanzan frenéticos a

correr por los llanos de la localidad. Se da rienda suelta a su entusiasmo, expansión a su espíritu y se despierta el afán de jugar. Grupos de caballeros en veloz algarabía van dejando atrás sus gritos de "Viva San Juan". En la vida diaria las acciones han sido lentas. Esta vez el movimiento y el bullicio parecen ser réplica a la lentitud y pesantez del diario vivir. Las bestias sudorosas llegan a las casas donde tienen un rápido descanso mientras sus amos beben con avidez el guarapo que les brindan los caseros.

Los fiesteros y albaceros con gran acompañamiento de gentes se acercan nuevamente donde el señor cura. Llevan los nombres de los fiesteros del próximo año. El sacerdote va leyendo en voz alta los nombres de los fiesteros, de los albaceros, de los mayordomos. Cada nombre pronunciado va acompañado de un campanazo que un fiscal se encarga de darlo; terminado el anuncio se da un repique general. De 15 a 20 mayordomos se asesora cada fiestero.

En seguida, frente a la puerta de la iglesia, arrodillados, los viejos fiesteros entregan las banderas a los nuevos. Realizan la procesión y al terminarla, en el lugar mismo donde se traspasaron las banderas, entréganse éstas al síndico, quien las bate una por una en el aire y termina como clavándola al suelo. Si por casualidad la bandera se envuelve en su propia asta alguna desgracia le pasará al nuevo fiestero. Generalmente es un presagio de muerte que llena de inmensa tristeza al fiestero cuya bandera ha tenido este suceso.

Ahora, cada fiestero marcha a su casa portando en sus manos la bandera del santo.

XXI

BANQUETE PARA EL ALBACERO

Después de la procesión el fiestero acude a la casa del albacero, donde es atendido con los consabidos calabazos de chicha y las botellas de aguardiente. Finalizado este ágape, la concurrencia se traslada a casa del fiestero. En el centro de la sala destácase, contigua al pango, la mesa con dos velas ardiendo en los extremos, los calabazos de chicha y los litros de aguardiente. Hacen los honores de la misma, el albacero, síndico y sus respectivas mujeres. Con la etiqueta y cumplidos conocidos se les brinda el presente y se efectúa el reparto correspondiente.

Los peones y los fiesteros se mueven de la sala a la cocina y de ésta a la sala. **Guechi pikin ustau** (estamos acompañando), dicen aquéllos, al entrar al **ñuhne wala. Anjiha,** responden los asistentes.

La cocina está repleta de alimentos cocidos y las mujeres se afanan en llenar los platos de variados tamaños; grandes unos, medianos otros y pequeños los más. Los repartidores se encargarán de pasarlos al destinatario. Esta vez servirán tres platos diferentes:

1º Arepa y carne; 2º Sancocho compuesto de plátano, papa, arracacha y carne picada; y, 3º Yucas, coles en rama, cocidas, y carne.

El albacero y mujer, síndico y esposa son congratulados con una batea de cada uno de estos tres "servidos". Los mayordomos reciben en menos cantidad y el resto de los asistentes en los platos de consumisión diaria.

De estos "servidos" sólo el último se reparte cuando la asistencia es numerosa. Todos van provistos de jigras. Sorben el caldo, exprimen los sólidos con la mano y los guardan en ellas. La borrachera y el sueño hace que pocos hablen.

Después de comer, o mejor, de colectar comida, suena la música. El fiestero y albacero bailan con sus esposas intercambiadas. Llevan en sus manos velas encendidas. La danza es lenta, pausada, trastrabillante. Al terminar todos se dirigen a casa del segundo fiestero a entregarle las banderas de la iglesia. Este repetirá los mismos actos religiosos y sociales, con la misma etiqueta y los mismos cumplidos.

XXII

UN BAÑO POR SAN JUAN

A las cuatro de la mañana del día 24 de junio en todas las casas están en pie, hombres, mujeres y niños. En la del fiestero brilla el fuego de la cocina, se cocinan los alimentos y todos beben y conversan. Por fuera, en la espesura de la noche, vense subir disparadas numerosas luces en cuyo final brilla una centella acompañada de una explosión: son los voladores que salen de los bohíos. A cada explosión se suman los gritos: San Juan! San Juan! San Juan!

El día anterior y en cada una de las casas habíase arreglado un chorro de agua a manera de ducha. Ahora todos se bañan. Este baño va acompañado de cohetes y gritos. Cons-

tituye una de las pocas oportunidades en que el indígena se baña. Pues, si bien es cierto que en la niñez el baño es un tanto frecuente, los adultos se bañan únicamente por la fiesta de San Juan, en la limpiada del hielo de la muerte o cuando tienen fiebre.

El baño de San Juan tiene la virtud de evitar que tanto las personas como los animales pertenecientes a cada una de ellas, contraigan llagas (chande). No obstante uno de los amanecidos en la casa del fiestero, que no se ha bañado disculpa su temor: "Yo no me bañé. No tengo animales. No importa que me vuelva chandoso".

—Usted sí tiene aunque sea "dos animales". Báñese: Le replica en tono picaresco y burlón el vecino.

—Me baño, pero no todo el cuerpo, sino mi... solamente".

El diálogo sigue en ademán subido y jocundo.

Después del baño cogen un gallo. A los chillidos de éste todos hacen coro: San Juan, San Juan, San Juan. Lo matan. A las seis de la mañana están paladeando sancocho de gallo.

En casa del fiestero se oye el siguiente diálogo entre los padres al oír llorar a su propio hijo:

Padre: Yo quiero pegar a ese hijo porque llora mucho.

Madre: Por qué va a pegar a su hijo. El no tiene la culpa. La culpa la tiene su pene.

A las cinco de la mañana el fiestero y su mujer han salido a casa del albacero con su "camarico": chicha, aguardiente, cohete, volador, velas, gallina, plátano, arracacha, yuca, carne, cominos y sal. A las seis están de regreso.

Los músicos hacen sonar sus instrumentos y las gentes bromean. Uno de ellos suelta uno picaresco y burlón, denotando la acción de la noche anterior: "Yo no voy a misa, porque no tengo calzón. Tengo pero se ha pintado". A los repiques de la campana los músicos y algunas gentes acuden a la misa.

XXIII

EL DÍA DE LOS PEONES

Cuando todo ha pasado, el señor cura se ha marchado a Belalcázar, los músicos con los labios hinchados y sus gargantas afónicas se han retirado a sus hogares, las gentes han quedado ahitas de chicha y aguardiente, el fiestero todavía tiene que atender —cuidar— a sus serviciales peones.

Ellos no han tenido oportunidad de desfilar ni a la casa del albacero, ni a las vísperas, ni a la procesión. Ni siquiera emborracharse al tenor de los visitantes. El fiestero también está muy agradecido de sus servicios. Ahora en pago de ello tiene que cuidarlos. Para eso ha dejado parte de la res bajo el humo del fogón. Tendrán su canoa de chicha, sus botellas de aguardiente, sus cohetes. Se los servirá en la mesa en que se atendió al albacero y en la misma forma. Abundancia de comida y de bebida será el testimonio de su gratitud. También traerán los músicos y bailarán. Amanecerán como aquellos de la fiesta, revolcándose en el suelo.

XXIV

CORRIDA DE GALLOS EN TUMBICHUKUE

El nombre de **Tumbichukue** es familiar a los colonos de todo Tierradentro. Es sinónimo de fabulosos tesoros. En este lugar, se dice, enterraron los paeces todo el oro y la plata que recogieron en la desgraciada población de Sebastián Quintero destruída por ellos.

Tumbichukue es una vereda formada por las faldas orientales del páramo de San Lucas y comprendida entre el **Kukiyú** y la quebrada **Yusayú** (Guacharaca). Pertenece a la parcialidad de Lame y precisamente por allí atraviesa el camino que va de San Andrés a Lame. El tránsito por este camino es frecuente. Sus gentes más accesibles al blanco.

El 24 de junio los hombres corren a lo largo del camino en sus caballos. Es costumbre de los indios y de los blancos "correr el día de San Juan". Los blancos dicen que quien no corra sus caballos en el día de San Juan les da chande. Los caballos pequeños y membrudos soportan jadeantes las exigencias de su jinete ebrio. Carrera desenfrenada y grito a voz en cuello: Viva San Juan!

Las gentes de la vereda acuden a una pequeña plazuela del camino, junto a la cual vive el capitán de Lame. Indios de San Andrés llegan a hacer coro a la corrida de gallos. En cambio, a pesar de la cercanía, ningún calderuno se mira por allí. Las mujeres que se observan aquí son limpias y llevan bien trenzado su cabello; visten falda negra, rebozo azul marino, blusa rosada, numerosos collares abigarrados, zarcillos brillantes y sombrero de paño. La monotonía de los collares oscuros o negros, característica de la indumentaria páez, casi desaparece entre estas gentes. El clásico sombrero de pindo que llevan los calderas desaparece. El castellano se habla con más frecuencia.

Todos los caballeros están pendientes de la jaula y de los gallos.

La jaula es muy parecida a la lámpara del albacero calderuno, con la circunstancia de que las varas van adornadas con un melado de panela (melcocha) y portan cuatro banderitas. Alguno de los caballeros da alcance a esta jaula y el próximo año tiene que entregarla tal como y conforme se la

apropió. El melado se reparte entre el público y las banderitas las toman los amigos de quien alcanzó la jaula; tienen que contribuir a los gastos.

Luégo viene la corrida de los gallos. Es lo más espectacular. Todo el público está pendiente de las incidencias del juego. Los caballeros corren veloces de un extremo a otro. Al pasar por debajo del gallo, levantan la mano con el fin de arrancarlo; apenas si lo rozan. Aumenta el frenesí de los caballeros, la algarabía de las gentes, el reventar de los cohetes. De pronto hay un chillido atroz seguido de un silencio rápido. Dos caballeros agarraron al tiempo el gallo y en sus manos quedaron los pedazos en cuya carne tiembla todavía la vida. El próximo año tendrán que volverlo vivo.

Un informante explica que quien coge la jaula equivale al fiestero, el gallo al albacero y las banderas a los mayordomos.

Lo que de aquí en adelante sigue pertenece a la báquica alegría.

Una chirimía hace las delicias del público.

XXV

LA FIESTA Y LOS NUMEROS

Los fiesteros son muy parcos en el suministro de informes acerca de la cuantía de sus gastos. Apenas se contentan con decir que gastan mucho dinero y entre las cosas que compran están la arracacha, plátano, yuca, caña de azúcar, pólvora, cera, sal, coca y las reses.

No obstante, he aquí el valor de los gastos que suministró un fiestero gracias a la insinuación que en ese momento hizo el sacerdote que oficiaba las ceremonias religiosas.

Por lo general matan tres reses: una al recibir la fiesta, otra para la limpiada de la iglesia y la tercera para el cuido del albacero.

Artículos comprados	Costo
1 toro ... ... $	40.00
1 novilla	35.00
1 ternera...	12.00
20 arrobas de maíz, a $ 0.60 cada una... ...	12.00
Caña de azúcar	2.50
2 libras de pólvora...	7.00

1 libra de pabilo	2.50
Plátano	2.50
Arracacha	7.50
1 arroba y media de sal	7.50
2 libras de anís	20.00
Derechos del señor cura	20.00
Total	$ 168.50

A esto debe agregarse la compra de coca para los peones.

La fiesta resulta, pues, costosísima para los indios que no tienen dinero, ni producen para vender, ni sus ganados los enajenan por valores numerarios sino por cambio. Es cierto que los mayordomos contribuyen con un peso para pagar los derechos del señor cura y que la mayoría de los visitantes llevan víveres al fiestero; no obstante esto, en el haber del fiestero no queda más que deudas, de las cuales no saldrá antes de los tres años.

XXVI

FIESTAS RELIGIOSAS

Entre los paeces no existen fiestas seculares colectivas. Todas son religiosas. Celebran con pompa y esplendor: San Andrés, Semana Santa, San Juan, San Pedro y San Pablo, La Santa Cruz, El Día de Difuntos, La Inmaculada Concepción...

El misionero lazarista David González dice que ya desde 1689 las fiestas estaban organizadas tal como se las encontró en 1905, vale decir como están hoy en día. Cada pueblo fue favorecido con un santo patrón y con varios otros protectores. No obstante esto, sólo San Juan Bautista y San Pedro y San Pablo, cuyas fiestas se celebran cuando el maíz está en macollaje, las lluvias arrecian y los vientos soplan con violencia; el día de difuntos, con su ofrenda a las almas; la Inmaculada Concepción, cuando abundan los cereales; y la Semana Santa (El Resucitado) fueron las fiestas y santos que más entusiasmos despertaron y echaron raíces más profundas en el alma de estos indígenas.

Los paeces, y en especial los calderas, son religiosos en lo externo, no en la convicción; amigos más de la forma que del fondo. Así lo revelan las fiestas religiosas de estos natu-

rales. Son pocos los que oyen misa y menos los que rezan en las vísperas. Para la gran mayoría las fiestas religiosas significan derroche de pólvora, luces, aguardiente y chicha. La abundancia de la comida. El placer de la reunión. La alegría del contacto. La música lenitivo de penas y el baile exteriorización de sentimientos. Es la expansión que provoca las reuniones, el chiste sexual que brota en ellas sin recelos, es la borrachera continua. Es la exhibición de la generosidad, la gimnasia de la cooperación y el altruismo.

El sacerdote en castigo de la inasistencia a la misa del fiestero y albacero principales se negó a verificar la procesión. Estos, tambaleantes de chicha y de vigilia, llegaron al final de la misa, se informaron de la determinación del pastor de almas, quien, además, les recomendó reservaran la pólvora para la procesión del día siguiente. Salieron. Y aunque no dieron la vuelta a la iglesia, ni portaron sobre sus hombros la imagen del santo, quemaron todos los cohetes, los voladores y el castillo, a los acordes de su música aborigen. La procesión se realizó simbólicamente.

Las mujeres y los hombres son oscuros en su piel y en su indumentaria. En estas fiestas no es raro verlos ataviados en colores vivos y chaquiras de vistosos colores.

Symptomatology. The good curers, the authentic té eu, in whom the society believes and trusts, those who constitute a monolith of security in the face of the mysteries of illness and death, are those whose vocations were determined by a vision, more precisely by a hallucination. In this case, the fate of the men is inescapable, permits no deviation. This leitmotiv, vigorous in times past, is now on the wane.

A curer from the Parcialidad /a territorial division/ of Santa Rosa describes his vision as follows: "At the age of six, while I was tending a field in the montaña, I saw my mother dressed in black, with a white hat and pouches. She chided me for the poor quality of my work, saying that animals were ruining the field. She walked on and I followed her. At the stream she vanished. I went to my home and found out that the woman was not my mother, since at the moment of the

* /221 cont./
756 vision she was at a 'minga' /communal work-party/ cooking
757 pork for the laborers.

"There was no doubt but that this was a spirit telling me that I should become a curer. The pouches that she carried indicated this to me. This is why I never fail to take my medicine pouches."

Another curer, from the Parcialidad of Calderas, relates his vision as follows: "One night I saw a beautiful child, fair, with the hair of a woman, reddish, and dressed in a wrapper. This child was the Ghost /Duende/, /222/ from whom the
[178] curer's power comes. He is the same Kallumb as is seen by true curers, because nowadyas there are some who learn to cure through the teaching of others."

In the Parcialidad of San Andrés they say that the Ghost visits the curer when someone goes to consult him, to tell him what brought him and the advice that he should give.

It may also happen, says a Calderuno /native of Calderas/
[262] 19 years old, that someone wishes to become a curer. Then,
[263] he subjects himself to a diet. For one month he eats no salt or ají /Capsicum/. He goes at once to the mountain, alone, his head lowered, lost in thought, with the hope of finding a good friend whose counsel he can ask. At a magnificent spot, pleasant to the senses, he meets a man advanced in years, short of stature, good, generous, amiable in conversation, and amply educated, who chews coca like other Indians and, like them, also carries kuetand yahas (pouches). Filled with trust, he explains his wishes to become a curer, arguing that there are many people who are dying. He asks about the good remedies. The one questioned answers that there are good remedies for curing the sick and presents him with a pouch of them. This one is for such-and-such an illness, he says, this other one for that one, and so on successively, specifying the medicinal value of the remedies in the pouch. He instructs him in their use, technique and method. Up to the way of

* /222 cont./
756 making the tama /a staff/. That man's vision is a personal
787 one. No one else can see it. And it is the same thing that gives the "signs," without which it is impossible to cure, even if one knows the medicinal value of the remedies. When the interview is over, the man returns home with joy manifest on his face. He finishes his apprenticeship with another curer, begins to cure his children and members of his family, and soon, once his reputation has spread, others will come and request his services.

One who is going to be a curer sees visions from boyhood: Thunder /Trueno/ or the Ghost. This is the illumination of his future destiny. He cannot evade it, for Thunder or the Ghost may drive him insane.

[263] When a child tells of having had a vision, he is immediately prohibited from eating ají, his salt ration is reduced, and
[868] he is bathed with remedies. Then a good curer is sought to instruct him, and when he has the secrets of medicine, that teacher leads him to the lagoon to be consecrated by Thunder. "To see Thunder" -- says an /223/ informant -- "having him show the medicines, is a sign that one will become a very good curer."

* 754 When someone has a vision, care is taken that the sorcerer
756 does not find out about it, for out of wickedness he might show
787 him ají and hep (a plant) and drive him insane. This happened to the curer from Santa Rosa mentioned above. "He would finally have tossed me into the Páez river" -- he said -- "if a curer from Huila had not cured me. Even today, when I am drunk, I have crazy moments and sing."

* 756 Period of instruction. Instruction is given by a curer of
868 great repute in an empirical way, for the pupil accompanies his teacher for several years, during which he learns how to handle the tama, to recognize the value of the remedies, to interpret signs, to master the technique of the treatments. The first cures are usually accomplished with his children or

/223 cont./

* 756 868 members of his family and under the direction of his teacher. The demand for his services on the part of others depends on the outcome of these treatments. Many of the young curers of *756 554 554 866 Togoima, Calderas, and Santa Rosa learned in this manner. All of them state that their teachers had visions, and explicitly or implicitly admit their inferiority to them. "The ancestors had visions, and for this reason they must have been superior to us," says a curer from Calderas. Owing to this fact, people believe that the curers of today cannot talk to [929] Thunder. They would be killed. One of the reasons given to [623] explain why the cabildos /local councils/ of today do not go to the lagoon to wash the staffs of command is precisely the lack of curers like those of old.

* 756 868 Those who have had visions also place themselves under the direction of an experienced curer in order to learn the [782] secrets of the profession. The definitive consecration as a [778] curer is obtained when they offer the "Camarico" /a gift customarily given to guests/ to Thunder at the edge of the lagoon.

[554] Although an apprenticeship in medicine can be undertaken at a very early age, the practice requires one to be an adult of about 30 years of age and married or living with a woman. A "very young" curer would lie, informants say.

* 756 778 782 Consecration of the te eu. The true té eu, that is to say, those who have had visions, make the offering of the "Camarico /224/ to Thunder," a ceremony carried out at the edge of a lagoon, in order to be consecrated definitively as curers, since medicine is a heritage from Thunder.

The teacher asks the pupil for a white sheep and two new pouches. The animal is sacrificed, and from each organ on the left side a small piece is cut and placed in the pouch. This is the "Camarico for Thunder." With this gift, teacher and pupil set out for the lagoon, while at home the women cook the meat with the express order that no one may eat it until they return.

/224 cont./

At the edge of the lagoon the teacher-curer digs a hole, over which, and from the end of the tama, he suspends the camarico. Thunder requests from the pupil 10, 20, or 30 centavos, coins which he deposits in the hole. Then, he lowers the pouch and covers the hole with stones and earth. The curer bathes the pupil with shu and shulape (1). Thunder

1. 1. Cf. below, "Remedies" /see pp. 22ff./.

draws near to receive other gifts which he requests by means of the signs, to state that the youth may learn how to cure, to prohibit him emphatically from collecting bad remedies (for sorcery), and to request him to be charitable with people. Last of all, he orders him to return home.

At the teacher's home, chicha and aguardiente are drunk, and meat is eaten with stew. Then the teacher presents remedies to the pupil and tells him that henceforth he will merely need to apply them, warning about the patients who are in a very serious condition, but with the help of God he should try to cure them.

The signs. The signs are reflex movements which manifest themselves in the musculature of the curer. "They are like a circulation" -- says one té eu, "as when a person's muscle twitches in the eye or hand. The interpretation of these signs is done by the curer."

The signs come from Thunder or the Ghost. That is to say, from assisting spirits. There are also those who say that they come from God.

The signs are fundamental, basic in Paez medicine. Without them there cannot be curers, and there cannot be a curer who does not know how to interpret the signs. It is useless to have knowledge of the medicinal value of the plants. The curer is no more than an intermediary, a spokesman for

* /224 cont./
756 the assisting spirit. It is not enough to know whether certain
755 medicines correspond to certain signs. The té eu must /225/
divine which remedies will be useful for the particular case.
This is why the curer always carries a pouch with all the known
remedies. He takes one out and consults. If the signs do not
circulate, the remedy is useless; he takes out another and waits.
When they are felt insistently, then the remedy is appropriate.
Since the signs are given by the assisting spirit, it is he who
cures.

* 756 The signs may contribute to the discovery of a vocation.
463 If a man engaged in a manual task that does not imply motion
787 (the making of firecrackers, plates for cooking, pottery)
suddenly feels the movement of the signs, he must seek out a
teacher so that he will instruct him in the art of curing. He
cannot disobey them or he would go mad.

* 756 Even the curers themselves must practice the signs. If,
787 for example, no sick clients have come for two days, the
755 té eu must visit his Kachí (2) and practice the signs; otherwise,

2. See below, "Divination sites" /see p. 9/.

they may drive him insane. For this reason, the curer must
[888] practice his profession until old age begins. Old men lose the
signs because they cannot travel to go to the Kachí and practice
the signs.

* 756 All the informants affirm that signs on the left side signify
787 something bad, while those on the right indicate something
827 good. As a rule, the signs that are given in a certain part of
755 the body have a specific meaning. Minor differences may be
noted in the information provided by the curers, but they are
[124] matters of form rather than substance. There follows a table
of the symbolism of the signs, gathered from many profane
informants and curers from the Parcialidades of Santa Rosa,
Calderas, Togoima, Avisame, and San Andrés.

/225 cont./

Right:
The signs go down the leg: death; remedies will not help.
The signs climb up the foot and the tibia: a member of the family will die and go to heaven.
The signs go up the outer edge of the foot to above the ankle: the remedies will work.
The signs occur between the ankle and the heel and cross to the same spot on the

Left:
The signs go along the inner side of the foot: the pest is leaving; the patient is encouraged.
The signs go up the outer side of the foot: the sorcerer wins; the patient dies.
The signs go up from the ankle to the back of the knee: sorcery; field has a spell on it.
These same signs, but first

/226/

left side: contest between the Té eu and the sorcerer.
Calf (gemelluses): visit of a good woman; the ghost comes singing to point out the remedies.
Calf (outer part of the digits): a good man is coming to visit the curer.
Kneecap, signs that go down: a person will die from the rainbow or ghost.
Thigh: the signs run to the back of the knee and disappear: the person will die; fierce pest; serious matter.
Signs go down from the groin to the foot: the

occurring on the right and immediately passing to the left: rainbow /arco/ and Ghost.
Calf (gemelluses): a sorceress is coming to visit the curer.
Calf (extending from the digits): a sorcerer is coming to visit the curer.
Kneecap: fear of the sorcerer because he is winning over the Té eu; fear, fright, disaster.
Thigh, the signs go down: bad person going by.
Rib (the tenth): bad person is coming.
Back of the hand: the ghost does not accept the remedies because they are incomplete.
Palm of the hand: the person

/226 cont./

756 Right:
787 wife is about to
827 menstruate.
755 Rib (the tenth): the patient will die at once; sting of Kallumb.
The signs occur between the ring finger and heart: on the following day the person will wield a shovel to bury a dead person.
Palm of the hand: the person will receive a present; greeting from the ghost; improvement of the pest.
Palm of the hand and passes to the throat: Pijao "dirt."
Thumb and palm of the hand (simian line): the lost animal will appear, the signs indicate that it will be caught.
Biceps: a good person will ask him to be godfather at a baptism.
The signs go from the ear to the shoulder: the ears will be cut off.
Cheekbone to the outer corner of the eye: the patient will improve; the stolen animal will appear.
Eye and down the nose: wake.

Left:
will die of the pest; the ghost did not accept remedies.

Signs in the arm: the echi is coming.
Biceps: same meaning as for the right side.
Wrist: someone will give a scare; he will be caught.
Shoulder and they make an arc through the chest: rainbow.
Cheekbone to the outer corner of the eye: the stolen animal was eaten.
Eye and down the nose: a dead person.

/226 cont./

756 When the signs occur at the vertex (crown), the sorcerer
787 is about to send the pest, and if they go from the vertex to
827 the left hand, the person is under a spell.
755 If the signs occur in the gluteal muscles, an animal belonging to the person has died and the vultures are eating it.
756 In this way, the curers can know the nature of the illness
755 /227/ and the type of remedies required. To determine the spell and the sorcerer responsible.

To divine whether a stolen object can be recovered or not, and who the thieves are. To learn whether a patient will improve or die. To detect the presence of the Ghost, Rainbow, and Echi. To know in advance about the visits of good or bad persons.

The act of perceiving the signs is called to divine or "to
[273] think." Every patient must always bring tobacco, aguardiente,
[276] and coca. The aguardiente is used to call Thunder, Ghost and Echi and to satisfy them. The chewed coca and tobacco serve to make the signs circulate.

Divination sites. The té eu has a special divination site called Kachí. In it he practices the signs and perceives them
[263] when he has a patient to cure. If the patient is not in serious condition and comes in person to the house of the curer, then he can divine on its ground, even though there is the obstacle of the presence there of ají and salt, articles that Thunder does not like. The treatment, that is to say, the perception of signs and the corresponding cleansing, is carried out at night, at two or three in the morning.

If the patient is in very serious condition, the té eu must go to a site where he will not be disturbed by the shouting of people, the barking of dogs, or the noises of animals. A site almost completely removed from human haunts, such as a bog or a lagoon. He takes with him two or three hairs taken from the crown of each member of the family present, with which he makes a ball that he places amidst the shu /Sphagnum/.

/227 cont./

755 He remains at the site for about an hour. When the signs give
*756 hope, he leaves the hair and returns to the patient's house.

In treatments of this type, the curer requires as "provisions" a pig, a sheep, and chicha.

*755 Divining the illness. The curer demands from his clients
756 two eggs (3) of coca, two cigars, and half a liter of aguardiente.
273
276
[804]

3. One egg of coca is equivalent to the weight of a hen's egg.

He gathers the coca into a medium-sized pouch with great scrupulousness, for he does not allow a single leaf to be lost. He transfers the aguardiente to a bottle of his own and puts it in the same pouch with the coca, likewise the cigars. The divination is performed under the eaves of his house at 8:00 P.M.

/228/ He places the patient on his right, seated on a pango pil (bench); the pouches of remedies are placed on his left, along with the pouch containing the coca and aguardiente received from the patient.

*755 He begins by making two bundles of remedies with yacuma
756 blanca, ul ñiñ, ñundayuskei, bitopiskue, and chandur de castilla (4). Each remedy is extracted patiently from his pouch,

4. Cf. below, "Remedies" /see pp. 22ff./.

which contains all the remedies needed for his treatments, but not in any specific order. He does not show anxiety or haste; he observes great moderation. When he takes out the remedy, before placing it on the maize husk that will serve as wrapping for the bundle, he quickly passes it around his body, beginning at the right foot, going up this side to the crown of the head, and ending on the left side, in order to stimulate the blood
[827] so that the signs will circulate. As soon as he has finished passing it, the signs may go from the right calf upward,

/228 cont./

755 indicating hope, for if they moved from the knee to the foot,
756 there would be no need to receive the coca, tobacco, or
[127] aguardiente, for the patient would be incurable. Only when the signs are favorable does he take the pouch of remedies received from the patient and pass it around in the same way as he did the remedies, with the aim of invoking Thunder and Kallumb, his helpers.

75 He orders the patient to chew the bundle of remedies which he presented to him not long before. He picks up the tama (5) in his hands and blows on it with the remedies that he

5. Cf. below, "The tama" /see pp. 17-18/.

is chewing, which are the same as those chewed by the patient, for the purpose of preventing the ptans ("dirt") sent by the
[276] sorcerers from surprising the curer and killing him. In this case he may have the mambe /lime to be chewed with coca, or the coca and lime together/ in his hand and nevertheless remain motionless, with blood running from his mouth. Then, and to the front, he drives in the tama, the weapon of Thunder, to indicate to him that he is not working in a bad way, but in such a way and in accordance with his teachings. Before putting it in the ground, he passes it around his body so that it will protect him from the ptans.

[824] Next to the tama he puts the bottle of aguardiente, which
[763] he places a sprig of chayuts; if it remains upright and floats, it is a good sign, while if it tilts and sinks to the bottom, it is an omen of death. On top of the bottle he puts a small calabash to measure the aguardiente, in which is also put a sprig /229/ of chayuts; it serves as a preventive, for it prevents the ptans from catching the curer unprepared and killing him.

[276] Then he puts a handful of coca in his mouth and begins to chew; he remains seated, almost motionless, his eyes trained on the room and on the tama, attentive to the slightest motion;

/229 cont./

75 from time to time he puts in more coca and more mambe,
[276] which he takes from a small calabash (kuetand tuka), pours on his right fist, and throws with force into his mouth. He watches. Sorcerers work systematically to send him the ptans, and they must not catch him unprepared. The signs warn him as to when he must blow the chew in order to contain the ptans.

He tells the patient that the signs are favorable; there will be an immediate improvement. The pains which assail him are due to the ptans which he has from the vertex to the nape.

After 20 minutes in a motionless and expectant state, the curer stands up with his face raised, as though illuminated, walks jauntily to the tama, blows the chew violently; he fills the small gourd with aguardiente and tosses it into the air. This is the invitation to Thunder.

He returns again to his place, takes a cigar and crushes more than half of it, puts more mambe in his mouth, and remains quiet, his hands folded and his arms resting on his knees. Only the deepness of the night with its characteristic sounds disturbs this decisive moment. No carelessness. It might have fatal consequences. He remains in this position for about 40 minutes.

Then he takes the chew from his mouth with his hand and tosses it in the direction of the tama, after having passed it around his body. The patient does likewise. He immediately tells the sick man that he must return with all the remedies. He interrupts his work. Thunder has shown himself to be
75 favorable. Since the patient has ptans, a good "cleansing"
783 must be done, for which he must bring three pounds of meat to be eaten after the cleansing, chicha, one pound of coca, one liter of aguardiente, and six cigars. The curer himself must
[177] go to the lagoon in search of the remedies. He advises the patient that for a period of three months at least he must not use the drugs of the whites, for if he did so, he would die.

The cleansing of the ptans. At 7:00 P.M. the patient comes to the house of the curer. He hands over the medicines

/229 cont./

75 requested. /230/ He divides the aguardiente into two bottles:
783 one for Thunder and the other to drink. In Thunder's bottle he
[782] places a sprig of chayuts, after passing it around his body; the sprig remains floating and vertical, a good omen. He puts the coca in a special pouch, along with the aguardiente and cigars. He makes up two bundles of remedies with maize husks. One is for the patient, to chew and swallow the juice.

75 He divides the other bottle, takes chayuts, passes it around
78 his body, puts it in the small calabash, fills it with aguardiente, and goes out of the house to toast Thunder. Then he gathers his pouches of remedies, a calabash of chicha, the patient's coca, a candle, and matches, and he goes to the divination site. When Thunder comes, he will ask the curer what the patient has presented to him. The he will show him the chicha and aguardiente. Thunder, satisfied, will say: "Take this, since you received it." They will drink together. Thunder's share will be tossed into the air. The patient must remain inside the house. When the time comes, he will call him for the "cleansing."

75 Outside, the night is black as ebony. The silhouette of
783 the curer is barely visible. He sits under the eaves to the south of the house. He begins to chew the remedies after passing them around his body. He drives in the tama and beside it he places the bottle of aguardiente. Immediately after this, seated, almost squatting, with his hand folded, quiet and motionless, gazing into space, grave, self-controlled, conscious of his mission, imbued with his knowledge, he spends long hours conversing with Thunder and warding off the attacks of sorcerers. From time to time he gets up without haste, slowly, as slowly as the passing of the hours of the night, and he beats with the tama, displaying the energy that marks the activities of the curer. The patient, lying on a cowhide, with no covering other than his own clothes, sleeps near the fire; he wakes up at different times, pierced by the intense cold of the night; outside he hears the constant, rhythmic, regular, vigorous blowings of the medicine man.

/230 cont./

75
783 At two in the morning, or rather, at the first cock's crow, the té eu calls the patient. The moon is full; the night seems white. The sick man sits to the right of the curer. He receives a bundle of remedies to chew. They are yacuma blanca, ul ñiñ, ñundayuskei, shugues, chandur, guepeyuskei. They help with the cleansing, and when spat out they will remove the "dirt" (ptans).

/231/ He places chayuts on the patient's crown in order to ward off any possible attack by the Echi. He advises him again not to use the remedies of the whites and, in case there is no improvement, always to return to the curer.

The curer passes to the right of the patient, about three meters. He points at him with the tama and blows out chewed coca and aguardiente in order to contain the black cloud (ptans) which may come at any moment. He comes to the patient and rubs him (cleanses him) with the tama, beginning with the right foot and continuing along this side; at the crown he rubs several times, sucks (absorbs the "dirt") for five or six breaths, rubs again; he lowers the tama to the throat, rubs, sucks the right shoulder, rubs again, and passes the tama to the nape of the neck, where he repeats the process; he ends up by bringing the tama down the left side. Over a hole dug previously to the left of the curer and about 15 meters away, he spits out everything that he had in his mouth and the dirt that he collected from the patient; he vomits; he blows one mouthful of aguardiente into the air, dismissing the "dirt," and drinks one so that the "dirt" will not enter again. He calls the patient, orders him to spit out the remedies that he has chewed, and hands him the bottle to measure out two drafts: one to be blown into the air and the other to be swallowed. He covers up the hole carefully. Curer and patient return to their places.

The té eu takes a good handful of shu and tashú, dips it in water in spite of the fact that it is quite damp, and goes to the patient. He begins the cleansing by going upward from the right foot. At the crown of the head, throat, and the nape of

/231 cont./

75 the neck, he exerts some pressure and the icy water runs down
783 the body. He goes down the left side and then goes to the hole to bury these remedies. With these remedies the body absorbs coolness. After having buried them, he blows aguardiente into the air and then drinks some more.

Once more at his place, he gives the patient a few herbs (shu and siempre viva?) to hold in his hand. He goes to the right of the patient and from there points to him with the tama and blows; he draws nearer, and he makes the familiar passes with the tama and the remedies named. He rubs the crown of the head (vertex), throat, and the nape of the neck.

[782] They go to the hole and toss the herbs into the hole. The curer takes a mouthful of aguardiente, stretches the tama toward the horizon, rises proudly, sets his eyes in the direction of the tama, blows violently several times, and soon his atti-
[191] tude becomes entreating. /232/ Actually, he prays in Spanish: "Lord, help us; I implore you for everyone." The té eu said later that he had prayed to Thunder, so that he would help him and would not permit the sorcerer to discover this hole where the "dirt" was buried. He drank a swallow. The patient blows a mouthful of aguardiente into the air and drinks a second one. They return to their places. The curer picks up the calabash of chicha, goes to the hole, and pours it out. It is a gift to Thunder.

Once more in his place, he puts yacuma, shu, and tashú into a calabash of cold water. He goes to the patient's right and from there sprinkles this water first on the house and then on the patient, who first removed his hat by order of the curer. This is a veritable bath, so that if any ptans should remain, it would be removed and he would be completely clean. The remaining water is poured into the hole. He blows aguardiente and drinks some more, the patient proceeding in the same way. The curer raises the tama and implores: "I pay you; I shall pay you." The curer said that he had spoken as follows:

/232 cont./

75
783 "There are all the remedies that you pointed out to me. If another patient comes, help me." Then he pours out all the aguardiente as a toast to Thunder.

With this, the cleansing is over. It is 3:30 in the morning.

He advises the patient not to change the remedies and not to take a route below that hole. He states that the signs are favorable and that he asked God for the patient's improvement.

To summarize, the cleansing of the ptans is done at night, beginning at 8:00 or 9:00 P.M. and ending at 3:00 P.M. /sic/ approximately. The following procedure is observed:

1. The patient must give to the curer two eggs of coca, one bottle of aguardiente, and two cigars.

2. The curer puts these remedies in a special pouch. He makes up a few bundles of remedies with yacuma blanca, ul fiñ, fiundayuskei, bitopiskue, chandur de castilla, chayuts (Santa Rosa), or yacuma, chayuts, tayuskei, shugues, tatse, echiutse (Calderas). All of these remedies are passed around the body of the curer.

3. At the Kachí, he places the tama and aguardiente in a special spot, hands over to the patient a bundle of remedies for chewing, and puts chayuts (Santa Rosa) or guepekás (Calderas) on his own and the patient's vertex (crown).

4. The first cleansing is done with the tama, by rubbing and by sucking the vertex, the right shoulder, and the nape of the neck, in order to remove /233/ the ptans and spit it out into a hole to bury it. There is blowing and the drinking of aguardiente by curer and patient.

5. The same procedure is followed with the wet remedies (shu, tashú) to lend coolness to the body.

6. A new cleansing is carried out with other herbs (shu and siempre viva?) with the rubbings and the suckings at the places mentioned, the burying of them, and the blowing and drinking of aguardiente. In Santa Rosa, this is the moment when the curer makes his entreaty.

/233 cont./

75 7. The curer toasts Thunder with the chicha, sprinkling
783 it in the air.

8. The curer washes the patient with a calabash of remedies. He fills up completely the hole that contains the "dirt," sprinkles the remaining aguardiente, and ends the cleansing with some final advice. It is 3:00 or 4:00 in the morning.

All treatment of illness is carried out with this cleansing procedure. That is to say, when the impurity (ptans) has been removed from the body, the health of the patient is restored. The curer combats the ptans. In a sense, the cleansing is a hard fight in which the curer is engaged.

756 The tama. The tama is a chonta staff about 40 centi-
755 meters long and indispensable for every cure.

While in other cultures the medicine man uses the maraca as an indispensable accessory in the art of curing, viewing it as having a mythical origin and thus a sacred character and magical properties, and while, according to Roth, certain piai of the Guianas use wooden dolls in their conjurations (6), among the Paez this little staff called tama

[113]

6. Métraux, Alfred. Le Shamanisme Chez les Indiens de l'Amerique du Sud Tropicale /Shamanism among the Indians of Tropical South America/." -- Acta Americana, Vol. II, No. 3, Fondo de Cultura Económica, 1944, pp. 217-218.

755 is used. In Santa Rosa, a curer-sorceress uses in her treat-
756 ments a wooden dolly dressed like the people, received, ac-
532 cording to the informant, from Thunder himself, and called
552 "Soft wind of Thunder."

[773] According to all the evidence, this name is derived from that mythical personage, more precisely that culture hero,

* /233 cont./

756 called Juan Tama, who enjoys the fame of having been the
[755] founder of pueblos, a victorious warrior, a good leader,
[532] legislator, and famed curer.
[552] The tama is a defensive and offensive weapon of a sacred
[773] character /234/ and used exclusively by the curers; it protects
[751] from the attacks of the ptans and wards them off. It is a gift
[787] from Thunder and his badge. In visions, it is the first thing
[428] that he shows. When the curer dies, it may be inherited by
a young curer, but generally it is left near the cemetery.

* 756 A curer from Calderas, possibly the one most imbued with
539 his mission to defend the health of the people, states that the
tama was left from a deed performed by the Virgin in defense
of her children. On a certain occasion the sea was rising
implacably over the surface of the earth, putting the lives of
men in grave danger. The Virgin took pity on them, brought
out the tama, and made the motions now made by the curer.
The waters retreated. She left this staff for the man who became a curer. This was the origin of the tama.

Another curer from the Parcialidad of San Andrés gave us the following account concerning the origin of the tama:

"The elders say that the tama was left by Thunder himself. A man had a potato field and a rancho in the montaña. He went to harvest it with his son. One afternoon the boy refused to accompany his father, preferring to remain in the rancho. On the following day he disappeared without leaving a trace anywhere. All the steps taken by the father to locate his whereabouts were unsuccessful. On the eighth day, the boy reappeared in the rancho. The father naturally inquired as to his whereabouts and his activities. He replied that he had gone to the señor papa, who had given him the stick he carried in his hands, called tama, and aguardiente and remedies. The aguardiente was cold water from a lagoon, and the remedies were in a pouch. No sooner had he finished his tale than he fell into a deathlike trance. On the fifteenth day, at death's door, he asked his father to hand him the tama, for the señor

* /234 cont./

756 papa had told him to defend himself with it and in case of ill-
539 ness to take the remedies that he had given him. He extracted their juice and took it. He rapidly improved. He applied them to others and noted that they soon regained their health. With the tama and the remedies he became the best curer in the entire region. He died when he was an old man"

* 755 To combat ptans, the tama is used in conjunction with a
756 plant called "nica."

824 Theory of illness. Sicknesses are caused by the state of
753 oodily impurity called "dirt" /sucio/, cold /hielo/, or /235/
783 ptans. The causes are essentially magical and are interpreted more as a premeditated and inimical attack than as punishment by supernatural beings. There are those who state that sicknesses are sent by God, but if one repents, they are soon taken away. Be it said at once that this concept is neither general nor rooted in tradition. Sicknesses, then, do not have natural causes; nor do accidents, since they are provoked by sorcerers.

Impurities are caused by the following:

a) When a person who has been at a wake has not had himself "cleansed."

b) When people dress in the clothes of a deceased person without washing them with the appropriate remedies.

c) When the house where the corpse was watched over has not been cleansed.

d) When a woman does not spend her period of menstruation in the Du yate léchukue.

e) When a woman does not bathe after menstruation.

f) When the placenta has not been suitably buried in the appropriate place and with the required remedies.

g) When a man sleeps with a menstruating woman.

h) When the man who serves food to a menstruating woman has not bathed his body or washed his clothes.

i) When the woman, after observing the diet of childbirth, does not bathe.

/235 cont./

753 j) When there is no blowing of remedies while at the
783 montañas, bogs, or lagoons.

k) When there is no blowing of remedies prior to cutting wood for bridges, sugar mills, and canoes.

l) When, at the inauguration of a rancho or house, the house ceremonies have not been performed.

ll) When the house has been built over a Pijao "huaca," or when they merely come across one while working the land.

m) When the traditional ceremonies are not performed upon harvesting a new clearing.

754 n) Through the machinations of the sorcerers. These kill
753 the most people, for they not only send the pest to persons,
783 but also to the entire community. On the other hand, they provoke /236/ the Ghost, Rainbow, and Echi to anger and also do sorcery at the request of jealous or vengeful persons. The sorcerers have unlimited power.

Hernández de Alba, speaking of illness, generalizes in these words:

"Sickness was always thought to be caused by witchcraft or by someone's will. The evil force entered the body and made it impure; it had to be expelled or "cleansed," lest death ensue. If a delirious person told who was killing him, the individual mentioned was thought guilty; or, if, after a death, the face of the deceased should appear to somebody,
[834] the person was considered responsible. These beliefs are still
[821] in force today, and the Indians avoid the causes of sickness,
[765] such as having sexual intercourse wit /sic/ a menstruating woman, exposing the body to bad weather while there is a rainbow, and neglicting /sic/ to bathe after a burial or to purify a house where a death ocurred /sic/" /cited in English/ (7).

7. Hernández de Alba, Gr. 1946, p. 955. See also Pittier de Fábrega, H. 1907, p. 325.

/236 cont./

755 Since sicknesses have a magical origin, the treatments are
783 also magical in character. "The cleansing" is indispensable in every treatment, with its attendant remedies and movements.

165 Symptoms of sicknesses. Among the sicknesses clearly
164 identifiable by the natives are smallpox and whooping cough, given their characteristic symptoms. Some of the informants, not many, to be sure, state that their children died of such sicknesses.

165 On the whole, child mortality, which is rather high, is
761 said to be caused by, in order of frequency and in generic terms,
776 pest, Echi, and sorcery. The cases of death by the ghost and rainbow are few.

753 The symptomatologies given for the sicknesses are very
776 vague and even confused with one another. The Echi, ghost, and rainbow sting, not really the body, but the soul, leaving hairs in the body that cause fevers and sharp pains at the spot where they are found. These hairs, when placed in the palm of the hand, move as if they were alive. They differ in color: the red ones are from Kallumb, the reddish blue ones from
[755] the rainbow, and the black ones from Echi. The hairs are re-
[783] moved by rubbing with remedies prior to the cleansing.

/237/ It is said that the sting of pallumb /sic/ causes heaviness, lack of appetite, pains in the head and body, fever, and even insanity.

753 When the arco /literally "bow"/, called kitús, is referred
776 to, it is nothing other than the rainbow, which comes out at
821 any hour of the day, accompanied by a rainy drizzle, the "rainbow meow," which causes scabies (chande) in children
[755] when it falls upon them; it is not harmful for adults. The curers,
[789] and they alone, from their ranchos blow chewed remedies toward it, tobacco, chandur, llushamuanda, and yacuma
[755] negua, in order to make it disappear quickly. Other people chew remedies, when they have them at hand, and rub them on their bodies. There is a general idea that the rainbow causes

/237 cont./

753 cramps in the body, and furthermore that sorcerers see it in the
776 form of a turkey impelled to peck people.
821

It seems obvious that what the Indians call Echimbe (red
753 Echi) or candelilla fina /thin glowworm/ is a firefly /luciérnaga/
825 somewhat difficult to capture and extremely fierce. They differentiate it perfectly well from the fire beetle /cocuyos (cucuyos)/. They say that it is an animal that God produced in
[755] order to harm the Christians. The curers call them and catch them in their Kachí, while other Indians, chewing coca, catch them anywhere and bring them to the curer to be buried.
[774] They believe that their fierceness is due to the fact that the
[829] souls of the Pijao are incarnated in them.

753 The symptoms of the sting of Echi are vague and imprecise and refer solely to bodily pains.

The symptoms of Pijao "dirt" are recognized by respiratory difficulties.

164 They differentiate perfectly well the venereal diseases,
757 which seem to be quite widespread in the acculturated parcialidades. In Calderas they are said to have spread widely among both sexes, without respect to age, and to have been treated with copper sulphate, for the remedies of the Indians were of no use. In Santa Rosa antibiotics are used. A curer in that parcialidad maintains that those diseases were brought from La Plata by wandering women and that it befell him to treat two cases: one was serious and the patient died; the second, not very advanced, he treated with yukchacha, montaña barbasco, and fisa (bitopat or bodoquero). He administered the juice for six days and subjected the patient to a diet of chicken exclusively.

755 Remedies. The remedies used by the Paez curer are
757 vegetal. As a rule they are prescribed in combination. Thus:
/238/ To clean away the ptans:

[783] Yacuma blanca, ul fiñi, fiundayuskei, shugues, chandur, guepeyuskey, chayuts.

/238 cont./

755 For the sting of Kallumb:

757 Chandur, flushamuenda, white and yellow guapeshú, nica, tobacco, chayuts.

For the sting of Echi:

Tatsé, ul fifi, yacuma blanca, shugues, tayuskei, siempre viva, shulape, shu, shupefifi.

For the sting of Rainbow:

Chandur, flushamuanda, black yacuma, ul fifi, chayuts.

All the above remedies are cooling and serve to allay fever.

824 The plants marked with an asterisk were identified by the
[128] Herbario Nal. Colombiano, in particular by Dr. Jesús M.
[137] Idrobo.

[127] For the others, we were guided by the work, Plantas Utiles de Colombia /Useful Plants of Colombia/, by Dr. E. Pérez Arbeláez, published by the Imprenta Nacional de Bogotá in 1947.

75 The té eu and the community. In every culture, medicine
182 performs an eminently humanitarian function. Its nature is
171 sociological. No matter what its methods may be, its purpose is to save human lives. It combats illness, but also prevents it.

75 Among the Paez, medicine cures and prevents. The
182 community and the family perform special ceremonies intended to achieve these two purposes of medicine.

755 When the pest (epidemic) has spread through the com-
*756 munity, threatening its subsistence, the authorities (cabildo)
182 invite the curer to conjure away the danger by performing the
[731] wé ká.

When the illness prevails in a single family, markedly decreasing its members, the eldest invites the curer to perform
[765] the ut ká. After every burial the people must remove the ptans
[783] from their bodies and from the house where the death occurred. The curer is the only one who can do this.

241 The first fruits of plantings made on new lands not culti-
*756 vated before cannot be consumed until the curer has performed
783 the cleansing ceremonies. Thus, it is the curer who defends
182 the family -- preservation of the species -- who purifies the
789 harvests -- preservation of the individual -- and who also defends the community, warding off by means of his conjurations
*756 the epidemics and the individuals who threaten it. In 1952,
789 before an imminent attack by subversive armed groups on the
182 Parcialidad of Santa Rosa, the curer warded it off with maní de montaña /literally, "montaña peanut"/, chewed and blown on the path by which they were to come.

/241 cont./

731 Since the ceremonies mentioned have some differential
755 aspects, we shall look at them in detail.

756 Wé ká (pest-send). When the pest appears in a community,
783 smallpox, whooping cough, which are rapidly finishing off
/242/ the population, the cabildo takes the initiative for conjuring away the danger. It requests from the people coca, tobacco, and aguardiente, they arranges for a pig and invite a famous curer who can talk to Thunder. From the edge of a lagoon, by means of good remedies and the help of Thunder, the curer must ward off the pest.

[782] They sacrifice the pig. From its left side they take a small piece from all the organs and place them in a new pouch. They gather glowworms (Echis) and go to the lagoon. The retinue made up of the curer and the cabildo leaves at three in the afternoon, and twelve hours later they will be back at the point of departure. Meanwhile, the women have been busy preparing the meat, without eating a single piece of it. They have not slept either, for they have an obligation to wait for the retinue wide-awake. When they arrive, the meat and stew are distributed, and the chicha and aguardiente are drunk. With this the people are relieved and the pest is banished from the community.

755 Ut ká ("dirt"-send). This is exclusively a family affair.
756 When the members of a family are dying, there is ptans, says
783 an informant, while another one thinks, with more reason, that it is the angry spirits of the dead who want to finish off the family. In such a case, the eldest of the survivors arranges for coca, aguardiente, and tobacco, gathers the family members together, and calls the curer.

[787] The latter divines up to eight or ten nights. He captures up to 12 glowworms. He asks for a castrated and fat pig. He ties it up for an entire night and divines as to whether the souls of the dead members of the family will accept it. At dawn he orders it killed. The slaughterers, the chicha-makers, the carriers of the sugar cane, and the women cooks are not

/242 cont./

755 members of the family, that is to say, they do not carry the
*756 surname of those who are performing Ut ká. None of them
783 may work, not even at making hats or pouches.

[461] The hog is skinned and washed over a hole; the hair and offal in general must fall there. When Ut ká is not being per-
[787] formed, the hog is skinned in a trough. Meanwhile, the curer
[782] divines as to how much meat is wanted by the souls. The latter specify the quantity, and the té eu translates it on a small stick, which is immediately passed to the slaughterers, who must cut out the pieces in accordance with this measure and put them into a pouch. The curer drinks aguardiente and also has assistants who help in perceiving the signs.

[252] /243/ The women prepare the maize for "mute" /stewed
[262] corn/, make small tortillas, as many as there are souls of the dead in the family. They also prepare every kind of fruit and food, plantains, arracacha, bread, yuca, bananas, granadillas, cucumbers, maize, eggs, meats, etc., to protect them against the ptans. They put a little piece of the foods into the pouch.

755 They also prepare some wooden dolls, in a number equal
*756 to that of the dead. They dress them like Indians: hat, poncho,
783 trousers, shirt. About 40 meters from the house they dig a
532 grave just as they do to bury the dead: a rectangular cavity with a lateral chamber. The curer weighs out two eggs of coca, picks up two cigars and a bottle of aguardiente. At about eight at night all those from the family leave, except those who are not. The cleansing is about to be performed. Then black clouds, like balls, gather. The curer blows remedies toward them. After two hours, the clouds go toward the left, clearing the horizon and leaving the stars visible in the immensity of space. The curer proceeds with the burial. In the lateral chamber of the tomb he places the dolls (representations of the souls) and a candle of laurel wax, after blowing the remedies at them. He closes up the chamber with a stone and then puts in the glowworms and the pouch of food.

1/1 [i.e. the family members--Analyst]

/243 cont./

*755 He fills the grave[1] with earth and proceeds with the cleansing
756 of the members of the family. They return home. All the
783 workers come out, and again he cleanses all of them. Only then can they go inside. The women have all the food prepared with half of the pig, for the other half belongs to the curer. Chicha and aguardiente are drunk and then the food is served. When dawn breaks, the usual liquors are being consumed. The curer leaves and other people take charge of bringing him his provision. The curer receives it, gives thanks, and hangs it outside the house. He can eat it only when he has killed more glowworms.

With this the Ut ~~ka~~ is finished and the pest has been warded off from the family.

*756 Ut peu ("dirt"-wash). Immediately after the burial, and
764 on the bank of a river or a spring, the washing of the clothes
783 and the cleansing of the people are done. The curer prepares three calabashes of remedies made up of (1) water and cow dung, (2) with rue, bitopiskue, ñundayuskei, dachak (curíbano /Scleria floribunda/), crushed, and (3) with shu and shulape.

/244/ With these, and in the order given, the people wash their clothes and their bodies. The clothes of the deceased are washed by the heirs.

The curer, after washing his own feet with the same remedies, remains seated, perceiving the signs. He then prepares another calabash of remedies with shú, shulape, and yuskei, for washing the hands of all those present.

He starts cleansing the people, who are seated on stones. The curer goes to the left and comes from there, beating with the tama. On reaching the first person to be cleansed, he performs the same acts already mentioned, doing the same with the others. He vomits the sucked-out "dirt" into a hole, where the people also cast their chew of coca, tobacco, and yuskei. Then the medicine man washes his hands with aguardiente and the remedy previously prepared. Everyone

1 [i.e., the grave into which the dolls as representations of the souls, have been placed -- Analyst]

/244 cont./

756 takes two swallows: they blow one into the air and they drink
764 the second one. What remains is sprinkled into the air. Those
783 present are lined up in a row, and the curer again beats with the tama, first around the front part and then around the back part. He casts the collected dirt into the hole, covers it with a stone, and tamps down the earth. Now the people, clean of ptans, go to the house of the deceased.

Yat put (house-blown). After the ceremony of the Ut Peu, all the people go to the house of the deceased, which they do not enter until the blowing of the house has been done. Everyone who was in the house comes out. The curer prepares the same three calabashes of remedies which he used in the Ut Peu. He pours out the calabash of water-diluted cow-dung at the spot where the corpse lay, doing the same with the second one. With the third, that is to say, the one made up of shu and shulape, he sprinkles the entire house (patio, walls, rooms, roof). With this the people can go in and its occupants will
765 continue to live. Dr. Hernández de Alba describes the
756 cleansing as follows:
783 "A month after the death, a shaman purifies the house. The relatives and Friends kill a pig, cut it lengthwise in two halves, one for the shaman, the other for the ceremonial banquet. The shaman sweeps the house floor with the pig's legs and some special branches, with /sic/ are later buried. He chews coca, says some unintelligible words, and spites /sic/ leaves on the house walls. The residents and guests then enter the house for the final proof of purification. The shaman, standing in the center of the house, gives a dog half a tortilla. If the dog does not die, he divides the /245/ others /sic/ half among those present. He does the same with a piece of cooked meat, and if the dog still does not die, he bdows /sic/ chicha in all directions in the hut, and then divides what remains with those present. The hut and food are then declared clean. The food is then eaten and much chicha drunk" /cited in English/ (8).

/245 cont./

*765 756 783 [113] 8. See: "Mitología y Cuentos de la Parcialidad de Calderas, Tierradentro /Mythology and Tales from the Parcialidad of Calderas, Tierradentro/," Revista Colombiana de Antropologia, 1953.

[114] This type of cleansing has not been confirmed by any informant, curer or layman, young or old, male or female, from the Parcialidades of Santa Rosa, San Andrés, Calderas, Togoima, Avirama, or Mosoco.

342 796 *756 [241] Conjuration of the new rancho. To protect their fields from the voracity of wild animals, they build a small rancho. Before occupying it, they perform the following conjuration. The curer blows remedies in the center of the rancho where the hearth will be. He digs a hole and buries shu and shulape. He makes a fire and casts fiundayuskei and bitopiskue into it. He gathers up all the ashes and throws them outside the rancho. He revives the fire again and roasts a green ear of maize, which is given to a dog to eat. If the dog does not die, it is a sign that there is no pest there and the owners can occupy it. In the opposite case they must abandon it. In Santa Rosa the Té eu eats the ear of maize.

This same ceremony is performed upon beginning a house. They give the dog roasted maize since it is not the season for green ears. Then they drink chicha and aguardiente.

241 *756 E huse uña (clearing-eat). The harvesting of the crops from new clearings must be initiated by the curer. The owner of the field provides coca, tobacco, and aguardiente and invites the curer. The entire family goes to the field.

The té eu prepares a calabash of remedies based on Chayuts, shugues, tayuskei, echiutse, ul fiñ, tatse. He sprinkles the clearing with this. He distributes as many bundles of remedies as there are persons present, for them to chew, to swallow the juice, and to rub their bodies with the remainder.

/245 cont./

241 As soon as the curer has collected one fruit of every species to
756 be harvested, he makes up a bundle as on offering to the Ghost,
[782] since he is the owner of the earth.

[776] When this offering has been made, the owners harvest a pouch of each crop sown. They go home and /246/ put the pouches side by side in the left part of the entrance door for
[783] the curer to blow remedies again. Without this requisite, the pouches of food could not be brought into the house because they might carry the pest. The women begin to cook them. When the time for eating comes, the curer first passes around a cup of aguardiente with yuskei and bitopiskue. When there are potatoes, they are handed over to the curer after they are cooked. He distributes one specimen to everyone present; what remains is handed to the owner, who in turn gives generously to the curer.

If the first fruits are of maize or beans, the following is done:

With the green ears of maize, "loaves" /bollos/ or "wrappers" /envueltos/ are prepared; with the beans, a large bundle is made. Then the ears of maize, the bundle of beans, and the loaves are cooked. Aside from this, there is a pot of stew with chicken to provide for the curer.

The cooked ears of maize, beans, and loaves are assembled in a trough, and the cook distributes to all those present a sample of each type. Everyone eats, taking care to leave a little of each mouthful, which they pass to the curer. The latter makes a pile, ties it up, and hangs it from the ridge of the house so that the field seed which is being harvested will yield abundant fruit in the following year.

The husks of the ears of maize are piled outside the house, where the curer remains for one night with the object of capturing glowworms and killing them.

776 Assisting spirits. Thunder. All the informants state that Thunder is short in stature, about 1.40 meters, wears a large hat of twigs, underdrawers, a black poncho, tama, and pouch

/246 cont./

776 of remedies. In addition, some say that he has a long beard, does not wear trousers, shows his genitals, and carries a musical instrument called tíngalo (triangle).

*[756] He is a curer and teacher of all the Paez té eu; a protector of the nasa (people) and to some extent even their legislator. Sat (cacique) at the time of the Pijao, he defended them from their voracity and gave them good advice. He ordered that the staffs of command of the cabildo members be washed in the lagoon, abodes of Thunder, to prevent the pest from killing the people.

[823] Thunder is an immortal spirit. He is not seen. He is the guardian of gold and he kills those who dare to collect it. He 776 warns the people /247/ when an evil white is coming to visit 821 them by means of a very strong peal of thunder given when it 787 is not going to rain. If thunder strikes in front of a house, this indicates to the owner that he has the pest and that he should seek out a curer to cure him. If it thunders first at the sorcerer's house and immediately passes to that of the curer, it is a sign that the former is casting a spell on him.

* 756 When a patient requested the services of a curer from 776 Santa Rosa, a torrential rain accompanied by thunder fell during the night. On the following day he told the patient that he had talked to Thunder, who had advised him not to treat him unless he brought him everything that he had requested.

The only being that Thunder fears is the devil. He knows more treatments than the Ghost.

* 756 A curer-sorceress from Santa Rosa says that Thunder, called 776 Manuel José Tipo, had fallen in love with her. He gave her 787 serenades with the tíngalo, which were more frequent when the sorceress swept the patio of her house. During the serenades he taught her the remedies. He was at the point of carrying her away to the lagoon, if she had not defended herself vigorously.

5:Bernal Villa--37 E-5 (1952-1953) 1954 SC15 Paez SC15

/247 cont./

776 Manuel José Tipo was in Calderas (9). The people tossed

539

[113]

9. Frazer, Sir James George. La Rama Dorada /The Golden Bough/, Fdo. de Cultura Económica, Mexico, 1951, pp. 33-34.

poison into the lagoon and he had to leave the place in the company of his wife. He went through the air to Santa Rosa, where, upon arriving, he let his wife fall. It killed her. In this parcialidad he was in love with a cacica /female cacique/. He always came to her well-dressed, with a rich bag of chachalacas. The father of the cacica, curious as to how he had killed so many chachalacas, followed him to the montaña and noted that when he undressed he had snakeskin on his back. He was a snake and for this reason caught birds with ease. He told this to his daughter. She, accompanied by a servant girl, set out on the following day for her field of very fertile soil. She had handsome fields of potatoes, cabbages, and onions. Thunder came to visit her. The place began to become a lagoon, and the servant girl warned her mistress of the danger that they were in. She paid no heed. Lucía Kalguesh, the cacica, remained there, living with Thunder. The lagoon was very rough, and Thunder deceived his wives a great deal. Then the puswesh (the stars) came down, cleared the forest around the lagoon, and dug out a drainage ditch for the purpose of /248/ drying it up. Just as they were about to achieve their end, Thunder came out and begged them not to dry up his dwelling. The angry puswesh sewed his mouth and cut off his tongue, for they were too big.

Thunder continued to behave badly, and the curers chased him to another lagoon, without his wife and children.

776 Kallumb. He lives in the springs and in the caves. He is a good spirit. The people say that the Virgin left a roving

/248 cont./

776 child to help the Indians, to protect them, and to instill a belief in her.

The ghosts look like angels and have a body covered with [727] down. Women may see them making the motions of weaving, in such a case they will become good weavers. Men may see them with pouches, indicating that they will become curers.

It is said that there are large and small ghosts. The former, when they rise, leave the rainbow behind them, like a trail. The latter do not keep company with the former and are less fierce. Both shriek like professional mourners.

* 756 The female Té eu. Women can be curers, people state; 562 there is no reason why the signs would not circulate for them. Nevertheless, no woman is a curer. In Santa Rosa there is a woman who, according to her own confession, is a good curer, has seen Thunder and conversed with him, and has good remedies. Thunder even gave her a wooden doll called "Soft wind [754] of Thunder," with which she gives treatments. But the community regards her as a most dangerous sorceress, and the cabildo has burned her remedies and has put her in the stocks. Furthermore, all the deaths caused by sorcery are blamed on her.

On the other hand, the behavior shown by the community is the same as that observed for all sorcerers, that is to say, detachment and resentment against her. A curer from Calderas explains the phenomenon as follows: women are cleverer than men; they have brilliant ideas and in general dominate the men. [754] A woman can become a curer, but at any time she might turn into a sorceress, because she is cleverer than a man. Sometimes she gets to the point where nothing matters to her. Hence women do not learn medicine.

* 756 Taboos of the Té eu. They refer above all to sex and food. 834 They do not have the full force and tenacity which they have 262 in other cultures.

/249/

*756 While the curer is perceiving the signs, he cannot cohabit.
834 The sorcerer who is aware of this interdiction will, out of
754 malice and wickedness, take his wife to the kachí and cohabit with her, with the aim that the signs will not circulate for the
[826] curer and the glowworms will not rise. And to add to the wickedness, they leave in the kachí pubic hairs, which are poisonous.

*756 The curer cannot eat ají, especially the one called ají
262 de montaña, because this would anger Thunder and the Ghost.
[263] They do not eat salt, or consume very little of it. Thunder did not eat salt, they say. They eat the meat of the "pro-
[785] visions" after performing the cleansing. In the ceremonies of ut ká, wé ká, and ut peu, they fast for one day. That is to say, they eat at daybreak and eat again on the following day. Furthermore, since the treatments are given at night, frugality makes them sleep less.

787 Dreams of the Té eu. The interpretation of Paez dreams, as in the generality of popular interpretations of dreams, observes a certain relation between the manifest content of the dream and the action to come. To put it better, future events are deduced from the manifest content of the dream.

They believe firmly in the omens of the dreams, but they
* do nothing to forestall them. It is as if it were a fatality of
[756] destiny. There are no dreams peculiar to the curers. Interpretation is a common patrimony of the people. The attitude toward these omens is the same: to wait indifferently. Here are a few examples out of many:

787 To dream that a snake bites him, sorcery. But if in the
754 dream another person kills the snake at the moment when it bites him, a good curer will turn the sorcery from the victim to the sorcerer himself.

To dream that a herd of swine attacks him, they are practicing sorcery.

To dream of killing a pig, the sorcerer is going to be killed.

/249 cont./

787 To dream of jaguars and cats, there is a Pijao "huaca" inside the house.

To dream of a hearth, there is gold at the spot.

[763] To dream that a jaguar is eating the chickens, the person will die of the Pijao pest.

To dream of a cow, the wife will die.

To dream of killing a bull or a horse, a good person will die (curers):

To dream that wasps are stinging him, they are going to catch him.

[763] /250/ To dream that the teeth are falling out painlessly, a close relative will die.

To dream of eating ají, the person will become angry for insignificant reasons.

To dream of finding a new chumbe /band/, they are working for the rainbow to sting him; if he dreamed that he was wrapped in it, the rainbow has stung him.

To dream of carrying beams or canoes, he will help to bury a dead person.

To dream of receiving silver coins, he will suffer from blennorrhagia.

To dream of drowning, there will be a war and he will be taken prisoner, or he will simply be drafted into the army.

* 756 Payment of the Te eu. As a rule, the curers do not collect fees either in money or in kind. Their services are free. In the confirmation of the profusion the first thing that Thunder recommends is to be charitable toward people. One curer states that he does not cure as a business, for he collects neither money nor animals; people reward him with a small gift. Another curer is more dogmatic. To exploit people is to incur God's anger. The people's gratitude is always expressed in the "provisions" (meat, chicha, and aguardiente).

Out of the articles that the patient brings them for the treatments, only a little coca is left over for them. From the ceremonies for the initiation of the harvest they receive cooked

/250 cont./

756 and raw food. From the Ut ká and Wé ká they receive half of the animal sacrificed, chicha, and aguardiente. In case of a serious illness, they demand a pig, a sheep, and turkeys. But they get only a little.

756 554 Although there is no lack of information about curers who collect money for practicing their learning, such as a curer from Togoima who was in demand even in La Plata and Garzón, it may be stated that the curers do not grow rich in the profession. Rather, the practice of curing prejudices their economic activities. Some are quite poor, while others own large areas of land, good fields of maize, wheat, plantains, and arracacha, a few head of cattle, and several horses, pigs, sheep, and turkeys. They might be classified as rich. Of the five curers from the Parcialidad of Calderas, three may be regarded as rich, while of those regarded as sorcerers, only one is poor. Naturally, this has been acquired by inheritance /251/ rather than as the fruit of their own efforts. Their labors are performed in accordance with the norms that prevail in the community, that is to say, through the system of mingas. During the harvest they make a distribution of foods just as the others do. They participate actively in the work of the others, as well as at the fiestas and drinking bouts.

It remains to be noted that the richest of the community are not curers. On occasion they are frequently criticized when during the treatments they request pork and the patient is not improving. "You should be ashamed" -- they shout -- "you are eating mutton and the patient is dying."

"Good curers, in referring to those regarded as sorcerers, [754] say that they collect without fail. Whatever they see they ask for. The sorcerers say the same thing about the curers.

Social status of the Té eu. All the well-known curers are over 30 years of age. They are "elders" /mayores/ and for this reason respected by the community. It is said that the curers are no better than other men, but it is certain that they enjoy an aura of prestige and recognition different from that given by the concept of "majority" /mayoridad/.

/251 cont./

756 In any case, "the curers have something and are kind,"
554 said one informant. They are respected, and at entertainments they are attended to in the room where important people (síndico, capitán, gobernador, eminent old people) are received, and they are served on larger plates.

Prestige is an advantage of the curer. It is not unusual for the curer to command more devotion than the capitán of the Parcialidad.

All the curers claim to be happy in their profession, and many are grateful to their teacher for his instruction. The advantage of being a curer is to be waited on by people, to be singled out from among the others, and also to be pursued for his knowledge, says one Calderun curer. Everyone seeks him out as a good curer; many of them are regarded as priests, for people come daily to their homes to look for them. They have more power than other people.

The curer has a high social status by virtue of his functions. But for no reason other than these functions. He commands respect and recognition for services rendered. No one can treat him badly. If during a drinking bout he is offended in some way, on the following day they hasten to make amends.

756 /252/ Psychological characteristics of the Té eu. The
157 curers vary in age from 30 to 70 years old. As a rule, they
156 have eyes deeply set in the orbital sockets, a penetrating gaze, a readiness to converse and laugh, a gentle manner, not at all aggressive; they are temperate and show much self-control and sureness in their movements.

A characteristic motor habit: seated on a very low log, they give the impression of squatting; their arms rest on their knees and with their hands they stroke their temples or chin. This motor habit is prevalent among Paez men.

[177] Their clothing is typically Paez; they do not favor change,
[291] although they are friendly enough with whites. They always
757 advise their patients not to use the remedies of the whites or they will die.

* /252 cont./

756 They are very tractable, friendly, and in our cultural
156 terms we would say that they have a marvelous gift for dealing
157 with people.

[886] When they grow old, they cease to perceive the signs.
[787] They believe that when a curer dies, his death is heralded
by thunder. They live in permanent tension to counter the
[821] attacks of sorcerers. At the slightest symptom, they go to their
[763] kachí to divine and to take the appropriate precautions. They
eat little so as not to sleep at night; they do not suffer from
insomnia. They refrain from sexual relations and from ají
during their treatments.

[731] They attract the entire concern of the community when
epidemics occur. The true curers, those conscious of their
profession, are temperate, engrossed in the fight against sick-
ness, and of a kindly disposition. They inspire trust and do
not show egoism; they readily explain the secrets of their pro-
fession.

* 756 Competition among the Té eu. Some rivalry seems to
578 exist among the curers, and the natives even list the zones of
action of the curers. It is certain that a curer will boast of
having overpowered another in the latter's own area of practice.
A curer from Santa Rosa tells how he overpowered a colleague.

755 The informant went to give treatments to a white patient
*756 at Alto de Atarraya. There he found another curer who was
578 giving remedies that were useless. The patient provided for
them very well, with abundant chicha and aguardiente. The
new arrival drank with care. His colleague had already eaten
the pork, but the patient was following /253/ him. The two
curers prepared to fight. The new curer took his tama and
his coca and at nine at night prepared to divine. His assisting
spirit told him that the other one had given false remedies.
Thus he had to learn the effective remedies. He discovered
that the harm had been done by a native servant girl, along with
some neighbors who did not like him. At once he called in
the cook in order to question her and make sure of what she had

/253 cont./

755 done; she would have to confess, or else he would have her
*756 arrested. She was wholly to blame. The servant girl took
578 fright and replied that perhaps she might be responsible, since at one time she had picked up an echi and put it in an ají bush. And it was this angry echi that was now killing her employer. At once the curer went to the ají bush, removed the echi, and blew fresh remedies at it. He set about divining anew and found out that the rainbow had also put hairs on him. On the following day he removed them. The patient recovered; it was proved that he was a good curer, and demonstrated that the other one did not know anything.

754 The Té eu and the sorcerer. It is said that a sorcerer can
*756 at the same time be a good curer, but we know perfectly well that the Ghost and Thunder do not give their knowledge to the sorcerers. On the other hand, when a té eu is asked for information about the remedies of sorcerers, they invariably answer that they know nothing about them, for if they were to learn about these remedies they would lose their wisdom.

The curers believe that they are constantly pursued by
75 the sorcerers. Yet, they are able to kill them. A curer from
539 Santa Rosa related his success to us as follows:

774 "When I was a young boy, I was clever and mischievous; I already knew remedies. On one occasion a sorcerer declared his enmity toward me because I was becoming a good curer. I fell ill, and the signs indicated to me my approaching death. In Huila there lived a good curer, and I went there with plenty of coca and aguardiente. He told me that I would die if he did not go to work at once. It was sorcery, and he had to kill the sorcerer. I would have to stay with him for at least a month. 'Let us go to work and dig a hole in order to kill that fellow,' he said to me. He made the first hole, which we used for several nights, for the sorcerer whom we were seeking was very clever. He would call the soul and it would come, but it did not allow itself to be caught; it was very suspicious. The sorcerer was very dangerous, he had killed my mother and my brothers. We went on working. The

/253 cont./

75 month went by, and we were unable to catch it. We did not
539 sleep. The curer would make another hole, and another. We
774 were tired. 'We shall catch that scoundrel /254/ yet,' he
would say to me. When we went on to the seventh hole, at
the crowing of the first cock, the soul came. The curer had
his tama ready, and at once, zoom! he gave it a blow and it
fell into the hole; he tossed earth on top of it and tamped it
down well. After a few moments the soul made a whistling
sound. 'We killed it,' the curer exclaimed triumphantly. I
saw the sorcerer's soul. Then the curer told me to go back,
for I was cured. He advised me to take remedies with me,
since there are many robbers along the way. Thus it came to
pass. I was careful at the dangerous spots. The signs indicated
to me the presence of robbers and at once I blew remedies at
* them (kit sust). They went to sleep.

756 Farther on I met some people who were pursuing a criminal.
539 They gave me coca and aguardiente so that I might prepare
789 the remedies at my house and help to capture the criminal.
Thus it came to pass. I put chayuts around my feet and the
criminal was unable to walk. They caught him."

75 Others say that the one bewitched, with his relatives,
774 goes to the curer, bearing coca, tobacco, and aguardiente.
They kill a pig and put a piece from each organ into a small
pouch. This is the grease for catching the sorcerer's soul.
At the crowing of the first cock, when everyone is chewing
coca, the soul comes to get the small pouch, immediately
falls into the hole, and the curer tosses upon it fierce echi,
remedies, and the chews of all, and covers it and tamps down
[783] the earth. This is how he kills the sorcerer. He immediately
cleanses the sick person and his relatives. The danger has
* been averted.

756 When the curer feels the signs at the crown of his head,
717 ptans is being sent to him. He goes without delay to the kachí
783 with pringamoza, paramo cabuya, tama, and flica to wait

/254 cont./

for it. If a black cloud draws near, he cuts it with the tama. It is the ptans.

The relations between these two men, on whose activities a great part of the security of the group rests, are not cordial; they are relations of latent and permanent aggression. The sorcerers wait for carelessness on the part of the curer. If they catch him asleep, they kill him at once. The sorcerers use pieces of glass to put an end to the wisdom of the Te eu, that is to say, to the signs. They can call sicknesses, combine all the pests, and send them to another parcialidad or to the curer himself so that they will kill.

When a té eu meets a sorcerer, they barely greet each other; at night he takes every precaution.

The curers can accuse a sorcerer before the cabildo, but they are afraid to do so.

/255/

Chapter II

Nasa Jihi

The vision that decides a destiny. Just as a té eu needs to see visions in order to decide on his vocation, the sorcerer also decides by means of visions. For example, if in the beak of a bird there is seen a donkey with open mouth into which mosquitoes fly, or simply pigs, the person is fated to become a sorcerer. These visions are personal and usually occur in isolated spots, such as ravines or bogs, where animals cannot come, on any day or at any hour, for this can take place in the daytime or at night.

When a person claims to have seen a donkey, people say that he is going to eat people. It is commonly stated that those who like to walk about at night are more likely to become sorcerers, for they have the opportunity to meet with evil spirits.

/255 cont./

754 It is said that one who is to become a sorcerer does not need a teacher; he will discover the remedies and the evil spirits. Nevertheless, in the Parcialidad of Santa Rosa it is said that the most dangerous sorceress in the place teaches people how to do witchcraft.

754 *756 The té eu can easily become sorcerers, if they show interest in becoming familiar with their remedies. A sorcerer can be a good curer and cure people, but nevertheless he will demand better provisions.

754 *[756] As a rule, it is unusual for a té eu to be universally acknowledged as such, for many people, and the sorcerers among them, commonly designate them as nasa jihi (evil person).

[787] They may have the visions from a very early age, but the practice of sorcery begins in adulthood and is perfected with maturity. The sorcerers who are publicly acknowledged are about 35 years old, most of them being elders.

/256/ Sorcerers never show their remedies; much less is it possible to attend one of their sessions. This is a concealed activity. One knows who the sorcerers are by public identification. [124] All the information obtained about them is provided by the people and sometimes by the curer himself. [56] Nevertheless, none of them confesses practicing this activity; rather, on the contrary, they protest their innocence and claim to be the best persons in the community.

[623] [692] The remedies that the sorcerers possess are said to be well hidden, for if the cabildo were to find them, they would punish them irremediably.

[513] The sorcerers cast their spells at night. The natives say that they do not sleep. No sooner has night fallen than they are chewing coca and tobacco. They sleep during the day. They prefer the dark of night for performing their activities, although they do not have special days or specific hours.

The sorcerers do not introduce objects into the body (toads, hair, etc.), nor can they turn into animals.

/256 cont./

754 Sorceresses are numerous, and it seems that they are the most feared.

[787] Sorcerers receive signs from the devil and the evil spirits who help them appear in the form of snakes, donkeys, or pigs.

[825] They are different from the ghost and Rainbow. It is said that the pig teaches the person to be very fierce or inclined to drunkenness (drunks roll about on the floor like pigs in the mud); the donkey, to be a glutton.

In general it seems that every adult is a potential sorcerer, and all the more so those who deviate from the institutionalized norms of behavior.

754 554 578 Victims of sorcery. The victims of sorcery are found everywhere among the people, without any distinction as to sex or age, status or function. The sorcerer himself commonly takes the initiative, but he is also at the disposal of those who want to employ him.

The victims of sorcery frequently are those people who are efficient, hard-working, and frugal, virtues which in our society lead to the development of a capitalist economy.

754 554 153 578 In Santa Rosa they speak of the lamented death of one of their ex-gobernadores. He was young -- they say -- intelligent, a good conversationalist, /257/ and very hard-working. He owned much land and good fields of coffee, yuca, maize, and sugar cane. Jealousy, the source of discord and injustice, motivated the sorcerers Lorenzo Io and Dolores Oinó, his wife, who joined forces at once with the greatest of the sorceresses, Felisa Ipia, in order to put an end to this man's life. This is the judgment of the curers and the opinion of the community. But the accusation was made by the victim himself, who, in the course of his death agony, which was prolonged, dreamed of the above-mentioned sorcerers. The dying man repeatedly requested that the sorcerers should be sent for, so that he might settle accounts with them. When they left his house to attend to the wish of the dying man, he expired. He died convinced that they had cast a spell upon him.

/257 cont./

754 A curer from Santa Rosa, while taking a spell off a sick
554 person, explained that this man owned much land and that they
152 had cast a spell upon him in order to appropriate it.
598

In Calderas a man who can read, write, and make memorials for the Alcaldía of Inzá, a maker of fireworks, builder of houses, and good farmer, was naturally the cause of envy. A sorcerer wanted to kill him. He called his soul while he was asleep. But the one called was aided by the soul of his brother, who blew mambe toward him. On the following day his left eye became white and was on the point of dropping out. A curer was able to cure him, but he remained one-eyed. The two brothers remained enemies of the sorcerer.

754 On another occasion and in the same parcialidad, two
613 brothers gave a sorcerer a beating. In revenge he cast a spell
623 on both within a year. Fearful of punishment, the sorcerer went to other parcialidades, but on his return the cabildo put him in the stocks.

In the old days -- says a curer from Santa Rosa -- the cabildos punished the sorcerers. Those of today are afraid of them. The elders /mayores/ have died bewitched. Actually, the Indians refuse to serve on the cabildo or to accept the post of capitán for fear of the sorcerers.

754 The sorcerers are all thieves. They often steal under the
685 very eyes of the owner, who, fearful that they will cast a spell upon him, does not make the slightest protest. But the sorcerers, in turn, fearful that he might complain to the white authorities, cast a spell upon him.

754 In Calderas, those who purchase livestock to expand their small hacienda have been attacked by sorcery.

The Indian who has lived with the whites, who has adopted
754 their clothing, their dietary habits, and their agricultural and
177 cattle-raising techniques, /258/ and who has given up the
554 habit of consuming coca and chicha is not only the victim of magical attacks, but is the direct recipient of offensive words and deeds.

/258 cont./

754 Thus, the victims are "the most skillful, the most charitable
554 toward travelers, the friends of the whites, those who display the most friendliness among the natives, those who have much livestock, large tracts of land, good plantings." In this phrase are listed almost the full gamut of the victims of sorcery. From previous examples, we see that those who have land, animals, mental ability and manual dexterity, and good fields, the energetic numbers of the cabildo, those who take the path
[182] of transculturation, are victims of sorcery. In addition, revenge and resentment are evened up by means of sorcery.

754 It is not surprising that undesirable whites are victims of
648 sorcery. The undesirable ones are those who covet their lands. The curers, on their own initiative or supported by the cabildo, call the soul of the white at a strategic spot, capture it, whip it with pringamoza (Urticaceae) and put bad remedies on it so that it will never return to the region. They say that the white begins to feel too lazy to travel in the area and finally decides to return to his country.

[177] In parcialidades such as Calderas, where much resistance is shown against living with and contact with the white, there are some people who are such sorcerers and such enemies of the white that even in the church they leave enchanted eggs so that not even the priest will come.

754 Among the victims of sorcery are parturient women and newborn babies, when the sorcerer or other envious persons do not want a certain family to prosper.

The power of sorcerers extends not only to human beings
[433] and animals, but also to the plantings. The loss of a planting
[167] means suffering from hunger, a shortage of coca, and emi-
[464] gration of the parents to distant places in order to hire out as laborers.

In the clearing they may put enchanted eggs, salt, pubic hair, or capio maize in order that the planting be lost.

/258 cont./

754 Methods of sorcery. There are various procedures for
774 practicing sorcery:

/259/ a) The one most widespread and about which the most information is provided consists of digging a hole and waiting over it for the soul of the victim. It arrives, giving off light like a candle. At once the sorcerer hits it with the tama, and it falls into the hole. It is at his disposal; he can bury it, whip it, blow remedies or mambe upon it, show it harmful objects.

When a quick death is desired, the sorcerer buries the soul with bad remedies, tamping it down vigorously with earth from the cemetery. The soul comes out with a whistling sound when the person dies.

754 It may also be whipped with the following remedies:
774 Bao* (Araceae). The victim's stomach swells until he dies.
824 Borrachero (Datura sp.). Poisonous narcotic. The victim goes mad.

Cabuya (Agave sp.). The juice of the leaves is caustic. The victim rots away.

Caspi* (Toxicodendron striatum Kuntze). Poisonous shrub whose emanations cause irritation of the skin. The person swells up and dies.

Chuwet in Spanish, called estancadera (Krameria ixína?) by the whites. It has pointed leaves, which, when brought into contact with the soul, stab the person.

Lechero (Euphorbia cotinifolia L.), poisonous plant. The victim bursts.

Pringamoza. The hairs of this member of the Urticaceae enter the body, and when they reach the heart, the victim dies.

754 The sorcerer can blow mambe on the soul, leaving the
774 person blind, or drive him insane by moving toward it a deer skull with an echi inside.

He can also prick it with the bones and hair of porcupines, snake bones, claws of the swift parakeet, and talons of eagles.

/259 cont./

754 To facilitate the capture of the soul, the sorcerer gathers
774 the soil on which the victim has trod, with which the us (heart) falls easily.

754 b) The sorcerer can make angry the Ghost, Rainbow, and
776 Echi. Thus:

For the Ghost, he puts a large ají de montaña (Capsicum sp.) at the spot where he lives; the person passes by and dies of a few stings in the heart.

/260/ For the Rainbow, he puts the rags of a menstruating woman in springs, bogs, damp places. A person passes by, is stung, and dies.

For the echi, he puts remedies where the victim works; stung, he vomits blood and dies on the spot.

754 c) Another way to cast a spell is rubbing bad remedies on the salt, pork, or eggs that the victim is going to eat. If by chance someone else eats them, nothing happens, for the witchcraft was not directed against him.

[783] d) The sorcerers handle the pest as they please. They can send it to persons or to the entire community. The sorceress Felisa brings the pest to Santa Rosa even for business reasons.

[789] e) When the sorcerers do not wish a person to return, they place at a strategic spot on the road two bundles of chayuts pointing upward, and in addition they blow dry pringamoza.

f) A curer from Santa Rosa explains how a spell was cast on one of the former gobernadors of the parcialidad. The late Leonidas was working in his garden and his rancho was empty. Then a woman came in, dressed in black (Dolores Oinó), dropped into the pot of food some of her own pubic hair, and stole a piece of Pijao earthenware that contained silver. Leonidas ate this food and began to feel his throat become dry
[783] and to breathe with difficulty. Finally he died. The Pijao pest has the same symptoms.

g) When the sorcerer wants a person to suffer an accident (fracture, contusion, dislocation), he leaves somewhere in that person's house a very smooth stone taken from the stream. The person, wherever he may be, slips and falls.

/260 cont./

754 If a person kills himself in a fall, it is believed that the
[783] sorcerer sent him ptans.
[761] h) To cast a spell on the plantings, they use tobacco, matches, and other remedies with which they are burned and destroyed.

As will be noted, in their enchantments the sorcerers do not use any parts or objects belonging to the victim, such as hair, nails, clothing, etc. Most of the remedies that they use are herbs or objects that have properties noxious to man or can cause him harm.

The sorcerer believes that putting them in contact with the soul or simply with the body produces the desired effects.

754 /261/ Paez sorcery is a clear case of imitative or
789 homeopathic magic, according to Frazer's classic definition. It is "desire dominating the world with instruments born of desire " (10).

[108] 10. Ponce, Aníbal. Estudios de Psicología /Psychological Studies/, El Ateneo, Buenos Aires, 1947, p. 363.

754 The Paez fear illness and death and live in the fear that
182 the whites may take from them their land, their ranchos, their plantings, that is to say, their very sources of survival.

While the sorcerers attack the customs of a capitalist economy and transculturation openly, the curers protect the community against sickness and against the attacks of individuals or groups, by means of their divinations and their vigorous and constant conjurations. In this sense sorcerer and curer are identical. They protect the community.

683 Punishment of the sorcerers. The sorcerer is feared by
754 the entire population; identified throughout by it, he suffers general enmity; torrents of hatred arise against him, ending most of the time in violent punishment: confinement in the stocks, whippings, dunkings, and even exile.

/261 cont./

683 The aversion that the people of Santa Rosa have for the
554 sorceress Ipia is expressed clearly in the words of one té eu:
754 "This old woman should be brought to the pueblo, her remedies burned, she should be bathed in ají water, manacled, and kept like this overnight to prevent her from running away, bathing with her remedies, and turning back into a sorceress."

683 In this same parcialidad the sorcerers accused of having
[623] killed the former gobernador with their tricks were given the following punishment by the Cabildo.

The sorcerers, taken from their houses with all their pouches of remedies, were led to the pueblo. In the plaza and in the presence of the people, the capitán took from the pouches remedy after remedy, showing it to the public and asking about its uses. The remedies were unknown in most cases and the sorcerers gave no information about them. They made a large pile. The gobernador of the cabildo says that they even had earth from the cemetery. He sprinkled the remedies with gasoline, put the sorcerers in the middle, and lighted the fire. The frightened sorcerers begged for forgiveness, claiming that they were innocent.

It is said that in the pouches they found flowers of sulphur, with which they /262/ prepared a drink that they forced them to take in order to rid them of evil spirits. The sorcerers, on their part, say that the drink in question was a mixture of the excrements of domestic animals and human feces.

The sorcerers had to remain at the wake overnight and dig part of the grave. After the burial they were invited to the meal which is offered on such occasions, an invitation which they refused, but they were forced to attend. With the food it is said that they were given pubic hair, according to the sorcerers. Then the people tossed them into a pond.

683 In Calderas the punishments are more violent. In 1951,
184 they took a sorcerer, put him in the stocks for two days, forced him to take the drink of excrements, whipped him,

/262 cont./

683 and finally exiled him. The sorcerer nearly died. He com-
184 plained to the Alcadía of Inzá about the brutality of the cabildo. The Alcadía had the stocks destroyed by force, in spite of the protests of the natives. The punishments of the sorcerers in the Parcialidad of San Andrés were about the same up to some 30 years ago.

683 Often, when there is a very dangerous sorcerer, the curers
754 band together in order to kill him. They call his soul, and
756 when it draws near they hit it with a stick smeared with chayuts.
774 The soul leaves with a whistling sound. When a volcano erupts,
[823] it is a sign that the devil is punishing the souls of sorcerers.

754 Psychological characteristics of the sorcerers. Broadly
157 speaking, the sorcerers are timid, resentful, aloof, with a very
156 strong persecution complex; they try to avoid contact with people, believing that they see in each of them a presumed accuser; they tend to be self-supporting; suspicious to a high degree, they roundly deny the accusations of their victims, regarding themselves furthermore as good persons, sound and inoffensive; they pretend to know nothing about remedies, and it is very difficult to obtain any information from them about sorcery. Most of them are intelligent. Endoculturally they are at odds with their own group, insofar as they embody the struggle against the influences of foreign cultures.

The nasa are convinced that no sooner has the sun gone down than the sorcerers are already at work. The most dangerous ones sleep during the day. For this reason they regard as peculiar characteristics of the sorcerers red eyes, an evasive look, aloofness, an unpleasant appearance, egoism, and suspiciousness. They look like criminals, informants say.

182 /263/ Socio-dynamic value of sorcery. Within Paez
754 society, sorcery is vital, overly active, and gravitates into all the social interstices. But, as must be evident, at all times and places it pertains to the realm of concealment. Its executors are surreptitious. They always act in the shadows.

/263 cont./

182 The people perceive only the effects. Only the expectant
754 attitude announces to us its presence. The latent fears tell us of its vigor. The members of the cabildo, the capitán, the té eu, the working men, the parturient women have a strong fear of sorcery.

When the pest spreads through the community, when the elders die and their experience and advice are lost, thoughts
[761] turn inevitably to the power of the sorcerers. Most deaths are brought about by sorcerers, the informants say.

754 Sorcery is a powerful barrier against the introduction
182 of the customs of a capitalist economy and also against the
177 intrusion of the whites in their parcialidades. It is strange that sorcery should exist in the less acculturated parcialidades, while in San Andrés it has practically disappeared. It is said to have been vigorous until 1926, the year when the Municipal Council of Inzá established in the parcialidad a settlement area in which the whites settled. With this measure living together was inescapable and they chose to accept them. Nevertheless, during the drinking bouts of the old people, the tremendous resentment that has become natural to them still crops out.

182 Furthermore, it makes its influences felt in the distribution
754 of land. Each family has lands from which it lives. With the
423 increase in population the problem of their unequal distribution
[554] has become prominent. Those who have the most land are
[152] the targets of envy and sorcery; they are more prone to magical attacks aimed at taking away their land. Intrasocial tensions
754 appear to be brought into equilibrium by means of this insti-
182 tution. The fear of reprisals checks aggression. Revenge is too prejudicial, since it can be manifested not only against
[184] individuals, but also against animals and plantings. It is
[177] perfectly true to say that while in Calderas acts of bloodshed
[675] are rare and suicide is unknown, in San Andres, a parcialidad which is largely acculturated, the homicides, murders, and
[762] cases of arson are hair-raising.

Medicina y Magia entre los Paeces

Por

S. BERNAL VILLA

[P 219]

CAPITULO I

El Te Eu

Sintomatología. Los médicos buenos, los auténticos *té eu*, en quienes la sociedad cree y confía, los que constituyen un monolito de seguridad frente a los misterios de la enfermedad y de la muerte, son aquellos cuyas vocaciones han sido determinadas por una visión, más exactamente por una alucinación. En este caso, el destino de los hombres es inexorable, no admite variación. Este *leiv motif*, vigoroso en tiempos pasados se encuentra en decadencia actualmente.

Un médico de la Parcialidad de Santa Rosa, explica así su visión: "A la edad de seis años, cuando estaba cuidando una labranza en la montaña, se me presentó mi madre vestida de negro, con un sombrero blanco y jigras. Me regañó por el mal desempeño de mi labor, criticándome que los animales están terminando con la labranza. Marchóse adelante y yo seguíla. En la quebrada desapareció. Fuí a mi casa y me di cuenta que aquella mujer no era mi madre, puesto que ella, en el momento de la visión, se encontraba en una "minga" cocinando carne de cerdo para los peones.

No cabía duda que era un espíritu que me decía que debía ser médico. Las jigras que llevaba así me lo indicaban. Por eso nunca dejo mis jigras de remedios".

Otro médico, de la Parcialidad de Calderas, relata así su visión: "Una noche ví un niño hermoso, rubio, con cabellera de mujer, colorado y vestido con una bata. Ese niño, era el Duende

---

ch equivale a ch española (techo).
j equivale a j francesa (jardín).
h equivale a j española (rojo).

[P.220 is blank]

de quien procede el poder del médico. Es el mismo *Kallumb* que ven los médicos de verdad, porque en la actualidad existen unos que aprenden a curar por la enseñanza de otros".

En la Parcialidad de San Andrés informan que el Duende visita al médico cuando alguien va a visitarlo, el objeto que lo lleva y le dice los consejos que debe darle.

Puede suceder también, informa un calderuno de 19 años, que alguien quiera ser médico. Entonces, se somete a dieta. Durante un mes deja de comer sal y ají. Marcha, luego, hacia el monte, solitario, cabizbajo, pensativo, con la esperanza de encontrar un buen amigo de quien demandar consejo. En un sitio espléndido, agradable a los sentidos, se encuentra con un hombre entrado en años, bajo de estatura, bueno, generoso, amable en la conversación, amplio en las enseñanzas, que mambea como los demás indios y que, como éllos, lleva también *kuetand yahas* (jigras). Infundido de confianza, explica sus deseos de ser médico, argumentando que son muchas las gentes que se están muriendo. Inquiere por los remedios buenos. El interrogado contesta que existen buenos remedios para curar a los enfermos y le obsequia con una jigrada de ellos. Este sirve para tal enfermedad, le dice, este otro para aquélla y así sucesivamente va especificando el valor medicinal de los remedios de la jigra. Lo instruye en su uso, técnica y método. Hasta en la forma de fabricar la tama. La visión de aquel hombre es personal. No puede verlo otro. Y es el mismo que presta las "señas", sin las cuales no es posible curar, aún sabiendo el valor medicinal de los remedios. Terminada la entrevista, con la alegría manifiesta en el rostro, retorna el hombre a su casa. Acaba el aprendizaje con otro médico, empieza a curar a sus hijos y familiares y luego, una vez esparcida la fama, vendrán otros a solicitar sus servicios.

Quien va a ser médico desde muchacho ve visiones: el Trueno o el Duende. Es la iluminación de su futuro destino. No puede torcerlo, puesto que el Trueno o el Duende, pueden alocarlo.

Cuando un niño manifiesta haber tenido una visión, inmediatamente se le prohibe comer ají, se le disminuye su ración de sal y se lo baña con remedios. Dspués se le buscará un buen médico para que le enseñe y cuando ya esté en posesión de los secretos de la medicina, aquel maestro lo conducirá a la laguna para que el Trueno lo consagre. "Ver al Trueno —dice un in-

formante— mostrándole los remedios es señal de que va a ser muy buen médico".

Cuando una persona tiene una visión se evita cuidadosamente que el Brujo se de cuenta de esto, puesto que por maldad, puede mostrarle ají y *hep* (una planta) y volverla loca. Esto aconteció con el médico santaroseño, de quien hicimos ya referencia. "Habría terminado botándome al río Páez —dice— si un médico del Huila no me hubiera curado. Aún hoy, cuando estoy borracho, tengo loqueras y canto".

Período de enseñanza. La enseñanza la efectúa un médico de gran reputación en forma empírica, pues el discípulo acompaña a su maestro por varios años, durante los cuales aprende a manjear la tama, a conocer el valor de los remedios, a interpretar las señas, a dominar la técnica de las curaciones. Las primeras curaciones las realiza generalmente con sus hijos o familiares y bajo la dirección del maestro. Del éxito de estas curaciones depende la solicitud de sus servicios por parte de los demás. Muchos de los médicos jóvenes de Togoima, Calderas y Santa Rosa han aprendido por este medio. Todos ellos declaran que sus maestros si tuvieron visiones y explícita o implícitamente reconocen su inferioridad frente a ellos. "Los antepasados si tuvieron visiones y por lo mismo debieron ser superiores a nosotros", declara un médico de Calderas. Debido a esta circunstancia piensan las gentes que los médicos de ahora no pueden hablar con el Trueno. La mata. Una de las razones que aducen para explicar por qué los cabildos de ahora no van a la laguna a lavar las varas de mando, es precisamente, la carencia de médicos como los antiguos.

Quienes han tenido visiones también se ponen bajo la dirección de un médico experimentado para aprenderle los secretos de la profesión. La consagración definitiva como médico se logra cuando a la orilla de la laguna ofrende el "Camarico" para el Trueno.

Si bien el aprendizaje de la medicina pueden hacerlo desde muy jóvenes, el ejercicio requiere ser adulto de unos treinta años y casado o vivir con una mujer. Un médico "mocito", dicen los informantes, miente.

Consagración del te eu. Los *té eu* verdaderos, es decir aquellos que han tenido visiones, han realizado la ofrenda del "Cama-

rico al Trueno", ceremonia que se realiza a la orilla de una laguna, a fin de consagrarse definitivamente como médicos, ya que la medicina es una herencia del Trueno.

El maestro pide al discípulo una oveja blanca y dos jigras nuevas. Sacrifican el animal y de cada órgano del lado izquierdo cortan un pedacito y lo van llenando a la jigra. Esto constituye el "Camarico para el Trueno". Con este presente, maestro y discípulo, encamínanse a la laguna, mientras en la casa las mujeres cocen la carne con la advertencia expresa de que nadie puede comerla en tanto no regresen.

A la orilla de la laguna el médico maestro hace un hueco sobre el cual y del extremo de la tama, suspende el camarico. El Trueno solicita al discípulo diez, veinte, treinta centavos, monedas que las va depositando en el hueco. En seguida, hunde la jigra y tapa el hueco con piedras y tierra. El médico baña al discípulo con *shu y shulape (1)*. Acércase el Trueno para recibir otros rgalos que solicita por medio de las señas, para manifestar que aquel joven puede aprender a curar, prohibirle, enérgicamente, coger remedios malos (de brujería) y solicitarle sea caritativo con las gentes. Por último ordena regresar a su casa.

En casa del maestro se bebe chicha, aguardiente y se come la carne con sancocho. Después el maestro obsequia remedios al discípulo y le dice que en adelante no necesita sino aplicarlos, advirtiendo a los pacientes que están muy graves, pero que con la ayuda de Dios procuraría curarlos.

Las señas. Las señas son movimientos reflejos que se manifiestan en la musculatura del médico. "Son como una circulación —dice un *té eu* como cuando a una persona le brinca un músculo, el ojo o la mano. La interpretación de estas señas las hace el médico".

Las señas provienen del Trueno o del Duende. Es decir, de los espíritus auxiliares. No falta quien diga que las da Dios.

Las señas son fundamentales, básicas en la medicina paez. Sin ellas no hay médico posible y no puede haber médico sin saber interpretar las señas. De nada sirve tener conocimiento del valor medicinal de las plantas. El médico no es más que un intermediario, un vocero del espíritu auxiliar. No basta saber si a tales señas corresponden determinados remdios. El *té eu* tienen que

(1) Cf. Infra. Remedios.

adivinar qué remedios le van a servir para el caso. Por eso el médico siempre porta una jigrada de todos los remedios conocidos. Saca uno y consulta. Si las señas no corren el remedio no sirve; saca otro y espera. Cuando tocan insistentemente, entonces, el remedio es apropiado. Como las señas las da el espíritu auxiliar, es él quien cura.

Las señas pueden contribuír a despejar una vocación. Si un hombre dedicado a una labor manual que no implique movimiento (factura de cohetes, platos para la cocina, cerámica), siente súbitamente el movimiento de las señas, tiene que buscar un maestro para que le enseñe el arte de curar. No puede desobedecerlas porque se vuelve loco.

Aún los mismos médicos tienen que practicar las señas. Si por ejemplo en dos días no han venido clientes enfermos, el *té eu* tiene que visitar su Kachí *(2)* y practicar las señas; de lo contrario pueden volverlo loco. Por eso el médico tiene que ejercer la profesión hasta que comience la vejez. Los viejos pierden las señas porque no pueden caminar, acercarse al kachí y practicar las señas.

Todos los informantes afirman que las señas del lado izquierdo significan algo malo, en tanto que las de la derecha indican algo bueno. En general, las señas que se dan en determinada parte del cuerpo, tienen una significación específica. Se alcanzan a observar pequeñas diferencias en los informes que suministran los médicos, pero son mas bien de forma que de fondo. He aquí el cuadro del simbolismo de las señas recogido de muchos informantes profanos y médicos de las Parcialidades de Santa Rosa, Calderas, Togoima, Avisame y San Andrés.

DERECHA:	IZQUIERDA
Las señas bajan por la pierna: muerte; los remedios no ayudan.	Las señas salen por el borde interno del pie: se va la peste; el enfermo se alienta.
Las señas suben por el pie y la tibia: familiar se muere y se va al cielo.	Las señas suben por el borde externo del pie: gana el brujo; el enfermo muere.
Las señas suben por el borde externo del pie hasta arriba del tobillo: los remedios sirven.	Las señas suben del tobillo hasta la corva: brujiado; labranza brujiada.
Las señas dan entre el tobillo y el talón y pasan al mismo sitio del	Estas mismas señas, pero primero

(2) Cf. Infra. SITIOS DE ADIVINACION.

DERECHA

lado izquierdo: Duelo entre el *Té eu* y el brujo.
Pantorrilla (gemelos): visita de mujer buena; el duende viene cantando a mostrar los remedios.
Pantorrilla (Exterior de los dedos): hombre bueno que viene a visitar al médico.
Rótula, señas que bajan: persona muere de arco o duende.
Muslo: las señas corren hasta la corva y desaparecen: la persona muere; peste brava; sujeto grave.
Señas bajan desde ingle hasta el pie: la esposa va a menstruar.
Costilla (la décima): el enfermo muere pronto; picada de Kallumb.
Las señas dan entre los dedos anular y corazón: al otro día la persona va a empuñar la pala para enterrar un muerto.
Palma de la mano: La persona recibe regalo; saludo del duende; mejora de la peste.
Palma de la mano y pasa a la garganta: "sucio" de pijao.
Pulgar y palma de la mano (línea simia): el animal perdido aparece, las señas indican que va a coger lazo.
Bicepo: persona buena lo lleva para hacerlo compadre de bautismo.
Las señas van de la oreja al hombro: van a cortar las orejas.
Pómulo al ángulo externo del ojo: enfermo mejora; animal robado aparece.
Ojo y baja por la nariz: velorio.

IZQUIERDA

se dan en la derecha y luego pasan a la izquierda: arco y Duende.
Pantorrilla (gemelos): bruja que viene a visitar al médico.
Pantorrilla (Extensor de los dedos): brujo que viene a visitar al médico.
Rótula: temor del brujo porque va ganando el *Té eu;* miedo, susto, azar.
Muslo, bajan las señas; persona mala que pasa.
Costilla (la décima): persona mala que viene.
Dorso de la mano: El duende no recibe los remedios por incompletos.
Palma de la mano: la persona muere de la peste; duende no recibió remedios.

Señas en el brazo: viene el echi.
Biceps: significado idéntico al de la derecha.
Muñeca: alguien va a asustar; van a aprehenderlo.
Hombro y hacen arco por el pecho: arco.
Pómulo al ángulo externo del ojo: animal robado se lo comieron.
Ojo y baja por la nariz: muerto.

Cuando las señas dan en el vértex (corona), el brujo va a enviar la peste y si pasan del vértex a la mano izquierda, la persona está brujiada.

Si las señas dan en los músculos glúteos se ha muerto un animal de su propiedad y se lo están comiendo los cuervos.

En esta forma, los médicos pueden saber el tipo de enferme-

dad y la clase de remedios que son necesarios. Determinar la brujería y el brujo responsable.

Adivinar si un objeto robado puede recuperarse y no y quiénes son los ladrones. Saber si un enfermo se mejora o se muere. Detectar la presencia del Duende, Arco y Echi. Saber de antemano las visitas de las personas buenas y malas.

La actitud de percibir las señas se llama adivinar o "pensar". Todo paciente debe llevar siempre tabaco, aguardiente y coca. El aguardiente sirve para llamar al Trueno, Duende y Echi y contentarlos. La coca y el tabaco masticados, sirve para que corran las señas.

Sitios de adivinación. El *té eu* tiene un sitio especial de adivinación llamado *Kachí*. En él practica las señas y percibe cuando tiene un paciente que curar. Cuando el enfermo no es de gravedad y asiste personalmente a la casa del médico entonces puede adivinar en el solar de la misma, aunque tiene el inconveniente de existir allí ají y sal, artículos que no le gustan al Trueno. Las curaciones, es decir, la percepción de las señas y la limpiada correspondiente, se hacen por la noche, a las dos o tres de la mañana.

Si el enfermo es de suma gravedad el *té eu* tiene que acudir a un sitio donde no perturben ni los gritos de las gentes, ni el ladrido de los perros, ni el relincho de las bestias. Un sitio casi completamente alejado de huellas humanas tales como barriales y lagunas. Llévase consigo dos o tres pelos arrancados del vértex de cada uno de los familiares presentes, con los cuales forma una pelota que la coloca en medio del *shu*. En aquel sitio permanece una hora aproximadamente. Cuando las señas dan esperanzas abandona aquel pelo y regresa a la casa del paciente.

En curaciones de esta naturaleza el médico exige como "cuido" puerco, oveja y chicha.

Adivinando la enfermedad. El médico exige a sus clientes dos huevos (3) de coca, dos tabacos y medio litro de aguardiente. La coca la recibe en una jigra de mediano tamaño, con suma escrupulosidad, pues no permite que se pierda una sola hoja. El aguardiente lo traspasa en una botella de su propiedad y lo coloca en la misma jigra de la coca, igualmente que los tabacos. La adivinación la efectúa en el alar de su casa y a las 8 p. m.

(3) Un huevo de coca equivale al peso de un huevo de gallina.

Coloca al paciente a su derecha, sentado sobre un *pango pil* (banco); las jigras de remedios las sitúa a su izquierda, lo mismo que la jigra de coca y aguardiente recibida del paciente.

Empieza por formar dos atados de remedios con *yacuma blanca, ul ñiñ, ñundayuskei, bitopiskue. chandur* de castilla (4). Cada remedio va extrayéndolo pacientemente de su jigra, que contiene todos los remedios necesarios para sus curaciones, sin orden alguno. No muestra afán ni precipitación; observa mucha parsimonia. Al sacar el remedio, antes de colocarlo en la hoja de mazorca de maíz que servirá de envoltura al atado, le da rápidamente una vuelta por su cuerpo, iniciando por el pie derecho, subiendo por el mismo costado, pasa al vértex y termina por el lado izquierdo con el fin de excitar la sangre para que corran las señas. Tan pronto acaba de dar la vuelta las señas pueden ir de la pantorrilla derecha hacia arriba denotándose entonces esperanzas, pues si corrieran de la rodilla hacia el pie no habría necesidad de recibir la coca, el tabaco ni el aguardiente, pues el paciente no tiene cura. Solamente cuando las señas son favorables toma la jigra de remedios recibidos del cliente y le da la vuelta en forma idéntica a la de los remedios con el objeto de invocar al Trueno y Kallumb, sus ayudantes.

Ordena al paciente masticar el atado de remedios que no ha mucho le obsequió. Coge la tama (5) en sus manos, le sopla con los remedios que está mascando y que son los mismos que masca el paciente, con el fin de evitar que el *ptans* ("sucio") enviado por los brujos pueda sorprender al médico y matarlo. En este caso puede estar con el mambe en la mano y quedar, sin embargo, inmóvil, echando sangre por la boca. En seguida y al frente, clava la tama, arma del Trueno, para indicarle que no está trabajando mal sino tal y conforme a sus enseñanzas. Antes de enterrárla le da la vuelta por su cuerpo para que así lo defienda del *ptans*.

Junto a la tama coloca la botella de aguardiente dentro de la cual introduce una ramita de *chayuts;* cuando esta queda erecta y flotando es buen signo, en tanto que si ladea y cae al fondo es presagio de muerte. Encima de la botella coloca un calacito para medir el aguardiente dentro del cual va también una rami-

(4) Cf. Infra. REMEDIOS.
(5) Cf. Infra. LA TAMA.

ta de *chayuts*; sirve como preventivo, pues evita que el *ptans* tome desprevenido al médico y lo mate.

Después se mete un puñado de coca a la boca y empieza a mascar; permanece sentado, casi inmóvil, con la vista atenta al espacio y a la tama, sensitivo al menor movimiento; de cuando en cuando se mete más coca y más mambe, que lo saca de un calabazo pequeño (*kuetand tuka*), lo vierte sobre el puño derecho y lo arroja con fuerza a la boca. Atalaya. Los brujos trabajan sistemáticamente para enviarle el *ptans* y no pueden cogerlo desprevenido. Las señas le advierten cuando debe soplar la mascada para contener el *ptans*.

Anuncia al paciente que las señas son favorables; va a tener pronta mejoría. Los dolores que lo aquejan se deben al *ptans* que tiene desde el vértex hasta la nuca.

Después de veinte minutos de estatismo y espectativa, el médico se levanta con la frente erguida, como ilumiado, marcha con garbo hacia la tama, sopla con violencia la mascada; llena el calabacito con aguardiente y lo arroja al aire. Es la invitación al Trueno.

Regresa nuevamente a su sitio, toma tabaco y muerte más de la mitad, echa mas mambe a la boca, quédase quieto, cogidas las manos y los brazos descansando sobre las rodillas. Unicamente la profundidad de la noche con sus ruidos característicos perturban aquellos instantes decisivos. Nada de descuidos. Pueden tener consecuencias fatales. En esta actitud dura unos cuarenta minutos.

Saca en seguida con la mano la mascada de la boca y la arroja en dirección de la tama, después de haber dado la vuelta por su cuerpo. Igual cosa hace el paciente. Inmediatamente comunica al enfermo que debe volver con todos los remedios. Suspende sus trabajos. El Trueno se había mostrado favorable. Como el paciente tiene *ptans* debe efectuarse una buena "limpiada", para lo cual debe llevar tres libras de carne, para comer después de la limpiada, chicha, una libra de coca, un litro de aguardiente y seis tabacos. El médico mismo tiene que ir a la laguna en busca de los remedios. Aconseja al enfermo que por espacio de tres meses, por lo menos, no debe usar las drogas de los blancos, porque de ser así se muere.

La limpiada del ptans. A las siete p. m. el enfermo arriba a la casa del médico. Entrega los remedios solicitados. El aguar-

diente lo reparte en dos botellas: una para el Trueno y otra para beber. A la botella del Trueno le introduce una ramita de *chayuts*, previa la vuelta dada por el cuerpo; la ramita queda flotante y vertical, buen presagio. La coca la pone en una jigra especial, junto con el aguardiente y los tabacos. Con hojas de mazorcas de maíz forma dos atados de remedios. Uno es para el paciente para que masque y trague el zumo.

La otra botella, la subdivide, toma *chayuts*, da la vuelta por el cuerpo, lo coloca en el calabacito, lo llena de aguardiente y sale fuera de la casa a brindar al Trueno. En seguida recoge sus jigras de remedios, un calabazo de chicha, la coca del paciente, una vela y fósforos y sale al sitio de adivinación. Cuando el Trueno se acerque pedirá al médico las cosas con que el paciente lo ha cuidado. Entonces, le mostrará la chicha y el aguardiente. El Trueno satisfecho dirá: "Tómese eso ya que ha recibido". Beberán juntos. Lo que corresponda al Trueno lo arrojará al aire. El paciente debe quedarse dentro de la casa. Cuando sea la hora, lo llamará para la "limpiada".

Afuera, la noche está negra como el ébano. Apenas se divisa la silueta del médico. Ocupa el alar sur de la casa. Empieza a mascar los remedios previa la vuelta por su cuerpo. Clava la tama y al lado de esta coloca la botella de aguardiente. Luego, sentado, casi en cuclillas, cogido las manos, quieto inmóvil, con la mirada atenta al infinito, grave, parsimonioso, consciente de su misión, compenetrado de su saber, permanece largas horas dialogando con el Trueno y defendiéndose del ataque de los brujos. De cuando en cuando, levántase sin afanes, lentamente, tan lento como corren las horas de la noche, bate la tama con energía que delata la actividad del médico. El paciente, tendido sobre un cuero de res, sin más abrigo que sus propias ropas, cerca del fuego, duerme; despierta varias veces, hincado por el intenso frío de la noche; de fuera oye los soplos constantes, rítmicos, acompasados, enérgicos, del médico.

A las dos de la mañana, o mejor dicho, al canto del primer gallo, el *té eu* llama al paciente. La luna está en su plenitud; diríase que la noche está blanca. El enfermo se sienta a la derecha del médico. Recibe un atado de remedios para mascarlos. Son *yacuma blanca, ul ñiñ, ñundayuskei, shugues, chandur, guepeyuskei*. Estos ayudan a la limpieza y cuando se los escupa sacarán el "sucio" (*ptans*).

Coloca *chayuts* en el vértex del paciente como defensa de un posible ataque del Echi. Recomienda nuevamente no usar remedios de los blancos y en caso de no conseguir mejoría acudir siempre donde el médico.

Pasa el médico a la derecha del enfermo, a unos tres metros aproximadamente. Lo señala con la tama y sopla coca mascada con aguardiente a fin de contener la nube negra (*ptans*) que de inmediato puede llegar. Acércase al enfermo, y con la tama lo frota (lo limpia) empezando por el pie derecho y continuando por ese costado; en el vértex frota varias veces, chupa (absorbe el "sucio" por cinco o seis resuellos, frota nuevamente; baja la tama a la garganta, frota, chupa el hombro derecho, vuelve a frotar y pasa con la tama a la nuca, donde repite el proceso; termina bajando la tama por el costado izquierdo. Sobre un hueco hecho previamente a la izquierda del médico y a unos quince metros de distancia, escupe todo lo que tenía en la boca y el sucio que recogió del paciente; trasboca; sopla un trago de aguardiente al aire, despidiendo el "sucio" y bébese uno, para que no vuelva a entrar "sucio". Llama al enfermo, le ordena escupir los remedios que estaba mascando, le pasa la botella para que se mida dos tragos: uno para que lo sople al aire y el otro para que lo beba. Tapa con cuidado el hueco. Médico y enfermo regresan a sus sitios.

El *té eu* coge un buen puñado de *shu* y *tashú*, lo sumerge en agua a pesar de que cargan bastante humedad y acércase al paciente. Inicia la limpiada por el pie derecho hacia arriba. En el vértex, garganta y nuca hace mediana presión escurriendo la helada agua por el cuerpo. Baja por el costado izquierdo y se dirige al hueco a enterrar aquellos remedios. Con estos remedios el cuerpo coge frescura. Después de enterrados sopla aguardiente al aire y bébese otro.

Nuevamente en su sitio, pasa al enfermo unas yerbas (*shu* y siempre viva?) para que las tenga en la mano. Dirígese a la derecha del enfermo y desde allá lo señala con la tama y sopla; acércasele, con la tama y los remedios enunciados da la vuelta conocida. En la corona (vértex), garganta y nuca, frota.

Dirígense al hueco y echan las yerbas al hueco. El médico toma un buche de aguardiente, estira la tama al horizonte, yérguese soberbio, clava la mirada en dirección de la tama, sopla con violencia repetidas veces y de pronto tal actitud se torna su-

plicante. En efecto reza en castellano: "Señor ayúdanos; imploro por todo el mundo". El *té eu* dijo después que rezaba al Trueno, para que le ayude y no permita que el brujo descubra ese hueco donde está enterrado el "sucio". Se bebe un trago. El paciente sopla un buche de aguardiente al aire mientras el segundo se lo bebe. Regresan a sus sitios. El médico agarra el calabazo de chicha, encamínase al hueco y riégala. Es un obsequio al Trueno.

Nuevamente en su sitio pone en un calabazo de agua fría *yacuma, shu, tashú*. Váse a la derecha del paciente y desde allí aspergea esa agua primero a la casa y luego al paciente, quien previamente se ha quitado el sombrero por orden del médico. Es un verdadero baño a fin de que si queda todavía *ptans* lo saque y quede completamente limpio. El agua sobrante la riega en el hueco. Sopla aguardiente mientras el segundo se lo bebe, procediendo en idéntica forma el paciente. El médico levanta la tama e implora: "Yo te pago; yo te pagaré". El médico dijo haber dicho así: "Allí quedan los remedios completos que tu me enseñaste. Si viene otro enfermo ayúdame". Riega en seguida todo el aguardiente como brindis al Trueno.

Con esto, termina la limpiada. Son las tres y media de la mañana.

Aconseja al enfermo no cambiar los remedios ni tampoco caminar por debajo de aquel hueco. Manifiesta que las señas son favorables y que pidió a Dios para que se mejore.

En resumen, la limpiada del *ptans* se efectúa por la noche, iniciándose a las ocho o nueve p. m. y terminando a las 3 p. m., aproximadamente. Se observa los siguientes procedimientos:

1º El paciente debe dar al médico dos huevos de coca, una botella de aguardiente y dos tabacos.

2º El médico recibe estos remedios en una jigra especial. Elabora unos atados de remedios con *yacuma blanca, ul ñiñ, ñundayuskei, bitopiskue, chandur de castilla, chayuts* (Santa Rosa), o *yacuma, chayuts, tayuskei, shugues, tatse, echiutse* (Calderas). Todos estos remedios son pasados por el cuerpo del médico.

3º En el Kachí, sitúa la tama y aguardiente en un sitio especial, pasa al paciente un atado de remedios para que masque y coloca *chayuts* (Santa Rosa) o *guepekás* (Calderas) en el vértex (corona) del enfermo y de él mismo.

4º Efectúase la primera limpiada con la tama, frotando y chupando el vértex, el hombro derecho y la nuca a fin de sacar

el *ptans* y escupirlo en un hueco para enterrarlo. Hay soplada y bebida de aguardiente de médico y paciente.

5º En la misma forma se procede con los remedios húmedos (shun, tashú) para dar frescura al cuerpo.

6º se efectúa una nueva limpiada con otras yerbas (*shu* y siempre viva?), con los frotes y chupadas en los lugares consabidos, la enterrada de los mismos y la soplada y bebida de aguardiente. En Santa Rosa, en este momento el médico implora.

7º El médico brinda la chicha al Trueno, regándola al aire.

8º El médico baña al paciente con un calabazo de remedios. Tapa totalmente el hueco que contiene el "sucio", riega el aguardiente sobrante y con los últimos consejos termina la limpiada. Son las tres o cuatro de la mañana.

Todo tratamiento de las enfremedades se realiza por este método de la limpiada. Es decir, cuando se ha sacado la impureza (*ptans*), del cuerpo se consigue la salud del enfermo. El médico lucha contra el *ptans*. En cierta forma, la limpiada es una dura lid en que se compromete el médico.

La tama. La tama es una vara de chonta de unos cuarenta centímetros de largo, imprescindible en toda curación.

Mientras que en otras culturas el hombre-medicina utiliza la maraca como accesorio indispensable en el arte de curar, teniendo esta un origen mítico y por lo mismo un carácter sagrado y virtudes mágicas, y, segúún Roth, ciertos *piai* de las Guayanas se sirven en las conjuraciones de muñecos de madera, (6) entre los paeces se sirven de esta varita denominada tama. En Santa Rosa, una médica-bruja utiliza en sus curaciones un muñeco de madera, vestido como las gentes, recibido, según la informante, del mismo Trueno y llamado "Viento suave del Trueno".

Según todas las evidencias este nombre se deriva de aquel personaje mítico, héroe cultural mas exactamente, llamado Juan Tama, que goza de la aureola de haber sido fundador de pueblos, guerrero victorioso, buen gobernante, legislador, y médico afamado.

La tama es una arma defensiva y ofensiva, de carácter sa-

(6) Metraux, Alfred. *Le Shamanisme Chez les Indiens de l'Amerique du Sud Tropicale.—Acta Americana*. Vol. II. Nº 3. Fondo de Cultura Económica, 1944, pp. 217-218.

grada usada únicamente por los médicos, protege de los ataques del *ptans* y los aleja. Es una donación del Trueno y una insignia del mismo. En las visiones es lo primero que aquel muestra. Cuando el médico muere puede heredarla un médico joven, pero por lo general, la abandonan cerca del cementerio.

Un médico de Calderas, posiblemente el más compenetrado de su misión de defender la salud de las gentes, manifiesta que la tama quedó desde una hazaña que realizó la Virgen en defensa de sus hijos. En cierta ocasión el mar venía cubriendo implacablemente la superficie de la tierra poniendo en grave peligro la vida de los hombres. La Virgen compadecida de ellos, sacó la tama e hizo los movimientos que hoy hace el médico. Las aguas se retiraron. Aquella vara la dejó para el hombre que saliera médico. Este es el origen de la tama.

Otro médico de la Parcialidad de San Andrés nos hace el siguiente relato acerca del origen de la tama:

Comentan los mayores que la tama la dejó el mismo Trueno. Un hombre tenía un papal y un rancho en la montaña. Con su hijo fue a cosecharlo. Una tarde el muchacho se opuso a seguir al padre prefiriendo quedarse en el rancho. Al día siguiente desapareció sin dejar huellas por ninguna parte. Todas las diligencias del padre encaminadas a localizar el paradero, resultaron infructuosas. A los ocho días, el muchacho reapareció en el rancho. El padre, naturalmente, inquirió por su paradero y sus ocupaciones. Contestó que había estado donde el papá señor, quien le obsequió el palo que llevaba entre las manos, llamado tama, aguardiente y remedios. El aguardiente era agua fría de una laguna y los remedios los traía en una jigra. Tan pronto acabó de contar cayó en trance de muerte. A los quince días, moribundo ya, pidió al padre le pasara la tama, pues el papá señor le había dicho que se defendiera con ella y en caso de enfermar tomara los remedios que le había dado. Extrajo de ellos el zumo y se lo tomó. Mejoré rápidamente. Los aplicó a los particulares y observó que recuperaban la salud fácilmente. Con la tama y los remedios se convirtió en el mejor médico de todos los contornos. Murió cuando estaba viejo".

La tama para pelear con el *ptans* lleva adjunta un vegetal denominado "nica".

Teoría de la enfermedad. Las enfermedades son producidas por el estado de impureza corporal denominado "sucio", hielo o

ptans. Las causas son esencialmente mágicas y se interpretan más como ataque premeditado e inamistoso que como castigo de los seres sobrenaturales. No falta quien manifieste que las enfermedades son enviadas por Dios, pero que arrepentido las quita rápidamente. Desde luego, este concepto ni es general ni tiene raíces en la tradición. Las enfermedades, pues, no tienen causas naturales; ni aún los mismos accidentes, puesto que son provocados por los brujos.

Son causales de impureza los siguientes;

a) Cuando la persona que ha estado en un velorio no se ha hecho "limpiar".

b) Cuando se visten con las ropas de un difunto sin lavarlas con los remedios correspondientes.

c) Cuando no se ha limpiado la casa donde se ha velado el cadáver.

d) Cuando la mujer no pasa las menstruaciones en el *Du yate léchukue*.

e) Cuando la mujer después de la menstruación, no se ha bañado.

f) Cuando la placenta no se ha enterrado convenientemente en los sitios apropiados y con los remedios de rigor.

g) Cuando el hombre duerme con la mujer menstruante.

h) Cuando el hombre que sirve los alimentos a una menstruante no se ha bañado el cuerpo ni lavado sus ropas.

i) Cuando la mujer después de cumplir la dieta de parto, no se baña.

j) Cuando estando en las montañas, barriales, lagunas, no se sopla remedios.

k) Cuando antes de cortar madera para puentes, trapiches y canoas, no se soplan remedios.

l) Cuando en la inauguración de un rancho o casa no se han realizado las ceremonias del caso.

ll) Cuando la casa se ha edificado sobre una "guaca" de pijao o simplemente cuando se encuentran con ella al labrar la tierra.

m) Cuando no se realizan las ceremonias tradicionales en cosecha de roza nueva.

n) Por las manipulaciones de los brujos. Estos son los que mas gente matan, pues no solo envían la peste a las personas sino también a toda la comunidad. Por otra parte hacen enojar al

Duende, Arco y Echi y también hacen hechicerías a solicitud de las personas envidiosas o vengativas. Los Brujos tienen un poder ilimitado.

Hernández de Alba al hablar de la enfermedad generaliza en estos términos:

"Sickness was always thought to be caused by witchcraft or by someone's will. The evil force entered the body and made it impure; it had to be expelled or "cleansed", lest death ensue. If a delirious person told who was killing him, the individual mentioned was thought guilty; or, if, after a death, the face of the deceased should appear to somebody, the person was consid ered responsible. These beliefs are still in force today, and the Indians avoid the causes of sickness, such as having sexual intercourse wit a menstruating woman, exposing the body to bad weather while there is a rainbow, and neglicting to bathe after a burial or to purify a house where a death ocurred" (7).

Teniendo las enfermedades un origen mágico, las curaciones son también de carácter mágico. "La limpiada" es imprescindible en toda curación, con su cortejo de remedios y de movimientos.

Síntomas de las enfermedades. De las enfermedades claramente especificables por los indígenas están la viruela y la tos ferina, dado sus síntomas característicos. Algunos informantes, no muchos por cierto, manifiestan que sus hijos murieron con tales enfermedades.

En general, la mortalidad infantil, bastante elevada, dícese causada en orden de frecuencia por los términos genéricos peste, echi y brujería. Son contados los casos de muerte por duende y arco.

La sintomatología que de las enfermedades dan son muy vagas y aún se confunden las unas con las otras. El *Echi*, duende y arco pican, no propiamente al cuerpo sino al alma, dejando pelos en el cuerpo que originan fiebres y punzadas en el sitio que se encuentran. Estos pelos puestos en la palma de la mano se mueven como si fueran vivos. Difieren en el color: los colorados son de Kallumb, los azul rojos, del arco y los negros del *Echi*. Los pelos se sacan con frote de remedios, previa la limpiada.

(7) Hernández de Alba. Cr. 1946. p. 955. Véase, además, Pittier de Fábrega, H. 1907. p. 325.

Se dice que la picada de *pallumb* produce pesantez, inapetencia, dolores de cabeza y del cuerpo, fiebres y aún locura.

En cuanto al arco se refiere, denominado *kitús*, no es otro que el arco iris, que sale a cualquier hora del día, acompañado de llovizna, el "miao de arco", que produce sarna (*chande*) en los niños cuando los moja; no es nocivo para los adultos. Los médicos, y únicamente éllos, desde sus ranchos, le soplan remedios mascados: tabaco, chandur, ñushamuanda y yacuma negra, para que desaparezca pronto. Las otras gentes mascan los remedios y se frotan en el cuerpo, cuando los tienen a mano. Es general el concepto de que el arco produce encalambramiento del cuerpo y asimismo, que los brujos lo ven en forma de pavo impulsándolo a picar a las gentes.

Parece evidente, que lo que los indios llaman *Echimbe* (*Echi* rojo) o candelilla fina sea una luciérnaga, un tanto difícil de capturarla y supremamente brava. La diferencian perfectamente de los cocuyos. Dicen que es un animal que Dios ha dejado para que haga daño a los cristianos. Los médicos los llaman y los capturan en su Kachí, en tanto que los demás indios, mascando coca los capturan donde quiera y los entregan al médico para que los entierren. Consideran que su peligrosidad se debe a que en ellos se encarnan las almas de los pijaos.

Los síntomas de la picada de Echi son vagos e imprecisos refiriéndose solamente a dolores corporales.

En cuanto a los síntomas del "sucio" de pijao son reconocidos por las dificultades respiratorias.

Diferencian perfectamente las enfermedades venéreas que parecen estar muy extendidas en las parcialidades aculturadas. En Calderas se dice que se propagaron mucho en ambos sexos sin tener en cuenta la edad, curándose con piedra lipia, pues los remedios de los indios no sirvieron. En Santa Rosa usan antibióticos. Un médico de esta parcialidad afirma que aquellas enfermedades las trajeron de La Plata las mujeres andariegas y que le tocó atender dos casos: uno grave en que la paciente murió; el segundo, no muy avanzado lo trató con *yukchacha*, barbasco de montaña *y fisa* (*bitopat* o bodoquero). Dio el zumo durante seis días y sujetó a la paciente a una dieta exclusiva de gallina.

Remedios. Los remedios usados por el médico paez son vegetales. Generalmente los receta en combinación. Así:

Para limpiar el *ptans:*

Yacuma blanca, ul ñiñ, ñundayuskei, shugues, chandur, guepeyuskey, chayuts.

Para la picadura de *Kallumb:*

Chandur, ñushamuenda, guapeshú blanco y amarillo, *nica,* tabaco, *chayuts.*

Para la picadura de *Echi:*

Tatsé, ul ñiñ, yacuma blanca, shúgues, tayuskei, siempre viva, shulape, shu, shupeñiñ.

Para la picadura de *Arco:*

Chandur, ñushamuanda, yacuma negra, *ul ñiñ, chayuts.*

Todos los remedios anteriores son frescos, sirven para calmar fiebres.

[P.239]

Nombre indígena	*Nombre castellano*	*Nombre científico*	*Usos*
Chandur	.....	?	Refrescante. Sirve para limpiar el *ptans*. Hay dos variedades. El grande llámase: ñusha.
Esh	Coca	Erythróxydon coca.	Raíz y hojas en cocimiento: cólicos y diarreas.
Bichach	Caucho	Hevéa ?	Hoja asada al rescoldo para fracturas, dislocamientos, contusiones. La hoja seca se quita y se coloca en los cogollos de cabuya para que sane rápidamente.
Chulco	Chulco	Oxális sp.	Contra la viruela.
Chayuts *	Contento, Alegría	Scutellaria racemosa Per.	Panacea de los paeces.
Chuwet pequeño	?	?	Para contentar las quebradas.
Fisa, bitopat	Dodoquero	?	En combinación con *yukchacha* y barbasco de montaña sirve para curar la blenorragia.
Echiutse chima *	?	Labiada ?	Contra la peste. Baños con esta yerba evita Echi, sobre todo cuando se camina de noche.
Guepekás	Pringamoza. Ortiga.	Uréra boccífera L.	Evita el ptans. Sirve para brujería.
Kuese	Barbasco de lo caliente.	Lonchocárpus ?	En invierno se sopla al aire para que venga el verano. Usase contra el chande (sarna).
Limoncillo	Limoncillo	Cymbopógon citrátus.	Infusión con panela y aguardiente contra el frío de una parturienta. Sirve también contra diarreas.
Nica	?	?	Para combatir el *ptans*. Para pelos de duende.

SC15 Paez

5: Bernal Villa

Nombre indígena	*Nombre castellano*	*Nombre científico*	*Usos*
Ñundayuskei	Pateperro	?	Contra el *ptana*. El zumo para las diarreas; con tabaco para el dolor de estómago. El agua de ésta para dolores de muelas, escupir mitad de la candela para que ayude a matar la enfermedad.
Shu *	?	Sphagnum sp.	Para combatir el *ptana*.
Shugnés *	?	Peperomia sp.	Para limpiar el *ptana*.
Shulape	?	?	Contra el *echí* y para la tos.
Shupeñiñ *	?	Peperomia sp.	*Echí* y las ferina.
Siempreviva		?	Amarrada a la cabeza calma el dolor.
Muski	Tabaco	Nicotiána Tabácum L.	Con coca hace correr las "señas". Machacado detiene las hemorragias. Para combatir el *ptana*.
Tap.	?	?	V. *Bichapk*.
Tatsé	?	?	Para la tos; para contener el pulso (us) cuando el niño está asustado. Contra el *ptana*.
Tayuskei *		Peperomia sp.	Para infección del ombligo. Tos ferina.
Ul ñiñ *	Culebrina, pepa de arco, monito almiscillo.	Hibiscur abelmoschus L.	*Ptana*, *echí*, arco.
Yacuma blanca		?	*Ptana*.
Umsim *	Yacuma negra	Myrcia acuminata DC. Vell aff.	Contra el arco.
Yuskei *		Scleria cattarinensis Boeck.	*Ptana*.

p. 240

Las plantas señaladas con el asterisco han sido determinadas por el Herbario Nal. Colombiano, especialmente por el doctor Jesús M. Idrobo.

Para las otras nos hemos guiado por la obra *Plantas Utiles de Colombia*, del doctor E. Pérez Arbeláez, editado en la Imprenta Nacional de Bogotá en 1947.

El *té eu y la comunidad*. La medicina en todas las culturas cumple con una función eminentemente humanitaria. Su índole es sociológica. Sean cualesquiera los métodos que use, tiende a salvar las vidas humanas. Ataca la enfermedad, pero también la previene.

Entre los paeces la medicina cura y previene. La comunidad y la familia realizan ceremonias especiales tendientes a lograr estos dos cometidos de la medicina.

Cuando la peste (epidemia) ha cundido por la comunidad amenazando su subsistencia, las autoridades (Cabildo) invitan al médico para conjurar el peligro efectuando el *Wé ká*.

Cuando la enfermedad se enseñorea en una sola familia, disminuyendo sensiblemente sus miembros, el de mayor edad invita al médico para realizar el *Ut ká*. Después de todo entierro las gentes tienen que sacar el *ptans* de sus cuerpos y de la casa donde se produjo el deceso. El médico es el único que puede realizar esto.

Las primicias de las sementeras hechas en tierras nuevas, no cultivadas antes, no pueden consumirlas mientras el médico no realice las ceremonias de limpieza. De manera que es el médico quien defiende la familia —conservación de la especie— purifica las cosechas —conservación del individuo— y defiende también la comunidad alejando por medio de sus conjuros las epidemias y los individuos que atentan contra ella. En 1952, ante la inminencia de un ataque de grupos armados subversivos a la Parcialidad de Santa Rosa, el médico los detuvo con maní de montaña mascado y soplado al camino por el cual debían haber llegado.

Dado que las ceremonias enunciadas tienen algunos aspectos diferenciales, veámoslas en detalle.

We ka (peste-enviar). Cuando en una comunidad aparece la peste, viruela, tos ferina que están terminando rápidamente

con la población, el cabildo toma la iniciativa para conjurar el peligro. Solicita de las gentes coca, tabaco y aguardiente, alistan un cerdo e invitan a un médico reputado que pueda hablar con el Trueno. Desde la orilla de una laguna mediante los buenos remedios, y la ayuda del Trueno el médico tiene que alejar la peste.

Sacrifican el cerdo. De la parte izquierda sacan un pedacito de todos los órganos y los ponen en una jigra nueva. Recogen las candelillas (*Echis*) y se marchan a la laguna. La comitiva compuesta por el médico y el Cabildo sale a las tres de la tarde y doce horas después estarán de regreso al punto de partida. Mientras tanto, las mujeres se han ocupado de la preparación de la carne sin haber comido un solo pedazo. Tampoco han dormido, pues tienen la obligación de esperar despiertas a la comitiva. Cuando llegan se reparten la carne, el sancocho, y se bebe la chicha y el aguardiente. Con esto se alivian las gentes, se ahuyenta la peste de la comunidad.

Ut ká (*"sucio"-enviar*). Es exclusivamente familiar. Cuando en una familia se están muriendo sus componentes, tiene *ptans*, dice un informante, mientras que otro piensa, con más razón, que son los espíritus de los muertos enojados que quieren terminar con la familia. En tal caso, el de mayor edad, de los supervivientes, alista coca, aguardiente y tabaco, reune a sus familiares y llama al médico.

Este adivina hasta ocho o diez noches. Captura hasta doce candelillas. Pide un cerdo castrado y gordo. Lo amarra toda una noche y adivina si lo recibirán las almas de los familiares muertos. Al amanecer ordeña matarlo. Matadores, chicheros, acarreadores de caña y cocineras no pertenecen a la familia, es decir, no llevan el apellido de los que están haciendo *Ut ká*. Ninguno de estos puede trabajar, ni siquiera hacer sombreros o jigras.
